Role And Development Direction Of Deliberation Capacity As Regional Human Resources

MIHO KIM
goodmiho@gmail.com
Suhong Park
suhongpark@gmail.com

Abstract

Korea has achieved rapid growth and democratization due to growth-oriented policies and uniform education for the last 20th century. However, in the 21st century where diversity and creativity are emphasized, such a growth engine is creating a dual crisis – the division due to social conflict and the relatively low achievement and satisfaction in academic and occupational status. On the other hand, a new human resources development strategy is required for the 4th Industrial Revolution era. Thus, the challenge for Korea's human resources development is to cultivate human capital with creativity, fusion, communication, and collaboration and to form social capital such as mutual benefits, trust, and social integration. The purpose of this study, I reviewed domestic and foreign literature on deliberation and human resource development since the 2000s. In order to fundamentally change, the development direction of the deliberation capacity is presented on the systems view. The results of the study are as follows. The deliberation is that people with different opinions make balanced decisions through mutual communication and reflection. In the era of the Fourth Industrial Revolution, creative talents with knowledge fusion skills are needed. The deliberation capacity enables the creation of collective intelligence through communication and cooperation among people with diverse fields and opinions. In addition, deliberation makes social capital such as social unity, trust, and common rationality by forming a public opinion on issues. In other words, deliberation capacity is the human capital and social capital of future human resource development. From the system point of view, the deliberative system development direction is as follows. First, it should be a system that takes into consideration the wholeness and alignment between the various components of deliberation. Second, the design should be based on the value of deliberation itself rather than the specific goal. Third, three general system models should be revealed: ecological model, structural model, and processual model. The significance of this study is to identify the overlapping significance of human capital and social capital, and to propose the positive and integrated development direction. In the future, various and practical models, programs, and policy are needed to be developed.

Role Of Need Satisfaction In Determining The Level Of Trait Anxiety Of University Student-Athletes

Abstract

The primary purpose of this study is to examine the role of level of need satisfaction in prediction the level of trait anxiety of the athletes participating in inter-university sports competitions. The secondary purpose of the study is to examine the level of need satisfaction and trait anxiety of university student-athletes in the context of gender variable. For this purpose, a total of 217 athletes, 116 men (agemean = 21.88 ± 2.79) and 101 women (agemean = 21.06 ± 1.73), who participated in interuniversity sports competitions, voluntarily participated in this research. Basic Psychological Needs Scale and State-Trait Anxiety Inventory were used to fulfill the purpose of the study. In the analysis of the data, t-test, Pearson's correlation test and regression tests were used. The data were analyzed with the SPSS 21.0 package program and 0.05 was used as significance level. There was a statistically significant negative correlation between psychological needs satisfaction and trait anxiety levels of the athletes according to the obtained data. As a result, it can be concluded that autonomy and competence subscales of psychological needs satisfaction of the athletes participating in the research are a predictor of the level of trait anxiety.

Keywords: *Motivational Self Talk, Mental Toughness, friend support, Athlete*

Introduction

Researches performed in different sub-disciplines of sports science address the physical characteristics (Turna & Kılınç, 2018; Akyüz et al., 2018;) or psychological skills (Bayköse et al., 2016; Şahin, Bayköse & Civar Yavuz, 2017a; Bayköse & Civar Yavuz, 2017b; Bayköse et al., 2017; Nergiz, Bayköse & Yildiz, 2015) which influence or which could influence the performance of the athlete. Studies in sports psychology which is a sub-field of sports science gradually increase and it may be stated that effort is paid for understanding psychology of all individuals' in sports environments and also researchers have been trying to contribute science based on theory. In this context, the aim of the present study is to investigate the association between psychological needs and trait anxiety level of athletes based on self-determination theory (SDT) which was developed for motivation.

Basic psychological needs are addressed in the context of three main factors in self-determination theory (SDT). These three factors defined as competence, autonomy and relatedness are accepted as universal according to self-determination theory (Deci & Ryan, 1985; Deci & Ryan, 2000; Deci & Ryan, 2012).

Self-determination theory has begun with internal motivation studies at the beginning of 70s (Deci, 1971) and it is a motivation and personality theory which has been developed since then and supported by many empirical studies (for detailed information, please see Deci & Ryan, 2012, Vansteenkiste, Niemiec & Soenens, 2010). Self-determination theory hypothesizes that human's nature has the potential to develop and reach its potential however social and environmental factors could inhibit (or support) this tendency (Ryan & Deci, 2002). Self-determination theory is composed of five different sub-theories. Autonomy, competence and relatedness needs are the basic psychological needs which are required for psychological health and personal development (Deci ve Ryan, 2000). Just as a seed's growing and developing require air, soil and water, wellness and satisfaction of these three needs are required for psychological development of humans.

Competence is one's feeling him/herself competent and sufficient in his/her doings and interactions. Significance of competence feeling was addressed in social cognition theory of Bandura (1986). According to self-determination theory, the activities which satisfy competence need are the ones which provide most appropriate challenge for developing the capacities of individuals (Ryan ve Deci, 2002).

Relatedness is defined as being in relation with others safely and heartfelt. Other theories like socio-meter theory (Baumeister & Leary, 1995) or attachment theory (Bowlby, 1979) have also revealed that sense of belonging is a basic need. According to self-determination theory, relatedness need can be satisfied through feeling oneself to belong to the community with respect to psychological aspect but not through statue or position.

Autonomy is defined as selecting the actions through his/her own willpower or selection and their being consistent with one's self. The opposite includes the behaviors done under pressure. It is not possible to state about self-determination or a real autonomy if a behavior is not internalized in harmony with one's self. Although competence and relatedness help to internalize the behaviors at some degree, a behavior cannot be healthily internalized to self without autonomy (Deci & Ryan, 2000). So satisfaction of autonomy plays a more important role than the other

needs according to self-determination theory, and the environments which satisfy this need provides a healthier development for the person.

Worry (anxiety) may be defined as a worry feeling against a non-physical threat. It is evaluated as one of the important mental health problems as it is common and may precipitate some mental diseases (Yeniçeri et al., 2007). Some authors report that a moderate stress and worry could improve creativity and development of people however increased anxiety could lead to decreased attention, focusing and learning, making errors, impaired interpersonal relationship, reduced productivity in presence of intensive stress (Yeniçeri et al., 2007).

Studies conducted in our country are required. Athletes begin to take responsibility through making selections, get in contact with new environments and try to develop themselves. The main purpose of the present study is to investigate how satisfaction of basic psychological needs predict trait anxiety level in the context of stress and psychological needs relationship.

Method

Study design

The present study is a relational screening model which aims at determination of presence or degree of covariance between two or more variables.

Study group

The study was conducted with athletes who participated in sport competitions between universities in different braches (volleyball, football, basketball, wrestle etc.) during 2017-2018 seasons. A total of 217 athletes (116 males with mean age of 21.88 ± 2.79 years and 101 females with mean age of 21.06 ± 1.73 years) were voluntarily included in the study.

Data collection tools

Data were collected using personal data form, basic psychological needs satisfaction scale and state-trait anxiety inventory.

Need satisfaction scale (NSS)

Need satisfaction scale was developed by Deci and Ryan (1991) and adapted to Turkish by Bacanlı and Cihangir Çankaya (2003). It is 7 Likert type scale and evaluates 21 items which measure basic psychological needs. The scale is composed of three subscales as autonomy, competence and relatedness. Overall score of the scale and internal consistency coefficients of subscales were calculated with Cronbach alpha method on 250 students. Internal consistency coefficients of subscales were found as .71, .60 and .74, respectively and .83 in total. Correlation obtained with applying the scale with two week intervals was .89 and these values were .82, .80 and .81 for subscales, respectively. Item-total correlation values vary between .33 and .64. Consistency statistics which was obtained with confirmatory factor analysis were as follows: RMSEA: 0.07, GFI: 0.86, AGFI: 0.82, CFI: 0.82, NNFI: 0.80. Factor loads obtained from the scale vary between .30 and .77. T values obtained with discriminant validity vary between 3.964 and 11.454.

State –trait anxiety inventory (STAI)

State –trait anxiety inventory was developed by Spielberg, Gorsuch and Lushene (1970) and adapted to Turkish by Öner and LeCompte (1983). Test-retest reliability is .73 and .86 for trait anxiety inventory, .16 and .54 for state anxiety inventory; KR-20 reliability is .86 and .92 for trait anxiety inventory, .83 and .92 for state anxiety inventory; median item-total reliability is .55 trait anxiety inventory, .54, .46, .53, respectively for state anxiety inventory. Trait anxiety sub-scale of the inventory was used in this study.

Data analysis

Skewness and Kurtosis values were tested for evaluating normality distribution. Skewness (0.593) and Kurtosis (-0.503) values of both scales were found between +1 and -1, in other words they were found to normally distributed and parametric test techniques were used. Descriptive statistics, frequency, percent, mean, t test, Pearson correlation test and multi-linear regression analysis were used for data analysis. SPSS 21.0 package program was used and a p level of <0.05 was taken as statistically significant.

Results

Table 1: Association between need satisfaction and trait anxiety level in university student athletes

	Relatedness	Autonomy	Competency	Trait anxiety
Relatedness	Pearson Correlation	1		
	Sig. (2-tailed)			

	N	217			
	Pearson Correlation	,687**	1		
Autonomy	Sig. (2-tailed)	,000			
	N	217	217		
	Pearson Correlation	,544**	,543**	1	
Competency	Sig. (2-tailed)	,000	,000		
	N	217	217	217	
	Pearson Correlation	-,370**	-,485**	-,540**	1
Trait anxiety	Sig. (2-tailed)	,000	,000	,000	
	N	217	217	217	217

** . Correlation is significant at the 0.01 level (2-tailed).

When correlation analysis findings were evaluated, trait anxiety level of university students was seen to have a negative correlation with need satisfaction. When level of negative correlations was analyzed, it may be stated that trait anxiety level of the athletes have a moderate association with autonomy and competency subscales of need satisfaction and a weak correlation with relatedness subscale.

Table 2: Regression analysis results about the role of need satisfaction on detecting trait anxiety level in university student athletes

Model	β	t	p
Autonomy	,306	-4,131	,000
Competency	,409	-6,028	,000
Relatedness	,074	1,035	,332
R=0,589; R ² =0,342; Adjusted R ² =0,338; F(3,216)=37,687; p=0.000			

Relatedness subscale of need satisfaction is seen not to be included in multi-step regression analysis model. According to multi-step regression analysis, a significant association was found between both autonomy and competency, and trait anxiety level (R=0,589; F=37,687; $p < 0,01$). While a negative and significant association was found between autonomy and trait anxiety level ($\beta = 0,306$; $p < 0,01$), a negative and significant association was found between competency and trait anxiety level, too ($\beta = 0,409$; $p < 0,05$). Autonomy and competency scores explain 34.2% of overall variance about trait anxiety level (R²=0,342; $p < 0,01$).

Conclusions

The present study has investigated the predictive role of need satisfaction level on trait anxiety level. Autonomy and competency were detected to negatively predicted trait anxiety. Results of the study have revealed that the increase in autonomy level of the athletes has led to a decrease in trait anxiety level, a decrease in autonomy level has led to an increase in trait anxiety level. The same was observed for also competency.

Sarı et al. (2011) have reported a negative and moderate correlation between need satisfaction and trait anxiety, consistently with our study. It may be stated that satisfaction of basic psychological needs could lead to a decrease in trait anxiety as also stated by Sarı et al. Results of the study of Harrison et al. (1997) are also in parallel with ours. In another study, Mellanby & Zimdars (2011) report a negative correlation between trait anxiety and autonomy.

Consequently, although relational studies provide more information about causality between variables, it is not possible to test causality with that type of designs. Interventional studies which include control group or experimental studies would yield more clear data about autonomy support and trait anxiety. Results of our study significantly contribute to literature despite these limitations. Although autonomy support and self-determination theory have been applied in many context, they were not studied yet in athletes in trait anxiety context. This is the first study in that field. Results support self-determination theory and contribute to literature.

Abstract

The contribution aims to study the perception of the sacral landscape and spiritual places in the South Moravian Region (especially the city of Brno) and Ústecký Region, i.e. in those areas which are ranked among the most and the least religious within the Czech Republic. The main purpose is to explore the landscape perception from the viewpoint of university students in both regions – with the focus on their spiritual imagery and preferences related to concrete places. The second aim is to point how we include these findings in the university courses at Masaryk University in Brno and J. E. Purkyně University in Ústí nad Labem. The paper discusses interrelated topics, which are linked with the landscape perception in South Moravian and Ústecký Region. The first theme is the sacral landscape associated with the perception of spiritual and personally important places; then the intention is to approximate the perception of sacral and spiritual elements of the landscape such as churches, chapels, forests, elevated places in the landscape and roadside memorials; third aim is to show how it works in the courses Sustainability, Urban and Rural studies and International Geographical Research. A questionnaire survey has been used to explore the spiritual attitudes of young people studying geography in Ústí nad Labem and Brno. The results point out the specific spiritual attitudes towards generally natural spaces and places assuming the condition of very low declared religiosity (in Ústecký Region) and provide an overview of the places and feelings associated with them; on the contrary relatively high religiosity and abundance of sacral and spiritual places in South Moravian Region were discussed. The results also point to the specific and relatively significant spiritual perception of certain landscape elements by young people which act in the cities of Brno and Ústí nad Labem. The application of mentioned concepts in the university education is also included.

Introduction

Landscape is an important component of the living space that is inhabited by every living being of this planet. The beginnings of modern attempts to grasp its complexity can be found at the end of the 18th century with Alexander von Humboldt; according to Lipský (1998), von Humboldt described the landscape as "the total character of the territory" (Totalcharakter der Erdgegend). Forman and Godron (1993) in their Landscape Ecology define the landscape as a heterogeneous part of the territory, consisting of a cluster of interacting ecosystems that repeat themselves in similar clusters within several kilometres wide area. According to Lipský (1998), the Dutch School views the landscape as a complex of higher order systems that interact with each other. These systems are by their nature an inseparable part of the Earth's surface and the whole set is formed and maintained by the continuous activity of abiotic, biotic and anthropogenic factors. Emphasis is placed on three aspects: perception, horizontal and vertical landscape structure - see also Stibral & Faktorová (2015). Anthropogenic relationships and influences play an important role in these landscape systems. The long-term effects of these influences are described by Stibral & Faktorová (2015), who, among other things, explain the formation of the landscape concept from the Renaissance period, including its reflection in painting and literary creations. Schama (2007) deals broadly with landscape study from the social science point of view. He primarily perceives the landscape as a cultural phenomenon (similarly to Cosgrove 1993, Wylie 2007); however, the inclusion of the sacral landscape purely according to anthropogenic influence is problematic (Zonneveld 1995, Forman and Godron 1986, Lipský 1998). The aspect of culture and lifestyle is indisputable; the sacral landscape can be found in the rural environment, for example, in the form of scattered Baroque architecture (Havlíček 2011), but also in cities where we can encounter various influences of sacral objects on the life of individuals, in heavily urbanized areas (Novotný & Daněk 2017). The aesthetic function of these objects can also be important (Havlíček & Hupková 2008), on the other hand, for the believers, it is mainly used as regular meetings spaces or "technical places" for religious practice (Novotný 2017). There are also sacral sites that are located in an environment close to the nature, if we use the first part of

the Zonneveld (1995) classification for landscape status description. It may be more remote places of pilgrimage, other little shrines, but also "sacred places" existing for centuries.

Why do people constantly turn to nature, when on the other hand, they are building "artificial" temples, such as churches in the city? The whole concept of landscape perception was influenced by religion and biblical interpretation of the creation and historical development of the world, a positive reputation of wild landscape acquired with the advent of Romanticism (Stibral 2005). Prior to Romanticism arrival, the views of the population were greatly influenced by religious paradigms: in particular, the effort to create a "terrestrial paradise" - the perfect landscape, and thus to come closer to an ideal landscape which God previously created in the Bible. The change comes slowly and gradually by promotion of natural elements within landscape paintings, as well as architectures, for example the extensive construction of castle gardens and ornamental buildings or landscaping of unpaved swampy soil, which could be found in the Italian region of Veneto in early modern times (Cosgrove 1993). The return of artists to the elements of ancient culture was also significant (Ovidius, Vergilius). The archetype of the Arcadian landscape was recreated thanks to the cultural movements of Renaissance and Romanticism. This landscape type showed an ideal forest-land type with plenty of food, wide view and shelter (Cosgrove 1998, Stibral 2005). It also included ancient elements, such as mythical creatures or temples. At the same time, thanks to its popularity, this type of landscape became the starting point for the next generation of artists, which were interested in landscape paintings and sacred sources. Eliade (In Relph 1976: 15) believes that sacred experience involves the "manifestation of something of a wholly different order, something that does not belong to our world". Such experience obviously has profound existential significance – above all it provides orientation by reference to holy or sacred places. Sacred places are centres of the world – points at which the three cosmic planes of heaven, earth and hell are in the contact and where communication between them is possible. Such centres are in no way to be understood as geometric and indeed there may be an infinite number of sacred centres in any region all of which are considered and even literally called "the centre of the world" (Eliade In Relph 1976: 16). Thus each temple, each place, each hallowed area and even each house insofar as it is itself a temple, constitutes a sacred place (Raglan 1964). Modern artists were also, since the beginning of the 20th century, focused on specific work with space and the environment, to help highlight and reflect the unique relationship between man and place (e.g. specific art, land art) (Šiler 2017).

Civil groups and individuals are currently engaged in the rescue and repair of thousands of small sacral monuments scattered throughout our country (Šiler 2017). Not to pray at them - as the Poles have done so often – but so that these sacred spaces and artefacts, by their simple silent existence, have rhythmized the area of the city and carried out the cultural acupuncture of the landscape (Šiler 2017). The contemporary reconstruction of sacral objects is not predominantly conditioned by religious motives (Havlíček 2011).

As part of the perception of the landscape and its further use, for example, for tourism or recreation, the concept of scenic roads was formed in the USA during the 20th century. It is based on a combination of automobile and sightseeing routes, to show the beauty of the surrounding landscape (see, for example, Bobr & Riezner 2017, Bobr & Novotný 2018, US Department of Transportation 2018). The purpose was to make use of less frequent roads and encourage the development of economy alongside them. Designed roads must have at least one of six qualities, such as archaeological, cultural, historical, natural, recreational or scenic value (Bobr & Riezner 2017). The scenic roads theme could be linked to sacral sites through roadside memorials, i.e. memorials to victims of traffic accidents (Hartig & Dunn 1998, Nešporová 2013, Nešporová & Stahl 2014, Przybylska 2015).

According to Forman & Godron (1993) the perception of the landscape depends on the viewer's point of view. This is a human individual for in our case of study (the research question focuses on the perception of the landscape by the inhabitants of the South Moravian and the Ústecký regions, more precisely by young respondents aged 20–30 years, we are especially interested in the lower end of this spectrum - see 2. The Study / Methods). The research problem is focused on the perception of the key sacral elements of the South Moravian and the Ústecký regions, but it also aims at the imagery and the experience of the personal sacred places that respondents create in the space which they inhabit.

The aim of this text is to study the perception of the landscape through the eyes of young people in the South Moravian and Ústecký Regions – and to do so we use three main themes that are interconnected. Within the framework of the aforementioned concept of a sacral landscape, it is intended to bring closer look at the perception of spiritual and personally important places (if such sites exist for the participants of the research), which are not always associated with ecclesiastical objects in the landscape. Our assumption was on the contrary, we presume that within the framework of secularization trends, it is more about other places which will be more directly related to nature. The partial aim was to identify these spiritual places and their significance for the present young generation, including the assessment of important historical places and landmarks in Brno and Ústí nad Labem

and surroundings of these cities. The second aim is to assess perceptions and differences in the perception of partial sacral and spiritual elements of the landscape, such as churches, chapels, forests, elevated places in the landscape, as well as memorial sites serving as memorials to victims of traffic accidents. The third objective lies in the didactic purposes: to approximate the context on which this research is based. The main context is university education at two Departments of Geography in the Czech Republic: in Brno and Ústí nad Labem. These cities were chosen because they act as catchment areas for university education in the South Moravian and Ústecký regions. Specifically it is taught in following training courses on aforementioned universities: course of *Sustainability* and the *Urban and Rural Studies* (both at Masaryk University in Brno, taught in the period 2014-2017), both originally introduced by doc. Alois Hynek, and *International Geographic Research* at the University of J. E. Purkyně in Ústí nad Labem since 2017.

In the frame of our didactic methods we use the division of the key concepts in Geography (see also Hynek et al. 2016) or the Sustainability concept as presented e. g. by Whitehead (In Cloke et al. 2014) in the Third edition of *Introducing Human Geographies*. Sustainability, also commented as sustainable development, is an integrated concept which includes three main pillars: the environment, the economy and the society. The environment is represented basically by ecological systems, biological metabolism, source use, etc.; the economy is characterized by financial flows, employment, production process or patterns of consumption; the society is based on living, reproduction, quality of life, health or the issue of the human rights (Whitehead in Cloke et al. 2014). Teaching Sustainability at the Masaryk University of Brno (since Autumn Semester of 2014 up to 2017, with the cooperation with A. Hynek) meant following outline of the course:

- a) Study on Lower Svitava Basin – near Brno
 - 1) rural landscapes
 - 2) urban landscapes
- b) Lectures and complementing seminars on:
 - 1) natural and social capital
 - 2) hybridity and nexus
 - 3) virtual walk along the Svitava river in Brno

The culture lies among three sustainability pillars and it is represented in the space by the cultural landscape. The cultural landscape is created by different people with disparate habits and intentions in different places – material culture is determined by the process of transformation of the environment (Sauer 1963, Hynek 2011). Landscape is product of collective endeavour, it reflects ideas, power and technologies; it is shaped by social organization, it has its own choreography – the processes produce disparate forms (shapes); cultural landscape is the space of nature and human interactions (Sauer 1963, Hynek 2011). Landscape is also a visual image of cultural meanings (Wylie 2007). The analysis of the landscape should include discourses or the systems of language and written studies which are included in the production, representation and interpretation of these landscapes (Cosgrove 1993).

Practical terrain research focused on the perception and cognitive understanding of selected localities. Sustainability – in the frame of this concept the cores of the practical research according to our teaching can consist in (see also Hynek et al. 2016): Land use; Labour, land and capital; Technical and social infrastructure; Divergencies (landscape continuum or so called urban-rural nexus – Gondek 2014); Transport, waste and pollution; Biodiversity; Security questions – ‘safety’ and ‘security’; Agents, actants. Decision makers, stakeholders, shareholders; brownfields – what about their future usage?; Factories and business companies – their environmental policy; Flood risks; Other many possibilities of terrain research.

We also encourage our students to create their own “mental maps” of different areas of study (e. g. surroundings of Brno, urban landscape of cities Brno and Ústí nad Labem), followed by discussion of the natural and social capital placing emphasis on the perception (Hády quarry, Těsnohlídek Valley etc.) and/or the application of the sense of place concept (Tuan 1974, 1977). Interviews and participant observations are the crucial methods of geographical inquiry we try to teach our students as well.

There is also a concept of the scenic roads which is primarily possible to be included into the category of drive tourism or tourism in general (Hardy 2006). For teaching, this concept is a way to get familiar with your region or state. The theme is also applicable for fieldwork or seminar work at universities or lower grade schools. Here there is more space for pupils' own creativity, such as defining important elements in a region or state. These places then form the central points that will result in the scenic road designation. Here there is the opportunity to point out the natural and cultural specifics of each country and to adjust the route choice to them. The final result of this scenic road planning exercise can be the student presentation of the designated scenic roads and the defence of the reasons for their selection.

The Study

Typical quantitative methods were utilized, namely a questionnaire survey, conducted according to the typical methods of creation and evaluation of the questionnaire (Cloke et al. 2004, Disman 2008, Punch 2008). There were three main themes of the inquiry related to the aim of this contribution: 1) general perception of spiritual and personal places in the landscape, 2) attitudes towards concrete sacral and spiritual elements of the landscape 3) application in the university education and environmental sciences. This was a pilot research, created to provide answers of the representative sample of a certain population group (the students of Departments of Geography of the Faculties of Science at UJEP in Ústí nad Labem and MU in Brno); after evaluating the results, the other purpose was to specify, to “soften” (see Hendl 2005) or redefine themes and particular questions. Subsequent research then can be developed in more manners, basically a) to continue with a vast quantitative survey with the aim to collect opinions of broader layers of inhabitants of both examined regions, b) a qualitative survey with limited number of selected respondents, but with the use of thorough semi-structured interviews and standard methods of selection of the communication partners like e. g. the method of the snowballing (Cloke et al. 2004) or the technique of the grounded theory (Strauss & Corbin 1999). The reason to opt for our sample of respondents also laid in the attempt to continue with the research on religious and spiritual imagery of young people (Hopkins 2015, Novotný 2017, Novotný & Daněk 2017, Bobr & Novotný 2018), with the focus on Ústecký Region, which is traditionally rated as one of the least religious regions of the Czech Republic according to statistical data (see e. g. ČSÚ 2014); and immediately after evaluating this part of survey, to aim at the Brno Region, to construct a comparison, between other results, because this territory is part of traditionally more religious South Moravian Region (Lužný & Nešpor 2008, ČSÚ 2014, Nešpor & Vojtíšek 2015).

The questionnaire survey was conducted in Ústí nad Labem in March of 2018, subsequently in Brno in the month of June of the same year. In Ústí nad Labem the questionnaires were distributed in the lectures, including all present students of all years and specializations of Geography in Ústí nad Labem; in the case of Brno the survey was done via online questionnaires in the interface of Google Docs (in June the courses had already ended). The answers of 93 respondents were collected in Ústí nad Labem, with 63% of men (59 persons) and 37% women (34 persons); in Brno 100 respondents participated in the survey (51 men and 49 women). The average age of all respondents in Ústí nad Labem was 22,3 years; in Brno the average age was 23,7, however, it was influenced by some extreme values (Ph.D. students exceptionally up to the age of 39 years). However, the modus (the most frequent value) for Brno was 22 years of age. Many respondents live in Ústí nad Labem or Brno or in the close surroundings of mentioned cities, but others inhabit Brno and Ústí nad Labem just temporarily or commute from localities outside the defined regions of Ústí and Brno (see below), thus a specific amalgam of personal and spiritual important places was created. These were mainly sacral places, selected churches and other monuments, but also places which can be related to the national landscapes (see e. g. Nairn 1997), or places constituted by hills and mountains (Milešovka, Buková Mountain near Zubrnice, Malé Sedlo in the city district of Střekov, then selected lookouts and altitude points in the surroundings of Brno, like the view from the Hády quarry, Babí Lom, Klucanina or Čebínka lookouts).

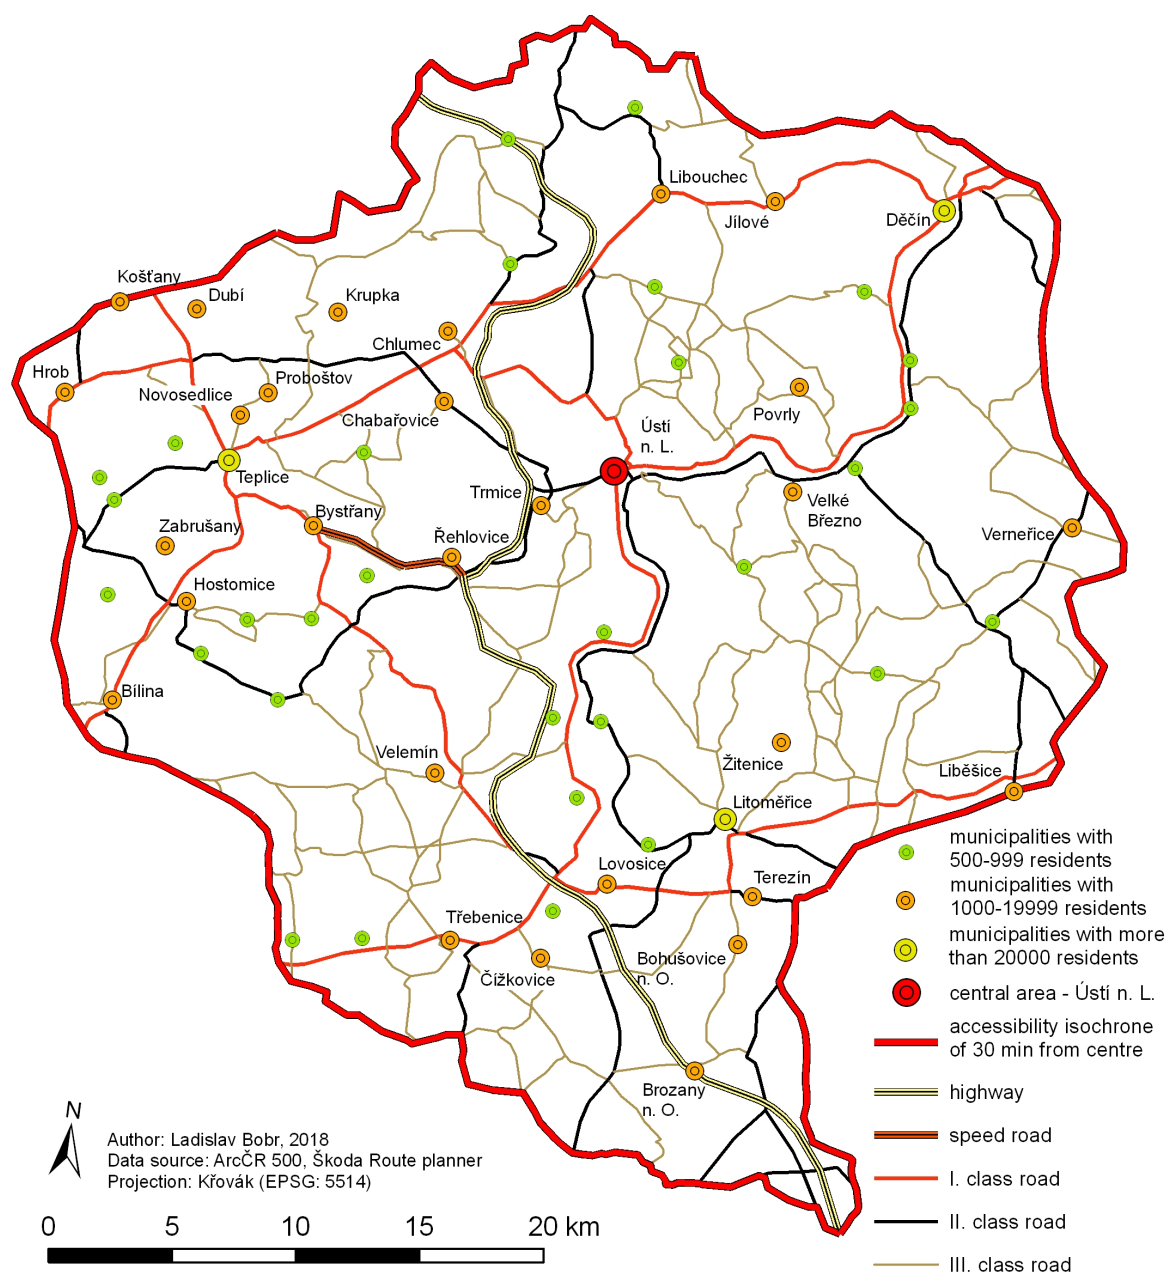

Figure 1: Ústí Region defined by average time accessibility isochrone (30 minutes) by car from the central location (Ústí nad Labem)

The introductory part of the questionnaire concerned the imagery of spiritual places and expression of the personal connection to the sacral landscape. Consequently, the concrete places of respondents' spiritual importance were determined, based on the maps of Ústí Region and Brno Region (Figure 1, Figure 2). These regions were understood as territories delimited by average time accessibility isochrone (30 minutes) by car from the central location (Ústí nad Labem or Brno, using the application Škoda Route Planner (Škoda Plánovač cest 2018)). The account of selected sacral and spiritual places in Ústí and Brno Region did not necessarily include only "material" churches and chapels, but also forest complexes, caves, viewpoints in the landscape etc. The perception of the places had been evaluated on the scale from 0 to 5 and after closing the research, the resulting score of selected localities was defined. The respondents also had the opportunity to express which spiritual and personally important places were missing in this part of the questionnaire.

In the phase of Ústí nad Labem also the more focused querying regarding the importance of surrounding landscape during the commuting to school or employment (vacation, eventually) was carried out; in compliance with the scenic roads concept (Mauch & Zeller 2008, Bobr & Riezner 2017, U. S. Department of Transportation 2018), this part of the research was already published (Bobr & Novotný 2018); the results on the scenic roads in Ústí Region

are not included in this text. The question of roadside memorials (erected to the memory of victims of traffic accidents) was intentionally projected to bridge the issue of scenic roads and particular evaluation of the sacral objects.

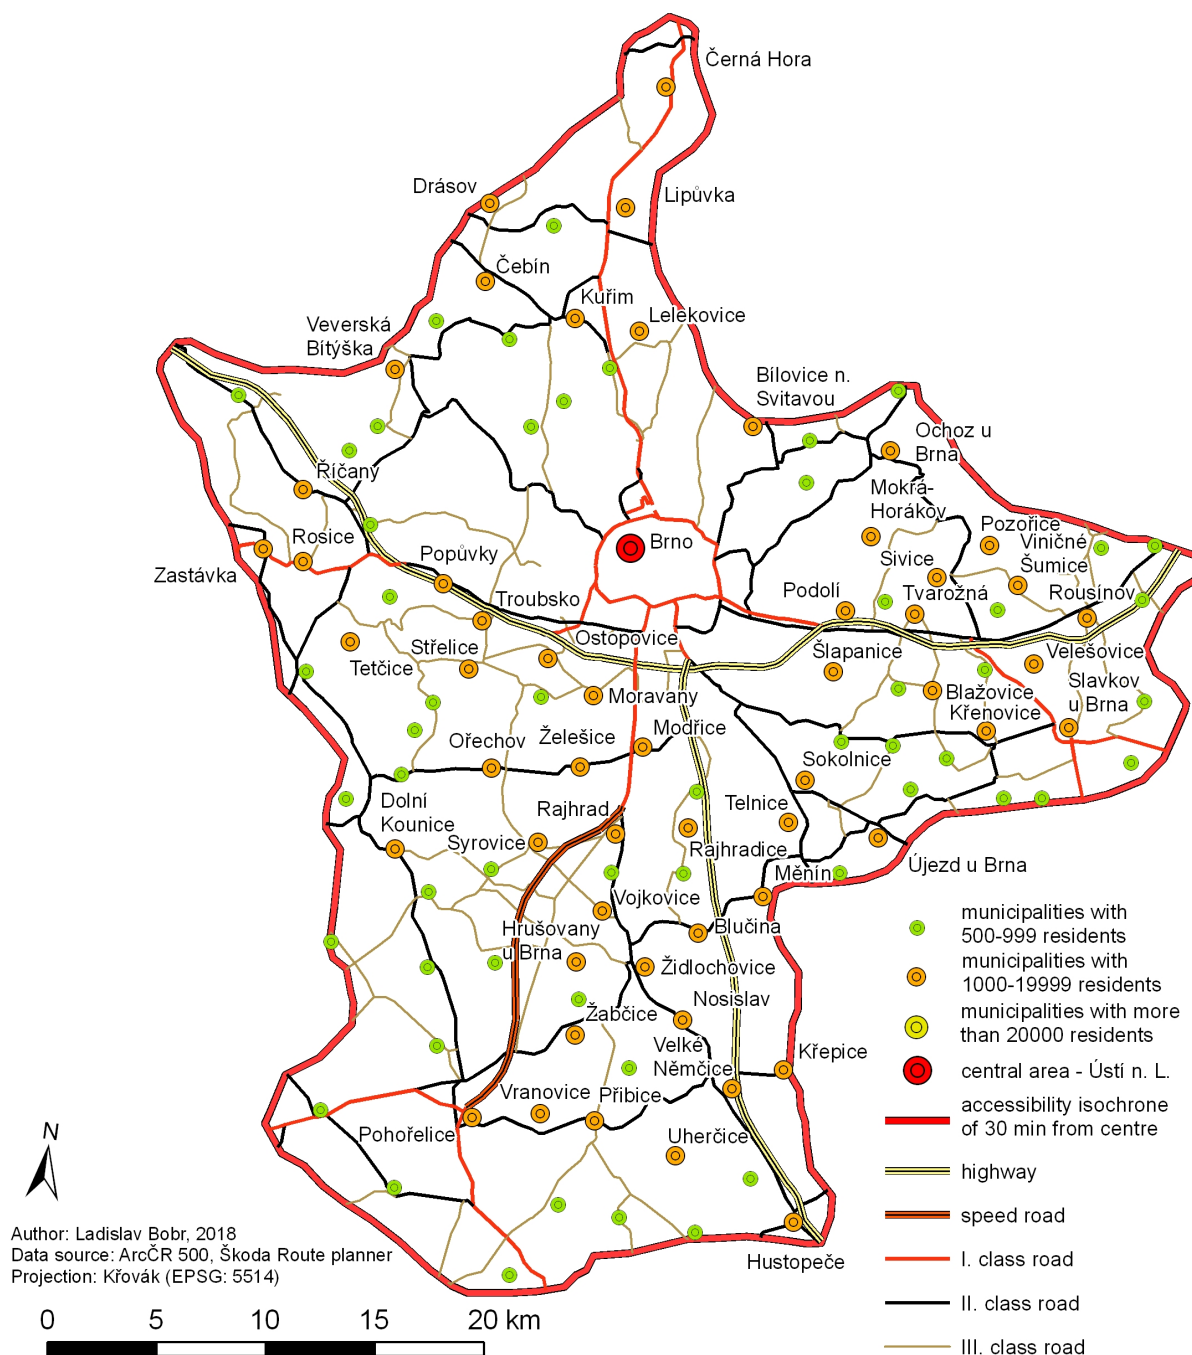

Figure 2: Brno Region defined by average time accessibility isochrone (30 minutes) by car from the central location (Brno)

Consequently, sacral and spiritual places, such as churches, chapels, crosses, stations of the cross or funeral areas were evaluated. Also the landscape perception was questioned, as well as the reflection of concrete feelings when observing the landscape from an elevated place.

As is usual, the final part of the questionnaire asked for common identification data, such as age, sex or the school-year of the respondents (keeping the anonymity, the name of the respondent was not required). An important question, and one of central questions, was about the self-identification of the student regarding their religious attitude, utilizing some predefined categories (non-believer; I believe in a higher power which I would not name God; I am Christian but I do not attend masses or any other spiritual meetings; I am Christian and an active member of the community, etc.). The respondents were allowed to introduce their own specific attitude, out of predefined

categories; this option was frequently used mainly by traditionally more religious (and/or spiritually oriented) students of the Department of Geography of Brno.

Findings

With regards to the sacral landscape and spiritual meaning, students from Ústí mostly state hills and mountains, such as the sites of lookouts (62 %). The second most important part of sacral landscape were pointed out to be churches and chapels (60 %) (it was possible to check more choices in the question). Little less than half of respondents (47 %) also matched forests to that meaning. Only about 34 % connects sacral objects, such as stone crosses and shrines, with any spiritual meanings. Funeral sites (cemeteries, graveyards, tombs, burial chambers, burial sites, necropolis) are mentioned sporadically in some answers, however there was no direct question for that kind of place. Historical sites (i.e. places with historical meaning) and water bodies (rivers, ponds, dams, lakes) are mentioned only rarely. In that context were also rarely mentioned places and spaces, where the person is surrounded by other people. People (crowd) provide spiritual power of the people or community to these places (i.e. people create place).

The answers of students from Brno are sharply different. The most important sacral places are considered to be churches and chapels (92 %), followed by stone crosses and shrines in the landscape (72 %). Elevated places with lookouts and forests are not considered to be much important (only 25 %, or 17 %). Funeral sites were asked for directly, and the result is their importance for 60 % of respondents. According to the answers, these places are mostly connected with their usefulness, importance for meditating, calmness and memory of the deceased. In the imagery of the respondents from Brno, the traditional perception is mostly used, according to which the Christian sacral elements are equal to general sacral elements. These results follow the proposition of higher religiosity of Brno respondents (which is shown by their perception of sacral places) and lower religiosity of Ústí respondents; according to statistics, the South Moravian Region is among the places with the highest religiosity (and with a high percentage of Christians), while the Ústí Region is among the less religious places. That is shown also by different perception of sacral places. The spirituality in Ústí region is mostly linked with natural spaces connected with spirituality and the sacral objects are only vaguely related to the creation and development of personal spirituality. In Brno region, as mentioned above, the spirituality is mostly connected to Christian sacral objects.

Particular places with (possible) spiritual importance for respondents are based on defined regions of Ústí and Brno (defined above; see part The Study / Methods). In Ústí region, the most frequently mentioned places were the surroundings of the place of home and further mountainous parts of the landscape. Their importance was partly for the physical landmark itself (easily found and dominant element of the landscape), partly for the lookout place; this supported the original hypothesis of including questions on spiritual aspects of lookouts as well. Among these should also be included rock structures (such as Tisá Walls or Marian Rock, a landmark in Ústí).

In Brno region, there was a stronger connection to the place of study, Brno itself. In the first, open student suggestion question, the Petrov cathedral (cathedral of St. Peter and St. Paul in the city core of Brno, one of important landmarks, shown also on one of the Czech coins) is mentioned most frequently. Another frequent place in Brno was St. James Church near the main square in the city core, or a common category “churches”. Particular churches were mentioned also in the region of Brno, e.g. monastic church in Rajhrad (south of Brno) and Vranov u Brna (north of Brno) or pilgrimage church in Křtiny (northeast of Brno). Important churches (in the sense of history or architecture) and pilgrimage places were mentioned also in a common meaning. On the other hand, the in Ústí frequently mentioned categories of high places and lookouts were almost excluded in Brno respondents’ answers. Some respondents identified sacral and spiritual places exclusively with Christianity; thus leading to answers in sense of “I am not a believer, I have no such places”. This also points out the usual confusion “spiritual/sacral means Christian”, which is quite common in the Czech Republic.

Table 1: Perception of connection between selected parts of landscape and personal spiritual life (%).

	Ústí	Brno
churches and chapels	60,2	91,9
(stone) crosses and shrines	34,4	77,8
forest	47,3	17,2
hills, mountains – points of lookouts	62,4	25,3
cemeteries and other funeral places	N/A	58,6
other place	21,5	11,0

Source: own research and processing

Results of the part of survey containing the score of personal importance of places in the Ústí region, happened to be influenced by respondents’ place of living. It is a result itself, however it probably urges to re-define and narrow

the study of spiritually connected places in urban and rural landscape. Two places in the Ústí region have a crucial role, no matter the respondents' place of living – Říp (mythical hill, key place in Czech origin myths), which itself is out of the region, but it is visible and easily identified due to its shape, and Terezín (town, former fortress and a place with the holocaust memorial). The survey score was 347 for Říp and 341 for Terezín, which are the highest values. Other notable places in Ústí region with high scores are: Milešovka (sharp cone shaped hill, regional landmark and place of free time activities; score 296), Tisá Walls (natural landmark, rock structures; score 286), Střekov Castle (natural and historical landmark in Ústí district Střekov, part of panorama above the Elbe river; score 263) and Větruše (natural and historical landmark with small castle on the hill above the confluence of Elbe and Bílina rivers, part of panorama of Ústí; score 241). These places are also both landmarks and very impressive lookouts.

On the other hand, two other lookouts with assumed importance were scored as less important. The main reason for their low score is probably bad accessibility. Lookout on top of Malé Sedlo hill (score 86) is placed in a rather peripheral area to Ústí and it is not much known. Erben's lookout above Ústí district Dobětice (hill with lookout and lookout tower; score 136) is an important landmark (sharp hill above the estate), however it is far from students' daily used areas. According to the survey, other less important places are Přemysl Oráč memorial in Stadice (also refers to Czech myths; score 124) and noticeable hill Buková hora near Zubrnice (score 130). These places with less personal and spiritual importance were substituted by specific hills, memorials, landmarks and places near respondents' places of living. It is possible that respondents were influenced by the previous question in the survey, which led to equalling of spiritually important place perception and "mere" landmark presence perception in place of living. The result of this equalling was a combination of personal influence, everyday or regular movement and local landmarks; spirituality was lost in this phase of research.

In Brno region, the Petrov cathedral in city centre of Brno (score 337) had the highest score. In Brno are also other important religious landmarks – St. James church (score 298) and The Augustinian Abbey (church and monastery) in Staré Brno (at the Mendlovo square; the abbey has been the home and workplace of scientist Johann Gregor Mendel. A special kind of spiritual place is the battlefield of The Battle of Austerlitz (score 211), which consists of several places (e.g. castle in Slavkov u Brna [originally Austerlitz], memorial at Zuran hill, several mass graves areas, etc.). The most important is probably The Peace Memorial near Prace, which is the first peace memorial in Europe. On the other side of Brno region (northwest of Brno) is Veverí castle (score 204), built on the promontory above Svratka river (now above surface of Brno Dam) in a forestall area. Discussing the score of the latter two places, their importance probably lies in their tourist attractiveness and their aura of a place for pleasant experiences in general, not only in the spiritual sense. On the other hand, both of these places can be attractive for dark tourism fans.

As mentioned above, the places of lookouts in Brno region have surprisingly failed. The only exception is lookout tower at Babi lom hill (north of Brno; score 159). Other lookouts and lookout towers, such as Květnice hill above Tišnov (score 91), the rather well known Alexander's Lookout Tower above Adamov (score 80), Klucanina (above Tišnov; score 69), Čebínka (northwest of Brno; score 55), have rather low score. However, the popularity of Babi lom and Květnice may result from their natural and landscape importance, the exploration of which used to be a part of lessons in the Department of Geography. It is possible that high places in landscape are not as important as in Ústí region because of the type of relief. Mentioned high places in Brno region, which are meant to be widely known, are rather far from the core of the Brno urban region. As has been found out during years of teaching the courses "*Sustainability*" and "*Urban and Rural Studies*" at the Department of Geography in Brno, a lot of students have no interest in exploring nearer and further surroundings of their place of study. Their daily time-spatial routines are narrowed down to places of temporary living, study and several free time activities (e.g. sports ground, library, restaurants, pubs, clubs etc.). Similar behaviour is observed with students of the Department of Geography in Ústí, although their link to the Ústí region is stronger (but not with the city of Ústí itself). It may be caused by a stronger regional impact of Ústí Department, while students come to Brno from different regions of the Czech Republic, i.e. not only from the Brno region or the South Moravian region.

The next topic of survey was reverential places near roads, which emerge as the memorials of road accident victims. In general, results of survey did not confirm the thesis of Przybylska (2015), who stated a growing rejection of these roadside memorials. Ústí students seem to be permissive; most of respondents checked the answers "it is right, they [roadside memorials] are a useful warning and also road accident prevention" (78 % of respondents) and "it is right, they [roadside memorials] remind of the deceased person in a suitable way" (58 % of respondents). Among Brno respondents, the results were quite similar (63 %, or 45 %). It is possible to conclude, that young people are more accustomed to roadside memorials. They can feel compassion with their same-age peers, who are sometimes involved in these accidents as well. Results of this survey seemed to show an important field for further deeper research (e.g. via interviews; Cloke et al. 2004, Dismar 2008).

It would also be incorrect to ignore the negative answers, although they are notably fewer. About 4 % of respondents both in Ústí and Brno do not like this kind of reverence in public space. Another portion of respondents consider the memorials as morbid (3 % for Ústí and 6 % for Brno). Partial comments for this topic show mostly the unsuitability of this kind of personal memorials in public space. One of respondents even advised the survivors should “put the headstone in their living room”. There were two other possible answers added in Brno part of survey (it ran after Ústí part). These answers were “I do not like them [roadside memorials], they often have low aesthetic quality” (12 %) and “I do not like them [roadside memorials], they distract the drivers” (5 %). Whole results are shown in Table 2.

Table 2: Perception of reverential places of road accident victims next to roads (e.g. crosses, memorials, flowers, candles etc.). Values in table in %.

	Ústí	Brno
it is right, they remind of the deceased person in a suitable way	58,1	45,0
it is right, but I do not perceive them	N/A	26,0
I do not like them, they do not fit into public space	4,3	4,0
I do not like them, they are morbid	3,2	6,0
I do not like them, they often have reduced aesthetic quality	N/A	12,0
it is right, they are a useful warning and also road accident prevention	78,5	63,0
no opinion	2,2	0,0

Source: own research and processing

The last topic of the survey focused on perception of specific (pre-defined) kinds of object and places, which are usually connected with religion or spiritual things. Categories were churches and chapels, crosses and shrines, Ways of Crosses and funeral sites. For each category possibilities of perception were set as “historical sites”, “spiritual places or places of calm”, “prominent landmarks”, “useless elements” and two other categories for other or no opinion.

For Ústí part, churches and chapels are perceived mostly as a historical landmark (92 %) and as a spiritual place or place of calm (68 %). Their perception as a prominent landmark is notably lower (29 %). On the other hand, almost no one marked them as useless elements, and the count of “no opinion” possibility was also very low (only about 5 %). Students from Ústí mostly state architecture, importance for tourism and sometimes also pleasant feelings as the positive attributes of these objects and their places. In some cases, negative attributes are stated as well; sometimes these places cause awkward feelings, disdain for religion (not mentioned whether only for Christian or religion in general), or feelings that “there is no business for an atheist in this place”. Among Brno students, churches and chapels are dominantly perceived as historical landmarks (89 %) and almost in the same way as spiritual places or places of calm (80 %). The perception as a prominent landmark is also lower (but not as much as in Ústí part; 55 %), while other possibilities take only marginal portion.

Crosses and shrines are perceived in a similar way. For Ústí part, most students see them as historical landmarks (58 %) and spiritual places (53 %). Interestingly, there is a relatively high portion of respondents who perceive them as the useless elements (13 %). For Brno part, the meaning of these objects as historical landmarks was noticeably lower than as spiritual places (52 %, or 60 %). They were also widely perceived as prominent landmarks (31 %), while their uselessness was distinctively lower (only 3 %). The question on Ways of Crosses was put only into Brno part of survey, where these objects were marked mostly as places of calm (63 %). The difference of perception of these places may be caused by different socio-cultural background of both regions. It is possible to tell the amount of these objects in both regions is similar. Their architecture and historical background are different – in Ústí region they were established mostly by German nationality and were strongly influenced by conventions of this community, while in Brno region the main driving force was Slav inhabitants (Moravians) and their conception of Christianity was rather different (partly because of strong Great Moravia influence). While the original inhabitants in Brno region remained, Ústí region underwent a great change because of resettlement of German inhabitants after World War II. (in Brno and in some parts of its region there were similar changes after World War II. Most of inhabitants of Brno core were German-speaking people as well. However, the change of culture was not as significant as in Ústí).

Views of landscape from some view point were in Ústí part perceived mostly as an aesthetical experience (87 % of respondents). It was also confirmed, that the calmness of the view can be related to spiritual life or spiritual feelings. Almost 30 % of respondents claim to experience unusual spiritual feelings and 11 % feel the presence of (some) supreme power. Among other feelings, there were quoted: peace, delight of climbing, overlooking the

landscape, insignificance of person compared to nature or an overall feeling of freedom. Results for Brno part were quite similar – 93 % of respondents perceive an aesthetical experience, 23 % feel the presence of supreme power and 18 % experience unusual spiritual feelings. These results also confirm the thesis of greater religiosity in Brno region. These results could also be a base of thesis of an extended spirituality. This spirituality has different presence in both regions; it is grounded in the traditional Christian religiosity in Brno region, but it proves to be a development of personal (individual) spirituality, with a very weak continuity to Christianity, in Ústí region.

The last part of survey contained a question on religious preferences of respondents (Table 3). These were put together with demographical and statistical questions. The Ústí Region has a long-term position as the least religious region of the Czech Republic (ČSÚ 2014). Nevertheless, it is rather surprising that only 3 students (3 %) stated a particular church (2 for Catholicism, 1 for Czech Brethren Evangelic Church). Only 9 % of respondents quoted affiliation with Christianity, but with no need to attend masses or other spiritual meetings. There was also an expectation of high share of people checking the possibility “I do believe in some supreme power, but I would not call that power *God*”. According to temporal surveys on religiosity in the Czech Republic, most people believe “in something”, which means in some transcendental power (Nešpor 2010, Václavík 2010, Štampach 2017). This discussed possibility was checked by almost 37 % of respondents, which leads to an opportunity for further research of religious or quasi-religious stances of (not only young) inhabitants of Ústí region. 52 % of respondents claimed themselves to be non-believers.

As discussed above, the situation in Brno region is different. Only about 20 % of respondents stated they are the non-believers. The most frequent stand-alone answer was the one of supreme power not called “God” (26 %). Strong affiliation with Christianity proves among possible dealing with Christianity – 21 % of respondents state to be Christians, but not attend masses or other spiritual meetings, 18 % claim to be an active part of the community and 8 % count themselves as Christians too, but they only attend masses (that means they do not usually attend other events connected primarily with Christianity).

Table 3: Religious/spiritual preferences of Geography students in Ústí and Brno (in %).

	Ústí	Brno
Non-believers	51,6	20,0
I do believe in some supreme power, but I would not call that power “God”	36,6	26,0
I am Christian, but I do not attend masses or other spiritual meetings	8,6	21,0
I am Christian, but I attend only masses	N/A	8,0
I am Christian and I am an active member of the community	3,2	18,0

Conclusions

This pilot study focused on three particular issues related to the perception of the sacral and spiritual landscape meaning in the core areas of South Moravian and Ústecký Region. The purpose was to approximate religious and quasi-religious imagery of the surrounding spaces. Religiosity is a conditioned complex of individual and subjective opinions (but still it is possible to identify specific inner regularities) and its inquiry in the contemporary Czech Republic brings knowledge about the shifts in the spiritual attitudes of young population. These attitudes differ with regard to the specific conditions of selected territories, basically because of: 1) traditionally long-term higher religiosity in South Moravian Region which is reflected also in religious and spiritual attitudes of young population, in contrast with Ústí (and Ústecký) Region, where the population was mostly re-settled during the 20th century and traditional religious ties often were shattered; 2) specific relief which enables creating of personal spirituality mainly in Ústecký Region, and without a traditional religion. Regarding the landscape perception, natural spaces of hills and mountains became crucial in the selected group of respondents; it meant elevated places in the landscape which are often linked with the spiritual feelings when observing the landscape. The places of personal importance are also related to the important localities of Czech historic past, with mythology (Říp Mountain) or the suffering of not only Czech nation (Jewish Memorial in Terezín), but also with the places of the origin of the individual, who belongs to certain (micro)region of regular practices. In Brno Region the importance of places is connected with the origin of the respondent in concrete territory within Brno Region, but at the same time there is also a higher share of students coming from very different regions of the Czech Republic. Generally, from the Brno phase of the research it is possible to observe importance assigned to the sacral monuments which serve as a spiritual place, but also as an urban landscape dominant. The clearest example is definitely the Petrov Cathedral, followed by other sacral monuments (churches and monasteries); also the Slavkov (Austerlitz)

battlefield has an important role, with certain analogy with the Terezín (former Jewish concentration camp and today a memorial place) at Ústí Region; in both cases these are places commemorating human suffering. Nevertheless, regarding the daily or regular activities, it is not the place of study which is important for commuting students from the personal/spiritual point of view, but the place of home. It is more visible in the example of Ústí Region, but this phenomenon is observable also in Brno Region. Places and sites like these are also good to watch for their scenic road potential and consider their interconnection. In case of this article, it is possible to speak about creating sacral scenic roads.

Albeit declared religiosity (in the sense of claiming to be a member of concrete Church or at least frequent visitor of masses and other spiritual meetings) of students in Ústí nad Labem is extremely low, several places have been assigned a spiritual value: this can once more challenge the questioned thesis about the non-religiosity of (young) population of the Czech Republic and particularly in the Ústí Region. If we put to the account relatively strong religiosity of the part of the students in Brno and frequent formulation of several forms of spirituality (in both regions), we can conclude that young people (based on the example of the geography students) are relatively considerably spiritually concerned in both regions, developing their own spirituality; simply said, they are not atheist, as is often claimed regarding the population of the Czech Republic. There are new emerging research options of more focused, mainly qualitative inquiry, which has already been dealt with by one of the authors hitherto on the example of Moravian cities. There are new options of grasping the particular questions about which we now have general results, and a continuation in the relatively attractive study of religious and spiritual attitudes of (not only) young inhabitants of Brno Region and mostly Ústí Region, it means the territory with very marked and distinctive morphology, which strongly helps to the specific perception. The essence of our research is also the involvement of the collected data and knowledge in the teaching and further development of the concepts discussed above in the relation to the university teaching.

Abstract

The purpose of this study is to determine the administrators' and teachers' perceptions on the needs related to the inclusive education practices and management at elementary level inclusive schools. In this research, study group has been chosen from classroom teachers, administrators and special education teachers currently working in the 2017-2018 academic year. Validity and reliability tested semi-structured interview forms have been used during data collection. Different set of interview questions have been prepared for school administrators and teachers. Data has been analysed through content analysis method. Research findings have been divided into sub themes. According to the research findings, school administrators said that they provided all kind of support for special education teachers and had positive attitudes toward inclusive education. However, classroom teachers stated that students with special needs disrupted the classroom environment. On the other hand, special education teachers said that practices for students with special needs had been very successful and helpful. They added that school administration did not provide sufficient support for special education.

School Autonomy In France According To Talis 2013: The Importance Of Educational Leadership

Pablo Javier ORTEGA-RODRÍGUEZ

Faculty of Education, Psychology and Sports Sciences Huelva University Spain

Abstract

In recent years, school autonomy in France has become a central issue for the improvement of students' outcomes. French principals, who have a significant responsibility for learning tasks, play an active role in decision-making. The purpose of this study is to explore the correlation between the type of school (publicly or privately-managed) and the significant responsibilities of French principals which participated in TALIS 2013. The sample consisted of 174 participants. Descriptive data were generated for all variables (percentages and means). Pearson's chi-square test was used to determine if there is an association between the type of school and principals' responsibilities for some tasks. All analyses were carried out using SPSS, version 22. Findings suggest a significant correlation between the type of school and principals' responsibilities for dismissing teachers and establishing teachers' salaries. This study adds to a growing body of research that school-based management has an influence on principals' responsibilities for deciding which courses are offered and choosing learning materials.

Keywords: *Leadership, principals, professional autonomy, school autonomy, school-based management.*

Introduction

In France, not all schools assume the same responsibilities legal or administrative. Hence the fact that people who administer schools receive different names. Principal is the name of Lower Secondary Education directors and Proviseur, in the Lycée, of Higher Secondary Education. French principals of Secondary Education can make decisions to authorize expenses, modernize the equipment and make some items of the budget more flexible (Oria, 2009). A qualitative study by Tulowitzki (2013) described how five Parisian principals had spent their work time. Most of them put a low emphasis on school improvement. They had to face many tasks and responsibilities with a demanding level of complexity. Their activities were related to administration and relationship.

In France, the transition from lower secondary education to upper secondary education is particular: families are involved in a process of dialogue with the school. In the first step, families make a request. In the second step, the staff meeting formulates a proposal. Barg (2013) found that school staff's decision-making depended on families' requests and, therefore, had reproduced the differences between social classes. Parental involvement had a great influence on school staff's decision-making. From a legal point of view, French principals can make decisions related to the organization of teaching in their school, but not with their methods and contents. This task is carried out through a division of responsibilities between the administration, the year head and its team and the pedagogical area (teachers) (Normand, 2015). French public schools are managed through a centralized system in which all teachers and principals are government employees. Elementary schools have principals who teach in and manage their schools, whereas principals work full time in middle and high schools (Supovitz, 2013).

The administrative accountability has influenced schools in the long term, although it has not had important consequences on teaching responsibilities. There is a limited autonomy for schools, a framework for school choice of limited dimensions and an unsatisfactory decentralization (Derouet, Normand & Pacheco, 2015).

School principals have the right to be both leaders and spokespersons for their schools. An effective management of human resources requires the recognition of directors as leaders, which does not agree with the pedagogical autonomy and professionalism demanded by teachers (Dutercq, 2015).

In 2005, an accountability policy was implemented in the French educational system, but it remains bureaucratic, centralized and descending, without taking school improvement into account. French principals have limited autonomy because their tasks are limited by the national standards in the curricula, teaching and schedules in schools (Normand, 2016).

French students' scores in PISA tests are close to the average of the OECD countries in all subjects. The government created two action plans. One plan is intended to provide personalized assistance to students with learning difficulties. Another plan aims to give schools more autonomy to manage its budget (Baird et al., 2016). After the publication of PISA results in France, the French government implemented national standards, an evaluation based on the PISA methodology for eighth grade students (Hugonnier, 2017).

The growing inequality of student performance in the last 15 years, confirmed by PISA results and the fact that this inequality is the highest in Europe, has been the reason why school autonomy remains limited. Many teachers and parents believe in traditional teaching and question political measures that advocate the learning diversity (Michel, 2017). In a study investigating principals' workload in France, Leithwood & Azah (2014) reported that school improvement is related to highly motivated principals who perfect their leadership over time, take advantage of their abilities in different contexts and work with other principals.

Objective

This paper investigates the factors that influence French principals' decision-making. The purpose of this study was to explore the relationship between the type of school (publicly or privately-managed) and the significant responsibilities of French principals for some tasks to improve school management.

The Study

Teaching and Learning International Survey (TALIS) is an international survey that offers the opportunity for principals to provide information about their professional development, practices, beliefs and school leadership. The questionnaire, which asks for information about policy matters and education, was completed by French principals (OECD, 2013).

Data were collected from TALIS 2013 results in France.

A variable is a construct or concept which is assigned to numerical values (DePoy & Gitlin, 2011).

A qualitative or nominal variable, which involves non-numerical observations, describes an individual by putting it into a group or category such as man or woman (Brase & Brase, 2016).

The values of a categorical or nominal variable are expressed as some categories, stated in words. If a categorical variable has two values is called a dichotomous variable. If it has more than two values, it's called a polytomous variable (Quader, 2016).

Pearson's chi-square test was used to determine if there is an association between the type of school and the significant responsibilities of French principals. The chi-square test of independence is conducted to determine whether the frequencies' distribution for one categorical variable is independent of another variable (Tokunaga, 2015). It's used to test the null hypothesis that the outcomes' proportions are the same all compared groups. The alternative hypothesis states that the proportions of outcomes are different (Hanneman, Kposowa & Riddle, 2013). The null hypothesis claims that there is no difference between compared groups or no relationship between variables. In contrast, the alternative hypothesis claims that there is a difference between compared groups or relationship between variables (Allen, 2017). If the P-value is less than 0.05, the null hypothesis is rejected and the alternative hypothesis is true. Then the result is statistically significant. If the P-value is equal to or greater than 0.05, the null hypothesis is accepted and the result is not statistically significant (Defusco et. al, 2015; Epstein & Martin, 2014).

In general terms, the alpha level or the level of significance is a probability level set before beginning hypothesis testing and determines the standard to reject the null hypothesis (Smith, Gratz & Bousquet, 2009). The alpha level sets the boundaries that separate high-probability samples (those that are likely to be obtained) from low-probability samples (those that are unlikely to be obtained) if the null hypothesis is true (Gravetter & Wallnau, 2009). In social sciences, it's commonly used an alpha level = 0.05. The normal curve of the sampling distribution, which represents 95% of its area, is included within 1.96 standard deviation units. Any score farther away from the mean falls within the 5% region (2.5% on either extreme of the sampling distribution) (Meyers, Gamst & Guarino, 2006).

All analyses were carried out using SPSS, version 22.

Findings

Chart 1. Percentage of French principals who answered the question “How strongly do you agree or disagree with this statement: This school provides staff with opportunities to actively participate in school decisions”.

Of two hundred and four French principals, one hundred and seventy four completed the questionnaire. 61.49% of French principals provide staff with opportunities to actively participate in school decisions, 35.63% of the respondent strongly agreed with the statement. A minority of participants (2.87%) disagree with the statement.

Chart 2. On average throughout the school year, percentage of time in the role as a principal that he/she spends on Curriculum and teaching-related tasks in school (Including developing curriculum, teaching, classroom observations, student evaluation, mentoring teachers, teacher professional development).

From the Chart 2 it can be seen that 30% of French principals have spent 20% of their time on Curriculum and teaching related tasks in school, 19.6% of them have spent 30% on their time, 16.9 of them have spent 25% of their time. 12.8% of French Principals have spent 15% of their time and 9.8% spent 10% of their time on Curriculum and teaching-related tasks. A minority of participants (less than 3%) have spent different percentages of their time on these tasks; for instance, 3%, 5%, 8%, 13%, 18%, 31%, 35% and 40%

Chart 3. Percentage of French principals who had a significant responsibility for deciding which courses were offered.

From the Chart 3 it can be seen that 37.8% of French principals had a significant responsibility for deciding which courses are offered, whereas 62.2% of them hadn't this responsibility.

Chi-Square distribution

The null hypothesis is accepted if the P-value is equal to or greater than 0.05 (the two variables are independent)

The alternative hypothesis is true if the P-value is less than 0.05 (the two variables are related)

	Value	df	P-value
Chi-square Distribution: Is there a correlation between the type of school (publicly or privately managed) and principals' responsibilities for dismissing teachers?	10,272 ^a	1	0.001

Table 1. P-Value of the correlation between the type of school and principals' responsibilities for dismissing teachers.

As Table 1 shows, there is a statistically significant correlation between the type of school (publicly or privately managed) and French principal's responsibility for dismissing teachers. The alternative hypothesis is true, so there is a difference between compared groups (public/private school principals) in relation to that task.

	Value	Df	P-value
Chi-square Distribution: Is there a correlation between the type of school (publicly or privately managed) and principals' responsibilities for deciding which courses are offered?	23,023 ^a	1	0.00

Table 2. P-Value of the correlation between the type of school and principals' responsibilities for deciding which courses are offered.

Table 2 shows a P-value = 0. There is a statistically significant correlation between the type of school (publicly or privately managed) and French principals' responsibilities for deciding which courses are offered. The alternative hypothesis is accepted, so there is a difference between compared groups (public/private school principals) in relation to that task.

	Value	Df	P-value
Chi-square Distribution: Is there a correlation between the type of school (publicly or privately managed) and principals' responsibilities for deciding on budget allocations within their school?	4,647 ^a	1	0.031

Table 3. P-Value of the correlation between the type of school and principals' responsibilities for deciding on budget allocations within their school.

Table 3 presents a P-Value = 0.031. There is a statistically significant correlation between the type of school (publicly or privately managed) and French principals' responsibilities for deciding on budget allocations within their school. The alternative hypothesis is true, so there is a difference between compared groups (public/private school principals) in relation to that task.

	Value	Df	P-value
Chi-square Distribution: Is there a correlation between the type of school (publicly or privately managed) and principals' responsibilities for choosing learning materials?	4,548 ^a	1	0.033

Table 4. P-Value of the correlation between the type of school and principals' responsibilities for choosing learning materials.

As Table 4 shows, the P-value is less than 0.05. There is a statistically significant correlation between the type of school (publicly or privately managed) and French principal's responsibility for choosing learning materials. The alternative hypothesis is true, so there is a difference between compared groups (public/private school principals) in relation to that task.

Conclusions

The findings of this study suggest that nearly 62% of French principals provide staff with opportunities to actively participate in decisions, but they can't decide which courses are offered in their schools. It has confirmed the findings of Iftene (2014) which found that French principals do not have any autonomy for raising private funds through donations, sponsorships and revenue from space rental.

The results indicate that 30% of French principals spend 20% of their time on curriculum and teaching-related

tasks, whereas nearly 20% of them spend 30% of their time.

Overall, this study strengthens the idea that principals' responsibilities for dismissing teachers or establishing teachers' salaries is related to the type of school (public or private). It has complemented the findings of an earlier study conducted by Maroy, Pons & Dupuy (2017), which reported that in France there was a "globalization by discursive internalization", in which transnational imperatives are integrated in official discourses on the regulation of the education system.

The results suggest that the type of school (publicly or privately-managed) plays a vital role in principals' responsibilities for deciding which courses are offered and choosing learning materials. It has provided a deeper insight into the school autonomy. Pons, Zanten & Da Costa (2015) reported that the introduction of New Public Management approaches and instruments in the field of education had not exerted a significant influence either on the public management of State-controlled private schools or on the coupling between the public and the private sector. The management of Catholic schools is still mainly based, on the one hand, on regulation through inputs and limited intervention by public authorities and, on the other hand, on a complex system of internal moral controls by the private authorities themselves.

Screening Or Not? Use Of Social Media In The Recruitment Process: A Case Study From Turkey

Asst. Prof. Dr. Asuman KUTLU
Media and Communications
Beykent University
Turkey
asumank@beykent.edu.tr

Abstract

Social networking sites originally designed for connecting people, have turned into business tools and resources. Social media both allows companies to connect with customers and sites like LinkedIn or Facebook offer recruiters various opportunities to connect with candidates in hiring process. This study seeks to demonstrate the importance of social media use as a recruitment tool by human resources professionals and raise awareness of social media users on how the HR professionals use social media to screen candidates and employees. The study is guided by three main elements: Use of social media in HRM; social media use to check up on current employees; researching candidates online in recruitment process. In addition to information obtained through literature review, data was collected from 10 companies in Turkey selected using a maximum variation sampling approach through qualitative research methods. The results revealed that employment websites, which save time and money, are the most preferred recruitment platform in Turkey. Out of all social media networking sites, LinkedIn is considered the best platform for recruiting white-collar applicants and Facebook follows it for blue-collar candidates. Although contemporary practice of employee and candidate screening through social media does not highly affect HR professionals, it has become common practice to determine people's alignment with company culture.

Introduction

Employees working for some form of payment under a contract of service, have changed in name various times due to the change in social and economic activities throughout history. Before 1980, the terms labour, labour force and personnel were used for employees, accepted as a significant resource within physical and financial sources in order to help the enterprise achieve its aims would later be defined as human resources. Transition process from personnel to human resources could also be regarded as the evolution of the work-oriented approach to the human-focused one. During this process, the management in charge of recruitment, keeping employee records and dismissal have been evolved into a department which is not only in charge of recruitment but also a much wider activity area covering a variety of tasks such as training and motivating employees and creating vision and mission of an institution or an organization. A right recruitment process might be the first and most important step to carry out these activities since finding employees who meet all the requirements including being compatible with organizational culture reduces funds spent by human resources management in areas of activity some of which are right recruitment process, employee management and education and career planning. Therefore, recruitment process covers a wide area of activities including employee need assessment and vacancy announcement, receiving applications, conducting interviews and employing right number of candidates meeting job requirements.

Another dramatic change nowadays which human resources department is going through is that human resource activities have been digitalized thanks to the increasing use of computers and the internet at business. One of the biggest changes that digitalization brings about is experienced in recruitment process. Until the mid-2000's, yellow pages which was one of the best methods for getting business found has been respectively replaced by career sites bringing employers and employees together, company web sites and social media tools such as Facebook and Twitter. Not only does digitized recruitment process help companies find expedient candidates in a short time at low cost but also companies are considered to gain prestige through being visible on new media platforms. On the other hand companies take the advantage of the continuously developing internet and social media to find potential candidates and measure their institutional appropriateness through analyzing their social media profiles. Scoping out job candidates on social media has become an expected part of the application process and getting a glimpse of who candidates are outside the confines of a resume could be held in favor of or against them. Many employers use social media to screen job candidates and run background checks before or after the interviews. They search social media profiles to obtain information supporting their qualifications for the job, to see posts, comments and photographs thus employers search for some key items via social networking sites as good signs to hire or they could be turned off by a candidate's online presence. Companies are provided with information obtained through candidates' social media profiles by human resources departments or continuously increasing number of internet companies. These companies are able to supply not only actual data but also contents shared by the candidate in

the past or deleted data. Considering studies on use of social media in recruitment process and screening job candidates in existening literature, this paper reports the findings of a study carried out with human resources professionals and aims to raise awareness about the transformation of social media into professional platforms.

Conceptual Framework

Companies wishing to gain advantage under conditions of global competitive environment acknowledge that human capital is a company's greatest asset because active management of financial and physical resources depends on employee skills. However strong other kinds of capital a company has, failure is inevitable if it is not able to take advantage of existing capital as required. The term human resources, first coined in the 1960s, is used to describe both the people who work for a company or organization and the department responsible for recruiting and staffing, training, labour and employee relations and organizational development (Barutçugil, 2004:32). The term covering all employees from unskilled ones to top executives in any organization is also used to express utilizable labor out of organization. It is an essential component of any organization which handles a variety of tasks including staffing, employee compensation and benefits, and designing work (Kaynak, et al., 1998:15). The history of human resources management is said to have started in England in the early 1800s and further developed with the arrival of the industrial revolution in the late 1800s, however the drastic changes in technology, the growth of organizations, the rise of unions and government concern and interventions resulted in the development of personnel departments in the 1920s. HRM argued to have started from the term 'Personnel Management' according to some scholars, emerges after the World War in 1945 as an approach by personnel practitioners to separate and distinguish themselves from other managerial functions and making the personnel function into a professional managerial function. Traditionally, the function of PM is claimed to 'hire and fire' personnel in organizations other than salary payments and training. (Haslinda, 2009:181) PM views employees as tools in an inverted approach however HRM has a wider scope considering employees as a prominent factor which adds value to the organization (Yüksel, 2007:9). Human resources today, contrary to traditional personnel management which keeps human capital in the background, integrates traditional PM functions to company's goals and strategies.

Recruitment and selection processes are considered to have a huge impact on how an organization functions because an effective recruitment and selection process (R&S) not only finds quality employees but also saves time and money on replacing and training new people. Employees have the opportunity to monitor the people at every level they have hired from the first day at work. R&S process at an organization (despite the process in individual to each organization) typically starts with identifying the hiring need. Once the company identifies what it needs, the human resources department prepares skill sets required and tries to reach candidates through a variety of methods depending on type of organization and business. While a global company could prefer to reach candidates through digital technologies whereas a small-sized enterprise tries to find candidates through distributing leaflets. Typical methods of recruiting include advertisements, posting available jobs on company websites, job search sites or social media.

A business uses two sources in R&S process which are internal and external recruitment each of which has advantages and disadvantages. While internal recruitment is filling with staff currently employed, external recruitment is the process in which the company hires a new employee outside. Companies seeking to reach employees who already know the organization and to reduce cost and time often use internal strategies along with external strategies by offering promotional roles to internal candidates. As a consequence they build motivation, a sense of commitment, and long-term satisfaction. Employers also use external recruitment to attract individuals with the necessary skill sets, especially when wishing to develop the business or take it in a different direction. Although internal resources are often preferred to reach potential candidates, it is not always possible to find potential applicants within the company. Therefore, companies tend to find employees through external recruitment methods such as using a recruitment agency, printed publications or online recruitment methods in order to assess a deeper pool of candidates for the job to be filled. In external recruitment process, it is also worth pointing out that in terms of leading and managing employees, if the company is not recruiting the people who bring the greatest skill sets to the organization, it will be a struggle to manage them day-to-day. Additionally, without a business analysis it is difficult to discover candidates' performance capabilities even with the best candidates until they're in the workplace (Çavdar & Çavdar, 2010:81). Therefore human resources departments take advantage of personality inventories, tests, and a variety of human resource assessments to obtain a great deal of information about the candidates.

As digital technologies become a reality of our lives, human resources departments take the advantage of mobile and other technologies to achieve business outcomes and drive organizational change. Many companies today impose upon digital technologies to save and process data in human resources departments as well as taking advantage of them in recruitment process. Digital technologies allow companies to access a larger pool of candidates quickly and inexpensively. Therefore, employment web sites in which candidates can share their cv

and companies post job vacancy are preferred more and more by both companies and candidates. Many recruiters searching for candidates take advantage of employment web sites and social media instead of print advertisement. In addition, employment web sites have started to use social media more effectively. Social media such as Facebook, Twitter and LinkedIn in particular bring recruiters and candidates together. For instance Starbucks, the largest coffeehouse chain in the world, is a good example of social recruiting case. Starbucks has taken advantage of social media to further expand their company. The company posts open positions, feature stories of employees who work for the company to interest future applicants, and is also able to expand their brand by getting their siren logo seen by the world. Social media reduces costs as well as building two-way communication. (Drum, 2010). The other reason why recruiters often take advantage of new technologies especially social media to fill positions is that people active in business are mostly representatives of generation Y. A generation is defined as the period of time, usually considered to be about thirty years that it takes for children to grow up and become adults and have children of their own (TDK, 2006) but it is not easy to divide lines between generations. Generation names and age spans are defined differently depending on country or region. Individuals belonging to different generations of age have different experiences, different views, different habits and different work style. There are five different groups of generation in literature however Turkey has its own generational definitions depending on its own social, political and economic influences. These are silent generation (born between 1925-1945), baby boomers (born between 1946-1964), generation X (born between 1965-1979), generation Y (born between 1980-1999) and generation Z (born 2000 and later) (Arslan & Staub, 2015: 5). Today Baby Boomers, Generation X and Generation Y members make up workforce considering members of silent generation and generation Z are not active in business. In 2014, baby boomers make up 10% of the workforce, generation X accounts for roughly 44%, and generation Y, which is the youngest generation employed, makes up about 46% of the workforce (TÜİK, 2014). Members of Y generation which represent nearly half of the total workforce distinguish themselves with social responsibility, self-confidence, being objective driven and having respect for diversity. Equipped with the latest technology they are the best-educated generation so far and they expect openness and transparency from management and colleagues as well as flexibility (Brown, et al., 2018). Marked out by their use of digital tools better than other generations causes human resources departments to use social media more in recruitment process. On the other hand searching for applicants through social media provides companies with cost advantage. Thus companies do not have to spend too much for employment sites and are able to post job vacancy on any desired platform. This gives employers the opportunity to emphasize different aspects of a vacancy on a variety of platforms and access a deeper pool of candidates. For instance Youth Republic, an integrated creative agency in Turkey, went beyond the traditional recruitment process and chose a popular application Tinder among young advertisers to find a new copywriter. They created a female and a male account they matched with young advertisers attracted their attention and got more applications than expected. The agency demonstrated that how a company can make a big impact by using digital technologies in recruitment process. Despite the tremendous growth of social media, company websites are still the first source of information for applicants in recruitment process. Therefore, companies build mobile compatible websites in which candidates can easily upload cv and obtain information about current vacancies. In addition to all, effective use of digital technologies in HR process has caused effective use of social media to be included in job description of HR specialists. Employers expect HR specialists not only to find employees through taking advantage of social media such as LinkedIn or Facebook but also to access top talents who are working in another company or not actively searching for job, to increase traffic to company website and post vacancies on social media platforms fit for applicants.

Related Studies

Even though companies still prefer to advertise job roles on job search sites or their own websites, an increasing number of companies have started to advertise their job vacancies on social media sites. Jacobs defines this process as social recruiting which is “sound hiring decisions by actively using web-based technologies to build a shared understanding between employers / recruiters and passive and active job seekers.” (2009:3) Since the new media has become more prevalent in everyday life, it has also changed the way employers made their hiring decisions. Employers started to look through social media to gather information about potential candidates. While some are looking to learn about candidate’s social life, others are looking to see if the cv lines up with the information shared on social media. According to a study focusing on recruitment and screening of job candidates, recruiting via social media is growing with 84% of organizations using it currently and 9% planning to use it. Recruiting passive job candidates (82%) continues to be the top reason that organizations use social media for recruitment (SHRM, 2015). Therefore information obtained by employers without the knowledge of candidates could be used for and against them. Furthermore some studies demonstrated that employers disregard candidates after screening online. Posting provocative or inappropriate photographs or information, sharing content about them taking alcohol and showing poor communication skills are some of the reasons for disqualifications. According to a survey carried out in 2009, hiring managers use social networking sites to research job candidates. Of those who conduct online searches of candidates, 29 percent use Facebook, 26 percent use LinkedIn and 21 percent use MySpace. One-in-ten (11 percent) search blogs while 7 percent follow candidates on Twitter. Thirty-five percent of employers reported they

have found content on social networking sites that caused them not to hire the candidate. The content includes provocative or inappropriate photographs or information, alcohol and drugs, discriminatory comments and confidential information from previous employer. On the other hand, eighteen percent of employers reported they have found content on social networking sites that caused them to hire the candidate. The content includes profile provided a good feel for the candidate's personality and fit, profile supported candidate's professional qualifications, good references about the candidate and good communication skills (Career Builder, 2009)

Research conducted focusing on candidate's awareness of screening process in 2008 revealed that thirty seven percent of candidates were aware that employers or recruiters could screen their social networking profile (Harrison, 2008). According to a similar study in 2010, while forty nine percent of candidates were aware that employers could view their social media, fifty one percent are not aware of the process. The survey found 49.3% of respondents were aware, while 50.7% of respondents were not aware that employers or recruiters could view their social networking profile. (Vicknair, et al., 2010)

In a study done with students enrolled in business classes at a college on their thoughts regarding what they thought of employers viewing their social media accounts and whether they find these practices appropriate showed that as students were aware that employers were screening their profiles for information, they protect themselves through privacy settings. However, they were unaware of the importance of grammar and spelling accuracy and how their friends' actions on social media may portray them in a negative light. (Root & McKay, 2014)

Although the number of global studies focusing on the use of social media in hiring process is increasing, research about social media screening in Turkey is still inadequate. According to a global study carried out in 24 countries including Turkey, more than half of all recruitment activity involved the Internet (53 percent) in 2013, with the percentage for 2014 expected to continue to grow (61 percent). 7 out of 10 recruiters use social media for their daily HR professional activities and recruiters largely use social media to assess a candidate's reputation. While the most attractive element to find on a social media profile is previous professional work experience, followed by the presence of professional prizes, achievements, and/or awards, which tend to be overlooked by candidates in their profiles, personality insights that can be identified from the profile come third, while no interest is shown for the candidates' number of contacts. (Adecco, 2014) Technology changing how employers and recruiters find potential candidates has a significant impact on recruitment process. As it allows recruiters to get an incredible amount of information about prospective candidates, social media accounts are screened by human resources departments in hiring process or to check up on current employees. They can indicate social media posts or photographs to eliminate a candidate or fire an employee. As a consequence professionals should be aware of the content they share on social media and its impact on their job prospects.

Research Methodology And Sampling

This is an exploratory study research using qualitative research methods to reflect the perspectives of participants. The main part of the study involved in-depth, semi- structured interviews with human resources professionals selected using a maximum variation sampling approach to cover as wide a range as possible in terms of age, sex, experience and sector. Semi-structured interviews in which open ended questions are used in order to get as many details as possible were employed because it offers flexibility while still covering the same areas of data collection. 10 interviews were obtained as people declined to give a lengthy interview due to their busy working schedule. However this research is consistent with the principles of qualitative analysis as it does not aim to be statistically representative (Punch, 1998:175). Human resources is a female dominated profession so of the 10 human resources professionals who completed the interview, 7 were women and three were men; their median age was 34 (range 26-42) and median experience was 12 years (range 3-18), three respondents had a bachelors' and seven had a masters degree. Of the 10 companies represented 2 were from manufacturing sector and others were from a range of other sectors which are textile, shopping mall management, food, healthcare and consulting. In depth interviews focusing on social media use in HRM to research candidates and current employees were carried out in cafes in early 2018. Interviews lasted on average about 40 minutes and were audiotaped and transcribed. All participants granted permission to be tape recorded. Every recording was labeled with name of the interviewee in order to avoid complication. The transcripts were analysed using template analysis to generate a list of codes representing themes in the text (King, 1998)

Findings

Social Media Use in HRM

The rapid evolution of social media has a big impact on human resource management and when asked about the use of social media, nine human resources professionals responded that they use social media effectively. While some human resources departments manage social media profiles on their own, some receive support through

consulting companies. They use Facebook, Instagram, LinkedIn and Twitter respectively. Three respondents also use Workplace, a business-focused version of Facebook. “We use workplace effectively and store all information there. Employees communicate and collaborate on work-related initiatives. For example, last weekend, we went trekking and shared photos with 16 countries. Also last month one of our partners founded a new shopping mall abroad and employees shared its video, we are highly online and interactive in that sense.” (P7)

Whatsapp which is quick and easy to operate is used by all age groups is another popular instrument for employee communication. All respondents integrated this messenger service into company’s daily routine.

“Our company has Facebook and Twitter accounts managed by a social media agency. We inform them about company activities and special days. We rarely use LinkedIn. We share company trainings organized by human resources department. But we use LinkedIn just for information purposes, private life is of secondary importance. We often use whatsapp to communicate with employees, even more often than mailing. We get feedback much faster. Also i created a whatsapp group hooking up all employees.” (P5)

“Our company doesn’t have any social media accounts and we don’t communicate with employees through social media. Most employees are blue collars and they do not use social networks. But we have to enter the digital world as soon as possible. I work in a long established company but people are not aware of our presence. We use whatsapp but some of our employees are not familiar with it either.” (P2)

Most respondents use social media for employee motivation and engagement. They post pictures taken at work and write comments thus spread information about the company. This can help with company awareness and provide new business opportunities. However, they tend to communicate through company social media accounts rather than their personal ones.

“Our company has Facebook, LinkedIn and Instagram accounts. Candidates especially blue collar ones use Facebook more than other social media platforms. It is difficult to get followers on Instagram so we must post job vacancies on Facebook. We also get positive and negative feedbacks more on Facebook. Interestingly, employees send me friendship requests but I think they shouldn’t. All in all, I am human resources manager. I can catch their photos taken and posted within the working hours or if an employee takes sick excess sick leave, i can check Facebook posts for those days. Therefore it is better not to communicate through social media.” (P3)

“Corporate trade department manages social media and many employees participate in the process by sharing photographs and comments. We have an internal application and broadcast employee suggestion program, employees can access us through them. However i add friendship requests of employees on company social media accounts rather than my personal one.” (P1)

“I never add employees on social media because i don’t want them to feel stalked by human resources department and I don’t want to be stalked either.” (P7)

“LinkedIn is a very important platform for both employers and employees. If you are in business life, you have to have a presence on it. Professionals can meet and exchange ideas so can constantly build connections and increase them.” (P2)

“A person who doesn’t have any social media accounts arouse my suspicion. This brings a fake account into a question because it is impossible to exist in business life without social media presence.” (P3)

Social Media Use to Check up on Current Employees

Employers as well as human resources professionals look at current employees’ social media accounts because individual freedom intersect with corporate identity. When asked about looking at current employees’ social media accounts, respondents did not find it ethical however only two respondents said that they had never looked at social media accounts.

“As we are a global company, privacy act is of utmost importance. We don’t look at current employees’ social media because we are not interested in employees’ private life. Now there are numerous companies doing this, they can fire employees for Facebook posts. However our company has a policy prohibiting discrimination.” (P7)

Although none of the respondents said they didn’t experience this kind of process in their current company, interestingly all mentioned they were aware of the the fact there were numerous companies including their ex, firing employees because of social media posts.

“Everyone has the right to privacy related to political, religious or sexual choices. We can’t make distinction based on them. However companies making such distinctions are increasing. My previous company was one of them. I had to fire employees as they posted pictures of them drinking alcohol.” (P7)

Two respondents mentioned employees shouldn’t post about politics and religion because employers pay attention to them. They should utilize privacy filters and avoid sharing posts or pictures that could damage their professional life.

“I had to fire an employee because he was posting about religion. He was an atheist. My previous employer was devoutly religious and was always warning employees against social media posts. According to him, employees represent himself, he didn’t want to be discredited. I am devoutly religious too but we got on well, his faith doesn’t interest me. He was a true professional at work. It wasn’t fair but if employers pay attention to social media posts, we should go by the book.” (P2)

“Employers should check up on employees social media accounts provided that they don’t abuse the process. If an employer tells employees they represent the company and there are things they shouldn’t share on social media, employees have to obey it. I don’t want to be misunderstood, i don’t support that policy. Unfortunately, employers pose a threat to individual freedom. Our hands are tied through that process, you want to share or like something on Facebook, but you can’t due to fear of being fired. My current employer cares pictures containing alcoholic drinks and political posts (if related to opposing party) I have to warn employees, i tell them to add close friends on social media and keep their posts private. Social media shifted the line between personal and private so employees are in charge of managing social media.” (P3)

When asked about social media use, interestingly most understood Facebook, Instagram or LinkedIn but not LinkedIn, they evaluated LinkedIn as an online employment website.

“I don’t find it ethical to look at employees’ social media because it is the private life of individuals but LinkedIn is not something like that, it is a professional platform. We don’t look at employees’ LinkedIn profiles either but we warn them. All employees are brand ambassadors so we tell them to have a professional LinkedIn Profile, upload a picture taken in front of company logo, write a success story. Because candidates look at them so employees should manage this platform effectively.” (P1)

Employers don’t want their employees to post things that could turn off customers or damage business relationships. In order to prevent privacy violations companies make policies such as social media training for employees or putting additional items into contracts. While Turkish Personal Data Protection Law protects fundamental rights and freedoms of persons, privacy of personal life in particular, the single respondent said they prepared a social media policy outlining how an organization and its employees should conduct themselves online.

“Employees shouldn’t talk about company or products and share company information getting customer reaction on social media. In my previous company a trainee shared information on behalf of the company. After the fact, we took action and prepared a social media guide telling employees not to share anything on their own social media on behalf of the company and corporate communication department is in charge of this process. We create hashtags and prompt them to engage in the conversation happening around that hashtag. We motivate employees to share photos of training programs workplace experiences.” (P1)

Others acknowledge employees’ use of social media is connected with corporate identity but their social media policy is limited with new employee orientation programs and verbal warnings.

“We provide new employees with an orientation program focusing on social media use. Especially, we warn them against posting pictures during production process. We export abroad and companies we sell our products could penalize our company for posting products. Our employees have high level of education so they are highly conscious of our verbal warnings and sensitive security. So I didn’t have to fire an employee because of social posts so far.” (P5)

One respondent said he stalked employees on social media to detect cliques. Social media could make new cliques and this could affect office culture.

“I stalk but not to check up on current employees but to detect cliques. I want to learn how employees socialize in and outside the office. I believe cliques prevent collaboration and inclusion of diverse perspectives and can be detrimental for a company. An employee who is excluded could resign and we lose a very talented person because of cliques.” (P5)

Social Media Screening in Recruitment Process

When asked about the methods respondents use in recruitment process, all indicated they use online employment websites. They post open positions on job boards, review resumes and conduct a phone interview to identify candidates for review by hiring managers. As well as linking candidates to employers, recruitment platforms offer career development resources and training information. However, some respondents indicated that job seekers are not well aware of applications.

“We get applications only on employment websites because all applicants must be treated equally and be given the same set of opportunities. If candidates try to submit CV offline, we reject because each candidate have to pass the preliminary elimination.” (P5)

“The online employment site we use has an application, selvi, which gave job seekers the opportunity to apply jobs through audio-visual mediums, upload a video cv. However candidates can't get much advantage of the application. They upload just a voice record or a video they record with their pets. That site also offers free trainings and seminars for human resources professionals and support individual as well as corporate development.” (P3)

Although employment websites reduce hiring costs and reach a variety of candidates quickly, employers meet high volume of resumes from unqualified applicants.

“Job sites allow candidates to access you however it is not always easy for us to access best candidates. So I find LinkedIn better to recruit employees. I can search for candidates by using keywords related to desired position.” (P8)

“Online employment websites are somewhat problematic both because of human resources professionals and employers. We are searching for a perfect candidate who has many of the essential skills and experiences, a very tall order we take to extremes. On the other hand people who don't have the minimum qualifications, required experience and skill set can apply for a position. Sometimes we get applications from candidates who don't have a medical degree for medical doctor vacancy.” (P3)

Only three respondents use LinkedIn to post jobs and one respondent uses LinkedIn Recruiter which is a paid license allowing employers to get unlimited access to every profile on LinkedIn. Two respondents advertise jobs in newspapers because of company owner. But respondents think newspaper limits the scope of applicants because fewer people are reading newspapers and publishing process is slow and online platforms elicit responses from all over the country.

“LinkedIn is the best platform to search for candidates based on their work history, job title, or university because normally it is difficult to qualified candidates aren't actively looking for jobs. However LinkedIn is not used to its full potential, for networking, it is difficult to find candidates.”(P10)

Three respondents take advantage of Skype interviews to save time and money. Although other respondents find Skype interviews useful under unavoidable circumstances, they prefer face-to-face interviews to identify and understand emotions of the candidate more clearly.

“If there aren't any annoying IT issues, I find Skype very efficient especially if candidates are not within close geographical proximity to the interview location. I often prefer video interviews between the resume screening and in-person interview stages. I could assess candidates face-to-face in the comfort of his/her own home. I think this creates equality between the employer and employee, prevents anxiety and feeling of being away. Therefore the candidate could express himself/herself better.” (P3)

“If the candidate is currently employed, Skype is the best option.” (P4)

When asked about social media screening, all respondents said they searched for social media profiles before hiring. Most respondents search for information supporting qualifications for the job and LinkedIn comes first.

“We only screen candidates on LinkedIn, the things we look at; candidate's education and experience match his/her cv, profile picture, having a profile picture is important, candidate's summary and involvement in social organizations. If candidate's qualifications and company requirements don't match, we don't invite the candidate to the interview.” (P4)

“Once i didn’t invite a candidate after a social media research. He had raunchy photographs and posts and they were public. The position was important and he could tarnish company image.” (P3)

Although there have been multiple arguments for the inclusion of a photograph on a CV, it is another key item human resources professionals pay utmost attention. All respondents indicated that profile picture should be professional. Social and professional images should remain separate. While adding a photograph to the CV can be seen as improper, not including a photograph throughout your digital presence is portrayed as naive and unprofessional.

“Candidate’s photograph is very important, sometimes we don’t take the cv without a photograph into consideration. Because we want to see the face of the candidate, sincerity of them, because photograph shows sincerity for us.” (P4)

“I look at candidate’s photograph, education and experience after telephone interview but I don’t stalk social media post or friends to avoid prejudice. Especially for some positions which require applicants to be presentable, I have to search them on social media if they don’t include a photograph on their CV.” (P2)

“I think even a selfie reveals much about personality. Camera angle, i mean how they hold the camera, whether or not they looked at the camera shed light on person’s personality.” (P3)

When asked about candidate screening during recruitment process, four respondents used Facebook, Twitter and Instagram pre-interview process, two looked at after the interview and four respondents said they didn’t search candidates on social media except LinkedIn.

“I stalk both job applicants and existing staff on social media because social media profile and postings shows character and I am good at analyzing candidate’s work ethic, dependability and attitude and i can easily learn them on social media. I try to understand whether the candidate’s personality and interests align with the values of the company because patient confidentiality is very important for us. An employee unaware of confidentiality could share a photograph of a patient and cause legal problems. We experienced a similar event. One of our employees shared a photograph of an elderly female patient and her relatives made a complaint about the issue. Following this event, social media fell into human resources department’s area of responsibility. However most of our employees are unaware of being stalked. I try to assess them on social media because i can evaluate qualifications more objectively, I can see his/her interests and get advantage of them in promotion process. For instance I promoted one of the employees last week, he is able to use social media very effectively and express himself in writing so i thought he is the best to represent the company in corporate communication department.” (P3)

In this sense, social media can also function as a source of information about the workforce, to identify those who are qualified to internal transfers and promotions. Another advantage of using social media is to gain insight into the values and personality of the candidate, so check candidate’s alignment with company culture so companies do not need proctor employment pre-tests. However one respondent indicated that they use both tests and social media profiles to assess competency with company culture.

“If candidates pass the first elimination involving different inventories required for the position, we screen them Facebook and Instagram profile to decide whether candidate’s personality and interests align with the values of the company. It is important because the number of candidates increases in respect to employees’ profiles. Our employees should represent our company well.” (P5)

Some respondents explained stalking behavior simply with curiosity, eight said they had never chosen not to hire a candidate because of social media posts.

“Candidate’s academic background and experience are vital factors in hiring but I like observing their lives, especially extreme cases, it is a biological instinct. I stalk celebrities too. Once one of the candidates had an interesting life style, she had pink hair so i searched her on social media but it didn’t have an impact on hiring process. After 15 July coup attempt, I suspected a candidate and did social media searched about him but it was state of emergency so I had to eliminate him.” (P7)

“I stalk white collar candidates on social media but not to eliminate them, just for getting preinformation, out of curiosity. However information on social media doesn’t cause not to hire a candidate.” (P2)

“First I search candidates on Facebook because everybody has an account. I also use Instagram but most profiles are private so it is more difficult to access them. I can find a lot of information via candidate’s photographs, posts, people’s comments or likes and dislikes. Since i am a human resources professional many people try to

communicate with me, they add me as a friend or send message. Communication skills are very important for me. For example they shouldn't use "what's up as a greeting" or they shouldn't make social media posts truly public. Use of social media reveals much about personality". (P3)

None of the respondents made a negative comment posting about alcohol consumption because except LinkedIn, social media of an employee is his/her own private sphere. In fact one respondent indicated that alcohol consumption can have a positive impact for hiring in certain departments.

"If the candidate will be hired in the marketing and sale department, posting information about them drinking has a positive impact on us. Because we are doing business with different countries and when our foreign customers visit us, the employee should know about night life to entertain them. However, if we will hire for manufacturing department, posting about alcohol consumption at 2 a.m. is problematic as they work by shifts." (P5)

None of the respondents require social media accounts during application and four respondents indicated social media is not a criteria to analyse a candidate.

"People can act differently online so social media personality doesn't reflect the reality. It can only cause prejudice. People can give reference but social media can't. There were many candidates we didn't hire after the reference check." (P2)

"Requesting social media address during application is a form of discrimination. In some countries like the U.S.A., labor and anti-discrimination laws prevent employers from requesting a picture or other details such as gender that reveal too much personal data and the some Turkish companies have started to adopt it. Female were asked whether they would take pregnancy leave in the past but now women do not face with such questions because it is not ethical, it prevents female employment. Today companies do not hire people based on the content shared on social media and it is not ethical either." (P1)

"We don't request the candidate's social media address however social media use is one of the key items to eliminate. I think candidates are thought to look motivated but most of them don't have much information about the company. It is not realistic. Our company is visible on all social media platforms. They can get information on social media at least." (P3)

Two respondents used company website to promote available positions as well as jobsites and social media. Although other companies have a website, they are either under construction or not updated. Another reason indicated is that candidates' lack of information about company websites prevents access a deeper pool of candidates.

Conclusions

Social media use in recruitment process has been an important research area in the field of HRM. Digital technologies lead to budget savings for human resources departments as submissions are online and HR professionals can use online personality to check candidate's competency with company culture through looking at social media profiles on LinkedIn, Facebook and Twitter as social media reveal too much information. The use of social media can also increase the number of potential employees companies receive as it creates new communication outlets. In addition to recruitment process, HR professionals use social media to research current employees and this can lead to bias if behaviour of employees do not align with personal values of the company.

The results show that although social media has become a new tool for recruitment, most HR professionals in Turkey don't utilize it for recruitment advertising purposes. They mostly use Facebook, Instagram, LinkedIn and Twitter. Nearly all companies try to manage social media accounts without receiving professional support. Every company integrated Whatsapp communication service into company's daily routine. They mainly use social networking sites to research job applicants and LinkedIn is their primary resource. All participants find LinkedIn useful in recruitment process as LinkedIn is a huge database where human resources professionals can find the candidates they need by using key words and see if cv lines up with the information shared on social media. It is followed by Facebook. Facebook has much larger user base than other social media networks and is effective for reaching internet users across all age groups. Therefore employers have a better chance at accessing candidates using this platform. In addition to assessing their skills and experience, they can check candidate's alignment with company culture. However they find it unfair to judge candidates by personal preferences which do not have any effect on professional performance. Two respondents said that they turned down candidates due to social content which is inappropriate.

Although each company represented in the study has a website, only two respondents get advantage of it to promote available positions. All HR professionals use employment websites for company recruiting. Targeting a far wider audience, online recruitment is much faster than traditional hiring methods and online postings are more cost-effective. However, job sites increase the chances of getting hundreds of job applications, many of which are irrelevant. While some companies use LinkedIn to post available positions, some get advantage of newspapers although they are considered to be slow and limit the scope of applications. Although human professionals do not tend to communicate with employees through personal social media accounts, most motivate them to engage in company's social media to post photos and spread information to increase public recognition. This study focused only a small number of respondents and future studies with more participants exploring the use of social media in recruitment process and research targeting use of social media in job search are needed to raise awareness of social media users.

Security ASA University Core Course In Undergraduate Curriculum

Sushil K. SHARMA
Ball State University
ssharma@bsu.edu

Abstract

The 21st century is all about connectivity but also faces challenges of continuously increasing levels and varieties of cyber-attacks. With an increased presence of individuals and organizations in an online digital world, it has become important we educate and train the masses to know how to avoid getting their information compromised by cyber criminals or cyber hackers. Cybercrime is the single most important activity which every individual or organization must deal with daily. Years ago, employers used to train and educate a handful of people in their organizations to prepare them for protecting organizational assets from hackers and cyber criminals. Today, there is a dire need for every employee to be educated and train with security education to defend digital assets.

Recent data indicates the number of cyber-attacks has increased by more than 25-30 percent annually. Under this scenario, there is a dire need to educate and train the average person to be equipped to against future cyber wars. Since the enemy is in virtual space on a 24/7 basis, it must be fought everywhere. As the types of cybercrimes are changing, future workers, independent of their majors, must be prepared with different kinds of education and training skills to defend against cyber threats. These cyber security skills should not be limited to IT professionals but earned by every college graduate.

Almost all universities offer security courses, but these courses are mostly offered by computer science, information technology, information systems or computer related disciplines for their majors. As evidenced recently, cyber-attacks affect every individual; therefore, it is imperative all undergraduate students, in all disciplines, are exposed to cyber security prevention methods to prepare them for the future challenges of cyber war. This paper discusses the design and methodology of a security course intended to be a university core course for all disciplines.

This paper discusses the approach used, curriculum developed, and the framework for the overall design of the course. The paper also discusses the types of attacks that affect individuals and challenges and opportunities for having such a course as part of the university core. The paper also discusses how a similar course on the basics of cyber security could be offered in our primary and secondary education systems.

Sekizinci Sınıf Din Kültürü ve Ahlak Bilgisi Kitabında İnsanın Özgürlüğü Ve Sorumluluğu

Mustafa ÖZTUNÇ
Sakarya Üniversitesi
oztunc@sakarya.edu.tr

Özet

8. sınıflarda okutulan Din Kültürü ve Ahlak Bilgisi Ders kitaplarında yer alan insanın özgürlüğü ve sorumluluğu konusu incelenmiş, insanın akıl ve irade sahibi olması ile özgür ve sorumlu bir varlık olması arasındaki ilişki ile ilgili bazı sonuçlara ulaşılmıştır. Konu içeriğinde insanı diğer varlıklardan ayıran en önemli özelliği aklını ve iradesini kullanma kapasitesine sahip bir varlık olduğu vurgulanmış, bu özelliklerinden dolayı, kendi yararına veya zararına olan şeyleri bileceği ve bu durumda insanın, davranışlarının sorumluluğunu da üstleneceği açıklanmıştır. “Özgürlüğümüzün sınırları başkalarına zarar vermeyecek şekilde olmalıdır.” sözün den hareketle “Herkesin sınırsız özgürlüğü olsa dünya ne hâle gelirdi?” sorusu öğrencilere yöneltilerek konu hakkında düşünceleri istenmiş, özgürlükle sorumluluk duygusu pekiştirilmeye çalışılmıştır. Allah’ın insana akıl bahşederek bunu kullanması gerektiği vurgulanmış, bu nedenden dolayı yaptığı her davranış ve seçimlerinde sorumluluk sahibi olduğu açıklanmıştır. Ayrıca Kur’an-ı Kerim’de bu hususlarla ilgili ayetler örnek verilerek Allah’ın emirleri açıklanmıştır. Özellikle sorumluluk kavramını ahlaki ve bir davranış olarak değerlendirmek gerekir. Kitapta anlatılan insanın özgürlüğü ve sorumluluğu konusunun içeriği ile Kant’ın görev ahlakı görüşü birbiriyle benzerlik göstermektedir. Kant, ahlaktan söz etmek için iyi istemenin olması gerektiğini ve biz bunu bize verilen akıl sayesinde neyi yaparsam doğru veya yanlış çıkarımda bulunarak ona göre hareket etmemiz gerektiğini bu sayede yapılan eylemin ahlaklı olabileceğini dile getirmiştir. Ders kitabında da aynı şekilde eylemde bulunmadan önce o eylemin sonucunun ne olacağını kestirebilmemiz gerekmektedir ve neyi yaparsam doğru olur diye düşündükten sonra hareket etmemiz gerekmektedir.

Anahtar Kelimeler: Özgürlük, Sorumluluk, Ahlak

Giriş

Okullarda okutulan derslerin en önemli yardımcı kaynaklarından birisi de ders kitaplarıdır. Din Kültürü ve Ahlak Bilgisi dersi eğitim ve öğretimi alan öğrencilerin bu dersi daha iyi bir şekilde anlamaları ve kafalarındaki sorulara kesin cevaplar bulabilmeleri için örneklerle desteklenerek hazırlanan Din Kültürü ve Ahlak Bilgisi ders kitaplarında yer alan konular ve içerikler bilimsel bir gözle ele alınması gereken konulardır. İnsanın yaşamı boyunca özgürlüğü ve sorumluluk duygusunu taşıması bunu yaşamına adapte edebilmesi elbette eğitimin konuları içerisinde yer almaktadır. 8 Sınıf Din Kültürü ve Ahlak Bilgisi Ders Kitabı da konu olarak insanın özgürlüğü ve sorumluluğu konusu anlatılmaktadır. Eğitim, yani okullar ve okullarda okutulan dersler, insanların ve kurumların ihtiyaç duyduğu ve önemsedığı bilgi, beceri ve değerleri üreten bir sistemdir (Erdoğan, 2004).

Sorumluluk, sorumlu olanın bir niteliği olarak, üç terim arasında bir ilişkiyi belirtir. Sorumlu kişi, sorumluluk alanı (görev alanı, eylemler, tutumlar, karakter), ve önünde hesap vermek durumunda olunan mahkeme (mesela adli bir mahkeme, vicdan, Tanrı karşısında sorumluluk gibi). Sorumluluk kavramının bu kadar geniş bir içeriğe sahip olmasından ötürü, sadece bu kavram ile ilgili olarak insan hukukun, ahlakın, dinin konusu olmaktadır. (Otfried Höffe, Petit Dictionnaire d'éthique, trans. de fr., Lukas k. Sosoe, matière de responsabilité.)

Sorumluluk ve özgürlük, eylemi ahlaki yapan en önemli iki özelliktir ve her iki özellik de birbirine bağlıdır. Bu iki özellik kendilerini ancak eylemde gösterirler. Çünkü eylem, sorumluluk ve özgürlüğün gerçeklik kazandığı ve onlara şahitlik yapan, belli bir amaca yönelmiş fiildir. Bundan dolayı eylem, basit bir içgüdüsel davranış veya bir organik refleks ya da uyarıcılara verilen otomatik bir cevap değildir. Sorumluluk, temelde tinsel bir davranıştan ileri gelen, tinsel bir gerçeklik olarak düşünülmelidir. Eylem, psikolojinin incelediği davranıştan ve fiziğin konusu olan hareketten farklı olarak ele alınmalıdır. (Gündoğan;2016))

“Hukukçular fiillerin toplum nizamını ilgilendiren sonuçlarından yola çıkmışlardır; ahlakçılar ise fiilin kendisinden yola çıkmış ve onun ahlaki sebebi ile münasebetini incelemeye çalışmışlardır.” (Topçu, 1995, s. 87-88.)

İnsanın yaratıcının istediği gibi bir insan olabilmesi için ne yapması gerektiği ve bunun neticesinde yaratıcının ona ne gibi sorumluluklar yüklediği ele alınmıştır. Özgürlüğün nerede son bulduğu ve kendi isteğimizle mi özgür olduğumuz yoksa Tanrı’nın çizdiği bir sınırdan mı bunun olduğu ifade edilmeye çalışılmıştır. İnsanın özgürlüğü ve sorumluluğu konusunda İslam dini ile Kant’ın felsefesi üzerinden konuya açıklık getirmeye çalışılmıştır.

İnsanı diğer varlıklardan ayıran en önemli özelliği akıl sahibi olmasıdır. Yaşamımızı sürdürebilmemiz için Allah’ın bize sunmuş olduğu ortamda nasıl yaşamamız gerektiği, neye göre hareket etmemiz gerektiği de bize bağlıdır. Bize böyle bir ortam sunan Allah’a karşı bizim de yerine getirmemiz gereken sorumluluklarımız bulunmaktadır. Bize verilen nimetlere karşı şükretmek ve neyin nasıl var olduğu üzerinde düşünmemiz gereklidir. İnsanlar, kendi fiillerinin sonuçlarına cevap verebilme kapasitesi ve yeterliliğine de sahip olmak durumundadırlar. Yani insanlar, eylemleriyle ilgili olarak kendilerine yöneltilen sorulara cevap verebilme gücüne ve yetkisine de sahip olmalıdırlar. Yaptığımız her davranıştan sorumluuzdur. Bir eylemde bulunmadan önce eğer bunu yapmış olursam eylemin sonucunu ne olur diye düşünerek hareket etmeliyiz. Yaptığımız davranışın aslında kötü olduğunu bilerek yapıyorsak da sonuçlarının da kötü olacağını biliyor olmamız gerekiyor.

Özgür olma sadece ahlaki anlamda değil, hukuki ve dini anlamda da gereklidir. İslam dininde insana neyin iyi neyin kötü olduğu açık bir şekilde ifade edilmiştir. Kişi neye yöneleceği konusunda özgürdür ve kısıtlama yoktur. Bilmesi gereken bir şey vardır o da her ne yaparsak yapalım yaptığımız en ufak iyilikten ve kötülükten sorumlu olduğumuzdur. Bize verilmiş akıl sayesinde iyi olanı yapabiliriz ve bu bir tercih meselesidir. Yapılan her davranışın mükafatı ve cezası vardır. Bize yarar sağlayacak olanı her zaman tercih etmeyebiliriz. Ama bunu yaptığımızda, yanlış olana yöneldiğimizde sonucu karşısında pişman olup Allah'tan af dileyebiliriz. Kur'an'ı Kerim'in bir çok ayetinde "Yüce Allah affedicidir" ifadesi yer almakta ve yaptığı yanlışlığın farkına varan insanların Allah'tan af dilemeleri emredilmektedir.

"Allah, insanoğluna akıl ve irade yanında iyiyi kötünden, doğruyu yanlıştan ayırt etmesi için rehber olarak ilahi kitaplar ve peygamberler göndermiştir. Din seçiminde ise insanı özgür bırakmış ve bu konuda şöyle buyurmuştur: "Dinde zorlama yoktur. Artık doğrulukla eğrilik birbirinden ayrılmıştır..." Yüce Allah bütün insanların inanmasını istemekle birlikte iman konusunu insanın özgür iradesine bırakmıştır. Allah, Kur'an'da gerçekleri ve doğruları açıklamış ve insanın, tercihlerinin sonuçlarına katlanması gerektiğini şöyle bildirmiştir: "Şüphesiz biz ona (doğru) yolu gösterdik. İster şükredici olsun ister nankör." (Akgül vd., 2011:123)

Buradan da anlaşılmaktadır ki bizlere her zaman her konuda tercih hakkı tanınıyor ve bu konuda yapacak olduğumuz tercihin sonucunda nelerle karşı karşıya kalacak olduğumuz açıkça dile getiriliyor. Böylece kendi hayatımızı bir bakıma kendimiz yönlendirmiş oluyoruz.

"Ne zaman onlara: "Allah'ın indirdiklerine uyun" denilse, onlar: "Hayır, biz, atalarımızı üzerinde bulduğumuz şeye (geleneğe) uyarız" derler. (Peki) Ya atalarının akıllı bir şeye ermez ve doğru yolu da bulamamış idiyse?" (Bakara suresi, 170.ayet)

Bu ayetten anlaşılıyor ki akıl insan olan her canlıda bulunur fakat bunu nasıl kullandığımız da önemli. Allah'ın bize verdiği uyarıları dikkate almayıp bizi yaratan ve bizi insan olarak diğer canlılardan üstün kılan Allah'ı dinlememekte ısrar edersek bunun sonuçlarına da katlanmak zorundayız. Yüce Allah bizi uyarır her konuda ve neyi merak edersek bunların açıklaması vardır. Kur'an'ı Kerim de bizlere uyarıcı niteliğindedir.

Kant'a göre eylemlerimizi yaparken eğilimlerimizden kaynaklı yaparsak bu iyi bir isteme sayılamaz. İsteme dediğimiz şeyin iyi bir şey olabilmesi için salt pratik aklın yol göstermesiyle hareket edilmeli. Yani bir eylemi yaparken bizde olan eğilimden değil salt pratik aklın öncülüğüyle o eylemde bulunursak o eylemimiz iyi bir isteme sayılır. Bu ne kadar mümkündür dersiniz insanın eğilimlerine göz kapadığı zamana kadar diyebiliriz. Yani demek ki insan ilk olarak eylemini isteyecek ama bu istemesi eğiliminden dolayı olmayacak salt pratik akıl sayesinde olacak.

"Bir irade, ancak herhangi bir istek, gereksinme, doğal bir eğilim tarafından değil, salt pratik akıl ve onun ilkeleri tarafından yönetilirse, iyi bir niyet, bir "iyiyi isteme" dir." (Heimsoeth, 2007:119)

"Kant doğal gereksinim ve isteklerden, eğilimlerden gelen eylemleri, ahlaklı eylemlerin karşısına koyar; ahlaklı eylemlere, salt pratik aklın yönettiği istemelerden gelen eylemlere, "ödeve dayanan" eylemler der." (Heimsoeth, 2007:121)

Yukarıda anlatmak istediği, bizlerin kendi çıkarımız için iyi olarak düşündüğümüz eylemleri yaptığımız da aslında ahlaki açıdan bu eylemlerimiz doğru değildir. Diyelim ki herkes sırf kendi istekleri için hareket etsin. Bunun sonucunda olacak şey belli. Herkes bencil bir şekilde davranır ve istediği her şeyin kendine olmasını ister kimseyi düşünmez. Bu şekilde olan bir ortamda ahlaktan söz etmek mümkün olamaz. Kaos ve kargaşa ortamı oluşur.

Böyle bir ortamın oluşmasına engel olmak için bizler kendi çıkarlarımız için değil de salt pratik akıl doğrultusunda hareket ederek eylemlerimiz de bulunursak burada ahlaki eylemden söz edebiliriz. Demek ki ahlaki eylemin olduğu bir yerde salt pratik akıl kendiliğinden orada bulunacaktır. Birbirlerinin tamamlayıcı niteliğindedirler.

Kant iyi istemenin olabilmesi için salt pratik aklın yanında ödeve de yer vermektedir. Kimi eylemler bencil bir şekilde ödeve bağlı olmadan yapılmaktadır. Mesela, sırf kendi çıkarı için eylemde bulunan birini örnek verebiliriz buna. Kimi ödeve uygun fakat ödevden dolayı değildir. Buna da hayatını devam ettiren birinin örneği verilebilir. Kimi eylemler de ödevden dolayı ama ahlaki içerikten yoksun olabilmektedir. Buna örnek olarak da yapabildiği yerde iyilik yapan birini diyebiliriz. (Kant, 2015:12-14)

"Ödevden dolayı yapılan bir eylem, ahlaksal değerini, onunla ulaşılabilecek amaçta bulunmaz, onu yapmaya karar verirden maksimde bulur; dolayısıyla bu değer, eylemin nesnesinin gerçekleşmesine değil, arzulama yetisinin bütün nesneleri ne olursa olsun, eylemi oluşturan istemenin yalnızca ilkesine bağlıdır." (Kant, 2015:15)

Burada anlatmak istediği şey ödeve bağlı olarak bulunduğumuz eylemin sonucu ile ahlaksal bir değere ulaşmıyoruz. Ahlaksal değere kendi verdiğimiz istemenin sonucunda ulaşıyoruz. Yani yaptığımız o eyleme kendi istememiz ile ahlaksal bir değer kazandırmış oluyoruz. Bir bakıma sadece ödev öyle istediği için değil bireyin kendi isteği doğrultusunda da bu sonuç ortaya çıkmaktadır.

Kant ödevin yasaya saygıdan dolayı yapılan eylemin zorunluluğu olduğunu dile getirmiştir. Burada yasa olarak kastettiği şey pratik yasadır yani nesnel ilke diyebiliriz. Demek ki ödev pratik yasaya olan saygı ile ortaya çıkmış olan eylemle mümkün olmaktadır. (Kant, 2015:15,16)

“Her ne kadar ö d e v i n buyurduğu birçok şey, ö d e v e u y g u n oluyorsa da, bunların gerçekten ö d e v d e n d o l a y ı olduğu, dolayısıyla ahlaksal bir değer taşıdığı kuşkuludur.” (Kant, 2015:22)

Ödevin bizlere yapmamız gerektiğini söylediği şeyler ne kadar ondan kaynaklı olduğu bilinmiyor ve bizden istediği eylemleri biz ne kadar uygularsak uygulayalım ahlaki değerliğinden de şüphe duyuluyor.

“Ahlaksal değer söz konusu olduğunda, sorun olan, gördüğümüz eylemler değil, eylemlerin görmediğimiz o iç ilkeleridir.” (Kant, 2015:23)

“Ahlak alanında öykülenme olmaz; örnekler de ancak yüreklendirmeye yarar, yani yasanın buyurduğu şeyin yapılabilişliğini şüpheli olmaktan çıkarır, pratik kuralların genel olarak dile getirdiklerini görürüz kılar, ama hiçbir zaman akılda bulunan hakiki asıllarını kenara itmeyi ve örneklerle göre kendimizi yönlendirmeyi haklı çıkaramaz.” (Kant, 2015:25)

Demek ki eylemin meydana gelmesi onun ahlaksal değerliliğini ortaya koymuyor o eylemi meydana getiren neden ahlaksal değeri belirliyor. Yani bir kişi eylem de bulunurken aslında onun ahlaksal olarak değerlendirilmesi o eylemi yaptıran iç nedenden kaynaklanıyor ve ona göre ahlaksal yönden değerlendiriliyor.

Ahlaklılığı örneklerle ve öykülenme tarzında göstermek ahlaklılığa yapılacak en büyük kötülük olduğunu söyler Kant. Ahlakla ilgili olan bütün kavramların akılda bulunduğunu dile getirir. Böylece ahlakla ilgili olan her şeye aklımız sayesinde ulaşabileceğimizi gösterir. (Kant, 2015:24-28)

Kant doğada yer alan her şeyin yasaya göre etki de bulunduğunu söylemektedir. Yani bir yasa var ve bu yasa çerçevesinde hareket edilmektedir. Yalnızca akıl sahibi bir varlığın, yasaların koyduğu ilkelere göre eylemde bulunma yetisi ve istemesi vardır. Buradan şunu anlayabiliriz akıl sahibi olmayan bir varlığın yasaların koyduğu ilkelerden bir şey isteme ve eylemde bulunma yetisi yoktur. Zaten akıllı olmayan bir varlığın eyleme yetisi ve istemesinden söz etmek mümkün değildir. Eylemler yasalardan türetilmektedir demek ki yasa eylemlerin ön koşulu konumundadır. (Kant, 2015:29)

“İsteme için zorlayıcı olduğu ölçüde nesnel bir ilkenin tasarımına emir (akıl emri), bu emrin formülüne de b u y r u k denir.” (Kant, 2015:29)

“Şimdi, bütün buyruklar koşullu olarak ya da kesin olarak buyururlar. İlk buyruklar, insanın ulaşmak istediği (veya isteyebileceği) başka bir şeye araç olarak olanaklı bir eylemin zorunluluğunu ortaya koyarlar. Kesin buyruk ise, bir eylemi kendisi için, başka herhangi bir amaçla ilgi kurmadan, nesnel zorunlu olarak sunan buyruk olur.” (Kant, 2015:30)

Bizim yaptığımız eylemler bir yasa etrafında yapılmaktadır. Yaptığımız eylemlerin ve istemelerimiz buna bağlıdır. Bunu yaparken de eğer yapacağımız eylem herhangi bir şey için yapıldığı gösterilmek için yapılacaksa yani bir bakıma bir şeyin gösterici olacaksa yapılan buyruk koşullu olur. Yani belli bir sebebe bağlı olarak yapılmıştır. Eğer tam tersi olarak sadece kendi başına iyi olan bir isteme de bulunulursa bu da kesin olan buyruktur. Bizden istenilen aslında kesin olan buyruktur iyi bir isteme ancak bu şekilde var olabilir.

“İsteme, kendini belirli bir yasa tasarımına uygun şekilde eylemeye belirleme yetisi olarak düşünülmektedir. Böyle bir yetiye ancak akıl sahibi varlıklarda rastlanır. Şimdi, isteme için kendi kendini belirleme de nesnel neden işini gören şey, amaçtır: bu da saf akıl tarafından veriliyorsa, bütün akıl sahibi varlıklar için aynı şekilde geçerli olmalıdır. Buna karşılık, etkisi amaç olan eylemin sırf olanağının nedenini içeren şeye a r a ç denir.” (Kant, 2015:44)

“Genel olarak koşullu bir buyruk düşündüğümde, neyi içereceğini önceden bilmiyorum, ta ki koşulu bana verilsin. Kesin bir buyruk düşündüğümde ise, neyi içerdiğini hemen biliyorum.” (Kant, 2015:37)

Burada demek istediği ben bir eylemi yapmaya karar verip onun benim istediğim eylem mi olduğunu biliyorsam bu kesin buyruktur. Böyle olmasının sebebi herhangi bir amaç için araç konumunda değil kendisi istenilen amaç durumunda olduğundan kesin buyruktur ve eylemin neyi içerdiği bilinmektedir. Koşullu buyrukta ise kesin buyruğun tam tersi olarak belli bir amaç için araç konumunda yani ulaşmak istenen aslında o değil başka bir şeydir ve bunun ne olduğunu o araç konumunda olan kullanılmadan bilinmemektedir.

“Nitekim akıl sahibi varlıkların hepsi, kendilerine ve diğer bütün akıl sahibi varlıklara hiçbir zaman sırf araç olarak davranmaları, her defasında aynı zama nda kendi başlarına amaç olarak davranmaları gerektiği yasasına bağlıdırlar.” (Kant, 2015:51)

“Demek ki ahlaklılık, eylemlerin istemenin özerkliğiyle, yani maksimleri aracılığıyla olanaklı bir genel yasamayla olan ilişkisidir. İstemenin özerkliğiyle bağdaşabilen eyleme izin vardır; bağdaşamayana ise izin yoktur. Maksimleri özerkliğin yasalarıyla zorunlu olarak uyuşan isteme, kutsal bir isteme, kayıtsız-şartsız iyi olan istemedir. Kayıtsız-şartsız iyi olmayan istemenin özerklik ilkesine bağlılığı (ahlaksal zorlanma) yükümlülüktür.” (Kant, 2015:57)

Burada istemenin özerkliği istemenin kendi kendine bir yasa olma özelliği anlamına gelmektedir. Özerkliğin bir diğer anlamı da özgürlüktür. Birey yaptığı eylemlerin de özgür bir şekilde davranır ve o neyi isterse onu seçer. Fakat seçtiği şeyin ahlak içinde değerlendirilmesi için kişinin kendinde iyi olanı istemesi gerekir. Yani kendi mutluluğu veya gereksinimleri doğrultusunda hareket etmemelidir. İsteddiği eylemin onu neye götüreceğini bilerek farkında olarak yapmalıdır. Bu şekilde yaparsa ahlaki açıdan değerlendirilir. Yoksa diğer türlü değerlendirilemez sadece ödevden dolayı ya da ödevle uygunluktan dolayı böyle davranmış demekten öteye gidilemez. (Kant 2015, 58)

“Hem özgürlük hem de istemenin kendi kendine yasa koymasının her ikisi de özerkliktir, dolayısıyla birbirinin yerine geçecek kavramlardır; tam bundan dolayı da, biri diğerini açıklamak ya da temellendirmek için değil, olsa olsa mantıksal bakımdan (aynı değerın farklı kesirlerini en küçük terime indirgediğimiz gibi) tam aynı nesnenin farklı görünen tasarımlarını bir tek kavrama indirgemek için kullanılabilir.” (Kant, 2015:69)

Kısacası ahlaklılıktan söz edebilmemiz için ilk olarak akıl sahibi bir varlığın olması gerekiyor ve bu akıl sahibi varlık kendi eğilimlerine, isteklerine ve ihtiyaçlarına göre eylemde bulunmamalıdır. Kendi çıkarlarını yok saymalıdır. Salt pratik akıl çerçevesinde hareket etmelidir ve bu sayede kesin buyruklara ulaşır. Kesin buyruklar sayesinde de bir eylemi yaparken o eylemin aracı değil amacı konumunda olur ve yaptığı eylemin neyi içerdiğinin farkındadır. Böyle olan bir eylemde ahlaksal bir değerden söz edilebilir. Diğer türlü sadece eylemlere araç ve neyi içerdiğini bilmeyen amaçsız bir şey olur. Demek ki ahlaktan ve onunla ilgili kavramdan söz etmek için ilk ve öncelikli olarak akıl sahibi varlığın kendinde iyi olanı istemesi gerekmektedir.

Sonuç

İnsanın özgürlüğü ve sorumluluğu konusuna baktığımızda İslam dini ile Kant’ın ifadelerine göz attık. İki görüşünde birbiriyle benzerlik gösterdiğini ifade edebiliriz. Kant ahlaktan söz etmek için iyi istemenin olması gerektiğini ve biz bunu bize verilen akıl sayesinde neyi yaparsam doğru veya yanlış çıkarımda bulunarak ona göre hareket etmemiz gerektiğini bu sayede yapılan eylemin ahlaklı olabileceğini dile getirmiştir. İslam dininde de aynı şekilde eylemde bulunmadan önce o eylemin sonucunun ne olacağını kestirebilmemiz gerekmektedir ve neyi yaparsam doğru olur diye düşündükten sonra hareket etmemiz gerekmektedir. Her zaman düşünmek için zamanımız olamayabilir o zaman da yapılmış davranışlar göz önüne alınabilir ve bu sayede daha doğrusuna yönelinmiş olunur. Bizler eylemlerimizi yapmakta özgürüz bunların sorumluluğuna katlanabilir olmak düzeyinde. Bizim özgürlüğümüz yaratıcının koyduğu kurallarla çizilmiştir bunun dışına çıkmak veya çıkmamak bize kalmış bir durum. Çıktığımız zaman da sorumluluğu üstlenmek zorundayız biz istesek de istemesek de bu böyledir.

Self – Efficacy Of Educational Employees: Social Activation Workers- Questionnaire Items Construction

Jaroslava Pavlickova
Tomas Bata University in Zlin Faculty of Humanities
jpavlickova@utb.cz

Abstract

This study deals with a specific aspect of an interview with a focus group. The aim was to concentrate on the educational aspect of perceived professional competence of social activation workers working with an endangered family. The focus group was implemented in order to generate professional survey items for use in a survey on "Self-efficacy". There were found 44 important formulations among 10 participants, which, by their content, are telling of the professional competence of employees, with a focus on the educational area of work in caring for children in families. Dispersed replicas will be used when creating a research tool as a part of one of three dimensions for measuring the professional competence of social activation workers working with endangered families.

Keywords: *Self-efficacy, social activation workers, education, focus group*

1 Introduction

The concept of "self-efficacy" has a relatively complicated background, and understanding it requires a certain knowledge of basic terms and interconnected mechanisms. Fusing together here are the terms self-esteem, self-confidence, self-identity with their question of the place in the internal structure of a personality. This theoretical background is a part of the broader "Bandura's" context of social cognitive learning. The field of social pedagogy has yet to deal much at all with the concept. The reason for our interest in the concept is its gap in the field. The scope and extent of social pedagogy in practice is undoubtedly broad, so the center of attention will be a specific professional group of field employees whose subject of interest is social prevention of endangered families and their educational questions of parenthood.

Child upbringing is one of the areas in which endangered families often need a certain measure of support. Members of every specific society are sensitive to deviations in educational practices, which from their point of view disturb the fulfillment of basic educational principles. It is a very sensitive topic and clearly no unity of opinion prevails in the right way to educate (Bechyňová, Konvičková, 2011).

In the current Czech school system, there are no job positions as a school social workers, a profession that has long traditions in a series of countries (Matoušek, Pazlarová, 2014). On the other hand, this system functions outside the school organization. Here, the employee enters as a intermediary between the child, the family and the school, or possibly local authorities. In recent years in the CR, there has been relatively broad development of so-called *social activation services for families with children*, which practically fulfill this role. In light of this fact, this profession is the constant central point of interest of our study.

The main objective of the submitted paper will be to generate professional items for the survey "Self- Efficacy" of social activation employees working with endangered families. This aim will be met through fulfilling the following two goals. The first will be to identify the educational nature of the job from the viewpoint of its employees, and then to determine directions of their work. The second goal will be to generate the formulation of the competence of an educational nature in the interaction "social employee – family".

1.1 Concept of self-efficacy

The concept of self-efficacy formed a fulcrum in the framework of the social cognitive theory of professor Albert Bandura, who researched social learning from elementary forms like imitation and social strengthening, through observational learning, up to the most complex form of teaching a person to act in accordance with accepted principles. Bandura thus approached cognitive and humanistic psychology (Nakonečný, 2008).

Bandura (1987, p. 391, 1997 p. 3) defines self-efficacy as "*the conviction of an individual about his abilities to organize and perform a certain activity, which is necessary for achieving specific goals.*" This means that the ability of perception influences her or his thinking, feeling and behavior. As stated by Bandura (1997, p. 394) "*it influences thought patterns, individually performed activities as well as emotional reactions during current or expected interactions with the environment*". It includes our certain judgment on our capabilities to organize or elaborate a gradual plan for achieving a desired performance. The level of self-efficacy is mainly given by:

- personal performance, which is influenced by previous successes or failures, (this aspect is considered the most influential),
- abilities to observe performed activities and learn during such observation,
- communication skills and the gift to argue,
- physiological and emotional factors, mainly by experiencing stressful reactions.

The consequences of the effects of these factors, especially gained experiences, contribute to forming impressions on one's validation both in the professional sphere and in personal life.

In light of this, the concept of self-efficacy deserves great attention mainly in the area of education and pedeutology. No less research attention is paid in other professional disciplines worldwide.

Researches efforts mainly ascertained the level of perceived professional competence of teachers in practice (Gibson & Dembo, 1984; Tschannnen–Moranová & Woolfolk Hoy, 2001; Gavora, 2009, 2011; Gavora & Majerčíková, 2012; Greger, 2011, Šuverová & Ďurkovičová, 2012, Wiegerová & Ficová, 2012, Smetáčková et al., 2017). In the area of social pedagogy, Hrbáčková & Šafránková (2015) focused on this issue in the area of influencing the behavior of children, school success rates and leisure time of children with educational care center and children's home employees¹. It is important to mention, however, that in all ways, it concerned a personal conviction and not an objective finding.

According to Bandura (1997, 2012), it appears more advantageous to perceive one's capabilities more optimistically than pessimistically, because this is just what supports the application of professional competencies, i.e. true knowledge, skills and abilities in practice. A high level of self-efficacy helps create more optimistic stances, it contributes to approaching daunting tasks like challenges, and correlates to one's quality of life. These people aspire to achieve higher goals, they are more dogged in their efforts and generally more resilient towards failures.

In the framework of the profession, the specifically perceived competence is monitored through research less frequently (e.g. Chung, 2002). This is why we chose to research the specific profession. While searching international databases, we never came across any mention of a research tool of our selected professional group of employees specifically focused on working with families with children in the home environment. In light of this situation, we decided to work together in creating our own tool.

From the methodological aspect, constructing this tool thus appears highly complicated and complex, so it requires gradual steps towards constructing what will ultimately be a valid and reliable research tool.

In this study, we attempt to construct items for the survey "Self-efficacy" in the professional area with regard for the educational aspect of working with families.

1.2 Social activation services for families with children

It the currently established Czech system of care for endangered children exists the employee works as an intermediary between the child, the family, the school and possibly local authorities and professional institutions. The employee works directly in the field, and thanks to close contact with children and parents, he or she has good prospects for intervention. According to Franklin, Gerlach, Chanmugam's (2008) statistics, 12- 22% of children over the course of school attendance experience personal or educational issues over which they would like to consult with a professional. Among children from socially disadvantaged families, this number increases up to 50% .

In recent decades, the Czech republic has seen rather intensive development of "*social activation services*" for families with children - employees working in the terrain and helping families in educational areas and more. These are outreach programs implemented mainly by non-profit organizations and certain municipalities. This form of home care provides support to families with children whose development is endangered in consequence of the impact of a long-term crisis situation, which the family cannot overcome without outside assistance (Matoušek, Pazlarová, 2014). One of the activities of this service involves these very "*pedagogical, educational and activation activities*". So in practice one may observe a clear interconnection of social work with the family and support for education and upbringing of the children living in the family. A hidden aim in this is a certain preventative effect in families, which is a subject of interest of work in social pedagogy. In light of the nature of the research, we focus only on educational activity².

One of the target groups of support for families was designated in the mid-20th century as "multiple problem families" (Matoušek, Pazlarová, 2014). Other applied equivalents are the terms "*families in extreme distress*") (Sharlin, Shamai, 2000), "*families in perpetual crisis*" (Kagan, Schlosberg, 1989) or "*underorganized families*" (Apponte, 1976).

Support for families in this direction means access to a family wanting to improve its situation in the interest of the child and adults alike, and only after possible failure to find an alternative solution for the child. It is necessary to strengthen and show sources of support to families and children, for whom this source has not been available and which is not their own.

¹ A methodologically interesting student is diploma thesis by M. Málek (2017) from FHS UTB " *Self-efficacy studentů sociální pedagogiky v řízení volného času klientů*" [Self-efficacy of social pedagogy students in managing clients' free time]

²Legislatively, these working activities are anchored in the CR in the framework of providing social activation services in Act No. 108/2006 Coll., Sec65(2) as "*pedagogical, educational and activation activities*". (author's note)

2 Methodology

Qualitative research is frequently used as a certain step towards quantitative research (Macek, 2012). In light of this fact, we have opted for a qualitative research strategy using a focus group. The focus group serves us as a supplementary method and source of preliminary information for our survey (Morgan, 2001).

2.1 Research objective

The objective of the implemented partial research is to generate items for the survey on professional competence (self-efficacy) of social activation service (hereinafter "SAS") employees for working with endangered families. In regard to the nature of the pedagogical research objective, we concentrate on the formulation of items focusing on the educational area of working with families. The main research question was: *"What professional competencies appear most frequently among SAS employees in the framework of educational activities of work?"* In relation to this, the main aim was to generate professional items into the survey "Self-Efficacy" in the framework of the social pedagogy field.

2.2 Research method

In regard to the specificity of the profession, we decided on a qualitative research strategy applying the method of a focus group. The effort was to emphasize the specificity and orientation towards specific and detailed clarification of the experience of participants for the needs of future creation of the survey. Preceding the method were individual in-depth interviews, which helped us gain insight on the impression of the specificity of the profession and determination of the dimension of the questionnaire. These detailed experience thus helped us provide a basis for asking questions for obtaining information on the needed competency in the profession. In consideration of our needs, we decided to concentrate specifically on the focus group with regard to the educational nature in the area of home care for families and their children. The focus group, whose communication among participants we analyzed, was implemented on the basis of previous addressing of employees in SAS.

An advantage that appeared was the ability to form a concentrated set of information and codes in a relatively short period of time, which provides direct proof of similar experiences of participants in comparison with obtained conclusions derived from analyses of previously performed individual interviews. Another advantage was the targeted focus of interested and the quantity of data obtained on it.

2.3 Research sample

The subject of the survey involved social activation service employees for their work with endangered families with underage children in the natural home environment. When implementing the research, we were conscious of the specifics of the given professional group. The focus group was formed of ten field employees working in the Zlin Region, Czech Republic. Work with the focus group was implemented in April 2018. To select, we chose the form of an intentional qualified selection of employees from facilities providing these registered services. We made our selection based on below characteristics:

- 1) an employee working in social activation services for at least one year,
- 2) an employee willing to participate in research and consenting to acquisition of an audio recording.

The participants were guaranteed anonymity, so no specific names of persons or individual facilities do appear in the study. Participation in the focus group was voluntary; the volunteers were informed in advance of the intention of the survey, so it is possible to discuss the potential motivation for taking part in the survey.

3 Analysis And Interpretation Of The Data

In our case, the focus group served mainly as a preliminary research technique to generate professional survey items in the survey "Self-efficacy", so the analysis and interpretation of data were controlled by the needs of our research project.

The objective of the focus group was first to ascertain information on the educational objectives of this work, and then to generate competencies and formulate them into items serving for construction of the professional dimension of the questionnaire "Self-efficacy".

In light of the field interest of social pedagogy, the subject of the focus was professional competence with regard to the educational aspect of work of SAS employees in the natural home environment. According to Průcha et al. (2013), education means overall and lifelong development of an individual's personality achieved in both formal educational institutions and in the informal environment. This is also the case of our research sample, specifically in the natural environment in which the interaction takes place, during which roles are emphasized of both social perception and common activities. In the most general meaning, education is designated as any situation with human participants during which some type of learning takes place. In light of this, we will search in the profession for activities that closely relate to the term "education".

The main established objective of the focus group was to formulate survey items of professional competencies of an educational nature, which are important for the profession from the viewpoint of its employees from practice,

to generate such items and to divide them up according to the educational goal. Participants were asked "*What can I do in areas of educational activities when working with a family?*" The proposals were discussed in the focus group. Around 56 replicas of certain activities were mentioned. We intentionally eliminated certain replicas because they did not fit in with the nature of our focus. Most frequently stated activities are then dispersed into 44 items speaking of their professional activities with regard to the identified aims. Participants agreed that during formulation of the wording, it is good to work with the terms, "*motivation, management and action*". (I2: 10 :^{3*} "...we show them patterns of behavior..." I5: 119: "...we need to motivate them...." I4: 273: "...we lead them towards not neglecting basic needs." I9: 46: "...we need to act on them in a certain way in various directions.") During formulation of characteristic items, we were bound by the theoretical concept of A. Bandura (2006) so that items would be formulated explicitly and would require of employees assessment of their own capabilities of implementing specific activities in relation to the family and children with varying target intentions. We modified the formulation of items adequately and stylistically based on the needs of our survey. We started from statements of individuals and followed up with the group consensus. We modified the statements of individual participants and kept the statements with the most frequent mentioning, and then broke them down according to educational goal. For clarity's sake, we provide them in the table. (Tab. 1)

From the table below, professional activities are seen with focus on the educational area of working with families that employees encounter in practice and apply during implementation of goals set together with the parents.

Table 1: Generated formulations of professional competencies

Pedagogical, educational and activation areas	Statements "What can I do in the area of educational work with a family?"
Education towards increasing competencies of parents in bringing up and educating their children	<ol style="list-style-type: none"> 1) To lead parents toward teaching their children basic questions of social education / thanking, asking, greeting/. 2) To support and lead parents towards strengthening development of creativity among children. 3) To show parents and children a different way to behave and act in upbringing difficulties and scholastic learning. 4) Motivating and leading parents to prompt their children to prepare for school and to support their development /individually, through specialized institutions/. 5) To motivate parents towards activities with children so as to positively influence the level and scope of their capabilities and skills. 6) To show parents during work and educational activities with children how to use appropriate educational-didactic aids for child development. 7) To support and lead families towards their children's higher scholastic success. 8) To direct and lead them towards follow-through in educational questions.
Education towards more effective communication	<ol style="list-style-type: none"> 1) To point out minor successes of the family and praise its members for these. 2) To create a good relationship with the family. 3) To adequately support the family in mutual communication. 4) To show them how to understand their own needs. 5) To activate and lead parents and children alike to work on controlling their emotions in crisis situations. 6) To teach parents to react appropriately to their child's needs. 7) To strengthen parents to lead children towards contact with their contemporaries.
Education on spending leisure time	<ol style="list-style-type: none"> 1) To motivate parents towards engaging in common, one-time leisure activities. 2) To support and motivate parents when searching for activities that could support their spending of leisure time. 3) To motivate and adequately engage children in leisure time activities. 4) To motivate parents to select leisure time activities for their children. 5) To motivate parents to search for (material) means for supporting leisure time activities of their child/children. 6) To adequately convey a system of positive values through an educational role model during leisure time activities.

^{3*}The following numbers gave sign the number of informant and the line in the recording. (author's note)

Education towards practical skills in caring for the household and towards family financial issues	<ol style="list-style-type: none"> 1) To point out to and help families set up a safe environment for their child's development. 2) To appropriately influence eating habits to positively impact the physical development and health of children. 3) To strengthen basic personal hygiene habits through education. 4) To provide good information on consequences of inefficient establishment of a regimen. 5) To motivate the family to instill an appropriate daily regimen and its regularity in important activities. 6) To inform and have a preventative influence on parents in questions of the debt issue regarding the family interest. 7) To lead and motivate the family in developing its financial stability for the needs of the children. 8) To motivate and lead parents towards gradual resolution of the family's debt situation in the interest of the children. 9) To motivate towards regularities in paying essential expenses for the family. 10) To motivate and lead towards economically more advantageous alternatives in the interest of sustaining the needs of children.
Education towards searching for another support network for the family	<ol style="list-style-type: none"> 1) To allow the family to decide in selecting offered solutions. 2) Through leadership and motivation, to enable parents to determine priorities and aims according to their personal potential. 3) To strengthen the ability of parents to request assistance when solving problems that they do not know how to resolve themselves. 4) To adequately recognize support of the nearby surroundings.
Education towards handling stress and burdens in the family	<ol style="list-style-type: none"> 1) To help family be able without authority oversight to refuse inappropriate proposals. 2) Through emotional support, to compensate for the stress burden of families. 3) To appropriately intervene and point out discrepancies of the family in the true and the established aim. 4) To compensate for feelings of frustration and disharmony by means of activation by enacting concrete steps. 5) To point out and teach recognition of the seriousness of the situation and convey to the parents the possible consequences. 6) To be able to perform together with the parents practical exercises of specific situations. (telephoning, requesting work, authorities, school) 7) To motivate and lead towards more independent responsibility by introducing personal examples.

(Source: own)

We gradually included activities that participants indicated as important in this area into the presented formulations, which we assigned according to the content aim of their activity.

In the focus group, the following objectives were defined, which employees most frequently try to pursue in cooperation with the parents:

- 1) **Education towards increasing competencies of parents in bringing up and educating their children.** (19 r. 73) *"...to teach them to orient themselves in everyday matters, how to teach children basic things, for example how to say thank you, how to behave during class, how to develop abilities in educational questions."*

To achieve this objective, it is necessary to proceed by means of interviews that must be conducted with awareness of support, and not to enter into any cooperation with adult members of the family. Oftentimes inadequately developed competencies may relate to their personal history in various areas of life. According to the Bowlby theory of attachment (2010), the experience of parents from their original family has an influence on the development of adequate parental behavior (care models experienced, quality of relationship with parents), current relationships with parents, support and a peaceful environment.

(14: 276) *"...lead them not to forget the basic needs for the family, lead them through this process of ascertaining needs."*

It is necessary to offer parents a different direction of thought and view of the child, and to help them gradually change if needed their external manifestations, attitudes and behavior towards the child. To help them be more thorough in perceiving their own needs and those of their children. To call on the parents to formulate an opinion that is alternative, more advantageous, which shows that a wrong opinion runs contrary to some value, which is important for the family or the children.

2) Education towards more effective communication.

(I8:72) *"To teach them to distinguish an adequate and inadequate environment and how to communicate among one another, what to do in crisis situations and how to recognize their seriousness."*

Communication is a so-called upholder of the relationship as well as an indicator of a certain quality. Unclear message with conflicting meanings may influence the nature of the relationship. For ambiguous conversation, its deciphering is very difficult for adult individuals, and practically impossible for children, who need clarity and understandability in communication. In this case, the role of the employee lies in being a communications intermediary. In a well-developed relationship, we can speak of a certain family mediator. According to Trélaün (2005), this form of support acts as a bridge between persons who have built a wall up between each other. It helps them search for dialog and the possibilities of a resolution. It concerns so-called dialogue clarification, which sometimes may move the positional roles to more favorable positions. According to Mareš (2007), opinions are formed especially in childhood in strong dependence to personal relationships and emotions, whereas discovery and opinions act together along with motives and emotions on the behavior and development of the personality. Among the important agents forming relationships and styles of communication is the so-called normality of individuals, as well as the resilience of members of a family towards the destructive effects of other family members, so in light of these needs, the role of a perceptive and sensitively reacting employee is oftentimes important.

3) Education on spending leisure time. Appropriately spent leisure time may be an indicator of the developmental formation of the individual's personality. This objective represents a very important area of development and interest of the parents in supporting the child, in selecting leisure time activities appropriate for him or her in terms of age and reasonable towards the family's financial limitation and the search for other possible variants and sources of financing.

(I1: 219) *"To show them what leisure time activities are offered by the nursery school, primary school, as though that source of information comes freely, they need not do anything actively there, but once it concerns some other offer and it is necessary to adequately motivate, this does not work very well in most families, ...a major task or role is played by the financial availability of activities, so consider in this too the interest of parents to become engaged and search for a solution for financial support."*

4) Education towards practical skills in caring for the household and towards family financial issues.

(I1:79) *"Support in running the household, this is the first step for us in training parental competencies, support in maintaining and managing the family budget."*

Sufficient functioning of the family in this direction is founded upon the fact that at least one family member in a certain extent and quality provides the household with what it needs. The most serious type of breakdown of this functioning comes from situations where nobody buys anything, nobody cooks, nobody cleans or does the washing, etc., thus nobody provides basic care for the household. Operation of the household can be broken down into individual bounded spheres: care for children (including preparing them for school), shopping, meals, personal hygiene, management of finances, animals, time organization, social contacts, etc.). To judge how the household is run, a well founded relationship is necessary.

(I4: 18) *"I first have to have a good relationship built up with the client."*

It is further necessary to have available information on how the family was living before this time, what difficulties they have encountered in the past and how other family members took part in running the household, what resources the family had and has, who helps the family and whether or not any significant breakdown occurred in the family...some crisis situation. Also possible to include here are eating habits, their regularity and age adequacy that supports healthy growth.

(I10: 90 -93) *"For example, we lead mothers to a regular meals regimen, we explain them the combination of appropriate and inappropriate foods, their consumption and appropriate shopping. Practical creation of a daily menu in combination with their budget, though some are very young or don't know it from family experience, and the same applies to personal hygiene habits."*

In this case, the family budget plays a key role. Setting boundaries between essential and non-essential expenditures should be the result of a dialog between the SAS employee and the family as indicated by Matoušek & Pazlarová (2014).

(I7: 103) *"Teach them to think and take their own path, that first I will pay the rent when I receive my allowance or pay."* **(I8: 106)** *"We work with consequences so they would realize what consequences they will face if they don't take this step, when they don't pay the priority expenses."*

From practice we know that handling one's own finances is among the difficulties that families often face. Difficulties in managing this also result from lack of experience and possible absence of support in this area.

- 5) **Education in seeking out a support network for the family.** The objective is to exchange information, to assess the situation of the child and the family, to create and interconnect a support network and to seek out and determine the optimum solution and plan for a common procedure, which leads to fulfilling the needs of the child. (Bechyňova, Konvičková, 2011)

(I6: 157) *"When I see that the parent is not up to it intellectually to help with the child's homework, that it is beyond the parent's abilities, then according to need, I offer them the option of tutoring, some leisure time center, some volunteers or possibly experts in a specific problem."*

In this case, SAS employees attempt to search for motivation for support also among other support resources, including support from the wider family, friends or through the work of volunteers.

The focus group participants agreed that if the employee is working with a family

"online...., the family is capable of seeing and perceiving, so they can be shown specific things illustratively".(I10: 123)

- 6) **Education towards handling stress and burdens in the family.** Stress can be understood as *a specific case of a more generally conceived burden*. This concerns a state in which the measure of burden exceeds the acceptable limit in terms of adaptation possibilities of the organism under the given conditions (Paulík, 2017, p. 65). Families with low self-confidence have a natural tendency to see the world as black and white. In consequence of this, it is necessary to notice qualities, successes and efforts, to realize their power, sources and abilities, and through support, to help them build self-confidence and a more realistic assessment and noticing of themselves individually.

(I9: 216) *"Appreciation for that which they know, what they have already done."*

According to Soukup (2014), also necessary for this besides appreciation and recognition are material reflections, framing or summarizing spoken and perceived content shared by the client. In crisis situations, external assistance is generally important, providing a feeling of safety and emotional support and sharing important information. Clear arrangement of that which is shared may assist in achieving calm and a certain feeling of certainty. It is often appropriate to verify the possibilities of using one's own experience from similar situations, or those of people from the surroundings.

(I10: 302) *"To lead them towards independence and most importantly, to ascribe to them responsibility for everything that is happening to them."*

(I4: 65) *"...I activate them, I motivate them to come up with a solution in some way, to do it themselves and not let them procrastinate in resolving issues, and to proceed as such in similar situations as well."*

It is therefore possible to view the work as a certain form of education by an illustrative example, management and motivation. We can state that the educational nature of the work is thus in line with the opinion of Průcha et al. (2013, p. 345) on the current view of upbringing. Průcha views upbringing as *"a certain form of action, a process of intentional and purposeful creation and influencing of conditions enabling the optimal development of a person in accordance with his individual dispositions, stimulating his efforts in becoming an internally integrated and socialized personality"*. In this regard, it is necessary in practice along with the client to transform more general objectives into smaller, specific aims, which then can lead in the future towards affecting greater and longer-lasting changes in the family's life. A question of fulfilling these goals however is the certain level of openness of the family towards cooperation and their own motivation and desire to change (I3: 18.) *"...but if they don't want to, nothing can help or our influence is minimal."*

Just like the field of medicine, social pedagogy also resolves the conflict between that which it knows and the question of how large a number of families to which it may provide this. In our case, it concerns intensive work with the family of mainly a long-term nature.

4 Conclusion

The center of attention of our study was the concept of professional competence self-efficacy of a specific group of employees. The subjects of research were field employees working with endangered families. This is a professional group of outreach employees whose job description involves working with the family as a whole, whose aim is to help family members to mutually fulfill their needs and to act properly in regards to the interest of the children in the family even in the environment outside the family. Their task is to have a preventative and secondary effect in the family's social and educational upbringing issues. The objective of the presented study was to generate professional items in the survey "Self-efficacy" of employees working in the field of social pedagogy.

In regard to the specificity of the profession, a part of which are preventative and educational activities taking into account the needs of the target group, we started primarily from the question of why the endangered family approached cooperation in the first place. Employees must be sensitive during interviews with individual members of the family, to listen to their "hidden needs" and apply their knowledge in the framework of counseling. Based on such knowledge, the employee influences the family through preventative activities.

Herzog (2007) states that most programs of field work come from the KAB model (Knowledge, Attitude, Behavior). Knowledge is the basis of counseling. In the framework of such knowledge, it is necessary to pass on to the family basic, mainly easy-to-remember information orally, and supplement this with various information brochures, etc. Through attitudes, employees form a safe environment, which makes room for specific opinions of individual family members, to be more empathic, and offer parents and children alike structuring of an attitude or acquiring new attitudes. Behavior enables parents to consult a real situation from their lives; in this case the employee may help them search for their own new solutions to a situation. The objective is to practice more socially acceptable behavior or to eliminate potential risks in the behavior of individual members of the family. Success was achieved in fulfilling the objective and in contributing to sensible recognition of educational activities in the framework of the profession. The dispersed formulations will be used in creating the research tool "Self-efficacy" of a specific professional group for working with families. However, generated items will represent only one area of the survey, the professional dimension. For the next two dimensions, personality and burden, which were not the subject of the submitted study, we will try to search based on the acquired data for adequate standardized surveys towards our research purpose.

We realize the limits of our study. There was only one focus group, or the gained data cannot be compared group-wise, on the other hand individual interviews with employees preceded the group. Use of a combination of two differing qualitative methods thus represents only a partial step towards the overall research objective for quantitative research.

We believe that the study will help us construct a valid and reliable research tool for examining the professional competencies of social pedagogy employees working in the natural environment.

Self-Efficacy Of Educational Employees: Foreign Language Teachers

Andrea MACKOVÁ
Tomas Bata University in Zlín,
Faculty of Humanities,
Czech Republic
amackova@utb.cz

Abstract

The main purpose of the study was an adaptation of a self-efficacy questionnaire for Czech EFL (English as a Foreign Language) teachers at secondary schools in the Czech Republic. It was an adaptation of the Teacher Sense of Efficacy Scale (Tschannen-Moran & Woolfolk Hoy, 2001) to Czech conditions. The data were collected in a survey completed by 200 respondents. The questionnaire was focused on the following dimensions "The English teachers' perceived efficacy for student engagement, classroom management, and instructional strategies". A validation of a research tool applied to these teachers and its following evaluation showed that the dimension for "classroom management" has not been confirmed by the factor analysis. Thus the final adapted research tool with 20 items in 2 dimensions has been designed.

Introduction

Self-efficacy is the belief in one's ability to influence events that effect one's life and control over the way these events are experienced (Bandura, 1994). This concept was developed within the social cognitive theory. There are four ways how to build self-efficacy: mastery experiences, social modeling, social persuasion and states of physiology. Teachers' beliefs about their own effectiveness, known as teacher efficacy, underlie many important instructional decisions which ultimately shape students' educational experiences (Sodak & Podell, 1997, p. 214). Understanding teachers' perceptions and beliefs is important because teachers, heavily involved in various teaching and learning processes, are practitioners of educational principles and theories (Jia, Eslami & Burlbaw, 2006). Teachers' beliefs in their instructional efficacy influence the kind of learning environment they create to orchestrate learning. Teachers with a high sense of of teaching efficacy believe that difficult students can be teachable if the teacher puts extra effort (Gibson & Dembo, 1984). According to Bandura (1997) teachers who believe strongly in their ability to promote learning create mastery experiences for their students, but those beset by self-doubts about their instructional efficacy construct classroom environments that are likely to undermine students' judgements of their abilities and their cognitive development (p.241). Gavora (2008) pointed that Gibson and Dembo supported at least two separate dimensions of teachers' perceived efficacy: Personal Teaching Efficacy (PTE), a teacher's belief that he or she can impact student learning and General Teaching Efficacy (GTE), a teacher's belief that proffesion in general brings about student change. Although a number of studies have investigated teacher efficacy in different school subjects, just a little research has been realized to explore the perceived efficacy in nonnative English speaking teachers at secondary schools in the Czech Republic. Thus in this study we explored self efficacy beliefs among Czech secondary school EFL teachers.

In the survey we inverstigated teachers'perceived efficacy for student engagement, classroom management, and instructional strategies. Data were collected through the adaptation of the Teacher Sense of Efficacy Scale (Tschannen-Moran & Woolfolk Hoy, 2001). The results showed that the dimension for management has not been confirmed by the factor analysis in the Czech conditions.

Method

Respondents

The respondents in the study were 200 volunteers = nonnative English speaking EFL (English as a foreign language) teachers working at secondary schools in the Czech Republic (82,5% grammar schools, 17,5% vocational schools). The questionnaires were distributed via emails, approx. 400. The return rate of the questionnaire was more than 50%.

The demographic data of the respondents are shown below (Table 2, 3 and 4). A total of 200 Czech EFL teachers (112 women, 88 men) between 1-31+ years of experience teaching English and the age group 26-61+ participated in this study. As can be seen from Table 3, the highest percentage of respondents was reached at the age group of 51-60, 46,5%. The highest percentage (41%) of length of practice years was achieved in the category 21-30.

Table 1: School Types

School types	Number	%
Grammar school	165	82,5
Vocational school	35	17.5
Total	200	100

Table 2: Respondents' Gender

Gender	Number	%
Woman	112	56
Man	88	44
Total	200	100

Table 3: Respondents' Age Groups

Age group	Number	%
26 - 30	24	12
31 - 40	43	21,5
41 - 50	38	19
51 - 60	93	46,5
61 and more	2	1
Total	200	100

Table 4: Respondents' Length of Practice Groups

Length of practice group	Number	%
1 - 10	34	17
11 - 20	78	39
21 - 30	82	41
31 and more	6	3
Total	200	100

Instrument

A Czech adaptation of the Teacher Sense of Efficacy Scale = TSES (Tschannen-Moran & Woolfolk Hoy, 2001) in Teachers of English at secondary schools in the Czech Republic was developed for this study. Quantitative research dealt with the English teachers' perceived efficacy for student engagement, classroom management and instructional strategies. Firstly, the TSES questionnaire (12 statements) was translated into Czech language and then completed up to 45 statements, based on the Czech school background. Those 45 statements included three surveyed dimensions for student engagement, classroom management and instructional strategies. Each of the dimensions was made up with 15 statements (the piloting of understanding was checked on a group of 10 volunteers - Teachers of English at secondary schools). Secondly, the pre-checked questionnaires with 45 statements were distributed to secondary schools in the Czech Republic. All the answers regarding the teachers' self-efficacy were rated on 5-point Likert scales, ranging from never (1) to always (5). The study was carried out in spring 2018. Finally, the data obtained were analyzed using the SPSS programme.

Findings

To determine the suitability of the data, KMO and Bartlett's sphericity test was used.

Table 5: KMO and Bartlett's Test

Kaiser-Meyer-Olkin Measure of Sampling Adequacy.		,798
Bartlett's Test of Sphericity	Approx. Chi-Square	8961,511
	df	990
	Sig.	0,000

The data in the table show (the resulting coefficient 0.80) their suitability for factor analysis. We also examined the number of factors by using a scree test.

Table 6: A Scree Plot Test

Table 6 clearly shows a break at the second factor. However, we tested a trifactorial solution, it did not appear to be interpretable. For the extraction of factors, the main component, Varimax Rotated Component Matrix method was used. As can be seen from the Table 7, there have been saturated 20 statements in 2 dimensions (the saturated dimensions are highlighted using the grey background).

The table above shows the saturation of two factors in two dimensions, the first corresponds to teachers' perceived efficacy for „Student engagement”, and the second to “Instructional strategies”. The existence of the dimension

for teachers' perceived efficacy for "Classroom management" has not been confirmed. The number 0,40 and more has been set up for the sufficient level of saturation. The reliability of the instrument was assessed by computing Cronbach's alpha coefficients for each dimension, which resulted 0,89 in both components - teachers' perceived efficacy for „Student engagement”, and also for “Instructional strategies”.

Table 8: Total Variance Explained

Component	Rotation Sums of Squared Loadings		
	Total	% of Variance	Cumulative %
1	10,641	23,646	23,646
2	10,401	23,112	46,758

Extraction Method: Principal Component Analysis.

As it is shown in Table 8, the total variance for component 1 = „Student engagement” was 23,65%, respectively 23,11% for component 2 = “Instructional strategies”. The total variance explained resulted in 46,76%. According to Gavora (2012), in humanities, 50% score of total variance explained is considered to be a relatively good result, therefore we considered this level to be satisfying.

Results And Discussion

Table 9: Mean and Standard Derivation by Gender of Respondents,

I am able to clearly display to the students that the class teacher is in charge at all times.	4,56	4,50	0,57	0,59

Based on the SPSS programme analysis, the final adapted research tool with 20 items with 2 components has been designed. We suppose that the meaning of the statements for the dimension "Classroom management" seemed too similar to the dimension "Instructional strategies" to the respondents, therefore the findings were not saturated enough. The most significant findings obtained in the study, was the overall high ranking of answers. The lowest

number (3,84) on 5-point Likert scales, ranging from 1 never (1) to always (5), was *"I am able to remain calm and focused in the case of teaching in a challenging class"*. On the other hand, the highest (5,00) scored the statements: *"I am able to link the curriculum with practice in order to achieve higher interest in English"* and *"I am able to respond in a calm and professional way to inappropriate language in my classes"*.

For better statement orientation, as it can be seen above, tables 9 - 11 have been created: "Mean and standard derivation by gender of respondents table", "Mean and Standard Derivation by Respondents' Length of Practice table" and "Mean and Standard Derivation by Respondents' Type of School table".

The gender

The lowest score for women in "Student engagement" (4,13) was reached in the statement *"I am able to employ/use the experiences and interests of the students in English classes"*. In "Instructional strategies" with 4,21 it was *"I am able to remain calm and focused in the case of teaching in a challenging class"* statement. Considering the men, those were the statements with 4,06 *"I am able to achieve a sense of self-worth in a student"* in "Student engagement" and 3,84 *"I am able to remain calm and focused in the case of teaching in a challenging class"* in "Instructional strategies".

Full meanings of the highest score (4,39) reached for women were following: *"I am able to praise a student in my English classes"* in "Student engagement" and 4,63 *"I am able to clearly display to the students that the class teacher is in charge at all times"* in "Instructional strategies". The men scored highest with 4,83 *"I am able to use professional teaching techniques to enable my students to achieve their best"* in "Student engagement" and 4,43 *"I am able to appreciate and respond to the positive student behaviour during classes"* in "Instructional strategies".

The length of practice:

The lowest number in the group of participants with the length of practice 1-10 years (4,02) reached in "Student engagement" statement, was: *"I am able to use professional teaching techniques to enable my students to achieve their best"*. The same (4,02) number for "Instructional strategies" was scored: *"I respond adequately to cheating during tests within the classroom"*. On the other hand the group with the highest length of practice (31+) scored the highest (5,0) with the statement in "Student engagement" component with *"I am able to link the curriculum with practice in order to achieve higher interest in English"* statement. For "Instructional strategies" the same number (5,0) was reached: *"I am able to respond in a calm and professional way to inappropriate language in my classes"*. The implications of results obtained can assist in the importance of the length of practice for teachers in service.

A type of school:

The vocational school teachers surveyed, scored higher in all the statements for "Student engagement" than the grammar school teachers. This fact can be caused by the demands laid on the students in these types of schools. For the "Instructional strategies" the statement *"I am able to remain calm and focused in the case of teaching in a challenging class"* (4,95) scored the highest. The lowest resulted with 4,10 the statement *"I am able to prevent the occurrence of disturbing behaviour in my classes"*.

The overall results from the study indicates a very high level of self-efficacy in English language EFL teachers. Based on Bandura's (1997) theory, this finding is of value in that the teachers' judgements about their teaching competence influence EFL teachers' practice in efforts, goals, and challenges they set up for themselves and for their students.

The following step of the survey will be the correlation of the adapted questionnaire with the self-reported English proficiency of the abovementioned respondents and their self-reported pedagogical strategies.

Abstract

The present investigation was carried out with an interdisciplinary approach that allowed an integral approach to the problem that represents the sexual harassment in universities. This paper is part of the research process carried out in the case study of the Autonomous University of Mexico Cuajimalpa Unit, and is integrated by a referential and methodological framework that supports the understanding of a qualitative study on the social representations of the student community, as well as the approach of a communication strategy that contributes to the incidence of those of the social representations and generates a cognitive change before the problem.

Keywords: Sexual harassment, violence, gender violence, culture, universities, social representations, interdisciplinary

Introduction

Sexual harassment represents only a fragment of an even bigger social problem, gender violence, nowadays this problem has been visible constantly through social networks becoming a topic of interest for public opinion. However, sexual harassment played in the saw public, workplaces, high school and universities, as well as other both public and private spaces are the result of social construction based on a culture in which it positions man in a hegemonic place in gender relations, a situation that generates inequalities and discrimination.

To begin, it is pertinent to mention that the concept of sexual harassment (In Spanish Acoso Sexual):

Sexual harassment consists of one or several focused interactions whose frames and meanings have an allusive content to sexuality, in which the performance of at least one of the participants may consist of indirect sexual approaches (use of symbols, written messages, whistles to distance, pornographic material), sexual bribery, approaches, looks, whispers and physical contacts or sexual propositions and comments that are unauthorized or unrequited, generate a hostile social environment and have negative consequences for those who receive them. It is possible that differences of hierarchy and status are involved, and necessarily imply an imbalance in the power relations between the individuals that can be counteracted or not during the same situation. (Gaytan, 2009, p.53)

However, it is important to mention that for the Mexican context, there is a differentiation between the concepts and the difference is in the hierarchical position of the main actors, since sexual harassment occurs in horizontal structures where the only hierarchical difference is determined by sex, whereas sexual harassment (In Spanish Hostigamiento Sexual) occurs in a real subordination of the victim and regularly occurs in school and work contexts (where relations are teacher - student and boss - subordinate) .

The Law of Access to Women to a life free of violence, in its article 13, defines sexual harassment (In Spanish Hostigamiento Sexual) as: "The exercise of power, in a relationship of real subordination of the victim to the aggressor in the work and / or school environments. It is expressed in verbal, physical or both, related to the sexuality of lascivious connotation "(Official Gazette of the Federation, 2017, p.5).

In general, the sexual reception is mostly identified by the acts that make up street harassment (such as touching, whistling, and sexual advances, among others) that is mainly presented on public roads or public areas such as public transport. This occurs both at the international level and at the national level, due to the high incidence recorded, the governments of some cities have carried out measures to prevent this type of violence.

As an example of the efforts mentioned, it is the 30/100 strategy implemented by the government of Mexico City in 2015, this strategy was developed with the cooperation of ONU Women in order to eradicate harassment in public transport and consisted of the implementation a publicity campaign to encourage reporting, surveillance operations, strengthening of the separation mechanism in wagons destined for women's use, security tools such as the distribution of whistles, the creation of a web page and a mobile application called Vive Segura, among other prevention measures.

Subsequently, #NoEsDeHombres (It's not from men) campaign was carried out, also implemented in Mexico City and elaborated by ONU Women. Other campaigns have taken place in different cities like Repor it for Stop it implemented to stop harassment in public transport in the UK in 2015. Like many others that have been implemented in different countries like Spain, Argentina and France to name a few, for end sexual violence against women.

With regard to sexual harassment in Universities or Higher Education Institutions (IES by its initials in Spanish), situations have been recorded in the national context that have evidenced the serious incidence in both public and private institutions; It is important to mention that the universities spaces destined for learning and social development shouldn't happened in this places.

It is worth mentioning some cases more visibles through social networks and media, in 2016 a student of Political Science at the Iberoamerican University reported having been sexually harassed by an administrative assistant when appealing to the authorities of the University and not receiving a response positive made a university movement through social networks in which the hashtag was used #NoEsNo, being supported by students from other universities and by the student community of the Iberoamerican University.

In the same year, the Metropolitan Autonomous University Xochimilco Unit (UAM X) was also the scene of accusations of sexual hostage acts, as students placed banners in the dining room with explicit complaints from professors who committed cases of sexual harassment (Hostigamiento sexual in Spanish) and misogynistic comments against female students.

As for the National Autonomous University of Mexico (UNAM) , multiple complaints have been made from acts of sexual harassment, sexist comments to murders typified as femicides that occurred in the University City facilities, it should be mentioned that according to the president of the Special Commission of gender of the University Council, Leticia Cano, the "February 28, 2018, the number of complaints about possible s gender violence increased to a total of 372, corresponding to 346 aggressors; that is, 20.6 complaints per month . "

Meanwhile, at the Autonomous Metropolitan University Cuajimalpa Unity (UAM C), the community in which our research is focused also showed incidence of harassment and sexual harassment, as during the session of the Academic Council of Unit CUA-141-17, where students requested the approval of a committee in charge of creating a code of ethics that integrates sexual harassment prevention and care within the University.

Ultimately and based on the above shows that the incidence of cases of sexual harassment in university environments is evident, in addition to that it is a problem has worsened because the education institutions lack prevention and attention measures. Consequently, the relevance of the investigation is demonstrated.

It is worth mentioning that it was derived to the mentioned cases and many others that were not so well known and were only treated internally by the different Universities; some institutions have reacted reactively generating preventive measures and attention to the problem contributing with contributions to influence the permanence of these acts.

Some of the most important contributions are: In the Iberoamerican University later the case mentioned occurred in 2016, the "Action Protocol for the prevention and treatment of discrimination and gender violence at the Iberoamerican University" in 2017 was performed. The National Autonomous University of Mexico, in 2016, made the "Protocol for the attention of cases of gender violence in the UNAM" which stipulates that the resolution of cases of gender violence will be through the institutional lawyer.

Other universities that have contributed to the realization of their own frameworks of action are the Autonomous University of Sinaloa, the Autonomous University of Ciudad Juárez, the Center for Economic Research and Teaching, among others.

It should be mentioned that the UAM C, presented the Immediate Protocol of attention to gender violence, this document addresses the procedure to be followed in case of being a victim of gender violence.

It is important to point out that these action protocols are guides that allow knowing the route to denounce an act of this type and that most of them are only designed for operation in the university context and in specific it is framed by the specific characteristics of the institution that he does it. As it is demonstrated, the authorities of the Universities have prioritized their field of action in the establishment of routes of action for denunciation and attention of the victims with the creation of protocols of attention, in spite of this, there are very few solutions alternatives that have been developed, one of them is the campaign carried out through social networks in the city of Monterrey where a blog was created to invite the victims of sexual harassment in universities to participate, using the hashtag # AcosoEnLaU.

In this way, the relevance of this research is demonstrated in which sexual harassment is identified as a problem that mainly affects women and that is very recurrent in different contexts, but in spite of what is a problem identified in the field school is very complicated because its solution routes that are internal and care in its majority the strategies they question only the complaint and there is no real s n prevention mechanism.

Consequently, the present investigation develops around the sexual harassment in universities, locating the object of study in the university community of the UAM C, specifically the actors: students, teachers and professors.

Derived from the great problem that the presence of cases of gender violence in university spaces implies, the Autonomous Metropolitan University Cuajimalpa Unit, concerned and aware of the need to address and stop sexual violence acts in the development of tools to eradicate this violence.

Regarding the main objective of this research is to develop an interdisciplinary system that allows students to access meaningful information that generates a cognitive change regarding sexual harassment and harassment in the Autonomous Metropolitan University Cuajimalpa Unit. This is achieved thanks to the intervention of the three knowledge lines Communication Strategies, Information Technologies and Information Design, which interact in the creation of social solutions in the postgraduate course called Master in Design, Information and Communication taught at the UAM C.

To achieve a specific objective, a prior study of a theoretical framework that allowed framing the research in an interdisciplinary development that provided a comprehensive understanding of the problem through different approaches was required, as well as a field study that made it possible to identify the incidence of the problem, the students' knowledge about this and the possible relevant solutions.

In addition, specific objectives were established:

- Propose a comprehensive communication strategy that affects the behavior change of students and teachers, to prevent cases of harassment and sexual harassment in the Autonomous Metropolitan University Cuajimalpa Unit.
- Generate a system that provides information that helps the main actors recognize the ways in which sexual harassment and harassment occur.
- Create a proposal that allows the user to appropriate this significant information with an enriching experience.

In this way, the pertinence and contribution of this research is highlighted, because although many Universities are working to stop the incidence of gender violence, the proposals only have a reactive aspect and attend the events that have occurred, provide routes for reporting and information, however, this project seeks to influence the main basis of the problem, since social constructions are projected by the behaviours or postures that are taken in front of a problem, providing adequate information and betting on a non-formal education, students can adopt a posture according to gender equality and against violence.

Now, the structure of this document is composed of the theoretical framework of the present research that integrates the present introduction, the referential frame in which the problem develops in the cultural context of Mexico, a conceptual framework that explains the main factors of the problem then methodological framework that explains the methodology used, as well as tools for practice work with the student community, the results and analysis of the study, the explanation of the proposed solution and conclusions.

Theoretical Framework

This section addresses the conceptualization of sexual harassment practices through social representations, the importance of these, as well as their construction and analysis, as well as the theoretical approach of elements that contribute to the incidence of the problem, such as culture, violence, the reproduction of social inequalities and, in the context of the problem, inequalities based on gender. The concept of gender implies a notion of sexuality that does not necessarily correspond to the physical sex with which one reaches the world in a certain way. From this perspective it cannot be affirmed that gender is only the product of one sex, these judgments are based on a social representation constructed historically on the differences between gender and sex, which show a radical discontinuity between sexed bodies and culturally constructed genders, that is, that the concept of gender is established from the circumstances or conditions in which it occurs, therefore, we can understand that it is given from the culture and society that surround it (Lamas, 2013).

To begin it is important to start with the proposition that sexual harassment is derived from a violent and hostile context in which these acts are part of gender violence, and occurs in an environment where gender inequality prevails derivative to cultural constructions inherited from generation to generation, fostering acts of discrimination and legitimating gender roles and stereotypes that support the masculine gender over the feminine gender and over any other gender identity.

Gender violence is given by gender relations, is the violence that is exercised from the hegemonic model of masculinity embodied mostly by men, but also by some women, against all women and also against men who follow other models of masculinity non-hegemonic both heterosexual and homosexual (Oliver and Walls, 2004, p.16).

As explained the notion of gender and its inference in acts of sexual harassment are based on social representations, which have been inherited and accepted through a process of socialization in which the media, social interactions, institutions (educational, governmental, religious, among others) and the family nucleus contribute to the formation of these.

It is worth mentioning that the importance of social representations for understanding the problem of sexual harassment and harassment lies in the fact that it is made up of a series of knowledge that supports the behavior of a community. The social psychologist Serge Moscovici

defines social representations as: "Representation is an organized corpus of knowledge and one of the psychic activities through which men make the physical and social reality intelligible, they are integrated in a group or in a relationship daily exchange "(Moscovici, 1979, p. 17-18).

Social representations are not in the mind of the individual at all times, but they think, arise and are built from crisis or conflict, what he calls "emergency", and to reach this state of emergency, Moscovici It concludes that three conditions must be presented:

- 1) The dispersion of information: The data that most people have to answer a question, to form an idea or purpose of a precise object, are generally insufficient and superabundant.
- 2) The focus of the subjects on a social relationship, or a particular point of view, has an undoubted impact on the style in question: An individual or a group gives specific attention to some very particular areas of the surrounding environment and takes a distance from it, other areas of the same medium. The student, the teacher or the worker locate psychoanalysis differently in their universe.
- 3) The presence of a pressure to infer: In ordinary life, circumstances and social relationships require the individual or social group to be able, at all times, to act, to take a position. (Moscovici, 1979, p. 176-178).

On the other hand, for the analysis of social representations the existence of dimensions is established, which are the knowledge pertaining to a group about a social object, and suggests that they compose the universe of opinion from three axes:

- Information: is the sum of knowledge about an event, event or social phenomenon.
- The field of representation: organization of content in a hierarchical way, which varies from group to group and even within it.
- The attitude: it is the position that is had in relation to the social object, this dimension can be favorable or unfavourable.

As the psychologist Moscovici explains, social representations are made up of common sense knowledge about a topic and support social behaviour before something.

However, the internalization process of information that promotes and reproduces acts of gender violence, such as sexual harassment and harassment, as well as sexist comments, discrimination, devaluation, insults among others, is the same process of socialization to which the individual is exposed from the first day of his birth, which allows him to adopt a specific cultural context of the geographical environment to which he belongs, in which the naturalization of violent and discriminatory behaviours can be determined, forming part of a patriarchal system and the preminence of the masculine gender over others.

It should be noted that these hierarchies in social relations have been historically established in culture, however, biological differences should not imply the hierarchical inequalities generated by cultural constructions:

A woman, she needed to carry her children in her innards for nine arduous months, and then feed them for years. Throughout that time I had few opportunities to obtain food, and I needed a lot of help. I needed a man. In order to ensure her own survival and that of her children, the woman had no choice but to accept the conditions that the man stipulated in order to ensure that he did not get too far away and assume part of the burden. As time passed, the female genes that succeeded in passing on to the next generation were those belonging to women who were submissive caregivers (Harari, 2014, p.151).

At this point it is relevant to mention that the concept of culture is understood as:

It is the social organization of meaning, internalized in a relatively stable way by subjects in the form of schemes or shared representations, and objectified in "symbolic forms", all in historically specific and socially structured contexts, because for us, sociologists and anthropologists, all social facts are inscribed in a specific spatio-temporal context (Giménez, 2005, p.5).

On the other hand, it is important to involve the concepts of power and violence, which are widely linked, violence is exercised to obtain power over others, which implies the notion of control, superiority and vigilance. Violence is conceived as a human aspect and is established in the social structure through a mechanism that perpetuates hierarchical inequalities. Violence is specifically human and, in this sense, it is a freedom (real or supposed) that wants to force another. I would call violence the use of an open or hidden force, in order to obtain from an individual or a group that which they do not want to consent freely "(Domenach, 1980, p.33).

Regarding this research, problems framing in the sexual harassment, is encouraged by gender violence instituted by the culture which is reflected by the social representations of a given group which in turn plays an unequal hierarchical system, allowing the exercise of power of some towards others.

In this way, the way in which violence is established in a social structure through different mechanisms is exemplified, some of which are very evident such as physical and / or verbal violence, economic manipulation or

more subtle mechanisms in which subordinate groups accept so domination without claims or grievances against those who exercise it. This mechanism is known as symbolic violence and the sociologist Pierre Bourdieu developed approaches to this.

Symbolic violence is that coercion that is instituted through an adhesion that the dominated cannot avoid giving to the dominant (and, therefore, to domination) when he only has to think and think or, better yet, to think about their relationship with him, of instruments of knowledge that he shares with him and that, being no more than the incorporated form of the structure of the relationship of domination, they make it appear as natural; or in other words, when the schemes put into operation to be perceived or evaluated or to perceive and evaluate the dominant ones (high / low, male / female, white / black, etc.), are the result of the incorporation of the classifications, that way they are naturalized, whose fruit is their social being (Bourdieu, 1999, p. 224-225).

It should be added that symbolic violence is the mechanism that allows the reproduction of unequal structures in society, because it is identified in gender relations, in racial groups, as well as in the economic strata that make up a society.

Added to this violence goes through an alleged cycle in which it is implemented in a structural manner, because in a very subtle way the social nuclei, media, government institutions and educational institutions such as government and private mental constructions previously accepted by society where they encourage the establishment of ideologies, gender roles and stereotypes which they allow these behaviours to be naturalized and subsequently be adopted in a structural way in society.

In this way lies the importance of social representations for research because although all the elements that allow to form a knowledge and position on an event supports the behaviour of a group or group, it is important to know how they conform and how they can be influence on these so that a gradual cognitive change can be achieved through meaningful information that allows to sensitize and reflect on the practices that integrate gender violence such as sexual harassment and harassment, but mainly to contribute to the implementation of a culture of equity. Next, the field work carried out in the UAM C will be approached, which constitutes a research with mostly qualitative tools and a survey, which allowed to know in a more detailed way the incidence, the knowledge that the student community knows the problem and This way to identify proposals that allow to solve the acts that integrate sexual harassment and harassment within the university.

Methodology

After proposing a theoretical framework that allowed identifying the approach to the study of the problem, it was important for the research process to know in depth the study community and in this way be able to generate viable solutions for the problems that occur in the University.

It is worth mentioning that for the development of this project, the Participatory Action Research (IAP) methodology was used as a guiding principle, because this type of horizontal methodologies allows the study community to be an active part of the research process, generating a dialogue to the construction of their own solutions. According to the sociologist Ander Egg Any methodology of social action requires

That people have an intervention in the study of their reality, in the elaboration of a situation diagnosis, in the programming of what is decided to be carried out and in the way of carrying it out. Better yet, if people, reflecting on their own actions, evaluate their activities. This is not achieved with statements or just encouraging the participation of people. It requires a set of guidelines and technical elements - operational, so that participation is possible and effective (Ander-Egg, 2003, p.5)

The majority of the research carried out was of a qualitative nature because information was collected on behaviours, social representations that reflect a level of knowledge and culture of the study community. However, one tool used was the application of a survey applied online, this study allowed to know the incidence of sexual harassment, this survey mostly allowed to know quantitative data and qualitative information that allowed to know the incidence of the problem, as well as the main actors of the problem.

To begin the research process in the exploratory phase it was recognized that one of the premises to investigate was whether in the university community of UAM C there were cases of sexual harassment and harassment, in case of existing the actors involved and how informed they were the students were on these acts.

To answer these questions, it was decided to apply an exploratory survey to a sample of convenience, through an online questionnaire, the instrument was composed of 10 closed questions and 11 open questions.

The survey was answered by 86 students, of whom 61% were female and 39% were male. The age range ranged from 18 to 50 years old, however, the highest participation was registered in 21 year olds, and the students who

answered this instrument were mostly from the Bachelor's degrees in Communication Sciences, Design and Information technology.

Among the most salient findings are, from the question, have you felt sexually harassed within UAM C? 30% of the women answered yes, 10% of the surveyed population does not know it, while 60% answered no. While only 12% of men answered yes, 3% did not know and 85% did not.

As for the question, who was or is the aggressor? The women answered first a student with 37.5%, followed by a teacher with 25% and with 12% more than one aggressor. While the male gender responded with 100% that by a student.

In the question, in case you were a victim of sexual harassment, would you know how to act? Only a part of the surveyed population answered yes (33%), 10% answered no, and 57% said they were not sure.

Finally, with the question do you consider that you, consciously or unconsciously, could have sexually harassed someone? Women responded with 76% who did not, 20% who was not sure and 4% who did. Meanwhile, men responded with 85% no, 12% yes, and 3% answered not being sure.

Derived from this first approach can be identified that sexual harassment and harassment is a problem that is present in the UAM C, the students are mainly victims of these acts, the main aggressors are the students, followed by teachers and professors. The majority of the students would not know how to act in front of a problem of this type and that they do not know how to identify the acts that make up the harassment and sexual harassment derived from the naturalization of these behaviours.

Subsequently, an exercise in social representations was carried out to understand the level of information held by the students, in addition to knowing the composition of the social constructions of the community in order to clearly understand the behaviours and positions students about the sexual harassment.

This method of qualitative character was applied to a sample of convenience conformed by 152 students, chosen of random way, without taking into account age, plan of studies that are signed up, identity of sort; The study to know the conformation of the social representations was made through the natural semantic networks.

One or more stimulus words are selected from which you want to know the meaning given by the subjects members of a particular group. They are asked to define the word stimulus by a minimum of five single words, which can be verbs, adverbs, adjectives, nouns, names or pronouns, without using articles or prepositions. When the subjects have made their list of defining words, they are asked to individually hierarchize them according to the proximity or importance of each of the words with the word stimulus. It will assign the number one to the word closest to the stimulus, the second to the next, and so on, until all the defining words are exhausted (Hinojosa, 2008, p.135).

The stimulus words used were abuse, sexual abuse, harassment, sexual harassment, harassment, sexual harassment, machismo and feminism, however for questions of relevance of information the interpretation of the units of analysis will be presented: sexual harassment (acoso sexual and hostigamiento sexual in Spanish, by the Mexican context).

Regarding the words sexual harassment (acoso sexual in Spanish) stimulus was obtained that the words that make up the conceptual core (three concepts that the individual s designate higher ranking) were women (24.34%), violence (16.44%) and abuse (15.13%), while that the peripheral concepts with greater weighting were man (12.5%), violation (13.15%), annoyance (8.5%), fear (9.2%) and harassment (7.23%) ; the study result in other contextualizing words and with little relevance for the analysis.

With the results obtained it can be interpreted that the students identify that these acts integrate a problem related to gender violence, in which women are the main victim, besides that these actions imply an abuse of the exercise of power. On the other hand is the relationship between the terms fear and complaint, because of this feeling is one of the main causes for not reporting. In addition, all the terms that make up the nucleus and the first periphery, such as rape, annoy, fear, are words that are at a level of happiness that is almost nil according to the specialized feelings dictionary. Affective Norms for English Words ANEW (Bradley, MM, and Lang, PJ)

Finally, an ambiguity is identified between the terms bullying and harassment because they do not find a difference between them.

Now with the words stimulus sexual harassment (hostigamiento sexual in Spanish) was obtained a conceptual core composed of the concepts bother (17.76%), harassment (13.81%) and abuse (11.84 %) and the first peripheral was formed by the terms bother (12.5%), fear (10.52%), violence (9.21%), touching (5.26%) and persecution (4.6%). The social representation obtained with the term sexual harassment shows the ignorance of information on the part of the student community because there is a wide confusion between the terms harassment and sexual harassment. In general, it was concluded that they do not know the differentiation between the terms and there is a wide disinformation about the problem, besides identifying cultural features in the context of the problem.

Conclusions

Finally, as part of the solution proposal, a communication strategy was elaborated that integrates the contributions of the three knowledge lines that intervened in the project, on the one hand the strategic development of actions that help to influence the cognitive and behavioural change, on sexual harassment, in addition to the approach provided by the Information Design and Information Technology lines, who through the investigative process granted integral solutions for the appropriation of information.

In this way, the actions that integrated the communication strategy were developed to influence the social representations supported by information and awareness, using tools that allow the appropriation of a new knowledge such as non-formal education.

The integrated strategic plan or actions that are developed along three phases corresponding to three years, in terms of implementation due to existing resources was carried out the first phase that included a first informative day that provided a space in which experts on the subject expressed their knowledge and work contributed on the subject, as well as a sensitization workshop; In this way, the actions allowed a space for dialogue and personal communication with the students.

In conclusion this comprehensive plan provides the student community resources to create new knowledge which allows the appropriation of information and awareness of behaviours that make bullying and sexual harassment in order obtain reflection on the subject.

Finally, guidelines are established for the development of repetitive communication strategies in order to influence social representations and the behaviour of certain groups. As well as, future research that contributes to the eradication of gender violence.

Sınıf Öğretmeni Adaylarının Görüşlerine Göre Özgün Fiziksel Oyun Oluşturma Sürecinin Değerlendirilmesi

Muzaffer Çalış
calis.muzaffer@gmail.com

Özet

Problem Durumu

Bilişim çağında, çocukların fiziksel etkinliklerden uzak bir şekilde elektronik ortamlardaki oyunlara yoğunlaştıkları ve en küçük zaman aralarında bile mobil cihazlarla oyun oynama eğiliminde oldukları gözlenmektedir. Bu bağlamda fiziksel etkinliklere yönelik oyunların okullarda uygulanması özel bir önem kazanmaktadır. Sınıf öğretmenlerinin fiziksel etkinliği olan oyun ortaya koymada üretken olmaları öğrencilerin oyun oynamasını ve fiziksel gelişimini olumlu yönde etkileyecektir. Aynı zamanda bazı geleneksel oyunlardaki fiziksel etkinlik eksikliği ve ilkokullarda oyun uygulamalarında benzer oyunlara yer verilmesi çocukları oyunlara karşı isteksiz hale getirebilmektedir. Bu nedenle öğretmenlerin yeni özgün oyun üretmeleri çok önemli hale gelmiştir. Hizmet öncesi eğitimde öğretmen adaylarının bu yönde alacağı bir eğitim öğrencilerin gereksinim duyduğu çağdaş oyunların üretilmesini kolaylaştıracaktır.

Araştırmanın Amacı

Bu araştırmanın amacı sınıf öğretmeni adaylarının beden eğitimi ve oyun öğretimi dersinde oluşturmuş oldukları özgün fiziksel oyunlara ilişkin görüşlerinin değerlendirilmesidir.

Araştırmanın Yöntemi

Bu araştırma sınıf öğretmeni adaylarının fiziksel oyun üretmedeki becerilerinin geliştirilmesine ve bu sürece ilişkin görüşlerinin tespit edilmesine yönelik olduğundan “eylem araştırması” tercih edilmiştir. Öğretmen adaylarının gereksinimleri doğrultusunda oluşturulan 14 haftalık uygulama sürecinde hem araştırmacılar hem de öğretmen adayları özgün oyunlar ortaya koymuşlardır.

Çalışma Grubu: Araştırma gerçekleştirileceği çalışma grubunun belirlenmesinde kolay ulaşılabilir durum örnekleminden yararlanılmıştır. Çalışma 2017-2018 öğretim yılının bahar döneminde Pamukkale Üniversitesi Eğitim Fakültesi Sınıf Öğretmenliği Ana Bilim Dalında, 2. sınıf öğrencileri ile Beden Eğitimi ve Oyun Öğretimi dersi kapsamında gerçekleştirilmiştir. Sürece 17 kız, 20 erkek olmak üzere toplam 37 öğretmen adayı dahil edilmiştir.

Veri Toplama Aracı: Araştırma verilerinin elde edilmesinde araştırmacılar tarafından geliştirilmiş olan “yarı yapılandırılmış görüşme formu” kullanılmıştır. Başlangıçta 5 sorudan oluşan form alanında uzman 4 öğretim elemanı ve 2 sınıf öğretmenin görüşüne sunulmuş elde edilen dönütler doğrultusunda düzenlemeler yapılmıştır. Form son hali ile 3 soru ve kişisel bilgiler kısmından oluşmaktadır.

Verilerin Toplanması ve Çözümlemesi: Özgün fiziksel oyunlar üretmesi için gerçekleştirilen 14 haftanın sonunda öğretmen adaylarının sürece ilişkin görüşleri tespit edilmiştir. Sürece katılan bütün öğretmen adayları ile birebir görüşmeler yapılmış, bu görüşmeler yaklaşık olarak 20 dakika sürmüştür. Katılımcılarla yapılan görüşmeler araştırmacılar tarafından not edilmiş ve elde edilen nitel veri seti araştırmacılar tarafından içerik analizine uygun bir şekilde değerlendirilmiştir. Veriler ayrıntılı bir şekilde okunarak bilgisayar ortamına aktarılmış ve araştırmacılar tarafından tablolara dönüştürülmüştür. Daha sonra oluşturulan tablolara ilişkin açıklama ve yorumlara yer verilmiştir. .

Bulgular ve Tartışma

Öğretmen adayları ile sürecin başlangıcında yapılan görüşmelerde yalnızca 3 geleneksel oyun isminin sıralandığı tespit edilmiştir. Bunlar “yakar top, yağ satarım bal satarım ve bezirgan başı” isimli oyunlardır. Ancak 14 haftalık eylem araştırması sonunda 15 özgün ve 16 da geleneksel oyunları sıraladıkları belirlenmiştir. Bu durum öğretmen adaylarının hem çağdaş oyunlara hem de geleneksel oyunlara ilişkin bilgi düzeyinde dikkate değer bir artış olduğunu göstermektedir. Diğer taraftan öğretmen adaylarının görüşlerine göre özgün fiziksel oyunlar ilkokul öğrencilerini motor, bilişsel, sosyal ve duygusal yönden geliştirici bir yapıya sahiptir.

Öneriler

Beden eğitimi ve oyun öğretimi dersi kapsamında öğretmen adaylarına kendi kültürlerinin bir parçası olan geleneksel oyunlar öğretilmelidir. Diğer taraftan ilkokul öğrencilerinin yaş özelliklerine uygun,gereksinimlerine yanıt verebilecek bir şekilde özgün oyunlar oluşturmaları sağlanmalıdır.

Smart Phone Usage Of Faculty Of Education Students In Learning-Teaching Environments

Şenyurt YENİPINAR

Süleyman GÖKSOY
Dr., Düzce University Faculty of Education
suleymangoksoy@duzce.edu.tr

Abstract

In this research, it was aimed to identify how student teachers use smartphones in learning-teaching environments, their intended purposes in using smart phones, and their perceptions on how to develop the use of smartphones in learning-teaching environments. The research was conducted with screening model and 570 student teachers who study at Faculty of Education in Duzce University and Aksaray University in 2017-2018 academic year were included in the scope. The data were collected with “The Use of Smart Phones in Learning-Teaching Environments Scope” which is developed by Göksoy and Yenipinar (2017). The data were analyzed and interpreted using T-test and Anova test. Research results demonstrate that student teachers know how and why they should use smart phones in learning-teaching environments. It is also found that student teachers’ views on how and why they use smart phones are at a high level and that their views on the development of the usage of smart phones are at a moderate level. Student teachers’ views on smartphone use, purpose and necessity in the learning-teaching environments, designing and developing smartphone usage do not differ according to university, gender and age variables. However, these are significantly different according to the field variable. The highest level of use in the learning-learning process is among students studying in the field of foreign languages. Second place is classroom teaching students and the lowest usage among the groups belongs to the students in social sciences teaching. Based on findings; it can be said that it is necessary to offer student teachers different activities and applications, additional education and personal development opportunities in order to improve the usage of smartphones in learning teaching environments.

Key Words: *Learning- teaching, teacher, smart phone*

Introduction

Today's contemporary society and its constituent individuals have advanced technology and use it intensively when compared with the examples of the past. People, especially children and young people, feel and experience technology more efficiently in their lives (Yıldırım, Yaşar and Duru, 2016). Smartphones, one of the most common products of contemporary information technology, have entered into every aspect of life. It is not possible to prevent this situation. Today, students live and grow up with technology (Ağca and Bağcı, 2013). It can be seen that some of the students who have recently started school have more functional information about technology than their teachers have. While the contemporary individual is constantly changing, transforming and developing the technology, at the same time their behaviors are being influenced by the technology they created.

To provide functional education services to large masses, to improve human and material resources, to provide high quality education, to meet individual differences and community demands, to raise social justice, democracy and equality in education, to reduce costs, to make use of the existing opportunities in the best and creative way are the indispensable necessities of technology and educational technology. These benefits of educational technology depend on the power of technology, the quality of the educational philosophy on which it is based, and the reliability of the educational science. The success of educational technology can improve only with the importance given to education. Also, educational technology reach significance if it focuses on actual needs of education in a planned and programmed way (Alkan, 1997; MEB, 2002).

While information technology in education is defined as tools to help teachers in order to educate and enhance the quality of education during educational activities (Aşkar, Seferoğlu, 2006), instructional technology can be defined as the application of systematic information which is obtained from scientific researches to practice (Yalın, 2003). Instructional technology is the application of systematic strategies and techniques adapted from behavioral sciences, physics and other sciences with aim of solving teaching problems. According to this definition: instructional technology is concerned with how the problems in teaching can be solved according to scientific principles. Instructional technology and materials are important in order to ensure that learning is more qualified. Teaching with technology and materials decreases the need to spend time and energy on determining the needs of students and adjusting the education accordingly. If the concepts of technology and material are handled

educationally, it can be indicated that they have many functions. The main functions are teaching-learning materials. They convey information, provide presentations and conversation. They are objected education systems and symbolization tools (Kaya, 2006).

When we look at the place and importance of tools in teaching, research results show that instructional technology and materials must be utilized in order to reach the goals in all kinds of educational applications. The more a learning activity is addressed to the sensory organs, the more permanent the learning is, the later it is to forget. We learn things % 83 through the sense of seeing, % 11 through the sense of hearing, % 3.5 through the sense of smelling, % 1.5 through the sense of touching and % 1 through the sense of tasting. Teaching is made more economical with the use of technology and materials (Yalın, 2003). At this point, smartphones enable teachers and students to access many opportunities quickly and with less effort and resources. Many objects, cases, personal information, photographs and situations can be reached instantly and used in learning-teaching environments.

Teachers' attitudes and skills related to the use of technology and materials are effective in students' learning levels. Some teachers may have enough knowledge to use technology and materials in their lessons, but some may not. Some teachers may be reluctant to use newer and current technology and materials. In addition, some teachers may feel pressure with the impression that it is difficult to use technology and materials, or they may rely more on traditional strategies and traditional technologies and materials. With all these assumptions, the use of smartphones in educational environments is an inevitable reality. Even if principals and teachers are not fond of it, these tools have fallen into teaching environments. Educators can not prevent these tools from being used in school and teaching environments by prohibition or other methods. Instead, it is a more logical and realistic approach to take advantage of these tools, which enter into teaching environments without the cost of public services. For this reason, teachers have to be good at using smartphones for educational purposes. In order to get reduce the negativities in this regard, teachers should be given necessary information and training on how to use educational technology products (Kaya, 2006). In educational applications, there are three main requirements to use instructional technologies and materials. The first is to bring education services to wider masses, the second is to make the learning-teaching processes in existing educational institutions more productive, and the third is to individualize learning and teaching activities. All other possibilities provided and can be provided by teaching technology and materials seem directly or indirectly related to these three basic needs mentioned above. To put it more precisely, it can be said that instructional technology and materials are mostly used in studies which are aimed at creating capacity in education and increasing the productivity of education (Hızal, 1983).

Instructional technology and materials had secondary importance in the learning-teaching environments, but in recent years the use of technology and materials has become more obvious, especially with the development of instructional technology and materials. The use of technology and materials in teaching is more difficult than the use of traditional teaching tools. It requires the use of more technical, complex and combined information. Therefore, it is harder to include technology and materials in the scope of methodological applications. Because advanced technology and materials may create more obstacles, are more complicated and more expensive. In addition, since they attract attention while using, they require guidance and training in their usage (Kaya, 2006). The above clarifications illustrate the need for greater use of technology for faster, more effective learning in an educational process that fully meets social needs. Teaching tools provides various ways and environments through which the information can reach the learner (Yalın, 2003). For this reason, technology should be used as a tool rather than a goal in educational settings. The main reason for the existence of technology is that people develop tools and methods to solve their own problems. These tools and methods can reach their goals only if they are used correctly (Kaya, 2006).

In this world of information, information is increasing at a rapid rate as a result of the effect of technology. The increasing problems of today's world such as overpopulation, information explosion, access to information, production of information, individualization can only be solved by utilizing contemporary technologies. It is not possible to solve today's problems with yesterday's method. Thus, we have to solve today's problems using today's opportunities. Today, business and operations are being carried out on information networks that are spread all over the world and open to everyone's use. According to Marşap (1999), advances in science and technology, particularly rapid changes in information technology, are pushing modern organizations to seek more successful managerial practices (cited from Balay, 2013). Smart phones are one of the solutions reached at the end of this seeking and the most widely used one. Smartphones are today's popular technology devices that combine many features, such as the Internet, a camera, video, audio recorder, navigation, music player, as well as communication applications. These features are rapidly increasing the areas and rates of the usage smartphones (Demirci, Orhan, Demirtaş, Akpınar and Sert, 2014). Smartphones that provides opportunity to use all of the features interactively have sneaked into all areas in life and this cannot be avoided even in the most private areas. Learning-teaching environments are also one of these areas. Teachers and faculty members can not prevent the use of smartphones

in classrooms, especially for young people because of their interest. In this case, the rational behavior should be to seek ways to utilize these tools in the direction of educational goals.

The aim of the research is to identify how student teachers use smartphones in learning-teaching environments, their intended purposes in using smart phones, and their perceptions on how to develop the use of smartphones in learning-teaching environments. The following questions have been sought in the research:

- 1) What are the opinions of student teachers on the usage, necessity and purpose of smartphones, and on improving the use of smartphones in teaching-learning environments?
- 2) Is there any significant difference among the opinions of student teachers on the usage, purpose, necessity and improvement of the use of smartphones in terms of university, gender, age and field/branch variables?

Method

In the research, the screening model was used in order to determine the current situation. In screening research, the appearance of a particular situation that occurs at a given time can be investigated as well as the changes that generally occur over time in a previously determined topic (Christensen, Johnson & Turner, 2015).

Data Collection Tool

A scale was used in the research in order to collect data. "The Use of Smart Phones in Learning-Teaching Environments Scope" which is developed by Göksoy and Yenipinar (2017) was applied. The scale consists of four parts. In the first part, there is personal information form. This form is designed to analyze students in more detail and to determine what effects student characteristics may have on variables. The other sub-sections are: a) How to use the smartphone (1, 2, 3, 4, 5 (n = 5), b) The purpose and necessity of the smartphone (6, 7, 8, 9, = 5) and c) Improvement of the smartphone use (11, 12, 13) (n = 3). The general alpha coefficient of the scale (.864), in order of size; how to use the smartphone (.811), the purpose and necessity of the smartphone (.765), and the improvement of smartphone use (.665). The alpha reliability of the scale was re-calculated with the current research and the results are as follows: scale general alpha coefficient (.764) according to dimensions; How to use the smartphone (.870), the purpose and necessity of the smartphone (.865), and the improvement of smartphone usage (.894).

Data Analysis Method

In line with the aim of the research, normality and skewness-kurtosis values were examined by applying the Kolmogorov-Smirnov and Shapiro-Wilk tests to the collected data before analyzing the subproblems. As it is seen in Table 1, it was determined that the subscales of the scale demonstrated normal distributions in terms of personal variables. After this process, data of 570 participants were analyzed. In the analyzes of the data, descriptive statistics (f, Ss), t test from parametric statistical techniques and One Way Anova Test were used for analysis and interpretation. For the interpretation and grading of the mean scores obtained according to the quintile scale used in the scale: 1.00 - 1.79 (never), 1.80 - 2.59 (rarely), 2.60 - 3.39 (occasionally), 3.40 - 4.19 (frequently) 4.20 - 5.00 (always) were used.

Table 1. Kolmogorov-Smirnov results of the scale

	Kolmogorov-Smirnov		
	Statistic	Df	Sig.
How to use the smartphone (HTUS)	,085	570	,000
The purpose and necessity of the smartphone (PANOS)	,077	570	,000
Improvement of the smartphone use (IOSU)	,108	570	,000
University	,367	570	,000
Gender	,464	570	,000
Age	,512	570	,000
Field/Branch	,211	327	,000

Research Population and Sample

The population of the research is composed of 939 undergraduate student teachers who are studying at Düzce University Faculty of Education and 996 undergraduate student teachers who are studying at Aksaray University Education Faculty in 2017-2018 academic year. The scales were distributed to all student teachers consisting the population, however they were applied only to 720 student teachers who stated that they would participate voluntarily. According to the results obtained from the scales given to 314 students from Düzce University Faculty of Education and 256 students from Aksaray University Faculty of Education, the scale was found to be suitable for research purposes. Thus, the results were interpreted on a total of 570 scales.

Demographic variables selected in the research are university, gender, field (branch) and age. Distribution of participant student teachers in terms of demographic variables is given in the following tables. The distribution of the student teachers in the research in terms of university variable is demonstrated in Table 2.

Table 2. Distribution of participants in terms of university variable

University	N	%
Düzce	314	55
Aksaray	256	45
Total	570	100

As seen in Table 2; 55% of the student teachers have been studying at Düzce University; 45% of them have been studying at Aksaray University. The distribution of participants according to universities appears to be very close to each other. The distribution of the student teachers in the research in terms of gender variable is demonstrated in Table 3.

Table 3. Distribution of participants in terms of gender variable

Gender	N	%
Female	423	74
Male	147	26
Total	570	100

As it is shown in Table 3, %74 of the student teachers who participated in the research are female and %26 of them are male. It can be concluded that this distribution reflects the real situation.

The distribution of the student teachers participated in the research in terms of age variable is demonstrated in Table 4.

Table 4. Distribution of participants in terms of age variable

Groups	N	%
17-25	483	84.7
26-35	87	15,3
Total	570	100

As it can be seen in Table 4, The majority (84.7%) of the student teachers who participated in the research were between the ages of 17-25.

The distribution of participant student teachers in terms of field/branch variable is given in Table 5.

Groups	N	%
Turkish-Literature	142	24,9
Psychological Counseling and Guidance	142	24,9
Classroom Teaching	100	17,5
Social Sciences	43	7,5
Foreign Language	43	7,5
Mathematics	100	17,5
Total	570	100

As it is demonstrated in Table 5, 24.9% of the student teachers participating in the research are in the field of Turkish and Literature; 24.9% in Psychological Counseling and Guidance; 17.5% in Classroom Teaching and 17.5% in Mathematics Teaching. Students with the least participation (7.5%) are in Social Studies and Foreign Language education in the research.

Findings

In this section, the findings obtained from the collected and analyzed data in the research process are given in the order of research subproblems. In addition, interpretations were given on the reasons for the findings.

1) The first subproblem of the research: “*The opinions of student teachers on the usage, necessity and purpose of smartphones, on improving the use of smartphones in teaching-learning environments*” is given in Table 6 according to scale subdimensions.

Table 6. Arithmetic mean and standard deviation values for smartphone use

Dimensions	N	\bar{X}	SS
How to use the smartphone (HTUS)	570	3,730	,772
The purpose and necessity of the smartphone (PANOS)	570	3,481	,808
Improvement of the smartphone use (IOSU)	570	2,570	,972
Final Total	570	3,260	,705

As can be seen in Table 6: opinions of the student teachers participating in the research on how to use the smartphone and on the necessity and purpose of using smartphones are at “frequently” level. It can be indicated that student teachers use smart phones in learning-teaching environments and they know how and why smartphones are used in learning-teaching environments. Opinions of the participant student teachers on improving the smartphone use are at “occasionally” level. The final total of the opinions about the smartphone use is at moderate level. As seen in the table, the standard deviations of research findings are close to one another. It can be said that the opinions of the participants have not been very different different.

Table 7 demonstrates the item-based mean and standard deviation values in order to elaborate the opinions of participant student teachers regarding smartphone use in learning-teaching environments.

Table 7. Arithmetic mean and standard deviation values of the scale items regarding the use of smartphones in teaching-learning environments

Dimension	No	Item	\bar{X}	Ss
How to use the smartphone (HTUS)	1	I know how I can use smart phones in a suitable way according to the topic.	4,08	,87
	2	I can explain the difference among the educational programs in the smartphone.	3,44	1,03
	3	I can explain the importance of the use of smartphone in a lesson.	3,75	1,03
	4	I can analyze the role of smartphone according to time and experiment within the learning teaching process.	3,61	,97
	5	I can use the smartphone to evaluate the learning teaching process.	3,75	1,10
The purpose and necessity of the smartphone (PANOS)	6	I use the smartphone for educational purposes in educational environments (classrooms, lecture halls, etc.).	3,54	1,09
	7	The use of smartphones in teaching and learning environments affects the educational quality positively.	3,58	1,04
	8	There is an educational need for smart phones to be used in teaching-learning environments.	3,42	1,12
	9	I think that using smartphone in teaching-learning environments may be beneficial for education and training.	3,62	1,05
	10	Faculty members have the necessary information and technology to use smartphone in educational settings in accordance with their educational purposes.	3,23	1,10
Improvement of the smartphone use (IOSU)	11	I use smartphone to determine negativities in educational environments (classrooms, lecture halls, etc.).	2,73	1,07
	12	I can develop an original model for smartphone use that will solve the problems in learning-teaching process.	2,53	1,21
	13	I can design smartphone use for learner-based education.	2,43	1,24

As it is seen in Table 7, when the arithmetic mean values of student teachers’ levels of smartphone use in the teaching-learning environments are handled on the basis of item, the item stated as “I know how I can use smart phones in a suitable way according to the topic” has the highest mean value ($\bar{X}=4,08$). The following item is stated as “I can explain the importance of the use of smartphone in a lesson” ($\bar{X}=3,75$) and it is given as the third one. Item that has the lowest mean value is the thirteenth which is stated as I can design smartphone use for learner-based education ($\bar{X}=2,43$). The items lower than the thirteenth are the twelfth “I can develop an original model for smartphone use that will solve the problems in learning-teaching process” ($\bar{X}=2,53$) and the eleventh “I use smartphone to determine negativities in educational environments (classrooms, lecture halls, etc.)” with the mean of ($\bar{X}=2,73$). Average scores of two items with the highest average are at “frequently” level and average scores of three items with the lowest average are at “occasionally” level. The obtained findings demonstrates that opinions of the student teachers participating in the research on the use of smartphone and on the necessity and purpose of

using smartphones are at “frequently” level and their opinions on the improvement and design of the use of smartphones are at moderate level. It is concluded that smartphones are highly used in learning-teaching environments. Nevertheless, it is not completely certain that this usage is suitable for educational purposes. On this subject, research should be carried out, especially on the smartphone usage contributing to the aims of education. The fact that the lowest arithmetic mean values are on the improvement of smartphone use is a matter to be considered. The necessary arrangements should be made so that the tools of the educational technology can be developed and the student teachers are equipped with the necessary knowledge and skills.

In the direction of the findings obtained; it can be said that different activities and applications should be provided for student teachers in order to design and develop the use of smartphones in the teaching learning environment. Also facilities of additional education and personal development should be considered.

2) The second subproblem of the research: “Any significant difference among the opinions of student teachers on the usage, purpose, necessity and improvement of the use of smartphones in terms of university, gender, age and field/branch variables”. Related findings are given above.

2. 1. Findings related to university, gender and age variables

T-test results on the opinions of participant student teachers on the usage, purpose, necessity and improvement of the use of smartphones in terms of university, gender and age variables are given in Table 8.

Table 8. T-test results regarding the university, gender and age variables

Variables		N	\bar{X}	ss	sd	T	p
University	Düzce	314	3,31	,71	567	2,13	0,306
	Aksaray	255	3,19	,68			
Gender	Female	422	3,22	,70	567	-2,19	,619
	Male	147	3,37	,71			
Age	17-25	482	3,29	,70	567	2,96	,420
	26-35	87	3,05	,67			

*p<0,05

When we analyze the T-test results on the opinions of participant student teachers on the usage, purpose, necessity and improvement of the use of smartphones in terms of university, gender and age variables, it is seen that there is no difference according to these variables ($p>,05$). The fact that there is no significant different according to the variables can be interpreted as the smartphone usage is not affected by the university, gender and age variables in teaching-learning environments.

2. 2. Findings related to field/branch variable

One Way Anova Test was applied in order to determine whether the opinions of participant student teachers on the usage, purpose, necessity and improvement of the use of smartphones differ in terms of field/branch variable and the results are given in Table 9.

Table 9. One Way Anova results related to brach/field variable

Scale	Field/branch	N	\bar{X}	SS		K.T.	SD	K.O.	F	p	Difference	
General Scale	(1) Turkish – Literature	142	3,07	,65	Intergroups	11,57		2,31 ,48				
	(2) Psychological Guidance and Counselling	142	3,30	,74	Intragroup	270,98	5		4,8	,00*		
	(3) Classroom Teaching	100	3,44	,71		-					1,2,4,6,	
	(4) Social Sciences	42	3,15	,76		-					3,4,6, 3-5	
	(5) Foreign Language	43	3,49	,59		-					6	
	(6) Mathematics	100	3,23	,66		-						
Total						282,56						

*p<,05

When Table 9 is analyzed, One Way Anova Test was applied in order to determine whether the opinions of participant student teachers on the usage, purpose, necessity and improvement of the use of smartphones differ in terms of field/branch variable and the results demonstrates that there is a significant difference among the opinions ($p<.05$). As a result of the Tukey-b test to determine the source of the difference: The student teachers' opinions on the use of smartphone in teaching-learning environments differ according to the branches: (1) Turkish-Literature, (2) Psychological Guidance and Counselling, (3) Classroom Teaching, (4) Social Sciences, (5) Foreign Language, (6) Mathematics. The numbers of the student teachers are the ones that demonstrated significant difference.

2. 3. One Way Anova results of opinions on field / branch variables in terms of scale subdimensions

One Way Anova Test results on the opinions of participant student teachers on the usage, purpose, necessity and improvement of the use of smartphones in terms of field/branch variable are given in Table 10.

Table 10. One Way Anova results of opinions in terms of scale subdimensions

Dimension	Branch	N	\bar{X}	SS	K.T.	SD	K.O.	F	P	Difference
(HTUS)	1)Turkish-Literature	142	3,59	,65	Intergroups	8,08		1,61	2,7	
	2) PGC	142	3,73	,74	Intragroup	330,66		,58		
	3) Classroom Teach.	100	3,83	,71	Total	338,75	5			1, 2, 3, 4, 6
	4) Social Sci.	42	3,68	,76					,018*	
	5) Foreign Lang.	43	4,04	,5						2, 3, 5
	6) Mathematics	100	3,70	,65						
(PANOS)	1) Turkish-Literature	142	3,27	,82	Intergroups	10,57		2,11		
	1) PGC	142	3,51	,81	Intragroup	360,27		,64		
	2) Classroom Teach.	100	3,62	,81	Total	370,56	5		3,30	,06*
	3) Social Sci.	42	3,46	,79						1, 2, 3, 4, 6
	4) Foreign Lang.	43	3,70	,72						2, 3, 4, 5, 6
	5) Mathematics	100	3,49	,75						
(IOSU)	1) Turkish- Literature	142	2,34	,90	Intergroups	21,64		4,32		
	2) PGC	142	2,66	1,00	Intragroups	516,03		,97		
	3) Classroom Teach.	100	2,86	,98	Total	537,68	5		4,72	,00*
	4) Social Sci.	42	2,30	,94						1-2, 4, 6,
	5) Foreign Lang.	43	2,72	,91						2-5,6
	6) Mathematics	100	2,51	,94						

* $p<.05$

When Table 10 is analyzed, it is seen that there is significant difference among the opinions of student teachers on the usage, purpose, necessity and improvement of the use of smartphones in terms of field/branch variable ($p<.05$). Differences are found in all dimensions and total points. According to the results of the Tukey-b test which was conducted to understand the source of the difference, mean and standard deviation of student teachers according to field variable are as follows: (1) Turkish-Literature, (2) Psychological Counselling and Guidance, (3) Classroom Teaching, (4) Social Sciences, (5) Foreign Language, (6) Mathematics. Their opinions are significantly different in these fields. When viewed in terms of average, the highest level of use is among students studying in the Foreign Language field (ATNK \bar{X} =4.04, ATKAG \bar{X} =3.70, ATKG \bar{X} =2.72). In the second place is the student teachers of Classroom Teaching (ATNK \bar{X} =3.83, ATKAG \bar{X} =3.62, ATKG \bar{X} =2.86). The averages of the views of the students of classroom teaching on improving the use of the smartphone in the learning-teaching environment are higher than the other groups. The lowest average among the groups belongs to the student teachers studying in Social Sciences (ATNK \bar{X} =3.68, ATKAG \bar{X} =3.46, ATKG \bar{X} =2.30). The cause of all these results needs to be studied. These results may be due to factors such as the smartphone technology that the students have, the economic level of the family, the proficiency to become a teacher, and the ability to transfer smartphone technology to learning-teaching environments.

Results, Discussion And Suggestions

The current research aimed to identify how student teachers use smartphones in learning-teaching environments, their intended purposes in using smart phones, and their perceptions on how to develop the use of smartphones in learning-teaching environments. Based on findings, the following results were obtained: Student teachers use smart phones in learning-teaching environments and they know how and why smartphones are used in learning-teaching environments. Also they frequently use smartphones. This result is the same as the result of Yildirim,

Yaşar and Duru (2016) "smartphones attract the attention of students". However, it is inconsistent with the view of Ağca and Bağcı (2013) that mobile devices have been seldomly used previously for teaching purposes. This situation may have been due to the fact that students confused what it means to use smartphones with educational purposes. Students may have also accepted smartphone usage outside of the subject course as an educational use. This situation can affect the learning-teaching process negatively, rather than contributing to this process. Student teachers' views on how to use a smartphone in learning-teaching environments are at a high level and their opinions on designing and developing their use are moderate.

The opinions of participant student teachers on the usage, purpose, necessity and improving and designing the use of smartphones according to the needs of education do not demonstrate any significant difference in terms of university, gender and age variables. However, their opinions differ according to field/branch variable. This result does not coincide with the results of the research carried out by Demircioğlu and Yadigaroglu (2011) stating that "there is no significant difference among the opinions of student teachers studying at different branches about information and communication technologies". This difference may be due to the research population and the methods used. It can be suggested that further research on the subject should be continued to clarify the situation. It seems that the smartphone is among the students in the field of Foreign Languages that has the highest level of use in the teaching learning process. Second place is the students of Classroom Teaching. In fact, the average of the opinions of the students in the classroom teaching field on improving the use of the smartphone in the teaching-learning environment is higher than the other groups. Among the groups, the use of the smart phone in learning-teaching environments is the lowest among the student teachers in the Social Studies field. The reasons for these results should be studied. Also, these outcomes may have stemmed from many variables such as the content of the ongoing program, the smartphone technology that the students have, the economic level of the families, the proficiency to become a teacher, and the ability to transfer smartphone technology to learning-teaching environments.

In line with the findings, for researchers; it may be advisable to carry out research that can be used to compare quantitative and qualitative research involving students and faculty members in each area / branch and that research on increasing the use of smartphones in learning-teaching environments and designing new applications to facilitate this usage should be conducted. For the application, it can be suggested that faculty members should be an example for the students using their smartphones for their educational purposes in their classes and that students who discover new ways and methods on the use of smartphones to be used in learning-teaching environments should be supported.

Social Networking Sites And The Construction Of Digital Selfness

Asist. Prof. Dr. Eda SEZERER ALBAYRAK
 Communication Design and Management Department
 KTO Karatay University
eda.albayrak@karatay.edu.tr

Abstract

New communication technologies have become increasingly common in all areas of our daily lives. The transformation of interactive networks offered by information technologies has also affected many components of social life. While these technologies digitally exist as individuals, they also give them the freedom to relate to the digital self. Social networking networks can be considered as an expression of self with both the profiles they create and the shares they make. It is assumed that as individuals shape their digital self, they are influenced by the views of other users attached to their social network and are going to design an ego as a result of interaction. In the method part of the study, four cases belonging to the digital identity of a user actively using social networks are distributed in four groups and these four cases have been analyzed by different groups of individuals from different statuses formed within the framework of semi-structured interviews.

Key Words: Social Networking Sites, Social Media, Digital Self, Digitalization

1. New Communication Environments And Socialization

Socialization is the process of forming human identity, teaching the current values and norms of society to individuals. In the process of socialization, the individual learns how to behave in society, expects society and expects to exhibit socially acceptable behaviors. In the process of socialization, the individual creates his identity by moving from family to the outermost social layer. The socialization process is divided into two. The first is the period of primary socialization that starts in the family and covers the period up to the school and the secondary socialization starts with school and continues until the end of human life. A person who was born as a biological entity becomes a socio-cultural personality in this process (İşman&Buluş, 2016:612).

Despite the influence of society on the individual, individuals are also influenced by society and social changes. Socialization is a constant interaction. In socialization based on mutual social relations, the behavior of each member in the group affects, controls and regulates the behavior of others; so socialization is also mutual. As a result, socialization is the process of becoming a part of this whole by accepting the concept of a high degree of freedom, eliminating the natural self of man, forming an identity and interacting with society.

There are three important stages in the process of social interaction (Berger and Luckmann, 1966: 108-130): 1. Externalization 2. Objectivity 3. Internalization

In the process of externalization, individuals create a decisive culture in the social structure. In this phase, which gives an objective qualification to the material and cultural conditions of social material, the individual carries subjective values and worlds of meaning. Role-based activities and typologies based on traction are the basic tools at this stage (Berger and Luckmann, 1966). Then a ground should be prepared where the ideas that are externalized will become a constant reality. In this phase, called objecting, individuals shape the norms they claim to be necessary for coexistence. For example, when we go to a hospital, the behavioral patterns we have inherited have actually been created before us and institutionalized in the historical process (Berger and Luckmann, 1966). Thus, behavioral patterns have become an external reality.

In the third stage, the process of internalization reveals the transfer of this external reality to the subjective areas of the individual through socialization (Berger and Luckmann, 1966). People construct a certain norm and object it into the next generations as an external reality. What is expected is that in the processes of socialization of individuals, they carry this external fact to their subjective universes and internalize the social reality that is constructed according to their own reality. At the end of this process, internalized patterns are reproduced by externalizing through roles and actions and transferred to later generations (Berger and Luckmann, 1966).

Socialization is a dynamic and multifaceted process. The media has a very effective role in this process. The transformation of communication environments and the possibility of socialization have also been differentiated. According to Mc. Quail, the media has five main functions: informing; cultural continuity; socialization; creating publicity and amusement. With the web 2.0 technology, known as second-generation Internet services, was introduced into the market in 2004, resulting in a cyberspace public space left behind by geographical borders. With the possibility of global communication provided by social networking networks and the possibility of continuity, the person keeps a constant identity development process. The interaction with the community is accelerating and increasing, and the individual has more to do with the cultural influences than ever before. Cultures are interacting with other cultures and become as open as ever before. Through social networks, social traditions, values and culture, global regulation from national boundaries are carried. As globalization, inter-individual interaction, products, capital and public space are overcoming the boundaries, while the boundaries are becoming more and more fierce with the new communication medium, the cultural product is becoming a product

that is uncovered from the hand and the cultural encounters in the expanding circle have been realized. This process which is also expressed as cultural globalization has become a product of the global village. The identities that are influenced by the multifaceted process of socialization carried on the global stage are noses with different cultures, and what they receive from dominant cultures are like building blocks that integrate into the culture of the society they are in (<http://ab.org.tr/ab13/bildiri/228.pdf>).

Individuals can turn their personal information into digital codes and form a profile with the forms directed after joining the social network. The accessibility feature can be customized with the view profile of the created profile. Other users can then be invited to the same network via this platform. It is the most important feature of social sharing sites that the list attached to the created profile is also open to others. This feature, which allows the profiles to connect indirectly, extends the network's volume. The use of social media has come to be referred to as a new mode of socialization, as it comes to being an objectified element in the way of social reality: "Individuals' social forms of existence can be classified under the following headings: representation, performance, profile, surveillance, surveillance, create, organize, carry out actions / campaigns in virtual space, and even move to offline everyday life " (Dunbar and Goffman, 2009: 29).

2. Social Network Sites And The Digital Self-Presentation

Dökmen (2010:169) describes selfness as "every feature and process that distinguishes me from the others." Goffmann (2009:16, 33) also tells us that when we present ourselves to other people, we display different performances according to different roles, and social life is actually a scene. When a person is in an act, he or she wants to make an impact on the person he or she follows. They want the viewers to believe that the character presented to them is actually a real character. Dökmen (2010:169) also says that according to the theory of self presentation, the behavior of a person depends on his / her gender concepts, his / her ability to act in accordance with the expectations of others. Therefore, it should be taken into consideration that the presentations of self are different according to the different social roles of women and man.

We can think of social media networks as environments in which individuals redefine society's integration process with digital codes. Web 2.0 technologies that enable simultaneous and bilateral sharing of user-based content have made the theory of Berger and Luckmann (1966: 108-130), the mechanism of producing social reality more dynamic. In providing these changes, it is necessary to talk about the social network areas created by the new media. Binark et al. (2012: 124-125) have thought of this space as a free and dynamic living space that can be easily found in new tribes, where new ones can easily be encountered by similar ones and "others". From these definitions, Web 2.0 can be seen as a means of freedom that an individual can use while creating digital identity. The development of the Internet has changed the conditions of traditional identity construction. Previous work on self-presentation in online environments has usually focused on constructing identities in anonymous (anonymous) user environments where the identity of the persons is not clear. Binark et al. (2012: 118) have considered the digital identity creation process as a process of constantly building/constructing. According to them, this process is not only a "future" but also a "being" with its past sentences. That is, the construction of the identity of the individual, which the individual creates, is proceeding at a time of its own shaping. According to Gonzales (2008) and Melcombe (2011), facebook users have the ability to present their own controllable images to friends and followers using personal profile pages. When users make a decision about Facebook identities, they are determined based on how other users want to perceive themselves. The fact that the information is under control in this way is vital for self presentation. When compared with what happens in the face-to-face communication of the self-presentation, it offers the user the ability to be selective about features that are presented for self-modifiable and manipulable online self-presentations. In other words, individuals decide for themselves which identity they are to offer on Facebook. Timisi (2005:97) defines this new situation as a centerless communication field as a perfect opportunity of self-creation. The user can place the desired visual or textual content on this page in the virtual entity. The person now has a copy of the digital components.

The results of the work Zhao and colleagues (2008) identities are different from identities in the anonymous online environment or those in the offline real world. Facebook users emphasize or exaggerate the ideal self characteristics that are socially desirable but not observed in real life. At the same time, users tend to hide their undesirable features. The emergence of Facebook has empowered its users on selective self presentation. Zhao et al. (2008) have identified desirable identities as inconsistent social network identities with real life personalities. These online identities are often positively shaped to express one's socially desirable and sympathetic attitude and are carefully constructed to reflect social and cultural norms.

Hood (2012: 315) approaches the subject in another way in the sub-title of "we all want a second life" in social media's work on the creation process of the self. Hood (2012) thinks of the social media user as an individual who designs an online world where he can live an extraordinary life in beautiful homes where he can have a great body that does not get old and does not get sick. Then he gives a striking example of the difference between the real and the self created in the virtual space. In these examples, it indicates that the individual creates the self which others want to see while forming their own self.

Facebook, Twitter, Foursquare, Instagram, Vine, Youtube, Pinterest, blogs, wikis, and many social networks that we can duplicate have undoubtedly different features, dynamics, usage limitations. However, when it is evaluated from the general perspective, it can be seen that a profile belonging to the user (selected profile photograph, identity descriptions, age, sex, relationship status, business information, education bill, cover photo, motto) opinion), likes, comments, friends (followers, followers). These properties are filled in to the individual's preference, either true or completely indistinguishable. Individuals who are looking for absolute power in social networks are also constructing their actions and social networking practices in this direction (Uğurlu, 2015:242). The individual expresses an identity that he or she does not feel by manipulating it through images through social networks. Social media, as an area where it can fill the gap between what it is and what it wants to be, just becomes functional in this process. When we are thinking about the subject, we have a virtual self that can make identity control itself by means of perfection on the body, in short, creating, organizing, attaching, extracting or delighting in digital visual materials by re-producing and re-producing digital visual materials. Agger (2011:168) defines the virtual self as: Existence is the act of being in the world rather than abstract philosophical ideas. In the formal, flashing, imaginary world of the Internet, where people create themselves electronically, more than ever is needed for self-editing. It is also possible to say that self-assembly is necessary. In other words, reality is debatable, creating a fictional self is like evidence of social nobility in the presence of individuals. It is able to offer the mechanism of repair and regulation to equip the body with images, to polish and shine the life stories, to complete the incomplete, to transform all these voluntarily into voluminous items, to say, I am special.

3. The Method Of Research

In the method part of the research, three cases belonging to the digital identity of a user actively using social networks are distributed in three groups and three cases have been analyzed by different groups of individuals from different status formed within the framework of semi-structured interviews. The first group is consisted of academicians, the second group is from administrative staff of an university and the third group is consisted of students. It is chosen from different status because it should be shown that how the same person's different social network sites sharings are evaluated by people who have different status.

The purpose of these negotiations is to reveal implicit and explicit information that can be obtained from digital sources. Three digital data belonging to an individual were selected in the interviews. These are the person's one of the Instagram account's post, the other Facebook profile photo, the avatar that is used in the next Twitter account. Each of these data is distributed in three groups of five persons. Based on the data from each group, they were asked to make estimates about their personal information, lifestyle and personality. At the end of the interviews, the third person assessed the said individual together with the digital data and reached the conclusion that he had cut it from its real context and identified the same person as four different "persona".

The elements that are basically measured are as follows. 1. Marital status 2. Age 3. Gender 4. Occupation 5. Economic income status 6. Hobbies 7. Cultural and Social Activities. These interviews are of great importance for our research. It uncovered how third-parties perceived the large, personalized information archive that was accumulating as a major source of reliance when pulled out of the relevant networks. Significant results were obtained in the talks.

The actual information of the individual who receives the digital identities is as follows (Personal permission has been obtained for the sharing of this information) :

1. Marital Status: Married
2. Age: 33
3. Gender: Female
4. Occupation: Instructor (Child Development Department)
5. Economic income status: 4.500
6. Hobbies: Reading book, imagining, shooting, discovering new places, writing, thinking and interpreting
7. Cultural and Social Activities: Helping living things in every situation, theatre, cinema and concerts in different cities, chat with people meaningfully and intellectually, organizing reading activities, making activities by recognizing the works of art

Group 1 (Academicians), evaluating the person's Facebook photo, was found in descriptive explanations and commented on the character of the person. The information they provide by way of image analysis is as follows:

1. Marital Status: Married
2. Age: 40
3. Gender: Male
4. Occupation: Doctor
5. Economic income status: 5.000-10.000
6. Hobbies: Listening to music, Diving, Swimming, Skiing
7. Cultural and Social Activities: Participating in conversations and concerts, theatre

“We think that a person is alone in the crowd. It’s a person who likes less things in his home, eats ^{less} food and wants fewer people in his life. He’s gentleman with culture and art. It looks like a human born to nature. we think that he loves loneliness and that he has an unrequited love.”

Group 2 (Administrative staff), who is on the way out of the Twitter avatar of the quiche, has gone through a general analysis of the clues they have found:

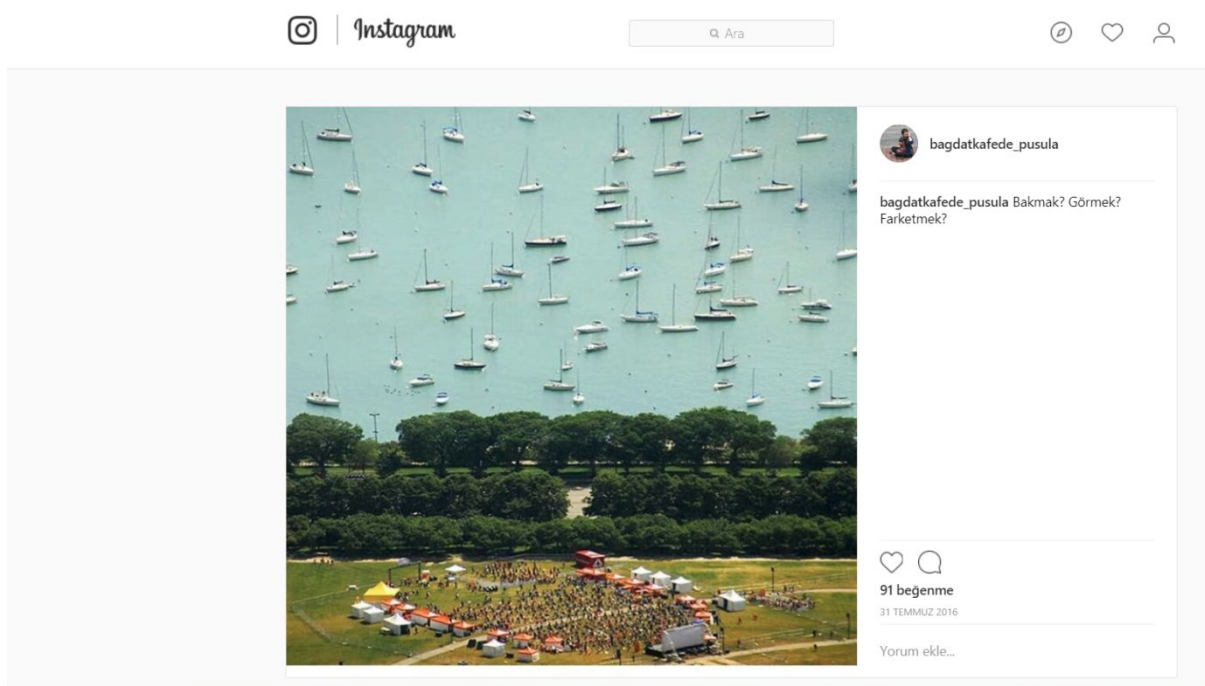

1. Marital Status: Married
2. Age: 35
3. Gender: Male
4. Occupation: Academician
5. Economic income status: 5.000-7.000
6. Hobbies: Watching films, Reading books, Being in nature
7. Cultural and Social Activities: Shooting, Travelling

“We think that having Little Prince photo as twitter avatar shows that he has child soul and colourful personality so his children are very lucky. He has a retweet about rectors so we assume that he is an academician

and he likes his job because he writes that his job and his soul are the same and whole. He likes children very much also he has positive perspective on life."

Group 3 (students), who is on the way out of the Instagram post, has gone through a general analysis of the clues they have found:

1. Marital Status: Single
2. Age: 35
3. Gender: Male
4. Occupation: Blogger
5. Economic income status: 5.000-6.000
6. Hobbies: Travelling, Shooting, Reading books, Discovering, Tracking, Dealing with antiquities
7. Cultural and Social Activities: Exhibitions and artistic activities, theatre

"We think that he is single because he has free spirit but he has a child in his spirit that he can not grow in. He also tries to show his own truths through artistic activities. He likes nature very much."

At the end of the talks, these three interpretations were revealed to the groups of the same person who actually represented the same individual. The interviewer's group makes different comments for the user and responds differently to the questions, indicating that the user has created his digital identity differently for each social network. This shows us that users design their identities in the online environment according to the existence and expectations of others.

Conclusion

The user who enters the virtual extension is in fact building an identity from the moment it first enters this area. This process goes in line with how one wants to be seen by others. It is possible to read each of the shares in social media profiles as performance. The person is aware that he is being watched by an audience during the performance, and he wants to make a certain impact on that audience. It is in the interests of the user to obtain the consent of other participants and to share them in order to make them accepted by them.

At the end of the talks, these three interpretations were revealed to the groups of the same person who actually represented the same individual. The interviewer's group makes different comments for the user and responds differently to the questions, indicating that the user has created his digital identity differently for each social network. This shows us that users design their identities in the online environment according to the existence and expectations of others.

This confirms the claim of the article. The difference in users' self-organization in digital media spaces has shown that this is a design process.

Socialization Of Youth Into Historical Consciousness In The Czech Republic

Tomáš KARGER & Jan KALENDA

Research Centre of FHS

Faculty of Humanities Tomas Bata University in Zlín Štefánikova 5670, 760 01 Zlín The Czech Republic

karger@utb.cz

kalenda@utb.cz

Abstract

This study presents results of qualitative research focused on transmission of historical consciousness to pupils and students on primary, secondary and tertiary levels of education. The study is based on data from 11 focus groups with 88 participants aged 12 - 25 which took place in late 2015 and early 2016. Analysis of the data was carried out according to the general coding paradigm. The study describes the modalities of historical consciousness transmission in four key socializing institutions: (1) non-formal intergenerational learning within family, (2) television broadcasting, (3) internet usage and (4) formal educational institutions. In this regard, the study supplements findings of existing research not only by describing the particular mechanisms of intergenerational transmission of historical consciousness, but it also demonstrates that a successful socialization into historical consciousness requires congruence of multiple institutions. Otherwise, a process of forgetting takes place.

Introduction

Since its formulation in the late 1980s in Germany and later in Scandinavia, the concept of historical consciousness has become a significant subject of international research in the domains of history didactics and understanding of the role history has in the everyday lives of pupils and students (Ahonen, 2005). A key contribution to establishing this subject's position was an extensive European-wide project Youth and History, which in 1995 and 1996 implemented a comparative survey among 15 and 16 year old europeans (Angvik & Von Borries, 1997).

Various authors (Angvik & Von Borries, 1997, p. 36; Blanuša, 2005, p. 33) regard historical consciousness to represent a complex interconnection among interpretations of the past, perceptions of the present, and expectations of the future based on the existing knowledge of the past. In such a frame, historical consciousness serves to provide a temporal orientation in an individual's life and to form a historical identity (Rüsen, 2008).

Existing research in the domain of historical consciousness focuses on a number of phenomena which are located at the intersection of educational sciences and sociology. In this regard, researchers study (1) how the use of various didactic materials, especially textbooks, contributes to its formation (Ammert, 2010; Thorp, 2014), (2) the contents of historical consciousness of pupils and students (Seixas, 2006), (3) and the modalities of understanding the world based on historical consciousness (Rüsen, 2008).

In the case of Czech Republic, historical consciousness has become a subject of research only in the last decade (see e.g. Labischová, 2011, Labischová, 2012; Grácová & Labischová, 2012; Šubrt, 2010). We agree with Labischová (2012), that in the existing research two approaches can be distinguished: (1) educationally oriented and (2) socially oriented. The educationally oriented approach focuses on the way history is taught at schools and how are the latest findings about historical events presented to students. In this regard, Czech researchers have so far focused not only on inquiring about the educational content and information sources within history classes (Grácová & Labischová, 2012), but lately also on innovative didactic techniques aimed at development of history-informed thinking (Labischová, 2015). On the other hand, the socially oriented approach focuses on the descriptive characteristics of the Czech population, i.e. the results of its transmission. It also pays heightened attention to the attitudes of adults to history, evaluation of certain historical periods and also to social determinants of history interpretation (Pfeifrová & Šubrt, 2009, Šubrt, 2010; Šubrt, Vinopal & Vávra, 2013). It also seems that the approaches of international research of the subject correspond to the approaches described above.

Even though both approaches produced significant findings about historical consciousness of the Czech population and its formation by the educational system, we think that some important questions concerning the phenomenon have not yet been resolved. This is true especially of the *question of historical consciousness formation in the so-called "sensitive period"* (Schuman & Corning, 2000, p. 916) between the 14th and 25th year of life which is by many authors (Hart-Brinson, 2014; Kyoung & Hye-Kyung, 2015) regarded as key for development of this type of consciousness.

While the educationally oriented approach tackles this problem exclusively as a problem of transmission of historical consciousness in schooling institutions, the socially oriented approach takes the processes and mechanisms of transmission of historical consciousness to children and youth as granted; it assumes their existence instead of regarding them to be a subject of empirical investigation. In the first case, we lack a deeper understanding of *how is the historical consciousness in the form of particular symbolic representations of the past transmitted by various institution simultaneously*, that is, not only by school, but also by family, or by various kinds of media. Furthermore, the question is whether there exist relationships among these institutions, which could lead to intensification or attenuation of transmission of historical consciousness. According to many authors (Duquette, 2011; Rüsen, 2008, Thorp, 2014), the impact of family environment and other upbringing institutions can significantly influence the relationship to history and through that also influence the appropriation of knowledge within the educational system. In this regard, we attempt to broaden the findings of the educationally oriented approach by describing the mechanisms of transmission of historical consciousness in various institutions which are responsible for its development during adolescence. In other words, we study the social environment which affects the formation of historical consciousness of pupils and students in the Czech Republic. This environment is regarded as an important socialization agent also by authors in the field of social pedagogy (Kraus & Poláčeková, 2001; Kraus, 2008).

In the case of socially oriented approach, *appropriation of historical consciousness in the course of the sensitive period*, during which children and youth form their relationship to history, interpretation schemes and basic political orientations (Alwin & Krosnick, 1991) is not properly elaborated. Because of that, the socially oriented approach is not able to explain why certain attitudes to history are present in the adult population.

We believe that the focus of this study on the mechanisms of transmission of historical consciousness to pupils and students will allow us not only to enrich the approaches empirically, but also to initiate their mutual interaction.

Methods

This research answers the call of several authors (e.g. Seixas, 2006, Rüsen, 2008, Labischová, 2011) for a more frequent use of qualitative methodology in the study of historical consciousness. In this regard, our intention was to study the ways in which pupils and students develop their historical consciousness about four particular symbolic representations of the past embodied by the following political events: (1) the terrorist attacks in New York on 11th September 2001, (2) the change of political regimes in Czechoslovakia in November 1989, (3) the events of August 1968 which culminated in the invasion of the armies of the Warsaw Pact to Czechoslovakia and (4) the communist coup d'état in Czechoslovakia in February 1948.

Informants from three levels of the educational system were selected for the purposes of the research: (1) elementary schools (IESCD 2) aged 12 – 14 (N = 21, 10 females, 11 males), (2) middle schools (IESCD 3) aged 17 – 20 (N = 46, 23 women, 23 men) and (3) universities (IESCD 6) aged 23 – 25 (N = 21, 10 women, 11 men). In total, 88 informants participated on this research project. Their selection was guided by two basic principles: first, it was aimed to cover all educational levels which correspond to the sensitive period (Schuman, Corning, 2000); second, it aimed at highest possible diversification of informants within the respective age groups. Because of that, at least two institutions differing by their specialization (technical, humanities) or character (vocational school, gymnasium) were selected at each educational level. The only exception to this concerns the level of elementary schools where we were able to develop cooperation only with a single school.

The data gathering for this research took place in late 2015 and early 2016. It was carried out through focus groups according to a single script executed by an interviewer (4 interviewers were involved in the research project). In total, 11 focus groups took place with participation ranging from 3 to 12 informants, having a character of discussion guided by half-structured script. The script was focused on the four historical events mentioned above, on the information sources that the informants used with regard to them, on the meaning the events have and on the ways of learning about them.

The transcribed material from focus groups was analyzed consistently with an approach known as the generic inductive qualitative model or as the general coding paradigm (Hood, 2014). We first carried out open coding of all of the transcribed material, while also making memos containing emerging interpretations and conceptualizations. Subsequently, we grouped the codes according to their topical affinities and generated four general categories which account for the processes of transmission of historical consciousness in the particular socialization institutions mentioned by the informants.

Results

We present our main findings by describing the respective socialization mechanisms embedded in four institutions that are formative of the historical consciousness of the interviewed students and pupils.

Family: parents and grandparents

Family members were among the most often stated sources of information with regard to the given historical events. In particular, the role of parent and grandparent narration constitutes one of the most important sources of information and attitudes toward the events. A more detailed look at the data reveals that there is a shift in that the parents of older students (tertiary level) narrate more often about older events from our script (August 1968, February 1948) than the parents of younger pupils. The same tendency is visible with regard to grandparents, although there is a difference in that parents tend to focus in their narration on their personal experience with the events, while grandparents tend to compare the periods more generally. From our data, it seems that grandparents are inclined to focus on the implicit question “What was it like to live at that time?”, while parents tended to narrate as if the question posed by their children was “What did you do when this event took place?” As a result, the information our informants had from grandparents were often concerned with meso- or macro-level conditions of life such as the feeling of certainty or the overall conditions of life. On the other hand, the information provided by parents were concerned with micro-level events – personal stories and biographical narration.

However, the narrations of parents and grandparents did not differ only with regard to content. They also differed with regard to the situations in which the narration took place, especially when taking into account what prompted the narration. Here, we must take into consideration the fact that it is not generally common that three generations share a household so that the narration of grandparents were limited to visits as opposed to everyday occasions for narrations of parents. However, during visits, grandparents do not need a specific prompt to begin with their narration. Our respondents characterized it in a way that their grandparents often “just told the story”. In contrast, when we focus on parent narration, we see that it usually takes place as a response to something. The impulses for narration take various forms such as direct questions asked by children, collective watching of television broadcasting (news, series, films, or even advertisements) which covers the given event, or celebration of anniversaries when the topic “is being talked about everywhere.” As a result, we can see that contact with children can be a sufficient prompt for grandparents to narrate, while for parents further prompts are needed to trigger narration.

Television

A second source of information permeating all cohorts was television broadcasting. As hinted above, this information source is also tightly associated with the role of parents as they are the ones controlling television while children are young and as parent’s narration is often triggered in a situation when the family gathers to watch television together. In television broadcasting, there are several types of content with varying relationships to the historical events we inquired about and to the mnemonic practices of our informants. There are television news which played key role for our older informants with regard to September 11th as they experienced this event through the means of television reporting. This mediation of the event resulted, as our informants reported, in vivid experience and a strong emotional response. Interestingly enough, what keeps the event in the everyday consciousness of our informants is not the emotional experience itself, but the issue of trustworthiness of information regarding the event. While some of the informants believe that they will never be certain about what really happened and resign to reach a conclusion, the problem of trustworthiness motivates others to actively seek further information and discuss them with their peers.

However, television news are not relevant only with regard to events that took place during the lifetimes of our informants. They also mediate other current events such as anniversary commemorations or events that are by our informants associated with the original historical events such as current terrorist attacks, which are associated with the perceived discontinuity of September 11th, or domestic political problems associated with the unfulfilled potential of 1989. In this way, television news keep some of the more recent events – which are commemorated or are seen as a beginning of current type of events – in everyday consciousness of our informants.

There are also television series covering some or most of the events we examined. Most notably, there is a series called “Vyprávěj” (which could be translated as “Tell us Your Story”) which narrates the life experience of one generation since the 1950’s to present and therefore serves as a source of information and as a prompt for narration for multiple historical events. Furthermore, films are most commonly cited with regard to 1968 as this event is, according to our informants, “heavily covered by films.” We could even argue that for our informants, films are the most significant source of information with regard to 1968 as they provide information and “feeling” for an event that is “definitely part of history” for them. Finally, we found out that even advertising has a mnemonic

potential. Our informants repeatedly pointed to an advertisement for one of the largest Czech banks. The ad attempted to emphasize the long tradition of the banking institution (it celebrated 190 years of existence) and so it depicted by animation the crucial events of the 20th century.¹ In this way, it was able to keep reminding our informants of the events we were examining.

Internet

A third source of information present at all three educational levels were websites, streaming services and social networks accessible through internet connection. Although internet as an information source was talked about very often during focus groups, closer inspection reveals that most of the options it provides are considered only potentially (as an answer to the question about how would informants gather further information), while the actual practice seems to consist of frequent visits to few selected websites, which only have limited potential of informing their visitors about historical events (e.g. during anniversary). As a potential source of information on the internet, our informants listed a broad range of websites such as Wikipedia, search engines (Google, Seznam.cz) or video streaming sites (YouTube, stream.cz). On the other hand the set of websites representing actual sources of information was much more narrow – it involved home pages, news sites and social networks. Furthermore, our informants usually were not able to describe their use of this medium beyond the first step of going to some of the listed pages. While one could see this as an indication of interactivity of the Internet as a medium, we also see that as an indication of absence of a stable mnemonic practice established around the Internet use.

School

A fourth stable source of information was school. In one way or another, this information source was present with regard to all examined historical events. Except for September 11th, the events were part of standard school curriculum and so information were often gathered from textbooks and teaching (although some informants reported that in their history classes, they never covered history more recent than World War II.). In some cases, our informants reported that their teachers told them about some of the events regardless of the subject they taught. In this sense, school is an actual source of information for our informants. Yet in the interviews, school also represents a potential source of further information – informants would often opt to consult their teachers (especially if the teachers talked about the event during classes) together with searching on the internet or asking their parents. This option, however, is no longer present at the tertiary level of education.

However, our analysis suggests that school cannot be seen as a self-sufficient source of information about the past. With regard to older events that we examined (August 1968 and February 1948), school usually represents the first and dominant source of information because these events appear sporadically in other sources (the only exception is the existence of numerous films depicting the events of August 1968 mentioned earlier). And it is precisely in these situations, when school is not accompanied by other information sources, that our informants begin to exhibit vague knowledge of the events, or even explicitly report forgetting. As a result, it seems that transmitting knowledge about historical events cannot be achieved by a single institution, even though it is the one most specialized in education.

Discussion

To summarize our findings, we point out that the core structures forming historical consciousness are constituted by family (parents and grandparents), school (curriculum and especially teacher narration) and audiovisual media (television and internet). In this regard, our findings are consistent with the theoretical assumptions about key factors influencing historical consciousness (see Grácová & Labischová, 2012; Labischová, 2011). However, the role of Internet, although mentioned quite often, seems to consist largely of a potential information source with no specific mnemonic practices related to it.

Despite their purpose, a number of educational internet platforms, which were lately established in order to educate about the second half of the 20. century (see e.g. DSTR, 2017, CZ3889, 2017), do not constitute a relevant source of information for our informants. We believe that this state resulted from an absence of their promotion during history classes, which is consistent with a relatively low level of attention paid to the political events of the second half of the 20. century on all levels of the educational system (see e.g. Labischová & Grácová, 2011; Labischová, 2012).

¹ The advertisement was also uploaded to Youtube by an official account of the institution. It is accessible here: <https://www.youtube.com/watch?v=y2hiE6B4nvE>.

Another important point that our data showed is that practices surrounding other information sources we elaborated imply a certain interconnectedness: parents control the television program to be watched and they also narrate in reaction films and series they often watch with their children; teachers narrate during anniversaries of significant events which resonate through the media. Furthermore, the interconnectedness is most visible when only one information source remains in the situation of remembering. In our case, it was the school providing information about some of the older events. In such a situation, knowledge transmission becomes problematic and the resulting historical consciousness is vague and fragmented. Consequently, it seems that to talk about the structures forming historical consciousness (or even study them) as separate entities is a simplification limiting our knowledge about the phenomenon. We hope to have demonstrated that the distinction between them is of analytical nature rather than ontological.

Overall, we can see that with regard to formation of historical consciousness of pupils and students in the Czech Republic, a continuous and simultaneous influence of multiple institutions is of vital importance. Influence of a single educational institution does not seem to be enough for the pupils and students to appropriate a “coherent” historical consciousness about the given events, or even to become part of their “historical identity” (Rüssen, 2008). The formation of historical consciousness is supported by influence of multiple institutions, a wider educational environment as defined by Kraus (2008).

According to what our informants reported, it seems clear that historical consciousness becomes more articulated either overall with higher age of the participants or for particular events depending how close they are to their year of birth. This finding is especially relevant for the two most recent events in the focus group script (November 1989 and September 11th 2001) which from the perspective of our informants have the strongest consequences for their everyday life and for their future. The didactics of modern history should emphasize also the consequences of older historical events for the current and future life of pupils and students if the aim is for these events to become a larger part of their historical consciousness.

Conclusion

Our findings provide evidence that effective transmission of historical consciousness requires congruence of multiple institutions. Nevertheless, as the statements of our informants referring to the event of September 11th illustrated, the transmission does not necessarily have to be consensual, that is, socialization may involve contradictory information and narratives. If some of the socializing institutions (e.g. family or media) provide interpretations of history that are substantially different to the ones provided by other institutions, informants may exhibit higher reflexivity with regard to given historical events, may use more sources of information and may even bear a more intensive interest in history overall. This finding relates to the works of Duquett (2011) and Rüssen (2008) who claim that differing interpretations of history among school and other institutions affect negatively the appropriation of the official version of history. However, such cases of incongruence may not be seen only in a negative light. Our data suggest that these cases may lead also to higher reflexivity of the actors and to intensification of their cognitive development (Kaufman & Baer, 2006). It could then be the task of pedagogues to support the reflexivity and to guide it by cultivating critical ways of thinking about history. To be sure, a deeper understanding of the relationship between incongruent socialization content and the extent of reflexivity of pupils and students clearly requires further research.

Sociological Profile Of Subscribers Of The Jazz Bulletin Of The Jazz Section Of The Union Of Czechoslovak Musicians

Veronika Navrátilová

Faculty of Education University in Hradec Králové Czech Republic

V.svoncova@seznam.cz

Abstract

Jazz is one of the basic types of non-artificial music. Non-artificial music is a relatively autonomous developmental sphere of the European music culture, formed since the 19th century and developing specific features and internal differentiation in the course of the 20th century. The Jazz Section of the Union of Czechoslovak Musicians (hereinafter just “JS”) was a very important and unique part of cultural life in Czechoslovakia of the latter half of the 20th century. Despite the difficulties brought by the normalisation period the JS was a very active organiser, methodologist and publisher. One of the fundamental publication outcomes was represented by the publication of the periodical for JS members called *Jazz Bulletin of the Jazz Section* (hereinafter just “JB”). The main purpose of my research was to record interviews with the key representatives of the JS and analyse types of JB subscribers on the basis of sociological categories by the methods semi-structured interview and semi-structured questionnaire.

Introduction

The origin and the whole period of existence of the JS fall within the period of “normalisation”. Normalisation is the stage of Czechoslovak history between April 1969 and November 1989, characterised by gradual suppression of the democratisation processes and reform efforts of the sixties and renewal of full Communist power. Thus not only the area of art but also all other areas of human activity in the country were subject to attributes like controlled censorship, cancellations and bans of various organisations, moral decay and repression. Musical life of the time was developing along three lines: the official music scene, the grey zone and the illegal - underground - music.

Jazz Section Of The Union Of Czechoslovak Musicians

The JS existed between the years 1971-1987. In that period the JS had over eight thousand official members. Its key personalities were Karel Šrnp, Vladimír Kouřil, Josef Skalník, Čestmír Huňát and Tomáš Křivánek.

In October 1971 the constituting conference of Jazz section of the union of Czechoslovak musicians created the organisation. In the same year the Ministry of the Interior approved establishment of the Jazz section of the union of Czechoslovak musicians as a special-interest organisation, albeit without full autonomy. The JS as a special-interest organisation therefore belonged to the Union of Czechoslovak Musicians (Kouřil, 1999, p. 14-20).

The Union of Czechoslovak musicians was dissolved by the Ministry of Culture’s administrative act in 1984 including the organisations associated with it, one of them being the JS. Continuation of the JS activity would have made it an illegal organisation. The courage, activity and conviction of its members meant that, despite the complex and dangerous situation, the JS continued its activity, joining the grey zone of the period culture. The representatives of the grey zone were neither the official scene nor the underground but moved along its thin borderline.

In the beginning the JS was exclusively jazz oriented. In connection with the cultural development and establishment of new music genres the originally purely jazz orientation of the section began to widen. The main goals of the Jazz Section included support and encouragement of interest in jazz music in Czechoslovakia, which was reflected by its extensive organisational, concert and publication activities (Švoncová, 2013, p. 11).

Concert organisation activity was the focus of the JS’s attention until the issue of the order of restriction and ban of these activities. In the years 1974-1979 the JS organised nine of the originally planned eleven music festivals titled *Prague Jazz Days* (hereinafter just “PJD”). The tenth and the eleventh editions of PJD were already banned by the authorities. The first edition, spanning across two days, developed into an eleven-day festival over the years. The PJD by its time scope, musical content (traditional jazz, modern jazz, rock, jazz-rock, alternative, punk, music experiments, etc.) as well as visitor rates outgrew all other music festivals held in Czechoslovakia up to that time. Major unofficial events organised by the JS also included a performance of the American avant-garde theatre ensemble, the *Living Theatre*, taking place on 12 October 1980.

After the banning of the concert organising activity the focus of interest of the JS moved to publication. Thanks to the omnipresent systematic censorship the situation was not favourable in this area either.

All printing that was not officially censored and approved was illegal. The textual and the graphic components were subject to compulsory official approval. The texts were first auto-censored, then censored and finally censor supervised by an official or political institution. The graphics of every envelope or poster had to be officially released. For the publication activity of the Jazz Section not to step beyond the boundaries of legality, all its

publications were declared supplements to its membership periodical or publications of a special-interest club, which did not require official supervision, censorship and approval (Kouřil, 1999, p. 247).

The rich publication activities of the JS were headed by the *JB periodical for JS members*, and included bulletin 43/10/88 and *Diskorama*, separate editions *Jazzpetit* and *Situace* and a series of books on music, literary, art, history of culture and philosophy themes. The major ones include publication of the novella by Bohumil Hrabal *Obsluhoval jsem anglického krále [I Served the King of England]*.

This wide spectrum of activities made the JS unique in the Czechoslovakia of the normalisation period. Despite that all five leading personalities of the JS were followed by the period regime, accused of illegal business, sentenced and imprisoned in 1986. Court rehabilitation of the JS only put things right in 1991.

Jazz Bulletin

The major publication activity of the JS was represented by the *Jazz bulletin* periodical for JS members (hereinafter just "JB"). In the years 1972-1982 all regular members of the JS subscribed to the JB and the JS issued 28 issues in irregular intervals.

In the beginning, the membership-oriented periodical, JB, like the JS, was strictly jazz-oriented. As time passed its music spectrum extended to rock, jazz-rock, the alternative music scene or contemporary music in general. In addition to music themes the bulletin also began to publish articles on film, theatre, rock - classical music syntheses, punk, electronic and minimalist music, ethnic music and fine arts. This wide scope is proof of the absolute uniqueness of this periodical in the Czechoslovakia of 1980s and 1990s.

Research

The object of my research included key personalities of the JS and former JS members - subscribers of JB. The subject was the JB periodical for JS members. The chosen research methods included semi-structured interview and semi-structured questionnaire.

The interview research method allowed obtaining unique data from the key representatives of the JS themselves. I recorded the observed phenomena by means of audio-recordings, video-recordings and a record sheet. The results were analysed by means of qualitative analysis, transcript, first-order reduction, coding, timeline work, clustering, and the contrasting and comparison method.

The questionnaire research method allowed accumulation of information about former members of the JS at the time of their subscribing for the JB periodical and now and comparison of the past and present situation data. The first stage of the specific investigation has lasted for 4 months so far. Material collection and research result analysis combined quantitative and qualitative design and used contingency tables, tables of absolute and relative frequencies and bar charts of relative frequencies.

The interview of Vladimír Kouřil as a key personality of the JS was held in Prague on 5 May 2018.

The interview of Josef Skalník as another key personality of the JS was held in an art studio in Prague on 12 May 2018.

Further interviews with the other key personalities of the JS are included in the next research stage schedule.

The questionnaire was compiled in the course of methodology preparation and final research instrument preparation, which took one month.

The interview with Vladimír Kouřil crystallised into cooperation in the form of professional patronage over the questionnaire which facilitated its sending to 98 former JS members and implementation of the research among them. The questionnaire return rate in the first research stage was 35 active respondents.

The main purpose of the research was to record interviews with key JS representatives, analyse types of JB subscribers by sociological categorisation and compare their music preferences at the time of their subscriptions and today for compilation of their sociological profile. The basic working hypothesis was that the subscribers of the JB membership periodical have the same music preferences today as they had at the time of their JB subscription.

Questionnaire

A questionnaire is one of the most common research techniques where the respondents answer the posed questions in writing. The main purpose of the questionnaire is accumulation of information about the respondents, their opinions and attitudes to a certain theme. The questionnaire, unlike the other research techniques, uses the form of written answers (Pelikán, 2011, p. 104-105).

The target group of the questionnaire research was former members of the JS - subscribers of the JB periodical for members. The questionnaire itself focused on sociological categories including gender, age, education, place of residence, music preferences at the time of JB subscription and at present. The questionnaire included twenty-two non-parametric closed (multiple-choice), semi-open and open questions. The closed questions asked about

numerical, geographical and other data and the respondent had to choose one of the offered variants. The semi-open questions also offered response variants but provided space for specification of the chosen variant. Open questions provided the respondents with unlimited space for their own formulations.

The statistical processing of non-parametric questions was based on establishment of absolute and relative values as this type of questions cannot be processed by standard statistical procedures (Pelikán, 2011, p. 109). Open questions were processed by sensible categorisation.

Question 1

VARIANT	FREQUENCY	%
male	32	91.4
female	3	8.6
total	35	100

Figure 1, table 1: The opening closed question concerned the gender of the respondents. The table of absolute and relative frequencies and the bar chart of relative frequencies show that the first research stage included 8.6% female and 91.4% male respondents.

Question 2

Figure 2: The second closed question focused on the age of the individual respondents. The bar chart of absolute frequencies showed that the youngest of the addressed respondents was 53 and the oldest 75 years old. Most respondents were 65 years old.

Question 3

Figure 3: The third closed question mapped the year of joining the JS by the individual respondents. Most of the respondents (14.3%) became JS members in 1977. (11.4% of the respondents joined the JS in the years 1973-1976 and in 1978 and 8.6% entered the JS in 1972.

Question 4

Figure 4: The fourth closed question asked about the age of the respondents on entering the JS. Most JS members joined the Jazz Section at the age of 25 (14.7%), and 11.8% became JS members at the age of 22-23 and 29 years. The youngest respondent was 16 on entering the JS and the oldest member was 36 when joining the JS.

Question 5

VARIANT	FREQUENCY	%
interest in music	17	48.6
interest in culture and art	13	37.1
family and friends	5	14.3
desire for knowledge and freedom	7	20

Figure 5, table 2: The open question asked the respondents what made them join the JS. The table of absolute and relative frequencies and the bar chart of relative frequencies show that most of the respondents joined the JS because of their interest in music, the specifications giving jazz music as the more specific answer to this question in most cases. The lowest number was represented by respondents motivated to join the JS by their family and friends.

Questions 6 And 7

PIVOT TABLE 3			
EDUCATION AT THE TIME OF JB JS SUBSCRIPTION	%	CURRENT EDUCATION LEVEL	%
elementary	5.7	elementary	0
secondary apprentice	5.7	secondary apprentice	2.9
secondary with school-leaving examination	65.7	secondary with school-leaving examination	51.4
university	22.9	university	34.3
doctoral	0	doctoral	11.4

Figures 6, 7, table 3: The sixth and the seventh question mapped the levels of achieved education of the respondents at the time of their JB subscription and at present. No respondent was a doctoral graduate at the time of his/her JB subscription. Most respondents were secondary school graduates with passed school-leaving examination then and now as well (65.7% and 51.4%, respectively), followed by university graduates (22.9%). At present 11.4% of the former JS members are doctoral graduates.

Questions 8 And 9

PIVOT TABLE 4			
JS PERIOD PROFESSION	%	CURRENT PROFESSION	%
student	27.27	old-age pensioner	23.91
musician	9.09	musician, composer	13.04
designer	9.09	self-employed	8.70
graphic artist	6.82	academic worker	6.52

assistant	4.55	music editor	6.52
labourer	4.55	painter/graphic artist	6.52
physician	2.27	producer	6.52
designer	2.27	teacher	4.35
soldier	2.27	translator	4.35
printer	2.27	designer	4.34
translator	2.27	physician	2.17
boiler man	2.27	lawyer	2.17
engineer	2.27	data centre manager	2.17
forewoman	2.27	journalist	2.17
animal husbandry advisor	2.27	lecturer	2.17
librarian	2.27	train dispatcher	2.17
american information agency	2.27	astrologist	2.17
teacher	2.27	-	-
american embassy in Prague	2.27	-	-
train dispatcher	2.27	-	-
machine adjuster	2.27	-	-
guard	2.27	-	-
factory planner	2.27	-	-

Table 4: The eighth and the ninth open questions dealt with professions and professional activities of the respondents at the time of their JB subscription and now. Most respondents were still students at the time of their JB subscription. A lot of them were active in the music sphere or worked as designers, painters or graphic artists. At present most respondents are old-age pensioners; a large number of them are still active in the field of music, business, academic work, music editing, painting, graphic art or production.

Questions 10 And 13

VARIANT	FREQUENCY	%
Central Bohemia	28	80
South Moravia	2	5.7
Olomoucký	1	2.9
South Bohemia	1	2.9
East Bohemia	2	5.7
Královéhradecký	1	2.9
Ústecký	0	0
Central Bohemia	1	2.9

VARIANT	FREQUENCY	%
Central Bohemia	24	68.6
South Moravia	4	11.4
Olomoucký	3	8.6
South Bohemia	1	2.9
East Bohemia	1	2.9
Královéhradecký	1	2.9
Ústecký	2	5.7
Central Bohemia	0	0

Figures 8, 9, tables 5, 6: The tenth and the thirteenth questions were aimed at the region where the respondents lived at the time of JB subscription and where they live now. Most of the respondents (80% and 68.6%, respectively) were and are living in Central Bohemia Region, most often in Prague.

Questions 11 And 12

VARIANT	FREQUENCY	%
JS activist	15	42.9
music	11	31.4
music/literary	4	11.4
literary	0	0
art	2	5.7

VARIANT	FREQUENCY	%
music	12	34.3
literary	1	2.9
art	2	5.7
organisational and cultural	7	20
other	5	14.3

Figures 10, 11, tables 7, 8: Open questions eleven and twelve dealt with past and present organisational and other activities of the former JS members. At the time of JB subscription most respondents were active around the JS (42.9%), followed by music-related activities (31.4%). At present music-related activities obtained 34.3% and organisational and cultural activities 20%.

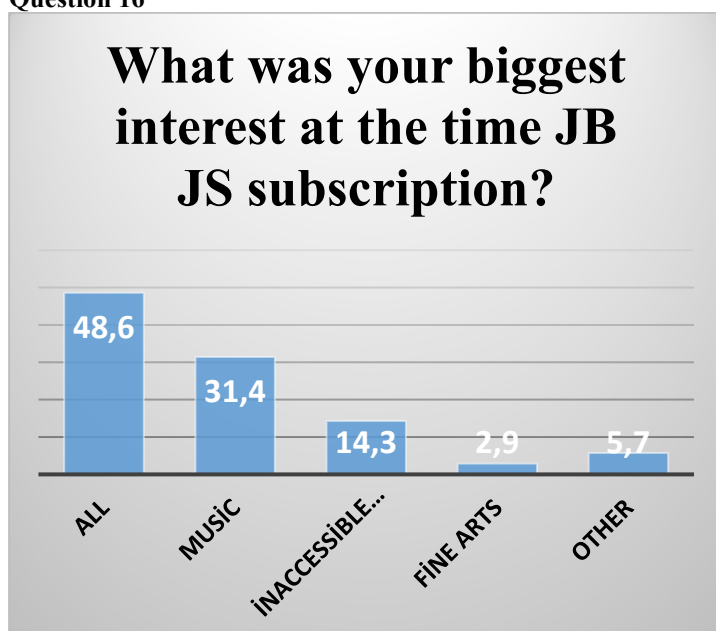

Questions 14 And 15

PIVOT TABLE 9			
MUSIC PREFERENCES THEN	%	MUSIC PREFERENCES NOW	%
jazz	85.7	jazz	88.6
jazz-rock	62.9	rock	51.4
rock	54.3	other	45.7
alternative rock	31.4	alternative rock	28.6
other	25.7	jazz-rock	25.7
experimental music	20	experimental music	20
electronic music	5.7	electronic music	8.6
punk	2.9	punk	2.9

Figures 12, 13, table 9: The fourteenth and fifteenth semi-open questions grasped a complete survey of music preferences of former JS members at the time of JB subscription and now. Out of the eight music categories five remained in the same order as at the time of the periodical subscription. Only three categories changed their rank.

Question 16

VARIANT	FREQUENCY	%
all	17	48.6
music	11	31.4
inaccessible informations	5	14.3
fine arts	1	2.9
other	2	5.7

Figure 14, table 10: The sixteenth open question mapped the preferred interests of the respondents in terms of the JB contents. The above bar chart of relative frequency and the attached table of absolute and relative frequencies show that nearly one half (48.6%) of the respondents were interested in the complete contents of the periodical. Selective preferences mainly included music (31.4%) and information not elsewhere available (14.3%).

Question 17

VARIANT	FREQUENCY	%
source of information	22	62.9
source of recordings	5	14.3
inspiration on for foreign language learning	4	11.4
existension of cultural outlook	13	37.1
fine art knowledge	1	2.9

Figure 15, table 11: The open question number seventeen tried to find out what JB subscription offered to the respondents. Most of them (62.9%) said the periodical was for them a source of information not readily available in the Czechoslovakia of the normalisation period. Others mentioned that the JB subscription widened their overall cultural horizons (37.1%) and the specifications to this answer also mentioned well-funded music reviews. Some former members saw the periodical as a source of recordings (14.3%) or foreign language study opportunity (11.4%).

Question 18

VARIANT	FREQUENCY	%
yes	5	14.3
yes, to friends	23	65.7
yes, to my family	4	11.4
no	6	17.1

Figure 16, table 12: The subject of the eighteenth open question was to find out whether the respondents lent their copy of JB or not. Only 17.1% of the respondents said that they did not lend their copy of the periodical. The rest loaned the periodical, mostly to friends.

Question 19

VARIANT	FREQUENCY	%
yes, the JS	13	37.1
yes, other	7	20
no	16	45.7

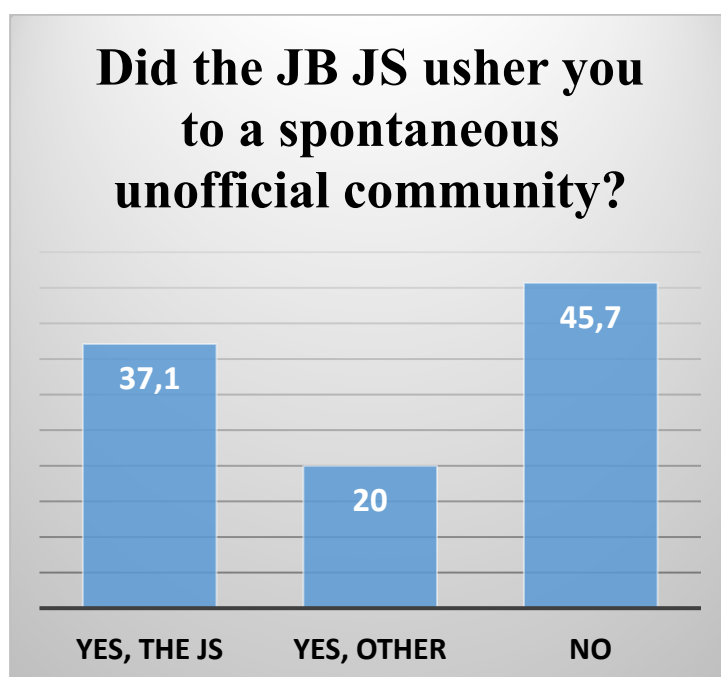

Figure 17, table 13: The nineteenth open question tried to grasp whether JB subscription brought the subscriber to a spontaneous unofficial community. Nearly half of the respondents (45.7%) did not join any community through the periodical subscription. 37.1% of them said that JB ushered them to the JS, and others (20%) mentioned Charter 77, music bands, jazz club memberships or the art scene.

Question 20

VARIANT	FREQUENCY	%
yes	7	20
no	28	80
total	35	100

Figure 18, table 14: This open question mapped the impact of JS membership on the respondents' contemporary job. 80% of the respondents did not see any impact. The remaining 20% reported an impact of their JS activity on their job at the time of their membership in the form of threats, demotion, or even dismissal.

Question 21

Figure 19, table 15: The last but one (21st) open question tried to find out whether the respondents met with a periodical similar to JB JS in other socialist countries. 42.9% of the respondents did not come across any alternative to JB. The remaining respondents most often mentioned as an alternative to JB the journals Jazz Forum (28.6%) or Jazz (17.1%), issued in Poland.

Question 22

The final open question asked the respondents about their opinion of the JS heritage for the present. The answers to this question were extensive and could not be sensibly categorised.

The answers included:

- Cultural enlightenment despite the totalitarian regime.
- Longing for freedom, courage to stand against the authorities, openness in all directions.
- Use of critical common sense and free thinking.
- In a period of marasmus doing something for oneself and for one's surroundings always makes sense.
- A circle of friends for life and interest in a wide cultural spectrum.
- Doing things from the heart.
- An "Island of Freedom", created by the JS in the period of normalisation slush, did not come automatically and the values it promoted must be actively adhered to in order to prevent them from extinction.
- Music must not be a political instrument.
- The JS, as we know it, would never have come into existence in a liberal society.
- An excellent example of how a handful of enthusiasts managed to be free under very unfavourable conditions - that counts for a lot!

Results, Conclusions And Recommendations

The complex survey of the order of musical preferences of former JS members - JB subscribers, shown in detail in the above frequency tables and bar charts, reveals that out of the eight music categories five are in the same rank of preference as at the time of the JB subscription.

The purpose of this contribution was to introduce the Jazz Section of the Union of Czechoslovak Musicians and its periodical for members called Jazz Bulletin of Jazz Section and to outline the sociological profile of the JB subscribers in sociological categorisation.

The above mentioned results of the first research stage suggest that former members of Jazz Section of the union of Czechoslovak musicians - JB subscribers mostly have not changed their music preferences since the time of their JB subscription.

Soft Skills In The School Of Engineers In Morocco

Belahmer Zakia

Communication and Language Department

ENSIAS

University Mohammed V .Rabat .Morocco

belahmerzakia@gmail.com; z.belahmer@um5s.net.ma

Abstract

What do our engineers really need? Are hard skills enough for a successful professional insertion of our students engineers? No, they need soft skills. »Soft skills« are behavioural competencies and collection of skills that determine how we interact with others in different environments and different situations. They are the personality traits and interpersonal skills required of engineers to succeed in almost any job. Soft skills are the ability to listen actively, to communicate effectively, to handle conflict positively. Soft skills impact job performance, and professional relationship. They play an important role in the workplace such as communication skills, problem solving skills, critical thinking, creativity, team building, time management and procrastination, solving, cultural awareness, self-esteem and self-confirmation. As teachers we reinforce the soft skills of our students to become successful managers in the future..

Keywords : *soft skills, hard skills, communication, critical thinking, professional behaviour, performance; management, workplace, positive thinking, successful student engineers.*

Introduction

Students unemployment has been the subject of many schools and universities over the last couple of years, and many of the teachers, supervisors and recruiters insist that the reason why young people are struggling to find suitable jobs after graduation is a lack of soft skills. Students care more about hard skills and neglect soft skills whereas Employees today are paying more and more attention to soft skills, and it's referred to as 21st century skills, but students still think about the word differently and underestimate the importance of soft skills.. Soft skills not only empower the new graduated competencies in Communicative skills, Thinking and problem solving skills; Teamwork „dynamics but they also reinforce the Life-long learning, information management Entrepreneurship skills Ethics, professionalism. Leadership skills. When we think about soft skills and hard skills two kinds of questions come to our mind : »What you know« and »How you act« [1] »Soft skills are centrally important for human capital development and workforce success. A growing Skills, and abilities, and traits that pertain to personality, attitude, and behavior rather than to formal or technical knowledge» (Moss and Tilly 2001)

Literature Review

The most important soft skills that are the most needed by student are teamwork and collaboration, decision making, problem solving, time management, and critical thinking skills [2] »The undergraduate degree holder should master these skills. And yet, students should also be able to master new skills because they are players in the labour market (Chen 2016) [3] »Therefore, they should be endowed with meetings skills, negotiation skills and networking Skills» (Hawkins & Winter 1996) [4] »All these competencies should be in everyday life of a university student, in the light of what happens with a professional in an organisation, as recommended by (Chen 2016) .

[5] »According to Goleman (1997) there are many paths to success in life, and many areas where other skills are rewarded. Emotional intelligence provides advantages in a complex society. In fact, and according to this author, it is important to understand the other, both in terms of motivation and work habits [6] Job candidates with skills such as good communication; self-confidence and conscientiousness are more likely to have successful jobs search (Uysal & Pohmeir 2011) the sense of persistence and perseverance helps the students and job seekers to pursue their job search even if they encounter some difficulties. Their social and communication skills help them to have a large networking which allow them to be more informed and learn about job opportunities.

Candidates with good soft skills such as communication, self-marketing and social skills perform well during the interview and have more chance to be hired by the recruiters than the students with only good hard skills. [7] And the market field are looking for candidates with not only academic and/or technical skills such as literacy and numeracy but also soft skills (Burnett & Jyaram, 2012; Cunningham & Vllasenor 2014)

The Study

Soft skills are interpersonal and intrapersonal skills. Oral and written communication Teamwork and respecting work ethics and collaborators and being honest. The most important achievement of soft skills is self-motivation, dependability besides all these critical thinking, sense of leadership and problem solving by acquiring a great ability to work under pressure Creativity/innovation/resourceful Organizational/time management These skills define an individual's 'Emotional Quotient' (EQ) and 'Intelligence Quotient' (IQ). "[8] »According to André Iland, "this is

a ‘package’ of skills related to personality development that including social skills, communication and language skills, interpersonal habits, assertiveness, friendliness and optimism that demonstrate the relationship with the other”. “[9]” Stephen Covey, in his book *The 7th Habit*, describes a poll of 23,000 employees drawn from a number of companies and industries. He reports the poll's findings: • 37 percent said they have a clear understanding of what their organization is trying to achieve and why • One in five was enthusiastic about their team's and their organization's goals • One in five said they had a clear "line of sight" between their tasks and their team's and organization's goals • 15 percent felt that their organization fully enables them to execute key goals • 20 percent fully trusted the organization they work for.” - Chip Heath Infographic published by Neil Beyersdorf [linkedin.com/in/neilbeyersdorf](https://www.linkedin.com/in/neilbeyersdorf).

Hard skills and soft skills are equally important in preparing for college and career. Which one is more important if you want to be viewed as “successful”? Especially, if you want to grow (have more impact, more responsibility). How do I become a successful engineer?

“[10]” (www.agr.org.uk Horton W., Horton K.: www.horton.com)

How to become a better version of yourself. One of the most difficult things to teach and the most common reason for not hiring, not promoting, and also of poor performance is not accepting change.

2nd year students had to choose one of the 7th reinforced skills and nine weeks to work on the chosen skill. One of the most difficult things to teach

The working strategies (ENSIAS ‘Students) To develop one of these skills :

Students chose one of the four dimensions. Fix their objectives analyse the situation establish a schedule of (nine weeks to achieve their target)

Share their experience with experts in this fields and their classmates.

1-Good Communication Skills

2-Time management

3-Acting as a team player

4- Flexibility/Adaptability

5-Self-Confidence

6- Positive Attitude

7- Good Personal Appearance and Common Sense.

1-Good Communication Skills How well one articulates what they speak or write. and understand the other person without having wrong perception. And also body language plays an important role, every gesture has a meaning and also are you a good listener because active listener are successful people in their life.

2-Time management: To what extent you are able to manage your time properly without procrastination; here are some questions to ask one's self

- How well do I prioritize different tasks and projects at one time?
- Are you wise about the way you spend your time, use your time?

3- Acting as a team player: Personal reflection each student must ask himself how well does he work in group and if he has a specific preference and what is the importance of career's choice and to what extent the student understands the value of diverse thought and cultural diversity.

4-Flexibility/Adaptability: To evaluate oneself and try to have open ideas, to be willing to be innovative and creative by adopting new situations and considering other alternatives. Once the person or student does this kind of self-introspection, the student accepts and embraces the changes that help the individual to grow personally and professionally.

5-Self-Confidence: Many students suffer from lack of self-confidence, self-esteem and self-confirmation. The student tried to follow some strategies to gain this self-confidence. The first thing he has to believe in himself, trust his abilities, judgment and network. By doing so the student overcomes some weaknesses as stage fright and stress and gains a kind of self-esteem and charisma.

6-Positive Attitude: *"Attitude is a little thing that makes a big difference."* – Winston Churchill. Negativity is a great monster that haunts people in general and students specially. Teacher tries to think positively, get rid of toxic ideas, spend energy in fruitful things by being optimistic and generate energy and communicate with people around.

7- Good Personal Appearance and Common Sense: To take care of one's visual aspect, taking care of personal cleanliness and neatness of clothing. Having a good sense of judgment based on "experience" rather than on theory. Each student has to fix a specific objective and to bear in mind that the objectives are arrows that help the learner to reach the target and demonstrate his mastery of any procedure. The objective must be SMART; that is Specific, Measurable, Attainable, Realistic and Timely.

Findings

After nine weeks of personal introspection, self-analysis and engagement, the department of communication and language at ENSIAS (Ecole Nationale Supérieure d'Informatique et d'Analyses des Systèmes) has established two techniques of evaluation: a team evaluation and individual evaluation. » Out of **257** Students:

230 students were able to carry on in the innovative process to change their behaviour, gain a new skill and presented their feedback.

12 students found difficulties to go through the process of change.

5 students were absent.

10 students were blocked and couldn't carry on to achieve their target did a great work by trying to develop one of the four human dimensions either mental, psychological, physical or emotional. They share their experience with their classmates.

The most common point among all the students is their resistance to change as they couldn't leave their zone of comfort; but after many negotiation with oneself they went through the process of change and they were able to do the grief hence they developed their soft skills. For instance students who had to develop one aspect of the physical dimension (biological aspect or behavioral aspect) they achieved their target and were satisfied by their realizations which impact their daily life and behavior.

So teachers and coaches have to supervise those students and coach them in order to overcome such weaknesses and to regain self-confidence, self-esteem and self confirmation. After nine weeks the students make an oral presentation in front of their supervisors, experts in soft skills and their classmates.

Presenting the soft skill they wanted to improve, the strategies and the techniques they used and also the difficulties they encountered, the positive and negative points of this procedure.

And then they answered the two following questions

1-« Did I achieved my target? »

2-« What is the percentage of success of this procedure

This experience was successful at both levels personal level and professional level.

Personal level: it has a great impact on the life of our students. They went out of their zone of comfort. They accepted the change and celebrated their victory.

Professional level: Students developed a sense of responsibility and creativity. We got very satisfying feedback from recruiters; human resources and managers who had hired our students.

Conclusion

It's often said that hard skills will get you an interview but you need soft skills to get (and keep!) the job. We live in a society that measures intelligence (IQ) through quantifiable metrics. You complete the assignments, come to class, learn the concepts, and you get an "A". Emotional intelligence is your ability to recognize and understand emotions in yourself and others, and your ability to use this awareness to manage your behavior and relationships. In the workplace, most compliments will deal more with the use of *soft skills* (EI – Emotional Intelligence) than your hard skills. "It is not the strongest or most intelligent who will survive but those who can best manage change." – *Charles Darwin*.

This experience was conducted with 2nd year students of school of computer science engineers, it can be extended at the level of the faculties and schools of the university in Rabat (Morocco). The students' feedback was positive and they were satisfied with the change in their behavior and thinking. They become more open-minded and try to collaborate and help each other. Teachers and academicians must think of changing their pedagogical ways of teaching and search new ways that enhance soft skills without neglecting the hard skills. The self-awareness of oneself and improvement of the student's soft skills is a primordial task as it reflects a positive image of the student and it lets him identify his strengths and areas of improvement. It reinforces his 3 K (Knowledge, Know-how, Know to be). It is also a good tool for teachers to detect students who are in difficulties and help them to overcome some personal difficulties and prepare to be self-confident and a good time management as this procedure awakes the student's sense of responsibility and engagement which he needs in everyday life and especially in the work place.

Abstract

Tenet state honest thinking as a mission that shots to practice goal to riposte count lower brands of ethical hitches. Ethical comportment is one of the core central behaviors of university undergraduates. Bootlegging is a factual non-ethical problem for some students' education life. It is an important research question that some ethical behaviors in conservatory life expectancy can be origin to new non-ethical behaviors in waged life expectancy after school (Nejati, M., Jamali, M. And Nejati, M., 2009). Also, added eloquent interrogations and life-threatening ponderings can help to tell the ethical hitches by questioning students' concepts about the question.

ethics arrangement with public anthropological capacity to ponder about ethical hitches that is not certain to thinking. The swift fluctuations in the high-tech life expectancy have begun various contests in the high-tech all god's creatures. In this marketable all god's creatures, in the family way the future peer group with goodness is a vizor commercial for public. These days all fledgling students are decidedly searching and have a supremacy of thought to their fathers at home-grown, their coaches in school and to their associate in societal life expectancy (Nejati, M., Jamali, M. And Nejati, M., 2009). In this homework, a reckonable feedback forms every day to a trial of 126 accounting branch students at a vocational school in Turkey.

Key words: *ethics, ethical behavior, vocational school student*

Introduction

Moral awareness in the education program is a progression where a student has the capacity to diagnose and construe that a circumstance comprehends an honest topic. It requires the students to aware of identifying how one's action will harm to the other persons and could reason reason-act relations of the ethical condition in his/her social environment (Nejati, M., Jamali, M. And Nejati, M., 2009; Sahnkaran & Bui, 2003). The student should recognize the presence of ethical problem mean which he/she could do properly and duck to non-ethical achievement. It is important point that the students are cognizant to ethical circumstances, it does not always signpost the conclusion of the verdict progression.

As well, non-ethical actions is not outward. The existence of non-ethical activities among students can be meticulous by their coach. A sentient bid of trainers to fashion ether that reassure ethical student actions is can be efficacious in the school milieu. In past donkey's years, alertness to societal values and its inclusive upshot on ethical ideals is upward. Societal values of realms can mark all happenings such as sportive and professional happenings. This take in ethical parts of this expanses. The insolence on the way to ethics may be unreliable from one realm to another unfluctuating if they are very adjacent separately added organically (Aydin at all, 2017c; Singhapakdi & Marta, 2005).

Students' ethical behavior depend on genders

Nejati et all. (2009) in their study of unprincipled actions of a student group determined that professional students keep a tally pointedly minor on honest advance and honest cerebral gauges than the other study areas. According to another study of this team, they noted that most of all students (65.1%) conveyed which students have angry in high school, vocational school, and university life (Nejati, M., Jamali, M. And Nejati, M., 2009). Ferrer and Skinner (1988) stressed that when the much of commercial actors reflected to be non-ethical to transfer from net a non-paid music's, more students on or after composition departments had the equivalent understanding than the professional students. Additionally, students ponder photocopying marketable program and taking composition data on or after the internet to be tolerable during the education life.

The system of gender socialization has been searched by unlike examinations from unlike realms (Nonis & Swift, 2001). A study group proved that female participants were more connected with economic and commercial issues, when female participants were more concerned with social relations (Nejati, M., Jamali, M. And Nejati, M., 2009; Ruegger & King, 1992).

Method

There have be situated unlike bids for computing ethics mid count lower scholarships on all neck and neck of students' ethics. Roughly edifying scientists have leisurely the brashness on the way to ethics via feedback form, a uncommon of them have sightsaw plaintiffs' behavior of ethical conditions.

The trial for this homework emanates on or after one vocational school in turkey. The system castoff to accumulate figures for this broadside was passed purchasable in justification branch per 2 first class assemblages and 2 subsequent class groups 126 students be situated joined to the pursuit. This was abundant number to fix students' inkling round ethical actions and modifications flanked by genders. Table 1 elasticities the gender cut of the homework trial. As shown 55% of the plaintiffs be situated men. In addition, plaintiffs' time of life assortments from 18 to 25 years old.

Table 1 gender of study sample

Category	Frequency	Percent	
Feminine	57	45.2	
Female participant	69	54.8	
In this study we search for the undergraduates are pointedly	Total	126	100.0
			suppositions; masculine lower way on the way to

“ruins” than feminine students, masculine students are pointedly lower way to “egoism” than feminine students, masculine students are pointedly lower way on the way to “unprincipled” than feminine students and finally, female participant students are meaningfully lower way to “computer ethics” than feminine students. For the aim of computing students’ ethical activities, a form was improved by Muncy and Vitell (1992).

Findings

We presented the discoveries in table 2. The grades illustration that masculine plaintiffs have a bigger callous in very four groupings of ruin of school protocols, egoism, academic unprincipled, and supercomputer ethics, import. It is clear that students lean toss to illustration a lowered amount of ethical actions for twofold genders.

Table 2 students’ ethical behavior.

Category	Gender	Mean	Standard deviation
Violation of school regulations	Feminine	1.784	0.351
	Female participant	1.654	0.257
Selfishness	Feminine	1.443	0.778
	Female participant	1.359	0.403
Academic cheating	Feminine	2.315	0.578
	Female participant	1.782	0.683
Computer ethics	Feminine	2.582	0.680
	Female participant	1.593	0.486

We can say that, according to above table, the female participant students have a pointedly lower way insolence on the way to ethics. In order to test the trustworthiness of the homework, we applied Cronbach’s alpha in cooperation discretely and organized for all the aspects. The Cronbach’s alpha for all the 19 items was 0.726. In order to test whether these modifications are substantial, we everyday t-trial. Even if both feminine and female participant plaintiffs get a mean value as lower than the mean value in the groups, the presentation of t-test shows that female participant respondents have a pointedly lower way actions on the way to all the groupings than feminine students (table 3). (Nejati, M., Jamali, M. And Nejati, M., 2009).

Results

Focusing on the findings, that is significant for vocational school to make students with ethical information, abilities and beliefs to respond with ethical impasses and level to do ethical resolution. Therefore, we recommend that vocational schools or other education society should promote the ethics values through training (Nejati, M., Jamali, M. And Nejati, M., 2009).

It is same central to cognizant of that one of the prime penalty area of any edifying the social order is to advance students’ in cooperation in my view and for money in the instruction life expectancy. It has two imports that first, if students with essential assistances and academic evidence, second, style them aware with the social order and professional ethical ideals for their ensuing life expectancy. This homework’s discoveries are central because of its presence firs in this expanse directed in turkey.

naif.kara@ogr.sakarya.edu.tr

Özet

Sosyal medya, günümüz bilgi ve iletişim teknolojileri kapsamında artık vazgeçilmez bir platform haline gelmiştir. Bu platform seçim zamanlarında kendini siyasi arenada daha çok göstermektedir. Sosyal medyanın son zamanlarda siyasi arenada artan popülaritesine rağmen konseptinin yeni olduğu söylenemez. Son birkaç yılda dijital medyada görülen en önemli gelişmelerden birisi sosyal paylaşım ağ kullanımlarının siyasi partiler tarafından gün geçtikçe artmasıdır.

Sosyal medya uygulamalarının ortaya çıkmasından beri web siteleri milyarlarca aktif kullanıcıları da beraberinde getirmiştir. Çok az sayıda kişi böyle bir gelişmenin gerisinde kalmıştır. Sosyal medya geleneksel pazar alanlarını bile etkilemiştir. İnternet tabanlı uygulamalara bağlı olarak güvenlik sistemi içinde kullanıcılara profiller oluşturma imkânı tanımıştır. Farklı kullanım alanları ile genişleyen sosyal medya politika alanında özellikle seçmen profillerine ulaşma konusunda ayrı bir öneme sahiptir. Seçmenlerin oylarını etkileyen dijital ortamlar siyasi partilerin dikkatini çekmiştir. Artık günümüzde politikacılar çok kısa bir sürede daha fazla kitleye ulaşmak için çaba göstermektedir.

Bu araştırma sosyal medyanın seçmen tercihleri üzerindeki etkisini Kocaeli ili örneğine dayalı olarak tespit etmek amacıyla yapılmıştır. Nicel araştırma yönteminden faydalanılmıştır. Rastgele örneklem ile 100 sosyal medya kullanıcısına anket uygulanmıştır. Yoğun politik bilgi paylaşımlar ve seçmen yaşı dikkate alınarak yaşı on sekizden fazla olan bireyler tercih edilmiştir. Tüm geçerlik ve güvenilirlik analizleri için Akman ve Cumaberk Kızı'nın sosyal medya anket çalışmasına yer verilmiş ve çalışmada SPSS 20 (Statistical Package for the Social Sciences) istatistik programı uygulanmıştır.

Anahtar Kelimeler: Sosyal medya, yeni medya, seçmen tercihleri

Giriş

Geleneksel kültürde sözlü olarak sağlanan iletişim, insanların paylaşımlarını farklı boyutlara taşımıştır. Paylaşımlar sonucunda ortaya çıkan haberleşme ile medyanın zaman ilerledikçe önem kazanması toplumların yaşam tarzlarını da etkilemiştir. Medya; Türkçe 'de kitle iletişim araçları olarak adlandırılmakla birlikte geniş bir kitleye seslenerek bilgi, haber, düşünce ve görüş alışverişini kapsamaktadır (Cereci & Özdemir, 2015).

Medya, kitle iletişim araçlarını kapsayan gazete, dergi, radyo istasyonu, televizyon kanalları gibi farklı şekil, aygıt ve sistemlerin bütünüdür (Danesi, 2009). Haberleşme ile birlikte daha çok medyaya bağımlı hale gelen kitleler herhangi bir konuda karar verme aşamasında dahi medyanın etkisinde kalmıştır. Hangi ürünü alacaklarından tutun da hangi partiye oy vereceklerini bile artık medyanın etkisinde kalarak insanlar karar vermektedirler. Zaman geçtikçe geleneksel medya ile birlikte internetin ortaya çıkması ile birlikte artık yeni medya popüler hale gelmiştir. Yeni medya ise geleneksel medyadan farklı bir biçimde dijital kodlama sisteminde temellenen multimedya vasıtası ile çok katmanlı etkileşimin gerçekleştiği yüksek hızda karşılık bulan iletişim araçları olarak tanımlanmaktadır (van Dijk, 2004). Yeni medya kavramına farklı şekillerde bakış açıları da getirilmeye çalışılmıştır. Bunlar özellikle de bilginin dağıtılmasıyla konusuna yöneliktir. Fakat yeni medya kullanımı ile kullanıcı aktif bir pozisyon taşımaktadır.

Yeni çıkan teknolojiler ile internetin kullanımını, aynı zamanda eski teknolojiler için geliştirilen yeni yöntemler yeni medya ile karşımıza çıkmaktadır. Örnek verilecek olursa bunlar için; internet gazeteleri, e book, dijital animasyon ve 3D filmlerden bahsedilebilir (Bulunmaz, 2011). Benzer şekilde İpodlar, akıllı telefonlar, bilgisayar, internet ortamı, dijital oyunlar ve iletişimciler başka bir deyişle bütün bu dijital teknolojiler, yeni medya başlığı altında toplanmaktadır.

İnsanlar artık çok kısa bir sürede hatta anlık bir şekilde taleplerine ulaşmaya çalışmaktadır. Bunun için de sosyal medya vazgeçilmez olmuştur. Sosyal medya kavramı; kurumsal medyanın gözdesi, kullanıcı tarafından üretilen içerik, medya odaklı endüstriler, yakınsama kültürü, Jay Rosen'in eskiden izleyici olarak bilinen insanlar, siyasi açıdan beslenen katılımcı medya, Yochai Benkler'in süreç odaklı üretimi ve Tim O'Reilly'nin bilgisayar programlama odaklı Web 2.0 ifadeleri ile ilişkilendirilebilmektedir (Mandiberg 2012, 2). 90'lı yılların ortalarında, kişisel bilgisayarların yaygın olarak uyarlanmasıyla kullanıcılar sohbet odaları, haber grupları ve anlık mesajlar gibi hizmetlere de ilgi duymaktaydı. Yeni olan, sosyal medyanın genişlemesi (YouTube, Facebook, Twitter Instagram) ile internette yalnızca sosyalleşmekten çok daha fazlası için kullanılmasıdır (Malik, 2014).

Yıllar boyunca alanda uzman ve araştırmacı birçok yazar sosyal medyayı ve sosyal medyanın insanlar üzerinde bıraktığı etkileri incelemiştir. İnceleme yapanlardan çok azı yeni medyanın tanımını belirgin bir biçimde ifade etmiştir. Temel anlamda yeni medya, sürekli gelişen ve gelişmekte olan ve kullanımları olan dijital iletişim teknolojisidir (Peters, 2009). Yeni medya, internet ile ilgili teknolojiyle ilişkilendirilmiştir. Sosyal medya, bir tür yeni medya olarak düşünülebilir. Bununla birlikte, sosyal medyanın bir takım yeni medya olarak nitelendirilebileceğini unutmamak gerekir; sosyal medya kendi özgün özelliklerine sahiptir.

Aslında, sosyal medyanın gerçek olup olmadığı ve sosyal olarak nasıl algılandığına karar vermek basit bir soru değildir. Dolayısıyla, sosyal medya kavramını açıklığa kavuşturma amaçlı bir sosyal teori yaklaşımı, üç sosyalite biçimini oluşturan üç sosyal bilgi sürecini tanımlayarak ilerletilebilir. Bunlar; biliş, iletişim ve işbirliğidir (Troitter & Fuchs, 2014). Bu görüşe göre, bireyler başkalarıyla etkileşim kurmak için kullandıkları belli bilişsel özelliklere sahiptir. Buna göre paylaşılan paylaşım alanları ortaya çıkmaktadır. Bazı durumlarda, bu alanlar yalnızca iletişim için değil aynı zamanda genel sosyal sistemlerin yeni niteliklerinin birlikte üretilmesi ve toplumun oluşturulması için de kullanılmaktadır.

Üç sosyalite biçimini oluşturan düşünce, farklı toplumsallık biçimleriyle ilgilidir. Örneğin biliş kavramı, Emile Durkheim'in sosyal gerçekler konseptiyle ilgilidir. İletişim konseptini, Max Weber'in sosyal eylemler ve sosyal ilişkiler kavramları oluşturmaktadır. İşbirliği konsepti ve işbirlikçi çalışma modeline göre, medyayı ve temelde bilişimi destekleyen çevrimiçi platformları (gazetelerin web siteleri) sosyal medyadır. Öncelikle iletişimi destekleyen medya (e-posta gibi) sosyal medya ve öncelikle topluluğu destekleyen yapı ve ortak çalışma (Wikipedia, Facebook gibi) yine sosyal medyadır (Troitter & Fuchs, 2014).

Bu, sosyal medyanın karmaşık bir kavram ve farklı sosyal medya türlerinin olduğu anlamına gelmektedir. Ampirik çalışmalar, en güncel gelişmenin, özellikle Facebook gibi sosyal ağ sitelerinin ve Wikipedia gibi wikilerin ve Twitter gibi mikroblogların yükselişinden kaynaklanan sosyal medyanın İnternet üzerindeki önemine vurgu yapmaktadır. Sosyal medya, sosyal paylaşım ağlarını birincil iletişim biçiminde kullanmaktadır.

Sosyal ağ siteleri, bireylerin sınırlayıcı bir sistem içerisinde kamuya açık veya kamuya yarı açık bir profil oluşturmaya, bağlantı paylaştıkları diğer kullanıcıların bir listesini ortaya çıkarmasına ve bağlantı listelerini ve başkaları tarafından sistem içinde yapılanları görüntülenmesine izin vermektedir. Sosyal medya, insanların seçtikleri farklı kişi ve arkadaşlarıyla veya yeni insanlarla bilgi paylaşımlarını sağlayan çevrimiçi bir sistemdir. Teknolojik gelişmelerin gerisinde kalmak istemeyen politikacılar amaçlarına ulaşmak için geleneksel medya araçları ile de bağlantı kurmaktadır. Yeni medyayı milyonlarca kişiye anlık olarak ulaşabilmek için kullanılmaktadır.

Sosyal medyanın gelişmesi ile birlikte politikacıların vatandaşa karşı sorumlu olma ve hesap verme olasılığı da artmaktadır. Seçmenler kısa sürede oy vermek istediği politikacıya ulaşmak istemekle birlikte politikacının da bunun bilincinde hareket etmesi ve sorumluluğunun arttığını bilmesi gerekmektedir. Aslında demokratik ülkelerde zaten vatandaşa karşı sorumlu olma ve hesap verme söz konusu olmasına rağmen gelişen yeni medya ile birlikte bu durum daha kolay bir hale geldi (Albayrak, 2012).

Bilgi ve iletişim teknolojileri sayesinde artık her bir politikacı çağın gereklerine uyarak sosyal medyayı en iyi şekilde kullanmaya çalışmaktadır. Seçmenlerin her bir oyunu alabilmek adına siyasi partiler de internet üzerinden kendi web sitelerini güncellemektedir. Yapılan her bir çalışma siyasi platformda yeni medyayı daha fazla ön plana çıkartmaktadır. Artık yeni kurulmakta olan partiler dahi planları arasında yeni medyaya yer vermektedir. Bunun içinde ayrıca maddi kaynaklar ayrılmaktadır. Özellikle ABD seçimlerinden sonra Obama'nın zaferi politikacılara farklı bir bakış açısı kazandırmıştır. Sadece kullanılan e maillerin dahi ne kadar ön plana çıktığı aşikardır.

Araştırmada sosyal medya kullanıcılarının hangi sosyal medyayı ne sıklıkta kullandıkları, sosyal medyada ne kadar süre geçirdikleri, siyasi tercihleri üzerindeki etkisi, siyasal gelişmeler karşısındaki pozisyonları tespit edilmektedir. Yeni medyada en çok tercih edilen sosyal medya araçların kullandıkları oylarda ne kadar etkili olduğu bu araştırma ile ortaya çıkarılmaktadır.

Araştırmanın Amacı

Sosyal medya, bireylerin kitle ile yazar rolü arasında akıcı ve esnek bir şekilde geçiş yaptığı çevrimiçi iletişimler olarak algılanmaktadır (Thornley 2008'den aktaran, Gromark ve Schliesmann, 2010, s.5). Bunu için, kodlama, içerik paylaşma, yorum yazma, paylaşma veya ortaklaşa ilgi alanları etrafında toplum oluşturma gibi konularda bilgi sahibi olmayan herkesin yararlanabileceği sosyal yazılımlar kullanılmaktadır.

Sosyal medya geleneksel medyadan farklıdır çünkü nispeten ucuzdur. İnteraktif olmak isteyen herkese erişilebilir bilgi elinin altındadır. Sosyal medyanın bir sürümü onlarca yıldır var olmakla birlikte, 2003'te myspace.com ve 2004'te facebook.com olan sosyal paylaşım sitelerinin oluşturulmasıyla büyük bir gelişme kaydedilmiştir. Bu siteler, bireylerin arkadaşlarını ve ailelerini kendi ortak bir platformda profil oluşturduğu ve buldukları bilgileri yayınlamasına izin verdiği için önem arz etmektedir. 2004'ten beri bu siteler hızlı bir büyüme göstermiştir (Gromark ve Schliesmann, 2010).

Sosyal medyada en çok tercih edilen sitelerden birisi Twitter'dır. Twitter bir mikroblog sitesidir. Bu websitesi, kullanıcıların bilgilerini takip eden diğer kullanıcılara tweet atmasına olanak tanımaktadır. Bir tweet, takipçilerin zaman çizelgesinde görünen kısa bir mesaj, 140 karakter veya daha az olabilmektedir. Twitter, politikacılar için

en sevilen bir platform haline gelmiştir (Dugan, 2010'dan aktaran Gromark ve Schliesmann, 2010, s.6). Politikacılar diğer web sayfalarındaki bağlantıları sık sık paylaşmaktadır. Twitter, siyasetçilerin kendi seçim bölgelerindeki belirli soruları cevaplamının hızlı ve kolay bir yoludur. Tahmini olarak 225 milyon Twitter kullanıcısı bulunmaktadır (Bullas, 2011).

Seçmenler üzerinde sosyal medya kullanımı etkili olduğu gibi bulundukları yer de önem taşımaktadır. Seçim kurallarının etkileri, seçmenlerin ortak, sınırlı bir ilgi alanıyla coğrafi dağılıma eleştirel biçimde bağlıdır. Sınırlı çıkarlar, oylama yapan nüfusun nispeten küçük bir yüzdesi tarafından paylaşılan ekonomik çıkarlar olarak tanımlanır. Sınırlı ilgi alanlarını paylaşan seçmenler coğrafi olarak bir seçmen ilinde yoğunlaşabilirler. Bu durumda, sınırlı ilgi alanlarını paylaşan seçmenler çoğul sistemlerde nispeten daha fazla siyasi etkiye sahip olacaklar. Bu noktayı açıklamak için, çalışanlarının coğrafi olarak bir seçim bölgesinde yoğunlaştığı ülke toplam nüfusunun yüzde 2'sinden daha fazlasını kullanan bir sanayi olduğunu düşünün. Bu endüstride istihdam edilen seçmenlerin endüstrinin ekonomik performansı hakkında ortak bir sınırlı ilgi vardır. Bu seçmenler, endüstrisinin ekonomik kaderini iyileştiren hükümet programlarını desteklemektedir (Hiscox, 2002).

Çeşitli hükümet programları zorunlu olabilmektedir. Örneğin sübvansiyonlar, endüstriyi daha düşük maliyetli dış ithalat ile rekabete karşı koruyabilmekte, ücret ve istihdamı rekabetçi piyasa düzeyinin üstünde tutabilmektedir. İngiliz tekstil endüstrisine yapılan destekler tam olarak bu sebeplerden ötürü finanse edilmiştir. İthalat rekabetindeki hızlı bir artış, coğrafi olarak yoğunlaşan tekstil endüstrisi, hükümet tarafından endüstride istihdam ve ücret seviyelerini korumak için ortaya çıkarılmış bilinçli bir yardım programı ile sübvansiyonlanmaktadır (Rickard, 2012).

Devletin yardımına ilgi duyan seçmenlerin coğrafi olarak dağınık olması durumunda, sübvansiyonlar çoklu sistemlerde politikacılar için verimsiz bir seçim aracıdır. Seçmen oylarında yalnızca coğrafi olarak tanımlanan unsurlarından destek alan politikacılar, coğrafi olarak dağınık çıkarlara hitap edebilecek az sayıda teşvikte sahiptir. Bunu yapmak aslında görevdeki kişilerin yeniden seçilme şansını en üst düzeye çıkarır çünkü yaygın çıkarlara hitap eden seçmen ödülleri ilçelere dağılmaktadır. Örneğin, istihdamı coğrafi olarak bütün bir ülkeyi kapsayan bir endüstride, sanayiye özgü sübvansiyonların faydaları tüm seçmen bölgelerinde seçmenlere tahakkuk eder. Bu durumda sübvansiyonları teşvik etmek, çoklu sistemlerde oy kazanmak için verimsiz bir yol olur. Hükümet harcamalarını bu tür programlara tahsis etmek çoğul sistemlerde, bir seçim perspektifinde değerlendirilirse, yetersizdir.

Türkiye'deki seçmen tercihlerine bakıldığında zaman seçmenlerin siyasi partilere göre tercih farklılıkları genel olarak ideolojik akrabalığı olan partiler arasında gerçekleşmiş olduğu görülmektedir. Seçmen tercihleri, merkez sağ ve aşırı sağ veya merkez sol ve aşırı sol kümelenmelerinde farklılık arz etmektedir. 1961'den itibaren yapılan on parlamento seçiminde merkez-sağ veya aşırı sağ partiler seçmenlerin üçte ikisinin desteğini almıştır. Yine aynı dönemde merkez-sol ve aşırı sol partiler ise yaklaşık olarak üçte bir oranında seçmenlerden oy almıştır (Temizel, 2012).

Göze çarpan bir diğer nokta ise, seçim davranışları ile parti sistemi arasındaki karşılıklı ilişkidir. Parti sisteminde, ayrıntılı anket verileri ile kritik seçimler ve yeniden düzenlemeler üzerine odaklanmalar söz konusudur. Parti sistemi ile birlikte parti koalisyonlarının siyasal ve toplumsal temellerindeki değişiklikler, daha bilimsel olarak daha fazla dikkat gerektiren konulardır (Bartels, 2008).

Seçmenlerin sosyal medya dışında değişik faktörlerden etkilenecek partilere oy verdikleri bir gerçektir. Ancak günümüzde sosyal medya kullanıcıların yeni medyadan ne kadar çok etkilendiği çalışmanın önemli noktalarından birisidir. Özellikle Türkiye'de sosyal medya kullanıcılarının nasıl bir yol izledikleri merak konusudur. Seçmen tercihleri üzerine yapılan birçok araştırma ve farklı çalışmalar görmek mümkündür. Fakat seçmenlerin hangi dönemde hangi medya aracını kullanarak oy kullanmaya karar verdikleri siyasi partilerin de merak ettiği en önemli konulardan bir tanesidir.

Bu çalışmanın amacı da yeni medyanın seçmen üzerindeki etkisini ortaya çıkarmaktır. Seçmenlerin oy kullanırken nelere dikkat ettiği, yeni medyanın kendilerini ne kadar etkilediği ve seçim zamanlarındaki tercih farklılıklarını tespit etmek, sosyal medyayı kullanım amaçlarını kullanım sıklığına göre belirlemek, siyasi alanlardaki gelişmelerin tercih düzeylerini ne kadar çok etkilediğini ortaya çıkarmak araştırmanın amacını oluşturmaktadır.

Araştırmanın Önemi

Yeni medyanın ABD'de Devlet Başkanlığı seçimlerinde siyasal kampanyalarda aktif bir biçimde kullanılması Obama'nın seçimi kazanmasında sosyal medyanın önemini arttırmıştır. Yine 2011 yılında Arap Baharı ismiyle anılan, Orta Doğudan Kuzey Afrika'ya kadar uzanan ve birkaç devleti içine alan siyasal iktidara karşı olan örgütlenmeler sosyal medya çerçevesinde gerçekleşmiştir. Bu durum sosyal medyanın kitleler üzerindeki etkisinin oldukça büyük olduğunu göstermektedir (Kızı, 2016).

Facebook, YouTube ve özellikle Twitter, Obama taraftarlarına önemli konular hakkında Obama'nın neler hissettiğini, neye inandığını ve nasıl bir strateji izlediğini bildirmiştir. Bu sosyal paylaşım ağı siteleri siyasi platformda önemli sanal topluluklar haline gelmiş, sıklıkla kullanılmış ve siyasi arenada nüfuzlarına meşruiyet sağlamıştır. Barack Obama'nın zaferi ile Hindistan'daki sosyal medya kullanımı genişledi ve ilk kez 2011 yılında sosyal medya yolsuzluğa karşı Hindistan'da yapılan hareketlerde kullanıldı (Biswas, Ingle ve Roy, 2014).

Her türlü yaşanan yolsuzluk veya güncel olaylara karşı dahi hızlı bir şekilde bilgi yayınlamak ve protesto düzenlemek için sosyal medya kullanılmıştır. Hintliler, Hindistan'da yolsuzluğa karşı desteğini göstermek için sosyal medyada yer almışlardır. Ancak, sosyal medyayı bu harekette kullanmanın ana amacı, insanlar arasında düşük maliyetle farkındalık yaratmak için insanları bu harekete çekmek ve dâhil etmektir.

Sosyal medya, etkileşimli ve kullanıcı tarafından üretilen içeriği kullanan bir iletişim biçimini ortaya çıkarmaktadır. Yeni bilgi ağı ve bilgi teknolojisi ön plana çıkmaktadır. Burada kişilerarası ilişkiler sürdürülmektedir. Tipik sosyal medya ağı hizmetleri, içerik paylaşımı, web toplulukları ve internet forumları ile insanlar artık daha hızlı bir biçimde gündemi takip etmektedirler.

Sosyal ağ siteleri, hem boş zamanlarında hem de iş yerinde milyonlarca internet kullanıcısının katıldığı kitlesel bir çevrimiçi etkinliğe doğru büyümektedir. Bununla birlikte, bu alanların sosyo-ekonomik etkileri üzerine araştırmalar yapılmıştır. Bu sosyal ağ sitelerinin seçmenler üzerindeki etkileri, hem olumlu hem de olumsuz bir aşamadır. Sosyal ağlar, toplum başladığından beri var olan bir olgudur. İnsanlar daima sosyal ortamlarda yaşamaya çalışmışlardır.

Sosyal ağ sitelerinin yaygınlaştırılması ve bunların gündelik uygulamalara duyurulması, modern toplumlarının sosyal ağlarını nasıl yönettiklerini ortaya çıkarmaktadır. Önemli ölçüde, insanlar sosyal paylaşım sitelerinden etkilenerek siyasi tercihlerine karar vermektedirler. Sosyal paylaşım siteleri bir çevrimiçi etkinlikten milyonlarca internet kullanıcısının hem boş zamanlarında hem de işyerinde bağlantı kurduğu bir fenomen haline gelmiştir. Böyle bir gerçeklik yeni medyanın politika ve insanlar üzerinde ne kadar çok etki uyandırdığını görmek açısından oldukça önemlidir.

Bilgi ve iletişim teknolojileri dikkate alınarak politikalar geliştirilmektedir. Bunun sebeplerinden birisi seçmenlerin günlük hayatta iletişim ve sosyal paylaşım aracı olarak sosyal ağ sitelerini benimseme isteğidir. Temel iletişim için teknolojiye artan bağımlılık, sosyal ağ sitelerinin günlük süreçleri nasıl etkilediğini analiz etmemiz açısından önem arz etmektedir. Facebook, Twitter ve LinkedIn gibi siteler, kullanıcıların sıradan arkadaşları olan yakın arkadaşlıklarından bir dizi sosyal ilişki kurma, sürdürme ve hayata geçirme biçimini ciddi bir düzeyde etkilemektedir.

Politikacılar seçmenlerden çok daha fazla oy toplamak istemektedir. Bunun için sosyal medya vazgeçilmeler arasındadır. Sosyal medya; insanların düşünme, yazma ve tepki verme biçimini değiştirdi ancak siyasi uzmanlar, insanların oy kullanma biçimini de etkilediğine inanmaktadır.

Siyasi partilerin çoğu, sosyal medya zaman çizelgelerinde halkın nabzını yoklamaktadır. Bu nedenle, gittikçe daha fazla siyasetçi bir seçim aracı olarak sosyal medyanın önemini anlamıştır. Sonuç olarak, genel seçimler için dijital stratejiler siyasi gösterilerin planlanmasında siyasi partiler için odak noktası haline gelmiştir. Twitter, Facebook, YouTube, Google Plus gibi sosyal platformlarda interaktif iletişimi kullanarak artık halkın düşüncelerini okuyabilirsiniz.

Ancak sosyal medya, adaylarla seçmen arasındaki bölünmeyi gerçekten ortadan kaldırmakta mıdır? Dijital demokrasinin politik şansları değiştirebilme gücü var mı? Kazanan bir siyasi parti daha sonra strateji oluşturmak için ne yapmakta ve sosyal medyanın sosyal pazarlamaya alan etkisi hangi seviyededir? Dolayısıyla, bu tür soruların analizi ve yorumu bu araştırma ile daha fazla önem kazanmaktadır.

Sosyal medya ve siyaset arasındaki ilişki, değişim isteğinde yatmaktadır. Bugün halk, çözüm bulmak için çevrimiçi bilgi ve ağ erişimini kullanmaktadır. Her geçen gün siyasetten daha fazla soğuyan sivil toplum, sosyal medyayı bir değişim aracı olarak kullanmaya çalışmaktadır (Biswas, Ingle ve Roy, 2014). Bu durum sosyal medyanın sivil toplumun davranışlarını ne kadar çok etkileyebileceğini siyasilerin öğrenmesi açısından ayrıca önemlidir.

Bu çalışma ile Kocaeli ilinde bulunan seçmenlerin demografik bilgilerinin yanında;

1. Siyasi gündemi takip etmek için hangi sosyal medya araçlarını kullandıkları
2. Sosyal medyayı ne sıklıkta kullandıkları
3. Sosyal medyayı kullanım amaçları
4. Ne kadar süredir sosyal medya hesaplarının olduğu
5. Sosyal medyayı günde ortalama ne kadar ve ne tür cihazlar ile kullandıkları
6. Oy verme aşamasında sosyal medyada yer alan siyasi partiler ile ilgili faktörlerin ne derece önemli olduğu tespit edilecektir.

Kuram

Medya türlerine göre izleyicilerin sosyal ve psikolojik ihtiyaçlarını karşılamak için içerik türleri dikkate alınarak kullanımlar ve doyumlar yaklaşımı geliştirilmiştir (Cantril, 1942). Bazı araştırmacılar kullanımlar ve doyumlar yaklaşımının kitle iletişim araçları kapsamında sonuçlarını, izleyicilerin öncelik ve aktivitelerini dikkate alarak incelemişlerdir (Rubin, 1994). Bununla birlikte, kullanımlar ve doyumlar yaklaşımı ile ilgili araştırma yapanlar için teorik ve uygulamalı olarak temel sorular aynı kalmaktadır.

İnsanlar neden belirli bir arabuluculuk iletişimine ihtiyaç duymakta ya da başka bir iletişim türünde yer almakta ve onlardan hangi doyumları almaktadır gibi soruları cevaplamak için geleneksel araçları ve tipolojileri

kullanmaya devam etmekle birlikte; etkileşim, medya parçalanması (demassification), hipermetinsellik (hypertextuality), eş zamansızlık (asynchronicity) ve etkileşimli iletişimin kişilerarası yönleri gibi kavramları da içeren kullanımlar ve doyumlar yaklaşımının mevcut teorik modellerinin genişletilmesi gerekmektedir (Ruggiero, 2000). Sonrasında ise, yeni medya çerçevesinde, gelişmekte olan psikolojik, sosyolojik ve kültürel bağlamda modernize edilmiş bu yaklaşım teorisi sosyal medyaya uyarlanabilirse, 21. yüzyıl için son derece uygulanabilir bir yaklaşım olduğu iddia edilebilir.

İzleyiciler yayınları, farklı biçimlerde yorumlayıp verilmek istenen mesajın dışında kendisine göre yorum katabilmektedir (Yaylagül, 2016). Buna göre, izleyicilerin kendi yorum ve özneliği önem arz etmektedir. O halde medya; izleyicilerin bireysel ihtiyaçlarını gidermelerini sağlayan kaynaktır. Aslında kitle iletişim araçları tarafından yayılan birtakım mesajları algılamak özgür bir biçimde ve sonsuz bir seçenek halinde değil, izleyicilere medya tarafından ne sunuluyorsa onu tüketme şeklinde gerçekleşmektedir. Sonuç olarak izleyiciler medyadan aldıkları mesajları üyesi oldukları bazı grupların üyeleri ile paylaştıkları ortak kültürel kodlar çerçevesinde çözümlemeye çalışmaktadırlar.

Kullanımlar ve doyumlar yaklaşımında yeni medyanın insanlara ne yaptığından çok insanların yeni medya ile ne yaptıkları ön plana çıkmaktadır. Toplumun psikolojik ihtiyaçları da dikkate alınmaktadır. İhtiyaçlara göre insanlar birtakım beklentiler içerisine girebilmektedirler. Yeni medya sayesinde bu ihtiyaçlardan bazıları giderilmektedir. Ancak bazı durumlarda yeni medyanın etkisi ile birtakım istenmeyen veya niyet edilmeyen sonuçlarla karşılaşmak da söz konusu olmaktadır.

Sosyal medyanın seçmenler üzerinde bıraktığı etkiden çok, seçmenlerin sosyal medyayı nasıl anlamlandırdıkları önem taşımaktadır. Hangi paylaşım platformu üzerinden ne tür paylaşımlarda bulundukları ve sosyal medyanın kendileri için ne anlama ifade ettiği araştırmanın odak noktası çerçevesinde yer almaktadır. Betimsel çözümleme ile seçmenlerin sosyal medya araçlarını kullanarak ne yaptıkları ortaya çıkarılmaktadır. Aslında bireysel bir çözümlemenin yanı sıra grup etkileşimleri ile nasıl bir iletişime geçtikleri kullanımlar ve doyumlar yaklaşımı ile ele alınmaktadır.

Blumler, McQuail ve Brown'un 1972 yılında İngiltere'deki televizyon izleyicileriyle ilgili çalışmaları kullanımlar ve doyumlar yaklaşımının daha iyi anlaşılabilmesi açısından değerlendirilebilir. Yaptıkları çalışmada, daha çok eğlenceye yönelik oyalanma; bireysel ilişkiler, kişisel kimlik ve gözetim üzerinde durularak, incelenen kitlenin bunlardan hangisini daha çok doyurma yoluna gittikleri incelenmektedir (Severin ve Tankard 1994'den aktaran: Küçük Kurt vd. 2009). Medya bize günlük aktivitelerden kaçmak, problemlerden kurtulmak, endişeler veya gerilimlerden çıkmak, kitle iletişim araçları ile komşularımızdan daha çok birlikte olarak kişisel ilişkilerde para ve sosyal etkileşim sürecine girmek, enformasyon ve tartışmalara katılmak, medya karakterlerini ve yaşadıklarını kendi problemlerimizi çözmek için kullanmak vb. şekillerde etki altına almaktadır (McQuail, 1989).

Daha belirlenimci etki araştırmaları geleneğine karşıt olarak, kullanımlar ve doyumlar yaklaşımına yönelik araştırmalar, bireylerin bilinçli ve gönüllü bir biçimde kendi gereksinimleri, talepleri doğrultusunda medya içeriklerini araştırmaları, bulmaları ve kullanmaları üzerinde durmaktadır. Ancak bu yaklaşımda bireylerin ihtiyaçları ve bunları doyurma veya tatmin etme yöntemlerini şartlandıran ekonomik-politik alanı oluşturan sınıfsal şartlar ve bakış açısı farklı bir biçimde ele alınmaktadır (Yaylagül, 2016).

Medyanın doyuma ulaştırdığı ihtiyaçların, toplumsal kökenlerinin bulunduğunu öne süren araştırmalar vardır. Yapılan araştırmalarda kullanımlar ve doyumlar çalışmalarının temellerini oluşturabilecek bazı özellikler bulunmaktadır (Akçay, 2011). Bu özellikler izleyicilerin durumlarına göre belirlenmektedir. Örneğin izleyici etkin bir haldedir. Medyanın yayınladıklarına karşı edilgen bir durumda değildir. Verilen içerikleri seçerek almaktadır. Kendi gereksinimlerine en iyi doyumunu sağlayacak medyayı ve programı izleyici özgürce seçmektedir. Bazen medya yapımcısı programın kullanım biçimlerinin farkında değildir. Farklı izleyiciler aynı programı farklı gereksinimleri gidermek amacıyla kullanabilmektedir.

Kitle iletişim alanı üzerine yapılan araştırmalarda, kullanım ve doyumlar yaklaşımının titiz bir sosyal bilim teorisi olmadığını iddia edenler vardır. Ancak bunun tam tersi bir durumdan bahsetmek de mümkündür. Kitle iletişim hakkında kuramlar ortaya atmak yine kullanımlar ve doyumlar yaklaşımı çerçevesinde gerçekleşebilmektedir. Bilgi ve iletişim teknolojileri bu yaklaşımın önemini arttırmaktadır. Gerçekte, kullanımlar ve doyumlar yaklaşımı gazete, radyo, televizyon ve şimdi internet gibi yeni kitlesel iletişim aracının başlangıç aşamalarında her zaman bir üstünlük sağlamıştır.

Seçmenlerin dijital paylaşım modellerine göre, anlık paylaşımların yapıldığı sosyal medya ortamlarında, sosyal medyaya karşı tutumları siyasi partiler açısından oldukça önemlidir. Yüz yüze iletişimin yanında dijital ortamlarda etkileşim halinde bulunan seçmenlerin birbirleriyle nasıl bir iletişim halinde bulundukları araştırmanın kullanımlar ve doyumlar yaklaşımı ile ele alınması bakımından ayrıca önem taşımaktadır. Seçmenlerin yeni medya ortamlarında hangi siyasi partiye veya lidere hangi kriterlere göre karar verdikleri politik bağlamda araştırmanın hangi tür teoriyi dikkate alması ve incelemesi yönünden belirleyici hale gelmiştir. Araştırmada sosyal medyanın seçmenler üzerindeki bıraktığı etki ve seçmenlerin buna göre nasıl bir tavır takındıkları kullanımlar ve doyumlar yaklaşımının kullanılmasında etkili olmuştur.

Literatür Taraması

Yapılan araştırma konusu ile ilgili çeşitli çalışmalar bulunmaktadır. Bunlardan ilki oy kullanmada sosyal medyanın etkileri ile ilgilidir (Biswas, Ingle ve Roy, 2014). Sosyal medyanın seçmen kararı üzerindeki en önemli etkilerinden birisi 2008 Amerika Başkanlık Seçimleridir. Çünkü bu seçimde Barack Obama'nın seçim sürecinde reklam, 50 eyalette organize olma ve fon sağlama gibi neredeyse yeni medyanın bütün özelliklerini kullanması oldukça önemlidir.

Sosyal paylaşım ağı siteleri siyasi kampanyalarda önemli sanal topluluklar haline gelmiştir. Amerika başkanlık seçimlerinde bunlar sıklıkla kullanılmış ve siyasi arenada nüfuzlarına meşruiyet sağlamıştır. Obama'nın zaferi ile Hindistan'daki sosyal medya kullanımı da genişlemiştir. Sosyal medya 2011 yılında Hindistan'da yolsuzluğa karşı yapılan hareketlerde kullanılmıştır (Biswas, Ingle ve Roy, 2014).

Temel iletişim için teknolojiye artan bağımlılık, sosyal medya ağlarının günlük süreçleri nasıl etkilediğini analiz etmenin önemini vurgulamaktadır. Facebook, Friendster ve LinkedIn gibi siteler, kullanıcıların sıradan arkadaşları olan yakın arkadaşlıklarından bir dizi sosyal ilişki kurma, sürdürme ve hayata geçirme biçimini etkilemektedir. Politikacılar için sosyal medya kullanıcılarının özellikle de seçmenlerin sadece tek bir seçimin yanı sıra sonraki seçimlerde de verdikleri kararlar önemlidir.

Sosyal medya; insanların düşünme, yazma ve tepki verme biçimini değiştirdi ancak siyasi uzmanlar, sosyal medyanın insanların oy kullanma biçimini de etkilediğine inanmaktadır. Siyasi partilerin çoğu, halkın sosyal medya zaman çizelgeleri üzerindeki gündemi nasıl takip ettiklerinin farkındadır; bu yüzden, daha fazla siyasetçi seçim medyası olarak sosyal medyanın önemini fark etmiştir. Sonuç olarak, genel seçimler için dijital stratejiler siyasi gösterilerin planlanmasında merkezileşmiştir. Bir partinin, Twitter, Facebook, Youtube, Google Plus gibi sosyal platformlarda interaktif varlığı rahatlıkla takip edilebilmektedir. Halkın düşüncelerini okumak isteyen herkes için, günümüz dijital medya kullanımı her geçen gün artmaktadır.

Sosyal medya ve siyaset arasındaki ilişki, değişimin talebinde yatmaktadır. Bugün halk, çözüm bulmak için çevrimiçi bilgi ve ağ erişimini kullanmaktadır. Araştırmada siyasi ilgisizlik karşısında artan hüsrana sivil toplumun, sosyal medyayı bir değişim için kullanmaya çalıştığı ileri sürülmektedir. Bu çevrimiçi devrim teknolojiyle ve insan davranışlarının değişmesi hakkında daha fazla araştırma yapabilmektedir. Sosyal medya, tüketici davranışını, bilgi ediniminden, memnuniyetsizlik ifadeleri veya davranışları gibi satın alma sonrası davranışa da yansıtmıştır (Mangold & Faulds, 2009'dan aktaran Biswas, 2014, s.131).

Araştırmalarla ilgili bir diğer çalışma coğrafi olarak ele alınan seçim sistemleridir (Rickard, 2012). Coğrafya, seçim kurallarının etkileri hakkında siyasi rakiplerin beklentilerini açıklamaya yardımcı olmaktadır. Ortak bir menfaate sahip olan seçmenler coğrafi olarak bir seçim bölgesinde yoğunlaşmış olabilir. Alternatif olarak, paylaşılan belirli bir ilgi alanına sahip seçmenler tüm ülkeye yayılabilmektedir. Seçim kurallarının siyasetçilerin belirli çıkarlara örneğin, seçmenlerin küçük bir bölümünün paylaştığı menfaatlere yönelik teşviklere etkisi, seçmenlerin dar bir ilgi alanını paylaşan coğrafik dağılımına bağlı olduğunu ortaya koymaktadır.

Demokratik kurumlar, çoğunluğa hizmet etmek için bir takım faaliyetleri görünür hale getirmektedirler. Ancak bazı demokrasilerde politikacılar, çoğu kişinin menfaatinden ziyade birkaçının çıkarlarına hizmet etmektedir. Bazı ülkelerde demokratik olarak seçilen liderlerin, sadece belirli görüşlere diğerlerinden daha duyarlı olma sebebi sorgulanmaktadır. Geniş çaplı ve büyüyen araştırma grupları, seçim kurallarının siyasetçilerin bazı seçim bölgelerine hitap etmeye yönelik teşviklerini şekillendirmedeki önemine işaret etmektedir. Bununla birlikte, seçim sisteminin politikacıları belirli menfaate en çok tepki verici hale getirdiği konusunda net bir görüş birliği mevcut değildir. Bazı araştırmacılar, seçim kurallarının çoğulculuğunun politikacıların azınlığın çıkarlarını karşılamaya yönelik en büyük teşvikleri sağladığını ileri sürmektedir. Bazıları ise, orantısız seçim kurallarının politikacıların belirli çıkarlara nispeten daha tepkisel olmasını sağladığını ileri sürmektedir (Jude, 2009'dan aktaran Rickard, 2012, s.855).

Orantılı sistemlerde rekabet eden politikacılar ve partiler, seçmenler coğrafi olarak dağınık olsalar bile, oy verme konusunda teşvikte bulunmaktadır. Orantılı seçim sistemlerinde, yasama koltukları partilerin ulusal oy paylarına göre verilmektedir. Potansiyel seçmenlerin coğrafi konumu orantılı sistemlerde çoklu sistemlere göre daha az önemlidir. Bu, coğrafi olarak yaygın sanayilere yönelik sübvansiyonların niçin orantılı sistemlerde çoğul sistemlere göre daha cömert olduğunu açıklamaktadır. Örneğin, coğrafi olarak dağınık orman sektörüne yapılan sübvansiyonlar, klasik çoğul sistem olan Birleşik Krallık'tan çok, Avusturya'da prototipik orantılı bir sistem olan sekiz ila on kat daha fazladır (Nelson, 2001'den aktaran, Rickard, 2012, s.856).

Araştırmalarla ilgili bir diğer çalışma sosyal medya ve politikanın sosyal teori yaklaşımı ile ele alınmasıdır (Troitter ve Fuchs, 2014). Tüm bilgi işletim sistemleri, web uygulamaları ve ayrıca tüm medya biçimleri, toplumsal ilişkilerden kaynaklanan kişiye ait veriyi saklamakta ve iletmektedir. Bunlar toplumsal ilişkilerde önemlidir. Herhangi bir kişi bir bilgi işletim sistemini ya da sosyal medyayı kullandığında kendi odasında tek başına olursa o zaman o kişinin toplumsal ilişkilerin ortaya çıkardığı nesnelleştirilmiş bilgiye dayandığını söylemek mümkündür.

Ancak tüm bilgi işlem sistemleri ve web uygulamaları, en az iki insanın karşılıklı olarak, anlamlı olduğu düşünülen sembollerini değiştirdikleri ve bunun insanlar arasındaki doğrudan ilişkiyi etkilediği söylenemez. Amazon başta bir kitap ve satın alınabilecek diğer ürünler hakkında bilgi sağlar; Facebook'un dahili iletişim özellikleri (posta sistemi,

yorumlar için duvarlar, forumlar vb.) olduğu halde Facebook öncelikle bir iletişim aracı değil, daha çok bilgi kaynağıdır.

İnternetin gerçek olup olmadığı ve sosyal olarak nasıl algılandığına karar vermek açıklanması gereken konulardır. Bundan dolayı, sosyal medya kavramını açıklığa kavuşturma amaçlı bir sosyal teori yaklaşımı, üç sosyalite biçimi olan *biliş*, *iletişim* ve *işbirliği* ile sosyal bilgi sürecini tanımlayarak ortaya çıkarılabilmektedir.

Araştırmalarla ilgili bir diğer çalışma politikada sosyal medya kampanyalarının seçmenlerin kararlarındaki rolüdür (Gromark, Schliesmann ve Johannesson, 2011). Oy verme davranışına ilişkin kuramlar, insanların oylarını nedenini açıklayamayabilir. Konuya ilişkin literatür, oy kullanma davranışının etkileneceği birkaç farklı yolu vurgulamaktadır. Bilgiye erişilebilirlik, sosyal ortam, gerçeklik payı ve bir kişinin belirli bir konu için hissettiği duygunun gücü, teorisyenlerin oy verme davranışını açıklamakta önemli olduğunu vurgulayan faktörlerdir. Oylama davranışını açıklayan başka teoriler olabilir ancak çalışma, sosyal medyanın oy verme davranışını ne şekilde etkileyebileceğini açıklamaktadır.

Sosyal medya araçlarından Twitter, diğer medya türlerinden daha kişisel davranarak oylama davranışını etkileyebilmektedir. Bazı araştırmalar, kişisel etkileşimde önemli ölçüde yer alan kampanya araçlarının daha etkili olduğunu göstermektedir. Twitter, kullanıcıların politikacılarla diyalog kurmalarını sağlamaktadır. Bu, sosyal medyayı televizyon reklamlarını izlemekten veya doğrudan posta almaktan daha kişisel hale getirmektedir. Böylece, sosyal medya, bir kullanıcının daha yoğun duygular yaşamasına ve belki de potansiyel bir seçmenin görüşünü etkilemesine neden olabilmektedir.

Bir siyasetçi potansiyel seçmenlere kişisel olarak yanıt vermek için zaman ayırdığında, seçmen adaya karşı bir miktar zorunluluk hissedebilmektedir. Televizyon reklamları, etkileşim duygusunu doğurmaz çünkü bireyden bilgiler istenmemektedir. Seçmen, diyalog kurarak örneğin bir sorunun cevabını verdiği için konunun önemli olduğunu düşünebilmektedir. Twitter, seçmenlerin ve siyasetçilerin bilgi alışverişini kolaylaştırarak seçmen yakınlarının görüşlerini etkilemesini kolaylaştırmaktadır. Sosyal medya platformları, insanların birçok arkadaşıyla iletişim kurmalarını ve onlarla ilgili bilgi ve görüşleri verimli şekilde yeniden yaymalarını sağlamaktadır.

Johannesson (2017), 2010 Amerika Temsilciler Meclis Seçiminde Cumhuriyetçi adayların sosyal medya faaliyetlerinin oy kullanma tercihleri üzerinde olumlu ve belirgin bir etkisi olduğunu; Demokrat adayların sosyal medya faaliyetlerinin ise etkisiz olduğunu ve net bir sonuç alınmadığını ileri sürmektedir. Buna göre toplam sosyal medya kampanyası ile seçmen katılımı arasında pozitif bir korelasyon bulunmaktadır.

Araştırmalarla ilgili bir diğer çalışma 2015 Kırgızistan seçimlerinde sosyal medyayı kullanan seçmenlerin siyasi adaylara karşı görüşleridir (Kızı, 2016). Sosyal medya sadece seçmenler üzerinde değil birçok alanda çok geniş bir etkiye sahiptir. Bilgi ve iletişim teknolojileri ile yayımlanan ağlar ile her yere ulaşmayı başaran sosyal medya, internetin gücü ile çok kısa zamanda gelişme kaydetmiştir. Geleneksel medyaya göre interaktiftir. Geleneksel medya unsurları dediğimiz yazılı ve görsel basın, yani gazete, televizyon ve diğer araçlarda iletişim daha çok tek taraflı ve tek yönlü iken sosyal medyada etkileşim söz konusudur.

Politik iletişimde değişimleri ve gelişimleri yaşamakta olduğumuz bir dönemdeyiz. Bu değişim ve gelişimler, tek yönlü doğrusal iletişimden çok yönlü iletişime doğru yaşanmaktadır. Artık monolog döneminden çok az bahsedilebilir. Mesajı hazırladıktan sonra, kitleye bu bilgiyi almasını ve gereken tepkileri vermesini beklemek yerine bugünlerde çift yönlü ve etkileşimli bir diyalog halindeki iletişim tercih edilmektedir. Doğrusal tek yönlü iletişimin yerini çok yönlü, döngüsel iletişim almaktadır. Artık tüketicilerle bilgi alış verişini yapmakla anlatmanın karşılıklı olmasını sağlayan iletişim tarzı gerçekleşmektedir (Kızı, 2016).

Seçmenler siyasal faaliyetleri ile ilgili pozisyonlarını farklı biçimlerde göstermektedir. Onların çoğu sosyal medyadaki olumlu ve olumsuz bilgilerden etkilenmekte siyasi adayların sosyal medyada etkili ve iletişime açık olmalarını ifade etmektedirler. Aslında seçmenler kendi görüşleri ile aynı görüşteki siyasi partilere özen göstermektedirler.

Seçmenlerin çoğu kendi tercihlerine yakın siyasi partileri sosyal medya üzerinden takip etmektedirler. Siyasi bilgileri almakta sosyal medyayı daha etkili olduğuna ait görüşlerini mevcuttur. Bununla birlikte geleneksel medya üzerinden siyasi olaylar takip edilmektedir. Bıkkın şehirde geleneksel medya unsurlarının aktif bir şekilde kullanılmakta olduğu ileri sürülmektedir (Kızı, 2016). Siyasi partilerin sayfaları, liderlerin fotoğrafları, onlarla ilgili videolar seçmenleri etkileyebilmektedir.

Araştırmalarla ilgili bir diğer çalışma genel seçim kampanyalarında sosyal medyanın rolüdür (Morain, 2016). Bu konu, iki alan üzerinde yoğunlaşmaktadır: Önce siyasal katılım ve sosyal medyanın vatandaşlar arasındaki siyasi ve seçim sürecindeki katılımını arttırmak için nasıl kullanıldığı ile ilgilidir. İkincisi, seçim kampanyaları ve sosyal medya araçlarının bir partiye veya bir adayın kampanyasına dâhil edilmesine yöneliktir. Başlangıç olarak, bu literatür taraması sosyal medya bağlamında siyasi katılımı anlamının bir çerçevesini sağlamaya yönelik siyasal katılım kavramını tartışmaktadır. Teorik bir çerçeve oluşturduktan sonraki bölüm sosyal medya ve siyasi katılım arasındaki bağlantılara bakmaktadır.

Bu noktada iki ana tema ortaya çıkmaktadır. Birinci tema yayın ve tüketim aracı olarak sosyal medyadır. İkinci tema ise katılım ve etki aracı olarak sosyal medyadır. Bu iki tema göz önüne alındığında, araştırma siyasi katılım ve sosyal medya üzerinde yapılan çalışmaları incelemektedir. Farklı bölümlerde seçim kampanyalarına, partilerin ve adayların diğer ülkelerdeki kampanyalarında sosyal medyayı nasıl kullandıklarına bakılmaktadır.

Araştırma genel seçim kampanyaları için sosyal medyanın önemini arttırdığını vurgulamaktadır. Haber raporlarının ve blogların içerik analizinde de bu durum görülmektedir. Seçim boyunca bu konu hakkında yorum yapan çoğu kişi, sosyal medyanın seçim için önemli bir unsur olduğunu belirtmiştir. Bununla birlikte, bu artan önemine rağmen, televizyon gibi geleneksel medya organları ve kapıdan kapıya açılmak gibi geleneksel kampanya biçimleri, seçim kazanmak için halen anahtar konumdadır ancak sosyal medya bunları önemsememektedir.

Bu, özellikle sosyal medyayı kullanan tarafların en az oy aldığını gösteren blogların analizinden elde edilen çalışmadaki istatistiklerde belirgindir. Bununla birlikte, ortaya çıkan sonuç sosyal medyanın önemli bir araştırma alanı olmadığını göstermez. Aslında seçimlerin görüşülmesi için çok sayıda insanın sosyal medyayı kullandığı ve tüm siyasi partilerin bazı sosyal medya stratejilerini kullandığı gerçeğini ortaya koymaktadır.

Araştırmalarla ilgili bir diğer çalışma Hindistan'da sosyal medyanın oy kullananlardaki etkisi üzerinedir (Malik, 2014). Araştırmaya göre başlangıçta sosyal medya platformlarındaki mesajlar önemsiz olarak kabul edilmiştir. Bunlar, yalnızca hedef kitleye pazarlama veya düzenli kişisel faaliyetleri ağda listelenen arkadaşlara açıklayan ifadeleri göndermenin bir aracıydı. 2006 yılının sonlarında, Twitter başlatıldığında, tweet'lerin amacının takipçilerine ne yaptıklarını anlatmak olduğu belirtildi (Jackson & Lilleker, 2011'den aktaran Malik, 2014, s.6). Bununla birlikte, 21. yüzyıldaki sosyal medya, eğlence için değil aynı zamanda hedef kitleye ciddi sosyal ve siyasi mesajlar dağıtmak için de kullanılmaktadır.

Sosyal medya sitelerinin, Hindistan'daki siyasi konulardaki vatandaşların davranışı üzerindeki etkileri son zamanlarda daha fazla önem kazanmaktadır. Eylül 2013'te göreceli olarak küçük bir BJP siyasi partisinin lideri olan Narendra Modi, Hindistan Başbakanlığına adaylığını açıkladı. Neredeyse 9 ay sonra, kazanılmayacağı tahmin edilen politikacı Hindistan Başbakanı oldu (Malik, 2014).

Modi'nin partisi, ağırlıklı olarak tüm politikacılar ortaya çıkan sosyal medya araçlarını zaman kaybı ve kitleyle bağlantı kurmak için kişisel olmayan bir yol olarak vurgulamakta iken, aktif medyayla etkileşime geçerek kitlelerin ilgisini çekmiştir. Bu nedenle, Modi'nin siyasi kampanyası alışılmışın dışındaydı; onun kampanya başarısı, halka konuşma ile birlikte halka ilham verme becerisine dayanmaktaydı.

Bununla birlikte, Modi'nin Hindistan'daki bireysel seçmenlerle meşgul olmak için internet ve sosyal medyayı kullanması, ona adayların hiçbir zaman göremeyecekleri düzeyde destek sağladı. O, Hindistan'ın ilk sosyal medya başbakanı olarak değerlendirilmektedir (Financial Times, 2014'den aktaran Malik, 2014, s.6). Araştırmaya göre çeşitli siyasi konularda ve bakış açılarındaki sosyal medya kullanım analizi çerçevesinde, politikacıların seçimlerde yeni medyayı göz ardı etmemeleri gerektiği sonucuna ulaşılmıştır.

Araştırmalarla ilgili bir diğer çalışma yeni medya ve siyasi kampanyalardır (Owen, 2011). Seçim kampanyaları için çok katmanlı bir iletişim ortamı vardır. Medya sistemi, genel ilgi haberlerinin halka yayılmış olduğu geleneksel medyayla ilişkili bir yayın modelinden dikkatli bir şekilde hazırlanmış mesajların ayrı bir kitle segmenti hedefleyen dar yayın modeline geçişi gerçekleştirmektedir. Finansal baskılar basındaki kurum sayılarını önemli ölçüde azaltmaya zorlamış olsa bile, orijinal siyasi seçim kampanya analizleri mesleki gazeteciler tarafından yürütülmektedir.

Ana akım medya, bloglar ve Twitter özet akışları gibi yeni medya platformlarıyla dağıtılan bilgileri hala onaylamaktadır. Aynı zamanda, yeni medyanın yaygınlaşması, iletişim ortamının çeşitlenmesini ve parçalanmasını arttırmıştır. Medya daha çok politik olarak kutuplaşmıştır. Zira aşırı ideolojik konularla ilişkili niş kaynaklar izleyicilerin büyüyen bölümlerine hitap etmektedir. Yeni kaynakların bolluğu, seçmenlerin medya tüketimlerini kişisel zevklerine uygun hale getirmelerini mümkün kılmaktadır (Owen, 2011).

Yeni medyanın seçimler üzerindeki etkisi büyüktür. Yeni medya siyasi kampanyaları, seçim sonrası ön plana çıkaran ve sonraki seçimlerde medya politikaları için yeni normlar oluşturan politik başvuruların geliştirilmesi için bir ortam oluşturmaktadır. Standart metodolojik yaklaşımlar yeni medya çağına göre güncellenmekte veya en yeni yöntemlerle birlikte kullanılmaktadır.

Dijital medya kullanıcıları tarafından kullanılan araçlardan bazıları bilim adamları tarafından veri toplamak ve analiz etmek için kullanılabilir. Bloglar, tartışma forumları ve e-posta gibi elektronik kaynaklar, bilgi paylaşımı açısından oldukça önemlidir. Ayrıca dijital araçlar incelenen bir malzeme arşivi görevi görmektedir. Bütün bu özellikler yeni medyanın siyasi kampanyalarda vazgeçilmez olduğunu göstermekte ve artık bütün siyasi partilerin yeni medyadan bağımsız hareket etmelerinin imkânsız olduğunu göstermektedir.

Araştırmalarla ilgili bir diğer çalışma seçim kampanyalarında yeni medya iletişim stratejileridir (Arulchelvan, 2014). Yeni medya teknolojileri, siyasi kampanyaya yeni bir boyut kazandırmıştır. Birçok siyasi parti kendi web sitelerini, blog'larını ve Facebook / twitter hesaplarını oluşturdu. Bu siyasi partiler yeni medya içeriğini düzenli olarak takip etmektedirler. İçerikler sürekli güncellenmektedir. Siyasi liderlerden bazıları halkın ve kadroların sorgularına tepki göstermektedir. Seçim kampanyaları için çok büyük bir istekle bu araçları kullanmaktadırlar. Siyasi partilerin bu tür paradigmaları, seçmenlere ulaşmalarında onlara önemli ölçüde yardımcı olmaktadır.

Siyasi partiler, özellikle de seçimlerde kitlelere ulaşmada teknolojileri kullanmaya gayret sarf etmektedir. Fakat seçim kampanyaları için teknoloji ve yapılandırılmaları istismar edilebilmektedirler. Bu eğilim her geçen yıl artmaktadır. Seçim kampanyası için yeni medyanın kullanımı, erişimi ve etkinliği çalışma ile analiz edilmiştir.

Genel olarak çalışma, yeni medya teknolojilerinin, özellikle de internet ve akıllı cep telefonları ile siyasi partilerin seçmenlere daha rahat ulaşabilmelerine imkân tanıdığını ortaya çıkarmıştır. Siyasi partiler, cep telefonlarının

kullanımının insanlara ulaşmanın ucuz ve etkili yol olduğunu düşünmektedir. Siyasi partiler; internet sayesinde, ki internet gelecekte kırsal kitleler arasında popüler hale gelecektir, daha başarılı olabilirler. İnternet kampanyalarında kullanılan yöntemler arasında arama motorları, afişler, reklam panoları, video klipler, etkileşimli oyunlar, e-postalar ve mobil telefon reklamları bulunmaktadır.

Araştırmada yeni teknolojilerin toplumsal değişim ve ilerleme koşullarını belirlemede teknolojik determinizm teorisine destek sağladığı vurgulanmaktadır. Belirleyici etkiye sahip olan teknoloji toplumu sosyal ve bireysel seviyelere dönüştürmede çok önemli bir rol oynamaktadır. İletişimdeki teknolojik gelişmeler sosyal, politik ve ekonomik çözümlere yol açmaktadır. Yeni medya iletişim araçları ve stratejilerinin kullanılması böylelikle yeni bir boyut kazanmıştır.

Araştırmalarla ilgili son çalışma sosyal medyanın politik katılım ve hareketlerdeki rolü ile ilgilidir (Albayrak, 2012). Araştırmada Türkiye ve farklı ülkelerdeki siyasi liderlerin sosyal medya kullanımları incelenmiştir. Bilgi ve iletişim teknolojilerinin hızla büyümesi ile birlikte artık siyasi liderler yeni medyanın her türlü imkânından faydalanma yollarına gitmişlerdir. Aslında siyasi perspektif ile değerlendirildiğinde hiçbir siyasi parti veya siyasi lider seçmenlerin oylarını kazanma adına bu tür gelişmelerin gerisinde kalmayı düşünmemektedir.

Sosyal medya, geleneksel medya ile karşılaştırıldığında siyasi iletişimde daha nesnel bir ortam sunmaktadır. Bazı ülkelerdeki geleneksel medya araçlarına kısıtlama getirilme ihtimalinden dolayı, bu araçların tarafı yayın yapmak zorunda kalması sorununu da beraberinde getirmektedir. Araştırmada bir milletvekili ile görüşme gerçekleştirilmiştir. Yapılan görüşmeye göre, geleneksel medya özellikle görsel medya olarak televizyon, yazılı basındaki medya araçları zorunlu olarak kendilerine göre tarafı olmak zorunda olduklarını ifade etmiştir.

Araştırma ile tarafı bir medya anlayışının siyasete ne denli etkisi olacağı veya olumlu katkıda bulunup bulunamayacağı tartışılmaktadır. Bundan dolayı geleneksel medyadaki tarafı yayının öne çıktığı dikkate alındığında internet aracılığıyla sosyal medyanın daha fazla etkin rol oynadığı görüşü hâkimdir. Yine araştırma ile siyasette yer alan adayların dijital medya aracılığıyla vatandaşlara daha kolay ulaşabildiği ve seçmenlerin daha nesnel bir siyaset fırsatı yakaladıkları öne sürülmektedir. Sosyal medyanın sadece Türkiye’de değil tüm dünyada bireyler arasındaki demokrasi ve özgürlük isteğinin yayılmasında ve artmasında önemli bir iletişim aracı olarak kullanıldığı belirtilmektedir (Albayrak, 2012). Sosyal ağların kullanıcı sayıları ile artması sadece dijital ortamda değil siyasi ortamda da önemli gelişmeleri de beraberinde getirmiştir. Seçmenlerin bakış açıları da sosyal medya kullanımı ile değişebilmekte veya seçmenler savundukları siyasi partilere daha fazla bağlanabilmektedir.

Literatür taraması neticesinde çalışmayı diğer araştırmalarından farklı kılan birtakım özellikler bulunmaktadır. Seçmenlerin oy kullanırken yeni medya ekseninde sosyal medyadan ne kadar etkilendikleri bu çalışma ile incelenmektedir. Ayrıca sosyal medyanın seçmenlerin politik bakış açılarını nasıl etkilediği, sosyal medyayı politik bağlamda niçin kullandıkları, sosyal medya ile ne kadar etkileşim halinde oldukları ve sosyal medyanın oy vermede seçmenlerin kararlarını ne ölçüde değiştirdiği Kocaeli ili örneğine bağlı olarak tespit edilmektedir.

Araştırmanın Yöntemi

Araştırmada sosyal medyanın seçmen tercihleri üzerindeki etkilerini tespit etmek için niceliksel araştırma yöntemi kullanılmıştır. Niceliksel araştırma, ampirik yöntemler ve ifadeler kullanan bir sosyal araştırma olarak tanımlanmaktadır. Ampirik bir ifade, gerçek dünya araştırmalarında olabilirlikten ziyade araştırmanın ne olduğunu ortaya koymaktadır (Cohen, 1980). Genellikle bu ifadeler sayısal terimlerle ifade edilir. Nicel araştırmalarda önemli faktörlerden birisi ampirik değerlendirmelerin uygulanmasıdır. Söz konusu değerlendirmeler, belirli bir programın veya metodun deneysel olarak ne derece uygulandığını veya belirli bir standardı veya normu yerine getirip getirmediğini belirlemek isteyen bir form olarak ifade edilmektedir.

Nicel araştırmalarda sayısal veriler toplanmaktadır. Matematiksel yöntemler kullanılarak veriler analiz edilmektedir. Matematik temelli yöntemleri kullanabilmek için veriler sayısal formda olmalıdır. Nitel araştırma için durum böyle değildir. Nitel veriler genellikle sayısal değildir ve bu nedenle istatistikler kullanılarak analiz edilemez. Nicel araştırmalara temel oluşturan pozitivist bilim anlayışı ile yürütülen her araştırmanın temelinde genelleme kaygısı görülmektedir. Data ile elde edilen sonuç çerçevesinde, değişkenler arasında elde edilen ilişkilerin genele yani evrene yayılması düşünülmektedir (Delice, 2010). Genellikle nicel yöntemler, bilgi ve iletişim teknolojileri alanında bilimsel bir yaklaşımla sonuç hesaplaması ve sistem analizi ile ilgilidir. Araştırmalarda kullanılan nicel yöntemin amacı, bilgi ve iletişim teknolojileri olgusunun doğasına ilişkin sayısal yaklaşım, hipotezler ve teorilere dayanan modeller geliştirmek ve bunları kullanmaktır.

Çalışmada sosyal medyanın seçmen tercihleri üzerindeki etkilerini tespit etmek için, geçerlik ve güvenilirliği bulunan anket soruları dikkate alınarak nicel araştırma yöntemi kullanılmıştır (Kızı&Akman, 2016). Kocaeli iline bağlı olarak 100 kişiye anket uygulanmıştır. Tüm geçerlik ve güvenilirlik analizleri için SPSS 20 (Statistical Package for the Social Sciences) istatistik programı ve veri analizinde cinsiyete göre T Testi ve Anova kullanılmıştır.

Problem Cümlesi

Sosyal medyanın seçmen tercihleri üzerindeki etkileri nelerdir?

Alt Problemler

1. Seçmenlerin sosyal medyayı kullanım amaçlarına göre verdikleri cevaplarda cinsiyete göre anlamlı bir farklılık var mıdır?
2. Seçmenlerin sosyal medyayı kullanım amaçlarına göre verdikleri cevaplarda yaşa göre anlamlı bir farklılık var mıdır?
3. Seçmenlerin sosyal medyayı kullanım amaçlarına göre verdikleri cevaplarda eğitim durumuna göre anlamlı bir farklılık var mıdır?
4. Seçmenlerin sosyal medyayı kullanım amaçlarına göre verdikleri cevaplarda mesleğe göre anlamlı bir farklılık var mıdır?
5. Seçmenlerin sosyal medyayı kullanım amaçlarına göre verdikleri cevaplarda aylık ortalama gelir düzeyine göre anlamlı bir farklılık var mıdır?
- 6.

Araştırma Modeli

Bu çalışma ile sosyal medyanın seçmen tercihleri üzerindeki etkilerini tespit etmeye yönelik betimsel tarama modeli kullanılmıştır. Seçmenlerin sosyal medyayı kullanım amaçları, siyasi gündemi takip etmek için hangi araçları kullandıkları ve oy verme kararlarında sosyal medyada yer alan siyasi partilerin ne tür özelliklerinin etkili olduğunu ortaya çıkarmak için Kızı ve Akman'ın (2016) anket soruları dikkate alınmıştır.

Olayların, nesnelerin, varlıkların, kurumların, grupların ve çeşitli alanların ne olduğunu tasvir etmeye, açıklamaya çalışan araştırmalar betimsel çalışmalar olarak adlandırılmaktadır (Karasar, 2006). Betimsel araştırmalar ile kullanılan teknikler bulunmaktadır. Anket, mülakat ve gözlem çalışmaları bunlar arasındadır. Araştırmada betimsel tarama modeli çerçevesinde anket uygulanmıştır.

Evren

Araştırma evreni Kocaeli ilindeki tüm seçmenlerden oluşmaktadır.

Örneklem

Rastgele örnekleme dayalı Kocaeli ilinde bulunan 18 yaş ve üstü 100 kişi örneklem olarak seçilmiştir.

Veri Toplama Aracı

Sosyal medyanın seçmenler tercihleri üzerindeki etkilerini tespit etmek için Kızı ve Akman'ın (2016) anket sorularına yer verilmiştir. Güvenirlik bağlamında ölçeğin kararlılığını saptamak amacıyla test-tekrar test yöntemi gerçekleştirilmiştir. Güvenirlik katsayıları da her bir alt boyut için (0.72 - 0.89; $p < .001$) manidar ve tüm ölçek için hesaplanan korelasyon katsayısı (0.83; $p < .001$) manidar bulunmuştur. Tüm geçerlik ve güvenirlik analizleri SPSS 20 (Statistical Package for the Social Sciences) programı ile yapılmıştır.

Veri Analizi

Araştırmadan elde edilen veriler SPSS 20 (Statistical Package for Social Sciences) programında analiz edilmiştir. Elde edilen veri analizinde tanımlayıcı istatistiksel yöntemlerinden yüzdelik, t testi ve tek yönlü anova kullanılmıştır.

Varsayımlar

1. Seçmenler oy kullanırken sosyal medyadan etkilenmektedir.
2. Seçmenler siyasi gündemi takip etmek için sosyal medyayı kullanmaktadır.
3. Seçmenler sorulara içtenlikle cevap vermiştir.

Sınırlılıklar

1. Araştırma, Kocaeli ilinde bulunan 18 yaş ve üstü seçmenler ile sınırlıdır.
2. Araştırma, sosyal medyanın seçmen tercihleri üzerindeki etkilerine dayalı oluşturulan anket sorularıyla 18 yaş ve üstü seçmenlerin verdikleri cevaplar ile sınırlıdır.
3. Araştırma, Kocaeli ilinde 18 yaş ve üstü seçmenlerden rastgele seçilen 100 kişi ile sınırlıdır.

Tanımlar

Sosyal Medya: İnsanların görüşlerinin sanal ağlar üzerinden açılan hesaplar yoluyla aktararak alternatif bir söylem gücüne sahip olabilme ve bunu güncel olaylara uyarlayabilme ve kullanabilme pratiklerini içerme olarak tanımlanmaktadır (Aydemir, 2014).

Seçmen: Seçimde oy hakkı verme hakkı olan kimse, müntehip (http://www.tdk.gov.tr/index.php?option=com_gts&arama=gts&guid=TDK.GTS.5a19ca5d52ddf9.24177947).

Yeni Medya: Dijital kodlama sistemi doğrultusunda ortaya çıkan multimedya içeriği ile birlikte eşzamansızlık, kitlesizleştirme ve etkileşim özelliklerine sahip olan çok katmanlı etkileşimin gerçekleştiği anlık hızda karşılık bulan iletişim araçları olarak tanımlanmaktadır (Rogers, 2003).

Bulgular

Bu bölümde, araştırma kapsamında toplanan veri analizi sonucunda seçmenlerin sosyal medya kullanımları ile ilgili elde edilen bulgulara yer verilmiştir. Anket çalışması Kocaeli ilinde bulunan 104 kişiye uygulanmıştır. Sosyal medya kullanmadıkları tespit edilen 4 kişi anketten çıkarılmıştır. 100 kişi üzerinden değerlendirme yapılmıştır. Ankette verilen cevapların yüzdelikleri hesaplanmıştır. Bu hesaplamalar aşağıdaki gibidir.

Tablo 1. Cinsiyetiniz					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	kadın	48	48,0	48,0	48,0
	erkek	52	52,0	52,0	100,0
	Total	100	100,0	100,0	

Tablo 1’de görüldüğü üzere ankete cevap veren katılımcılar cinsiyet değişkeni açısından incelendiğinde toplam 100 kişiden oluşan çalışma grubunun %48’ini (48 kişi) kadın, %52’sini (52 kişi) erkek katılımcılar oluşturmaktadır.

Tablo 2. Yaşınız					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	18-21	10	10,0	10,0	10,0
	22-25	6	6,0	6,0	16,0
	26-29	13	13,0	13,0	29,0
	30 ve üzeri	71	71,0	71,0	100,0
	Total	100	100,0	100,0	

Tablo 2’ ye bakıldığında zaman ankete cevap veren katılımcıların %10’u (10 kişi) 18-21 yaş grubundan, %6’sı (6 kişi) 22-25 yaş grubundan, %13’ü (13 kişi) 26-29 yaş grubundan, %71’i (71 kişi) 30 ve üzeri yaş grubundan oluşmaktadır.

Tablo 3. Eğitim Durumunuz					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	İlkokul	3	3,0	3,0	3,0
	Ortaokul	5	5,0	5,0	8,0
	Lise	13	13,0	13,0	21,0
	Lisans	60	60,0	60,0	81,0
	Lisansüstü	19	19,0	19,0	100,0
	Total	100	100,0	100,0	

Tablo 3’e bakıldığında ankete cevap veren katılımcılardan %3’ü (3 kişi) ilkokul, %5’i (5 kişi) ortaokul, %13’ü (13 kişi) lise, %60’ı (60 kişi) lisans ve %19’u (19 kişi) lisansüstü eğitim düzeyini oluşturmaktadır.

Tablo 4. Mesleğiniz					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	İşçi	16	16,0	16,0	16,0
	Devlet memuru	41	41,0	41,0	57,0
	İşveren	10	10,0	10,0	67,0
	Emekli	7	7,0	7,0	74,0
	İşsiz	11	11,0	11,0	85,0
	Öğrenci	15	15,0	15,0	100,0
	Total	100	100,0	100,0	

Tablo 4 incelendiğinde ankete cevap veren katılımcıların %16’sı (16 kişi) işçi, %41’i (41 kişi) devlet memuru, %10’u (10 kişi) işveren, %7’si (7 kişi) emekli, %11’i (11 kişi) işsiz, %15’i (15 kişi) öğrenci grubunu oluşturmaktadır.

Tablo 5. Aylık Geliriniz					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	500-1500	21	21,0	21,0	21,0
	1500-2500	16	16,0	16,0	37,0
	2500-3500	33	33,0	33,0	70,0
	3500-4500	23	23,0	23,0	93,0
	4500 ve üzeri	7	7,0	7,0	100,0
	Total	100	100,0	100,0	

Tablo 5'e bakıldığında ankete cevap veren katılımcıların %21'i (21 kişi) 500-1500, %16'sı (16 kişi) 1500-2500, %33'ü (33 kişi) 2500-3500, %23'ü (23 kişi) 3500-4500, %7'si (7 kişi) 4500 TL ve üzeri aylık gelir grubunu oluşturmaktadır.

Tablo 6. Sosyal Medya Araçları					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Facebook	12	12,0	12,0	12,0
	Twitter	7	7,0	7,0	19,0
	YouTube	23	23,0	23,0	42,0
	Instagram	25	25,0	25,0	67,0
	LinkedIn	33	33,0	33,0	100,0
	Total	100	100,0	100,0	

Tablo 6'ya bakıldığında katılımcılardan %12'si (12 kişi) Facebook, %7'si (7 kişi) Twitter, %23'ü (23 kişi) YouTube, %25'i (25 kişi) Instagram, %33'ü (33 kişi) LinkedIn sosyal medya araçlarını kullanmaktadır.

Tablo 7. Sosyal Medya Kullanım Süresi					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	1 yıldan az	15	15,0	15,0	15,0
	1-2	8	8,0	8,0	23,0
	3-4	15	15,0	15,0	38,0
	5-6	24	24,0	24,0	62,0
	7 yıl ve üzeri	38	38,0	38,0	100,0
	Total	100	100,0	100,0	

Tablo 7'ye bakıldığında katılımcılardan %15'i (15 kişi) 1 yıldan az, %8'i (8 kişi) 1-2 yıl, %15'i (15 kişi) 3-4 yıl, %24'ü (24 kişi) 5-6 yıl, %38'i (38 kişi) 7 yıl ve üzeri sosyal medya kullanım süresine sahip olduklarını belirtmektedir.

Tablo 8. Sosyal medyayı çevremle iletişim kurmak için kullanım.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiçbir zaman	12	12,0	12,0	12,0
	Çok az	22	22,0	22,0	34,0
	Ara sıra	23	23,0	23,0	57,0
	Çoğunlukla	28	28,0	28,0	85,0
	Her zaman	15	15,0	15,0	100,0
	Total	100	100,0	100,0	

“Sosyal medyayı çevremle iletişim kurmak için kullanım.” anket sorusu ile ilgili tablo 8'e bakıldığında ankete cevap verenlerin % 12'si (12 kişi) hiçbir zaman, % 22'si (22 kişi) çok az, % 23'ü (23 kişi) ara sıra, % 28'si (28 kişi) çoğunlukla, % 15'i (15 kişi) her zaman yanıtını vermiştir. Sonuç olarak katılımcıların % 28'si çoğunlukla sosyal medyayı çevreleri ile iletişim kurmak amacı ile kullandıklarını belirtmiştir.

Tablo 9. Sosyal medyayı fotoğraf, video, görüş paylaşımı için kullanım.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiçbir zaman	18	18,0	18,0	18,0
	Çok az	21	21,0	21,0	39,0
	Ara sıra	30	30,0	30,0	69,0
	Çoğunlukla	23	23,0	23,0	92,0
	Her zaman	8	8,0	8,0	100,0
	Total	100	100,0	100,0	

“Sosyal medyayı fotoğraf, video, görüş paylaşımı için kullanım.” anket sorusu ile ilgili tablo 9’a bakıldığında ankete cevap verenlerin % 18’i (18 kişi) hiçbir zaman, % 21’i (21 kişi) çok az, % 30’u (30 kişi) ara sıra, % 23’ü (23 kişi) çoğunlukla, % 8’i (8 kişi) her zaman yanıtını vermiştir. Sonuç olarak katılımcıların % 30’u ara sıra sosyal medyayı fotoğraf, video ve görüş paylaşımı için kullandıklarını belirtmiştir.

Tablo 10. Sosyal medyayı ürün ve hizmetler hakkında bilgi toplamak amacıyla kullanım.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiçbir zaman	21	21,0	21,0	21,0
	Çok az	16	16,0	16,0	37,0
	Ara sıra	36	36,0	36,0	73,0
	Çoğunlukla	19	19,0	19,0	92,0
	Her zaman	8	8,0	8,0	100,0
	Total	100	100,0	100,0	

“Sosyal medyayı ürün ve hizmetler hakkında bilgi toplamak amacıyla kullanım.” anket sorusu ile ilgili cevap verenlerin %21’i (21 kişi) hiçbir zaman, %16’sı (16 kişi) çok az, %36’sı (36 kişi) ara sıra, %19’u (19 kişi) çoğunlukla, %8’i (8 kişi) her zaman yanıtını vermiştir. Sonuç olarak katılımcıların %36’sı sosyal medyayı ürün ve hizmetler hakkında bilgi toplamak için kullandıklarını belirtmiştir.

Tablo 11. Sosyal medyayı eğlence, oyun amaçlı kullanım.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiçbir zaman	37	37,0	37,0	37,0
	Çok az	31	31,0	31,0	68,0
	Ara sıra	18	18,0	18,0	86,0
	Çoğunlukla	9	9,0	9,0	95,0
	Her zaman	5	5,0	5,0	100,0
	Total	100	100,0	100,0	

“Sosyal medyayı eğlence, oyun amaçlı kullanım.” anket sorusu ile ilgili cevap verenlerin %37’si (37 kişi) hiçbir zaman, %31’i (31 kişi) çok az, %18’i (18 kişi) ara sıra, %9’u (9 kişi) çoğunlukla, %5’i (5 kişi) her zaman yanıtını vermiştir. Sonuç olarak katılımcıların %37’si sosyal medyayı hiçbir zaman eğlence ve oyun amaçlı kullanmadıklarını belirtmiştir.

Tablo 12. Sosyal medyayı benimle ortak ilgi ve gereksinimlere sahip bireyleri bulmak ve onlara katılmak amacıyla kullanım.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiçbir zaman	44	44,0	44,0	44,0
	Çok az	23	23,0	23,0	67,0
	Ara sıra	15	15,0	15,0	82,0
	Çoğunlukla	11	11,0	11,0	93,0
	Her zaman	7	7,0	7,0	100,0
	Total	100	100,0	100,0	

“Sosyal medyayı benimle ortak ilgi ve gereksinimlere sahip bireyleri bulmak ve onlara katılmak amacıyla kullanım.” anket sorusu ile ilgili cevap verenlerin %44’ü (44 kişi) hiçbir zaman, %23’ü (23 kişi) çok az, %15’i (15 kişi) ara sıra, %11’i (11 kişi) çoğunlukla, %7’si (7 kişi) her zaman yanıtını vermiştir. Sonuç olarak katılımcıların %44’ü sosyal medyayı hiçbir zaman ortak ilgi ve gereksinimlere sahip bireyleri bulmak ve onlara katılmak için kullanmadıklarını belirtmiştir.

Tablo 13. Sosyal medyayı siyasi gündemi takip etmek için kullanım.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiçbir zaman	24	24,0	24,0	24,0
	Çok az	20	20,0	20,0	44,0
	Ara sıra	27	27,0	27,0	71,0
	Çoğunlukla	19	19,0	19,0	90,0
	Her zaman	10	10,0	10,0	100,0
	Total	100	100,0	100,0	

“Sosyal medyayı siyasi gündemi takip etmek için kullanım.” anket sorusu ile ilgili cevap verenlerin %24’ü (24 kişi) hiçbir zaman, %20’si (20 kişi) çok az, %27’si (27 kişi) ara sıra, %19’u (19 kişi) çoğunlukla, %10’u (10 kişi) her zaman yanıtını vermiştir. Sonuç olarak katılımcıların %27’si sosyal medyayı siyasi gündemi ara sıra takip etmek için kullandıklarını belirtmiştir.

Tablo 14. Sosyal medyada yer alan partilerin sayfalarındaki bilgilere bakarım.

“Sosyal medyada paylaşılan parti adayları ile ilgili videoları takip ederim.” anket sorusu ile ilgili cevap verenlerin %25’i (25 kişi) hiçbir zaman, %32’si (32 kişi) çok az, %18’i (18 kişi) ara sıra, %22’si (22 kişi) çoğunlukla, %3’ü (3 kişi) her zaman yanıtını vermiştir. Sonuç olarak katılımcıların %32’si sosyal medyada paylaşılan parti adayları ile ilgili videoları çok az takip ettiğini belirtmiştir.

Tablo 25. Sosyal medyada parti liderleri ve adayları hakkındaki bilgilere bakırım.					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiçbir zaman	21	21,0	21,0	21,0
	Çok az	18	18,0	18,0	39,0
	Ara sıra	14	14,0	14,0	53,0
	Çoğunlukla	41	41,0	41,0	94,0
	Her zaman	6	6,0	6,0	100,0
	Total	100	100,0	100,0	

“Sosyal medyada parti liderleri ve adayları hakkındaki bilgilere bakırım.” anket sorusu ile ilgili cevap verenlerin %21’i (21 kişi) hiçbir zaman, %18’i (18 kişi) çok az, %14’ü (14 kişi) ara sıra, %41’i (41 kişi) çoğunlukla, %6’sı (6 kişi) her zaman yanıtını vermiştir. Sonuç olarak katılımcıların %41’i sosyal medyada parti liderleri ve adayları hakkındaki bilgilere çoğunlukla baktığını belirtmiştir.

Ankete verilen cevaplara göre daha önce belirlenen alt problemler doğrultusunda anket soruları ile ilgili cinsiyete göre anlamlı bir farkın olup olmadığını tespit etmek için T testi uygulanmıştır. Elde edilen sonuç aşağıdaki gibidir:

Tablo 26. Cinsiyet için T-Testi Independent Samples Test										
		Levene's Test for Equality of Variances		t-test for Equality of Means						
		F	Sig.	t	df	Sig. (2-tailed)	Mean Difference	Std. Error Difference	95% Confidence Interval of the Difference	
									Lower	Upper
Sosyal medya üzerinden paylaşılan partinin programı önemlidir.	Equal variances assumed	,512	,476	2,008	98	,047	,48237	,24022	,00566	,95908
	Equal variances not assumed			2,007	97,178	,048	,48237	,24033	,00540	,95934

Tablo 26’ya göre hesaplanan α değeri ($\alpha:0,047 < \alpha:0,05$) 0,05’den küçük olduğu için “Sosyal medya üzerinden paylaşılan partinin programı önemlidir.” anket sorusu ile ilgili cinsiyete göre anlamlı bir fark bulunmaktadır. Kadınların aritmetik ortalaması 2,7708 olarak hesaplanmış ve aritmetik ortalaması 2,2885 olan erkek katılımcılara oranla sosyal medya üzerinden paylaşılan partinin programını daha fazla önemsedikleri sonucuna ulaşılmıştır. Diğer anket sorularında ise hesaplanan “ α ” değeri normal $\alpha: 0,05$ değerinden büyük olduğu için cinsiyete göre anlamlı bir farklılık bulunmamıştır.

Tablo 27. Yaş için Anova Testi						
		Sum of Squares	df	Mean Square	F	Sig.
Sosyal medyayı fotoğraf, video, görüş paylaşımı için kullanırım.	Between Groups	22,567	3	7,522	5,910	,001

Tablo 32'ye göre hesaplanan α değeri ($\alpha:0,001 < \alpha:0,05$), ($\alpha:0,000 < \alpha:0,05$), ($\alpha:0,011 < \alpha:0,05$) ve ($\alpha:0,018 < \alpha:0,05$) 0,05'den küçük olduğu için "Sosyal medyayı çevremle iletişim kurmak amacıyla kullanırım.", "Sosyal medyayı fotoğraf, video, görüş paylaşımı için kullanırım.", "Sosyal medyada yer alan partilerin sayfalarındaki bilgiler önemlidir." ve "Sosyal medyada paylaşılan parti adayları ile ilgili videolar önemlidir." anket sorularında sosyal medyayı 7 yıl ve üzeri kullananlar ile sosyal medyayı 1 yıldan daha az kullananlar arasında anlamlı bir fark bulunmaktadır.

Sonuç Ve Öneriler

Bu araştırmada sosyal medya kullanımının seçmen tercihleri üzerine olan etkilerini belirlemek için anket soruları Kocaeli ilinde bulunan 52 erkek, 48 kadın olma üzere toplam 100 kişiye uygulanmıştır. Katılımcılardan %10'u (10 kişi) 18-21, %6'sı (6 kişi) 22-25, %13'ü (13 kişi) 26-29 yaş grubundan oluşurken, %71'lik (71 kişi) bir oran ile çoğunluğu 30 ve üzeri yaş grubu oluşturmaktadır. Eğitim düzeyine bakıldığında katılımcıların %3'ü (3 kişi) ilkokul, %5'i (5 kişi) ortaokul, %13'ü (13 kişi) lise, %19'u (19 kişi) lisansüstü mezunu iken çoğunluğu %60'ı (60 kişi) lisans düzeyindeki katılımcılar oluşturmaktadır.

Sosyal medya kullanımına bakıldığında katılımcılardan %12'si (12 kişi) Facebook, %7'si (7 kişi) Twitter, %23'ü (23 kişi) YouTube, %25'i (25 kişi) Instagram, %33'ü (33 kişi) LinkedIn sosyal medya araçlarını kullanmaktadır. Katılımcıların çoğunlukla LinkedIn sosyal medya aracını tercih ettikleri ortaya çıkmıştır. "Sosyal medyayı siyasi gündemi takip etmek için kullanırım" anket sorusu ile ilgili cevap verenlerin %24'ü (24 kişi) hiçbir zaman, %20'si (20 kişi) çok az, %27'si (27 kişi) ara sıra, %19'u (19 kişi) çoğunlukla, %10'u (10 kişi) her zaman yanıtını vermiştir. Sonuç olarak katılımcıların %27'si sosyal medyayı siyasi gündemi ara sıra takip etmek için kullandıklarını belirtmiştir.

Cinsiyet için yapılan t testine göre, "Sosyal medya üzerinden paylaşılan partinin programı önemlidir" anket sorusu ile ilgili cinsiyete göre anlamlı bir fark bulunmaktadır. Kadınların erkek katılımcılara oranla sosyal medya üzerinden paylaşılan partinin programını daha fazla önemsedikleri sonucuna varılmıştır. Yaş için anova testine göre ise "Sosyal medyayı fotoğraf, video, görüş paylaşımı için kullanırım." anket sorusunda 18-21, 22-25, 26-29 ile 30 ve üzeri yaşları arasında anlamlı bir fark bulunmaktadır. "Siyasi gündemi takip etmek için internet haber sitelerini kullanırım." ve "Siyasi gündemi takip etmek için sosyal medyayı kullanırım." anket sorularında α değeri ($\alpha:0,031$ ve $0,017 < \alpha:0,05$) 0,05'den küçük olduğu için 18-21 ile 26-29 yaşları arasında anlamlı bir fark bulunduğu tespit edilmiştir.

Eğitim düzeyine göre yapılan anova testi sonucunda; "Sosyal medyayı çevremle iletişim kurmak amacıyla kullanırım", "Sosyal medyayı fotoğraf, video, görüş paylaşımı için kullanırım", "Sosyal medyayı benimle ortak ilgi ve gereksinimlere sahip bireyleri bulmak ve onlara katılmak amacıyla kullanırım", "Sosyal medyayı siyasi gündemi takip etmek için kullanırım" ve "Sosyal medyada yer alan parti liderinin fotoğraflarına bakarım" anket sorularına cevap veren katılımcıların ilkokul ile ortaokul, ilkokul ile lise, ilkokul ile lisans ve ilkokul ile lisansüstü eğitim düzeylerine göre anlamlı farkların bulunduğu sonucuna ulaşılmıştır.

Anova testi sonucunda meslek gruplarına göre "Sosyal medyayı fotoğraf, video, görüş paylaşımı için kullanırım.", "Sosyal medyayı benimle ortak ilgi ve gereksinimlere sahip bireyleri bulmak ve onlara katılmak amacıyla kullanırım." ve "Sosyal medyayı siyasi gündemi takip etmek için kullanırım." anket sorularına cevap veren devlet memurları ile çalışmayanlar arasında anlamlı bir fark bulunmuştur. Kullanılan sosyal medya araçlarına göre ise "Sosyal medyayı çevremle iletişim kurmak amacıyla kullanırım.", "Sosyal medyayı fotoğraf, video, görüş paylaşımı için kullanırım." ve "Siyasi gündemi takip etmek için sosyal medya araçlarını kullanırım." anket sorularında anlamlı bir fark bulunmuştur. LinkedIn sosyal medya aracını kullananların, Facebook ve Youtube sosyal medya araçlarını kullananlara göre çok daha fazla olduğu tespit edilmiştir.

Sosyal medya kullanım süresine göre "Sosyal medyayı çevremle iletişim kurmak amacıyla kullanırım.", "Sosyal medyayı fotoğraf, video, görüş paylaşımı için kullanırım.", "Sosyal medyada yer alan partilerin sayfalarındaki

bilgiler önemlidir.” ve “Sosyal medyada paylaşılan parti adayları ile ilgili videolar önemlidir.” anket sorularında sosyal medyayı 7 yıl ve üzeri kullananlar ile sosyal medyayı 1 yıldan daha az kullananlar arasında anlamlı bir fark bulunduğu tespit edilmiştir.

Tespit edilen oranlar ve test sonuçlarına göre sosyal medyanın siyasi gündemi takip etmek için seçmenler üzerinde etkili olduğu göz ardı edilemez. Dolayısıyla seçmenlerin siyasi partilere ve siyasilere oy verirken sosyal medyayı dikkate aldıkları sonucuna varılmıştır. Siyasiler ve siyasi partilerin misyon ve vizyonlarının doğru bir biçimde sosyal medya araçlarını kullanarak seçmenlere aktardıklarında seçmenlerden daha fazla oy toplayabilecekleri tespit edilmiştir.

Demografik özellikler dikkate alındığında siyasi partilerin dijital ortamda sadece program içeriklerinin değil aynı zamanda görselliğin de görece olarak genç seçmenler üzerinde bıraktığı çarpıcı etki gerçeğini göz önünde bulundurmaları gerekmektedir. Sonuç olarak sosyal medyada yer alan siyasi partilerin faaliyetleri hakkındaki bilgiler, parti adaylarının görüşleri, paylaşılan vaat ve söylemler, parti liderleri ve adayları hakkındaki bilgiler ve sosyal medya üzerinden paylaşılan partilerin dine bakış açıları seçmen tercihleri üzerinde oldukça etkili olduğunu ortaya çıkarmıştır.

South African Social Sciences Teachers' Understanding Of Democracy, Citizenship And Citizenship Education

Sonja SCHOEMAN

Department of Curriculum and Instructional Studies
University of South Africa South Africa
schoes@unisa.ac.za

Abstract

This paper reports the findings of a study that surveyed a sample of social sciences teachers' understanding of the concepts of democracy, citizenship and citizenship education. A non-experimental survey research design involving quantitative data was used to generate data for the study. The results from the questionnaires were analyzed by means of descriptive statistical analyses. The three different definitions of each of the respondents were then coded by means of inductive and *a priori* coding. To reveal the meaning of the definitions, themes were identified, and organized into categories. The latter were used to summarize the content of the definitions.

The findings indicated that the most frequent elements to appear in the democracy definitions were forms of government and political equality (rights and responsibilities), and the least frequent element was the evaluative (critical thinking). The analyses of the respondents' citizenship definitions revealed that they held a minimalist view of South African citizenship. They saw citizenship as a responsibility and right. The elements with the lowest frequencies were membership, active and the evaluative. Two of the respondents made reference to critical multicultural citizenship. The respondents' citizenship education definitions gravitated towards the conservative orientation of citizenship education, and the emphasis was on responsibilities and education. The elements with the lowest frequencies were membership, evaluative, active and rights. A close reading of the three collected definitions revealed evidence of the reproduction of the existing socio-political order and the cultivation of national loyalty and obedience to authority. Given the latter, in practice, the education of critical, active and inquiring young South African citizens were not taking place.

Finally, an improvement plan to enhance democracy, citizenship and citizenship education within the framework of the school subject social sciences was recommended, given that the future of governments depends on citizenship education. "If the young is not trained by habit and reason in the spirit of the constitution, all is for nothing." (Thomas Jefferson)

Introduction

In 2018, South Africans celebrate 24 years of democracy. While the conditions of poverty, unemployment, disease and crime are daunting, their optimism about the prospects of democracy is encouraging. However, most citizens' involvement in governance is described as inadequate (Foley & Puta in Stevick & Levinson, 2007; TIMES Live, 2015). Foley and Puta's (in Stevick & Levinson, 2007) research findings confirm that a vibrant civil society is essential for democracy to flourish, and for them the solution to the problem lies in citizen participation and development. Globally, growing concern is also expressed in democracies about the "... levels of engagement or disengagement amongst young citizens and their ability to engage with basic civic responsibilities." (Hughes, Print & Sears, 2010, p.295; SAAPS, 2016). Hughes et al (2010) and Pinar (2011) confirm that one of the primary responsibilities of a public education system is to ensure that citizens have the knowledge and skills to effectively engage with the social, economic and political opportunities that are inherent to a democracy.

Problem Of The Study

Momentous curriculum changes have occurred in South Africa since the end of apartheid and the first democratic elections in 1994 (Department of Basic Education, 2011). A closer scrutiny of the curriculum policy documents revealed a number of problems, namely that the curriculum as document did not necessarily translate itself into curriculum as experience; and that it lacked conceptual clarity, coherence and consistency which resulted in conflicting forms and conceptions of citizenship and citizenship education. Citizenship education in South African public schools has in some cases a maximalist tone, but collectively reflects a minimalist conception of citizenship and citizenship education. South African public schools are providing the learners with knowledge about the country and the world's social, political, economic and geographical phenomena without any active engagement with social conflicts and problems such as racial and gender discrimination, conflicting political ideologies, competing economic systems, poverty and inequality. The emphasis in the values-based education documents is also on content instead of process, and the latter undermine democratic participation and an active citizenry, and promote obedience, if not, unquestioning loyalty to the South African government (Banks, 1990; Department of Basic Education, 2011; Mathebula, 2009).

According to Hammett and Staeheli (2009) and Parker (2015), the school subject social sciences globally focuses on democracy, human rights and citizenship education. However, the South African social sciences curriculum is abstract, and does not reflect the learners' experiences in their communities and society at large (Department of

Basic Education, 2011). Hughes et al (2010, 295) warned against curriculum policy documents depriving social sciences of its role of "... developing critical thinking and reflexivity among teachers and learners about the conflict-ridden realities of a world torn apart along political, economic, religious and racial lines." When school subjects do not focus on the conflicts and the problems of society, they serve the hegemonic power nexus, and reconfirm the social order. Mathebula (2009, pp. 2-3) cautions policy-makers that, "Democracy requires a range of forms of learning, both taught and caught, or inside and outside schools." For Hammett and Staeheli (2009), the minimalist conception of citizenship education is not appropriate for the South African context; what is needed is strategies for getting South Africa from where it is (mainstream conception of citizenship and citizenship education) to where the country ought to be (transformative conception of citizenship and citizenship education).

Research Question And The Purpose Of The Study

According to Kalous (as cited in Yazdgerdi, 1996, p.16), if practices of citizenship education are to change, it should start with a "... spontaneous bottom-up unfolding ..." of citizenship development reforms. With this in mind, the following exploratory research question was formulated: What could be done differently in terms of citizenship education in South Africa to enhance its potential for the development of informed, critical and participating citizens? Given this question, the purpose of the study was to survey a sample of social sciences teachers' understanding of democracy, citizenship and citizenship education to

- contribute to the current debate on the conceptual clarity, coherence and consistency in the education policies;
- sensitize role-players to strategies for getting South Africa from where it is to where the country ought to be; and
- serve as an impetus for further research to address the lack of citizen involvement in governance, and to promote a vibrant civil society in South Africa.

Literature Review

Given the topic of this paper, a brief description of the concepts democracy, citizenship and citizenship education is provided below. This is done to avoid any misunderstanding regarding the use of the concepts in this study.

Democracy

In the nation state, the modern concept of democracy consists of three principal components: democracy, constitutionalism, and liberalism. Each must exist in a political system to be a true democracy. The fundamental principles of democracy are the sovereignty of the people, political equality of all citizens, just powers of government based on the consent of the governed, and free, fair and frequent elections. Constitutionalism refers to the use of constitutions to limit governments by law, and to respect the freedom, equality and dignity of individual citizens. Liberalism recognizes the moral primacy of the individual and the protection of fundamental rights. Two parallel models of democracy are distinguished, the participatory (broad participation of the people in the direction and operation of political systems) and the representative (all eligible citizens vote for representatives to pass laws on their behalf) (Blaug & Schwarzmantel, 2006; Mathebula, 2009; McLaughlin, 1992).

Citizenship

The concept of citizenship has different meanings depending on the socio-cultural context and political organization of the state (Garcia, 2007). According to Mathebula (2009), South Africa is a participatory democracy and citizens' individual autonomy and equality are respected, and they need critical thinking skills for active engagement in all aspects of public life, both globally and nationally. According to Marshall (1950), citizenship is an equal status given to every citizen of a country, and they are granted rights and responsibilities. Marshall (1950) identified three kinds of rights: civil rights (freedom of speech, thought, faith and liberty); political rights (as elected member or voter); and social rights (public safety, health and education).

McLaughlin (1992) mapped citizenship along a continuum of minimalist and maximalist conceptions. He contrasted the minimalist and the maximalist conceptions of citizenship in terms of various citizenship issues. Major points of divergence between the two interpretations of citizenship are the extent of political involvement and the degree of critical understanding and questioning that is required for citizenship. With regard to a minimalist view, political involvement and participation is limited to voting for elected representatives, and citizenship is viewed as a private matter; while a maximalist view focuses on the broad participation of the people in government. The maximalist conception requires an explicit understanding of democratic principles, values and procedures, and the dispositions and capacities required for participation in the democratic processes. The minimalist conception requires an unreflective socialization of citizens into the political and social *status quo*.

Parker (1996) identified three conceptions of democratic citizenship, namely the traditional, progressive and advanced. According to him (Parker 1996), the traditionalists emphasize knowledge of government structures and

functions, and democratic values such as freedom of speech, liberty and voting. The progressives share a similar commitment, but also embrace notions such as strong democracy and civic participation in its numerous forms (Banks, 2004; Newmann, 1968). Advanced citizenship is built on the progressive perspective, but also focuses on the tensions between pluralism and assimilation (Parker, 1996). Additionally, Parker (1996) identified three conceptions of good citizenship, the personally-responsible, participatory and justice-oriented. A personally-responsible citizen has a good character, is a responsible member of the community, and endeavors to solve problems. A participatory citizen is knowledgeable about the operation of government agencies to resolve social problems, and want to improve society through civic participation, good relationships, common understandings, trust and collective commitments. A justice-oriented citizen, critically assesses social, political and economic structures to identify injustices, solve social problems and improve society.

Citizenship education

Citizenship education, in many countries, is categorized along a continuum of minimal to maximal characteristics. Minimal citizenship education includes normative ideas of citizenship, such as a legal ascription of citizens' identity and their rights and duties, with an emphasis on equality for all, without accounting for the diversity within multicultural societies. Within this form of citizenship education, the goal is to educate good citizens who are law-abiding, contribute to society, and possess good characters. The pedagogy is content-led with the focus on civic knowledge, with little or no attention to participation in processes to address societal structures and relations that create inequalities among citizens (Maree et al, 2012; McLaughlin, 1992).

Kerr, Stuurman, Schultz and Burge (2010) and McLaughlin (1992) describe maximal citizenship education as the development of learners' values, attitudes and skills for participation in democratic processes and civic organizations. The goal is to foster young citizens' involvement in political, societal and civic structures. The pedagogy focuses on the school curriculum and extra-curricular activities such as participation in school governance and service learning. The emphasis is on the acquisition of knowledge and skills in a variety of subjects.

Extending McLaughlin's (1992) minimal and maximal approaches to citizenship education, DeJaeghere (2006) and DeJaeghere and Tudball (2007) put forward the critical citizenship education approach that problematizes and (re)constructs democratic citizenship to address civic realities such as exclusion and discrimination, and the factors that prevent the full enactment of democratic citizenship in multicultural societies. This approach shares foundational principles with critical pedagogy, and the recent developments in multicultural education and post-colonial theory. Kincheloe and Steinberg (2002) explain that a critical multicultural approach to citizenship education questions the existing socio-political order that creates injustices and inequalities for certain groups in society. Both knowledge and participation are used to empower learners to understand and engage with the underlying causes of social problems in society. Knowledge in this approach refers to a critical analysis of historical and contemporary developments and practices of citizenship in nation-states, and the social structures through which democracy are enacted. This knowledge is learned from a variety of disciplinary and cultural perspectives, including perspectives of marginalized knowledge. Learners should develop positive attitudes and emotional connections to those who are different from themselves, and also engage with contested issues.

From the above, it is clear that the purpose of citizenship education is the development of good citizens. In terms of its implementation, which includes policies, curriculum and teaching strategies, the purpose is expressed as either conservative (maintaining the *status quo*), or progressive (empowering individuals and groups to struggle for emancipatory change). Citizenship education practices are situated somewhere along a continuum between these two orientations, but gravitate towards one or the other. The conservative orientation privileges reproductions of the existing socio-economic order to instill national loyalty, obedience to authority, voluntary service, and the assimilation of immigrants. It also deals with national narratives, historical and geographical facts, the functioning of government institutions, the reproduction of social structures, and the development of moral character and social cohesion. Representative democracy and voting are the most important expression of citizenship participation. The progressive orientation privileges societal transformation (gender, race and class), social justice, diversity, and emancipation by identifying and reducing the tension between capitalism and democracy. The most important expression of progressive citizenship is participation and activism. It nurtures critical analysis, political engagement, and cross-cultural respect and understanding to develop active, informed and critical citizens (Shugurensky & Myers, 2003).

Research Methodology

Critical theory was used as theoretical framework of the study given its emphasis on reason as the highest potential of human beings, and that by reasoning it is possible to criticize and challenge the nature of existing societies. It also claims that bias is present in every human action, that research can address the bias, injustice and subjugation

that shape people's experiences and understanding of the world, and that a study of the latter can result in an understanding, critique and change of society (Blaikie, 2001).

The context of the empirical study was a rural secondary school in the Gauteng province. The school has 1200 learners and 36 teachers. It has four grade 7 classes, nine grade 8 classes, and thirteen grade 9 classes with Tswana as language of teaching and learning. Access to the school was via an old tar road and a dirt track. Electricity, running water and poor sanitation facilities were available. The school buildings were overcrowded and needed renovation. The qualifications of the staff ranged from matriculation (Grade 12) certificates to honor's degrees, and their teaching experience varied from none to between 21 and 30 years.

A non-experimental survey research design involving quantitative data was used to generate data for the study of the rural teachers' knowledge and understanding of what it means to be a South African citizen. As a result of practical decisions to access an existing group, the non-probability convenience sampling technique was used. As the researcher was interested in getting an inexpensive and quick approximation of the truth regarding the development of rural South African citizens, only a limited number of respondents were involved (Maree et al, 2012). Stoker's (1985) guidelines for sampling were used to determine the sample size of the study. The questionnaire was group-administered to a sample of 15 teachers that included sub-groups of gender, age, academic qualifications, teaching experience, and grades and subjects responsible for. The objective of the questionnaire was to obtain facts and opinions about a phenomenon (citizenship development) from respondents who were informed about the particular issue (conceptions of democracy, citizenship and citizenship education).

The questionnaire started with a few biographical questions followed by three structured questions. The following biographical questions were included: a closed dichotomous question to determine the teachers' gender, and three fill-in questions to identify their ages, qualifications, experience, teaching subjects, and the grade(s) that they are teaching. A scaled question was formulated to determine the extent of their academic knowledge and understanding of the concepts democracy, citizenship and citizenship education. The questionnaire was concluded with three fill-in questions to determine the teachers' authentic knowledge and understanding of the concepts. The following ethical principles were negotiated with the respondents prior to the start of the data-collection procedure, namely anonymity, voluntary participation and confidentiality.

Results And Discussion

After the data has been captured, the descriptive statistical analyses were done using Microsoft Excel. The results from the questionnaires are presented in Tables 1 to 8.

Biographical information

Table 1 (see below) contains the frequency distribution of the gender of the teachers. Of the 15 teachers who responded to the question, 9 (64.29%) were female and 5 (35.71%) male. One (7.14%) of the sampled teachers did not respond to the question.

Table 1: Teachers by gender

Gender			
Female		Male	
Frequency (f)	Percentage (%)	Frequency (f)	Percentage (%)
9	64,29	5	35,71
Total	*14		

* One of the 15 teachers did not respond to the question.

Table 2: Age distribution of teachers

Years	Frequency (f)	Percentage (%)
20-24	1	6.7
25-29	2	13.3
30-34	-	-
35-39	1	6.7

40-44	3	20.0
45-49	2	13.3
50-54	3	20.0
55-59	3	20.0
Total	15	100

Table 2 (above) reflects the age distribution of the teachers. Of the 15 teachers, one (6.7%) were between 20 and 24 years of age, two (13.3%) between 25 and 29, and another one (6.7%) between 35 and 39. Three of the sampled teachers (20.0%) were between 40 and 44 years, and two (13.3%) between 45 and 49 years of age. Six of the teachers were within the age cohorts of 50 and 54 (3, 20.0%) and 55 and 59 (3, 20%) respectively.

Knowledge and understanding of the key concepts

The teachers' opinion on the extent of their knowledge and understanding of the concepts democracy, citizenship and citizenship education are presented in Table 3 below.

Table 3: Extent of teachers' conceptual knowledge and understanding

Teachers' conceptual knowledge and understanding		
Category	Frequency (f)	Percentage (%)
Excellent	5	33.3
Good	7	46.7
Average	2	13.3
Poor	1	6.7
Total	15	100

Of the 15 sampled teachers, 5 (33.3%) indicated that their conceptualization of the three concepts was excellent, seven (46.7%) that it was good, two (13.3%) that it was average, and one (6.7%) that it was poor.

Qualitative data from the three definitions

The three different definitions of each of the respondents were coded by means of inductive and *a priori* coding. Each definition was read to elicit elements that might or might not be evident in the other definitions. The elements elicited from the document study were also used to bring order, meaning and structure to the collected information. The process of reading the data in this manner continued until an exhaustive list of possible elements was created. In each of the definitions, themes that would facilitate the teachers' understanding of the concepts were identified, and organized into coherent categories to summarize and reveal the meaning of the definitions. The categories used to classify the elements were: form (type of government, status); rights (civil, political, social, status); responsibilities (participation, status); membership (belonging to, status); evaluative (critical thinking); active (agency, practice, attitude); and knowledge (education) (Garcia, 2007; Mathebula, 2009; Schoeman, 2006). The results are reported in Tables 4 to 6 that focus on each of the three definitions.

Table 4 (below) contains the frequency distribution of the key elements in the teachers' democracy definitions.

Table 4: Frequency of elements in the teachers' democracy definitions

Element	Frequency (f)	Percentage (%)
Form	7	46.7
Rights	3	20.0
Responsibilities	3	20.0
Evaluative	2	13.3
Total responses	15	100

Of the teachers (n=15) who were sampled, the most frequent element to appear in their democracy definitions was form, with 7 (46.7%) references to forms of government. The second most frequent elements were rights (n=3, 20.0%) and responsibilities (n=3, 20.0%), and the least frequent element was the evaluative as only two (13.3, %) of the teachers referred to this element. The analysis of the teachers' democracy definitions revealed that the majority of them included references to forms of government. Most of the respondents referred to the fact that South Africa was a representative democracy, "... by voting to elect representatives to a parliament" (Teacher #7), and that "... all eligible members of [the] state vote through elected representation ... so that they represent them well." (Teacher #6). In only a few of the definitions, references were made to participatory democracy: "...

Government of the people" (Teacher #9), and a "... . System of government by the whole people" (Teacher #5). The definitions of the teachers provided evidence that they were knowledgeable about their status as citizens of a democratic South Africa, and multiple references to political equality (rights and responsibilities) were included. For example, Teacher #4 referred to the: "Right to vote ... and ... responsibility to ... say ... how and who should ..., make decisions for the people."

A low percentage of the teachers (2, 13.3%) made reference to the evaluative element. Despite the implementation of an education system conducive to the establishment of a democratic South Africa with participatory democracy and active citizenship at its core, in practice, the education of active, critical and inquiring individuals were not taking place. The latter are vital skills for citizens to affect the decisions that political representatives take on their behalf (Blaug & Schwartzmantel, 2006). According to Banks (1990), citizenship education in a democracy has to empower students to take control of their own lives, and for this they have to ask critical questions. Two of the teachers included references to some of the other characteristics of a democracy such as critical multicultural citizenship. For example, the protection of fundamental rights and dignity was cited: "I have rights to basic needs as stated in [the] South African Bill of Rights. ... The people have human rights" (Teacher #8), and that in a democracy the citizens are "Free from oppression, discrimination, and segregation to be governed according to ... [the] constitution of my country." (Teacher #10)

Table 5 below contains the frequency distribution of the key elements in the teachers' citizenship definitions.

Table 5: Frequency of elements in the teachers' definitions of citizenship

Element	Frequency (%)	% of responses
Responsibilities	6	40.0
Rights	4	26.7
Membership	2	13.3
Active	2	13.3
Evaluative	1	6.7
Total responses	15	100

Of the teachers who were sampled, the most frequent element included in their citizenship definitions was responsibilities. From the 15 responses, 40% (n=6) of the teachers' definitions contained this element. The next frequently mentioned element was rights (26.7%, n=4), followed by membership (13.3%, n=2) and active (13.3%, n=2). The least frequent element was the evaluative (6.7%, n=1). The results of the analysis of the citizenship definitions revealed that the respondents held a minimalist view of citizenship. They obeyed the calls for law and order and good neighborliness, but were more concerned about their formal and legal status, than their public duties and participation through representative politics.

A close scrutiny of the above responses, revealed the teachers' views on citizenship as a status (rights, membership) and an attitude (agency, active, evaluative). One of the most salient elements in the citizenship definitions of the respondents were their references to responsibilities and political rights: "I have a rights to vote for a government that represent me. I need ... access to information To make the right choices." (Teacher #10), and "I ... have the right to vote and choose the party that will be able to represent us as the voters" (Teacher #2). Two of the respondents referred to social and civil rights: "I have rights to housing, citizenship, ... and safe and clean water" (Teacher #7), and "I legally belongs to South Africa and have the rights and protection of my country." (Teacher #8). According to Pena (2003), democratic societies cannot be found on rights and institutions alone, they also depend on the qualities (responsibilities, participation, accountability) of their members. Habermas (1996, p.72) observed that "... the citizen as individual can reflectively use these qualities and attitudes to change their situation, position or material legal status." In the teachers' citizenship definitions, references were also made to citizenship as an attitude. Teacher #6 wrote: "I should be loyal to my country Carrying out my duties to the best [of my] ability. ... [and] choose who I want to run the country. (someone who is a hard worker, honest and trustworthy)."; and Teacher #15 explained that citizens have to " ... respect other peoples' right[s] [that is] whether you are a disabled person or not ... I would like to be [a] paramedic women so that I can help people who are injured in an accident." The element with the lowest frequencies in the respondents' citizenship definitions was once again the evaluative. McLaughlin (1992) indicated that the extent of citizens' political involvement is related to the degree of their critical understanding and questioning. Political involvement in South Africa is limited to voting. It was clear from the respondents' citizenship definitions that only a few of them developed the critical faculties to understand and question the issues related to equity and justice at local and societal levels such as to: " ... help people who are poor and ensure that they get a healthy life style." (Teacher #15), "... I will fix the lights on [the]

street and make sure that the roads are save and ... fine." (Teacher#2), and "I ... will Take part in community activities (volunteering)." (Teacher #13).

Table 6 below provides the frequency distribution of the key elements as identified in the citizenship education definitions of the teachers.

Table 6: Frequency of elements in the teachers' citizenship education definitions

Element	Frequency (%)	Responses (%)
Responsibilities	6	40.0
Education	3	20.0
Membership	2	13.3
Evaluative	2	13.3
Active	1	6.7
Rights	1	6.7
Total responses	15	100

Of the teachers (n=15) who were sampled, the most frequent elements to appear in their citizenship education definitions were responsibilities and education. Of the responses, 40% (n=6) and 20.0% (n=3) of the definitions contained these two elements. The next most frequent elements were membership (13.3%, n=2) and evaluative (13.3%, n=2), and the two least frequent elements were active and rights, with 1 teacher (6.7%) each. The respondents' citizenship education definitions gravitated towards the conservative orientation of citizenship education. According to Inman and Buck (1995), citizenship education should be concerned with empowerment and the development of learners' ability to take control, and exercise responsibility over their own lives, and to ask critical questions, evaluate evidence and question the taken-for-granted. A close reading of the collected citizenship education definitions revealed that all of them contained evidence of the reproduction of the existing socio-economic order, including the cultivating of national loyalty and obedience to authority. The emphasis was on the minimalist conception of citizenship education with the functioning of government institutions, representative democracy, and voting as the most important experiences of citizenship participation: " ... to provide the young people with an understand[ing] of the political [,] legal, and ... respect [for] the citizen." (Teacher #9), and "... citizenship education Means they want people leaving education with an understanding of the political ideal and economic functions of adult society and with the social and moral awareness to thrive in it. " (Teacher #7). Teacher #12 wrote, "Citizenship education [is to] promote responsibility and taking pride and to be [a] patriot." Teachers #13 and #14 respectively demonstrated that it is taught: "to ... ensure that we get a good education in our own country so that we can help our community to develop educationally and support of our government."; and to "... involve all people to address common issues and learn to solve them." In terms of Greeno's (1991) environmental view of knowing, in the South African citizenship education classrooms, the learners learn about an environment without exploring the actual territory.

Conclusion And Recommendations

Given Parker's (1996) identified conceptions of democratic and good citizenship, this study revealed that the sampled teachers demonstrated that they held traditional and progressive conceptions of democratic citizenship. According to him (Parker, 1996), as traditionalists they emphasized knowledge of government structures and functions, and democratic values such as freedom of speech, liberty and voting. However, as progressives they embraced notions such as strong democracy and civic participation in its numerous forms (addressing common and welfare issues by volunteering) (Banks, 1990; Newmann, 1968). Only two of the teachers, demonstrated characteristics of advanced citizenship, as they focused on the tensions between pluralism and assimilation (Charles Taylor cited in Parker, 1996).

Parker (1996) also identified three conceptions of good citizenship, the personally-responsible, participatory, and justice-oriented. The social sciences teachers sampled for this study, identified with the characteristics of personally-responsible citizens as they saw themselves as having good characters and being responsible members of the community with as their core responsibility the solving of problems. They also indicated that they were participatory citizens who were knowledgeable about how the South African government agencies operate to resolve social problems, and to improve society through civic participation, good relationships, common understanding, trust and collective commitments.

The social sciences teachers involved in this study, revealed a conservative orientation to citizenship education. They viewed the purpose of citizenship education as the reproduction of the existing socio-economic system, and to instill in prospective citizens national loyalty, obedience to authority, and voluntary services. The social sciences

curriculum focused mainly on national narratives, historical and geographical facts, the functioning of government institutions, the reproduction of social structures, and the development of moral character and social cohesion as the most important expressions of citizenship participation.

This paper is concluded with a response to the research question that was posed at the beginning of the study, namely: What could be done differently in terms of citizenship education in South Africa to enhance its potential for the development of informed, critical and participating citizens? Widespread consensus of how to respond to the issue of citizenship education exists across the democratic world (Hughes, Print & Sears, 2010). Given the above, the following are recommended for the South African context:

- A thorough conceptual analysis of the curriculum policy documents. Pinto (2012) asserts that curriculum policy documents are highly political since they set out what learners "ought to learn" and what teachers "ought to teach". Apple (2004) advises that curriculum theorists, teacher educators and teachers should document the conceptual tools which are used in curriculum policy documents to reveal to what extent they may act as agents of hegemony, and perform latent ideological functions.
- Democratic citizenship education as primary focus of social sciences education. Roth and Desautels (2004) and White (2000) demonstrated that there exists a close link between social sciences and citizenship education as both focus on discovery learning, active learner engagement and social participation. According to Parker (1996) and Ross (2006), Thomas Jefferson pointed out that the people are democracy's engine, and that they must be educated for political engagement. The critical social sciences education (CSSE) approach is the most appropriate approach to citizenship education. It is grounded in the maximalist conception of citizenship and citizenship education using both the informal and formal curricula. This approach is part of the progressive citizenship education orientation, and empowers learners to critically examine and engage with social reality; and create a more democratic and socially just world. Active teaching and learning strategies are used to develop learners' higher order thinking skills to interrogate issues such as racism, gender inequality, multiculturalism, and social criticism (Kumar, 2012; McLaughlin, 1992; Ross, 2006; Shugurensky & Myers, 2003).
- Building curriculum for citizenship education. Hughes et al (2010) and Zevin (2015) conducted analyses of leading democracies, and identified factors associated with the building of effective citizenship education curricula. These were used to propose an action plan for the design of an effective citizenship education curriculum for the South African context. See Table 7 below.

Table 7: Designing an effective citizenship education curriculum for South African schools

Six elements	Actions
Debate	Initiation of a national debate on the issue as change agent towards a proactive curriculum.
Goals	Formulation of widely accepted goals to establish standards for citizenship education as part of social sciences education.
Curriculum materials	Development of pedagogically sound teaching and learning support materials.
Funding	Adequate government funding for effective implementation.
Teacher development	Provision of substantive pre- and in-service teacher education programs.
Research	Funding of research and development to support citizenship education policy, program development, and pedagogy.

This paper is concluded with Aristotle's argument that the future of a regime depends on citizenship education, and if the young is not trained by habit and reason in the spirit of the constitution, all is for nothing. Given the above, politics are a central concern of education, the nature and extent of citizenship education is the major determinant of politics, and governments can do much to provide effective citizenship education to its citizens (Department of Basic Education, 2011; Jones & Jones, 1992; Watson, 2005).

Abstract

Individuals experience a series of different emotions during sport activities (Hanin, 2000; Lazarus, 2000). Sport researchers, who are studying on the relations of emotions and performance and the distribution of the emotions, need valid and reliable scales. In this context, the objective of this study is to adapt the Sport Emotional Questionnaire, which includes items based on the emotional experiences of the athletes and which is a pre-competition emotion scale, to Turkish culture. Totally 191 athletes (87 females, 104 males) volunteered to participate in the study (MeanAge= 23,76 + 4,05). Sport experience of the participants was calculated as Meanexperience= 8,73 + 3,82. Sport Emotional Questionnaire, which was developed by Jones et al.(2005), was used as the data collection tool in the study. Exploratory Factor Analysis (EFA) and Confirmatory Factor Analysis (CFA) were used in order to examine the factor structure of the scale. Additionally, Cronbach Alpha (α) coefficient was used concerning the reliability of the scale. When the findings of the study are examined, the original form of the sport emotional questionnaire, which was originally five-item, was transformed into a four-item structure after the adaptation process to Turkish Culture. Moreover, since the four items were gathered under different sub-dimensions, they were excluded from the model and re-analyzed. After the last analyses concerning the validity of the scale, goodness of fit parameters were calculated as χ^2/df :2.370, CFI: .95, SRMR: .003, RMSA: .08. As the conclusion, it was concluded that, having been developed for the athletes and adapted to Turkish Culture, the Turkish form of Sport Emotional Questionnaire was valid and reliable.

Keywords: *Sport Emotion, validity, reliability, Athlete.*

Introduction

Although the definitive description of emotion varies according to researchers, Fredrickson (2001) defines emotion as a cognitively assessed response given consciously or unconsciously to a fact. This response “triggers a stream of reaction flows that manifests itself in a system of superficial assembled components such as subjective experience, facial expressions, cognitive functioning and physical changes” (s.218). Some researchers emphasize the behavioral aspect (i.e., behavior tendencies) of the emotional reaction (see in Gross, 1998; Russell,2003).

This article focuses on how an inventory, which can be useful to assess the subjective feeling associated with an emotion, can be developed. Studies suggest that the context of the emotional experience can confidently be defined only with two dimensions including intensity and pleasure (Parrot, 2001). Physical and behavioral features accord with emotions in the most optimistic approach as long as the individuals who experience these situations do not verify by conveying their insights.

Emotion in the emotion scales in sports studies is used as affectivity and mood changes. However, there are theoretical differences between these structures (for a discussion on this topic, see Ekman & Davidson, 1994). Mood explains the long-term situations which an individual being in without knowing the reason for experienced feelings (Parkinson, Totterdell, Briner, & Reynolds, 1996). Conversely, emotions are relatively short-term and triggered by a particular premise (Lane & Terry, 2000). Affectivity is a broad term used to explain everything about emotions such as choices, feelings, and moods (Rosenberg, 1998). The Sports Emotional Questionnaire, which was developed to emotions by considering these definitional differences, is related to the individual's responses against a specific event (i.e., what do you feel about this competition) rather than what the individual generally feels (i.e., what do you feel now?). With the view that if the answer that is given in the question "what are you feeling now" is used when asked before the competition, emotional responses given to other situational factors will have been evaluated as well as those related to the competition (i.e.,the anger related to the delay in traffic on the way to the competition), if we use the question “what do you feel about this competition”, it is thought that the collected measurement will be related to emotional responses associated with the competition, and the Sport Emotional Questionnaire has been developed (Jones et al., 2005). There is neither a sport-specific perspective nor a developed or adapted measuring instrument for competition or sporting performance in our country. In this context, this study aims to adapt sport emotional scale to Turkish culture.

Method

Research Group

The validity and internal consistency reliability were tested on the athletes competing in different league status in different provinces in Turkey during the 2017 – 2018 season and the athletes were recruited according to purposeful sampling. 191 athletes ($\text{Mean}_{\text{age}}=23,76 \pm 4,05$) including 87 females (45,5%) and 104 males (54,5%) participated in the study. The means score of the sports experience was found to be $\text{Mean}_{\text{experience}}=8,73 \pm 3,82$.

Table 1: The distribution of the participants according to gender variable

	N	%
Women	87	45,5
Men	104	54,5
Total	191	100,0

When table 1, is examined, it seen that 191 athletes ($\text{Mean}_{\text{age}}=23,76 \pm 4,05$) including females 45,5% (87) and 54,5% males (104) participated in the study.

Data Collection Tools

Personal Information Form

The form designed by the researchers included information such as gender, age, sports branch, and sports experience (How long have you been competing?).

Sport Emotional Questionnaire (SEQ)

Sport Emotion Questionnaire developed by Jones et al. (2005) to measure the emotional state of the athletes. With the view that if the answer that is given in the question "what are you feeling now" is used when asked before the competition, emotional responses given to other situational factors will have been evaluated as well as those related to the competition (i.e., the anger related to the delay in traffic on the way to the competition), if we use the question "what do you feel about this competition", it is thought that the collected measurement will be related to emotional responses associated with the competition, and the Sport Emotional Questionnaire has been developed (Jones et al., 2005). The original questionnaire has 5 sub-dimensions including 22 items.

Data Collection/Process

Before starting to the translation process, the permission was asked via e-mail, and the authors granted the permission. Standard translation and back translation method suggested by Brislin (1986) was used in the translation process. In this method, there should be two independent translators. The first translator translated the original scale into the target language; the second translator did the back translation (Carlson, 2000). According to Savaşır (1994), the translators should know both language and the related concept about the scale. In this context, the original scale was translated into Turkish and then the Turkish form was translated into the original language by using the translation-back translation method. The English version of the scale was translated by one expert in the English language and two experts who know English in sports sciences. Translated scale items were compared with each other. The same experts made the necessary corrections regarding meaning and grammar by discussing on the Turkish version. The items having the same and the different translations were translated into English again by different language experts. Back-translation version of the scale was compared to the original scale, and differences and mistakes were determined. English translation was compared to the original scale, the last version of Turkish scale was created with the closest translations. The last version of the scale was applied to the athletes before or after training to find out the construct validity and reliability.

Analysis

In data analysis, Confirmatory factor analysis (CFA) was applied to test whether the scale was verified in Turkish culture. In the first analysis, because 5-factor structure was not confirmed, Exploratory Factor Analysis was conducted, and it was found that the scale had a 4-factor structure in Turkish culture.

In confirmatory factor analysis, maximum likelihood method was used to analyze the data. In confirmatory factor analysis, to confirm that the scale had an acceptable fit (χ^2/df ratio, root mean square error of approximation-RMSEA, standardized root mean square residual-SRMR, Tucker-Lewis Index-TLI, Comparative Fit Index-CFI and Goodness of Fit Index-GFI), the indices were evaluated by considering some criteria. Thus, χ^2/df ratio under 3 indicates perfect fit (Kline, 2005; Sümer, 2000). It is stated that RMSEA and SRMR value of 0-0.05 is a good fit, 0.05-0.10 is acceptable fit; the CFI value of 0.97-1.00 is a good fit, 0.95-0.97 is acceptable fit; GFI value of 0.95-1.00 is a good fit, 0.90-0.95 is acceptable fit (Schermelleh-Engel, Moosbrugger and Müller, 2003). Moreover, divergent and convergent validity analyzes of the scale were conducted in "Master Validity Tool" created by Gaskin & Lim (2016) in AMOS 21 program. The validity analysis was conducted in AMOS 21; the reliability was tested in SPSS 20 by using Cronbach's alpha values and Pearson Products Moment Correlation coefficient.

Açıklanan Toplam Varyans	% 74,208			

In the evidence collection process associated with scale construct validity, EFA, which is a statistical method that aims at explaining the structure with a smaller number of variables by gathering variables (items) measuring the same structure, was used (DeVellis, 2014; Tezbaşaran, 2008). It can be explained by the Kaiser-Meyer-Olkin (KMO) coefficient and Bartlett test whether the data collected from the study group is proper for factor analysis (Büyüköztürk, 2014). In this case, it is expected that the Bartlett test should be significant and KMO value should be higher than 0.50. According to literature, the KMO value is accepted as 0.60 medium, 0.70 good, 0.80 very good, 0.90 excellent. KMO value of 0.60 and significant Bartlett test indicate that the data is proper for factor analysis (Tavşancıl, 2014; Çokluk et al., 2012), reveal that the data comes from multivariate normal distribution and that the factoring technique between variables can be used (De Vellis, 2014; Fraenkel and Wallen, 2000; Kline, 1994). In this study, KMO sample fit value was 0.92, and the Bartlett test of Sphericity chi-square value was 2012.543 ($p < 0.01$). These values indicated that the data collected from the study group perfectly proper for the factor analysis.

There are various factoring techniques such as principal component analysis, maximum likelihood factor analysis, unweighted least squares analysis, and weighted least squares analysis (Tabachnick and Fidell, 2007). However, suggesting that principal component analysis is more powerful than many factoring techniques regarding psychometric aspect, mathematically simple and effective to cope with potential factor uncertainty problems, Stevens (1996) has said that principal component analysis is a technique that should be preferred with priority because of its listed advantages (cited in Akbulut, 2010). Hence, "Principal Component Analysis" was used in this study.

In Principal Component Analysis, the contribution of each factor to total variance and the latent variables having Eugene value over 1 by Kaiser-Guttman principle were considered when deciding factor number (Kline, 1994; Murphy and Davidshofer, 1991; Zwick and Velicer, 1986). Furthermore, the rotation technique was used to interpret factor structure easily and to gather items highly correlated with each other in a factor. Tabachnick and Fidell (2007) suggest that the direct oblimin rotation technique can be preferred in the axis rotation used in the conditions that the scale factors are correlated.

In this study, because the sub-dimensions of the features aimed to be measured were predicted to be correlated, the direct oblimin rotation technique was applied. According to many researchers (DeVellis, 2016; Büyüköztürk et al., 2012; Tavşancıl, 2014), the item factor loading value in a factor should be over 0.30. However, some researchers (Ferguson and Takane, 1989) suggested that 0.40 should be the cutoff point for the factor pattern. Accordingly, the cutoff point for item factor loading was accepted as 0.40. In the removal process of the items not measuring the same structure, it was considered that the factor loading should be over 0.40 and the difference between loading values should be 0.10 to prevent overlapping when an item had a high factor loading for two different factors (Büyüköztürk, 2014).

Figure 1: The Scree Plot

In figure 1, when the scree plot supporting to all decisions is examined, after the fourth point the slope makes a plateau. Besides, as it is seen in figure 1, the Eugene value of each factor is over 1.

Table 3: The fit indices of four- and five-factor measurement models

	χ^2	df	χ^2/df	CFI	SRMR	RMSEA	GFI
5 Factor	478.312	127	3.28	.82	.09	.09	.87
4 Factor	301.019	127	2.37	.95	0.03	08	.96

In table 3, when the fit indices are examined, while the indices for 5-factor structure are $\chi^2=478.312$, $df=127$, $\chi^2/df=3.28$, $GFI=.87$, $CFI=0.82$, $SRMR=0.09$ and $RMSEA=0.09$, those for 4-factor structure are $\chi^2=301.019$, $df=127$, $\chi^2/df=2.37$, $GFI=.96$, $CFI=0.95$, $SRMR=0.03$ and $RMSEA=0.08$. As the result of maximum likelihood analysis, all of the items in the scale had high t values.

**Figure 2: Diagram for the four-factor measurement model**

In the result of CFA, the factor loadings of the 4-factor model are displayed in figure 1. Figure 1 shows that the item loading values between latent and observed variables are between 0.87 and 0.94 in enthusiasm and happiness;

0.91 and 0.94 in indisposition; 0.86 and 0.96 in anger, 0.76 and 0.92 in anxiety. Kline (2010) suggested that the standardized weights of around 0.30 were moderate, while weights of .50 and above reflected large effect sizes. Hence, it can be said that item factor loadings collected as the results of CFA reflect large effect sizes. The values collected from CFA can be interpreted that the Sport Emotional Questionnaire can perform the valid and reliable measurement.

Convergent and Divergent Validity

Table 4: CR, AVE, MSV and factor-factor correlations

	CR	AVE	MSV	MaxR(H)	F1	F2	F3	F4
F1	0,970	0,823	0,567	0,972	0,907			
F2	0,966	0,852	0,773	0,972	-0,753***	0,923		
F3	0,928	0,811	0,773	0,947	-0,624***	0,879***	0,900	
F4	0,896	0,743	0,651	0,917	-0,648***	0,807***	0,777***	0,862

When table 3 is examined, Cr values range between .89 and .97. Besides, AVE value ranges between .74 and .85. When the factor-factor correlation is examined, it can be said that the significant correlation levels are moderate and high.

Reliability

Table 5: Cronbach's alpha and item correlation in Enthusiasm and happiness dimension

	Scale Deleted	Mean if Item Deleted	ItemScale Variance Deleted	if ItemCorrected Correlation	Item-TotalCronbach's Alpha if Item Deleted
d3	15,618		62,153	,868	,969
d13	15,377		61,699	,896	,967
d19	15,393		61,103	,902	,966
d5	15,560		62,606	,896	,967
d10	15,712		61,006	,901	,966
d15	15,670		61,275	,881	,968
d20	15,487		60,377	,922	,965

Cronbach's alpha value of Enthusiasm and happiness dimension was found to be 0.97. When the Cronbach's alpha coefficient values calculated after deleting each item, the reliability coefficient decreased after deleting items. Item total correlation coefficients in Enthusiasm and happiness sub-dimension was 0.92 at highest (d20. Item) and 0.87 (d3. Item) at lowest.

Table 6: Cronbach's alpha and item correlation in dejection dimension

	Scale Deleted	Mean if Item Deleted	ItemScale Variance Deleted	if ItemCorrected Correlation	Item-TotalCronbach's Alpha if Item Deleted
d2	4,335		29,403	,908	,957
d7	4,492		29,072	,887	,961
d12	4,545		29,334	,906	,958
d17	4,466		29,092	,914	,956
d22	4,382		29,153	,900	,958

Cronbach's alpha value of dejection dimension was found to be 0.97. When the Cronbach's alpha coefficient values calculated after deleting each item, the reliability coefficient decreased after deleting items. Item total correlation coefficients in Enthusiasm and happiness sub-dimension was 0.91 at highest (d17. Item) and 0.89 (d7. Item) at lowest.

Table 7: Cronbach's alpha and item correlation in anger dimension

	Scale Deleted	Mean if Item Deleted	ItemScale Variance Deleted	if ItemCorrected Correlation	Item-TotalCronbach's Alpha if Item Deleted
d9	2,738		8,036	,870	,916
d14	2,623		8,057	,887	,902
d18	2,859		8,406	,867	,918

Cronbach's alpha value of anger dimension was found to be 0.94. When the Cronbach's alpha coefficient values calculated after deleting each item, the reliability coefficient decreased after deleting items. Item total correlation coefficients in Enthusiasm and happiness sub-dimension was 0.89 at highest (d14. Item) and 0.87 (d18. Item) at lowest.

Table 8: Cronbach's alpha and item correlation in anxiety dimension

	Scale Mean if Item Deleted	ItemScale Variance if Item Deleted	ItemCorrected Correlation	Item-TotalCronbach's Alpha if Item Deleted
d6	3,236	7,276	,716	,906
d16	3,586	6,707	,846	,794
d21	3,534	6,776	,804	,831

Cronbach's alpha value of anxiety dimension was found to be 0.90. When the Cronbach's alpha coefficient values calculated after deleting each item, the reliability coefficient decreased after deleting items. Item total correlation coefficients in Enthusiasm and happiness sub-dimension was 0.85 at highest (d16. Item) and 0.72 (d6. Item) at lowest.

Discussion And Conclusion

This study was conducted to provide some relevant evidence for validity and reliability of Sport Emotion Questionnaire developed by Jones et al. (2005). In line with the study purpose, it was seen that internal consistency reliability coefficient of subdimensions of Sport Emotion Questionnaire ranged between 0.90 and 0.97. The internal consistency reliability coefficients were between 0.80 and 1.00, which Alpar (2001) suggested as highly reliable. In the study conducted by Jones et al. (2005), the internal consistency coefficients of the questionnaire having 22 items including 5 factors were found to be between 0.81 and 0.87. As it is stated by DeVellis (2016), the internal consistency coefficients are enough between 0.65 and .80.

The Turkish form of Sport Emotion Questionnaire, which was created the final version in line with translation-back translation method and experts' opinions, was applied to the athletes. In data analysis to test the construct validity, principal component analysis and confirmatory factor analysis were used. The results of the principal component analysis revealed four factors for Sport Emotion Questionnaire. Four-factor structure that was found out as the result of principal component factor analysis explained 74.208% of the total variance of "Sport Emotion Questionnaire." Factor loading ranged between 0.71 and 0.86. It was found out that there were 7 items in enthusiasm and happiness (factor 1), 5 items for indisposition (factor 2), 3 items for anger (factor 3), and 3 items for anxiety (factor 4). In this context, it was stated by Alpar (2001) that having factor loadings over .45 was acceptable.

Moreover, Erefe (2002) and Özgüven (1999) stated that item factor loadings could be accepted up to .30. Accordingly, the values can be said to meet the criteria. It can be said that the items in the questionnaire are acceptable. In confirmatory factor analysis, to confirm that the scale had an acceptable fit, χ^2/df ratio, RMSEA, SRMR, CFI, GFI, and TLI were evaluated. Some references are indicating the statistical model fit was used. In many types of research, more than one fit index is referenced. In this study, frequently used indices such as the ratio obtained by dividing chi-square by degrees of freedom (χ^2/df), root mean square error of approximation (RMSEA), standardized root mean square residual (SRMR), Tucker-Lewis Index (TLI), Comparative Fit Index-CFI and Goodness of Fit Index (GFI) were used. To have a good fit for a model, RMSEA should be smaller than 0.06. However, it is acceptable to have values up to .08 (Hu & Bentler, 1998). Having the value obtained by dividing chi-square by degrees of freedom under two indicates perfect fit (Tabachnick and Fidell, 2007). Conversely, there are studies suggesting that the value under 3 indicate perfect fit (Kline, 2005; Sümer, 2000).

Moreover, GFI and CFI should be over 0.90 for an acceptable fit, having values between 0.95 and 1.00 indicates perfect model fit (Bentler, 1990; Hu & Bentler, 1999). When all these criteria were considered, it was found that the hypothesized model of Sport Emotion Questionnaire had an acceptable fit and the indices were enough for model fit. Thus, the model consisting of eighteen items and four factors was found to be statistically fit.

Convergent validity refers to the statement related variables are correlated with each other and factor they constituted. Divergent validity is that the statements related to variables should be less correlated with the other factors. For the convergent validity, CR values should be higher than AVE values, and AVE should be higher than 0.5 (Hu & Bentler, 1999). In line with our results, having lower AVE values related to the questionnaire than CR values indicates that the scale has convergent validity.

For the divergent validity, it was examined whether MSV values were lower than AVE values. It is suggested that having lower MSV values than AVE values is evidence for divergent validity (Hu & Bentler, 1999). In this direction, it is seen that MSV values are lower than AVE values. In another word, the scale has divergent validity.

Consequently, in line with the result obtained from the validity and reliability studies of the Turkish form of Sport Emotion Questionnaire, it can be said that the questionnaire can be used validly and reliably to measure the athletes' emotional state before the competition. Some limitation of this study should be considered. For instance, construct validity related to validity and reliability, convergent and divergent validities and internal consistency coefficients were examined in this study. Additional studies are needed for psychometric features of the questionnaire. Furthermore, examining Sport Emotion Questionnaire in different groups will be beneficial. Conducting the criterion-related validity of Sport Emotion Questionnaire, examining its relationship between different concepts, and testing the factor structure for males and females will contribute to the validity and reliability of the questionnaire.

Author Note

This study is an improved version of the oral presentation presented in the International Conference on New Horizons in Education held between 18-20 July.

Strategic Provision Of Staff And Facilities For Successful Delivery Of A Civil Engineering Technology Programme

A.S. Mohd Kassim, C-M. Chan, N.H. Hashim, M.L. Ahmad Jeni, N. Kahar,
A. Ahmad and I. Baba

Faculty of Engineering Technology, Universiti Tun Hussein Onn Malaysia (MALAYSIA)

Abstract

The strength and competencies of teaching and supporting staff in an institution of higher learning should not focus on the academic programmes per se, but encompass the campus-wide efforts towards full implementation of outcome-based education, or more commonly known as OBE. This paper examines the strategic pairing of staff and facilities in the successful implementation of an undergraduate Civil Engineering Technology programme. The teaching staff comprises of professors, associate professors, senior lecturers, lecturers, instructors and the tenured tutors awaiting pursuit of postgraduate degrees. The instructors are especially equipped with industrial experience and exposure, often of former employment in related industrial fields and are therefore well-versed with workplace expectations. Teaching load is analysed with relevance to staff-student interaction for effective learning, coupled with the student advisory and counselling system for continual monitoring of the academic performance. The teaching staff are also encouraged to engage in professional development, such as via industrial attachment, consultancy and research collaboration to strengthen the practical-cum-industrial component of the engineering technology programme. In addition, staff assessment is conducted by both the university and the students to ensure unbiased quality monitoring. Facilities-wise, common academic services like library, lecture halls and rooms, laboratories and workshops are complemented by an integrated information technology system and other daily amenities such as residential colleges, banking services, healthcare centre, transportation, sports and recreation. In short academic excellence cannot be achieved by good teaching and learning techniques alone. It needs to be underpinned by an organized, well-grounded supporting system which includes comprehensively every façade of a student's life on campus, from within and outside the lecture rooms, to ensure effective and successful delivery of the programme in grooming balanced graduates.

Keywords: *Staff, facilities, university, engineering technology, industrial exposure, teaching workload, assessment*

Introduction

Staff and facilities are arguably the most important components for the successful delivery of an academic programme in any institutions of higher learning. While sometimes considered secondary to curriculum and syllabus of high standards, poor knowledge transfer mechanisms coupled with inadequate facilities would make delivery of the programme's contents ineffective, if not impossible. As globalisation created new challenges to institutions of higher learning, the onus of good programme delivery inadvertently falls on the academic staff specifically, and the supporting staff in general (Mushemeza, 2016). Lack of motivation among staff could be attributed to low morale primarily related with unsatisfactory rewards (Hijazi *et al.*, 2017). Based on 157 samples from 7 private universities in Nigeria, Akafo & Boateng (2015) reported that rewards in the forms of wage, bonus and compensation form a positive and direct relationship with job satisfaction. Academic staff are also subjected to unprecedented anxiety and uncertainty, in particular those under contractual tenures at universities (Bodla *et al.*, 2014). On the other hand, although university education is recognised to meet the foremost needs of learning opportunities, it is the institutional facilities that draw and retain students upon enrolment in the demand-driven higher education sector (McLaughlin and Faulkner, 2012). As pointed out by Milne, the 'out of sequence' learning pattern today has phased out traditional lecture delivery in rigid, sequential manner, where students of this digital age are more inclined to overlap learning and intellectual discourse via different media, technology and communities simultaneously (Milne, 2006). Moreover, students being young adults in general regard services such as healthcare, wellness and fitness as being necessary to help them maximize their university experience (Allen and Ross, 2013). This paper examines the strategic provision of staff and facilities for an undergraduate Civil Engineering Technology programme at UTHM, with elaborations on the engagement, monitoring and enhancement mechanisms introduced to ensure good, effective delivery of the programme.

Strength And Competencies Of Teaching Staff

Academic staff consists of Professors, Associate Professors, Lecturers and Instructors. The different positions denote academic qualification levels and past experiences / achievements in teaching and learning, research, publications, consultancies, community services and other related works. The general qualifications and competencies of the Academic Staff are as follows:

a. Professor

- ☐ Possesses Master or Doctorate qualification.

☐ Demonstrates exceptional performance in teaching and learning, supervision and research activities as evidenced by academic publications as well as outstanding community services.

b. Associate Professor

☐ Possesses Master or Doctorate qualification

☐ Demonstrates excellent performance in teaching and learning, supervision and research activities as evidenced by academic publications as well as outstanding community services.

c. Lecturer

☐ Possesses Master or Doctorate qualification

☐ Actively involved in research activities, including presentations and showcases in conferences, seminars and related exhibitions, academic publications as well as community services.

d. Engineer Instructor

☐ Possesses diploma or degree qualification with substantial relevant working experience in industry.

Table 1. Academic qualifications of teaching staff.

Academic Qualifications	Number of Staff
Doctorate	14
Masters	9
Bachelor	2
TOTAL	25

Table 2. Academic positions of teaching staff.

Post	Number of Staff
Professor	-
Assoc. Professor	6
Sr. Lecturer	5
Lecturer	7
Sr. Eng. Instructor	6
Eng. Instructor	1
Assistant Eng. Instructor	2
TOTAL	27

Table 3. Session breakdown and distribution of teaching staff.

TEACHING STAFF	Academic Session			
	2013/14	2014/15	2015/16	2016/17
(a) Total number of full-time staff (including those servicing other programme, staff on study or sabbatical leave & tutors)	2	3	3	8
(b) Full-time equivalent of teaching staff servicing other programme	1	2	2	3
(c) Teaching staff (on study or sabbatical leave)	0	0	0	0
(d) Tutors	0	0	0	0
(e) Effective full-time teaching staff = (a)-(b)-(c)-(d)	1	1	1	5
(f) Full-time equivalent of teaching staff from other programme servicing this programme	14	12	12	17
(g) Full-time equivalent of part time teaching staff	1	1	1	1
Full-Time Equivalent Teaching staff (FTES) contributing to Staff: Student Ratio = (e)+(f)+(g)	16	14	14	23

The academic staff of this programme, are adequately qualified and experienced and would be equipped with the required competencies for effectiveness delivery of the programme's curriculum. The summary of academic qualifications of teaching staff in the programme is shown in Table 1 and the summary of the posts held by full time Academic Staff is shown in Table 2 respectively. A breakdown in terms of numbers of academic staff (full-time, part-time and inter-programme) for 2013/2014 up to the year 2016/2017 is shown in Table 3.

The academic staff are well informed of the PEOs, PLOs, CLOs and the implementation of OBE, and always encourage active student's engagement in the learning process via outcome-based approach. A series of OBE workshops were organized at University and Faculty levels to enhance the staff's understanding and outlook of the teaching and learning method. A committee has been specially formed to organize teaching and learning activities related to OBE within the Faculty. It is compulsory for all new academic recruits to attend to an OBE induction course organized by the Centre for Academic Development and Training (CAD), which provides

insights to the fundamentals of teaching and learning in line with the OBE philosophy. A pass in the compulsory course is part of the requirements to be appointed as a permanent staff at UTHM. A good mix of OBE activities are regularly organized by the committee to inculcate the philosophy and practice of OBE, such as seminars, stakeholders' review meeting and committee meetings. In order to be sure of the attainment of outcomes predetermined for each student, each programme has mapped each course with appropriate level of cognitive, psychomotor and affective domains in Bloom's taxonomy as well as soft skills required for that particular course. Also, at the beginning of each class session, the learning objectives and outcomes (PEOs, PLOs, and CLOs) are being highlighted and explained, so that students are informed and aware of the learning outcomes expected of them.

Teaching Workload And Student-Staff Interaction

The overall staff workload is established according to the staff's academic background, industrial experiences and field of competencies. The average teaching load (teaching hours per week) for academic staff in this programme is 11 hours per week. Table 4 shows the ratio of staff and student for the four (4) academic sessions. Student-staff interaction is at its optimum level as the Faculty has a low staff/student ratio, i.e. better staff-student engagement and interaction leading to more effective learning among the students. The academic advisory system is implemented to monitor individual student's academic performance and wellbeing / welfare in general. Academic advisors are appointed among the academic staff, with the responsibilities of advising and counselling students in academic and to a certain extent, personal life matters. The academic advisory system has been made more accessible by going online, i.e. a university-wide system known as PA-Online (e2.uthm.edu.my/ppa/pa/). The personal information of the student, academic record (transcripts), past academic qualifications and other relevant data are recorded in the system, enabling the academic advisor to have close monitoring of the performance of each student without excessive interference.

Table 4. Ratio of teaching staff to students.

Academic session	2013/2014	2014/2015	2015/2016	2016/2017
No. of Full Time Equivalent Teaching Staff	16	14	14	23
No. of Students in Program	29	29	77	124
Staff to student ratio	1:2	1:2	1:6	1:5

All academic staff are involved in various committees as members in the Faculty's management system. The purpose of these committees is mainly on the smooth running of the academic programmes as well as to provide support in the management and organisation of various activities at the Faculty level, while giving exposure to the academic staff in organizing academic and non-academic activities with internal (e.g. inter-faculty programmes) and external partners (e.g. industry, professional bodies, other institutions, etc.). Some of the committees in the Faculty include:

- Academic Management Team
- Curriculum and Syllabus
- Industrial Training and Mobility
- Timetable
- Postgraduate Studies
- Outcome-based Education
- Promotion and Website
- Academic Advisory
- Research and Consultation
- Publication
- Quality Assurance (MS ISO 9001:2000)
- Laboratory Physical Development and 5S
- Staff Development
- Academic Development and Training
- Student Affairs and Alumni

Professional Exposure And Development

Professional development is vital element in enhancing the experience and knowledge amongst the academic staff. This includes participation in professional courses or seminars organized internally or by other agencies. The University encourages its staff to disseminate their research findings at national and international conferences. The University also encourages staff to enhance their technical experience and linkages through consultancy work, such as extending their services and expertise to industries of the related field. In addition, industrial visits are routinely arranged for all academic programmes to promote staff/student-industry interaction as well as acquisition of industrial exposure. This is also achieved via invigilation of students at Industrial Training.

To further enhance research and development as well as innovation, the Faculty has established a centre of research: the Advanced Technology Center (ATC) as a hub for research innovation and consultation activities at the Faculty. ATC comprises of 11 focus groups, encompassing a comprehensive field of research and industrial focus studies, as shown in Table 4. Through this medium, the academics are actively engaged in academic publications, including books, technical entries in conference proceedings and journals at both national and international levels. To further promote the research acculturation, the Faculty regularly reminds and encourages staff to apply for research grants by internal and external sources.

Staff assessment-wise, The University incorporates annual assessment of staff performance, including the aspects of teaching, supervision, research, publication, participation in professional, as well as community involvement. The assessment form used to evaluate the staff performance can be accessed through <http://prestasi.uthm.edu.my>. To get the evaluation or feedback from the students on matters relevant to their academic environment, the University has established several working systems, including: *Sistem Penilaian Pengajaran Staf Akademik dan Kursus (SPARK)* – in which students get to give comment and evaluate their satisfaction level of the lecturers and courses.

In addition, *Sistem Saluran Aduan Dan Cadangan Dalaman (SACAD)* – SACAD is an online application developed for staffs and students to lodge for complaints or suggestions directly to University administration. SACAD is a medium to enhance the efficiency and improvement of the university's governance system by getting the feedback for the provided services. The Secretariat serves to plan and monitor all activities related to the complaints and provide the internal proposals to the university so that all the shortcomings and weaknesses will be overcome and the quality of service can be continuously improved.

Strength And Competencies Of Supporting Staff

The supporting staff are divided into two categories, namely technical and administrative. The administrative staff are under the Dean's Office and led by the Assistant Registrar, who assists the Dean in administrative and financial matters of the Faculty. The administrative staff consist of 1 Administrative Officer, 2 Assistant Administrative, 2 Assistant Administrative Officers, 1 General Assistant, 2 Office Secretaries and 1 Senior Assistant Administrative Officer. On the other hand, the technical staff assist the Head of Laboratory (either instructor or lecturer) in handling the equipment in the laboratory, especially in terms of maintenance and services as well as preparation for teaching and research purposes. Currently the technical staff assisting the programme consist of 2 Assistant Engineers (departmental), 2 Assistant Architect (departmental), 2 science officer (shared) and 12 Assistant Engineers (shared). Table 5 summarizes the positions held by the supporting staff for the programme.

Table 5. Focus groups under ATC for research and innovation activities.

No.	Focus Group	Integrated Niche Area
1.	Green Environmental Technology	<ul style="list-style-type: none"> - Wastewater - Solid waste - Sludge and soil - Microbiology - Air quality
2.	Sustainable Green Building Technology and Management	<ul style="list-style-type: none"> - Green building - Applied science - Maintenance - Rehabilitation - Construction
		<ul style="list-style-type: none"> - Artificial intelligence - Neural networks - Fuzzy logic - Machine learning - Optimization for vision and learning

Table 6. Technical and administrative personnel constituting the supporting staff.

Supporting Staff	Position	Numbers in 2017
Administrative	Administrative Officer	1
	Assistant Administrative	2
	Assistant Administrative Officer	2
	General Assistant	1
	Office Secretary	2
	Senior Assistant Administrative Officer	1
Technical	Assistant engineer (civil departmental)	1
	Assistant Engineer (shared)	0
	TOTAL	10

The ideal and recommended staff to lab ratio of 1:1 notwithstanding, due to unavoidable staffing constraints, the current ratio for the Programme is understandably short of being favourable. At present, a technical staff is assigned to oversee the operations of 4 laboratories. Nonetheless each laboratory is managed by a Head of Lab, who is appointed from among the academic staff. Therefore, each laboratory is being jointly monitored and managed by an academic staff and a shared technical staff. Also, postgraduate research students (master's and PhD) are regularly recruited to assist in the laboratory sessions, to ensure good one-to-one group demonstration of the experiments involved, with post-lab session guidance and assistance. The postgraduate students are engaged either via paid schemes, or as part of their obligation as recipients of scholarships for their respective postgraduate studies. The exercise apparently kills two birds with one stone, i.e. the undergraduate students gain direct assistance

from the seniors, while the postgraduate students gain experience in teaching as well as develop soft skills in the semi-voluntary activity.

In addition, the concession signed between UTHM and SDPS (Sime Darby Property Selatan Dua) stipulates a 2-decade long of maintenance and services of the major laboratory facilities. This contractual relationship allows the Faculty to carry out regular and periodical maintenance works as well as repairs and services of technical faults of the equipment installations in a systematic manner. In other words, the shortage of technical staff in the management of the laboratories is also partially mitigated by the maintenance system in place.

The current practice and situation described above have not escaped the Faculty's attention. Request for additional technical staff has been forwarded the Registrar to make amends to the number of staff required in the laboratories. However due to financial constraints and other inevitable factors, the recruitment of new staff process has been gradual and on-going.

Teaching And Learning Facilities

In 2016, UTHM has successfully obtained 3-star rating for excellence (overall) in the 2016 QS Star Rating assessment (Figure 1 **Figure C6-1**). Other audit criteria in the QS Star Rating system is the University's facilities, Teaching and Innovation respectively, especially in terms of supporting teaching and learning as well as research activities of the institution's community. The 5-star ratings were awarded to the University for Facilities, Teaching and Innovation in the audit exercise of the same year is evidence of UTHM's commitment and preparedness to provide the best learning environment for students.

Figure 1. QS Stars Rating: 5-star for facilities at UTHM.

The facilities are not entirely for T&L purposes alone, but also include those necessary for students' convenience and wellbeing in general. Adequate to cater for the needs of over 15,000 students, the living, teaching and learning facilities are offerings of top-notch quality and value-for-money in the literal sense. This comprehensive infrastructure includes the library, respective faculty buildings equipped with the lecture rooms, laboratories, workshops and space for other student activities, common lecture halls, sports facilities (including an Olympic-size swimming pool) as well as affordable residential colleges or hostels. Other facilities comprise of a bank and teller services, a mosque and prayer rooms, bookshop, convenience stores and clinic.

Despite its location in the suburb, the University strives to create a vibrant, dynamic and accessible learning environment with the necessary amenities for students' everyday living. Therefore, it goes without saying that it is a source of great pride for the University to receive the QS Star-Rating, especially in Facilities, which effectively puts UTHM at par with other well-endowed and more longstanding local or foreign institutions in and outside the country. Following are detailed accounts of the facilities mentioned earlier:

i) Teaching and Learning Facilities

Lecture halls and rooms of various sizes, seminar rooms and examination halls are fully air-conditioned rooms and equipped with suitable audio-video equipment, such as LCD projector, visualizer and PA systems for the larger rooms. Maintenance services are just a phone call away where the contact details of the maintenance team are displayed in each of these rooms and halls.

ii) Library

The Tunku Tun Aminah Library, named after the princess of the current Sultan of Johor, covers a splendid 16,000 square meters of floor area, with a storage capacity of 300,000 books and can comfortably accommodate 3,000 users at any one time. The Library provides a spacious and conducive learning environment with 118 carrel rooms, 40 discussion rooms, 2 seminar rooms, a postgraduate research room, an auditorium, a special reference room, a journal room and a 24-hour reading room. An extensive database of print and digital resources to support teaching, learning and research activities are on offer at the Library. At present, the Library has acquired over 230,000 copies of books, 15,000 theses and 25,000 items of audio-visual materials. There is also an active subscription to

24 packages of database, e-books and 170 title of e-journals. The collections are in general of open access and classified according to the Library of Congress Classification (LCC) system. In addition, the library has a growing database of scanned documents, which currently archives over 5,000 scanned documents such as journal articles, conference papers and exam papers available in PDF format. Further information on the Library services can be found at <http://library.uthm.edu.my/v3/>.

iii) Information Technology System

The Information Technology Centre or Pusat Teknologi Maklumat (PTM) goes as far back as December 1994, functioning initially as the provider of computer services for students and staffs, but has today expanded to the provision and management of university-wide ICT facilities, including the related infrastructure, hardwares and softwares. PTM is fully equipped with a wide campus link based on an advanced fiber optic backbone supported by a 3Com Net Builder II Router, MSH Hubs and Switch Hub. This link is connected with the outside world via a leased line of 2Mbps speed. Controlled by a central server system with the Avaya P550 network engine, the system is able to support data up to 100Mbps on the Fast Ethernet Technology. To cater for the growing needs of the University, the system is currently in the process of being upgraded to GBIT technology with the capacity to reach a maximum of 1000 Mbps speed. The development of this high speed link system is essential for supporting high resolution video streaming, in line with the University's concerted efforts towards enhanced online outreach in terms of programme delivery, global connectivity and access. In addition, wireless university-wide internet service is readily accessible by the University's community and guests 24-7. Further information on It services of the University can be found at <https://ptm.uthm.edu.my/>.

All students and staff are assigned personal email addresses based on the University's domain, as the official channel for dissemination of information and notifications, and as the primary means of electronic correspondence in general. On continual improvement of services, PTM also provides several Microcomputer and Unix Workstation laboratories as connected to the Novell and Unix server respectively with a University-wide access. Technical advice and assistance are always at hand for staff and students alike, especially in IT matters for T&L purposes. Short courses are regularly organized too as an initiative to encourage the usage of the latest computer and software technology.

iv) Laboratories and Workshops

The Faculty has several state-of-the-art laboratories and workshops facilities to support T&L activities. Health and safety of users at these facilities are strictly observed and monitored with regular maintenance and updating of the relevant equipment, procedures and training. In relation to the Programme, these facilities enable students to perform experiments and to conduct basic research work at course and FYP levels. These facilities for practical and hands-on sessions are rudimentary to the Engineering Technology programme in grooming future technical graduates of balanced technical and soft skills.

Overall, these laboratories and workshops are equipped with testing and measuring equipment, various supporting apparatus and instruments, machineries, computers with relevant softwares installed as well as for data recording and analysis purposes during the practical session. Practical sessions in these facilities give students the opportunity to verify theories and principles taught in lectures, to examine the practical implications of theoretical frameworks, and to relate textbook materials and field implementations for enhanced understanding of the subject matter. The facilities also expose students to the fundamental tests, measurements and standards commonly adopted in the related industries. This ensures graduates to make a smoother varsity-to-market place transition upon completion of the Programme, giving them a better leverage against others in the competitive job market.

Living Sphere Facilities

i) Other facilities

The University is constantly improving the facilities to meet the needs of T&L and general wellbeing of staff and students. In addition to the main facilities described above, other facilities available for the convenience of the University's community include the following:

- i. Transportation
- ii. Residential colleges
- iii. Medical and health care services
- iv. Sports and recreational facilities
- v. Cafeterias
- vi. Mosque/Prayer rooms
- vii. Banking services
- viii. Bookshop
- ix. Convenience store

ii) Banking Services

The University has a fully operational Bank Muamalat branch on campus, and a banking kiosk equipped with teller machines for several local banks, e.g. Bank Rakyat, CIMB and others. The banking kiosk is located adjacent to the University's main bus stop for ease of access to the students.

iii) Residential Colleges

The residential colleges aim to provide affordable living quarters for the students and the facilities are mainly on campus or located in close proximity to the campus. The capacity of residential colleges at the Parit Raja and Pagoh campuses are approximately 7,000 and 6,000 students respectively. General amenities available at these living quarters include prayer and study rooms, cafeteria, visitor's room, photocopy kiosks and laundry services.

iv) Transportation

Transportation services by buses and vans are provided for the students by the offices of the Centre for Student Housing and Transportation (P2P). Shuttle services are available at fixed schedules to help in the mobility of students to and from campus, as well as within the University. The operation hours are 0700-2300 daily, except for weekends and public holidays). The transportation services provided are especially useful for students without personal vehicles, while contributing to a 'greener' campus where the number of vehicles on campus are reduced.

v) Cafeteria and Canteen

There are a number of cafeterias and canteens available on campus to serve as waterholes for staff and students alike without having to leave the University's compound, saving both time and transportation costs.

vi) Mosque

The University's mosque, Masjid Sultan Ibrahim, was named after the present Sultan of Johor. The house of worship can accommodate up to 4000 people, and is managed by the offices of the University's Islamic Centre, which is also located in the mosque. To cater for various activities related to Islamic studies, worship and spiritual development, the multi-function building is equipped with a number of specialized rooms, namely Al-Farabi seminar room, Al-Khwarizmi computer room, Harun Al-Rashid resource room, an open study / activity area for students, among others. At the Pagoh campus, a mosque is available as part of the shared facilities among other institutions at the education hub (UTM, IIUM and Politeknik Tun Syed Nasir). Prayer rooms are also provided at selected blocks of the campus for the convenience of staff and students.

vii) Sports and Recreational Facilities

The sports and recreational facilities are especially myriad to serve the various interests and needs of the students, namely track and field facilities in a mini stadium, an Olympic-size swimming pool, a couple of football fields, futsal court, rugby field, lawn bowl pitch, hockey field, tennis courts, badminton courts, basketball court, *sepak takraw* court, volley ball court and netball court. Similar sports and recreational facilities are also provided at the Pagoh Campus, though the accessibility is shared among the co-habitants of the education hub.

viii) Medical and Health care Services

Students and staff can seek medical attention or healthcare services at the in-house clinic named as University Healthcare Centre (PKU) for free. The clinic also provides emergency and outpatient treatments on weekdays with standard operating hours. The clinic is staffed by 3 medical doctors, 2 dentists and 3 medical assistants who work hand in hand with 9 nurses. There is also an ambulance service to cater for emergency cases.

ix) Bookshop

A bookshop owned by the University's Publisher is open daily for the patronage of all. A full range of the University's publications are on display and for sale. Students particularly find the service convenient to purchase textbooks or main reference books authored by the University's academic staff.

x) Convenience Stores

Four convenience stores operate on campus, selling provisions and goods for daily use and consumption of students in general. Fondly known as Coop Mart UTHM, the stores are managed by the COOP UTHM, and can be found strategically in the vicinity of Bank Muamalat, Arked, residential colleges Kolej Kediaman Tun Syed Nasir (TSN) and Kolej Kediaman Tun Dr. Ismail (TDI).

Conclusions

The discourse above illustrates the importance of complementing good academic and supporting staff with functional facilities and services to cater for the needs of students on campus. These may seem to be the execution

extensions of the academic curriculum, or supplementary pillars of the institution, but they are indeed the key components to enliven the education process, without which campus life would be unwholesome and incomplete. Nonetheless continual improvement and upgrading are necessary to maintain the level of conduciveness for the students in this tertiary education environment.

Acknowledgements

Thank you and kudos to the Faculty's **AA Team** (academic and supporting staff) for the successful ETAC accreditation of programmes late last year.

Strengthening The Perception Of Organizational Performance In Sport Management Studies

Jana NOVÁ

Faculty of Sport Studies Masaryk University Brno Czech Republic
nova@fsps.muni.cz

Abstract

This paper analyses teaching and learning strategies that are applied in sports management studies in order to equip students with a strong perception of organizational performance in a sports context. Using the case study method, the aim is to suggest an educational model that would develop and strengthen the skills to allow students to assess and measure performance of sports organizations effectively. The model is conceptualized on the basis of the analysis of students' assignments using the Atlas .ti software with the purpose of identifying their perception of organizational performance concepts in sport after the completion of the core subjects of sport management studies. In the light of these findings, the reflection in terms of current educational models and subjects and their teaching and learning methods was also conducted. Upon the findings, the author proposes the inevitable changes that should focus on the classification of different managerial situations and cases in a variety of sports organizations (public, professional, non-profit) where the organizational performance measurement is of the utmost importance for their survival and further development.

Introduction

The professionalization of sports organizations meant application of business principles in the marketing of sports products, planning, human resource management, and other aspects of organizational activities. Performance management is one of the most important principles. The diversity of the missions of the sports organizations led to the development of various tools and criteria for evaluating their performance. Sports manager must, therefore, know the ways how to define, analyse and present performance in the environment of sports management.

Performance is generally understood as a combination of two criteria – efficiency and effectiveness. Efficiency is traditionally defined as an ability to achieve the aim of the institution. Effectiveness compares the number of means used for achievement of the results without considering user satisfaction. For private companies financial indicators and assets represent the basic synthetic measures of performance evaluation. In the case of non-profit organisations efficiency need not be relevant and effectiveness is a complex construct with an external dimension (external social performance).

Specific Evaluation of Performance in Sport and Sports Organisations

The definition of organizational performance in Sport is key to the proper understanding of the difference between

- the athlete and sporting performance that is measured by sport rankings and league tables and
- performance of the sport organization as a whole that is measured by key performance indicators of the sport organizations.

Evaluation of performance is based on criteria identical with business organisations, which reflects progress towards professionalism.

Due to the existence of specific features of sport there are also differences in performance evaluation derived from the fact that sport is not driven by the need to optimise profit; sports organisations follow a pair of conflicting missions, profit maximisation and avail maximisation, emphasizing rivalry of clubs and their desire to win.

Sport Performance Evaluation Indicators

Performance indicators in sports organisations differ from these of purely business organisations for there are multiple organisational goals related to the desire for sporting achievement, financial stability and social responsibility. Therefore sports organisations are driven by more or less clearly declared performance indicators related to one of the following areas: sport, economy and social.

The Study

Our study was realized in the three subsequent steps. Firstly, we conducted a review of relevant literature from sport management in order to understand the latest trends in the definition of the performance measures and performance management systems for public, professional and non-profit sport organizations. Secondly, a qualitative analysis of articles in sport management journals published in the years 2011-2015 using the Atlas.ti functionality of filter was carried out, with the aim of identifying the extent to which the two selected concepts suitable for performance management in sport – namely Balanced Scorecard and Performance Prism can be found. Both content analyses can influence and will be reflected in our understanding of how to design the education/course content of organizational sport performance within sport management studies. Finally a qualitative analysis of the students' assignments from the subject of Sport Management using coding techniques (Strauss, A. & Corbin,

J.,1998) and Atlas.ti software was performed in order to reveal the extent to which the current approach in teaching and learning organizational performance in sport reflects the desired learning outcomes, i.e. understanding of the strategic focus of performance measures and performance management system in sports organizations.

Findings

Approaches to Performance Evaluation in Sports Organisations

According to Hoye et al. (2012) the following approaches to sports organisation evaluation can be identified:

- 1) Performance management related to the organisation's objectives and intentions
- 2) Theory of sporting performance evaluation – from stakeholder perspective
- 3) Theory of sporting performance evaluation (input – output)
- 4) Multidimensional models of performance measurement

Multidimensional model is preferred in sports organisation performance evaluation, though, according to Winand (2014), for every sports organisation has many stakeholders with different ideas of what should be evaluated for the purpose of measurement of the organisation's effectiveness and performance.

When evaluating performance of sports organisations methods / models developed for organisations from other sectors, profit, non-profit and public, may be applied. The most popular and the most frequently applied methods / models include the following multidimensional models:

- Balanced Scorecard (Kaplan&Norton, 1992)
- The Performance Prism (Neely, Adams &Kennerley, 2002)

Balance Scorecard (Kaplan & Norton, 1992) emphasized not only financial indicators but also the overtaken indicators which can help identify many potential issues before their impact on the financial measures can be seen. The Balanced Scorecard model emphasizes four different aspects of the organisation where performance needs to be evaluated: finance, customers, internal processes and motivation to learning. Practical application of this model in evaluation of performance of a sports organisation [Table 1] is possible after setting indicators for the individual dimensions and their specification. What always matters is the particular strategy and vision of the given sports organisation and performance indicators in the balance scorecard may be made operational for both long- and short-term objectives.

Table 1: Example of application of Balance Scorecard model in sports organisation

Goals	Evaluation method	Plan	Activities
Financial objectives / performance			
Revenue portfolio extension (diversification)	% of various sources of financing in the budget	60 % of gains in the budget will come from sponsors	Club brand building Sponsor network building and extension
Increase of club membership base	Number of club members	25 % increase of membership base	Promotion, recruitment sports events
Customers			
Increase of fan satisfaction with services	Fan satisfaction level	15 % increase of fan satisfaction	Revision of all services on the basis of fan satisfaction Implementation of remedial measures Questionnaire-based inquiry using SERQAL model
Reduction of complaints of sports events visitors	Number of complaints	20 % reduction of the number of complaints	Introduction of processes for early identification of critical points in services and their addressing Adoption of a system for on-the-spot troubleshooting
Learning and development / growth			
Increase of key skills of employees	Number of training courses and practices	Increase %	Preparation and implementation of educational and training plan

			Introduction of a system of education and training effectiveness evaluation
Fluctuation reduction	Fluctuation (measurement methods)	Decrease %	Personal motivation interviews with key employees Measures for increase of employee motivation and satisfaction
Effective processes			
Reduction of new member recruitment costs	Costs of recruitment	Reduction %	Involvement of volunteers in recruitment Use of information system and social media for recruitment
Streamlining of the process of communication with fans	Number of target groups	Increase of the target group number	Introduction of CRM (customer relationship management) to work with target groups of fans

Source: Nová et al. (2016) pursuant to Balance Scorecard Framework (Kaplan&Norton, 1992)

Performance Prism

The authors of the Performance Prism (Neely et al., 2002), unlike those of the Balance Scorecard, emphasize the key role of the stakeholders in achievement of success of the organisation. The expression “prism” is used to emphasize the fact that the model uncovers hidden elements of the organisation affecting its performance. The model defines five basic questions for the organisation management evaluating performance of their organisation [Table 2].

Table 2: Evaluation of organisation performance aspects

Performance aspect	Question for management
Stakeholder satisfaction	What are the needs and desires of our stakeholders?
Stakeholder asset/contribution	What can our stakeholders give us?
Strategies	What strategies are needed to satisfy stakeholders' needs?
Processes	What processes need to be introduced to satisfy stakeholders' needs?
Skills	What practices, people, technologies and infrastructure are needed for full implementation of processes and strategies?

Source: Neely et al., 2002

In our opinion, this model is very fitting for application in sports organisations with their broad portfolios of stakeholders [Table 3].

Table 3: Example of application of the Performance Prism in sports organisation

Stakeholders	Players	Fans	Media	Employees	Sponsors
Stakeholders satisfaction (what are their expectations in relation to the sports organisation)	Game success, adequate salaries and benefits, low injury rates	Game equality and excitement, high proportion of victories to losses, complex experience	Mass market, high level of public interest	Adequate salaries and benefits, employment security, professional development	Positive club or association reputation, brand awareness and recognition
Strategies	Do we possess adequate training, playing and financial strategies to achieve sports success and	Are the strategies of sports event preparation focused on the needs and desires of fans?	Are our media strategies in harmony with the media market?	Do we possess adequate human resource management strategies?	Do we create and implement strategies of brand building and cooperation with sponsors?

	financial stability?				
Processes	Do our processes support our sporting and financial strategies?	Do our processes support quality of services to fans for their engagement?	Do our processes support effective work of and with media?	Do our processes support application of effective methods of work with human resources?	Do we have processes in place for support of communication with sponsors and their presentation?
Skills	Do we possess skills for utilisation of increased effectiveness by means of technologies and innovations?	Do we offer the correct portfolio of services and quality human resources?	Are we able to increase our media coverage?	Are we able to support HR strategy?	Do we possess skills for targeted building of partnerships with sponsors?

Source: Nová et al. (2016) pursuant to Performance Prism Framework (Neely et al., 2002)

National Sport Management Bodies and Organisations Effectiveness Evaluation

Frameworks for organisational management of performance of national sports organisations and sport management bodies have so far been the most profoundly examined area of performance in sport.

Winand et al. 2010 design a model for measurement of organisational performance of management bodies for Olympic sports, distributing their objectives among five main dimensions [Table 4].

Table 4: Model of organisational performance of sport management bodies

	Dimension	Sub dimension	Objectives
Strategic goals	<i>Sport</i>	Elite sport	International sports success Increased participation of athletes in international competitions Improvement of services for athletes Increased sporting activities for members
	<i>Customer</i>	Sport for all Sporting values and service for the society Development of members	Maintenance of sporting values in the society Improvement of non-sport services for members Member acquisition Member loyalty development
Operative goals	<i>Communication and an image</i>	Image Communications	Dissemination of positive image of individual sports in media and in the society Dissemination of positive image of individual sports among members Improvement of club's internal communication towards members Improvement of communication establishment towards members
	<i>Finance</i>	Financial resource management Financial survival	Fundraising Finance management Management of self-financing Management of financial independence on public authorities
	<i>Organisation</i>	Staff skills Internal functioning	Improvement of office and sports staff skills Improvement of volunteer skills Improvement of internal functioning of the central office Improvement of organisational atmosphere in the central office

Performance Evaluation of Non-Profit Sports Organisations

A unified model for performance evaluation of non-profit sports organisations is offered by Winand et al. (2014), [Table 5].

Table 5: Unified model for performance evaluation of non-profit sports organisations

EXTERNAL ENVIRONMENT			
INPUT	THROUGHPUT		OUTPUT
Fundraising	Financial	Sports programmes	Achievements
Size Volunteers Technical staff Members	Resource management Independence External communication and contacts	Elite sport Mass sport Organisation operation Internal atmosphere Process effectiveness	Success of elite sport Mass sporting Services for members, athletes, society Services provided
Physical resources	Stability, Research support, Human resource support and recognition, Planning and flexibility		Financial objectives Ethical objectives, Safety, Recreational goals
PERCEPTION			Ethical values
Internal stakeholders: Management board members, salaried office staff, salaried research and technical staff, coaches, members, elites			FEEDBACK
External stakeholders: sponsors, governmental agencies, top management bodies			Internal Satisfaction External Image

Source: Adapted by the author pursuant to (Winand et al., 2014)

Evaluation of Performance of Sport Management Bodies and Organisational on Local Level

There is no theoretical framework for evaluation of performance of sport management bodies and organisations on the local level. However, in countries like Great Britain, Australia, New Zealand, Canada etc., i.e. where the New Public Performance model is applied, there are various models for evaluation of performance and quality of services of local sports organisations applying for public finance also on the local level. In addition individual sports organisations issue activity evaluation criteria for their local clubs in case they want to apply for financial contributions to their activity [Table 6].

Table 6: Examples of evaluation of performance of sports organisations on local level

Organisational management of performance in sport on local level
1) <i>Measurement of Performance for Sport Development – Good Practice Guide for Local Authorities</i> (2001) published by Sport England Sporting outcomes (range of participation and skills development opportunities available ; levels and frequency of participation in sport; levels of (voluntary) involvement in sport leadership, coaching , officiating and administration; achievement of sporting success, attitudinal change) Process outcomes (strategic and development plans; range/nature of partnership developed; proportion of resources from other agencies; satisfaction of individuals , including users, partner organizations and stakeholders, awareness level) Service outputs (location, number and accessibility of facilities provided; number of users/ visits; frequency of attendance; number of people trained ; number of organisations assisted) Process outputs (quality management system accreditation; methods of delivery and processes adopted; speed of response; satisfaction with staff) Equity measures (ethnicity, gender, socio – economic group, age) Social, economic and environmental outcomes (health and well – being ; economic development and regeneration; environment and sustainability, community safety; educational attainment and lifelong learning; equity and inclusiveness; quality of life)
2) <i>Model SPARC-Sport And Recreation New Zealand, Activities in Performance Management in Sport</i> - New Zealand – considered an instrument for development and assessing the following criteria: Management; Planning; Sport management (internal); Human leadership; Customer focus; Method of sporting opportunity provision
3) <i>AFL Community Club Improvement Program</i> The Australian Football League recognises that volunteers and administrator active in sports clubs significantly contribute to success of Australian football, and that the demand placed on club volunteers and administrator increases together with the need to operate the clubs in the professional manner.

AFL programme for improvement of local club activity was developed specifically for helping the clubs review their current operation and identify opportunities for improvement.

After the programme completion, the clubs receive a detailed report with information about the good practice to help them formulate action plans for improvement of the club activity, operation and management in future.

By means of the programme the clubs can receive recognition for good/excellent club administration:

The club quality level suggests effective club administration

Gold Club Quality – level acknowledges that the club management is excellent

Evaluation of performance in sport often involves overlapping of performance and quality assessment systems. This phenomenon was described by Nová (2014), who also suggested an Integrated Model for Quality and Performance Management in Non-Profit Sports Organisations.

A qualitative analysis of sport management journal articles

A qualitative analysis of sport management journal articles (Sport Management Review n= 222, Journal of Sport Management n= 206, European Sport Management Quarterly n= 102) published in the years 2011-2015 using the thematic coding (and Atlas.ti functionality Word Cruncher was carried out. The aim was to identify the extent to which two selected organizational performance concepts (Balanced Scorecard and Performance Prism) have been researched. The analysis showed that the expression / code balanced scorecard and performance prism and their derivations were found in these articles: Hagen Wäsche and Alexander Woll (2013) in their study provided an understanding of the organization and management of Regional Sport Tourism networks and in one case the balanced scorecard was used as the strategic management tool. Ian O'Boyle and David Hassan (2014) examined the situation in the field of organisational performance management and measurement within non-profit sport organisations and they stated that an area of research that is not addressed in any study of organisational performance in NPSOs is the use of traditional business performance management tools such as The Balanced Scorecard (Kaplan & Norton, 1992, 1996), The Performance Prism (Neely et al., 2002; O'Boyle & Hassan, 2013), or any derivative of such tools. Ian O'Boyle (2015) examined the issue of developing and implementing performance management tools – Balance Scorecard and Performance Prism that can potentially help national sport organisation managers.

Analysis of students' assignments

The study programme Sport Management at the Faculty of Sport Studies Masaryk University (FSPS MU) is delivered in cooperation with the Faculty of Public Administration (teaching the basics of management, marketing, economics and HRM). On the basis of these general management subjects the Faculty of Sport Studies delivers courses with the endeavour of teaching students how to apply the acquired knowledge in a sport context especially when it comes to organizational strategy and performance of sport organizations, see [Table 7].

Table 7: Delivery Logic of the organizational body of knowledge in Sport Management at FSPS MU

Subject /course taught in Sport Management Studies	Content related to organizational strategy and performance
Basics of Management	Definition and basic characteristics of organizations' strategy and business performance
Management in Sport	Organizational strategy and organizational performance within a sport context, interrelation between the organizational strategy of sport organizations and performance measurement and performance management systems in sport organizations
Case Studies in Sport Management	Reflection and application of strategy-based performance theory in practice based on specific case studies

We examined the assignments of 36 undergraduate students who passed the subjects Basics of Management and Sport Management (spring semester 2018). A condition for completing the subject of Sport Management was the writing of the assignment respecting the following instructions for the part of the assignment that was related to organizational performance:

- 1) Select a sports organization, briefly describe its mission, vision, and strategy
- 2) Study in detail the Balanced Scorecard by Kaplan and Norton (1992) and suggest performance indicators for your organization. Fill in, at your own discretion, the indicators suggested by Hoye et al. (2012) and

Nová et al. (2016). Justify your proposal. Create the Performance Prism for your organization (by Nova et.al, 2016)

The content analysis of students' assignments using a coding method (Strauss and Corbin, 1998) and Atlas.ti software was conducted so as to assess their perception of the organizational performance

The examination was guided by the following questions:

- To what extent can the students apply critical thinking with regard to organizational performance in the chosen sport organization? and
- Are they able to implement two well-known frameworks (Balanced Scorecard and Performance Prism) in the chosen sport organization?

To answer the above-mentioned questions in the process of the content analysis, 9 general codes have been suggested that classify the extent to which the students were able to operationalize the prescribed performance tools for the chosen sport organization [Table 8].

Table 8: Extent of the utilization of the Balanced Scorecard (BSC) and Performance Prism (PP) for the chosen sport organization in the students' assignments

Code	Comment	Grounded
Balanced scorecard mentioned not used	Students fail to operationalize the BSC for sport context	10
Balanced scorecard utilized	Students used the dimension of the BSC but failed to link it to the strategy of sport organization	7
Balanced scorecard utilized accurately	Students managed to operationalize the all dimensions of the BSC in variations and linked them to the strategy of sport organization	13
Balanced scorecard utilized with limited extent	Students managed to operationalize all dimensions of the BSC and linked them partially to the strategy of sport organization	6
Performance Prism mentioned not used	Students fail to operationalize the PP for sport context	2
Performance Prism not mentioned not utilized	Students have not demonstrated either knowledge or operationalization of PP	9
Performance Prism utilized	Students used the dimension of the PP but failed to link it to the strategy of sport organization	12
Performance Prism utilized accurately	Students managed to operationalize all dimensions of the PP for a variety of stakeholders and linked them to the strategy of sport organization	11
Performance Prism utilized with limited extent	Students managed to operationalize all dimensions of the PP for limited stakeholders and linked them just partially to the strategy of sport organization	2

Almost 31% of students successfully used the Performance Prism and more than 36% successfully used the Balance Scorecard. 16% of students used the BSC to a limited extent and more than 5% used PP within a limited extent.

What is challenging from the pedagogical point of view is the fact that more than 33% of students were able to recognize the importance of the PP tool and utilized it but failed to link it to the strategy. This statement is valid for more than 19% of students when it comes to the utilization of the BSC.

Analysing the accurate operationalization of the BSC and PP within the variety of the sport organizations chosen by students for their assignments, it is obvious that the best results in setting the performance measures were achieved for non-profit local sport organizations and 1st league for profit sport organizations [Table 9].

Table 9: Accurateness in applying the performance models for various types of Sports Organizations

Type of the Sport Organization N=36	BSC mentioned not used n=10	BSC utilized n=7	BSC utilized accurately n=13	BSC utilized with limited extent n=6	PP mentioned not used n=2	PP not mentioned not utilized n=9	PP utilized n=12	PP utilized accurately n=11	PP utilized with limited extent n=2

For Profit national Olympic Centre N=1	1	0	0	0	1	0	0	0	0

Conclusions

Although research and practice guides referring to the organizational performance in sport are sufficient there are no studies available that shed light on how sport management students understand or are taught this important topic. This qualitative case study offers an initial exploration of how the organizational performance for a variety of sport organizations is learned and taught in sport management studies. After careful analysis of the transcripts from the undergraduate students' assignments, their preparedness to operationalize the most popular business performance models, namely the Balanced Scorecard and the Performance Prism in a real sport context was examined.

To achieve a better understanding of organizational performance in sport and to equip the students with the relevant knowledge and skills the current approach regarding the teaching and learning of these crucial topics was revisited. On the basis of this and also our findings the starting point is to set up a competence framework in the area of organizational performance. Based on our findings the following competences and skills must be demonstrated by students at the end of the respective courses:

- Demonstrate the knowledge of the respective performance models from business and the sport industry that are applicable within a variety of sport organizations
- Manifest the ability to determine the performance management system and key performance indicator sets considering the organizational strategy
- Determine relevant stakeholders, their relationship with the sport organization and to be able to identify their expectation
- Be able to ensure that the necessary information is available to operate and improve the organizational processes and to monitor, analyse and evaluate the performance of the overall organization
- Set up appropriate measures to measure and monitor key indicators to demonstrate the organization's performance in the light of the organizational strategy
- Ensure that data and information are sufficiently accurate, reliable and secure
- Analyse and evaluate data and information using suitable methods
- Measure performance and provide performance feedback to stakeholders so as to enhance improvement initiatives

Bearing in mind the results of the analysis of students' assignments, the structure of the sport management study programme and current teaching and learning strategies that are considered as critical elements in teaching and learning organizational performance, it is advised to introduce the following measures in order to successfully achieve the above-mentioned learning outcomes.

- A. Content change within the study programme structure** led by the need to provide the space for single subjects focused on organizational performance in a sport context, namely:
- Organizational performance and sustainability of Sport Organizations
 - Critical Reflections of Sport Management Practice in the light of the performance concepts (Balanced

Scorecard; Performance Prism etc.)

- The role of Sport Business Intelligence and Integrated Management System in a sport context in relation to the organizational performance

The content changes can be theoretically underpinned by the opinions of the experts in the area of cognitive psychology who claim for providing the students with sufficient subject matter knowledge base and guidance so to allow them apply fully and encourage the critical thinking (Kirschner et al., 2006).

B. Adoption of the teaching and learning methods that would provide the opportunity for:

- Self-development activities to gain skills such as being able to gather and process data (Sport Business Intelligence) or design the appropriate IT tools or design the Integrated Management Systems that would include the performance management systems (more practice and project-oriented subjects are required for this)
- Further strengthening of the teaching case studies in sport management education (Nova, 2013) as far as the teaching case studies describe problem situations occurring in the daily practice of sport organizations and the students are expected to assess the appropriateness or accuracy of the solution, which was adopted by the management of sports organizations or to propose, on the basis of information, the most appropriate solution / decision, even using theoretical concepts from management theory.
- Learning in teams to support critical and creative thinking in the area of organizational performance
- Full exploitation of the Cognitive Load Theory Model (Sweller, 1988; van Merriënboer & Sweller, 2005). This learning model is appropriate for the competency based curriculum as far as it uses the logic of the mind processes and stores information. But the model must be supplemented by good quality and quantity of study materials. Thus, the effectiveness of students learning can be achieved (Schilling, 2016).
- To achieve the interactive students' engagement behaviors using the ICAP framework that differentiates four modes of students learning modes: Interactive, Constructive, Active, and Passive – ICAP. This framework states that students' learning is increasing as they are more engaged with the learning materials and thus moving from passive to active, constructive and interactive behavior (Chi & Wylie, 2014).

All suggested changes that are supported by the latest theories in the active learning will allow the designing of a new, more focused approach to the teaching and learning of the relevant body of the knowledge to enhance the students' skills and capabilities for the appropriate implementation of the organizational performance models after completion of the sport management studies.

Sibel Cengizhan
Marmara University
sibel@marmara.edu.tr

Özet

Modern education has made psychological counseling and guidance services an integral part of educational activities. However, problems are observed in the implementation of guidance services in the schools. The purpose of this study is to examine student opinions on psychological counseling and guidance services carried out in vocational high schools. Findings can help improve the functioning of guidance services. The research was conducted using the scanning model. The universe of the research is İstanbul, Üsküdar IMKB (Istanbul Stock Exchange) girl technical and vocational high school. The study group consisted of a total of 119 students from 9th, 10th, 11th and 12th grades selected by chance sampling method. The data were collected by a 30-item questionnaire. Students responded to the survey questions by choosing yes, no preference. The data obtained from the survey were analyzed by using percentage and frequency statistical technics. The data obtained from the survey were analyzed by using descriptive statistical techniques. It has been determined that the majority of students recognize the counselors in the school and know the location of the guidance service. Students also stated that; they could easily apply to the guidance service, found their activities satisfactory, helped solve the problems, got real and close interest in their problems, tried to determine their interests and they were informed about courses and discipline rules. It has been determined that other statements have been answered negatively. It has been suggested that similar studies should be conducted with larger groups in order to generalize the findings.

Students' Perception Of Smart Learning System Within The Management Information System Course At Fujairah University

Ahmad AlHamad
Fujairah University
aqd14@yahoo.com

Iman Okur
Business Administration College
iakour@sharjah.ac.ae

Abstract

The aim of this paper is to measure students' perception towards the use of Smart Learning System (SLS) available at Fujairah University within a Management Information System course (MBA level). The study will show the effect of using the smart learning system on students' performances and the issues that could be added to enhance it. To achieve this, a questionnaire was delivered to eighteen students taking the Management Information System course and then it will be analyzed using the well-known software, Statistical Package for Social Sciences (SPSS). The results will show if there will be a positive perception toward the adoption of the Smart Learning System at the University.

Students' Views On Laboratory Courses

Benzegül Çelik
benzegulcelik@duzce.edu.tr

Murat Genc
muratgenc77@gmail.com

Abstract

The purpose of this study is to take students' views about laboratory courses. The research was carried out in Düzce University Faculty of Education General Chemistry Laboratory I-II and General Physics Laboratory I-II courses. General Physics and General Chemistry laboratory courses were conducted in the same laboratory. In the lessons, experiments were carried out by groups of 4 to 6 students. Demonstration experiments were frequently preferred depending on the material and safety situation. For this study, after 2 semesters and 4 laboratory courses, an open-ended questionnaire was applied to the 25 freshman science teaching students and by the way data was collected. The data was analyzed qualitatively and answers of the students were categorized into 4 main points. According to the results, students thought that laboratory courses increase learning of theoretical knowledge and develop science practices like making experiments, analyzing the process, etc. On the other hand, the other two categories were stressing the missing sides of those courses. Students need a well-designed laboratory handbook with theoretical information about experiments. Moreover, students complain about laboratory facilities like inadequate and outdated materials. Findings of this study showed that students were aware of the benefits of the laboratory courses. And, if the laboratory facilities were improved, those courses would be more efficient for students.

Study Programs And College Student Satisfaction: The Case Of Czech Students

Jan KALENDA & Illona KOČVAROVÁ

Research Centre of FHS

Faculty of Humanities Tomas Bata University in Zlín

Štefánikova 5670, 760 01 Zlín The Czech Republic

kalenda@utb.cz

kocvarova@utb.cz

Abstract

Student satisfaction with their study programs is considered one of the most crucial factors that shape their experience within the higher education system. In this article, we address the following research question: How important are subject fields and academic features of study programs for college student satisfaction? For this purpose, we used data from a survey of college students (N = 1237) carried out in 2018 at Tomas Bata University in Zlín (Czech Republic), where a modified version of the Studiebarometeret (NOKUT) questionnaire was applied. The results are based on the 6-factor solution of CFA. Descriptive results of all study fields are compared. Although the overall differences in satisfaction are rather small, a cluster analysis shows that they are not based on different study fields but primarily on other academic characteristics of those study fields (size of study groups, level of study, and the ratio of applicants and admitted students).

Introduction

The Czech higher education system has been undergoing a complex transformation in recent years. Following the adoption of a new law in 2016, extensive measures for achieving the desired quality of educational processes and auditing services of universities have been implemented. It was due to beliefs that the quality of education, despite its problematic conceptualization (Green, 1994), is a crucial indicator of distinction in both the national and international higher education arena, i.e. something that several authors (Blackmore, 2009; Strathern, 2000; Muijs & Bokhove, 2017) critically see as a tool of accountability and marketing rather than means of enhancement of their practices and services.

In this regard, the Czech higher education system has been following a trend that started in the early 1990s in the Western countries and then has been continuing in Asia and East Europe countries (Douglas et al., 2006, 2015; Liu et al., 2017; Peter, 1997). Nowadays, it is part of a broader transformation of the higher education system in the Central Europe where a new “skill-production regime” is being slowly built (Hall & Soskice, 2001) with a higher level of accountability to the public.

A big part of these new measures within the Czech higher education system is connected with the implementation of different models of quality indicators and evaluation, especially the evaluation of students' satisfaction with their study programs, teaching quality, counseling, and other forms of institutional support. In this context, students are seen as customers of the universities (Gruber et al., 2010; Finey & Finey, 2010; Jongbloed et al., 2008; Joseph et al., 2005) using various services and products that should satisfy their needs, while shaping their experience with the college studies. Probably the most crucial role in this process is played by various interactions between the customers (students) and the university staff – e.g. teachers, counselors, and other representatives of the university who may change the students' satisfaction upwards or downwards (Bitner et al., 1994).

Subsequently, the data about students' satisfaction serve as an essential tool for universities and their management, because it can be used for several purposes such as:

- (1) Building and developing strategies for improving the quality of education and related services (among others see Alvaréz et al., 2016; Burgess et al., 2018; Liu et al., 2017). As Liu et al. (2017) argue, it is a primary indicator of self-assessment at any university which can be used as building stone for a quality management of the institution.
- (2) Improving the marketing strategy with a focus on new applicants (Lin et al., 2017) and responsiveness to changing the marketplace. Identifying strong and weak sides of student satisfaction can help in modifying market tools – for example, what should be highlighted, and, on the other hand, what should be de-emphasized.
- (3) Increasing loyalty of the students, which leads to their continuing studies at a higher level, or their recommending the university to new applicants (Ali et al., 2016; Alves & Raposo, 2007; Green et al., 2015; Douglas et al., 2015; Lin et al., 2017).
- (4) Improving the education outcomes of the students. In the expert literature, we can find many works (Jemelske, 2009; Richardson, 2005; Mascarella & Terenzini, 2005) that highlight a strong relationship between students' satisfaction and their learning outcomes.

Many Western countries, especially those that slowly started with “qualitative” reforms in the late 1990s, have their national student satisfaction surveys. Probably the most known is NSS (National Student Satisfaction Survey) from the UK that has been used as a source of student satisfaction data in numerous studies (Burgess et al., 2018; Callendar et al., 2014; Cheng & Marsh, 2010; Sabri, 2013; Yorke, et al. 2014). National scale surveys are also carried out in the USA (National Survey for Student Engagement), Australia (Australia's Course Experience Questionnaire), Japan (Japanese College Student Survey), or Norway (Studiebarometeret). In contrast to those countries, the Czech higher education system does not have a unified approach to studying and evaluating student satisfaction. There does not exist any standardized protocol or research tool used in the whole country. Every university is responsible for creating their own. For this reason, our presented data are the product of a survey carried out by one of the Czech state universities in the spring of 2018.

Research in the area of student satisfaction is extensive. It mainly focuses on different factors influencing student satisfaction: e.g. student employment status (Moro-Egido & Panedes, 2010), quality of assessment (Russell & Lehman, 2008), teaching quality and organization management (Burgess et al., 2018; Langan et al., 2013), college experience (Elliott & Healy, 2001), class size (Peterson et al., 2001), or a combination of several factors together (Tessema et al., 2012).

According to several studies (Audin et al., 2003; García-Aracil, 2009; Green et al., 2015; Lid et al., 2014; Radloff & Coates, 2010), subject fields are one of the most critical factors that make student satisfaction different. It is based on the assumption that students from various study fields have both different motivation to study and experience within the higher education system. According to some international studies (Lid et al., 2014; Radloff & Coates, 2010), we can find significant differences between social-science disciplines (e.g. psychology, social work), law and medicine on the one side, and other sciences (for example engineering), and education (e.g. pedagogy) on the other side. In the case of the latter, students are usually less satisfied with their studies and related services.

Purpose of the study

In this study, we follow the international research about the role of subject field in student satisfaction. We examine to what extent subject fields, as a curricular basis of the higher education in the Czech Republic, are essential factors influencing student satisfaction. In this regard, we address two fundamental research question:

- (1) Do Czech college students significantly differ in their satisfaction according to their subject field?
- (2) Are there any commonalities between different subject fields according to a cluster analysis?

Methodology

For our survey we have decided to use a modified version of the Norwegian questionnaire known as Studiebarometeret which is a product of NOKUT (Norwegian Agency for Quality Assurance in Education) and was first implemented in 2013. We work with its English version from 2015. Our modification consists of two critical changes: the translation of the questionnaire into the Czech language and its transformation according to the educational context of the Czech Republic as well as our university. It meant a slight meaning modification of some items and also a partial modification of the factor structure (only some dimensions were used and one was added).

The research tool is still being modified (NOKUT, ©2017), so its internal structure has not been finalized yet. Some factors and items are stable while some were added or changed over time. As the structure is variable, we have decided to use a modified version. This solution is more suitable for an internal quality evaluation at our university. As the evaluation process at our university is based on more surveys among students, we have only chosen some dimensions from the Studiebarometeret which are suitable for a summative evaluation of our study programmes. As for other unapplied dimensions, we have not applied the Teaching and Counselling dimension as there is an individual survey considering only this parameter of quality evaluation at our university where students have an opportunity to assess each teacher in each subject after every semester. Instead, we added one dimension called International mobility (F5).

The next table (Table 1) presents all the factors (dimensions) and their items chosen to be applied in our survey. The numbers of factors are not connected to the original questionnaire but to our modified version.

Some other items of our questionnaire were also based on Studiebarometeret, but they were only used as single items for our internal evaluation. In this text, we only work with the 6-factor structure which was further reduced during the validation as shown below. We have also used a set of sorting variables (mainly the information connected to the faculties and fields of study).

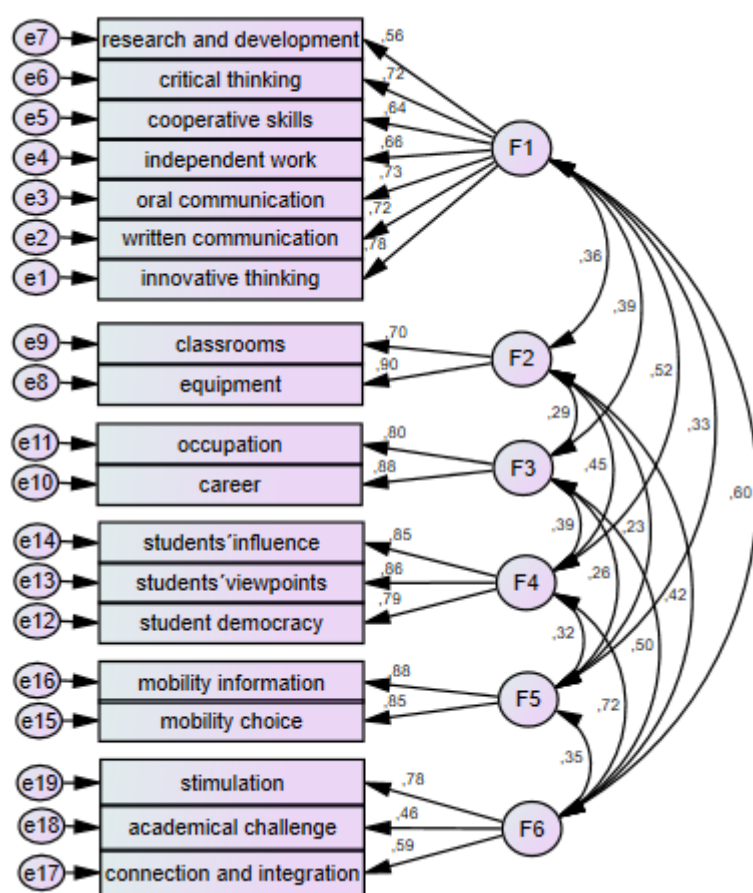

Table 1: Factors and dimensions of the research tool

Factors	Items
F1 Learning outcomes	Theoretical knowledge
	Knowledge of scientific work methods and research
	Experience with research and development work
	Skills specific to the discipline and working life
	Critical thinking and reflection
	Cooperative skills
	Ability to work independently
	Oral communication skills
	Written communication skills
F2 Study environment	Innovative thinking
	Rooms for teaching and other study work
	Equipment and study tools
	Library and library services
F3 Working life relevance	ICT tools and services (e.g. teaching platforms, software and PC availability)
	Relevance to 'natural' occupational fields
	Relevance to good career opportunities
	The knowledge that is generally useful in occupational life
F4 Participation	Skills that are generally useful in occupational life
	The students' opportunity to influence the study programme content and design
	How students' viewpoints are taken into account and followed
F6 Stimulation and coherence	The local student democracy
	The programme is stimulating
	The programme is academically challenging
	The programme consists of courses that are well connected and integrated

Overall, 1,237 students took part in the survey. An online questionnaire was applied. The total response rate was 26 %. One student was excluded from the analysis due to his unclear study field affiliation.

As the first step of the validation, an exploratory factor analysis (EFA) was applied to see whether it is possible to work with the original (but slightly modified) structure of the questionnaire. As the result was very similar, we based our model of the confirmatory factor analysis (CFA) on its solution. However, we expected some reductions in the model, as CFA has much more stringent requirements from the statistical point of view. The final result (after a reduction of weak items) is presented in the following picture (Schema 1). The basic parameters are fulfilled (Chi-square = 530,259; Degrees of freedom = 137; CMIN/DF = 3.871; Probability level = 0.000; CFI = 0.955; TLI = 0.938; RMSEA = 0.048). Although some coefficients inside the structure are rather weak, we consider it a suitable model for our research.

The level of reliability is high (see Table 2), except for Factor F6 (0.599). One of the possible explanations could be its general and more abstract content in comparison to other factors. We consider Factor F6 the last and weakest one, and future applications of the questionnaire will show whether it should be discarded completely from the questionnaire structure.

Schema 1: Confirmatory factor analysis (the source: our own calculation)**Table 2:** Reliability of factors – Cronbach's α (source: own calculation)

F1	Learning outcomes	0.860
F2	Study environment	0.777
F3	Working life relevance	0.806
F4	Participation	0.873
F5	International mobility	0.848
F6	Stimulation and coherence	0.599

Results

We present the descriptive results of our survey in three diverse but complementary forms. The first of them use the ISCED F (2013) classification of study fields (Table 3). The second one uses the same classification as was applied by Lid et al. (2014) in their survey through the NOKUT questionnaire (Table 4), and the third utilizes the structure of the study programs described in the García-Aracil (2009) study about the European graduates (Table 5). This strategy helps us show our descriptive results in different contexts using various procedures for the data aggregation – from the most detailed approach (the ISCED F classification used in Table 3) to the most general approach (García-Aracil's classification). It also helps us compare our results with findings from two international studies.

Descriptive results

If we look at differences in satisfaction according to different study fields, we can find that these differences are rather small. Students are satisfied slightly above average. The highest level of satisfaction (see Table 3) can be found in students of Fine Arts, Marketing and Advertising, Software and Applications Development, Engineering, and Education. Their average score is of 3.5 to 3.8 on a scale of 1 to 5. On the other hand, we identified the lowest level of satisfaction in the area of Audio-Visual Techniques and Media Production, Database and Network Design and Administration, and Caring for the Elderly and Disabled Adults. All of them have scored around 3.0. From these results it is evident that there are no clear thematic groups of subject fields (e.g. social sciences versus natural sciences) that influence student satisfaction.

Table 3: College student satisfaction according to different study fields – 23 study fields, ISCED F classification (the source: our own calculation)

Field of study	F1	F2	F3	F4	F5	F6	Total
Audio-visual techniques and media production	3.2	3.4	3.0	2.8	2.9	2.6	3.0
Database and network design and administration	3.2	3.5	3.1	2.8	3.0	3.0	3.1
Caring for the elderly and disabled adults	3.5	3.5	3.1	2.8	2.5	3.0	3.1
Training of pre-school teachers	3.5	3.4	3.3	2.5	3.0	3.3	3.2

Chemical engineering and processes	3.4	4.0	3.6	2.8	3.4	3.1	3.4
Engineering and engineering trades	3.4	4.2	3.8	2.8	3.2	3.1	3.4
Education and training (interdisciplinary)	3.8	3.5	3.3	3.1	3.2	3.4	3.4
Education	4.0	3.8	3.4	3.2	3.1	3.3	3.5
Software and applications development and analysis	3.7	4.3	3.1	3.5	3.5	3.3	3.6
Teacher training with subject specialization	3.9	4.0	3.5	3.3	3.5	3.4	3.6
Marketing and advertising	4.0	4.0	3.6	3.4	3.3	3.4	3.6
Fine arts	4.0	4.0	3.6	4.2	3.7	3.6	3.8

When we take another step forward in our analysis and compare study fields according to the Lid et al. (2014) classification, differences are even smaller (see Table 4). Individual study fields differ by only 0.1 to 0.2 of scale points, the lowest score being for Nursing and Engineering, and the highest for Art, and Pedagogy. A comparison with the results of student overall satisfaction from Norway (see the last column of the Table 4) shows that students from the Nordic country are generally more satisfied than Czech students in our survey but there are no similarities with satisfaction according to study fields.

Table 4: College student satisfaction according to different study fields – seven study fields (the source: our own calculation and Lid et al., 2014)

Field of study	F1	F2	F3	F4	F5	F6	Total	Lid et al. (2014) results*
Nursing	3.6	3.5	3.2	2.7	2.9	3.1	3.2	4.1
Engineering	3.3	3.7	3.2	2.9	3.0	3.1	3.2	3.8**
Teacher education	3.6	3.5	3.3	2.6	3.0	3.3	3.2	3.7
Business and administration	3.6	3.7	3.4	2.8	3.1	3.3	3.3	4.2
Natural sciences	3.5	4.0	3.4	2.9	3.3	3.2	3.4	4.1
Art	3.6	3.5	3.4	3.4	3.3	3.3	3.4	4.0
Pedagogy	3.9	3.6	3.4	3.2	3.2	3.4	3.4	4.0

Note: *Results of overall satisfaction for all students from the particular study fields in Norway. **Data for Engineering at the bachelor level.

In the last step of our descriptive analysis we analyzed study fields classified only into six categories. Not surprisingly, also in this case, the differences were minimal – 0.1 to 0.2 of scale points (see Table 5). We did not

find any relevant commonalities between study satisfaction and study fields in our survey and the data from the García-Aracil (2009) survey of the European graduates (see especially the last two columns of Table 5).

Table 5: College student satisfaction according to different study fields – six study fields (the source: our own calculation and García-Aracil, 2009).

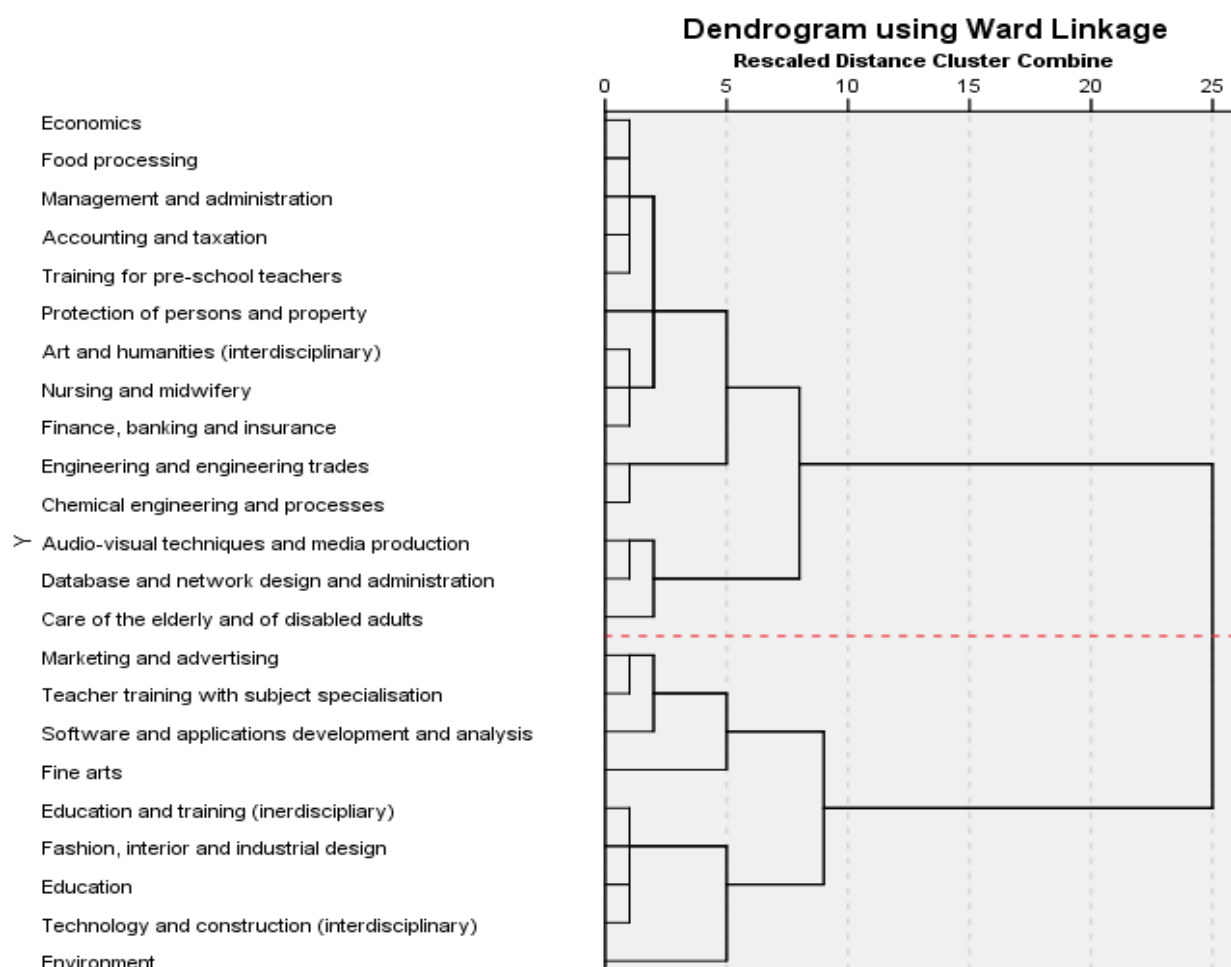

Field of study	F1	F2	F3	F4	F5	F6	Total	Czech*	Europe**
Medical sciences	3.6	3.5	3.2	2.7	2.9	3.1	3.2	3.0	3.8
Engineering	3.3	3.7	3.2	2.9	3.0	3.2	3.2	3.7	3.8

Note: *Results of overall satisfaction of graduates from the particular study fields in the Czech Republic from the García-Aracil (2009) study. ** Results of overall satisfaction of graduates from the particular study fields in Europe (11 European states together) from the García-Aracil (2009) study.

Analytic results

For a more detailed analysis of our data we used a cluster analysis based on the 6-factor structure of the questionnaire. The Dendrogram created by the Ward Linkage method helped us identify fields of study with similar results. The closer the linkage on the standardized scale (0-25) between two fields is, the more similar their assessment in the 6-factors of the questionnaire is.

Schema 2: Cluster analysis (the source: our own calculation)

From the Dendrogram (Schema 2) we can see that two primary groups of study fields can be defined (shown by the dashed line). Although we could consider other solutions with more clusters, we preferred simplicity, which enables a more precise interpretation. The first cluster includes 14 study fields (using the ISCED F classification)

with 829 students (67 %), and the second one includes nine study fields with 407 students (33 %). When we compare the results of the two clusters and add other information about the study fields (academic features of the study programs), the results show that the satisfaction is higher in all 6-factors, except for Factor F2. In addition, in the second cluster there is a much higher percentage of students attending small study groups of the bachelor study programmes where less than 40 % of applicants were admitted to the study (see Table 6).

Most significant differences between these two clusters lie in the evaluation of learning outcomes (Factor F1). More satisfied students score higher in the evaluation of their learning process. They are also significantly more satisfied with the possibilities of participating in their learning process (Factor 4) – how they can influence the study program content, or how academic staff work with their comments and remarks. In other factors, differences are smaller.

Table 6: Differences between less satisfied and more satisfied students (the source: our own calculation)

		Ward Method	
		Cluster 1	Cluster 2
		Less satisfied	More satisfied
Overall results in 6 factors of the questionnaire (mean)			
Factors	F1: Learning outcomes	3.4	3.9
	F2: Study environment	3.7	3.7
	F3: Working life relevance	3.3	3.4
	F4: Participation	2.7	3.3
	F5: International mobility	3.1	3.2
	F6: Stimulation and coherence	3.2	3.4
Complementary information about study fields (column %)			
Size of study groups	Size of study groups ≤ 20 students	7%	41%
	Size of study groups 21 - 50 students	62%	26%
	Size of study groups > 50 students	31%	33%
Level of study	Bachelor study programme	52%	67%
	Master study programme	46%	32%
	Doctoral study programme	2%	1%
Ratio of applicants	The ratio of applicants and admitted students > 60%	59%	46%
	The ratio of applicants and admitted students 41 - 60%	40%	14%
	The ratio of applicants and admitted students ≤ 40%	1%	40%

Discussion

This research aimed at getting to understand the complex relationship between student satisfaction and study fields, the latter being considered an important factor influencing college student experience (Audin et al., 2003; García-Aracil, 2009; Green et al., 2015; Lid et al., 2014; Radloff & Coates, 2010). Contrary to previous studies we did not find any significant differences in student satisfaction according to their study fields. Only on the level of the ISCED F classification we identified relevant differences between some study fields but without any thematic familiarity (see Table 3). This conclusion is also relevant for analytical results that did not show any thematic similarity between study fields based on the cluster analysis. In order to answer the first one of our research questions (Do Czech college students significantly differ in their satisfaction according to their subject field?) we can conclude that college students in our sample do not significantly differ in their satisfaction according to subject fields.

One of the possible reasons for this result lies in the limitation of our survey to only one university which does not work with a much more bigger and representative sample as the research done by García-Aracil (2009) or Lid et al. (2014). This is probably the reason why García-Aracil (2009, p. 14) identified as the negative influence the study fields of Education, Humanities, Engineering, and Medical Sciences in students satisfaction, while we did not find such a strong and clear relationship.

Based on our findings from the cluster analysis, we can say that commonalities between different subject fields exist (the research question no. 2). We identified two clusters of study fields that are significantly different, but we should highlight that this difference is the output of academic characteristic of these programs rather than their curricula or thematic orientations. The crucial factor in this distinction is the following three characteristics of study programs: (1) size of study groups (higher level of satisfaction can be expected in small study groups); (2) level of study (higher level of satisfaction seems to be connected with lower level of study); (3) ratio of applicants and admitted students (higher level of satisfaction is found in programs with lower ratio of applicants and admitted students).

These findings are partially novel in the context of international research focused on the link between student satisfaction and features of study programs, mainly in the focus on the ratio of applicants and admitted students that is not well researched. In the case of the study group size, we corroborate findings from the previous literature (Peterson et al., 2001) that consider the importance of smaller study groups for student satisfaction. On the other hand, we diverge from other studies (García-Aracil, 2009; Tessema et al., 2012) in the study level. According to them, students of higher level of study tend to express greater satisfaction. We identified an opposite trend.

Although these findings have some substantial limits for the understanding of college students' satisfaction (of their representatives, in particular), they are crucial evidence for the university management. They can be utilized for improving the study programs structure and offer. For this purpose, we can suggest two complementary strategies. One focused on "strong" study programs with a higher level of satisfaction (Cluster 2), and the other focused on "weak" study programs (Cluster 1).

The first strategy should focus on improving some evaluated factors in the study programs from Cluster 2 which have a similar score as the study programs in Cluster 1. Namely, these are Factor F3 – Working life relevance, and Factor F5 – International mobility. We suppose that an improvement in these two areas which are not directly connected with academic features of the study programs can change student satisfaction upwards.

The second strategy should focus on changing the design of the study programs in Cluster 1 in order to improve student satisfaction: (1) to lower the number of students in study groups to increase personal interaction between teachers and students; (2) to gain feedback from older students (students of the higher level of study) telling why their satisfaction during studies declined, and then to propose remedies; (3) to lower the ratio between applicants and admitted students, and accordingly, to improve and personalize the marketing of study programs toward students that are highly motivated for enrolling in particular study programs. Most of these measures are in line with the recommendations from the international literature (Ali et al., 2016; Lin et al., 2017).

Syrian Asylum-Seekers' Children In Turkish Schools: Inclusion Experiences Of Teachers

Muhammet Ruhat Yasar
Kilis 7 Aralık University
ruhat@kilis.edu.tr

Zeynel AMAÇ
Kilis 7 Aralık University
zamac@kilis.edu.tr

Abstract

Recent immigrant flow affected Turkey very much that approximately three and a halfmillion asylum-seekers live in Turkey. For the purpose of addressing their educational needs, integration to Turkish culture, and preventing generation gap (UNICEF, 2017), Ministry of Education implemented an inclusive approach to schooling of Syrian asylum-seekers' children by educating them in public schools with their Turkish peers in the same classrooms in 2016. Education, as basic human rights and as a way of integration to Turkish society, is provided free of charge in all levels of education in Turkey. The inclusion of Syrian students in the classrooms is quite new experiences for teachers and if it is not managed properly it can have negative effects on both students and their teachers.

Dryden-Peterson (2015) identifies three most common education experiences that refugee students face in countries of first asylum: "language barriers, teacher-centered pedagogy, and discrimination in school settings" (p. 1). Recent studies on asylum-seekers in Turkey concluded that Syrian students had PTSD (Çiğerci & Güngör, 2016) and language barriers (Erdem, 2017). Research on teachers is limited. Only a handful of studies focused on teachers (Yaylacı, Serpil, & Yaylacı, 2017). Because educating students from different backgrounds in terms of race, language, and culture is a novice issue for teachers, it is needed to learn more about their experiences in inclusive classrooms.

Phenomenological studies focus on lived experiences of individuals (Merriam & Tisdell, 2016). The purpose of this study was to explore experiences of teachers teaching Syrian students in the city of Kilis, where the number of asylum-seekers is more than its own population and almost one-fifth of the students in public schools are Syrians. The guiding question of this research was "What are the lived experiences of elementary and middle school teachers educating Syrian children in inclusive classrooms?"

Five teachers from four different primary and middle schools were interviewed. The six open-ended interview questions allowed the participants to reflect on their experiences. The data were collected during the spring semester of 2017. The interviews were analyzed according to thematic methods. Three themes emerged: Language barrier, lack of family support, and teachers' lack of pedagogical skills to teach asylum-seeker students.

Teacher Professional Development Strategies Of General Buddhist School

Abstract

The objectives of this study were to propose strategies for development of teacher professional of general Buddhist schools and to study teacher professional development strategies. This study used mixed methods research consisting of 2 phrases. Phase 1: The study of current conditions and desirable to determine the requirements needed for development of teacher professional used questionnaire for 354 teachers general Buddhist schools. Phrase 2: The qualitative study focus group discussion with 15 experts with general Buddhist schools, analyzing the contents according to the objectives of the study.

The results :The Need Assessment of teachers professional development descending order was: Collaborative networks of forces (PNImodified = 0.16), Supportive Structures and Environment (PNImodified = 0.15) Individual Teacher Need (PNImodified = 0.14), Acting under Professional standards (PNImodified = 0.13), Learning of students and teachers (PNImodified = 0.13) and Following the Acting under KulayanamitDhamma. (PNImodified = 0.10). Teacher professional development strategies suitable and useful for general Buddhist schools consisted of 4 goals ,6 strategies, 9 Measure and 36 indicators .

Key Words: *Strategies ,teacher professional development*

Introduction

The quality of the education system depends on the quality of teachers. Because the quality of teachers is the most important factor for the quality of student learning. (OECD, 2013) The education systems of the countries getting high marks often give first priority to teachers through the selection of appropriate quality teachers or teacher quality. That is having the best person to be a teacher, keeping good teachers and taking the best out of teachers. (McKinsey Report, 2007) As the quality of teachers is critical to improving the quality of education because teacher quality affects student quality. Teachers have an important role in the development of a complete human being for all physical, mental and moral, ethics and culture to live with others happily. The quality of teachers is the key factor affecting the learning of the students. For there were research findings from various periods that students who had a good teacher develop 3 times advanced students to teachers is not good. And from the collection of relevant data analyzed, synthesized, and classified related to teacher development, including the teaching of teachers, ethics of teachers, the use of information technology (ICT) for teaching, new knowledge for teachers in the 21st century, the media and the teaching of teachers and problems of teacher development. The study found that driving to develop teachers lacks of mechanisms for collaboration to drive professional development of teachers to be a noble profession and the curriculum and teacher development are not consistent with the needs of teachers. (Office of the Education Council, 2013)

General Buddhist schools, Department of Education Buddhist Studies, Division Office of National Buddhism organize 409 lower secondary schools and upper secondary schools with 4,411 teachers. Having teachers recruited to teach is the duty, authority and responsibility of each school. The results of the 2nd round external assessment of 391 general Buddhist schools nationwide shows that only 209 schools or 53.45 % accredited quality standard, while 182 schools or 46.55 % have not certified. Considering the average standard of each standard, it revealed that 5th Standard: Students with the knowledge and skills required by the curriculum, has the lowest average (2.12). The next is 9th Standard: Teachers are capable of teaching effectively and focus on the learners, (2.45). This is consistent with the analysis of the potential for development of the general Buddhist schools, finding the weaknesses is that teachers lack of security and advancement of the profession. Teachers have not been developed to be able to organize the teaching and learning process that emphasizes learner-centered equitably and appropriately. Changes cause a brain drain to other organizations having more security. And management and staff development are not systematic. (Division of Buddhist Studies, 2010).

From the background and the importance above, the researchers are interested to study the needs for teacher professional development in general Buddhist schools to develop teachers on knowledge and skills to

meet the required performance. And to improve the working methods of teachers to effectively develop their productive stage as a professional teacher. This will affect the quality of education to students.

Objectives Of The Study

were to assess the needs for development of teacher professional of general Buddhist schools and to study teacher professional development strategies.

Definition

1. Strategy refers to the management or way of working at General Buddhist School. The general education is used as a tool for the development of professional quality teachers. Thus, Individual Teacher Needs Student and Teacher Learning Collaborative networks of forces Supportive Structures and Environment Acting under Professional standards and Acting under Kulayanamit Dhamma Achieve effective with 4goals are :

1.1 Goal means The overall goal of the strategy is to anticipate the importance of professional development.

1.2 Strategies means The Management Approach at General Buddhist School has chosen to work to achieve

the objectives set out.

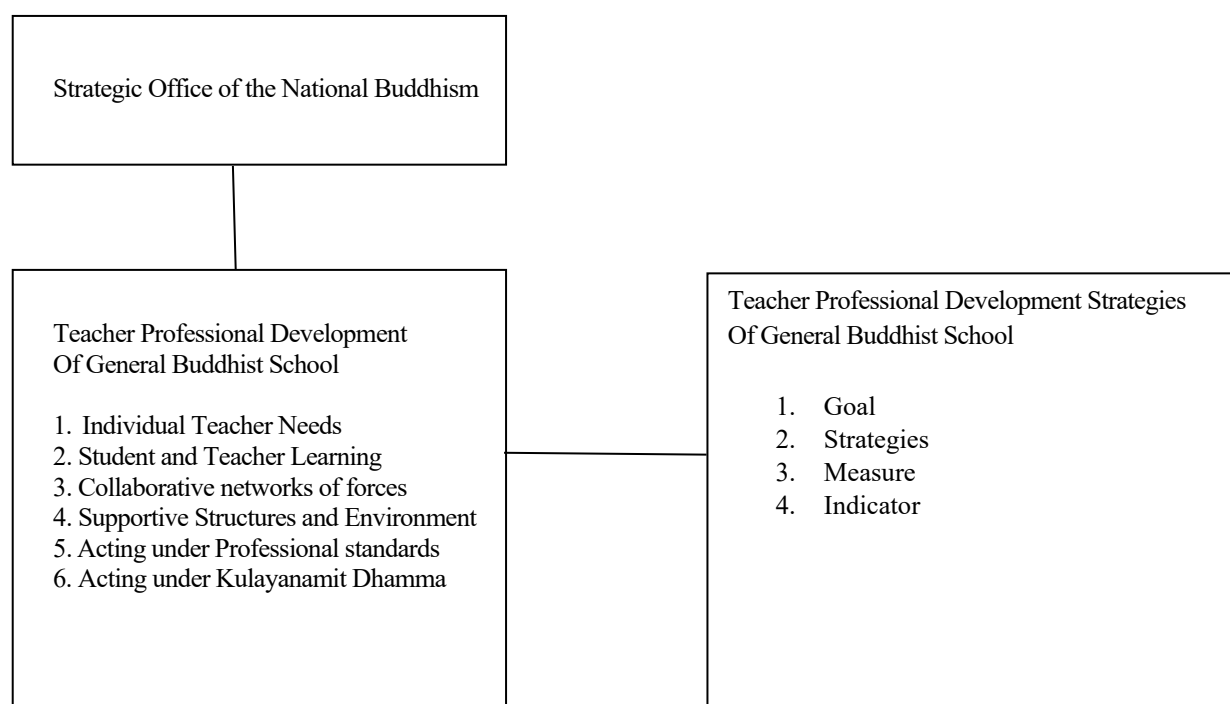

1.3 Measure means The program is based on a professional development strategy used by the teacher.

Each strategy succeeds.

1.4 Indicator means Identify or reflect on accomplishing goals.

2. General Buddhist School means Schools that provide basic education under the Ministry of Education To the novice monk.

conceptual framework

Population and sample

Phase 1 : The population in this study were 4,411 teachers in general Buddhist schools all over the country.

The target group was 354 teachers in general Buddhist schools randomized by the multi-stage random.

The sample size is determined by the square of Krejcie & Morgan, 1970.

Phase 2 : The qualitative study focus group discussion with 15 experts

Methodology

This study used mixed methods research consisting of 2 phrases.

Phase 1 : The study of current conditions and desirable to determine the requirements needed for development of teacher professional used questionnaire for 354 teachers general Buddhist schools.

Phrase 2 : The qualitative study focus group discussion with 15 experts with general Buddhist schools, analyzing the contents according.

The Findings

1. Results of the study of the current conditions and desirable conditions and assess the needs for development of Teacher Professional Development of General Buddhist Schools are as follow :

No	TEACHER PROFESSIONAL DEVELOPMENT OF GENERAL BUDDHIST SCHOOLS	Current conditions		Desirable conditions		PNI _{modified}	Levels
		\bar{x}	S.D.	\bar{x}	S.D.		
1.	Collaborative networks of forces	3.37	1.01	3.90	0.89	0.16	1
2.	Supportive Structures and Environment	3.44	1.02	3.95	0.88	0.15	2
3.	Individual Teacher Need	3.48	1.00	3.96	0.91	0.14	3
4.	Acting under Professional standards	3.60	0.96	4.09	0.84	0.13	4
5.	Learning of students and teachers	3.50	0.96	3.96	0.91	0.13	5
6.	Acting under Kulayanamit Dhamma	3.89	0.90	4.27	0.81	0.10	6
	Totals	3.560	0.975	4.022	0.873	0.135	

2) Teacher professional development strategies suitable and useful for general Buddhist schools consisted of 4 goals were : 1) Promote the creation of a collaborative network of teachers of the Buddhist Scripture School. Department of General Education 2) Develop a structure and environment that supports professional development. 3) Promote the development of professional teachers to meet the needs of each teacher. 4) Promote and develop teachers to practice their professional standards.

- 6 strategies were : 1) Build collaborative networks of forces 2) Organize the structure and environment supporting professional development 3) Create a professional development system to meet the need of each teacher 4) Implement measures to promote compliance with professional standards 5) Encourage the Development of student and teacher learning 6) Promote the practice of moral principles ,
- and 9 Measures 36 indicators.

The Discussion

Phase 1: The study of current conditions and desirable to determine the requirements needed for development of teacher professional found The Need Assessment of teachers professional development descending order was: Collaborative networks of forces because Educational Professional Network is a good example. Pay attention to personnel. And have ongoing operations Believe that learners are valuable and develop. Collaboration of school administrators, voluntary administrators These can be described as beliefs and good standing in the development of professional education networks. And when it is done, it results in the development of a professional education network well and with clear guidelines. Should be expanded. May be prepared as a plan. In addition, there is a need to improve the quality of education in order to improve teachers' professional qualities. Consistent with Thompson Gregg and Niska (2004) Community Network of Professional Learning is a combination. Sharing the power of sharing and learning with teachers, administrators and educators. Based on a culture of friendship, vision, values, goals, and common missions. Working together as a team to learn continuously in the way of working and living together. There are teachers together as leaders. And the management is supporting the learning and development of professional quality change. The quality of learning management emphasizes the success or effectiveness of learners. Of the members of the network.

Phase 2: Teacher professional development strategies suitable and useful for general Buddhist schools consisted of 4 goals were : 1) Promote the creation of a collaborative network of teachers of the Buddhist Scripture School. Department of General Education 2) Develop a structure and environment that supports professional development. 3) Promote the development of professional teachers to meet the needs of each teacher. 4) Promote and develop teachers to practice their professional standards. and 6 strategies were : 1) Build collaborative networks of forces 2) Organize the structure and environment supporting professional development 3) Create a professional development system to meet the need of each teacher 4) Implement measures to promote compliance with professional standards 5) Encourage the Development of student and teacher learning 6) Promote the practice of moral principles , and 11 Measure 36 indicators. because Strategy is the management approach that the organization chooses to implement. In order to achieve the goals set in the future. Strategies are the framework and guidelines that will allow executives to define plans and projects in

detail about what to do, how to go about a product that corresponds to the mission and goals of the organization. Consistent with Somjed Srisomjak (2016) Strategies for teacher development and educational personnel include 4 strategies, 9 Measure and 11 indicators.

Suggestion For Future Research

General Buddhist schools should do Research and Development to obtain an application form or programs in teacher professional development.

Abstract

In this survey, it is aimed to determine opinions of teachers about values education. The investigation is a case study one of the qualitative research models in the direction of the projection of the examination. Study group of the investigation consists of 10 teachers working in a science and art centre in the province of Aksaray. Interview form prepared by the researcher was utilized as a data collecting tool. Analysis of the collected data was performed by the use of descriptive analysis method. According to the result of the survey, it is inferred that the teachers reach the information about values education on their own meaning. The question that which values should be acquired by the students was replied as love, respect, fairness, helpfulness and honesty. What is more, the teachers suggest long term social responsibility about values education. The question that which teaching method, techniques, equipment and materials should be utilized shows that the teachers do not have enough knowledge. In this context according to the result of the survey it can be suggested that the teachers can be informed about the teaching methods, techniques, equipment and materials related to the values education and rearrangements can be applied in the current curriculum.

Key Words: *Gifted-Talented Students, Values Education, Teacher Opinions.*

Introduction

Through the centuries, the education changing the society has been changed with the society as well (Ogelman & Sarıkaya, 2015). For instance, technological developments has brought about the social problems as “value crisis”. Therefore it is inevitable that the new necessities of the changing society now has new values (Yiğittir & Öcal, 2011). In other words, the renewing value concept has a very essential position in education. Since the time of Plato, Aristo and the following years, according to many philosophies and their works, the studies about values and its education and how to inherit the values from generation to generation have always been in the essential subjects. (Kenan, 2009). The values education remarks were concurred in the time of Socrates as well. (Ogelman & Sarıkaya, 2015). Socrates is the first westerner educationalist who is into teaching the children to be a good human in the Ancient Greek (Nash, 1997). Basic values like moral, responsibility, respect, fair and sensitiveness can be transferred to the individuals of society and sustain the persistence of culture (Yazıcı, 2006).

Values education starts from the birth of a baby. In the following years, the values education at school should develop at the same direction so that the aimed value acquisitions can be achieved but the family and school values should not conflict each other. Which values the parents want their children to have, the society aim all the children to gain the same values of parents as well (Çengelci, Hancı, & Karaduman, 2013). Ryan and Bohlin (1999) made suggestions to parents in order to create a good character for their children in terms of values education: first of all be a good example for your children, do not carry this heavy burden on your own and ask for help, control what is in your heart and mind, be patient about the main rules and values to be learned, the child should know the reason of punishment when it is necessary, use a moral language in your conversations and do not reduce character education just to the words.

The school is a place where social and individual perceptions develop consonantly to each other (Dewey, 2008). Emotional gains like respect, tolerance, responsibility and helpful are aimed to teach children with cognitive acquisition at schools (Akbaş, 2008; Çengelci, Hancı, & Karaduman, 2013). In this context, the tasks of the school in the open and hidden curriculum are to have them gain values in directions of education aims, affect them positively in terms of personal structure and point of view themselves, promote their moral developments (Akbaş, 2007).

When it comes to the meaning of the word “value”, it is possible to assess different definitions. Çelikkaya (1996) defined value as every kind of emotion, thought, behaviour, rule or dignity based on as social, humanistic, ideologist or divine that is accepted and sustained in a society, belief, ideology or people.

Tezcan (1974) defined the values as standards that appreciates all cultures and societies. The most essential social values are respect, love and responsibility. Some of the values which are valid all times and places are these; fair,

modesty, loyalty, peace, courage, faithfulness, friendship, mindfulness, empathy, reliability, tolerance, steady, cooperation, helpfulness, austerity, leadership, mercy, kindness, self-esteem, sharing, patience, loyalty, respect, love, responsibility, prudence, fidelity, beneficence, spirituality, consistency in conversation and behaviours (Aydm, 2010).

Respect to the developments has occurred since then, there has nearly never been any time that “self-control refreshment” has been needed to come true of values education away from all political conflicts and every culture and geography (Kenan, 2009). Finally, renewal of the present values education in the curriculum by analysing the results of the values education studies is essential in terms of future of education.

Method

This study is a case study of qualitative research designs. In this research, semi structured interview technique was utilized in this qualitative research method which is described as investigation process that is used in order to present the events and phenomenon in a real and natural way by the use of data collecting methods like observation, interview, document analysis (Yıldırım and Şimşek, 2008).

In this investigation, teachers' opinions about values education are aimed to detect. In this context, the developed interview form was finally edited by expert views. There are six open ended questions in the interview form.

Study Group

The study group of the investigation was detected by the use of convenient sampling method. The researcher selects an assessable and close fact or phenomenon and performs it quickly and practically in this convenient sampling method (Yıldırım and Şimşek, 2008). In this examination, 10 teachers working in a science and art centre in the province of Aksaray consist of the study group by the use of convenient sampling method.

Data Collecting Tool

In this study, an interview form was performed so as to collect data. 6 open ended questions which present the research problem best by scanning the current literature were prepared and added to the interview form in the process of interview questions' preparation. Open ended research questions provides the researcher to approach the phenomenon flexibly and in an open ended style (Yıldırım ve Şimşek, 2008).

The interviews were performed according to the teachers' advisable working time and dates. The interviews were recorded by the use of voice record tool and then transcribed so as to prevent data loss. A written permission was received for voice record from the teachers.

Teachers replied the 6 questions that they faced in the interview and added their opinions about values education. The interview questions prepared as a data collection tool were presented in Table 1.

Table 1. *Interview Questions of Data Collection Tool*

1.	Do you have any information about the values education applied in the National Education Institution? Was there any informing work, meeting or a seminar about this subject? How and where did you access the information about the values education?
2.	Which values do you think to be acquired by the students in the scope of values education? Why?
3.	Do you find the values education enough applied at schools? What are your suggestions about this subject?
4.	Which teaching methods, techniques or equipment and materials can be utilized in values education? What are your suggestions about this subject?
5.	What are your applications related to the values education? Would you explain please?
6.	Do you have any problems in the application of values education? What are the problems? How can these problems be solved, what are your solution suggestions?

Data Analysis

The data gathered from the interviews were analysed by the use of descriptive analysis method. Descriptive analysis; descriptive analysis consists of four stages as creating a framework, processing the data thematic framework, describing the data and interpreting the data (Yıldırım ve Şimşek, 2008). A thematic framework was founded by the researcher for the data analysis. The data were coded by the researcher in this scope. Then the collected data were coded in common themes by comparing each other.

The data were coded in accordance of the investigation by scanning the scripts again and again gathered from the interviews, and the themes were created which explain the coded data. The collected data were organized in a table. The interviewed teachers coded were identified from Ö1 to Ö10. The teachers' opinions were directly cited for the interpretation of the data collected.

Findings

In this section, the findings are presented as a result of the investigation. Teachers' opinions related to values education are demonstrated below in tables.

The information related to where and how the teachers reached the information about the values education applied in the National Education Institutes were presented in Table 2.

Table 2. The information related to where and how the teachers reached the information about the values education applied in the National Education Institutes

Theme (Categories)	Codes	n	%
The sources of the information about the available values education	School (Ö1,Ö2)	2	20
	Internet (Ö3)	1	10
	Personal Means (Ö4,Ö5,Ö8,Ö9,Ö10)	5	50
	Seminar (Ö6,Ö7)	2	20

When the Table 2 is viewed, teachers' opinions about where and how the teachers reached the information about the values education program applied in National Education Institutes are seen as "personal means" with the percentage of %50. Other opinions of the teachers are the school and seminar with %20 and internet with %10. The citations from the opinions of the teachers are given below.

"I had my first opinions with the help of bulletin boards and studies prepared at school. Then I read something about this subject" (Ö2)

"I have reached the information by the help of web site" (Ö3)

"I do not have much information. I have reached my available information as a result of investigations about the subjects." (Ö5)

"In the past it was mentioned a lot, meetings and seminars were applied in school level but I do not think it was effective" (Ö6)

Teachers' opinions about which values should be gained by students in the scope of values education are presented in Table 3.

Table 3. Teachers' opinions about which values should be gained by students in the scope of values education

Theme (Categories)	Codes	n	%
Which values should be gained by students	Love and Respect (Ö1,Ö7,Ö8)	3	30
	Family (Ö2)	1	10
	National and Religious Values (Ö3)	1	10
	Universal Values (Ö4,Ö5,Ö6)	3	30
	Social Ethics (Ö9,Ö10)	2	20

After viewing the Table 3, in terms of teachers' opinions about which values should be gained by the students, there are replies about a %30 ratio of universal (fair, patience, tolerance, helpfulness, honesty, merciful etc.) values and %30 ratio of love and respect values.

Among the other opinions, there are ratios of %20 social ethics, %10 family based values education and %10 national and religious values. The citations of teachers' opinions are demonstrated below.

"Respect... First of all, I think when there is respect somewhere, it is more likely to live in." (Ö1)

"I think the values education should start in the family. If there will be values education at school, this should be in an applicable way. Instead of just giving the students information about values education, we should work in with applicable works to go beyond this position." (Ö2)

“Individuals should be educated according to the national and religious values of this country” (Ö3)
“Fairness, patience, tolerance, helpfulness, human relations are to be performed in this context” (Ö4)
“Social ethics, good person, the rules for the daily life in society, human relations and communication. As we live in a social environment, these properties are very essential to make this environment liveable to me.” (Ö9)

The third question -the teachers do not find the current values education applied at schools as a result of this- is about what can be done at school about this issue and about their suggestions are presented in Table 4.

Table 4. Teachers’ opinions about what should be done at schools about values education

Theme (Categories)	Codes	n	%
Teachers’ suggestions about values education	A specific lesson (Ö1)	1	10
	Long term social responsibility projects (Ö2,Ö3,Ö5,Ö6,Ö7,Ö8,Ö9)	7	70
	Model example (Ö4)		
	Seminar for families (Ö10)	1	10
		1	10

When Table 4 is viewed, teachers’ opinions about what should be done at schools about values education are mainly about the category of long term social responsibility projects with the ratio of %70. Other opinions of the teachers are a specific values education lesson with the ratio of %10, a model example for the children category with the ratio of %10 and family seminars with the ratio of %10. The citations of teachers’ opinions are demonstrated below.

“I don’t think it is enough. Because it is very difficult for teachers to spare time for the value education. May be it is very productive if there is a specific lesson named as values education.” (Ö1)

“It is not enough. It should be promoted by social activities.” (Ö2)

“It is not enough. There should be mostly applicable activities.” (Ö6)

“It is not enough. Teachers and students should apply the values mutually in daily life. Model examples should be constructed.” (Ö4)

“The application of the values are also very essential. It is not helpful at all not to obey them after spelling the values verbally. What is more, municipality organizations should give seminars to the families about the values education. Education starts in the family and continues in the society. If telling a lie, stealing or unchastity has become normal, they become normal in the family and society at last. In order to prevent these situations, the families should be honest and bad examples in TV series should be distracted. These behaviours should not drum into the brain and not be normal.” (Ö10)

Teachers’ opinions about the question related to values education which teaching methods and techniques or equipment and materials should be used are presented in Table 5.

Table 5. Teachers’ opinions about the question related to values education which teaching methods and techniques or equipment and materials should be used.

Theme (Categories)	Codes	n	%
Which teaching methods and techniques should be used	Video (Ö1,Ö6)	2	20
	No idea (Ö2,Ö3,Ö5,Ö10)	4	40
	Everything (Ö4)	1	10
	Game, drama (Ö7)	1	10
	Application Activities (Ö8,Ö9)	2	20

Viewing the Table 5, it is found that teachers do not have any idea about which teaching methods, techniques and equipment and materials should be used at the ratio of %30. Other opinions are respectively videos at the ratio of

%20, application activities at the ratio of %20, and games at the ratio of %10. The citations of teachers' opinions are demonstrated below.

"Interactive flat board can be used. Films or videos can be watched about the values" (Ö1)

"I do not think that I have enough information to suggest any teaching methods, techniques, equipment or materials about this subject and I am not expert about it" (Ö2)

"It should be spontaneous. Every kind of facility can be used for this education, as long as teachers and parents are eager for it" (Ö4)

"Games." (Ö7)

"Instead of equipment and materials, application activities are more helpful" (Ö8)

Teachers' opinions about what kind of activities they apply in the scope of values education are presented in Table 6.

Table 6. Teachers' opinions about what kind of activities they apply in the scope of values education

Theme (Categories)	Codes	n	%
What kind of activities	Discussions (Ö1)	1	10
	MEB framework curriculum (Ö2)	1	10
	No answer (Ö3,Ö5,Ö10)	3	30
	Trips (Ö4,Ö7,Ö9)	3	30
	Direct instruction (Ö6,Ö8)	2	20

After viewing the Table 6, teachers' opinions about the applications related to values education are mostly trips with the ratio of %30 and no answer about the application related to the values education with the ratio of %30. Other opinions are respectively direct instruction with the ratio of %20, creating a proper discussion environment with the ratio of %10 and applying the framework curriculum of National Education with the ratio of %10.

"To be honest I cannot spare much time for it. When I have time in the classroom, I try to apply mutual discussions as it needs to be." (Ö1)

"I try to include values education into my lessons by the use of framework curriculum prepared by National Education" (Ö2)

"I include the activities in a verbal instruction" (Ö8)

"We go trips and visits about the subject" (Ö9)

Teachers' opinions about the problems encountered during the values education applications were presented in Table 7.

Table 7. Teachers' opinions about the problems encountered during the values education applications

Theme (Categories)	Codes	n	%
Encountered problems	Time (Ö1,Ö9)	2	20
	Lack of knowledge (Ö2)	1	10
	No idea (Ö3,Ö5,Ö8)	3	30
	Teacher's attitude (Ö4,Ö6)	2	20
	Value study (Ö7)	1	10
	Negative environment (Ö10)	1	10

After viewing the Table 7, teachers' opinions about the problems encountered during the values education applications are %30 no idea, %20 time problem, %30 teachers' different approaches to values education, %10 teachers' lack of knowledge, %10 value conflicts and %10 continuous negative effects on children of the environments. The citations of teachers' opinions are demonstrated below.

“There should be more investigations and studies about this subject. When you have a detailed information, it would be easy to apply it. I have observations about that teachers do not have enough information about this subject and they do not know how to manage the process of values education.” (Ö2)

“Everyone should give the same or similar attention to values education. When it is ignored, there will be ne acquisitions for the students and teachers” (Ö4)

“Values studies.” (Ö7)

“Time problem is available. Assigning the students in the scope of social responsibility activities can be sometimes problematic.” (Ö9).

“...especially respect to woman should be acquired because the woman is an essential person who grows the child that is the base of the society and shapes the family.” (Ö10)

Result Discussion And Suggestions

This study is aimed to determine the opinions of teachers related to values education. According to the answers given in the current investigation, it is concluded that the teachers' knowledge about values education is gained by the help of their own means. The question that which values should be acquired by the students is replied by the teachers as love, respect, fairness, cooperation and honesty. What is more, the teachers suggest long term social responsibility projects to be organized related to values education subject. It is pointed out that the teachers do not have enough knowledge about what teaching methods, techniques, equipment or materials should be used in order to teach values education. According to the present examination, it can be understood that teachers generally instruct directly to teach values. The teachers build consensus about the problems encountered during values education applications. The idea of that the direct instruction method is not enough related to the problems during the applications and the presence of the teachers who has no idea about the issue come into prominence.

When it comes to the investigations performed about values education, Yiğittir and Öcal (2011) examined the opinions of 83 high school history teachers from different provinces in their study. According to their investigation, history teachers are eager to teach their students national values like “patriotism and love of nation, historical consciousness, sensitiveness to historical and cultural heritage, national and divine values, cooperation, respect, independence, respect to The Turkish National Anthem and Turkish flag”. The history teachers attended to the study are understood that they use different instructional methods to teach values education like inspiration, case study and book analysis, documentary and short films, trips to historical places and museums, biography examination, research, modelling.

In the study of Çengelci, Hancı and Karaduman (2013), they aimed to determine the opinions of teachers and students about values education in a primary school environment. Teachers proposed some suggestions related to teaching of values education process, school staff and school-family-society cooperation. Students thinks that mostly honesty value is tried to be instructed in their school. It is pointed out that students confirmed less the items about school cleaning and creating classroom rules. Ogelman and Sarıkaya (2015) aimed to show the opinions of pre-school teachers about the values education in their investigation. According to their study results, when it comes to values education, teachers firstly thinks the concepts like respect, love, tolerance, responsibility, cooperation, honesty, helpfulness and kindness. The problems encountered by the teachers during the values education are children's developmental situations (short attention span, lack of abstract thinking, readiness etc.), lack of support from families, lack of material, book, curriculum, teachers (self-esteem, lack of knowledge) and lack of time. Moreover, teachers claimed that it is necessary to inform families about the issue, include values education in preschool curriculum, promote teachers with materials about values education and give seminars to teachers.

Consequently, when the researches performed so far are examined in detail, all the surveys connect the same points. In this context according to the result of the current survey, it can be suggested that school staff and teachers are to be informed about teaching methods, techniques and materials to be used in values education and also rearrangements in the curriculum is to be applied.

Teaching Mathematics With The Use Of The History Of Mathematics: Some Opportunities Offered By The World Of Psychophysics

Verena Zudini

Department of Mathematics and Earth Science
University of Trieste, Italy
vzudini@units.it

Abstract

The history of mathematics may be useful in education and represent a support in mathematics teaching mainly in two directions: on the one hand, arousing the students' interest in mathematics and, on the other hand, stimulating the reflection about mathematical concepts and methods. This work shows how the figure of Gustav Theodor Fechner (1801-1887) and the discipline of psychophysics which he founded should rightly constitute a chapter of the history of nineteenth century mathematics to be adequately re-evaluated also in the context of secondary school and university mathematics teaching (including teacher training). We will focus on the opportunities which a deep analysis of Fechner's contribution can offer in mathematics education of today.

1. Fechner And Psychophysics

Historians of science credit Gustav Theodor Fechner (1801-1887) with having founded the discipline of psychophysics; his work, which was entitled *Elemente der Psychophysik* and published in 1860, is the first official text of this "new" discipline, presented as a complete and mature science.

Owing to his theory, Fechner is recognized as the scholar who developed the first quantitative methodology of psychology. Fechner, in his work, aims constantly to unite psychology and mathematics, conceived as an essential component in achieving a measurement of mental variables. Mathematics plays in Fechner's theory a key role as a tool that can enable the realization of his scientific project and is a fundamental element for the sheer existence of the discipline of psychophysics, applied at a high level.

The figure of Fechner was central to the issue of mental measurement and his contribution (in terms of the measurement model he proposed) had a strong impact on the reality of nineteenth century measurement in its entirety, having influence up to today. So, his figure and work deserve a prominent place in the landscape of (applied) mathematics of that period.

Focusing on Fechner and psychophysics is of interest in so far as they can be adequately re-evaluated also in the context of secondary school and university mathematics teaching (including teacher training). The fascinating example of Fechner, the person, may significantly stimulate students' interest; an analysis of the concepts and methods (e.g., functions and calculus) used by him and by the subsequent scholars who have dealt with psychophysics provides a good aid to see mathematics from a new point of view and in a new work environment (particularly engaging, concerning our human nature, and different from the traditional approaches: Regarding the interaction of the domains of mathematics education and the history of mathematics in the process of mathematics teaching, see, e.g., Furinghetti & Radford, 2008, and Fenaroli, Furinghetti & Somaglia, 2014).

1.1 Fechner, A Fascinating Figure

Fechner's conception of psychophysics stems from his education, as a physicist and a philosopher, and his life and personality: The study of his figure and the origin of his thought is fundamental for a correct interpretation of his psychophysical theory, in which science and philosophy fuse, and is a very good example for showing (secondary school and university) students how we work when doing (applied) mathematics.

A singularly eclectic figure, when he left school, Fechner attended the Academy of Medicine in Dresden and enrolled at the Faculty of Medicine at the University of Leipzig, where he followed lectures also in logic, botany, zoology, physics, chemistry, pharmacy, anatomy, physiology, obstetrics, and algebra.

Fechner's decision to study medicine soon proved to be an unhappy choice. Although he completed his studies, Fechner did not feel totally fulfilled in this discipline and decided against practising it. Such a negative reaction towards medicine found expression in the satirical contributions which he published under the pseudonym of "Dr. Mises" (see Antonelli & Zudini, 2011). However, none of this undermined Fechner's enthusiasm for science, which remained the fundamental interest of his life.

Fechner was physicist, physician, and philosopher, professor at the University of Leipzig. Initially attracted by the "philosophy of nature" ("Naturphilosophie") - which at that time went against Newton's doctrine, supporting instead the idea of the universe as an animated organism -, he extended his interests to physiology, physics, chemistry, and meteorology. In 1834 he became professor of physics and in 1835 founded the first physics institute in Germany, in the newly-built "Augusteum" in Leipzig. Fechner carried out research mainly on the theory of electricity, electromagnetism and electrical chemistry. Among the first scholars to recognize the importance of Ohm's law (1827), he distinguished himself by using the quantification method and by collecting a great amount

of experimental data, which he then analysed and discussed in his research. In 1832 he published the “Repertorium der Experimental-Physik”, forerunner of the journal “Fortschritte der Physik”, which was founded in 1845 (for more details regarding Fechner’s figure and work see, e.g., Brožek & Gundlach, 1988, Heidelberger, 1993, and Zudini, 2009).

1.2 The Definition Of Psychophysics

The central role which mathematics would have in psychophysics is clear from the very definition of it at the beginning of *Elemente*: Psychophysics is conceived by Fechner as the “exact doctrine” of the “functional or dependence relationships” between body and soul, more generally, between the bodily and spiritual, physical and psychical worlds (Fechner, 1860, vol. I, p. 8).

A first element emerges immediately in this definition: the conception of psychophysics as “exact doctrine”, which is characterized, in particular, as a study of the quantitative links that bind physical stimuli to mental variables (sensations) related to them. The basic idea of the conception is to consider the human perceptual system as a measuring instrument (more precisely as a physical instrument) that allows the quantification of sensory experience.

The philosophical basis for an assumption of this kind is the second major element in the definition of psychophysics: the “functional” conception of the relationships between body and soul, matter and spirit, and, more generally, between the physical and the psychical worlds, which in Fechner takes the form of an “identity view” (“Identitätsansicht”), already presented in the appendix to the second part of the work *Zend-Avesta* (Fechner, 1851; see also Heidelberger, 1993). In *Zend-Avesta, oder über die Dinge des Himmels und des Jenseits. Vom Standpunkt der Naturbetrachtung*, Fechner’s panpsychist philosophy finds expression in the theory of universal animation, which goes back to Friedrich Schelling and has a strong oriental character, and the program of the future discipline of psychophysics is already presented in an embryonic way.

According to the “identity view” by Fechner, matter and spirit are expressions of a single reality which manifests itself at times in one way and at times in another, just as the two sides of the same coin or medal, depending on the (internal or external) observation point from which one looks at it. On the basis of the principle of identity view, Fechner postulates the existence of a general and constant relationship of functional dependence between physical and psychical phenomena, that can be expressed in exact terms, through a law which has, as he intends it, elementary and universal character, similar to that of the law of gravitation. This allows, in Fechner’s theory, quantitative analysis of psychical dynamics and paves the way to realizing his project of a scientific foundation for the disciplines of the mind.

The appendix to the second part of the work *Zend-Avesta* is also important because, as above mentioned, it contains, in an embryonic way, a “new principle of mathematical psychology”, which would be the basis of the future discipline of psychophysics (Fechner, 1851, vol. II, pp. 373-386). Fechner himself remembers the morning of October 22, 1850 (still celebrated today as the birth date of psychophysics) when, while he was in bed, he had the intuition that the relative increase in the physical vital force could be the measure of the increase in the corresponding mental intensity (Fechner, 1860, vol. II, p. 554).

The aim to carry out the experimental measurement of the sensations and the foundation of a quantitative science, which is evident from the very definition of psychophysics as “exact science”, clashes with the (seemingly insurmountable) problem of the inaccessibility of sensations from direct, external observation.

As we will see, Fechner solves this problem by developing a “correlative theory” of the measurement. Instead of a direct measurement, he implements a psychical quantification by indirect means, through physical processes corresponding to the sensation, on the basis of the functional relationship of reciprocity that allows a scholar to choose the observation point which seems the better one (or, ultimately, in this specific case, the only feasible one): The scholar can measure the stimuli correlated to a sensation and determine the thresholds of sensations, using them as a unit of measurement.

1.3 Fechner’s Model Of Measurement

According to Fechner, any exact doctrine has to begin with the measurement of its objects; therefore, it is necessary to show how psychophysics allows the measurement of psychical magnitudes.

Already in 1858, anticipating the treatment of *Elemente*, Fechner had considered the status of measurement in psychology and had noted the problems and the relevant polemics connected with this operation (Fechner, 1858). Fechner was convinced that a quantitative aspect was undeniable in psychical phenomena; the question was to prove the actual correlation between quantity and measure in them.

“Measuring” means describing data through numbers, and therefore using mathematical rules in investigations. Fechner says clearly how this should be done in psychophysics when he affirms, proposing an “Euclidean model of measurement” (Zudini, 2011), that:

In general, the measurement of a magnitude consists in verifying how many times a magnitude of the same kind taken as a unit is contained in it. (Fechner, 1860, vol. I, p. 45)

Sensations are to be measured through the measurement of the stimuli that induce equally perceptible sensations, finding a method for establishing the equality between two given sensations. The specific method adopted by Fechner is the following: Two sensations of the same kind are perceived as different only when the difference between the corresponding physical variables is greater than a minimum value ("differential threshold").

As explained in Zudini (2011), Fechner faces the problem of measurement in two phases: In the first phase, he intends to indicate the conditions, which are necessary and at the same time sufficient, for saying, in general, that a magnitude, both of physical and psychical nature, is measurable - from 1858, he will call these conditions the "general principle of measurement" ("allgemeines Maßprinzip"). With the second phase, Fechner seeks to put into practice the principle of measurement for psychical magnitudes, that is, to find an empirical application of this principle in the psychical field.

1.3.1 The General Principle Of Measurement And Its Application In The Psychical Field

So as to guarantee the possibility of measuring a magnitude, the general principle of measurement sets out a series of conditions, which can be expressed schematically in the following way (Heidelberger, 1993, p. 220):

1. Magnitudes have to be conceived as phenomena that can increase or decrease in a continuous way;
2. There must exist a grade of difference, which can be reproduced or verified in various situations, such that one can decide if it is equal or not to the grade of difference between any other two magnitudes;
3. One can distinguish the conditions under which a magnitude has the value zero.

These conditions determine the possibility of measuring in the sense of "counting equals". In fact, Condition 2 gives a value "difference" that can be compared with other differences and therefore used as a unit for measurement. Any other value can in fact be expressed as consisting of a number n of units, starting from zero (Condition 3).

The general principle of measurement has a clearly theoretical character since it does not explain, for example, how to reproduce or discover the magnitude unit, nor how to proceed to the necessary comparisons between magnitudes. This principle is therefore to be considered in the light of the various types of magnitudes and verified in its validity in every field.

In the case of mental phenomena, according to Fechner, one can see at a glance that Condition 1 is satisfied, insofar as mental phenomena such as consciousness or attention are susceptible to a variation in grade; sensation, feeling, instinct, or volition can be weak or strong. Sensations can therefore be conceived as continuous magnitudes generated according to a gradual process starting from the zero condition.

Condition 2 requires us to be able to estimate the equality of the differences of sensations, which is, in general, difficult to carry out. In the case of sensations that are present at the same time and very different in intensity, a subject is, at most, able to estimate that one is stronger than the other; but to assess the size of the difference between the two is a very different thing. The latter implies that we have successfully derived a scale of sensation strength. To find this kind of scale, we need a unit. The difficulties that recur in this operation come from the very nature of sensations, which cannot be treated as material objects. For example, they cannot be put side by side as one does when estimating the length of two objects; neither is it possible to find a standard that allows for such a comparison.

The question is to find a proper procedure for psychical magnitudes; for this purpose, it is sufficient to exploit two other conditions which are valid for physical standards of measurement and which we can formulate in the following way (Heidelberger, 1993, p. 224):

4. A definition of a standard unit of measurement of physical magnitudes can be obtained by relating this unit to other dimensions, with which it is functionally connected;
5. In order to achieve standards of measurement of physical magnitudes we have to rely on our mental impressions, which are produced in us by the material quantities.

Condition 4 means that, when we measure physical objects, we have to deal not with pure dimensions but with dimensions which are expressed through concrete standards, as happens, for example, in the case of time: Fractions of time are measured not directly through time itself but using an external, concrete standard, such as the movement of the hand of a watch.

It is clear that, when we measure units of time, we have to deal with the units of space with which they are connected, considering as a point of reference both the movements of the heavenly bodies and the hands of the watch. That happens in (classical) physics also for forces: The forces themselves are not measured directly (which is impossible); we measure, instead, magnitudes which are relevant or dependent on them, such as the velocity variation of equal masses, or the differences of masses having the same velocity.

According to this interpretation of measurement, which could be defined as “correlative” (Heidelberger, 1993; Murray, 1993), for the measurement of any dimension Q , we need a directly observable dimension R and a device or apparatus of measurement A , properly calibrated and able to represent the values of R in correlation with those of Q in a unique and monotonic way (i.e., capable of preserving the order of the values of the two dimensions).

In the above quoted case of time, which is measured through the movements of the hands of the watch, we can construct a watch in order to supply such a representation: If we know the length of a distance covered by the hand d , we have at a glance the quantity of correspondent time t , according to the formula (“measurement formula”) $d = c \cdot t$, with c constant.

In the case of sensation, we have to search in an analogous way for a dimension which is correlated to it as space is to time, and that dimension is, according to Fechner and his “identity view,” the external physical stimulus. The apparatus that plays here the role of the watch is the human body, which is able to correlate, as the model of measurement itself demands, the values of intensity of sensation with those of stimulus. We must only find the “measurement formula” that expresses that correlation.

Condition 5 emphasizes the importance of sensorial impressions in the process of constructing standards of measurement of physical magnitudes. Still considering the example of time, if we use a watch, calibrated in minutes, it is evident that we conclude that a minute has passed from the mental impression that the distance covered by the hand is equal to the space between two notches. In the process of derivation of standards of measurement for physical magnitudes, the consciousness of equality of a standard to the measured object is fundamental, and this consciousness depends on the subjective mental impressions which we have of concrete physical quantities. The subjective component is therefore necessary in the process of measurement, but can be made objective, restricting its role to the function of comparison of the correspondences existing between the device of measurement and the measured object.

In the process of measuring physical magnitudes we use mental impressions in order to determine the equality of standards and measured objects; therefore, we determine the magnitude of the physical by connecting the physical with the psychical. In the case of measuring psychical magnitudes, on the other hand, we have to reverse this relation. This is possible only after arranging and calibrating a physical scale in such a way that equal psychical magnitudes result from intervals of equal dimension on the scale, according to a law which allows us to connect increments of stimulus and increments of sensation and to deduce therefore, from the intensity of the stimulus, the intensity of the associated sensation.

In the case of measuring time through a watch, the determination of such a law is simple, since equal intervals of time correspond to equal distances covered by the hand. That does not happen for the measurement of sensation through the stimulus connected with it; in such a case, equal differences in sensation do not correspond to equal differences in the stimulus.

The question is to find a function that expresses the reality of the process. The solution to the problem proposed by Fechner follows, by analogy, the procedure used in (classical) physics for measuring forces: In this case too, we can try to measure the magnitude of the sensation produced by equal stimuli or the magnitude of the stimuli which induce an equal sensation. The first possibility is, however, not practicable in psychophysics, since sensation is not susceptible to direct measurement; therefore, the second possibility is left, which consists of assuming the variable sensation as constant and in measuring the physical stimuli for which it remains constant. Here, the distinction made by Fechner between absolute sensitivity and differential sensitivity comes into play. With the first, he means the organic response to the absolute value of a given stimulus; the second refers, on the other hand, to the response to the relative difference between two stimuli and varies according to the variation of the absolute magnitude of the stimulus.

1.3.2 The Measurement Of Sensations

With such conditions posed for measurement, we have to be able, according to a model which follows Euclid (Zudini, 2011), to find a homogeneous unit of measurement and to determine the number of times in which it is contained in the magnitude to be measured. As time is measured through the hand of the watch and space through the ruler, so we can deal with sensation, using the stimulus for its measurement: We proceed to subdivide sensation into equal sections (i.e., in the equal increments which its growth from zero consists of) and to consider the number of these equal sections as determined by the number of the correspondent increments of the stimulus, which can provoke equal increments of sensation (“Maßprinzip”).

These increments in sensation, determined through physical units of variable magnitude which are able to provoke equal increments in sensation, are assumed as units of measurement.

The sensations, as we know them, satisfy, therefore, in Fechner’s system, the conditions posed for measuring a magnitude. In particular, the fulfilment of those conditions is strictly connected with Fechnerian thought in its totality and achieved on the basis of the parallelism between the physical and psychical and of the functional relation of reciprocity which justifies the scholar in choosing the point of view which he considers more proper (or the only practicable). If we cannot measure sensations directly, nevertheless we can measure the stimuli that provoke them and determine the thresholds of sensations, especially the differential ones, using them as the unit

of measurement; we have to measure sensations through the measure of the stimuli that induce equally noticeable sensations, finding a method for determining the equality of two given sensations.

For this purpose, Fechner uses the results on differential sensitivity obtained years earlier by the physiologist Ernst Heinrich Weber (1795-1878), according to which equal relative increments in stimulus correspond to equal increments in sensation (see Weber, 1834, 1846); he generalizes them and, also with the aim of statistical methods, sets out what he calls “Weber’s law” (“Weber’sches Gesetz”).

1.3.3 Fechner’s Measurement Formula

Starting from Weber’s law, Fechner takes what he considers to be an experimental result - the fact that the just noticeable difference in sensation is constant - and applies the differential and integral calculus to sensation conceived as a phenomenon which increases in time and is susceptible to infinitesimal variations.

Moving from the differential equation:

$$d\gamma = k \frac{d\beta}{\beta}$$

by integrating both members of the equation and imposing the condition of the threshold for the stimulus magnitude - i.e, for the threshold value of the stimulus magnitude, the sensation magnitude is zero -, Fechner obtains his famous logarithmic “measurement formula” (“Maßformel”):

$$\gamma = k \log \frac{\beta}{b}$$

where γ is the sensation magnitude, β the stimulus magnitude, b the threshold value of the stimulus magnitude β (called the “absolute threshold” of the stimulus magnitude), and k is a constant (called “Weber’s constant”, depending on the sensory modality) (see Fechner, 1860, vol. II, pp. 10-13; for in-depth analysis of this formula, see Masin, Zudini & Antonelli, 2009, and its references).

The formula of measurement proposed by Fechner is called, in current psychophysics and, generally, in science, “Fechner’s law” (see Figure 1) and is considered the first explicit, quantitative formulation connecting sensations with stimuli (Algom, 2003).

Figure 1. “Fechner’s law”

Fechner arrives at his result giving credit to several scholars who preceded him (see Fechner, 1860, vol. II, pp. 548ff.): first of all, the aforementioned Ernst Heinrich Weber, who, according to Fechner, gave unity to various events observed in the psychophysical sphere and brought new evidence to the discipline, making it an exact and “connected” science. It was he who set out the first clear and, in some way, general enunciation of the psychophysical law, determined by using a method of measurement of sensation in almost all the fields of perception and called by Fechner “Weber’s law”.

According to Fechner, a fundamental role in the development of his psychical measurement theory (“Maßlehre”) was also played by researchers who studied the mathematical (logarithmic) function through which psychical magnitudes are linked to physical quantities in some specific areas: Among these, Daniel Bernoulli is to be mentioned with his determination of the dependency relationship of “moral fortune” on “physical fortune” (see Bernoulli, 1738).

By elaborating all these contributions in the context of a very particular panpsychist philosophy, Fechner comes to the determination of the functional relationship between the physical and mental worlds, between body and soul,

formulating a law which expresses their relationship in precise and quantitative terms and, in this way, achieves a psychical “measurement”.

Fechnerian psychophysics, whose principal result is Fechner’s law, represents therefore a composite theory in which different elements or “ingredients” are harmoniously fused together (Zudini, 2009) according to the following schema (Figure 2):

Figure 2. The structural system of Fechner’s psychophysics

The mathematical ingredient, as reported in this scheme, assumes a key role inasmuch as it enables Fechner to treat mathematically mental phenomena and to pursue his aim of building a psychological metric, anchored in the physical world (see Romano, 1976).

2. Fechner’s Heritage

The impact of Fechner’s work was immediately great on the scientific community: For the first time, a rigorous project of empirical and experimental research, which was guaranteed by the possibility of measuring mental phenomena, based upon mathematics, was begun and carried out (see Zudini, 2011).

2.1 The “Fechner Case” And The Debate On It: From Then Up To The Present Day

Fechner’s project was the object of lively discussion, in particular in the Mitteleuropean cultural world (extending to France and Belgium) among scholars from very different disciplines, who dealt with the “Fechner case”: Among them, many scientists of the nineteenth and twentieth centuries, such as Joseph Antoine Ferdinand Plateau, Hermann von Helmholtz, Ernst Mach, Jules and Paul Tannery, Joseph Delboeuf, and David Hilbert, are to be mentioned (see Zudini, 2009, 2011; Antonelli & Zudini, 2012; Zudini & Zuccheri, 2016).

The model of measurement proposed by Fechner became that of reference, which no scholar could neglect: a model to criticize, correct, or confute, in the methodological aspects of its (empirical and mathematical) procedures or even in its psychophysical, physiological, or, in a strict sense, psychological value itself; in certain cases, it was a model to reject in a radical way, on the basis of the assumption that it was impossible to measure sensations and, in general, psychical magnitudes and therefore to make a scientific study on them.

So, as described in Zudini (2011), Fechner’s destiny would be analogous, in a certain way, to that of Euclid, whose model was considered for centuries as the “summa” of geometrical knowledge and of logical rigour, as the correct idealization of the properties of physical space and of the figures of this space, and was then called into question in particular with the advent of non-Euclidean geometries in the nineteenth century. Fechner’s attempt to apply a model of measurement to sensation magnitudes which goes back to Euclid himself (Zudini, 2011) - and the debate that followed - generated ideas, concepts and theories which were destined to have rich developments in the scientific field of the twentieth century and that still animate and are relevant in current psychophysics.

The discussion on Fechner’s work was initially developed from three types of issues: The first concerned the correctness of the law proposed by Fechner on the basis of the experimental data and the mathematical techniques which he used; the second was related to the very nature of the law; the third regarded the possibility of measuring sensations and mental magnitudes in general. In particular, it is to be said that the response given by the cultural world of the French language to Fechner’s psychophysics was negative both from a theoretical and a mathematical point of view, based on the conviction that the application of mathematical models to the psychical sphere required further analysis and experimentation.

As for the first aspect, namely the correctness of the mathematical law obtained by Fechner - the aspect which is the most interesting in this context and on which we focus, also considering the development of psychophysics -, the contribution of Joseph Antoine Ferdinand Plateau (1801-1883), a Belgian physicist and professor at the University of Gand (Ghent), is to be mentioned. Starting from experiments which he conducted on the bisection of sensorial intervals (Plateau, 1872), Plateau, unlike Fechner, derived a power function as psychophysical law (which was also proposed by the German philosopher and psychologist Franz Brentano (1838-1917): See Brentano, 1874). Plateau’s power function would come to the fore again about a century later, in the so-called “modern psychophysics” of the American S. S. Stevens (Stevens, 1957). The latter liked to mention Plateau among those who, in the nineteenth century, had anticipated his power law.

The general form of this law is

$$\psi(I) = kI^a$$

where I is the magnitude of the physical stimulus, $\psi(I)$ is the subjective magnitude of the sensation evoked by the stimulus, a is an exponent which depends on the type of stimulation, and k is a proportionality constant which depends on the units used.

2.2 Toward A “New” Conception Of Mental Measurement

Starting from the 18th century, the question of the possibility of measuring the intensity of mental variables was much discussed. Fechner, Plateau, and other contemporary scholars treated this question considering the two “worlds”, the physical and the mental ones, as arranged according to the following schema:

In this schema, a mental variable Ψ corresponds to every physical variable Φ . The problem is then reduced to finding the function (“psychophysical law”) that connects Φ and Ψ .

It is evident that in this formulation, which dominated the history of psychology from Fechner until the 1960s, the problem is somewhat simplified because of the (undoubtedly limited) way of conceiving physical and mental variables. It is clear, in fact, that, for certain mental variables Ψ , there is no physical correspondent Φ . The very search for the function that connects Φ and Ψ creates difficulties, related to the arbitrary nature of the choice of the formula, among the various existing possibilities, and the measurement units used from time to time (see Masin, 2003, 2004).

Starting from the 1960s (Attneave, 1962; Curtis, Attneave & Harrington, 1968), a new way of dealing with the problem was stated, characterized by a decisive “leap in quality”; the schema became more complex, involving a further “world”, that of the responses (of a subject):

Responses played an important role and had to be taken into account, as the world of responses of a subject is accessible, unlike the mental one.

The relationship between Φ and Ψ is what Fechner sought, while the relation between Φ and J is known, since it is possible to measure the variables Φ and the variables J . For a psychologist, it is more important to determine the relation between Ψ and J .

For example, if the relationship between Ψ and J is the identity, we would have

$$J = \Psi$$

as Stevens, essentially, affirmed.

Other authors have believed, on the contrary, that

$$J \neq \Psi$$

A possible hypothesis is that J is equal to Ψ , up to an unknown constant, namely

$$J = a \cdot \Psi$$

with a an unknown constant.

Another possibility, less “good” (from the operative point of view, for those who do research in psychology) than the former, is that

$$J = a \cdot \Psi + b$$

with a and b unknown constants.

Further, it is possible that there are more complex relationships between J and Ψ , namely:

$$J = F(\Psi),$$

with F a non-linear function.

In psychology, scholars are interested in knowing which relationship is the correct one, in order to calculate Ψ .

Today, in the context of mental measurement, the studies by Norman H. Anderson, carried out starting from the 1960s, are an example of interest. Anderson has proposed a theory called “information integration theory” (hereafter, IIT) which “illustrates” the “modern aims” of psychophysics (Masin, 2004).

Through this theory (see, e.g., Anderson, 1981, 1982, 1991), Anderson intends to “enter” into the human mind more than Fechner and others before him did: He “reaches” not only Ψ , but “arrives” at measuring the mental quantities which are generated “before” Ψ , according to a procedure appreciably different from that of classical psychophysics.

Anderson formulates two axioms, the axiom of “purposiveness” and the axiom of “integration”, and starting from these develops, on an inductive basis, his theory. This is proposed as a “unified” theory (Anderson, 1996) and aims at explaining, by using the very concepts of everyday life, the multiplicity of factors that contribute, combining (or indeed integrating) with each other, to the processing of information in various mental processes, in the context of a vision of a human being as an active elaborator of information in order to reach different goals.

IIT gives, according to Anderson (2007), a solution to the age-old problem of measuring the sensations in psychophysics, going beyond the question of determining the “psychophysical law” between stimulus (physical variable) and sensation (mental variable) which was typical of classical psychophysics.

IIT aims not only at measuring the intensity of sensations, but also at discovering the laws governing the process of integrating information in the context of the genesis of the sensations themselves; the measurements of this

information are obtained on the basis of these integration laws (which are said to be simple: additions, multiplications, weighted averages, or combinations of these - hence the idea of a “cognitive algebra” as a tool not only in psychophysics, but in the entire psychology).

IIT can be schematized using a diagram (“functional measurement diagram”) (Figure 3), where the (observable) stimuli, indicated by S_1, S_2, S_3 , on the left side of the diagram, are factors of the (observable) response, denoted by R , on the right side of the diagram.

Figure 3. The functional measurement diagram, which is based on Anderson (1981, p. 5)

Between each of the stimuli S_i and R there are three functions: the valuation function (or “psychophysical law”), the integration function (or “psychological law”), and the response function (or “psychomotor law”), in symbols V, I , and M , respectively, representing the transition from S_i to R . The S_i are transformed, through the valuation function V , into the corresponding (not observable) psychological stimuli s_i ; these stimuli s_i combine with each other, through the integration function I , into the unitary, implicit (unobservable) response r , which is then transformed by the response function M into the (observable) R response, according to

$$V(S_i) = s_i$$

$$I\{s_i\} = r$$

$$M(r) = R$$

Three unobservable entities are present in the diagram: the integration function I ; the psychological stimuli s_i , corresponding to the physical ones S_i and internal to the body, often unconscious; the implicit answer r , which can be conscious, but it is also internal to the body.

Functional measurement solves the problem of “the three unobservable entities” through the joint solution of the following three related problems:

1. the measurement of the psychological stimuli s_i ;
2. the measurement of the implicit response r ;
3. the determination of the integration function I .

2.3 Psychophysics And “Virtual Reality”: Looking Ahead To The Future

Today’s psychophysics - obviously evolved from Fechner’s time in terms of physiological and methodological knowledge, as we have briefly seen - is a lively area of research that analyses the perceptual processes by studying the effects of physical stimuli on a subject. These stimuli are constructed by an investigator according to his research needs and have controlled and defined physical properties. Stimuli can be of visual, auditory, tactile and olfactory type.

Psychophysical research is aimed primarily at determining the “perceptual threshold” value below which sensory stimuli are not perceived. Scholars have to systematically vary the magnitude of the stimuli on the basis of different methodologies, in order to define “psychometric” functions, which describe the link between the magnitude in question and the extent of the perception that human beings have of it. Therefore, they proceed, in the context of an “experiment”, collecting “experimental data”, which express, through their numerical value, the perceptions that subjects have according to the variation of the magnitude of the stimuli. An experiment places subjects in a “small virtual reality”: Subjects’ tasks will be to indicate (often simply responding to a question with only two forced answers) their own level of perception of the magnitude in its variation.

With the advent of computers, computational capabilities have been revolutionized: In just a few years, it has become possible to obtain performances that greatly reduce the time required to simulate, analyse and solve “systems”; the number of variables that can be used in the experiments has been significantly increased and the quality of the response of the simulated systems has radically improved. The electronic calculation methods, gradually developed due to technology, have become essential instruments for the realization of “virtual realities”, which are able to simulate systems in almost all their aspects.

In the research field of psychophysics, experiments can actually be considered “small virtual realities”; subjects interact with these and respond on the basis of their own perceptions and cognitions. Using a programming language, combined with graphics and sound libraries, scholars can create virtual environments on the computer with highly realistic graphic and sound details. “Optimal” software tools for the realization of experiments of

visual and acoustic perception with the use of an electronic calculator, and then for the creation of small virtual realities, are “MATLAB” and the “Psychtoolbox” libraries (here the term “optimal” refers to a balance between the high calculation performances obtained and the low production times of the final result: This is possible thanks to “MATLAB”, which makes available almost all the mathematical tools through a very intuitive and simplified language; therefore, one can initialize and process large amounts of data with a minimum design effort. See, e.g., Brainard, 1997, Pelli, 1997, and Shreiner et al., 2012).

Psychophysical experiments require the use of mathematical tools (such as analytic geometry, numerical analysis, trigonometry, Boolean algebra, complex analysis, statistics) primarily for defining and processing the data which are representative of the stimuli and reworking the output data (i.e., the magnitudes related to subjects' responses).

3. Conclusion

Following the way of “mathematization” indicated by Fechner and developed afterwards, psychophysics has elaborated over time increasingly rigorous methods for studying mental events, namely for evaluating and modelling them. These methods have been incorporated into many different disciplines (e.g., sensory systems, cognition, memory, psycholinguistics) and - often being modified to meet the specific needs of each discipline - have contributed, in a significant and successful way, to the state of knowledge in them.

Fechner's project of combining mathematics and psychology to achieve a mathematical treatment of the mind and constituting a mathematical science of humans has therefore borne fruit. We can hazard that psychophysics, as a discipline, has gone beyond the most optimistic expectations of Fechner, who was, after all, a son of the physiological and technical knowledge of his time.

As the present work has shown, in the development of psychophysics, mathematics has always played, from its origins until today, a central role in order to unite the physical world and the mental world - as the name of psychophysics itself suggests.

Those who do psychophysical research can realize it every day. And Fechner deserves to be remembered for his mathematical contribution, just as the psychophysical scholars, members of ISP (“International Society for Psychophysics”), have organized every year, since 1985, a “Fechner Day” in order to discuss psychophysics and its developments or trends. It is no coincidence that, when possible, “Fechner Day” takes place on the anniversary of the intuition, mentioned at the beginning of the present work, that Fechner had on October 22, 1850 - namely, that the relationship between the stimulus and the sensation was capable of being expressed in mathematical terms (specifically, with a logarithmic formula) - and from which psychophysics would originate.

Teaching Medical Terminology: Implications For English For Medical Purposes Courses Of Instruction

Aynur Ismayilli Karakoc

School of Linguistics and Applied Language Studies Victoria University of Wellington
Wellington 6012, New Zealand
studyaus1@gmail.com

Abstract

English for Medical Purposes (EMP) has intrigued the researchers to study the different aspects of it including medical terminology. Majority of studies have emphasized the needs for training the learners in medical terminology, as it derives from Latin or Greek origin and is based on word root and affixation principles. However, there are a few empirical studies which have addressed this issue from learner-centered approach, particularly at Turkish EFL context. The present study discusses the effect of activities for teaching medical terminology conducted with L1 Turkish speakers. The study employed mainly qualitative-based methodology comprising teacher observations, student reflections, and semi-structured interviews along with pre- and post-test results. The findings suggest that the learners' vocabulary knowledge was improved after the implemented techniques. The paper suggests further implications and recommendations for EMP courses of instruction.

Introduction

The role of English as a lingua franca is surely eminent not only in global communication, but also in education, academic fields and print publications. Consequently, its role in English teaching has been reflected in English for Specific Purposes (ESP), where it has been applied to business, technology, computer science and many other disciplines. Similarly, the role of English also in medicine is increasing fast, as most of the publications, medical textbooks, journals and conferences are growing firmly in English (Chia et.al, 1999; Hwang & Lin, 2010). Concomitantly, English for Medical Purposes (EMP) has been branched out under ESP. Apart from academic demands, English has become vital at workplace, particularly in health care settings as well. For example, there is growing number of healthcare professionals (e.g., nurses, pharmacists, doctors) working in English speaking countries, or people from different countries visiting a specific country for health care services.

In terms of Turkey, a large number of citizens from different countries visit here for medical or health tourism purposes. According to the report by the Ministry of Health of Turkey Republic (2012),

“health tourism refers to travelling from the place of residence to another place for the purpose of protection and development of health and treatment of diseases, and benefiting from health and tourism opportunities by staying at the place of destination for minimum 24 hours. A person who travels for the aforementioned purposes is called “health tourist”. p. 5.

This necessitates the role of English to be important in health industry which also requires training health professionals in English to communicate their ideas to health tourists. Apart from that, the number of international students studying in Turkey is steadily rising, so does the number of international medical faculty students. To meet all these needs, several universities in Turkey have established medical faculties in English to prepare students for academic and workplace conditions. Consequently, this has posed requirements and tasks on parts of both trainers (e.g., universities, teachers) and trainees (e.g., medical students, to be- doctors, nurses, pharmacists) to meet the learners' needs. Considering that ESP is learner - centered approach (Hutchinson & Waters, 1987), researchers have conducted needs analysis to explore the learners' wants and demands in order to furnish them with most suitable methodology.

Literature Review

Needs Analysis

ESP can be defined as "an approach to language teaching in which all decisions as to contents methods are based on the learners' reason for learning" (Hutchinson & Waters, 1987, p. 19). These reasons can be *needs, wishes, wants and lacks* which all group under an umbrella term, *needs*. To meet the learners' needs, researchers in various countries have designed needs analysis, prepared or suggested syllabus and materials addressing these needs (Antic 2009; Karimkhanlouei, 2012; Popa, 2013; Faraj, 2015; Kayaoglu & Akbas, 2016; Celik, 2017; Celik & Topkaya, 2018 and others). The majority of the studies have implemented questionnaire and checked learners' perceptions towards their needs for EMP macro skills (reading, writing, listening and speaking).

When macro skills categorized under sub-skills, studies have paid more attention to EMP-related specific grammar points including present simple, past simple and present perfect tenses, passive voice and modal verbs, as they

have been found frequently used in EMP textbooks and instruction materials (Pavel, 2014; Faraj, 2015). Some of the studies have focused on activities attending to linguistic issues or skills such as grammar and lexicon for EMP (Antic, 2010; Pavel, 2014); moves in medical research papers (Antic, 2007), reading EMP related texts (Alagozlu, 1994; Tasci, 2007; Yeniceri, 2008); medical discourse (Hoekje, 2007), pronunciation (Labov & Hanau, 2005) vocabulary and others.

Vocabulary for EMP

Vocabulary knowledge plays a great role in EMP, because it is based on a specific terminology with Greek or Latin origin. Hence, having sufficient medical terminology knowledge is essential for the one who wants to be in medicine discipline. Since these words are built on affix rules, it is of significance to know not only the word roots but also the affixes. In this regard, studies have considered word formation rules and suggested training the learners in specific medical terminology (Antic, 2009; Pavel, 2014; Piroozan, Boushehri, Fazeli, 2016). To the researcher's knowledge, however, there are a few empirical studies addressing this question. To name a few, those studies address the issues concerning the perception of everyday language and medical terminology among international medical graduates in Australia (Dahm, 2011); discovering meaning of medical terms through word part analysis strategy in Iranian context (Taie, 2015), and checking the effectiveness of course instruction in terms of lay-medical vocabulary and formulaic language in New Zealand context (Wette & Hawken, 2016). Taie (2015) specifically focused on medical terminology and designed a student-centered approach in her study; however, although it showed satisfactory results, it was only limited to 'word parts analysis' (WPAS) technique, where words were split into roots and affixes and students were trained with this technique.

All in all, there is insufficient number of studies investigating the effectiveness of EMP courses of instruction (Ferguson, 2012), and they lack in directly offering student-centered approach, particularly of Turkish L1 speakers as well. Hence, motivated both by the literature and needs of the medical faculty and students at a private university in Turkey, the purpose of this study is to address the needs of L1 Turkish speakers in EMP focused lexical knowledge and train them particularly in medical terminology. The study was guided by a research question that specifically addressed the issue:

What evidence of the effectiveness of an EMP course can be seen from implemented methodology for teaching and learning medical terminology?

Methodology

Participants

The participants of this study were totally 30 students studying at English language preparatory course at a private university in Turkey. They were studying in this one-year course before enrolling at a medical faculty. The language proficiency level of the students was B1+ and B2 classified by a CEFR scale according to the proficiency test administered by the university. As part of a national curriculum, all of them had taken Biology course at a high school, which was also tested by national university entrance exam. As part of this course, students had studied human anatomy as well. In the first semester, the students took courses in grammar, reading and writing and listening and speaking for academic purposes, and content-based medical English. In the second semester, the same courses were followed except for content based English, and Medical Terminology course was added instead. This course was required mandatory, as it was deemed necessary by the medical faculty considering the needs of pre-medical students.

Instrumentation

For the purpose of this study, tests were used to check the learners' prior knowledge on unfamiliar terms related with three body systems, including endocrine system, nervous system, and the eye and ear. These particular systems were chosen randomly. The students were not told that these tests would be used for research purposes. The course period was from January till June, and was offered in 6 sessions a week. After implementing methodological activities and tasks with all chapters for the purpose of this study, posttest on pretested vocabulary knowledge used to check the effect of implementation, in particular how many words students could learn or remember. The test consisted of 90 multiple-choice (MC) questions with four options (answer choices) adapted from Fremgen & Frucht (2016).

Example test:

A medical term that means *polydipsia* is called _____

- A) many thirst
- B) many bacteria
- C) many hair growth
- D) many infected cells

Answer: many (excessive) thirst

Which term means *surgical repair of a nerve*?

- A) neuroplasty
- B) neuropexy
- C) neurorrhaphy
- D) neuropathy

Answer: neuroplasty

Apart from test results, students' reflections, teacher observation notes and semi-structured interview notes with students were collected to check the learners' perceptions respectively.

Design And Procedure

This study used pre-and post-test design to assess the learners' ongoing progress in terminology and implemented certain tasks to fulfill these needs. In the first academic week, students were introduced to general view of medical terminology in five sessions, so that they can have a general idea about word formation in medical terminology. After introduction sessions, the following tasks and methodologies were implemented during the course. It should also be noted that the techniques designed for the purpose of this study were implemented during the entire period of the course; however, the students' vocabulary knowledge was pre- and post-tested on only three body systems which were chosen randomly.

WPAS technique

WPAS (word process analysis) technique (Nation, 2001) deals with teaching vocabulary, and research has demonstrated that it has a successful effect on learning medical terminology as well (Taie, 2015). In WPAS, words were broken down into roots and prefixes/suffixes. For example, *brady* means slow, and when this word is used in combination with different word roots, learners were expected to critically transfer this knowledge across and build the meaning. In other words, for instance, the word *bradycardia* (*brady-* slow; *cardia-heart*) means slow heartbeat, and by already knowing the root and prefix, learners are expected to be able to build the meaning of *bradypnea* (slow respiration rate). This technique is also one of the most common methods offered in medical course-books (Cohen, 2008; Fremgen & Frucht, 2016 and others). These implemented activities helped students to think critically and transfer the already learned prefix/suffix to another term with the same prefix/suffix. It also facilitated the memorization, as there were many terms to learn. Student reflections on WPAS say:

S.B.: *'We should pay attention more to word root, prefix and suffix because they help me to memorize the terms'.*

A.B.: *'Prefix and suffix exercises were helpful because we can see the same parts in different chapters and in different words'.*

Terminology lab

The course was conducted through help of interactive tasks, videos and other visuals. In interactive tasks, they were asked to combine a correct prefix/suffix with given random word roots which were projected on board (Figure 1). In order to understand better and strengthen the vocabulary knowledge, supplementary videos and photos of checking terminology were also projected (Figure 2). Students found these online aids/activities very useful and claimed that they helped them to better learn the terms and recall them later. Moreover, students were also observed that they found traditional way of learning, i.e., only practicing by book, to be boring. On the other hand, technology-aided learning was found to be motivating in practicing the previous learned terms and supplementary to book exercises as well.

S.S.: *'I found it helpful to check my notes in book against the projected materials. Using only book would be boring; therefore, supplementing it with overhead projector, videos and other aids make the lesson enjoyable'.*

D.S.: *'More visuals and repetition through pictures helped me to learn and recall the terms, rather than focusing only on memorization'.*

S.Y.: *'I do not have anything to do with traditional way of teaching, but it won't be useful in terms of learning medical terminology'.*

Figure 1. Root/Affix Exercises on Language Lab

Though great majority of the students found technology-aided learning to be helpful for medical terminology, only two of them stated that there is no difference for them. Nevertheless, these students also stressed the essence of visual aids, to be effective.

E.E.: 'Traditional way is OK for me, but more pictures help me to understand the definitions better'.

S.S.: 'Though pictures are helpful for visual-learners, these activities and tasks were helpful for revision and made clear of what we knew or did not know'.

Figure 2. Terminology Exercise on Language Lab

Kahoot quiz-games

One of the interactive activities implemented in class was through online game called Kahoot (www.kahoot.com). It is a game-based learning platform and has been successfully implemented in schools and educational institutions as educational technology. Kahoot offers a lot of quizzes on medical terminology definitions. These quiz-games were used as revision during the classes. Also, it was a project requirement for students to prepare their own Kahoot quizzes (Figure 3). Hence, one group of students was randomly assigned a particular chapter and prepared online quiz on that medical terminology list (30 questions) supplemented with pictures. After checked by teacher, these quizzes were answered by a whole class. It was expected that this game would facilitate learning medical

terminologies. Students claimed that they motivated and participating in this quiz-game while preparing, sharing and competing with each other when answering it. Moreover, this interaction and preparation helped them to recall the definitions of terms in post-tests.

M.D.: *'These games helped to better concentrate on and recall the definitions'.*

M.B.: *'These quizzes not just make us only memorize, but understand and internalize'.*

A.T.: *'There are so many terms, but these projects facilitated learning them, and the test became manageable'.*

D.Z.: *'I learnt a lot while preparing my own quiz and answering my friends' questions too which helped me be successful in test'.*

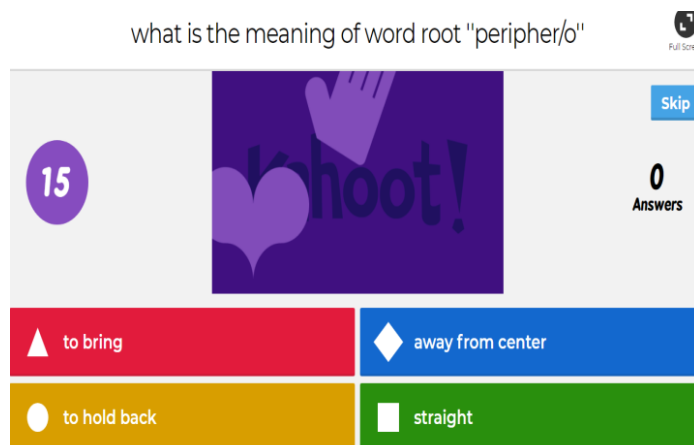

Figure 2. An Example of Kahoot Quiz-Game Prepared by Students

'Research' project

As part of the project, the other group was randomly assigned chapters and asked to list affixes/roots and definition of terms (e.g., certain pathology or condition) supplemented with pictures (Figure 4). After checked by the instructor, these projects were also shared in the class for learning and revision purposes.

E.S.: *'This project was helpful because I did not only learn the words like a robot'.*

S.B.: *'When preparing and finding so many interesting facts made me better memorize the terms. It was interesting to find different diseases related to my chapter'.*

S.O.: *'I was so excited to see our medical terminologies in other sources. I was happy that I recognized these words in tests'.*

Y.Y.: *'It saves time to learn new information from our friends' projects'.*

Term	WPAS	Definition	
Gingivitis	Gingiv/o: gums -itis: inflammation	-a common and mild form of gum disease that causes irritation, redness and swelling of gingiva.	<div>Healthy Gums</div>  <div>Gingivitis</div> 
Nephromegaly	nephr/o: kidney -megaly: enlargement	-enlargement of kidney.	

Figure 3. Student's Project on Medical Terminology

Research articles

In the other implemented activity, random research papers published by medical doctors in English were chosen. It must be noted that instructor chose these articles with moderate language difficulty, as students at this level found it hard to read articles with difficult language. In these activities, students read introduction and summary parts of articles, found terminologies and checked the meanings. They checked their knowledge of already learned words which was also of a revision and self-assessment character, which was claimed by students to be real and natural.

N.C.: *'It is important to check terms in papers because it is more real. It is not just a list of words to memorize'.*

E.B.: *'It prepares us to faculty classes from another perspective too. Because we will see such papers at faculty lessons'.*

E.S.: *'When I read these articles I better understand and try not to forget the words'.*

Results And Discussion

For the purpose of this study, paired-sample t-test was conducted to compare the difference between pre- and post-tests results by using SPSS (Table 1 and Table 2). There was a significant difference in the scores for pre-test 1 (M=8.18, SD=3.9) and post-test 1 (M=24.5, SD=4), $t(27) = -15.7$, $p < 0.05$; pre-test 2 (M=7.2, SD=3.7) and post-test 2 (M=24.3, SD=4.9), $t(28) = -16.4$, $p < 0.05$; and pre-test 3 (M=9.5, SD=5.5) and post-test 3 (M=24.8, SD=4.8), $t(26) = -12$, $p < 0.05$ respectively.

Table 1. Descriptive statistics for pre- and post-tests 1, 2, 3.

		Mean	N	Std. Deviation	Std. Error Mean
Pair 1	Pre-test 1	8.18	28	3.97	.75
	Post-test 1	24.57	28	4.05	.76
Pair 2	Pre-test 2	7.24	29	3.70	.68
	Post-test 2	24.38	29	4.96	.92
Pair 3	Pre-test 3	9.56	27	5.52	1.06
	Post-test 3	24.85	27	4.87	.93

Table 2. Paired samples t-test for pre- and post-tests 1, 2 and 3.

		Paired Differences					t	df	Sig. (2-tailed)
		Mean	Std. Deviation	Std. Error Mean	95% Confidence Interval of the Difference				
		Lower	Upper	Lower	Upper	Lower			
Pair 1	Pre-test1	-16.39	5.52	1.04	-18.53	-14.25	-15.71	27	.000
	Post-test1								
Pair 2	Pre-test2	-17.13	5.61	1.04	-19.27	-15.00	-16.43	28	.000
	Post-test2								
Pair 3	Pre-test3	-15.29	6.58	1.26	-17.90	-12.69	-12.06	26	.000
	Post-test3								

Hence, it can be claimed that both test results and qualitative data gathered during this study show that the implemented methodology was successful and vocabulary knowledge has developed. Also, as students claimed and as the teacher observed, the activities did not focus on rote memorization, but rather strengthening the memorization of terms by transferring their knowledge to real-life like tasks. Moreover, the methodology did not feature *'robot-way of learning'*, as stated by one of the students, rather it focused on trying to find solution on how to enable the students to internalize the learned terms. It should also be noted that, as observed and reflected by all students, their prior knowledge on Biology was of great importance to remember some subjects and terms. This appeared to facilitate the process of associating new knowledge with prior knowledge which requires critical skills on students' parts. Nevertheless, the study bears some drawbacks as well.

Limitations

The study cannot be claimed without its limitations. Given that the methodology implemented for this research focused on enabling the students to internalize the learning process of medical terms, it would be ideal to check to what extent students can recall this vocabulary after some time, i.e., at the faculty. Further follow-up analysis can be carried out with a content teacher as part of adjunct teaching. Moreover, students can be checked to what extent they apply or produce the learned terminology in communication skills in medical context, as this scope bears one of the essential issues for EMP (Wette & Hawken, 2016; Dahm, 2011).

Conclusion And Implications

This study attempted to learn the effectiveness of implemented methodology for teaching and learning medical terminology. Most of the studies have dealt with addressing needs of learners in foreign countries and in Turkey. However, there is a dearth of research on offering pedagogical approach to EMP, particularly to medical terminology knowledge of Turkish L1 speakers. This study can be considered unique as it tried to approach the problem further based on a student-centered approach and suggested pedagogical implementation.

The collected data through pre- and post-tests, students' during- and post-reflection notes, semi-structured interview notes and teacher observations showed that students appeared to be equipped with skills which can also be useful at the faculty. By preparing the projects and applying the learned knowledge into practice, they can be considered to be trained independently which can be called autonomous learning, where teacher played the role of knowledge-transformer, not transmitter. Also, it helped them to think critically and transfer this knowledge into practice which is essential for ESP courses as well (Bahous, 2001). Hence, by applying the learned words to real-life context through projects and interactive techniques, it was found that students can better learn and recall medical words. Besides, it can motivate students, as learning the terminology can be boring, sometimes. In addition to this, this study's methodological approach with transfer skills can also be applied in medical terminology where WPAS technique is impossible to apply for such terms, e.g., *duodenum*, as it was claimed by Taie (2015).

It can also be suggested that similar methodology can be implemented with EFL learners before the mainstream classes. In this context, this class was instructed by the faculty requirement in order to facilitate and familiarize the students with medical terminology before mainstream classes. Similar syllabus can also be applied in other EFL contexts to better prepare the learners with self-confidence and prior knowledge of medical terminology before enrolling at faculty classes. Students and universities can also benefit from such approach, as the number of international students studying at medical faculties is increasing each year. Additionally, gamification-based practices like Kahoot or other projects appeared to enhance the learners' attitudes and motivation towards lessons. Both students' reflections and teacher observation can support it, which are in line with other studies (Yildirim, 2017 and others).

Finally, another important point in EMP context is teaching learners with different or lower language proficiency levels which can make the situation difficult (Eggly, Musial & Smulowitz, 1999; Rivera-Goba & Campinha-Bacote, 2008). Foreseeing this problem, this course was offered in the second semester when learners' language proficiency level was improved up to upper intermediate and a few to advance. Moreover, the ongoing academic and general English courses and pre-content-based English course were facilitating factors in this respect. Therefore, teachers planning to realize such teaching approach should take the learners' language proficiency levels into consideration beforehand.

Teaching Probability With Games

Timur KoparaBülent Ecevit Üniversitesi
timurkoparan@gmail.com

Gül Kaleli Yılmaz
Bayburt Üniversitesi
gyilmaz@bayburt.edu.tr

Abstract

By this study, it is aimed to examine the learning environment created for game and simulation based probability teaching. The sample of the study in which the special case study is adopted, is created by 40 teacher candidates who are volunteers from a total of 60 students in a class studying at a state university. The data were collected by presenting the six open ended problems with play, work sheet and simulation activity. The questions asked about the games include making predictions as to whether the game is fair or not, playing games for a few times (with physical objects such money, dice, card drawing etc.) and more times (with simulations) and observing the results, calculating the winning probabilities of players experimentally and theoretically and comparing these. The process of finding out the probability information underlying the games by the prospective teachers was analyzed qualitatively by means of worksheets, simulations and in-class observation, and the ways of thinking, intuitions, estimations, strategies, and opinions about the learning situation of the participants were tried to be determined. The results obtained put forward that the learning situation that was set up simultaneously contributed to the knowledge of probability and probability teaching of the prospective teachers; and that the candidates' opinions about the learning situation are positive.

Teaching Process Management In Healthcare: Impacting Capacity And Quality Of Care

Abstract

Medical practitioners admittedly receive little in the way of Operations Management or Process-driven training as part of their education. Here we discuss the impact of those gaps in the form of delayed assessment and treatment, queues and waiting lines, and the opportunities presented in a greater operations focus. Several cases are presented, including the use of medical scribes, specific clinic structures centered on particular patient categories, and the application of 'patient-centric' or customer approaches to healthcare. While typically the quality of the outcome (successful treatment) is viewed as the goal of a healthcare transaction, an operations and process focus not only offers the potential to improve that outcome, but to increase the capacity of the healthcare system and lower overall costs.

Keywords: *Healthcare, Operations Management, Efficiency, Capacity*

Introduction

Wait times are increasing within the healthcare system in Canada, resulting in delayed treatment and potentially adverse outcomes for patients (Barua, Esmail & Jackson, 2014). Since 1990, however, more doctors are being trained and graduated into the system (Canadian Institute for Health Information, 2016), indicating there are larger capacity utilization issues leading to the aforementioned delays and bottlenecks. At the same time, Canada ranks poorly when compared to other OECD countries with respect to the cost and quality of care provided by its healthcare system (Advisory Panel on Healthcare Innovation, 2015)

This paper, presented in a narrative and allegorical format, outlines a number of examples of both current care and opportunities for improvement within the system potentially available through an adjustment to educational and leadership perspectives within the healthcare field. The intended audiences for this research are practitioners and administrators within healthcare and leaders of education in healthcare institutions.

Background

In 2008, Gary experienced severe abdominal pain while on a fishing trip with his grandsons, pain that was bad enough he cut the trip short and went to the hospital. After two days and a series of tests, he was diagnosed with an aortic aneurysm. The cardiologist informed him the aneurysm was not large enough to repair, but they would keep an eye on it, and if it grew to 5mm in size, they would deal with it then. Gary was 68-years-old at the time (Cross & Rowe, 2017).

Six years later, following a series of semi-annual check-ups, the surgeon informed Gary that the aneurysm had reached 5mm in size, basically the point when it was considered risky, so they would schedule him in for surgery as soon as possible. No travelling, no lifting, and take it easy, he was told. Three months later, Gary had not heard anything, so he checked in. The cardiologist's office informed him they had him on the list and he should receive a call soon. After six months, and nine months, same story. Finally, a year after confirming they had to deal with the problem, Gary was brought in for surgery, and an endo-vascular 'Y'-shaped stent was inserted through the top of his legs into his aorta. Capacity issues while he was in the hospital prevented Gary from getting a bed in the surgical recovery area, so he was sent home the next day. Thankfully, Gary recovered fully and completely, and six months later was moving well with no after-effects of either the aneurysm or his surgery.

Let us look at this from a higher level. Perhaps the first five years of Gary's ordeal were not what the medical community would consider urgent. Once the diagnosis had reached 'dangerous', however, Gary's stress level obviously increased, and he worried, 'could this rupture today? Tomorrow? Should we drive to Toronto to see the grandkids? Can we go on that family vacation? Can I shovel the driveway?' Presumably, the aneurism was increasing in size as he continued to wait for surgery. The stress of the situation and indeed, waiting a full year for surgery, may have caused other issues, and reduced Gary's activity level, possibly leading to other long-term health issues or complications. This is a lot of 'could haves' and 'maybes', but studies have connected delays in service to increased impact on patient health (Barua, Esmail & Jackson, 2014).

Many defend the healthcare system in Canada, praising its universal access and quality of care as being world-class and admired by our nation's peers. For all it's accolades, and perhaps unfair comparisons to the U.S. healthcare system, Canadian healthcare really does not compare well when ranked against other OECD nations. In one study, Canada ranks 9th of 11 OECD countries in both access to care and quality of care, while spending \$4,522 per capita, compared to the United Kingdom, for example, which ranks 1st of 11 and spends \$3,405 per capita (Advisory Panel on Healthcare Innovation, 2015). We are spending more for slower healthcare in Canada.

It is believed that Canadian medical schools are world class, and graduate superb practitioners at all levels. The authors' own support and treatment from doctors and nurses within the system, though thankfully infrequent, has been wonderful, and any doctor met over the years personally or professionally has been excellent. The issue here isn't the people; it is the process. There is a capacity problem, not unlike what many plants and businesses face, so perhaps we should be turning to some shop floor and business style solutions.

This is not an argument for the generation of more doctors into the system, the equivalent of adding more machines in a production plant, if you will forgive the crude comparison. In fact, over the past 9 years this approach to improve operations has been pursued, resulting in more physicians per person than ever— 228 doctors per 100,000 population (Canadian Institute for Health Information, 2016). While the number of practitioners may remain as part of the capacity issue, the increasing supply points to an alternative constraint. This is a systemic issue - the immediate opportunity within healthcare is in the area of efficiency, process and shop floor style operational excellence.

Research Methodology

Direct interviews and observations (researcher following physicians' rounds) were conducted in healthcare environments with physicians, executives, administrators and patients in different hospital departments. Information and examples were collected across multiple institutions and analyzed for similarities around the premise of operations management exposure within medical education. Questions regarding prior exposure to process and operations management training were not asked until after the initial interviews and observations were completed.

Supporting data was collected through a literature review of publicly available population-wide studies and institution-specific examples. These examples are presented and discussed herein.

Conclusions – The Impact Of An Operations Focus

Here are two premises: First, faster is cheaper. A patient that is processed and treated sooner will consume fewer resources in the healthcare system, where a quicker diagnosis yields earlier and presumably shorter treatment times, a lower burden on system capacity, and reduced public or insurance-supported healthcare spending. For the patients, this means a more complete recovery in many cases, less time off work and therefore less impact on families and employers. None of this is new or surprising, but seldom achieved. Second: Slow is expensive and dead. That is, the reverse of the first point must also be true. Delayed admittance, examination and treatment will consume more resources and capacity, increase the time it takes for recovery to the point of potential long-term or permanent consequences, and have a broader impact on the patient and their family. A 2014 Fraser Institute study of the impact of increasing wait times on women's health found that across 12 major medical specialties, estimated wait times have risen from 9 weeks in 1993 to 18 weeks in 2013. Worse, there is a direct connection between extended wait times and increased patient mortality (Barua, Esmail & Jackson, 2014).

If one applies an efficiency, or even a Lean approach to the problem, what would that mean? Quite simply, it would mean our practitioners and their supporting systems such as scanning and diagnostic equipment would spend less time on non-value-added activities, and more time in the room with patients. Doctors would spend less time with charts, forms and administrative activity, and more time as a practitioner. Machines that are a bottleneck in the system, such

as an x-ray, MRI or CT scan would spend less time sitting idle, where few run 6 or 7 days now (a related constraint here is the technicians and radiologists to operate the equipment).

An important question at this point is, whose job is it to manage operational efficiency in a hospital or clinic? Certainly Administrators are charged with improving costs and capacity utilization in their hospital. Some Masters in Hospital Administration programs include a component or course in Operations Management. Introducing a 'Lean Initiative' in a medical facility, however, would likely garner a mixed reaction at best. Past experience has led many to misunderstand what Lean is really about. Lean is not head count reduction. Lean has nothing to do with layoffs and *doing more with less*. Lean is about reallocating resources around the organization in ways that create more value for customers, and in this case, patients.

The deficiency in healthcare education is not complicated – that education is simply missing one key component. In defense of medical practitioners and our medical schools, doctors receive very little exposure or training in the areas of process operations and efficiency. Doctors queried on the subject indicate they may have had a class or two on the subject in third or fourth year, but that is it. Hospital Administration programs offer a bit more in this area, but collectively, hospital and clinic environments are *busy and hectic*, and deal with life-saving situations throughout the day. Justifiably, they are focused on the here and now, and not finding ways to improve the system's flow.

The purpose of this paper is to advocate for two things: a greater application of process and operations management tools in the interest of increasing capacity in the healthcare system, and longer term, the inclusion of these tools in medical and administrative training. These are simple, straightforward processes that can free up capacity, reduce lead times, and improve the output of healthcare, not only in Canada but any country. Some small component of operations management education and training will do several things within the field that will ultimately drive meaningful improvements in efficient healthcare operations¹. Practitioners and administrators will see their practices and clinics differently, ask questions and consider how to better manage those clinics. Even small increases in education and time spent will facilitate a curiosity and ideally an initiative to facilitate and drive improvement.

Many institutions, in fact, have already begun thinking and working this way. Following are three concrete and varied examples of the application of an operations focus within healthcare, all of which reduced lead-time and the consumption of resources within the system. That is, *patients were treated faster and costs were reduced*. Each example was approached from a different perspective, including the use of an outside consultant, exposure to a solution through a conference attended by a curious physician, and the ability to question why a clinic was managed the way it was.

An Outside Consultant

Virginia Mason Medical Center in Seattle took a hard look at its scheduling and waiting lines roughly 15 years ago. Healthcare is a business, and if queues are too long, patients will eventually go elsewhere, and that clinic gets paid to treat the patient. In 2002, leadership at VMMC worked with Toyota process gurus, both in Japan and back in Seattle, to eliminate their dozens of waiting rooms around the hospital through the creation of more accurate scheduling (e.g. is this a 10- or 20-minute procedure?), process assessment (do we have the tools and information necessary to complete this successfully?) and information technology (digital records and multiple sources of access to that information). Essentially, VMMC changed the way they approach healthcare by transitioning away from batch production methods and into a flow production method from both a patient and provider perspective, not unlike a factory production process. From a patient standpoint, they eliminated batching by removing waiting rooms, assigned patients an electronic tracker with their patient information at check in, and sent patients directly to treatment areas. From a provider perspective, management identified that the key to improving efficiency wasn't in getting doctors to provide direct patient care faster, it was managing their time when they are not with patients or their *indirect* care time better. They identified that if they could get doctors to complete paperwork and pressing administrative tasks as they encountered them, the system would benefit. Indirect patient care was improved by adding a layer in the process and employing a process specialist called a flow manager. The flow manager prioritizes work for doctors and provides direction as to what indirect care should be completed after leaving direct care and before resuming direct care with another patient. The additional process prevents batching of indirect care, improves the flow of operations, increases the time spent with patients, and reduces the costs to serve patients (Crounse & Pettinger, 2011). This transition from

¹ Healthcare Operations here is considered the overall management of clinical care in a healthcare environment, and not specifically those procedures carried out in a hospital operating room or theatre.

batch to flow modules through process redesign was enabled through an additional element – Information Technology. The IT element gave employees graphical visibility into the location and status of all providers, patients, and equipment. The flow manager could then make informed decisions to prioritize the most pertinent tasks while preserving the flow of the system. While waits decreased, the number of patients processed increased, and VMMC reduced costs by \$12 million over 6 years (Company files, 2017). Subsequent phases of effort continue to reduce or automate the indirect, or less value-added work that still exists within the system.

These improvements are beyond the scope of most basic operations courses, and certainly outside the focus of medical practitioners and administrators. That being said, the process starts with the recognition by hospital leadership that the status quo will no longer serve customer needs, and then their willingness to seek help.

Conference Attendance

Dr. Peter Graves had been an Emergency Room physician for 20 years, and had long appreciated the ability that department offers to tend to acute injury and illness in a hospital space like no other. What he found perpetually frustrating was the length of time patients had to wait for treatment (often measured in hours), and the increasing burden of paperwork associated with patient charting. While attending a medical conference in the United States, he sat in on a presentation on medical scribes. Scribes were people trained to work with physicians while they assessed and treated patients in settings like the ER, and complete patient charts concurrently with the attending physician treating the patient. Graves realized the benefit of the process, and secured approval at Queensway Hospital in Ottawa where he worked to run a trial using medical scribes in their Emergency Room (Cross & Rowe, 2017). Following his trial, the process was then piloted with a number of doctors in the Emergency Room, and has subsequently been rolled out to several other departments in the hospital. In the traditional process, a doctor would take notes and records while with the patient, after wrapping up with a patient, or at the end of a long shift in the ER. Working with a scribe frees up more of their time to practice medicine and create value in the system; doctors dictate their notes and comments to the scribe while working with the patient, and then review, edit and sign the notes once the examination or treatment is finished. The impact and results of this process are numerous: doctors using a scribe report an increase of 30% to 40% in their capacity over a shift, where they may see 30 patients per shift with a scribe versus 21 without (Cross & Rowe, 2017). The quality of care through the process (both perceived and actual) is higher, as a result of the patient receiving the doctor's complete attention while in the room together. Accuracy and detail on the medical records is improved, as the process is done live and concurrently with treatment, rather than after the shift as in many situations. The big win for the hospital and its patient community? Waiting lines are down at Queensway, and revenues are up through increased earnings associated with higher patient flow.

How do we create the most value in our assets? Any plant manager will tell you she wants her machines up and running. An airline only makes money when its planes are in the air, a logistics provider when its trucks, trains or ships are en route, and an oil field service when their rigs are drilling. In this case, doctors create the most value while they are assessing and treating patients, and an MRI machine while it is scanning a patient. Idle time in a hospital is a waste of resources.

The Permission to Question

Mount Sinai Hospital in Toronto recently took a process-centric look at their geriatric care facility, when the director, Dr. Samir Sinha, asked the paradigm-breaking question, 'are we a hotel, or a hospital? We don't get breakfast in bed at home; why should we provide it in a hospital?' Patients in most wards are traditionally given meals in bed, yet we know that prolonged bed rest promotes dysfunction (Grant, 2016). In Sinai's new Acute Care for Elderly (ACE) strategy, patients are encouraged to move around far more often. Seniors are clustered in the ACE ward, where they are provided with non-slip socks, beds are kept at lower heights to reduce falls, and they eat in common areas to encourage socialization and movement. Phones are muted in this non-paging environment. More movement and interaction during the day means the patients are content and sleep better at night. All of this leads to a quicker recovery and discharge for patients, reducing cost of care per patient by 23% and saving the hospital over \$6 million in 2014 (Grant 2016). Early discharge also resulted in more capacity within the ACE ward as well as the indirect benefit of patients spending less time in the hospital with a lesser risk of contracting unrelated infections and diseases. 17 other hospitals and healthcare providers in Canada and Iceland are now applying Sinai's ACE model.

A primary goal of the healthcare institution, its practitioners and administration is to provide quality care for their patients. That is a given. Beyond that, however, workers at all levels need to appreciate their responsibility to question, and realize there are better ways to complete any type of work; we just haven't discovered that improvement yet. This

is the essence of the Toyota Way – *do the work this way, until we figure out a better way to do it. Part of your job is to think about how we can improve things.*

Summary

Canada's healthcare system has issues, but the people are not the problem. Practitioners commit countless hours and tireless energy throughout their training and careers in the interests of a healthier Canada. There are numerous challenges and areas of study and focus within healthcare today, and some are far more complicated than others. As the examples above illustrate, however, there are significant opportunities with small enhancements to healthcare education, potentially leading to significant improvements to capacity utilization and the patient experience with the healthcare system.

zeza.kavtaradze@tsu.ge

Ketevan Lortkipanidze
ketlort@mail.ru

Nato Akhalaia
nato.akhalaia@tsu.ge

Abstract

In the Georgian language the derivation of the verbal forms from nouns is based on the structures of active and passive voices.

1. [...] + R + THM
2. R + THM

The mentioned models are common to the forms of the both voices. In the first structure ς -prefix is used in the active voice, and \omicron - prefix in passive. These types of verbs are known as *verbe denominale* in the linguistic literature. In general, relatively few studies have been conducted as regards the constructions of such verbs. (D. B. Gerds, S.A. Marlett). In the Georgian language the nouns and adjectives are verbalized in most of the cases. The nouns can be borrowed from the lexical funds of the Georgian as well as other languages. The paper reviews the models of DVNs, thus illustrating the corresponding patterns borrowed from the Georgian and Turkish languages.

Technology Integration of Preservice Teachers as Both Teacher and Student

Asst. Prof. Dr. Hatice Çilsalar Sagnak
Yozgat Bozok University
haticecilsalar@gmail.com

Abstract

The purpose of the paper was to analyze preservice teachers' development in terms of ISTE Standards for both student and teacher in technology-integrated course named as 'Teaching Principles and Techniques' for third-year teacher candidates. Case study method was implemented, and a survey was arranged by using ISTE standards for both students and teachers. A sample of 95 respondents from the same school and enrolled the same course of the same instructor. The data of the survey were analyzed with SPSS. The results showed that the participants got higher scores as teachers standards than student standards.

Introduction

The way of how people learn and practice are impacted in technology driven world which changes the ways we work, communicate, and live. In response to current needs of the 21st century, learners and educators have confronted with technology in educational environment to learn, use, and produce. International Society for Technology in Education (ISTE) determined the standards for the stakeholders of education to transform teaching and learning (ISTE, 2016). Particularly, the transformation process proceeds with technology integration in teacher education programs. With this transformation, teacher candidates gained the opportunity to develop themselves as a teacher to integrate technology in their future classrooms in addition to empowerment as connected learners and digital citizens. This paper aimed to analyze preservice teachers' development in terms of ISTE Standards for both student and teacher in technology-integrated course named as 'Teaching Principles and Techniques' for third-year teacher candidates.

Context of the Study

The course, implemented in three sessions with the same instructor, was designed as technology- integrated course; in which Edmodo, a learning management system, was the course webpage, projects were needed to use technology to do, and bi-weekly reflections on their development were the assignments. All course requirements were planned to develop the teacher education program to meet ISTE Standards. A survey, as data collection tool, was prepared to measure their development by following both ISTE-S and ISTE-E. In total, 95 preservice teachers were participated in the study at the end of the semester to capture their pure development after the course over. There were 56 women (58,9%) and 39 men (41,4%) all of whom had the average age of 23. Details n demographics of the participants were represented in Table 1.

Table 1.
Demographics of the participants

	Min	Max	Mean	Sd
Age	20	36	23,03	3,164
GPA	1,80	3,70	2,80	0,41
Courses in the Semester	5	18	12,14	3,21
Total Education Courses	3	6	3,56	0,86
Pervious Education Courses	1	2	1,27	0,44

Data Analysis

To analyze data, paired sample t-test, which compares the mean of two matched groups of people or cases, or compares two different mean of a single group (Ross & Wilson, 2017) was employed in IBM SPSS 23. Teacher candidates' perspectives on their technological development as student was categorized as empowered learner, digital citizen, knowledge constructor, innovative designer, computational thinker, creative communicator, and global collaborator. As educators, teacher candidates represented their perspectives on technology in terms of learner, leader, citizen, collaborator, designer, facilitator, and analyst.

Results

Means and standard deviations of these sub-dimensions of ISTE Standards for learners and educators are reported in Table 2.

Table 2.
Mean and Standard Deviation of Sub-scales

	Mean	Sd
<i>Educators</i>		
Empowered Professional		
Learner	3,93	0,76
Leader	4,07	0,75
Citizen	4,07	0,78
Learning Catalyst		
Collaborator	4,02	0,78
Designer	4,06	0,82
Facilitator	3,86	0,76
Analyst	4,16	0,84
<i>Students</i>		
Empowered learner	4,10	0,70
Digital Citizen	4,03	0,79
Knowledge Constructor	4,06	0,84
Innovative Designer	3,89	0,81
Computational Thinker	3,81	0,86
Creative Communicator	3,94	0,87
Global Collaborator	4,01	0,94

The mean scores indicated that the participants highly scored themselves as analyst educators after the course when compared with other standards specified as ISTE-E. On the other hand, the participants indicated their empowered learner characteristic when compared to others in ISTE-S. In order to understand significance of the mean differences between ISTE-E and ISTE-S scores of participants, paired sample t-test was conducted. It revealed no-significant difference between total scores of the standards for learners and educators ($t = -0,94$, $df = 93$, $p < .34$). The non-significant difference indicated that technology integration into the course, which focuses on development of their pedagogical knowledge as teacher candidates, contributed them on both them as learner and their teacher knowledge. Although the aim of the course is to subsidize teacher pedagogy knowledge through technology, they had the opportunity to enhance technology integration knowledge in terms of ISTE standards for educators.

Conclusion

This paper has significance on to explain the teacher education programs on teacher candidates both as teacher and student. While educational institutions were looking for ration implications (Bucci, Cherup, Cunningham, & Petrosino, 2010), such implications' contribution on preservice teachers lead the way to develop teacher education programs. In the field teachers do not use technology effectively because of their lack of education, probably (Kay, 2007; Kim & Baylor, 2008). On the other hand, this study implies that teacher candidates have chance to develop themselves as both future teachers and current students at the teacher education system in Turkey.

Özet

Algı, duyuyla alınılan, beyin tarafından işlenen, bellekte depolanan ve fiziksel veya zihinsel bir tepki biçimini üreten enformasyondur (Mutlu, 2012). Küreselleşen kültür ve yeni medya ile oluşturulan popüler kültürün, etkin yayım aracı olan televizyon, gösterilen programlar, yayınlanan diziler ile insanlarda farklı algı yaratabilecek bir pozisyonadadır. Göstererek ve duyurarak tek yönlü iletişim sağlayan televizyon, bu gücü ile yeni trendler oluşturabilir hem istenileni hem istediğini sunabilir ve insanları istediği yönde manipüle edebilir.

Gerek ülkemizde gerek dünyada iç güvenlik denilince ilk akla gelen kurum olan Emniyet Teşkilatı ya da polis ise suç ve ceza spektrumunda suçu önleyen, suçu çözen, olarak yer almaktadır. Özellikle ülkemizde polisin yüklendiği başka sorumluluklar da bulunmaktadır. Çok fazla branş ve uzmanlık alanına ayrılan polis teşkilatı trafikten teröre kadar birçok alanda hizmet vermekte ve bu süreçte sürekli vatandaşla temas etmektedir. Öte yandan her ilden gelen 300 bine yakın personele sahip emniyet teşkilatı milletin bağrından çıkmıştır ve milletin kendisidir.

Bu bağlamda ülkemizde her zaman iyisiyle kötüsüyle doğrusuyla yanlışıyla gündemde olan Polis Teşkilatının, insanların zihinlerinde nasıl anımlandırıldığı, Polis imajının ve algısının ne olduğu, Polis Teşkilatını çeşitli hikayeler üzerinden anlatan polisiye televizyon dizilerinin bu imaj ve algının oluşmasında ne denli etkili olduğu ve dizilerde yaratılan “Polis” kavramının ülkemizdeki üniversite gençliği üzerinde nasıl bir iz bıraktığına Dicle Üniversitesi İletişim Fakültesi öğrencileri baz alınarak bu çalışmada değinilmiştir.

Anahtar Kelimeler: Algı, polis, polis algısı, televizyon, dizi.

Giriş

Günümüz dünyasında 4. güç olarak kabul edilen medya, 19.yy’da başladığı serüveninde, 20.yy’da gelenekselleşmiş ve daha sonra, çok mesafe kat ederek, bugün, gelenekselin dışında, gelişen yeni medya ile insan hayatında vazgeçilmez bir hal almıştır. Ülkelerin kendilerine özgü kültürleri, gelişen medya aracılığı ile sınırları aşarak globalleşmiş ve ortak kültür ortaya çıkmaya başlamıştır. Bu süreçte medyada başat rol, önceden beri hem görsel hem de işitsel duylara hitap eden televizyonun olmuştur.

Görüntü ve sesin birlikteliğiyle televizyon; diğer kitle iletişim araçlarına oranla, mesajları kitlelere iletmede daha etkili ve evreni kişinin ayağına getiren bir araçtır. Denilebilir ki ondan önceki diğer kitle iletişim araçlarından hiçbirisi kişiyi olaylara bu denli tanık etmemiş; gerek ses, gerek görüntü olarak, çoğunlukla anında, olay ve kişilerle karşılaştırmamıştır. Bu bakımdan televizyonun, hangi amaca ağırlık verirse versin, kişiyi sürekli olarak kendine baktıran bir araç olarak kabul edilmesi, zorunludur (Aziz, 1975: 198).

Bir noktada televizyon haber, eğlence, spor, magazin, belgesel programları ve dizilerle kitlelere farklı alternatifleri sunmanın dışında; kültürel aktarım ve etkileşim aracıdır. Televizyon, çeşitli sosyal değerlere nüfuz ederek düşünce üzerinde en etkili olmakta; aynı zamanda sosyal davranış için tavsiye ya da yol gösterme biçiminde çeşitli olanakların kaynaklarına işaret etmektedir. Yani sosyal davranışlara referans oluşturmaktadır (Önür, 2001: 7).

İzleyicileri eğlendirmek, zamanlarını geçirmelerini sağlamak haricinde daha farklı görevleri de olan kitle iletişim araçları zaman içerisinde gösterdiği gelişmeyle çok güçlü bir hal almıştır. Öyle ki bu durum basın daha doğru deyişle medya ile bağlantısı olan medya da çalışan insanların da güçlenmesini beraberinde getirmiştir. Medya tarafından kat edilen yol ve sonucunda ulaşılan bu güç, medya takipçilerinin kısaca izleyicilerin tutum ve davranışlarını değiştirebilir, ya da yeni tutum ve davranış oluşturabilecek boyutlara ulaşmıştır.

Kitle iletişim araçlarının oluşturulan bu etki yalnızca bireysel bazda değil tüm toplum yönünü değiştirebilir. Kitle iletişim araçlarının ya da medyanın, toplumun dinamiklerini, dengesinin, yapısını değiştirebilme yeteneği toplumsal ilişkileri yeniden yaratma, yeniden yapılandırma, yeniden konumlandırma ve yorumlama gücünü kendine sağlamıştır.

Arslan (2004), medyanın bu şekillendirme ve değiştirme etkisinin bireyler ve genel anlamda toplum boyutuyla da sınırlı kalmayıp, toplumsal ve siyasi yapı içinde etkin bir konuma sahip olan siyasi liderleri ve meşru hükümetin politikalarını da kapsayacak boyutlara ulaşabildiğini belirtmektedir.

Kitle iletişim araçlarının toplumsal bazda sağladığı çok önemli hizmetlerden olan bireylerin ve toplumun sosyalleşmesini ve iletişim ihtiyaçlarını karşılama özelliği yadsınamaz bir gerçek olsa da bununla birlikte bardağın boş tarafını görmekte de fayda vardır. Toplumlar için büyük faydalar sağlayan kitle iletişim araçları, istenildiği takdirde çok güçlü bir propaganda aracı, bunun da ötesinde kitleleri yönlendirebilecek çok güçlü bir silah olarak

da kullanılabilir. Medyanın kontrolünü elinde bulunduran kişi, grup ya da güçler, iletileri kendi çıkarları doğrultusunda tahrif (deforme) edip değiştirebilirler. Böylece toplumun düşünce yapısını, ideolojisini, kanaatlerini şekillendirme gücünü tekellerinde alabilirler ve kitle iletişim araçlarını kültür asimilasyonu sömürü ve kültürel sömürü aracı olarak kullanabilirler.

Kitle iletişim araçlarını en fazla göz önünde olanı şüphesiz televizyondur ve televizyonun etkileriyle ilgili en çarpıcı örnek ise son dönemde gitgide artan televizyon dizileridir. Özellikle, günümüzde Türk televizyon izleyicilerinin bakış açısını değerlendirdiğimizde diğer toplumlara göre farklılık gösterdiği dizilerdeki karakterleri gerçek hayatla özdeşleştirerek benimsediği görülmektedir.

İnsanlık tarihine baktığımızda ise; ilk insandan bu yana güvenlik, insan için en temel ihtiyaçlardan biridir. İnsan yaratılışı gereği, özgürlük ve bağımsızlık istemekte, insanlığından gelen temel hak ve hürriyetlerini sorunsuz ve kendi içinde sınırsız yaşayabilmek için öncelikle güvende olmasının gerekliliğini bilmektedir. Günümüzde güvenlik denilince ilk akla gelen meslek grubu olan Polisler ve Polislik mesleğinin ülkemizde Emniyet Teşkilatı kurulduğundan bu yana oluşturduğu hem kurumsal hem de polis bazlı imajı, her dönem insanlarda farklı algılanmış, hem dönemin getirdiği ortam ve süreç hem de yine o dönemde medya yoluyla oluşturulan ya da sunulan imajlar çerçevesinde bir polis zihinlerde yaratılmıştır.

İnsanlar günlük hayatında sürekli olarak polisi görmekte, duymakta veya hissetmektedir. Özellikle ülkemizin yüzölçümü olarak olmasa da nüfus olarak yoğunluğu polis yetki alanındadır. Şehir ve ilçe merkezlerinin asayişinden sorumlu emniyet teşkilatı 24 saat hizmet vermektedir. Öyle ki, 14.07.1934 tarihinde resmi gazetede yayınlanarak yürürlüğe girmiş olan 2559 sayılı Polis Vazife ve Salahiyet Kanununda yer alan ilk iki maddedeki;

Madde 1 – Polis, asayiş amme, şahıs, tasarruf emniyetini ve mesken masuniyetini korur. Halkın ırz, can ve malını muhafaza ve ammenin istirahatini temin eder.

Yardım isteyenlerle yardıma muhtaç olan çocuk, alil ve acizlere muavenet eder. Kanun ve nizamnamelerinin kendisine verdiği vazifeleri yapar (PVSK, 1934).

Madde 2 – (Değişik: 16/7/1965 - 694/2 md.)

Polisin genel emniyetle ilgili görevleri iki kısımdır.

a) Kanunlara, tüzüklere, yönetmeliklere, Hükümet emirlerine ve kamu düzenine uygun olmayan hareketlerin işlenmesinden önce bu kanun hükümleri dairesinde önünü almak,

b) İşlenmiş olan bir suç hakkında Ceza Muhakemeleri Usulü Kanunu ile diğer kanunlarda yazılı görevleri yapmak (PVSK, 1934) ve yine 12.06.1937 tarihinde yürürlüğe giren 3201 sayılı Emniyet Teşkilatı Kanunu 1. Maddesindeki “Memleketin umumi emniyet ve asayiş işlerinden Dahiliye Vekili mesuldür. Dahiliye Vekili bu işleri, kendi kanunları dairesinde hareket eden Emniyet Umum Müdürlüğü ile Umum Jandarma Komutanlığı ve icabında diğer bütün zabıta teşkilatı vasıtası ile ifa ve lüzum halinde İcra Vekilleri Heyeti karar ile ordu kuvvetlerinden istifade eder.”(ETK, 1937) tanımı bu durumu gözler önüne sermektedir ve polis trafikten teröre kadar birçok konuyla doğrudan ilgilenmektedir.

Daha çok ideolojik görüş ve kar/zarar marjına göre oluşan polis algısı özellikle son dönemde terörle mücadele ve terörle mücadeleyi konu alan haber, reklam ve dizilerle algının yönünü pozitif çevirmiştir ki 2-14 Kasım 2016 tarihleri arasındaki Polis Özel Harekât alımına yapılan başvuru sayısı 285 bin (AA, 2016) olarak kayıtlara geçmiştir.

İşte, medyanın kültür yaratma gücü, kültürün popüler bir hal alması, televizyonun bu popüler kültürü oradan oraya aktaran ve imaj algısı oluşturabilen fenomenliği perspektifinde, ülkemizde yayınlanan polise dizilerin Türk Polis Teşkilatının imajını nasıl sunduğu ve Üniversite gençliği üzerinde nasıl bir Polis algısı yarattığı konusu ele alınmıştır.

Araştırmanın Amacı

Tarihsel ve sosyolojik olarak baktığımızda suç olgusu ve suç ile mücadele önemini korumaktadır. Toplumdaki bireylerin birbirleriyle uyum içinde varlıklarını sürdürebilmeleri için, herkesin tabi olacağı bir takım kuralların geçerli olması elzemdir. Kuralların toplumu birliktelik boyutunda uyumlu kılması toplumsal yapının devamı açısından önemlidir. Bu nedenle kurallar toplumsal alanın her aşamasında kendini göstermiştir. Bu kurallar ise gerek yazılı yani formel (Anayasa, kanun, yönetmelik gibi) gerekse sözlü yani informal (Örf, adet, gelenek, değerler gibi) geçmişten bugüne süreç içinde meydana gelen kanaatlerin kaynaklığında şekillenmiştir.

Günümüz literatüründe suçlar hem hazırlanış hem işleniş hem de sonuç bakımından çok çeşitlilik göstermektedir. Suçların bu denli çoğalmasına karşın her geçen gün suçlarla mücadele için toplumlar nazarında devletler yeni stratejiler belirlemiş ve yeni yaptırımlar ortaya koymuştur. Ancak suçun işlenmesi karşılığindeki maddi ya da manevi getiri de insanları yeni suç işleme tekniklerine ve yeni suç alanlarına yöneltmiştir.

İnsanın doğası gereği meraklı ve problem çözmeyi sever yapısı, suçun bu denli çok ve güncel olması karşısında, suça karşı olmakla birlikte suça, suçun işlenişine ve çözümüne de bu denli meraklı olmasına neden olmaktadır.

Gündelik hayatta maruz kalınmasa bile suçun sürekliliği herkes tarafından bilinmektedir ve suçla mücadele eden, suçu önleyen ya da suçun kim tarafından, neden, nasıl, nerede işlendiğini, suç delillerini, suçlular arasındaki ilişkiyi çözen bir kesim “Polis” halkın her zaman gözü önündedir. Ailesinde, yakınında ya da çevresinde polis olarak

görev yapan birisi olmayan insanlara için “polis” kavramının içi çevresinden duydukları, ideolojik düşünceleri, yazılı ve görsel basın tarafından doldurulmaktadır.

Hayatın her anında yer alan kitle iletişim araçları ve özellikle televizyon, insanların haber alması, eğlenmesi, öğrenmesi gibi çeşitli amaçlarla kurulmuştur. Bu amaçları ile birlikte insanlara hoşça vakit geçireceği ve görmek istediğini, duymak istediğini verecek programlar da yer almaktadır. Öyle ki, medya toplumdaki en etkin güç merkezlerinden biridir. Sosyal davranış şekillendirici, yol göstericidir ve yapıcıdır. Yani davranışları oluşturabilen bir olgudur. Kitle iletişim araçları bu haliyle, tutum ve davranışları, kanaatleri ve benliği etkileyebilen en etkin olgudur.

İşte bu süreçte televizyon bu yöndeki en güçlü iletişim aracıdır. Herhangi bir şehirde gerçekleşen olay anlık olarak çok uzaklardaki bir insana –genel yayın politikası çerçevesinde gösterilmek istenildiği şekilde- gösterilmektedir. Bunun dışında suç fenomeninin bu kadar ilgi uyandırması televizyon yapımcılarını da o tarafa yönlendirmiştir. Bugün ekranlara baktığımızda sabah kuşağında cinayet, kaçma ve kaçırma, tecavüz, intihar gibi olayların sunucular ve farklı dallarda uzmanlar ile olay içerisindeki şahıslar tarafından çözümlenmeye çalıştığı programlar ve akşam saatlerinde oynayan polisiye dizilerle doludur.

İnsan doğumuyla beraber algılamaya başlamaktadır ve algıladığı her figürü aynı zamanda kendine göre anlamlandırmaktadır. Anlamlandırma sürecinde çevresel faktörle ve uyaranlar çok etkilidir. Kimi zaman ihtiyaçlar kimi zaman rol modeller belirler algıyı. Zihinsel ve fiziksel gelişim sürdükçe algılar değişebilmekte yeni algılar ve algı odakları oluşmaktadır.

Bu süreçte yine alınan eğitim, girilen sosyal ortam ve çevre, okunan kitap dinlenen müzik gibi birçok etken algının oluşmasına ya da değişmesine neden olmaktadır. Çalışmamızda ki ana konu olan polis ve polislik ise insan fiili hayata dahil olmaya başladığı anda insanın hayatına doğrudan ya da dolaylı olarak girmektedir.

Kimisinin aile ferdi polistir, kimisi adli bir olayda polisle temas haline girmiştir, kimisi polise ihtiyaç duymuştur. Çünkü polis hayatın her alanında. Sabah trafiğinde de polis vardır, futbol maçında da polis vardır, sokaklarda, dağlarda da polis vardır. Kiminin gözünde kahraman, kiminin gözünde düşman, kiminin gözünde paralı asker kiminin gözünde egemen gücün çıkarlarını savunan memurdur polis ama bunun yanında her haneye girmiş milletin kendisidir polis.

Bu çalışmadaki amaç ise, polis ve polislik bu kadar hayatın içinde iken eğitimi tamamlayacak ve hayata atılacak üniversite öğrencilerinin çocuklarından gençliklerine kendi bilinçlerinden oluşturdukları polis figürünün siyasi düşünceleri ve yaşamışlıklarından sonra televizyonda izledikleri diziler ile nasıl bir hal aldığını ve oluşan algıyı ortaya çıkarmaktır.

Araştırmanın Önemi

İnsanoğlu yaradılışı ile birlikte çoğalmaya, çoğalmayla birlikte toplu yaşamaya, toplu yaşamayla birlikte ise toplumsallaşmaya başladı. Bu süreçte beslenme ve beslenmeyi sağlayan üretim birincil derecede önemliken zamanla güvenlik sorunları yani suç ortaya çıktı. İnsanın sosyal çevresinden başlayarak, psikolojik etkenler, ekonomik gerekçeler, kalıtsal rahatsızlıklar, aile yapısı, madde bağımlılığı ve fiziksel ihtiyaçlarının birçoku suçların oluşmasına neden oldu.

Suçların oluşması ile ortaya çıkan güvenlik ihtiyacı sonrası toplumlar belli normları hayata geçirerek suçla mücadele etmeye başladı. Ancak toplumsal normlar ve daha sonraları ortaya çıkan yazılı kanunlar ve yaptırımlar suçun işlenmesini engellemedi. Psikolojik, sosyolojik, ekonomik ya da fiziksel nedenler insanları sürekli olarak suça teşvik etmiş ve önceleri basit suçlarla başlayan bu süreç modern çağda suçlarında çeşitlenmesine ve suç yollarının da artmasına neden olmuştur.

Suç ve suçluyla mücadelede etkin rol oynayan polis ise, bir meslek olarak insanların her zaman ilgisini çekmiştir. Hem devlet gücünü ve otoritesini temsil, hem görevin kutsal olduğu vatani bir görev olduğu görüşü polislik mesleğini diğer mesleklerden diğer sınıflardan ayırmıştır. Bu bakış açısı polisliği sürekli göz önünde tutmaya neden olmuş ve toplumsal yapı polisliğe saygınlık kazandırmıştır. Suç ve suçlu ile yapılan amansız mücadele ve terörizme verilen onca şehit halkın içinden gelen polisi yine halkın gözünde yüceltmiş ve bu durum yazılı ve görsel basının ilgisini çekerek nice kitap, dergi, foto-roman, dizi, film ve programlarda polisin konu edinilmesini sağlamıştır.

Bu süreçte polisi göz önüne alan ve gözler önüne seren en güçlü iletişim aracı televizyondur. Özellikle son dönemde yaşanan olaylar sonucu artan milliyetçilik ve bunun getirisi reytingi hedefleyen televizyon kuruluşları polis imajından son noktaya kadar yararlanmakta bu esnada polis için farkında olarak ya da farkında olmadan bir polis algısı oluşturmaktadır. Bunun dışında suç ve suçlu merakı televizyon yapımcılarını yine o tarafa yönlendirmiştir. Bugün ekranlarda haberler dışında da sürekli olarak gündüz veya akşam kuşağı fark etmesizin polisiye ile karşılaşmaktadır.

Gündelik yaşamda asayişin sağlanması, trafiğin düzenlenmesi ve de en önemlisi terörle mücadelenin etkin şekilde yürütülmesini sağlayan, halkın esenliğini ve huzurunu hedef edinen herkes ailesi ile mutlu bir hayat sürsün diyerek kendi ailesini babasız bırakan, ülkenin her noktasında günün 24 saati görev yapan polisler ve polislik mesleğinin oluşturduğu imaj ve insanlarda oluşturduğu algı kişisel farklılık oluşturduğu kadar özellikle bazı bölgelerde de farklı bakış açılarıyla karşılanmaktadır.

Bölücü terör örgütü tarafından “sözde” başkent ilan edilerek sivil ayaklanmanın hedeflendiği, Devletin başlattığı ve başrolde polisin yer aldığı hendek operasyonlarının yürütüldüğü Diyarbakır’da son 40 yılda oluşturulan polis algısı ve operasyonlardan sonra oluşan algı, polislik mesleğine dışarıdan bakan, ideolojik olarak karşı çıkan ve özellikle stratejik bir konumu olan Diyarbakır Dicle Üniversitesi İletişim Fakültesi öğrencilerinin polis algısını görebilmek açısından önemlidir.

Kuramsal Çerçeve

“Televizyon Dizilerinde Sunulan Polis İmajının Üniversite Gençliği Üzerinde Oluşturduğu Polis Algısı: Dicle Üniversitesi İletişim Fakültesi Örneği” konulu çalışmada temel alınacak kuram olarak “Gündem belirleme” kuramı tercih edilmiştir.

Gündem belirleme kuramı toplumun, çeşitli güncel sorunlarının önemini algılamasını açıklamaya çalışan bir kitle iletişim kuramıdır. Özünde, toplumun konuların önemini algılamasını, iletişim araçlarının konuları ele alış biçimiyle açıklamaya çalışır. İnsanlar dünyada neler olup bittiğini kitle iletişim araçları vasıtasıyla takip ederler. Medya günlük hayatta meydana gelen kimi olaylara daha fazla ilgi gösterir, bazılarını ise daha az ilgi gösterirken kimisini görmezden gelebilir. Toplamlar medyanın verdiği bilgiler doğrultusunda bilgilenmektedir. İnsanlar, medyanın kurmuş olduğu gündem sayesinde olayların hangi önemde olduklarını öğrenirler (Yaylagül, 2006). Medyanın önem verdiği konular, halkın da önemli olarak algılayacağı konulardır. Medyanın önemsemediği konular ise daha önemsiz olarak algılanacaktır. Gündem belirleme kuramı öncelikle kitle iletişim araçlarının gündemi belirleme yetisini açıklayacak şekilde formülendirilmiştir. Medyanın gündem belirleme görevi yaptığını savunan görüş, Cohen’in (1963) çalışmasından çıkarılmış ve McCombe, Shaw ve diğerleri (1973) tarafından geliştirilmiştir. Bu görüşe göre, kitle iletişim araçları halka “ne düşüneceklerini söylemede” çoğu kez başarılı olmayabilir; fakat izleyicilerine “ne hakkında düşüneceklerini” anlatmada başarılıdır (Erdoğan ve Alemdar, 2005). Öte yandan, medya dünyayı bizim için şekillendirme gücüne sahiptir ve bu yönde uğraşır. Bunu yaparken de bir düşüncenin alacağı şekli belirlemeksizin toplum için gündem hazırlarlar.

McCombs ve Shaw (1993), gündem belirleme hipotezinin 25 yıllık geçmişine ilişkin değerlendirmelerinde, bu araştırma geleneğinin sonuçlarını araştıran yeni araştırmaların, iletişim araçlarının bize sadece ne hakkında düşüneceğimizi anlatmakla kalmadığını, onu nasıl düşüneceğimizi ve bunun sonucunda da ne düşüneceğimizi anlattığını belirtmektedir.

Medyanın etkileri üzerine yoğunlaşan gündem belirleme kuramı bu etkinin ortaya çıkışı ve topluma etki süreci ile gündemdeki konunun önemine, toplumun bahse konu olguyla bağına ve gündem konusunun toplumdaki dinamiklerle ilişkilendirilmesine bağlantılı olarak yürür. Özellikle de siyasal iktidarlar çoğu zaman toplumun ilgisini kendi yapıp ettiklerinden uzak tutmak için kitle iletişim araçları aracılığıyla toplumun bir takım yapay gündemlerle meşgul olmasını isteyebilirler. Böyle durumlarda etkinin en kısa sürede ortaya çıkmasına yönelik ilgi çekici konuların kitlelere aktarılmasına özen gösterilir (Güngör, 2013).

İletişim araçlarının gündem belirleme yetisini Rogers ve Dearing (1988), bu araçların insanların ne hakkında düşüneceklerini, neyi önemli olarak algılayacaklarını etkileme eğilimi olarak tanımlanmaktadır. Onlara göre, gündem “ belli bir zaman noktasında önem hiyerarşisine göre sıralanmış konular ve olaylar listesidir.”. Shaw (1977) ise, olaylar, “zaman ve uzamla sınırı ayrı olgular”, konular ise, “birbiriyle bağlantılı olaylar dizisi” olarak tanımlanabilir demektedir. (Mutlu, 2012).

Medyanın, günlük hayatta toplumun gündemini oluşturmaya, istenilen birtakım konuları izleyici kitlelere göstererek ilgiyi o konuya çekmesi gündem belirleme kuramının başlıca savıdır. Toplum da kitle iletişim araçlarının sunduğu konuya ilgi gösterirse kısa süre içerisinde o konuyla ilgili toplumda birtakım fikirlerin ortaya çıktığı, o düşünceler doğrultusunda da bir kamuoyu oluştuğu gözlemlenir. Toplum gündemine sunulan konu önemine ve tartışılabilirlik özelliğine göre de aynı anda taraftar veya muhalif çeşitli kamuoylarının doğmasına yol açabilir. Diğer yandan moral değerlerle ilgili ya da duygu dünyasına seslerin konuların izleyici kitlelerce çok çabuk algılandığını ve kısa sürede de yaşama geçirildiğini söylemek yanlış olmaz. Özellikle de insanlarda korku ve panik yaratacak özellikteki konuların kısa sürede insanların ilgisini çekerek onarlı belli tavır, davranış ve tutum alışlara yönelttikleri bilinmektedir (Güngör, 2013).

Kitle iletişiminin gündem belirleme düşüncesinin özünde, toplumun bu konulardaki düşüncelerinin medyanın sunduklarıyla etkilendiği varsayımının bulunduğunu belirten Erdoğan ve Alemdar (2005). Medyanın olaylara verdiği önceliklerin, seyirciler tarafından öğrenildiğini, gündem belirlemenin zaman içinde uzanan bir öğrenme süreci olduğunu medyanın önceliklerinin halkın öncelikleri olduğunu ifade etmektedir.

Problem Cümlesi

Televizyon dizilerinde sunulan polis imajı Dicle Üniversitesi İletişim Fakültesi öğrencileri üzerinde nasıl bir polis algısı oluşturmaktadır?

Evren ve Örneklem

Çalışmada evren olarak Diyarbakır Dicle Üniversitesi İletişim Fakültesi, örneklem olarak ise 141 öğrenci tercih edilmiştir.

Veri Toplama Aracı

Veri toplama aracı olarak araştırmada anket tekniği kullanılacaktır.

Veri Analizi

Verilerin analizinde SPSS analiz programında yüzde tekniği kullanılacaktır.

Varsayımlar

1. Tüm öğrenciler polisiye dizi izlemektedir.
2. Tüm öğrenciler polislik mesleğini saygın görmektedir.

Sınırlılıklar

Bu araştırma;

- 1- Dicle Üniversitesi İletişim Fakültesini kapsamaktadır.
- 2- Veri toplama aracı olarak çalışmada anket yöntemi kullanılmıştır. Anket İletişim fakültesinde öğrenim gören 141 öğrenci üzerinde uygulanmıştır ve verilen cevapların güvenilirliği ile sınırlıdır.

Tanımlamalar

Algı: Bir şeye dikkati yönelterek o şeyin bilincine varma, idrak (TDK, 2017).

İmaj: Görüntü (TDK, 2017).

Yöntem

“Televizyon dizilerinde sunulan polis imajının üniversite gençliği üzerinde oluşturduğu polis algısı: Dicle Üniversitesi İletişim Fakültesi örneği” konulu çalışma da veri elde etme tekniklerinden anket yöntemi tercih edildiği için araştırma yöntemi olarak “nicel araştırma yöntemi” ile çalışılacaktır.

Araştırma deseninin nitel ya da nicel olması çalışmanın giriş bölümünde başlayan problem cümlesi, sorular ve hipotezlerin biçimlenmesi ile şekillenmektedir. Örnek olarak, problem cümlesi hipotezle biten bir araştırma ancak niceliksel bir desen olabilir. Eğer problem cümlesi araştırma soruları ile biterse bu sefer araştırma deseni soruların karakterine göre nicel ya da nitel olabilmektedir ve bu durumda hangi araştırma deseninin uygulanacağına araştırmacının karar vermesi gerekmektedir.

Nicel araştırma genellikle fizik, kimya, biyoloji gibi doğa bilimlerinin yanında sosyal bilimlerde de yoğun bir şekilde kullanılmaktadır. Daha çok sayısal veriler ve istatistiklere dayanan nicel araştırma yöntemi diğer araştırma yöntemlerine nazaran kendine has özellikler barındırmaktadır.

Nicel araştırma yöntemlerinin tipik özellikleri şu şekildedir;

- Ölçüm ve sayısallaştırma (örn. Elde edilen bilgi ve veri sayıya dönüştürme) esastır. Ölçümün doğruluğu ve kesinliği aranır.
- Davranışa odaklanır (örn. İnsanların ne dediği ve ne yaptığı).
- Bu bilimsel yaklaşım, doğa bilimindeki aynı genel ilkelere bağlıdır.
- Daha önceden var olan teori, fikir ve kavramların test edildiği tümdengelim mantığı kabul edilmiştir.
- Araştırma sürecinin ilk başlarında araştırma deseni detaylı olarak daha öncesinden belirlenmiştir.
- Ölçümün geçerliği (istenilen ölçümü göstermesi) ve güvenilirliği (zaman içinde farklı gözlemler ile tutarlı olması) önemlidir.
- Yöntemin detaylı tanımı yapılır; böylece çalışmanın çoğaltması yapılabilir (aynı çalışma tekrar edilebilir böylece bulgular kontrol edilebilir).
- Verilerin istatistiksel analizi beklenir.
- Bulguların genellenmesi aranır (daha geniş grupların örneği olması için çalışılan katılımcıların örneklemelerini gerektiren çoğunlukla istatistiksel genellenebilirlik formunda).
- Tarafsızlık aranır, araştırmacı ve katılımcılar arasındaki mesafe korunur.
- Standartlaşma için kontrol ve doğruluk aranır. Bu genellikle bağlamsızlaştırmayı içerir (örn. Bağlamda araştırılan durumu ayıklama ya da bağlamanın muhtemel etkilerini göz ardı etmek). İstenilen standartlaşmayı yakalamak için biraz yapaylığa gereksinim duyulabilir.
- Değerlerden bağımsız ve tarafsız bir pozisyon aranır.

Nicel araştırma paradigması tarihsel olarak pozitivizm ile yakından ilişkilidir (Robson, 2015’den çeviren Nayır, 2015).

Literatür Taraması

Çalışmada konu ile ilgili olarak yapılan literatür taramasında öncelikli olarak değerlendirmeye Soydan ve Aslan (2014) yaptıkları araştırma alınmıştır. Söz konusu araştırmada araştırmacılar iletişim ve kitle iletişim araçlarına değinerek özetle iletişimin; birbirlerine nesneler, olaylar, olgularla ilgili değişimleri ileten, bunlarla ilgili bilgileri aktaran, aynı olaylar, olgular, nesneler ve sorunlar karşısında benzer yaşam tecrübelerinden kaynaklanan yine benzer duygular taşıyarak bunları ifade eden bireylerin oluşturduğu topluluk ya da toplum yaşamı içinde gerçekleştirilen davranış, yargı, tutum, duygu, düşünce bildirimleri olarak tanımlamaktadır.

Günümüzde hem toplumsal varoluşu, hem de sosyalleşmeyi yaratmak ve bu ortaklığı sürdürebilmek için kitle iletişim araçlarına ihtiyaç duyulduğunu ifade eden araştırmacılar genellikle kitle iletişim araçlarından bir bütün olarak söz edildiğini, ancak; radyo, televizyon, yazılı basın, haber ajansları gibi farklı işlevleri yerine getiren çalışma alanları bulunduğunu ifade etmişlerdir.

Kitle iletişim araçlarının ortak özelliğinin zamanla toplumda alışkanlığa ve ihtiyaca dönüşerek toplumda bir talebin oluşmasına neden olmasını gösteren araştırmacılar, bir başka ortak özelliklerinin ise olayları aynı anda sınıf, cinsiyet ya da kimlik gözetmeksizin toplumun her kesimine aynı anda ulaştırabilmesi olarak belirtmektedir (Soydan ve Alpaslan, 2014).

Yine aynı araştırmacılara göre, medya her çeşit bilgiyi bireylere ve topluluklara aktaran bilgilendirme, eğitime gibi temel sorumluluklara sahip hem görsel, hem de işitsel araçların tümü şeklinde tanımlanabilmektedir.

Artık medya, hayatın her alanında bilgilendirici ve yönlendirici bir güç olarak yer almaktadır. Özellikle teknolojik gelişmelerin bu alanda kullanılmasıyla birlikte, medya her yerde ve her zaman en kötü ve ağır koşullarda bile iletişim kurmayı sağlamaktadır. Medyanın temel işlevleri arasında yer alan bilgilendirme, kültürel devamlılık, toplumsallaştırma ve kamuoyu yaratma işlevleri insanları medyaya daha çok bağımlı kılmaktadır.

Söz konusu araştırmacılara göre, medyayı yazılı basın ve görsel-işitsel medya olarak ele alırsak, haber, bilgi ve yorumları gazete ve dergi gibi basılı bir şekilde topluma ulaştıran medya türü yazılı basın, radyo, televizyon gibi daha çabuk bir yoldan topluma ulaştıran medya türü de görsel medya olarak adlandırılmaktadır.

Çalışma konusu ile ilgili değerlendirmeye alınan ikinci araştırmada Büyükbaykal (2005); kitle iletişim araçlarını, günümüzün yaygın deyişiyle medya, kullandığı sözel ve göstergesel dil ve tüm gündelik pratikleri, spordan siyasete, sanattan eğlenceye bireyin içinde biçimlendiği, kendini yeniden ürettiği toplumsal olguları anlamlandırmakta ve tanımlamaktadır. Bugün yaşadığımız dünya araştırmacıya göre gittikçe medyanın yapılandığı bir dünya haline gelmektedir. Toplumsal yaşam bir bakıma televizyon kanalları, radyo, sinema, gazete ve bilgisayarlar tarafından şekillenmektedir. Medya sadece haber ve eğlence programları yoluyla insanları beslemekte aynı zamanda, insanlara bir yaşam tarzı kazandırmaktadır.

Yine Büyükbaykal'a göre (2005), bilgi, düşünce ve davranışların aktarılması süreci olan iletişim olgusu insanlık tarihi kadar eski bir olgudur. İnsanların öğrenmek ve bilmek gereksinimleri ise radyo, televizyon, gazete, dergi, kitap, reklam, telefon, telgraf ve bilgisayar gibi kitle iletişim araçları sayesinde karşılanmaktadır. Bu araçlar herhangi bir bilgiyi, kısa sürede geniş kitlelere hızlı bir biçimde ulaştırabildikleri için günlük yaşamda son derece önemli bir yere sahiptir. Günümüzde çok sayıda insan ekonomik, sosyal, kültürel ve siyasal gelişmeler hakkında bilgi edinebilmek amacıyla kitle iletişim araçlarından faydalanmaktadır.

Geleneksel iletişim sürecinde yer alan öğeler kitle iletişim sürecinde de bulunmasına karşılık; araştırmacıya göre kitle iletişimi, kullanılan araçlar, iletilen haber ve bilgilerin içeriği ve seslenilen kişiler yönünden farklılık ve özellikler taşır. Kitle iletişim araçları kullanımı yoluyla yapılan iletişimde ise, iletişim kişiler arasında değildir. Bir topluluk içerisinde türdeş olmayan ve tek tek özellikler kesin olarak bilinmeyen bir kitleye, bu iş için geliştirilmiş araçlar ile bir kaynaktan seslenilir. İletişim basın, radyo, televizyon gibi bu iş için özel olarak öngörülmüş kurumlar aracılığıyla gerçekleşmektedir. Haberin yayımı, kültürün yayılması, kişiler ya da gruplar arasında rastlantısal buluşmalara bağlı değildir. Aksine, sürecin işlemesi için isteme dayanan bir yaklaşım ve bu amaçla geliştirilen kurumlar aracılığıyla gerçekleşmektedir. Haberin yayımı, kültürün yayılması, kişiler ya da gruplar arasında rastlantısal buluşmalara bağlı değildir. Aksine sürecin işlemesi için isteme dayanan bir yaklaşım ve bu amaçla geliştirilen kurumlar söz konusudur..

İncelenen Baran ve Baran'a (2014) ait üçüncü çalışmada ise, son yıllarda insanların belki de en fazla vakit ayırdıkları eğlence aracı haline gelen teknolojinin insanlığa sunduğu en önemli araçlardan biri olan televizyon (TV) yoluyla insanlar yorgunluğunu atmakta boş zamanlarının önemli bir kısmını yarışma, dizi, magazin vb. TV programlarını izleyerek geçirmektedirler. Reklam, dizi, magazin vb. programlarla insanların bilinçaltına etki ederek onları tüketime sevk eden televizyon, seyircileri, yarışma, magazin, dizi, reklam vb. programlarda karşılaştıkları ünlüler gibi yaşamaya, giyinmeye özendirilmektedirler.

Televizyon araştırmacılara göre, zaman içerisinde iletişim işlevinin dışında daha farklı özellikleri içerisinde barındıran bir hal almıştır. TV'nin zaman içerisinde artan bu etkinliği pazarlama akademisyenlerinin ve uygulamacılarının da dikkatini çekmiştir. Pazarlamacılar gerek reklam kuşaklarıyla gerekse diziler, magazin programları, yarışmalar vb. programlar aracılığıyla tüketicilere ulaşmaya çalışmaktadırlar. Bu noktada pazarlamacılar TV programlarında futbolcular, mankenler, sanatçılar gibi ünlüleri kullanarak tüketicilere kendi ürünlerini kullanmaları halinde ünlülerin sahip olduğu prestije sahip olabilecekleri mesajını vermektedirler. TV programlarında geçen ürün ya da markaların satın alınamaması psikolojik, ekonomik, toplumsal bir takım sonuçları beraberinde getirmektedir statü kaybı gibi görülmektedir.

Baran ve Baran'a göre (2014), Tüketiciler kullandıkları ürün ve markalar aracılığıyla karşısındakilere sosyal statü ve sınıfsal bakımdan mesajlar verirler ve herhangi bir nedenle bu ürün ya da markaları kullanamayan tüketiciler bu mesajlar sonunda bu ürün ve markaları kullanabilmek için bir takım bedeller ödemeye kendilerini hazırlarlar. Bu nedenle de toplumsal olarak sosyolojik birtakım sorunların ortaya çıkmaktadır.

Çalışmada dördüncü ve beşinci inceleme olarak değerlendirilen ve iki farklı araştırması kaynak olarak kullanılan Kırtepe (2014) ise, televizyon dizilerini konu alarak; toplum genelinde televizyonda en çok izlenen program

türünün televizyon dizileri olduğunu belirtmiştir. Bu program türü birçok yönden diğer program türlerinden farklı olduğunu dile getirerek insanın günlük hayattaki yaşam akışının bir benzerinin dizi senaryolarında işlenmekte olduğunu ifade etmiştir. Bu özellikler ile televizyonun bir kitle iletişim aracı olarak sahip olduğu vasıfların bir arada bulunması dizi filmlerin izlenme oranının fazla olmasına, toplumda kolayca kabul görmesine ve etkisinin artmasına zemin oluşturmaktadır.

Araştırmacıya göre, dizileri ve diziler hakkındaki değerlendirmeleri önemli kılan birçok nokta vardır. Tekrar, merak, mesajının kolaylıkla birçok yere ulaşabilmesi ve kültürel unsurları içermesi bunların başlıcalarıdır. Bu unsurların dizileri ve onlarla ilgili değerlendirmeleri ve araştırmaları önemli hale getirdiği söylenebilir. Çünkü bunlar toplum ve diziler arasında meydana gelen sürekli bir veri aktarımına altyapı oluşturur. Hatta bu bağlantının kimi zaman bağımlılık denecek bir seviyeye ulaştığı belirtilmelidir. Böylece bir taraftan dizilerin varlığı ve devamlılığı sağlanırken diğer taraftan toplumda mevcut olan değişim döngüsünün istenilen yönlerde gerçekleşmesine zemin oluşturulabilmektedir.

Kırtepe'ye göre (2014), televizyon yayınları içerisinde en çok takip edilen program türü televizyon dizileridir. "Bölümler hâlinde yayımlanan ve çoklukla aralarında konu bütünlüğü olan film, dizi, televizyon dizisi" şeklinde de tanımlanmaktadır (TDK, 2010'dan aktaran, Kırtepe, 2014). Farklı şekillerde telaffuz edilse de televizyonda gösterilen ortak konular farklı olayların bütünleştirilmesinden oluşan drama şeklinde tasarlanan anlatılara dizi olarak adlandırılabilir. Ana karakter ve ortak mekanlardan oluşan diziler farklı konular içeren bölümlerden oluşur. İzleme alışkanlıklarının değişmesi ve dizilerdeki çeşitliliğin artmasını sağlamaktadır.

Çalışmacıya göre, diziler birçok yönden televizyonda yer alan diğer program türlerinden farklı özelliklere sahiptir. İnsan yaşamını anlatan televizyon dizilerinde, toplumsal hayatın akışına uygun ve benzer konular sunulmaktadır. Bu özellikler dizilerin birey üzerindeki etkisinin artmasına, izlenme oranının yükselmesine ve toplumda kabullenilmesine katkıda bulunmaktadır. Bunun yansımaları seyirciler üzerinde çeşitli noktalarda gözlenebilmektedir. İnsanların toplumu oluşturan diğer üyelerle olan sosyal ilişkileri, davranışları ve diyalogları bu yansımaya gözler önüne sermektedir. Öyle ki insanlar dizilerdeki kahramanlar gibi konuşmaya, şakalaşmaya, hitap etmeye, giyinmeye ve tüketmeye başlamıştır. Dizilerde yer alan repliklerin kullanılması, oyuncuların takılarının/kullandıkları eşyalarının moda haline gelmesi vb. gibi birçok noktada bu görülebilir.

Yine Kırtepe'ye göre (2014), diziler sosyal hayatın ekrana aktarılmasıdır. Bu aktarım nedeniyle diziler, toplumsal yapının göstergesi olarak görülebilir. Toplumsal yapıda yer alan olması gereken ve ya istenen unsurlar dizilerde kendisine yer bulabilmektedir. bireyler arası ilişkileri, bireyin toplum içerisindeki sosyal konum ve statüsünü, bakış açısını, ekonomik faaliyetler çerçevesinde insanın yerini, vb. sosyo-kültürel yaşantıda bulunan birçok şeyi dizilerde görmek mümkündür.

Bu nedenle televizyon dizilerinde sunulan konuların toplumda kendine yer bulması çok kolay ve kaçınılmazdır. Diziler vasıtasıyla topluma aktarılan olgular toplum tarafından değerlendirilmektedir. Kullanılan isimler bile toplum üyelerinin düşüncelerinde ve o ismi taşıyanlara bakış açılarında değişiklikler meydana getirebilmektedir. Televizyon dizileri toplumda istenilen değişikliklerin toplumun gündemine taşınması için bir araç olarak kullanılabilmektedir. Toplumda kendine yer bulan konular, tartışılmaya, konuşulmaya, olumsuz ve olumlu yönleriyle değerlendirilmeye başlanmaktadır. böylece gündeme giren veya girdirilen olaylar toplumsal kabule veya yapılacak itirazlara engellenmesine imkân sağlamaktadır. Bu şekilde dizi film programları toplumun herhangi bir konudaki tavrının ve algılamalarının oluşumunda etkin rol oynamakta ve arzu edilen şekilde izleyicide değişimlerin meydana gelmesini sağlayabilmektedir.

İnsanlık tarihinin başlamasıyla birlikte güvenlik, insanlar için daima öncelikli konulardan biri olmuştur. Güvenliğin temin edilmediği yerlerde özgürlükten, demokrasiden ve insan haklarından söz etmek oldukça güçtür. Bu nedenle günümüz dünyasındaki az gelişmiş ve gelişmekte olan ülkelerin öncelikli hedeflerden biri de güvenliktir (Halil, 2013'den aktaran Kırtepe, 2014).

Çalışmada değinilen altıncı araştırmada ise Halil'e (2013) göre, insanlık tarihinin başlamasıyla birlikte güvenlik, insanlar için daima öncelikli bir konu olmuştur. Zira dünya çok çeşitli tehlikelerle doludur. İnsanlar doğal afetleri, vahşi hayvanları, kısaca kendinden başka her şeyi bir tehdit unsuru olarak gördüğünden, kendini korumak için barınaklar, evler ve çeşitli aletler yaparak asgari bir güvenli yaşam sağlamaya çalışmıştır.

Batıda Rönesans ile başlayan ve 18. yüzyıl Aydınlanma Dönemi ile devam eden milliyetçilik, şehirleşme, bilim, teknik, sanayileşme ve endüstrinin gelişmesiyle modern toplum, modern devlet anlayışını ortaya çıkarmıştır. Ancak bu düşüncenin son dönemlerde yerini postmodern anlayışına bıraktığı görülmektedir.

Araştırmacıya göre, modern ve demokratik toplumların temel ihtiyaçlarının başında da huzur ve güvenlik gelir. Güvenliğin temin edilmediği yerlerde özgürlükten, demokrasiden ve insan haklarından söz etmek oldukça güçtür. Bu nedenle günümüz dünyasındaki gelişmiş ve gelişmekte olan ülkelerin öncelikli hedefi yine güvenliktir.

Güvenlik kurumları, toplumun huzur ve güvenliğini sağlamak için kurulmuşlardır. Günümüzün modern ve demokratik toplumlarında iç güvenlik hizmetlerinden sorumlu kolluk teşkilatları bir görev gücü olarak değil, güvenlik hizmeti sunan bir servis olarak algılanmaktadır (DPT, 2007).

Ülkemizde güvenlik ihtiyacı kolluk olarak polis ve jandarma tarafından karşılanmaktadır. Polis bu görevini 2559 sayılı polis vazife ve salahiyet kanunu ile gerçekleştirir. Polis demokratik düzen içinde, kanun hâkimiyetinin sağlanması ve korunması, yurt içinde huzur ve nizamın temini, vatandaşların can, mal, ırz güvenliğinin sağlanması

ve korunması, suç işlemeye yönelik davranışların önlenmesi, sanıkların yakalanarak adalete teslim edilmesi görevlerini yerine getirir (Resmî Gazete, 1934).

Çalışma konusundaki yedinci araştırma olan Demirbaş ve Demir'e göre (2014), bir kurumun toplumun çeşitli kesimlerince nasıl algılandığı, söz konusu kurumun gerçek imajını oluşturmaktadır. Doğru imaj oluşturabilme yöntemi, doğru ve güvenilir bilgilerin üretilmesi ve hedef kitlelere zamanında aktarılabilmesidir. Kurumla ilgili halkın gözündeki imajın her zaman olumlu olması gerekmez, önemli olan doğru olmasıdır.

Bu nedenle halkın polis algısının belirlenmesi gerekir. Polis imaj ve algısı; toplumun, polisi ve polisin çalışmalarını nasıl değerlendirdiği, polisle çalışmaya gönüllü olup olmadığı ve suça karşı hassasiyetini belirlemeye çalışmak, bu doğrultuda yöntemler ve stratejiler geliştirmek, uygun stratejiler belirleyebilmek için toplumun cinsiyet, yaş, ekonomik durum veya eğitim gibi farklılık gösteren kesimlerinde polise ve polisliğe genel bakış açısı farklılıklarının, polisle işbirliği yapma eğiliminin ve suça karşı hassasiyetin seviyesinin bilinmesi önemlidir.

Araştırmacılar, polis teşkilatlarının toplumun desteğini almadan ve toplumla işbirliği yapmadan istenen yüksek performansı gösteremeyeceği ve suça mücadelede başarılı olamayacağı ifade etmektedir. Bu sebeple, polis teşkilatları toplumla yakınlaşmak, işbirliği sağlamak ve toplumun desteğini almak için çaba sarf etmektedir.

Polisin görevini yaparken toplumdan alacağı destek önem arz etmektedir. Bunu sağlamanın yöntemlerinden bir tanesinin, kurumun empati yapması, değerlendirmesi ve hatalarıyla yüzleşme cesareti göstermesinden geçtiği araştırmacılarca düşünülmektedir. Öyle ki polisin, halkı oluşturan bazı kesimler nezdinde nasıl algılandığının ölçülmesi önemlidir.

İncelenen sekizinci çalışmada Aslan ve Olgun'a göre (2009), toplumda suçları başarılı bir şekilde ortaya çıkarmak ve önlemek için toplum ile polis arasında verimli bir ilişki zaruridir. Hukuk ve düzenin temsilcisi olarak polis önemlidir. Toplum ise, hem suç ve suçluları kontrol etme teşebbüslerinde hukuku uygulayan temsilcilere destek noktasında bir kaynaktır, hem de suç mağdurlarının kaynağıdır. Kendisini başkalarının gözüyle denetlemeyen bir polis teşkilatının hizmet kalitesini artırması, hizmet sunduğu topluma entegre olması ile suça mücadelede ve toplumun huzur ve güvenliğini sağlamada toplumu yanında görmesinin oldukça zor olacağı değerlendirilmektedir. Araştırmacı için, polisin çalışmalarının sadece 'adli' olaylarla sınırlı kalması, polis ile toplumun arasındaki iletişimin kurulamamasına neden olmaktadır. Polisin başarısı, toplumun katılımı ile doğrudan orantılıdır denilebilir. Polisin görevi kamu düzenini sağlamaktır. Bu görevi yerine getirirken hizmet ettiği toplumun onay, güven ve saygısını kazanmak zorundadır. Diğer bir anlatımla polis, hukuksal meşruiyet ile toplumsal meşruiyeti kazanmalıdır. Öte yandan bir kişinin, ürünün veya bir kurumun halkın gözündeki konumu veya algılanma biçimi olan imaj, aynı zamanda bir kuruluşun kişiliğini de meydana getirmektedir. Bu kişiliğin, kuruluşun yönetici ve çalışanlarının ürünü olduğu söylenebilir. Bu yüzden de çoğu kez kurum imajı ile özdeşleşmektedir. Üretilen mal ve hizmet ve kuruluş çalışanları sıklıkla değişse bile imaj genellikle kalıcı olmakta ve değişmesi uzun zaman almaktadır. Bu sebeple polisin imajının ne olduğu zaman zaman ölçülmelidir.

Polisin halkla kurduğu ilişki kalitesinin artmasını savunan bu yaklaşımlar ile birlikte, polis ve halk arasında ilişkinin niteliğini, vatandaşın polis hizmetlerinden beklentisi ve memnuniyet düzeyini anlamaya yönelik yapılan araştırmaların sayısında artış yaşanmıştır. Yapılan bu araştırmalarda, halkın polisten beklentileri ve polis algısı, polisin vatandaş algısı, bu algıyı şekillendiren kültürel değerler ve polis hizmetlerinde vatandaş memnuniyetini etkileyen faktörler üzerinde durulmuştur.

Çalışmada incelenen dokuzuncu araştırma da Gülnar'a göre (2017), gündem belirleme üç aşamada gerçekleşmektedir. Birinci aşama, McCombs ve Shaw tarafından gerçekleştirilen 1968 Chapel Hill araştırmasıyla ortaya çıkmıştır. İkinci aşama 1976 Amerika Başkanlık Seçimleri esnasında Weaver ve diğerleri tarafından araştırılmıştır. Üçüncü aşama ise ilk kez 2010 yılında McCombs, Lei Guo ve Hong Tien Vu tarafından araştırılmış ve "An Expanded Perspective on Agenda-Setting Effects. Exploring the Third Level of Agenda Setting" (Gündem belirleme etkileri üzerine genişletilmiş bir perspektif. Üçüncü aşama gündem belirlemeyi araştırmak) isimli makaleyle ortaya atılmıştır.

Geleneksel gündem belirleme modeli olarak da isimlendirebileceğimiz birinci aşama gündem belirleme, özetle, insanların "ne hakkında" düşüneceklerinin medya tarafından belirlenebileceği üzerinde durmaktadır.

Araştırmacıya göre, ikinci aşama gündem belirleme modeli, özetle, kitle iletişim araçlarının insanların yalnızca "ne hakkında düşüneceklerini" değil aynı zamanda "ne düşüneceklerini" de belirlediği hipotezi üzerine inşa edilmiş bir modeldir. Üçüncü aşama ise, gündem belirlemenin entelektüel babası olarak kabul edilen Walter Lippmann'ın (The World Outside and The Pictures in Our Heads (Dışarıdaki dünya ve zihinlerimizdeki resimler) tanımlamasından hareketle açıklarlar. Lippmann'ın "zihnimizdeki resimler" tanımlaması bağlamında ilk aşama gündem belirleme etkilerinin cevapladığı soru şudur: "Bu resimler neyle ilgilidirler?". İkinci aşama gündem belirleme çalışmaları ise "Bu resimlerin baskın karakteristikleri nelerdir?" sorusunu cevaplar. Yazarlar son yıllarda yapılan araştırmaların ardından "Zihnimizdeki resimler nelerdir?" sorusunun cevabını vermeye çok yaklaştığını belirtirler. İşte bu aşama gündem belirlemenin üçüncü aşaması olarak nitelendirilmektedir.

Araştırmacı bu üç aşama dışında gündem birleştirmeye değinerek, bireylerin kişisel gündemlerinin bireyin içerisinde bulunduğu cemaat veya mensup bulunduğu grup ile ilişkisine odaklanır. Dolayısıyla gündem birleştirmenin temel hipotezini, bireylerin bir gruba dahil olduklarında kendi/bireysel gündemleri ile grup gündemlerinin birleştiğini ifade ederek açıklamaktadır.

Araştırma konumuzda son olarak değindiğimiz çalışma Atabek'e göre (1998), haberler çevredeki karmaşık ve değişik özelliklere sahip olaylar arasından izleyiciler veya okuyucular için seçilerek belirli gazetecilik kuralları çerçevesinde tanımlanırlar. İzleyicilerin doğrudan deneyimlerinin ötesindeki dünya ile ilgili olarak hangi konulara ilgi göstereceklerini belirlemede haberler önemli işleve sahiptir. Gazete editörlerinin veya televizyon yayıncılarının gündelik işlerini yaparken yayınlanacak haberleri seçmesi ve haberlerin gazete veya televizyondaki konumlarını belirlemesi, izleyicilerin dünyayı algılayış biçimleri üzerinde etkiler yapar.

Yine araştırmacıya göre, kitle iletişim araçları doğrudan deneyimlerimizle öğrenemediğimiz ya da içinde yer almadığımız olayları nasıl algılayacağımızı belirlemede çok önemli bir role sahiptir. Her gün seçilen ve sunulan haberlerle o gün hangi konuların önemli olduğuna ilişkin algıları etkiler. Kitle iletişim araçları sahip oldukları bu etki sayesinde kamunun düşünme ve tartışma gündemini düzenlemede önemli bir işlev görür. Kamu gündeminin belirlenmesi, kitle iletişim araçlarının belirli haber konularını vurgulayarak izleyicilerin gündemlerini belirlemesidir.

Bulgular

1) Maddelere ait frekans ve yüzdelere

Bu bölümde her bir maddenin frekans ve yüzdelik değerlerine yer verilmiştir.

Tablo 1.M1-Genel olarak polise güveniyorum

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	11	7.8	7.8
Katılmıyorum	14	9.9	17.7
Kararsızım	23	16.3	34.0
Katılıyorum	46	32.6	66.7
Kesinlikle Katılıyorum	47	33.3	100.0
Toplam	141	100.0	

Tablo 1’de “M1-Genel olarak polise güveniyorum” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %7.8’i kesinlikle katılmıyorum, %9.9’u katılmıyorum, %16.3’ü kararsızım, %32.6’sı katılıyorum ve %33.3’ü kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 2.M2-Polise saygı duyuyorum

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	8	5.7	5.7
Katılmıyorum	7	5.0	10.6
Kararsızım	11	7.8	18.4
Katılıyorum	47	33.3	51.8
Kesinlikle Katılıyorum	68	48.2	100.0
Toplam	141	100.0	

Tablo 2’de “M2-Polise saygı duyuyorum” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %5.7’si kesinlikle katılmıyorum, %5’i katılmıyorum, %7.8’i kararsızım, %33.3’ü katılıyorum ve %48.2’si kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 3.M3-Gerektiğinde polise destek veririm

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	6	4.3	4.3
Katılmıyorum	8	5.7	9.9
Kararsızım	11	7.8	17.7
Katılıyorum	38	27.0	44.7
Kesinlikle Katılıyorum	78	55.3	100.0
Toplam	141	100.0	

Tablo 3’de “M3-Gerektiğinde polise destek veririm” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %4.3’ü kesinlikle katılmıyorum, %5.7’si katılmıyorum, %7.8’i kararsızım, %27’si katılıyorum ve %55.3’ü kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 4.M4-Polisin genel olarak imajı olumludur

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	14	9.9	9.9
Katılmıyorum	14	9.9	19.9
Kararsızım	21	14.9	34.8
Katılıyorum	47	33.3	68.1
Kesinlikle Katılıyorum	45	31.9	100.0
Toplam	141	100.0	

Tablo 4’de “M4-Polisin genel olarak imajı olumludur” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %9.9’ı kesinlikle katılmıyorum, %9.9’ı katılmıyorum, %14.9’u kararsızım, %33.3’ü katılıyorum ve %31.9’u kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 5.M5-Polislik kolay bir meslektir

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	60	42.6	42.6
Katılmıyorum	49	34.8	77.3
Kararsızım	16	11.3	88.7
Katılıyorum	13	9.2	97.9
Kesinlikle Katılıyorum	3	2.1	100.0
Toplam	141	100.0	

Tablo 5’te “M5-Polislik kolay bir meslektir” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %42.6’sı kesinlikle katılmıyorum, %34.8’i katılmıyorum, %11.3’ü kararsızım, %9.2’si katılıyorum ve %2.1’i kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 6.M6-Polislik saygın ve itibarlı bir meslektir

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	6	4.3	4.3
Katılmıyorum	9	6.4	10.6
Kararsızım	17	12.1	22.7
Katılıyorum	48	34.0	56.7
Kesinlikle Katılıyorum	61	43.3	100.0
Toplam	141	100.0	

Tablo 6’de “M6-Polislik saygın ve itibarlı bir meslektir” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %4.3’ü kesinlikle katılmıyorum, %6.4’ü katılmıyorum, %12.1’i kararsızım, %34’ü katılıyorum ve %43.3’ü kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 7.M7-Polislik hiç bir şey olamayanların tercih ettiği meslektir

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	50	35.5	35.5
Katılmıyorum	43	30.5	66.0
Kararsızım	20	14.2	80.1
Katılıyorum	19	13.5	93.6
Kesinlikle Katılıyorum	9	6.4	100.0
Toplam	141	100.0	

Tablo 7’de “M7-Polislik hiç bir şey olamayanların tercih ettiği meslektir” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %35.5’i kesinlikle katılmıyorum, %30.5’i katılmıyorum, %14.2’si kararsızım, %13.5’i katılıyorum ve %6.4’ü kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 8.M8-Çocuğumun polis olmasını isterim

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	29	20.6	20.6
Katılmıyorum	16	11.3	31.9
Kararsızım	43	30.5	62.4
Katılıyorum	26	18.4	80.9
Kesinlikle Katılıyorum	27	19.1	100.0
Toplam	141	100.0	

Tablo 8’de “M8-Çocuğumun polis olmasını isterim” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %20.6’sı kesinlikle katılmıyorum, %11.3’ü katılmıyorum, %30.5’i kararsızım, %18.4’ü katılıyorum ve %19.1’i kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 9. M9-Polisin görevini yaparken adil ve tarafsız olduğunu düşünüyorum

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	18	12.8	12.8
Katılmıyorum	21	14.9	27.7
Kararsızım	35	24.8	52.5
Katılıyorum	38	27.0	79.4
Kesinlikle Katılıyorum	29	20.6	100.0
Toplam	141	100.0	

Tablo 9’da “M9-Polisin görevini yaparken adil ve tarafsız olduğunu düşünüyorum” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %12.8’i kesinlikle katılmıyorum, %14.9’u katılmıyorum, %24.8’i kararsızım, %27’si katılıyorum ve %20.6’sı kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 10. M10-Polis işkence ve kötü muamele yapmaz

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	21	14.9	14.9
Katılmıyorum	14	9.9	24.8
Kararsızım	30	21.3	46.1
Katılıyorum	44	31.2	77.3
Kesinlikle Katılıyorum	32	22.7	100.0
Toplam	141	100.0	

Tablo 10’da “M10-Polis işkence ve kötü muamele yapmaz” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %14.9’u kesinlikle katılmıyorum, %9.9’u katılmıyorum, %21.3’ü kararsızım, %31.2’si katılıyorum ve %22.7’si kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 11. M11-Polisler rüşvet almazlar

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	18	12.8	12.8
Katılmıyorum	18	12.8	25.5
Kararsızım	38	27.0	52.5
Katılıyorum	35	24.8	77.3
Kesinlikle Katılıyorum	32	22.7	100.0
Toplam	141	100.0	

Tablo 11’de “Polisler rüşvet almazlar” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %12.8’i kesinlikle katılmıyorum, %12.8’i katılmıyorum, %27’si kararsızım, %24.8’i katılıyorum ve %22.7’si kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 12. M12-Polisler kendilerini halkın üstünde görmekte-dirler

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	37	26.2	26.2
Katılmıyorum	28	19.9	46.1
Kararsızım	29	20.6	66.7
Katılıyorum	32	22.7	89.4
Kesinlikle Katılıyorum	15	10.6	100.0
Toplam	141	100.0	

Tablo 12’de “M12-Polisler kendilerini halkın üstünde görmekte-dirler” maddesine ait frekans ve yüzdeler yer almaktadır. Katılımcıların %26.2’si kesinlikle katılmıyorum, %19.9’u katılmıyorum, %20.6’sı kararsızım, %22.7’si katılıyorum ve %10.6’sı kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 13. M13-Emniyet teşkilatı personeli eğitimidir

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	13	9.2	9.3
Katılmıyorum	9	6.4	15.7
Kararsızım	26	18.4	34.3
Katılıyorum	54	38.3	72.9
Kesinlikle Katılıyorum	38	27.0	100.0
Toplam	140	99.3	

Tablo 13’de “M13-Emniyet teşkilatı personeli eğitimidir” maddesine ait frekans ve yüzdeler yer almaktadır. Katılımcıların %9.2’si kesinlikle katılmıyorum, %6.4’ü katılmıyorum, %18.4’ü kararsızım, %38.3’ü katılıyorum ve %27’si kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 14. M14-Emniyet teşkilatı en güvenilir kurumdur

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	15	10.6	10.6
Katılmıyorum	8	5.7	16.3
Kararsızım	26	18.4	34.8
Katılıyorum	48	34.0	68.8
Kesinlikle Katılıyorum	44	31.2	100.0
Toplam	141	100.0	

Tablo 14’de “M14-Emniyet teşkilatı en güvenilir kurumdur” maddesine ait frekans ve yüzdeler yer almaktadır. Katılımcıların %10.6’sı kesinlikle katılmıyorum, %5.7’si katılmıyorum, %18.4’ü kararsızım, %34’ü katılıyorum ve %31.2’si kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 15. M15-Medya polisi kötü göstermektedir

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	10	7.1	7.1
Katılmıyorum	32	22.7	29.8
Kararsızım	41	29.1	58.9
Katılıyorum	39	27.7	86.5
Kesinlikle Katılıyorum	19	13.5	100.0
Toplam	141	100.0	

Tablo 15’de “M15-Medya polisi kötü göstermektedir” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %7.1’i kesinlikle katılmıyorum, %22.7’si katılmıyorum, %29.1’i kararsızım, %27.7’si katılıyorum ve %13.5’i kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 16. M16-TV dizileri polisi olduğundan farklı göstermektedir (olumlu)

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	6	4.3	4.3
Katılmıyorum	15	10.6	14.9
Kararsızım	32	22.7	37.6
Katılıyorum	56	39.7	77.3
Kesinlikle Katılıyorum	32	22.7	100.0
Toplam	141	100.0	

Tablo 16’da “M16-TV dizileri polisi olduğundan farklı göstermektedir (olumlu)” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %4.3’ü kesinlikle katılmıyorum, %10.6’sı katılmıyorum, %22.7’si kararsızım, %39.7’si katılıyorum ve %22.7’si kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 17. M17-TV dizileri polise olan sempatiyi artırır

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	3	2.1	2.1
Katılmıyorum	11	7.8	9.9
Kararsızım	22	15.6	25.5
Katılıyorum	75	53.2	78.7
Kesinlikle Katılıyorum	30	21.3	100.0
Toplam	141	100.0	

Tablo 17’de “M17-TV dizileri polise olan sempatiyi artırır” maddesine ait frekans ve yüzdelere yer almaktadır. Katılımcıların %2.1’i kesinlikle katılmıyorum, %7.8’i katılmıyorum, %15.6’sı kararsızım, %53.2’si katılıyorum ve %21.3’ü kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 18. M18-Polisiye diziler arttıkça polis olma isteği de artmaktadır

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	6	4.3	4.3
Katılmıyorum	14	9.9	14.2
Kararsızım	15	10.6	24.8
Katılıyorum	65	46.1	70.9
Kesinlikle Katılıyorum	41	29.1	100.0
Toplam	141	100.0	

Tablo 18’de “M18-Polisiye diziler arttıkça polis olma isteği de artmaktadır” maddesine ait frekans ve yüzdeler yer almaktadır. Katılımcıların %4.3’ü kesinlikle katılmıyorum, %9.9’u katılmıyorum, %10.6’sı kararsızım, %46.1’i katılıyorum ve %29.1’i kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 19. M19-Polislerin dizilerdeki gibi olmasını istiyorum

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	13	9.2	9.2
Katılmıyorum	30	21.3	30.5
Kararsızım	33	23.4	53.9
Katılıyorum	42	29.8	83.7
Kesinlikle Katılıyorum	23	16.3	100.0
Toplam	141	100.0	

Tablo 19’da “M19-Polislerin dizilerdeki gibi olmasını istiyorum” maddesine ait frekans ve yüzdeler yer almaktadır. Katılımcıların %9.2’si kesinlikle katılmıyorum, %21.3’ü katılmıyorum, %23.4’ü kararsızım, %29.8’i katılıyorum ve %16.3’ü kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

Tablo 20. M20-Polisiye dizilerden sonra polislere bakış açım değişti

	Frekans	Yüzde	Yığılmalı Yüzde
Kesinlikle Katılmıyorum	17	12.1	12.1
Katılmıyorum	46	32.6	44.7
Kararsızım	35	24.8	69.5
Katılıyorum	29	20.6	90.1
Kesinlikle Katılıyorum	14	9.9	100.0
Toplam	141	100.0	

Tablo 20’de “M20-Polisiye dizilerden sonra polislere bakış açım değişti” maddesine ait frekans ve yüzdeler yer almaktadır. Katılımcıların %12.1’i kesinlikle katılmıyorum, %32.6’sı katılmıyorum, %24.8’i kararsızım, %20.6’sı katılıyorum ve %9.9’u kesinlikle katılıyorum seçeneğini işaretlemişlerdir.

2) Maddelere ait tanımlayıcı istatistikler

Bu bölümde her bir maddeye ait ortalama, standart sapma, basıklık (kurtosis) ve çarpıklık (skewness) değerlerini içeren tanımlayıcı istatistikler yer almaktadır.

Tablo 21. Maddelere ilişkin tanımlayıcı istatistikler

	n	Ort	Ss	Çarpıklık	Basıklık
M1. Genel olarak polise güveniyorum	141	3.74	1.24	-0.81	-0.32
M2. Polise saygı duyuyorum	141	4.13	1.12	-1.47	1.51
M3. Gerekğinde polise destek veririm	141	4.23	1.09	-1.54	1.68
M4. Polisin genel olarak imajı olumludur	141	3.67	1.29	-0.79	-0.46
M5. Polislik kolay bir meslektir	141	1.94	1.05	1.07	0.41
M6. Polislik saygın ve itibarlı bir meslektir	141	4.06	1.09	-1.21	0.86
M7. Polislik hiç bir şey olamayanların tercih ettiği meslektir	141	2.25	1.25	0.74	-0.54
M8. Çocuğumun polis olmasını isterim	141	3.04	1.38	-0.11	-1.12
M9. Polisin görevini yaparken adil ve tarafsız olduğunu düşünüyorum	141	3.28	1.30	-0.31	-0.95
M10. Polis işkence ve kötü muamele yapmaz	141	3.37	1.34	-0.50	-0.87
M11. Polisler rüşvet almazlar	141	3.32	1.31	-0.34	-0.91
M12. Polisler kendilerini halkın üstünde görmektedirler	141	2.72	1.35	0.14	-1.24
M13. Emniyet teşkilatı personeli eğitilidir	140	3.68	1.21	-0.88	-0.01
M14. Emniyet teşkilatı en güvenilir kurumdur	141	3.70	1.26	-0.87	-0.17
M15. Medya polisi kötü göstermektedir	141	3.18	1.14	-0.09	-0.81
M16. TV dizileri polisi olduğundan farklı göstermektedir (olumlu)	141	3.66	1.07	-0.65	-0.13
M17. TV dizileri polise olan sempatiyi artırır	141	3.84	0.92	-0.94	0.89
M18. Polisiye diziler arttıkça polis olma isteği de artmaktadır	141	3.86	1.08	-1.03	0.48
M19. Polislerin dizilerdeki gibi olmasını istiyorum	141	3.23	1.22	-0.21	-0.95
M20. Polisiye dizilerden sonra polislere bakış açım değişti	141	2.84	1.18	0.24	-0.86

Tablo 21’de ölçek maddelere ilişkin ortalama, standart sapma, basıklık ve çarpıklık değerleri yer almaktadır. Ölçek maddelerine ilişkin ortalamalar incelendiği zaman; en yüksek ortalamanın 4.23 ortalaması ile “M3. Gerekğinde polise destek veririm” maddesine, en düşük ortalamanın ise 1.94 ortalama ile “M5. Polislik kolay bir meslektir” maddesine ait olduğu görülmektedir.

Ölçek maddelerine ilişkin basıklık ve çarpıklık değerleri incelendiği zaman; çarpıklık değerlerinin -1.54 ile 1.07 aralığında olduğu, basıklık değerlerinin ise -1.24 ile 1.68 aralığında olduğu görülmektedir. Bu değerler ölçek maddelerinin her birinin normallik varsayımını karşıladığını göstermektedir.

3) Güvenirlilik

Ölçeğin güvenirlik çalışması kapsamında iç tutarlık katsayısına (Cronbach's Alpha) bakılmıştır. Tablo 22'de görüldüğü gibi ölçeğin iç tutarlılık katsayısı 0,85 bulunmuştur. Bu değer ölçeğin yüksek derecede güvenilir olduğunu göstermektedir.

Tablo 22. Güvenirlik Değerleri

Cronbach's Alpha	n
0.851	20

4) Cinsiyetlere göre polis algısının karşılaştırılması

Bu bölümde bireylerin cinsiyetlerine göre polis algılarının farklılaşıp farklılaşmadığını öğrenmek amacıyla yapılan t testi yer almaktadır.

Tablo 23. Bireylerin cinsiyetlerine göre polis algısını araştırmak için yapılan t testi

Madde	Cinsiyet	n	\bar{x}	Ss	t	Sd	p

	Kadın	67	2.97	1.15			

Tablo 23'te bireylerin cinsiyetlerine göre polis algısının farklılaşıp farklılaşmadığını araştırmak için yapılan t testi bulunmaktadır. Ölçekte yer alan 20 maddeden her biri cinsiyete göre ayrı ayrı analiz edilmiştir.

Yapılan analiz sonucunda "M5. Polislik Kolay Bir Meslektir" maddesinde cinsiyetlere göre anlamlı farklılık olduğu görülmektedir ($t_{(139)}=2.404$, $p<0.05$). Cinsiyetlere ilişkin ortalamalar incelendiği zaman, erkeklerin ($\bar{x}=2.13$), kadınlara göre ($\bar{x}=1.72$) göre polislik mesleğini anlamlı oranda daha kolay buldukları görülmektedir.

Bunun yanında "M19. Polislerin Dizilerdeki Gibi Olmasını İstiyorum" maddesinde de cinsiyete göre anlamlı farklılık görülmektedir ($t_{(139)}=-2.651$, $p<0.05$). Cinsiyetlere ilişkin ortalamalar incelendiği zaman, kadınların ($\bar{x}=3.51$) erkeklere ($\bar{x}=2.97$) göre, polislik mesleğinin dizilerdeki gibi olmasını anlamlı oranda daha fazla istedikleri görülmektedir.

Ölçekte yer alan diğer maddelerde cinsiyetlere göre anlamlı farklılık görülmemektedir ($p>0.05$)

5) Yaş göre polis algısının karşılaştırılması

Bu bölümde bireylerin yaş gruplarına göre polis algılarının farklılaşıp farklılaşmadığını öğrenmek amacıyla yapılan t testi ve Anova yer almaktadır.

Tablo 24. Yaş gruplarına göre polis algısını karşılaştırmak için yapılan t testi

Madde	Yaş	n	Ort	Ss	t	Sd	p

Tablo 24'te bireylerin yaş gruplarına göre polis algısının farklılaşıp farklılaşmadığını araştırmak için yapılan t testi bulunmaktadır. Ölçekte yer alan 20 maddeden her biri yaş gruplarına göre ayrı ayrı analiz edilmiştir.

Yapılan analiz sonucunda "M5. Polislik Kolay Bir Meslektir" maddesinde yaş gruplarına göre anlamlı farklılık olduğu görülmektedir ($t_{(139)}=-2.64$, $p<0.05$). Yaş gruplarına ilişkin ortalamalar incelendiği zaman, 17-19 yaş arasındaki bireylerin ($\bar{x}=2.19$), 20 yaş ve üstü bireylere ($\bar{x}=1.73$) göre polislik mesleğini anlamlı oranda daha kolay buldukları görülmektedir.

Bunun yanında "M19. Polislerin Dizilerdeki Gibi Olmasını İstiyorum" maddesinde de yaş gruplarına göre anlamlı farklılık görülmektedir ($t_{(139)}=-2.06$, $p<0.05$). Yaş gruplarına ilişkin ortalamalar incelendiği zaman, 17-19 yaş arasındaki bireylerin ($\bar{x}=3.46$) 20 yaş ve üstü bireylere ($\bar{x}=3.04$) göre, polislik mesleğinin dizilerdeki gibi olmasını anlamlı oranda daha fazla istedikleri görülmektedir.

Ölçekte yer alan diğer maddelerde yaş gruplarına göre anlamlı farklılık görülmemektedir ($p>0.05$).

Bu bölümde bireylerin yaş gruplarına göre polis algılarının farklılaşıp farklılaşmadığını öğrenmek amacıyla yapılan ANOVA yer almaktadır.

Tablo 25. "M1-Genel olarak polise güveniyorum" maddesine ait tanımlayıcı istatistikler

	Yaş	n	Ort	Ss
M1. Genel Olarak Polise Güveniyorum	17 yaş (1)	34	3.82	1.22
	18 yaş (2)	13	3.31	1.55

21 yaş ve üstü (5)	63	4.38	0.97
Toplam	141	4.23	1.09

Tablo 29’da “M3-Gerektiğinde Polise Destek Veririm” maddesine ait tanımlayıcı istatistikler yer almaktadır. “M3-Gerektiğinde Polise Destek Veririm” maddesine ait ortalamalar incelendiği zaman, 17 yaşındaki bireylerin 4.35; 18 yaşındaki bireylerin 4.08; 19 yaşındaki bireylerin 4.00; 20 yaşındaki bireylerin 3.73 ve 21 yaş ve üstü bireylerin 4.38’dır. Ortalamalar arasında gözlenen bu farklılığın anlamlı olup olmadığını belirlemek amacıyla tek yönlü ANOVA yapılmıştır.

Tablo 30. “M3-Gerektiğinde Polise Destek Veririm” maddesine ilişkin yapılan ANOVA

	Varyansın Kaynağı	Kareler Toplamı	Sd	Kareler Ortalaması	F	p
Yaş	Gruplar arası	6.798	4	1.70	1.440	0.22
	Grup içi	160.478	136	1.18		
	Toplam	167.277	140			

Tablo 30’da yaş gruplarına göre “M3-Gerektiğinde Polise Destek Veririm” maddesini karşılaştırmak amacıyla yapılan ANOVA görülmektedir. Yapılan analiz sonucunda yaş gruplarına göre istatistiksel olarak anlamlı farklılık görülmemektedir ($F_{(4, 136)}=1.440$; $p<.05$).

Tablo 31. “M4-Polisin Genel Olarak İmajı Olumludur” maddesine ait tanımlayıcı istatistikler

	Yaş	n	Ort	Ss
M4. Polisin Genel Olarak İmajı Olumludur	17 yaş (1)	34	3.79	1.22

	19 yaş (3)	16	3.81	1.28
	20 yaş (4)	15	3.33	1.50
	21 yaş ve üstü (5)	63	3.68	1.24
	Toplam	141	3.67	1.29

Tablo 31’de “M4-Polisin Genel Olarak İmajı Olumludur” maddesine ait tanımlayıcı istatistikler yer almaktadır. “M4-Polisin Genel Olarak İmajı Olumludur” maddesine ait ortalamalar incelendiği zaman, 17 yaşındaki bireylerin 3.79; 18 yaşındaki bireylerin 3.54; 19 yaşındaki bireylerin 3.81; 20 yaşındaki bireylerin 3.33 ve 21 yaş ve üstü bireylerin 3.68’dir. Ortalamalar arasında gözlenen bu farklılığın anlamlı olup olmadığını belirlemek amacıyla tek yönlü ANOVA yapılmıştır.

Tablo 32. “M4-Polisin Genel Olarak İmajı Olumludur” maddesine ilişkin yapılan ANOVA

	Varyansın Kaynağı	Kareler Toplamı	Sd	Kareler Ortalaması	F	p
Yaş	Gruplar arası	2.782	4	0.69	0.411	0.80
	Grup içi	230.211	136	1.69		
	Toplam	232.993	140			

Tablo 32’de yaş gruplarına göre “M4-Polisin Genel Olarak İmajı Olumludur” maddesini karşılaştırmak amacıyla yapılan ANOVA görülmektedir. Yapılan analiz sonucunda yaş gruplarına göre istatistiksel olarak anlamlı farklılık görülmemektedir ($F_{(4, 136)}= 0.411$; $p<.05$).

Tablo 33. “M5-Polislik Kolay Bir Meslektir” maddesine ait tanımlayıcı istatistikler

	Yaş	n	Ort	Ss
--	-----	---	-----	----

M5. Polislik Kolay Bir Meslektir	Bir 17 yaş (1)	34	2.12	1.20
	18 yaş (2)	13	2.85	1.14
	19 yaş (3)	16	1.81	1.05
	20 yaş (4)	15	2.07	0.96
	21 yaş ve üstü (5)	63	1.65	0.84
	Toplam	141	1.94	1.05

Tablo 33’de “M5-Polislik Kolay Bir Meslektir” maddesine ait tanımlayıcı istatistikler yer almaktadır. “M5-Polislik Kolay Bir Meslektir” maddesine ait ortalamalar incelendiği zaman, 17 yaşındaki bireylerin 2.12; 18 yaşındaki bireylerin 2.85; 19 yaşındaki bireylerin 1.81; 20 yaşındaki bireylerin 2.07 ve 21 yaş ve üstü bireylerin 1.65’dir. Ortalamalar arasında gözlenen bu farklılığın anlamlı olup olmadığını belirlemek amacıyla tek yönlü ANOVA yapılmıştır.

Tablo 34. “M5-Polislik Kolay Bir Meslektir” maddesine ilişkin yapılan ANOVA

	Varyansın Kaynağı	Kareler Toplamı	Sd	Kareler Ortalaması	F	p	Post-hoc
	Gruplar arası	17.516	4	4.38			
Yaş	Grup içi	136.910	136	1.01	4.350	0.002	2 > 1, 3, 4, 5 1 > 5
	Toplam	154.426	140				

Tablo 34’de yaş gruplarına göre “M5-Polislik Kolay Bir Meslektir” maddesini karşılaştırmak amacıyla yapılan ANOVA görülmektedir. Yapılan analiz sonucunda yaş gruplarına göre “M5-Polislik Kolay Bir Meslektir” maddesi, istatistiksel olarak anlamlı farklılık göstermektedir. ($F_{(4,136)} = 4.350$; $p < .05$). Gruplar arasındaki farklılığı görebilmek amacıyla post-hoc testlerden Tukey çoklu karşılaştırma testi yapılmıştır. Yapılan test sonucunda 18 yaşındaki ($\bar{x}=2.85$) bireylerin, 17 ($\bar{x}=2.12$), 19 ($\bar{x}=1.81$), 20 ($\bar{x}=2.07$) ve 21 ve üstü ($\bar{x}=1.65$) bireylere göre polisliği daha kolay bir meslek olarak gördüğü görülmektedir. Aynı zamanda 17 yaşındaki ($\bar{x}=2.12$) bireylerin, 21 ve üzeri ($\bar{x}=1.65$) yaştaki bireylere göre polisliği daha kolay bir meslek olarak görmektedir.

Tablo 35. “M6-Polislik Saygın ve İtibarlı Bir Meslektir” maddesine ait tanımlayıcı istatistikler

	Yaş	n	Ort	Ss

Sonuç

Kitle iletişim araçlarının tümünü ifade eden genel bir kavram olan medya, izleyici üzerinde etki oluşturmaya çalışan ve hâkim ideolojiyi yaygınlaştıran etkili araçlar olarak değerlendirilmektedir. Dolayısıyla, insanlara kitlesel olarak hitap edebilmek, onları belli bir ürünün tüketimine yönlendirmek ve kendilerine sunulan belli düşünce ve görüşleri onaylamalarını sağlamak amacıyla faaliyet gösteren (Yaylagül, 2008:15) medya belli kurumların ya da belli kurumları temsil eden insanların da toplum tarafından nasıl algılanacağını belirleyebilir veya o algıyı değiştirebilir.

Türkiye’de özellikle çözüm süreci ya da Kürt açılımı olarak adlandırılan ve bir boyutu da karşılıklı eylemsizliğe dayanan dönemin başlangıcı, Gezi Parkı protestoları, 17-25 Aralık Darbe girişimi ve daha sonraki süreçte yaşanan olaylar, PKK’nın 22 Temmuz 2015 tarihinde 2 Polis Memurunu şehit etmesi ve sonrasında Türk Silahlı Kuvvetleri ile Emniyet Genel Müdürlüğünün ortaklaşa yürüttüğü temizlik/hendek operasyonları akabinde hem PKK hem DAESH terör örgütlerince son iki yılda Ankara başta olmak üzere (Gar saldırısı, Merasim sokak saldırısı, Kızılay saldırısı) İstanbul (Taksim, Sultan Ahmet, Sultangazi saldırıları) Bursa, Diyarbakır, Gaziantep, Şanlıurfa gibi illerimizde meydana gelen terör eylemleri ile son olarak Mevcut Hükümeti ve Anayasal Düzeni Yıkma amacıyla FETÖ/PDY tarafından kalkışılan 15 Temmuz Darbe girişiminin ardından, Diyarbakır gibi bu hususta stratejik öneme sahip bir şehirde üniversite eğitimine devam eden öğrencilerin, son yıllarda ülkece yaşanan olaylarda başrol oynayan kurumlardan birisi olan Emniyet Teşkilatına kısaca polise ve polisliğe bakış açısı ile televizyon dizilerinin önceki algıyı nasıl değiştirdiği yönündeki bu çalışma sonuç olarak algının düşünülenin aksine daha olumlu olduğunu, polislik ile ilgili her hangi bir önyargı olmadığını ortaya çıkartırken polisliğin dizilerdeki gibi olmasının istenildiği yönünde bir gerçeği de gözler önüne sermiştir.

Telling Creative Stories At School: The Complex Knowledge Structure Approach

Fabio Sartori

REDS Lab. - Dept. of Informatics, Systems and Communication

University of Milano-Bicocca Italy

fabio.sartori@unimib.it

Abstract

This paper presents, from both the theoretical and practical points of view, an educational project conducted at the Department of Computer Science, Systems and Communication of the Milano-Bicocca University in collaboration with secondary schools of Milan and its province. The project was devoted involving students to reflect about creativity needed to solve complex problems. Storytelling and case-based reasoning has been adopted, respectively, as the conceptual and computational tools to reach this aim. The CKS-Net framework was used as the didactic platform.

Introduction

Knowledge is an important asset of enterprises and many methodologies have been proposed to acquire and represent experiential knowledge, like CommonKADS (Shreiber, Wielinga, de Hoog, Akkermans, & Van de Velde 1994) and MIKE (Angele & Studer, 1998). Anyway, these methodologies are devoted to manage structured knowledge through the definition of well defined and formalized knowledge models. Unfortunately, there are a lot of fields and problems which cannot be described by standard and general methodologies, since their structures are so complex that it isn't possible to create a model of the involved knowledge.

In this context, a very promising subject of investigation concerns the adoption of Case Based Reasoning (CBR) (Kolodner, 1993) methodology as a very suitable paradigm to deal with complex knowledge structures. It has been applied to many research areas (Muñoz-Avila, Gupta, Aha, & Nau, 2002; Watson, 2002b, 2002a) and it results to be the most natural approach for many research projects characterized by episodic knowledge, since it allows to find a solution to a new problem (i.e. the *case*) by the adaptation of solutions adopted in the past to solve the most similar problems to the current one.

The key aspects of a Case Based application are the *structure of the case* and the *nature of the similarity* among cases. The structure of the case must define what kind of attributes has to be adopted to describe problems, in order to allow the comparison among them. The nature of the similarity must define a criterion, that can be a function (i.e. similarity function) or something more complex like a similarity metric (Finnie & Sun, 2002), to compare cases according to their attributes, in order to determine what are the most similar past problems to the current one.

The definition of case structure and similarity function is rather simple when the examined domains are characterized by well defined knowledge: in such situations, the classical K-Nearest Neighbor based on the Euclidean Distance is sufficient to compare cases having a fixed and unchangeable structure. Unfortunately, there exist a lot of situations in which the structure of the case is not unique, since it depends on the context in which it is analyzed and more sophisticated similarity metrics than the K-Nearest Neighbor algorithm could be necessary to compare them. The aim of the paper is to describe a conceptual and computational framework for the management of collective creativity in decision-making processes, that cannot always be captured exploiting traditional methodologies for the development of knowledge-based systems. Such knowledge typically concerns informal groups of people working and living within organizations, called Communities of Practice (CoPs) (Wenger, 1998) as well as organizations with a low level of technicality, like e.g. Small and Medium enterprises (SME).

Given the importance of SMEs in the global economy, especially in Europe, there has been a great deal of research in the Knowledge Management (KM) context, both from the theoretical and the practical standpoint to support SMEs in their day to day activities and to join SME networks. The main KM issues that have been recognized for SMEs are:

- their significant technological gaps with respect to wider organizations. Several technological solutions have been proposed in KM literature to enhance networking and knowledge sharing within

collaborative communities (see KNOW-CONSTRUCT project (Soares, Simões, Silva, & Madureira, 2006) as an example);

- their vulnerability in terms of loss of key personnel, as a consequence of their small size (Handzic, 2004). The limited dimensions of SMEs, that undoubtedly is a benefit from the agility perspective, may in fact cause the lack of a shared structured framework for company experiential knowledge collection and management.

In this paper we mainly refer to the latter issue and we present *Complex Knowledge Structures (CKS)*, a framework for the representation and management of creativity based on the integration of storytelling (Atkinson, 1998) and Case Based Reasoning methodologies. Storytelling is a short narration through which an individual describes an experience on a specific theme (Bruner, 1991). Storytelling can be considered an effective way to capitalize the knowledge that is produced from the daily working activities within organizations (Kleiner & Roth, 1997). Knowledge Management can profitably exploit storytelling as a way to make explicit the individual experiences, skills and competencies, to promote the negotiation processes through dialogues among people involved, to support the reification of new knowledge in order to make it available for the future and to help newcomers in the learning process about his/her job through the analysis of the problem-solving strategies and social context represented by the stories. In order to improve knowledge formalization and sharing within SMEs, CKS models problem-solving situations, solutions and outcomes into a CKS-Base that can be incrementally enriched with new experiences and managed according to a CBR strategy.

As an example of CKS application, we present here a Work Experience Scheme Project conducted at the Department of Computer Science, Systems and Communication of the University of Milan Bicocca in collaboration with many secondary schools of Milan and its province. The project, called “Let’s cook with the case based reasoning”, aimed at enabling students to involve students in understanding how creativity can be computationally captured (Gervais, 2009) through the storytelling conceptual paradigm. The students were invited to reflect on and solve a concrete problem, quite easily understandable by them given their age and skills: how to organize a dinner tackling in a creative way possible critical situations, like the lack of an fundamental ingredient, the disposition of people around the table, and so on.

Methodology

The Report to UNESCO by International Commission on Education (Delors, 1996) emphasises the role of learning in the new millennium. Learning in this sense means resource, possibility for every human being to realise itself, and not only compulsory education, training, acquisition of competencies, expertise, abilities or skills. Today learning throughout life is a necessity for individuals to participate in the knowledge society and economy, it’s a fundamental strategy. Adult Education asserts as a new man’s right, it finds its fundament and its aim in acknowledging value of every person to whom it must be warranted the opportunity to properly express itself along the life-span development.

This perspective of education as a life long process upsets time and modality of learning: All people can be protagonist of their own life, choices and iter. In this sense the main purpose of educational processes is the promotion of person’s integral health, in all contexts in which he/she lives: In the family, at work, in the local community. A democratic development of every Country would be possible only if education will be a right -not a privilege- during the whole life span development (Alberici, 1998). All people should have opportunity to know their own capabilities and best exploit them. It’s necessary to enable adults to become actors of their own development throughout life (Lengrand, 1970), resources for their own life project and for community.

Contemporary socio-cultural context supports the idea of knowledge acquisition and management, not only as development of Organisation, policy, methods of knowledge diffusion, but also as a community’s benefit. Starting from these considerations, we reflect about the concept of continuous learning within organizations and how to support it. In particular, we focus the attention on learning by doing paradigm.

Learning by Doing is based on well known psycho-pedagogical theories, like cognitivism and behaviourism, which are devoted to point out the role of practice in humans’ intellectual growth and knowledge improvement. In particular, this kind of learning methodology refuses the typical idea that concepts are more fundamental than experience and, consequently, that only a solid set of theoretical notions allows to accomplish a given task in a complete and correct way. Learning by doing methodology states that the learning process is the result of a continuous interaction between theory and practice, between experimental periods and theoretical elaboration moments. Learning by doing can be articulated into four distinct steps (Figure 1), where practical phases (i.e. *Concrete Experience* and *Experimentation*) are alternated with theoretical ones (i.e. *Observation and Reflection* and *Creation of Abstract Concepts*): starting from some kind of experience, this experience originates a mind activity that aims to understand the phenomenon; this step ends when a relation between the experience and its

results (typically a cause-effect relation) is discovered that can be generalized to a category of experiences similar to the observed phenomenon. The result is a learned lesson that is applicable to new situations which will eventually occur in the future.

Figure 1: the four steps in learning by doing

In our framework, a *concrete experience* can be represented by a story, which represents a decision making process about a problem to be solved. This story should give to a newcomer an idea of how a critical situation could be tackled, according to the knowledge owned by experts. Moreover, it could give indications about who could help him/her in case of need.

Stories can be archived as cases according to the case-based reasoning (CBR) paradigm. Case Based Reasoning is an Artificial Intelligence method to design knowledge management systems, which is based on the principle that “similar problems have similar solutions”. For this reason, a case based system doesn’t require a complete and consistent knowledge model to work, since its effectiveness in finding a good problem solving strategy depends typically on how a problem is described. Thus, CBR is particularly suitable to adopt when domains to tackle are characterized by episodic knowledge and it has been widely used in the past to build decision support systems in domain like finance (Sartori et al, 2016), weather forecasting (Hansen and Riordan, 2001), traffic control (Gomide and Nakamiti, 1996), and so on.

A case, as shown in Figure 2, is a complete representation of a complex problem and it is generally made of three components: *description*, *solution* and *outcome* (Kolodner, 1993). The main aim of CBR is finding solutions to new problems through the comparison of it with similar problems solved in the past, as shown in Figure 3, which represents the well known 4R’s cycle by Aamodt and Plaza (2004): the comparison is made according to a retrieval algorithm working on problem features specified in the *description* component. When an old problem similar to the current one is *retrieved*, its solution is *reused* as a solving method for the new problem. The solution can be then *revised* in order to fit completely the new problem description and finally *retained* in the case base to become a sort of new lesson learned. In the retained case, the outcome component gives an evaluation about the effectiveness of the proposed solution in solving the problem. In this way, new cases (i.e. stories) can be continuously created and stored to be used in the future, building up a memory of all experiences that can be used as newcomer training tool.

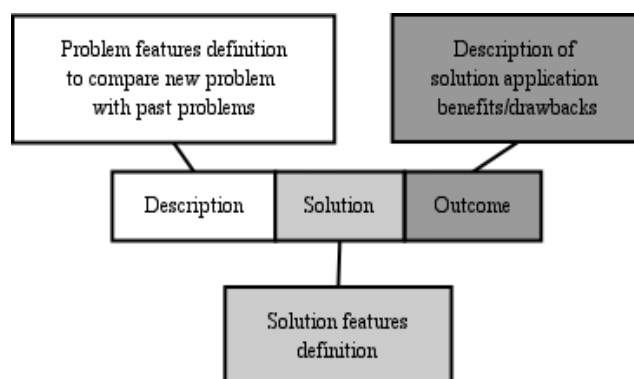

Figure 2: Case structure

Starting from concrete experiences newcomers can learn decision making processes adopted within the organization they are introducing quicker than studying manuals or attending courses. Moreover, the comparison between their own problem solving strategy and the organization one, represented by the collection of stories, stimulates the generalization of problems and consequently the reflection about general problem solving methods, possibly reducing the time period to make the newcomers able to find effective solutions.

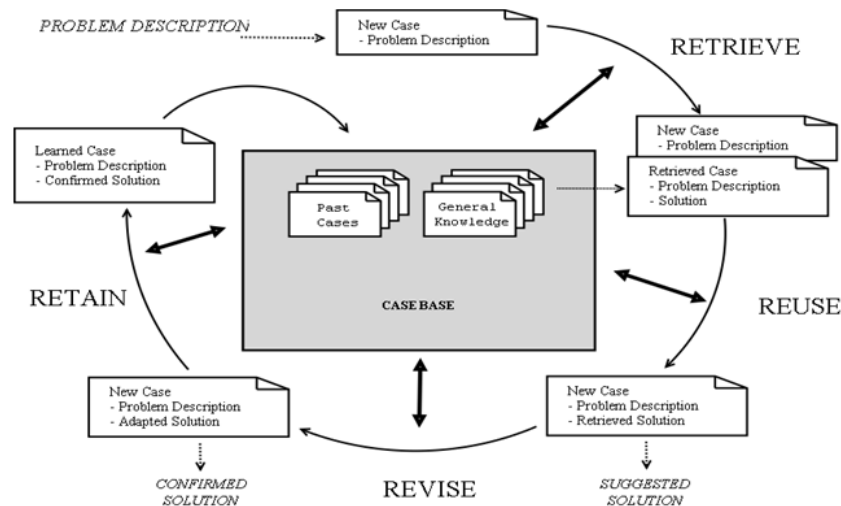

Figure 3: The 4R's cycle for CBR system development

CBR is one of the most suitable Artificial Intelligence methods to deal with learning by doing (Sartori et al, 2010), due to the perfect match between their cycles of life. In particular:

- The *description of a new case* can be a way to represent *experimentation in new situations*, since the aim of CBR is to solve a new problem exploiting old solutions to similar problems. Thus, a new case is the attempt to apply past experiences to a new concrete situation in order to validate a problem solving strategy, as the experimentation in new situations is a way in the learning by doing context to test the generation of abstract concepts starting from already validated concrete experiences;
- A retrieved case in the case base represents a concrete experience in the learning by doing framework;
- Retrieval, reuse and revise are the CBR phases during which a solution to a new problem is found and reused by comparison with similar past problems and then adapted to fit completely the critical situation defined by problem description. Thus, they can be exploited to model the theoretical steps of learning by doing methodology (i.e. Observation/Reflection and Creation of abstract concepts), through which a newcomer finds a general way to tackle a problem starting from a set of existing examples;
- Finally, the retained case in the CBR paradigm is the completion of the initial problem to be solved with the optimal solution obtained at the end of the CBR cycle, thus it represents a new instance of the initial experimentation in new situations.

Moreover, since the concept of story can be used to describe both a case in the CBR paradigm and a concrete experience in the learning by doing methodology, in our opinion, storytelling is the optimal connection between a case-based support to the development of training systems for newcomers and the learning by doing context.

Creative Stories In The Cbr Paradigm: The Cks-Net Framework

Robert E. Franken (2007) defines creativity as “*the tendency to generate or recognize ideas, alternatives, or possibilities that may be useful in solving problems, communicating with others, and entertaining ourselves and others*”. People become creative due to their needs to tackle new, modified or complex situation, to communicate ideas and values or solving problems. Franken argues that creativity arises from the capability to think in a different way with respect to the common sense, being able to generate new possibilities and/or alternatives.

For Robert W. Weisberg (2010), the word *creative* can be referred to both novel products of value and the person(s) working on it, focusing on the fact that the novelty of a product is necessary but not sufficient to state it is creative too, since it must also have value or be appropriate to the cognitive demands of the situation.

A very detailed analysis of creativity and creative people comes from Psychology. For example, Mihaly Csikszentmihalyi (1997) observes that the term creativity is very often associated to people who think unusually, being interesting and stimulating for other groups of persons as well as people who study the world in novel and original ways or individuals capable to produce important changes in our culture. According to the concepts above,

Csikszentmihalyi defines creativity “any act, idea, or product that changes an existing domain, or that transforms an existing domain into a new one [...] What counts is whether the novelty he or she produces is accepted for inclusion in the domain.”

An interesting point of view is offered by Linda Naimann¹, who distinguishes between imagination and creativity: “I define creativity as the act of turning new and imaginative ideas into reality. Creativity involves two processes: thinking, then producing. Innovation is the production or implementation of an idea. If you have ideas, but don’t act on them, you are imaginative but not creative. According to this definition, creativity is strictly related to innovation, defined as² “using new ideas or applying current thinking in fundamentally different ways that result in significant change.”

The last definition is very close to how Knowledge Management has interpreted the term creativity; in a fundamental paper David Gurteen (1998) gives very clear definitions of knowledge, creativity, innovation and the relationship existing among them through the discipline of Knowledge Management: “Creativity and innovation concern the process of creating and applying new knowledge. [...] Knowledge Management, however, is a new discipline and creativity and innovation need to be thought about in this new context.”. As Linda Naimann, Gurteen says that creativity and innovation are complementary: the generation of new ideas (i.e. creativity) needs a way to put them into action (i.e. innovation). On the other hand, no innovation is possible without the existence of an idea. As a consequence, existing knowledge is required to start the process (i.e. how is it possible to put into action an idea?) as well as the generation of new knowledge as the process output (i.e. what is the result of an idea application to a given context?). From the conceptual perspective, *dialogue* is indicated as the most suitable paradigm to take care of creativity in the Knowledge Management area: “In dialogue you prefer a certain position but do not cling to it. You are ready to listen to others. Your mindset is one not of ‘convincing others that your way is right’, but of asking what can I learn from others.” As a consequence, the natural technological support for this kind of creativity management is the adoption of *groupware* approach: “Groupware is coming of age with the advent of INet technologies [...] and its groupware – the bringing of people together across time and space – that combined with new ways of thinking is transforming the way that we work.”

From the conceptual point of view, *storytelling* has been universally recognized as a very good starting point. As reported by S. Denning (2011), storytelling build trust, unlock passion, overcomes hierarchies due to its intrinsically collaborative nature and its capability to flatten the communication among people (or communities). A story is a narrative account of a real or imagined event or events. Within the storytelling community, a story is more generally agreed to be a specific structure of narrative with a specific style and set of characters and which includes a sense of completeness. Through this sharing of experience stories allow to pass on accumulated wisdom, beliefs, and values. Stories explain how things are, why they are, and the different roles and purposes involved. Stories are the building blocks of knowledge, the foundation of memory and learning. In the Knowledge Management literature (Bhardwaj & Monin, 2006), stories are often considered as very profitable tools to make explicit tacit knowledge, with the possibility to exploit them in the process of generating collective creativity from individual creativity.

From the computational point of view *Case Based Reasoning* is one of the most suitable paradigm to deal with creativity (Sartori, 2017). As reported above, the relationship between storytelling and CBR has been already analyzed in the past: in this approach, the story is the conceptual tool through which a tacit knowledge frame, for example a portion of a problem solving strategy, is made explicit.

As pointed out in the previous section, this schema perfectly fits the 4R’s cycle for the development of CBR applications: the case structure can be adopted as an approximation of a story representing the narration of a complete problem solving strategy adopted by an individual during an innovative solution generation; the collection of all the cases produced by an organization, i.e. the *case base*, can be thought as an approximation of all the stories produced by their members in their problem solving activities.

The CKS-Net framework has been designed and implemented according to the following principles:

- creativity is the result of a negotiation process inside a community of people. This community is composed by experts and users interested in their capability to solve a problem. The community lives for a short period of time, starting when a problem arises and finishing when a solution to the problem is found;
- the negotiation process must be represented as story, clearly identifying the problem, the solution adopted and the benefits or drawbacks obtained by the application of the solution;
- the case structure defined to computationally describe the story must be variable according to the different perspectives under which a problem can be considered;
- the similarity measure to compare stories should work on heterogeneous case structures.

¹ Available <https://www.creativityatwork.com/2014/02/17/what-is-creativity/>, last access 2018/08/20

² Definition from the IBM Global Innovation Study, 2006

To take care of the points above in the design of a case-based application is not trivial; one of the principles of the CBR approach is that *similar problems have similar solutions* if the problems are characterized by *homogeneous* descriptions. This principle cannot be completely satisfied in the design of a framework for supporting innovation: an innovative solution to a problem could be derived from different contexts, according to the heterogeneous nature of the fields the community members come from. Tec as structure chosen for representing problems in CKS-Net is the graphical one. As a consequence, the retrieval algorithm must be properly thought, in order to give plausible results in the comparison of problems.

The design phase of the framework for the management of creative stories has started with the analysis of the nature of the knowledge involved: *know-how* knowledge, related to the way a community solves a problem, and *social* knowledge, related to the communications among the members of the community involved in the problem solution. Both of them should be potentially considered in the case structure. Moreover, the problem solving activity should be viewed as a sort of bridge between the description of the problem and the reasons why solving that problem is crucial. The result of the analysis has been the definition of the *Complex Knowledge Structure* (CKS) as a mean to acquire and represent in a uniform fashion both the experiential and social knowledge involved in a problem solving process.

Figure 4: Graphical representation of Complex Knowledge Structures (CKS)

In this sense, a Complex Knowledge Structure can be considered as a mean to describe the narration of a story represented by a problem solving process. CKSs are represented by means of *graphs* (see **Figure 4**), whose *nodes* represent entities involved in problem solving process and are bounded by direct and labelled edges (each edge is an instance of a relationship holding between two entities). Further details about the CKS-Net framework are out of the paper scope: they can be found in (Sartori, 2017).

Case Study

In this paper, we present a Work Experience Scheme Project conducted at the Department of Computer Science, Systems and Communication of the University of Milan Bicocca in collaboration with many secondary schools of Milan and its province. The project, called *Let's cook with the case based reasoning*, aimed at enabling students to reflect about solving complex problems in a creative way. Ten students attending the last two years of the secondary schools were involved in the project, selected on the basis of their motivations. They were invited to discuss about a typical configuration problem in the CBR domain, the definition of lunch or dinner. This problem can be tackled from different points of view, ranging from the meal preparation to the disposition of invited people around the table. In particular, we have focused on the meal preparation: a group of three students worked on appetizers, a group of three students worked on main courses and the last group of four students worked on desserts. First of all, they build up a case base of recipes from opportune knowledge sources, like cooking books and internet blogs: at the end of this step, we obtain a collection of 236 solved cases (105 appetizer, 115 main courses and 116 desserts).

Then, they were answered to think about possible classes of problems that needed a creative solution: to this scope, they tried to retrieve knowledge from the same knowledge sources. They were able to find two main classes of problems:

- the lack of one or more ingredients and their substitution with others to preserve final meal characteristics (e.g. pleasant taste);
- the attempt to modify the recipe to obtain new characteristics of the final meal;

The students formalized such problems as 89 new cases without solution.

Then CKS-Net was asked to find solution to solve the problems, looking for similar problems in the case base and exploiting past solution to derive new ones.

Figure 5: An example of story in CKS-Net

As an example, Figure 5 shows a story about the solution of a missing ingredient in an appetizers, that is and asparagus flan. The problem concerns (step 1. In the figure) the lack of asparagus, and the user must replace them in order to preserve *pleasant taste* and *little spicy* characteristics of the original recipe. The CKS-Net system retrieve the most similar past problem form the case base (step 2. In the figure): the interesting point is that such case represents a *main course*, that is a *potatoes focaccia*. Anyway, the system was able to recognize that the problem represented by it was similar to the current one; in particular, the lack of potatoes with the necessity to substitute them with another ingredient capable to preserve the pleasant taste and little spicy features. Thus, the system reuses the solution adopted in the past to suggest the replacement of asparagus with *onions*. In this sense, and according to the definitions of creativity given above, the story depicted in the figure can be defined a *creative solution to a complex problem*.

At the end of the project, 69 of the initial 89 problem were solved in a good way, for a total 77.5 % percentage of success; the students declared their full interest in the project and they stated their availability for repeating the experience at a deeper level.

Conclusions

This paper has presented a framework to support learning by doing and creativity within different kinds of groups, like communities of practice or more formal knowledge structures acting in SMEs or wider organizations; this framework is based on the integration of storytelling and case based reasoning methodologies.

Storytelling has been chosen due to its capability of taking care of different kinds of knowledge in the description of working experiences and presenting important pieces of expertise to newcomers in wide organizations.

On the other hand, case based reasoning is one of the most suitable Artificial Intelligence paradigms to deal with episodic and heterogeneous knowledge and consequently, in our opinion, it is probably the best approach to manage unstructured narrations about expertise and problem solving strategies. In order to test the effectiveness of our approach, its application in the context of the *Let's cook with case based reasoning* educational project has been briefly introduced: the project has confirmed the capability of our approach to find innovative solutions in

creative contexts and suggested the future works, in particular the integration of CKS-Net in the KAFKA framework (Sartori and Melen, 2017) for the development of a complete environment to support knowledge engineering in complex domains.

Abstract

This Poster Presentation deals with and Adaptive Personalized System for Creating Expression Tools in Social Inclusion of Learners with Verbal Communication Disabilities. The European Union project Tools of Expression for Social Inclusion TESI- focuses on social integration of people with verbal communication disorders at risk of social isolation.

It is intended to conceptualize and develop social competences (SC) related to personal, social and professional development of people with verbal communication disorders through the creation of an adaptive, affordable and easy-to-use software solution that will enrich their opportunities for personal expression.

TESI project, now in its initial stage, allows us to reflect on the role of this technology-based solution in supporting disadvantaged learners, examine the TESI conceptual model and software system and the process of validation it through a pilot study.

The Analysis Of Career Anchor In Accordance With Sex, Completion Term, Major Field Centering Around The K College In Gyeongsangnam Province, South Korea

YU NA BAE
shssangel1004@hanmail.net

Suhong Park
suhongpark@gmail.com

Abstract

The purpose of this study carried out to analysis of career anchor in accordance with sex, completion term, major field in order to provide a basic date of career anchor applied career development program for college student.

For achieving these study goals, the survey was conducted for a week(2017.12.05.~12.12) by student of K college in South Korea. 950 copies have been distributed, 719 copies have been collected, except for unreliable response, finally 639 copies were used for analysis. Subjects of this study were divided into sex, completion term and major field. Subjects were examined the average score of 8 types of career anchor for whole student, the average score of 8 types of career anchor for each group of sex, completion and major field and were analyzed the significant differences of 8 types of career anchor patterns according to three groups(sex, completion term, major field).

The brief obtained through this study were as follows.

1. There was no significant difference in sex in career anchor.
2. The anchors that showed significant difference among groups by completion were TF, CH.
3. The anchors that showed significant difference among groups by major field were GM, CH.

Based on the results of this study, it is expected that it will be useful to design for career development education program based on career anchor for college student.

The Analysis Of The Target Audience Having A Part In The Success Of An Advertising Campaign In Terms Of Their Demographic Characteristics

Çağrı GÜMÜŞ
cagrigumus79@gmail.com

Abstract

As the successful elements of an advertising campaign are taken into account, it is different from similar campaigns and has the purpose of convincing the target audience to buy that product or service. For this reason, the advertiser has to follow a process that involves striking and interesting work on a certain topic at a certain time. In this context, a successful advertising campaign in this process emerges as a result of a realistic evaluation and identification of the demographic characteristics of the target group. This study involves explaining the demographic characteristics (such as age, education, gender, place of residence, occupation, income and marital status) that are vital in defining the overall profile of the target group, which are effective in the emergence of a successful advertising campaign.

Keywords: *Target Audience, Advertising Campaign, Demographic Characteristics*

Introduction

With the emergence of the mass phenomenon of communication, the rapidity of the transmission of the message to as many persons as possible has brought about the time and space that triggered great transformations in cultural structures. The fact that massive communications are open, independent of each other, have begun to affect their level of knowledge, attitudes and attitudes (Aziz, 1982: 48). The concept of mass communication, which is the "mass communication" in English, emerges as a process in which, in the first place, antisocial social groups or individuals try to convey or convey symbolic contents to other people. Among the most important factors of this process are the fact that other people who constitute the mass have different characteristics from the ones that constitute the symbolic contents and the other is the use of technical tools in reaching the contents (Gökçe, 1993:81). The transformation that mass media has experienced in today's world, also called Network Society or Post-Industrial Society; have created significant differences in the mechanism of operation of these vehicles from the past. As a result of developments in Internet technologies and leaps in mobile technology, people are now able to communicate with each other on social networks online 24 hours a day and exist in new public spaces where they can interact and interact. As a result of the changes and transformations that technological developments cause in daily life practices, the main difference between the new mass communication channels that are developing alternatively or in parallel; all users can produce content independent of content providers and have reached the capacity to publish this content. The conceptual framework drawn by Laswell (Mutlu, 2008:178), which introduced the concept in the 1940s, is that the prominent discussion areas of mass communication in academic meetings held in the 1970s (Alemdar and Kaya, 1983:15) seen. After the periods when the owners of media tools have discussed the dimension of the capacity to establish cultural hegemony or the existence of large institutions that are necessary for content production, social networking is now the most penetrated penetration of society as a whole; the right to create content derives from the monopoly of media ownership and democratization as all the individuals have reached this capacity.

Advertising derived from the word "clamare" meaning "to call" in Latin; is generally defined as the act of promoting and adopting the people, institutions, products and services to the target group. (Karpas, 1999: 35). Advertising is the most controversial item on marketing communication. With the development of marketing, products, services, individuals and ideas are also considered within the scope of marketing, and the focus areas of advertisements are enlarged in this way. (Odabaşı and Oyman, 2002: 95) In the marketing process, advertising is accepted as part of mass communication in terms of communication. When considered by communication as an instrument of information and persuasion, It is also used to advertise a product or service in large quantities. (Gürüz, 1999: 20). Thus, it is ensured that the product or service is announced to the target masses determined by the mass media, and attitudes and behaviors are made in the desired direction.

Social responsibility campaigns can be defined as a strategic positioning and marketing tool in which various agencies use an agency or individual to connect to a related social purpose or problem within a certain period, period and movement plan to provide mutual benefits (Elden, 2009:302). Institutions contribute to a specific problem with social responsibility campaigns; At the same time, consumers have the opportunity to find an emotional connection with the media and find a place in the media. Long-term and successful campaigns; the institution is able to be news in the media and increases the likelihood of institutions in the consumer's eyes. Being news in the media about a social

campaign will attract even those who are opposed to the ad; they can create positive judgments in the minds of the institution indirectly. (Karahana, 2006: 62).

The person intended to reach the message in the communication process is one of the basic components of the target communication process, defined as a cluster or a mass. Through the mass communication, the target can be expanded from person to mass; (Mutlu, 2008: 126), which defines specific audience segments and has the definition of reaching them with the most effective channel available.

The success of an advertising campaign is assessed based on whether it can convince the target mass to meet its campaign objectives. If the advertising campaign can create a positive attitude towards the product or service on the target audience, it means fulfilling the advertising campaign objectives if it can increase the awareness or recall of that product or service. In order to achieve this, the demographic factors including age, gender, place of residence, occupation, income and marital status, which help to segment the target population according to certain numerical and livelihood characteristics, need to be recognized in the context of the basic characteristics of the target population.

Demographic Characteristics And Samples Of Target Audience

Age is creating differences in Consumer's age group consumption behavior. For example, young age group clothes, cassette, cd products, middle age group, household goods, etc. products (Gürüz, 1999: 87). In this context, advertisers should set up advertising strategies by taking into account the age range of the target masses they are aiming to call, and identify the advertising content accordingly. The perspective of the target group that sees associations of its own age group in an advertisement for a product or service will therefore also differ in its perspective and hence in its buying behavior (Elden et al., 2008:105). A consumer in the 15-20 age group tries to follow the fashion while choosing products such as clothing, plaque, and magazines. In this way age groups are important in determining consumer characteristics due to the needs and desires of different products at different ages (Yaylacı, 1999:133). In this context, advertisers should set up advertising strategies by taking into account the age range of the objects they are aiming to call, and determine the advertising content accordingly.

In an ad for a product that one child will use, attention will be drawn to the target item, and cartoon characters, animations, or the use of real animated children as protagonists will draw attention to the child's product (Elden, 2009: 369). For example; In the Pınar Kido Fruity Milk advertisement, an advertisement consisting entirely of cartoon characters was prepared and the advertisement was animated with a clown to attract children easily.

Likewise, advertisements in which the character of Lion King Max, identified with the product by Max freezes and helping children in difficult situations, play a role in real life children in the foreground can be given as examples of advertisements prepared for children. As can be seen from the examples above, these images used in advertising campaigns show that the success of the campaign for the age factor is significant at the point of describing and attracting interest.

Like age, it plays a very important role both in the purchase decision and in **gender** differences in the choice of product or service and brand. Some products or services are directed towards women by some products or services to men. Again, while men are more decisive in the purchase of certain products or services, women have a say in the purchase decision of some products or services. For this reason, it must be determined which product or service the product or service is intended for and what the gender of the person making the decision to purchase the product or service is (Kocabaş and Elden, 2006: 60).

For example; Orkid Alldays is directly proportional to the gender factor due to the fact that the target audience for the product of the use of a woman figurine (mother, business woman, friend, etc.) who wear different collective roles in social life.

It is also possible to find advertisements in which some women's products are included as final decision makers. For example; Gillette's shaver is shown as a woman who tests and certifies the utility of the product. As can be seen from the above examples, the gender roles used in advertising campaigns indicate that the success of the advertising campaign is important in terms of defining the target audience.

Another factor that has a significant effect on the buying behavior of the target group is the **marital status** of the group in which the advertisement is voiced. The marital status also increases the needs for certain products or services, and

can be influenced by specific brands or services, such as how, gender, and age group they are involved with, which brand they are heading to, which needs and desires will emerge, and which products or services it leads to more orientation.

In terms of marital status, it is possible to categorize as the target groups, young single, young married children without children, young married children with a child under the age of six, young married children with a child older than six, elderly married children with children, elderly married children without children and single widows. Especially at this distinction, the target is decisive on the life span of the kittens, the need for children to be newly married, the need for children to be newly married, and the tendency towards certain products decreases while increasing the orientation towards certain products. This creates a point for marketers to form a basis for market segmentation and sets the path for advertisers to improve the effectiveness of advertising by preparing appropriate messages for the marital status of the target audience. For example; children's toys that are not needed during the young single age are at the forefront in the young married stage of children (Odabaşı, Barış, 2002: 254).

For example; baby grooming and baby food advertising, couples waiting for babies, and young married children under six years of age, there will be no sense for young married children aged six or over. However, Akbank's Baby Fund advertisement, where a newly married and expecting baby can be found, can be seen as an advertisement for married couples who are both waiting for a new baby and younger than six.

For older married or married children, my children will be able to focus their time on travel, entertainment, and product needs so that this kind of product or service advertising will be more targeted to this audience. For example, a pair of couple and families are shown in the advertisements of Kilim Mobilya firm and the bride who answered "enough of rug" in order to ask the mother-in-law "what you want" is displayed while shopping at Rug Store. The second ad of rug focuses on the need to renew the sofa sets in the husband's house in preparation for marrying his sons. These rug ads, new married young couples, or young singles preparing for marriage take their children as the target audience for elderly married couples in preparation for marriage. As can be seen from the above examples, the marital status of the target group and the stage of marital status have an important influence on the advertising content in terms of advertisers.

It is important to note that the target groups have different cultural backgrounds, diverse elements of subcultures, lifestyles, habits, and differences in tradition-customs, where the masses in which they advertise different **geographical locations** or advertisements in different countries offer significant clues and are not eligible for creative work in creative work (Elden et al., 2008: 111).

In international or global advertisements, preparation of contents that will not be contrary to the social values and cultural structure of the addressed country, and where necessary, advertising of the local content specific to the addressed geographical area is effective on the success of the advertisement, as well as the effect of subcultures - rural, east-west etc.) should not be ignored. The place where sustains his life can differentiate his viewpoints on visual and auditory codes in the context of the advertisements, as well as his consumption and buying habits, lifestyle, increased need for certain products, and cultural influences. For this reason, advertisers should pay close attention to the perceptions of the cultural aspects that arise as well as the needs and requirements that the geographical location is active when creating the advertising content (Elden, 2009: 374-375).

For example; In addition to global advertisements being launched worldwide by companies operating in world markets such as Coca-Cola and Nike, advertisements that include Coca-Cola's unique symbols, such as the month of Ramadan, in particular the Turkish society and their values are geographically influenced by local advertisements to advertisements that are used.

However, one of the examples of advertisements in which elements such as life styles and traditions of subcultures are emphasized in the same country is Doğuş Çay commercial, in which Sinan Çetin also plays a role. In this advertisement, a peasant girl who lives in Karadeniz, a region where tea is grown in our country, says "The most beautiful tea is Doğuş Çay" with her regional Black Sheik Shivi in her local clothes.

Educational status provides useful information for determining the level of education of consumers, preparing advertising plans and strategies and implementing them effectively. Buying behaviors also vary, as a consumer with a high level of education and a consumer with a low level of education may differ in the demand for a particular product

or service. In this way, the selection of the media in which the advertising messages and messages will take place is determined, taking into account the educational situation of the consumer (Yaylıcı, 1999: 134).

A target group with a high educational level is more oriented towards technical products, complicated features and esthetically different products. In this context, it is much easier to perceive the content of a rational message that conveys these characteristics of a product with complex technical features in an ad that appeals to a target audience with a higher level of education. If an educational message is prepared for a target audience with a high level of education, the expected behavior of the target audience or the resultant emphasis on them can create a disturbing effect on the target audience at this level. They want to make their own decisions about what to do, or to arrive at themselves in the end. For this reason, the messages emphasized directly as the result should not be preferred while calling this mass (Elden, 2009: 371-372).

For example; In the Turkuaz Water advertisement, indirect benefits are used instead of direct benefits of water benefits, benefits of the consumption of the body and turquoise water properties. The advertisement, which starts with a mother who drinks a baby in a park and a turquoise water girl starts to take flowers from a child, helps the flower girl to download a little girl's kitten from the tree, this girl crosses an old uncle and her two uncles fight the two lovers, he continues to take the falling wallet of a certain person, who is a business man with a dress, and give it to him. At the end of the ad, the male character comes to the house and his wife, who sees the turquoise water at the beginning of the commercial, welcomes him. The advertisement, which ends with the slogan "Goodness is in its essence," is told that doing good will return to the person as finding goodness, and the goodness chain starts with the mother character who drinks Turkuaz Water. In this ad, there is no emphatic message about what to do directly to the target group, and the goodness, purity, health and benefit in the essence of the water are emphasized with an indirect expression.

Advertising messages to be prepared for low-level educational targets need to be prepared with clearer content that is simpler, easier to understand, leaner, and will not challenge the target audience, in contrast to the higher-level educational level. From this point of view, it will be a suitable strategy to prepare one-way message contents with direct narration instead of indirect narratives, instead of rational stimuli, where emotional stimuli and humor items are foregrounded at the end of the advertisement message (Elden, 2009: 371-372).

For example; the Ali Desidero Derby Shave Banner commercial, which struck a turning mark, has a direct expression of appeal to a lower level of education. Ali Desidero is presented as an opinion leader, approval authority, and goes to the factory where the razor blades are produced. "I see it all as educated children" seems to offer direct messages directing consumers as a person who decides on behalf of the advertisers.

The income situation, the economic situation in which the country is located, is one of the economic factors affecting the agency operations as well as all the production enterprises (Yaylıcı, 1999: 135). The state of the national economy is a loyal feature of consumer behavior. In the economy, the situation of the Gross National Rate, which is the monetary expression of goods and services created in a year, is considered as the most important data in determining per capita income. In countries where income per capita is high by increasing Gross National Rate, it is easier for people to turn to consumption. In such countries, where resources can be allocated for eliminating other necessities after eliminating their compulsory needs, management managers perform activities such as product diversification and product differentiation in a more intensive manner, and accordingly marketing and advertising activities develop and become active (Gürüz, 1999:87).

For example; Peti Danone, a food item for the child to use, is advertised in advertisements containing a vitamin that contributes to the child's healthy development of the product as well as the child being affected by the user in order for the child to be bought by his parents, rather than by his / her own paternity, and if you want your children to develop healthy as a conscious mother, you should buy Peti Danone "and parents and daughters are affected as purchasers and money is separated from family income.

Although the woman who will use the washing machine as an individual in the white goods advertisement will also need to separate a share from the family income, besides facilitating the housework of the woman, the issues such as the stability in general, economic washing programs and long- income is being tried to be shared with a common decision.

For example, Istikbal Regina Ready Kitchen is trying to make it easier to get a common share of family income through the presentation of "this is your living space" by presenting the kitchen as a living room where only the woman does not eat and eat food, where the whole family can spend time, even as a baby room .

Result

The ability of brands to sustain their lives depends on their preference by a specific target audience and the existence of loyal target kits. Advertising campaigns fulfill key objectives such as bringing brands together with target groups, informing target groups about the brand, and enabling the target group to choose brands. In fulfillment of these objectives, it is necessary to consider the demographic factors that are effective in shaping the buying behaviors of the consumers who constitute the target group to be effective in order to create ads that attract attention to the advertisement targeted by the advertisements and to ensure that the advertising content can create the desired effect.

Abstract

It is important for brands to be where their target audiences are. In today's media environment, the attention of the consumer is shifting to the Internet and several social media sites are enjoying a growing interest by Internet users. The rapidly evolving platform of Instagram is one of the most popular social media sites and brands are using it to reach their target audience. Brands are not only using Instagram for sponsored posts and paid partnerships, but they are also using their Instagram profiles to communicate with consumers via posting images related to the brand. This study aims to analyze brand posts on Instagram using Taylor's (1999) six-segment message strategy wheel and to explore the models applicability to the context of social media. Based on the literature on communication strategies, six-segment message strategy wheel suggests a dichotomy of transmission and ritual views, each consisting of three segments

The Balance Lifestyle Of Malay Muslim Students In Private Higher Learning Institute: A Study In Sunway University

maliassam@sunway.edu.my

Abstract

The purpose of this research is to identify the profiles and balance in lifestyle of the Malay Muslim students who are the minority group in Sunway University. The research respondents consist of 70 students who are pursuing a professional accounting course in which the average academic achievement of all the subjects taken is at least 60 percentage. The collection of data is done by giving out questionnaires that were answered by the respondents. The descriptive analysis method used to identify the frequency and percentage of the balance level of the students' lifestyle consist of the relationship with Allah, relationship with other people, academic development, health management, financial and excellent time management. The research finding had determined that the Muslim students in private institute have mediocre lifestyle balance except for their relationship with Allah which is noticeably high.

1. Introduction

Private higher learning institutes have become more important to the education field in Malaysia in the recent years. The inability of public institutes to accommodate new enrolment of students has led to the establishment of private colleges and universities, in order to provide the opportunity to students who are unable to secure their places in public institutes in order to continue their studies.

However, in the effort to pursue their studies in private institutes, students especially the Muslim students will be facing various challenges and predicaments in their studies and daily lives. Some examples of the problems encountered by students in private institutes are the relationship with their friends, skipping classes, financial problems, language barriers, cultural shock and getting negatively influenced by their peers (Ng Wei Leng 1999:64). In addition to that, students in private institutes especially those in Sunway University consist of multiple races including Chinese, Indians, internationals students and the minority groups of Malay Muslim students. Thus, it is very likely for this minority group of students to be exposed with a totally different lifestyle, as compared to their school days which focused more on the all-around excellence, academically, spiritually and personality-wise. The goal of achieving the overall balance in all these aspects can be more easily executed in school because most of the students were Muslim Malays as compared to their university lives where they are given more freedom to decide on their own. Furthermore, students in private institutes come from various backgrounds, different religions, races and even countries, which force the Malay Muslim students to accept and adapt to a very different environment from their school days.

The question is, can the Malay Muslim students adapt to the university life in private institutes? Will they be able to maintain the same lifestyles from their school days? Hence, the purpose of this research is to identify the level of balance in the Malay Muslim students' lifestyles in private institutes, which consist of relationship with Allah (spiritual), relationship with other people (social), academic development, health management excellent financial and time management.

2. The Balance of Muslim Students' Lifestyle

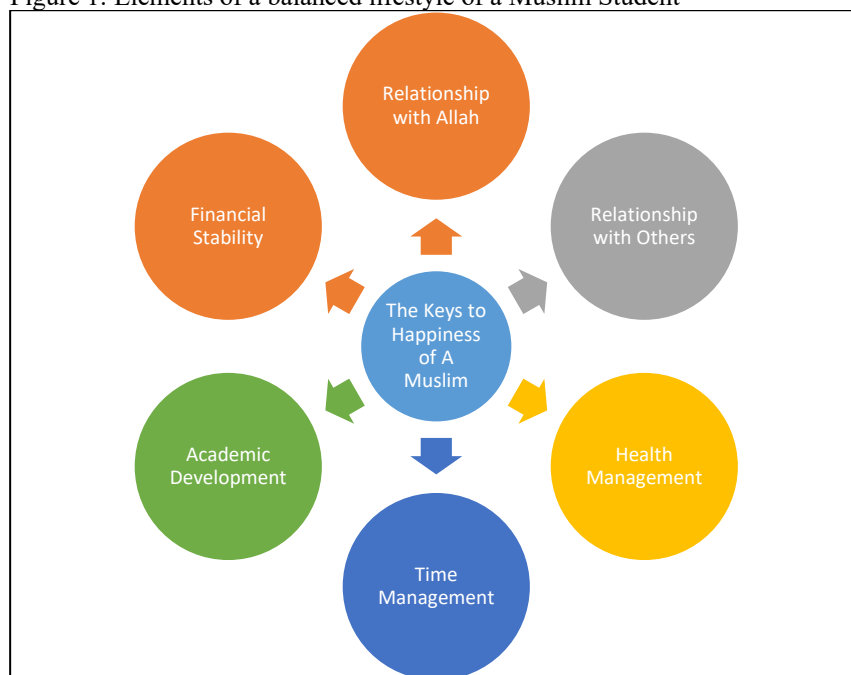

According to the dictionary (2001), balance is defined as equally distributed and unbiased. Meanwhile, lifestyle is defined by the dictionary (2001) as the way of life of a certain individual. According to Plummer (1983), lifestyle is how an individual spends his day, what he presumes as important in his life and what he thinks of his surroundings.

In the *International Encyclopaedia of the Social Sciences & Behavioural Sciences* (2001), lifestyle is defined as life patterns practiced by people who are classified into different classes within a society. The classes are measured from multiple aspects such as participation in social activities, housing areas, housing appliances, vehicles, clothes,

education, social status and behaviours. Thus, lifestyle is a life pattern of a certain individual who is identified by his activities, interests and views on something.

On the other hand, the balance of a Muslim student's lifestyle is to integrate spiritual, physical and emotional elements in his lifestyle, whether it is from the daily activities, interests or views on certain things. In discussing the balance of Muslim students' lifestyle, a few elements have to be managed in order to achieve balance between spiritual, emotional and physical aspects. The elements that drive the balance of a Muslim student's lifestyle is shown in figure 1:

Figure 1: Elements of a balanced lifestyle of a Muslim Student

The general dimension of a Muslim student's lifestyle balance is as shown in Table 1 below:

Table 1: Summary of the dimension of a Muslim student's lifestyle balance

Relationship with Allah	Performing daily prayers, reciting the Quran, fasting, believing in fate, believing in effort and reward, praying to Allah, believing in failures and never gives up (Al-Qadir:2015).
Relationship with Others	Keeping in touch with the parents, frequent meeting with the lecturers, keeping in touch with the friends, studying in groups, sharing knowledge, participating actively in clubs and society, sharing and listening to other people's problems. (Baharin Mesir, 2003)
Academic Development	Striving towards excellence, jotting down notes in lectures, managing study time properly, asking questions to the lecturers, able to understand the lesson easily, preparing before the lectures, looking for references in the library, doing daily revisions. (Norhani Bakri, 2005)
Health Management	Rarely fallen sick, maintaining dietary diet, exercise frequently, good stress management, ensure enough rest. (Yusoff al-Qaradhwai, 1998)
Financial Management	Good financial management, thrifty, do not spend money excessively (Yusoff Al-Qaradhwai, 1998), do not burden the family with financial problems. (Ng wei Ling, 1999)
Time Management	Self-study for more than 4 hours daily, sleep at least 6 hours daily, go to bed before midnight, wake up before 6 am, be in class 5 minutes early, do not waste time (Rafiq bin Abdullah 2004)

3. Research Methodology

This is a quantitative research using questionnaire as the instrument of study. Sample size consists of 70 Malay Muslim students in Sunway University who enrolled in Professional Account course which consist of CAT and ACCA programs. The data analysis is conduct using the descriptive analysis and the results of study is shown by

using table which indicates the frequency and level of percentage of Muslim students' lifestyle which contain five Likert scales. The obtained data is analyzed using the Statistical Package for Social Students (SPSS). The ranking of the Muslim students' lifestyle is categorized into high level, intermediate level and low level as shown in table 2 below:

Table 2: Level of Muslim students' lifestyle

Level of Muslim students' lifestyle	Score
Low	0-1.6
Intermediate	1.7-3.4
High	3.5-5.00

4. Results and discussions

Based on the analysis that has been done, 70 questionnaires were obtained. The discussions of result are divided into several aspects:

4.1 Students' background

From the analysis, the percentages of male students are 38.6% while the female students are 61.4%. All of them enrolled in Professional Account course. Majority of the respondents are students funded by Yayasan Peneraju scholarship. While the examination grade for the respondents are from average grade (60%-79%) which is 58.6% up to excellent grade (80%-100%) which is 41.4%.

From the respondents' school background, research analysis found that majority are from boarding school which is 72.9%, as shown in table 3:

Table 3: Respondents' previous high school

Previous School	Frequency	Percentage
Fully Boarding School	26	37.1
MRSM	25	35.7
Public high school	13	12.6
Private school	4	5.7
Public high school	2	2.9
Total	40	100

4.2 The Balance of Malay Muslim Students' Lifestyle in Sunway University

The balance of Malay Muslim students' lifestyle in Sunway University consists of relationship with Allah, relationship with others, academic development, health management, financial and time management.

4.2.1 Relationship with Allah SWT

Relationship with the Creator is one of the main characteristics that picture the lifestyle of a Muslim student. In this aspect, research has emphasized on the five daily prayers, tahajud or dhuha prayers, reciting al-Quran, fasting, to believe in fate, to believe in effort and rewards, to pray and to trust in Allah and to believe that failure is a part and parcel of life. From the analysis done, it is found out that the relationship between respondents with Allah is high that is 72.9% as shown in table 4 below. This proved that Malay Muslim students in Sunway University still emphasis on spiritual elements within themselves. This research supports the research done by Suzyliana Mamat (2016), have discovered that having close relationship with the Creator will shape spiritual intelligence and emotion of a student. As quoted by her, high emotional intelligence will develop good behaviour of the student.

Table 4: Level of respondents' relationship with Allah

Relationship with Allah	Frequency	Percentage
High	51	72.9
Moderate	19	27.1

4.2.2 Relationship with Others

Students cannot exclude themselves from human to human relationship. The relationship between human that should be done by students include maintaining the relationship with their parents, lecturers and housemates or even their classmates. Analysis done have discovered the level of relationship between respondents and other human the majority is moderate which is 58.6% compared to high level which is 41.4% as shown in table 5 shown below. This proved Muslim students in private higher education Institutions still prioritize and maintain good relationship between human. This research supports the research done by Baharin Mesir (2003) that assumes each student should have good relationship with their parents, lecturers and friends. Good relationship with other people will surely help to ease all their effort to achieve success in their studies.

Table 5: Level of respondents' relationship with others

Relationship with human	Frequency	Percentage
High	29	41.4
Moderate	41	58.6

4.2.3 Academic Development

In the aspect of academic development, this research aimed to observe on how students managed to achieve success in their studies. This includes taking lecture notes, good time management, consulted to their lecturers, making preparation before lectures, finding revision materials at the library and doing revisions every day. The result of the analysis discovered that the level of academic development mostly is moderate which is 58.6% compared to high level which is 41.4% as shown in table 6. This proved that respondents are serious when comes to their academic development. These researches supported the research done by Baharin Mesir (2003), which is a student that excelled in his studies and a student that responsible and work hard to achieve success.

Table 6: Level of academic development

Academic Development	Frequency	Percentage
High	29	41.4
Moderate	41	58.6

4.2.4 Health Management

In the aspect of health management, this study is carried out to observe how students conduct self-health management such as monitoring food and diet, exercising, being wise upon managing stress and having enough rest. Based on the performed analysis, it is found that the majority of people with medium-level of health management is 68.6% rather than the higher level which is 31.4% as shown in Table 7 below. This proves that the respondents are monitoring their health wisely. This study supports the study outcome carried out by Baharin Mesir (2003) which states that an excellent student is a student who is an expert in monitoring his/her health. This is because a fit body will definitely result in having an excellent and balanced spiritual, physical and emotion.

Table 7: Level of Health monitoring

Health Monitoring	Frequency	Percentage
High	22	31.4
Medium	48	68.6

4.2.5 Financial Management

As for the aspect of financial management, this study is carried out to observe how students manage their finance; saving, prioritizing needs rather than wants, managing finance wisely, does not bother family members with financial issues and does not bother to follow the latest trend. Based from the analysis done, it states that the level of financial management is medium, 52.9% rather than the higher level which is 47.1% as shown in Table 8 below. This also proves that the respondents are able to manage their finance wisely. This study supports the one carried out by Ooi Yoon Phaik (2002) and Misra & Mc Kean (2000) who found out that a less effective financial management is one of the causes which leads students to be stressed. However, if the student is able to manage his/her finance wisely, this condition will lessen the stress upon the students.

Table 8: Level of Financial Management

Financial management	Frequency	Percentage
High	33	47.1
Medium	37	52.9

4.2.6 Time management

From the aspect of time management, this study is carried out to observe how students manage their time wisely such as time for studying, sleeping, class attendance, revision session, updating general knowledge and carrying out the things we love or hobbies. The outcome of the study tells us that the majority level of medium time

management is 72.9% compared to the higher level which is 27.1% as shown in Table 9 below. This proves that respondents are capable of managing their time intelligently. The study supports the one carried out by Baharin Mesir (2003) which assumes that an excellent student will always be ready and is capable of managing his/her time wisely.

Table 9: Level of Time Management

Time management	Frequency	Percentage
High	19	27.1
Low	51	72.9

Conclusion

Based on the analysis conducted on the lifestyle of Muslim students in private higher learning institute found that the lifestyle of Muslim student in Sunway University is at a moderate level, in the exception of their relationship with Allah, which is at a high level. This research proves that the respondents have a balanced lifestyle. The research also found that most of the Muslim students in Sunway University were excellent students back in their high schools because majority of them came from boarding schools. In addition to that, the research also found that the students managed to achieve excellent marks in their examination in which most of them scored at least 60 percent.

Furthermore, the finding of this research also proves that the Malay Muslim students in Sunway University do not only have strength in spiritual aspects but also emphasize on their academic achievements, possess strong personalities and spiritual aspects. The all-around strengths make the students not only emotionally, mentally and physically strong, but also make them not easily influenced by surrounding external factors. This research also supports Mohd Anuar (2011), who claims students who are able to balance the spiritual, intellectual, social and physical aspects of their life will achieve excellence in higher learning institute, both public and private. In conclusion, this research has answered the question in which Muslim students in Sunway University have balanced lifestyle and are able to adapt to the private higher learning institute.

Abstract

Taking a look at the data of moral collapse among Malaysian youth, the Malay Muslim youth serve as the major contributor compared to other races. According to racial division, 204 recorded cases involving the Malays, while 54 were Chinese and 47 were Indian. This has raised questions among the Malaysian scholars, especially the Muslim scholars, because the figure doesn't add up with what Islam teaches; to practice noble values and to uphold the faith. What is happening to the Muslim community in Malaysia nowadays is contrary to what a Muslim is supposed to be. Hence, this research is aim to study the status of Islamic faith education and its significance in facing the challenges of Muslim behaviour. Qualitative study is applied in this research by collecting primary and secondary data from printed materials in order to build a basic theoretical framework of the study. Obtained data from books, journals, magazines, proposals, newspapers, dissertations, theses, brochures, websites and any form of information are being referred to assist researcher to achieve the objective of the study. These forms of resources are categorized as secondary data. To analyze the data, this study is referring to the basic theory of Islamic faith in order to gain more understanding of the forms of behaviour of Muslim society in Malaysia. From the finding, the data are analyzed and evaluated whether the forms of behaviour of Muslim society in Malaysia are derived from Islamic education or otherwise. In Malaysia, the current development of Islamic education has developed its own niche in the Muslim community, as Islamic education has been taught starting from the school level until the tertiary level with the implementation of the Islamic and Asian Civilization Curriculum (TITAS). Based on the findings, researcher has found that Muslim Malaysians at least committed three forms of behavioural deviation from Islamic faith, namely the deviation of the faith through speeches, the deviation of the faith through acts and deviation of the faith through writing. This somehow has given impression that the Islamic education is incapable of being translated into life and one's behaviour. The concept of Tauhid can not be understood comprehensively so as not able to give a positive impact on life and also depicted that the Islamic faith is being separated from life. Although the Islamic education system has been implemented at every level of education, it indicates that Islamic

education seems to be needing more improvements on the quality of its learning outcomes. This is because some form of allegations of faith among Muslims in Malaysia through behaviour still exist in the society.

Introduction

Teenagers in Malaysia are the main community groups estimated to have about 60% to 70% of the population of nearly 30 million. Being an important asset for the society and nation, teenagers play a significant role to contribute to the development and progress of a nation in the future. With the growth of political, economic and social taking place rapidly, it is undeniable the teenagers in Malaysia today are struggling to get through the social dilemma and confusion of life. To name a few, the common social problems caused by today's adolescents are the free sex that starts from promiscuity, runaway teens, drug abuse, alcoholism, illegal racing and teenage involvement in crimes such as stealing, robbing, raping and murder cases. And day by day, these social problems are worsening at an alarming level.

In 1998, Malay Muslim youth served as a major contributor to moral collapse data compared to teens from other races. According to racial division, 204 recorded cases involving the Malays, while 54 were Chinese and 47 were Indian. This often become question mark amongst the Malaysian scholars, due to high percentage of moral collapse by the Malay Muslims, while Islam itself educates its people to practice righteousness and good values. Within 10 years between 1989 and 1998, the crime rates involving male teenagers increased by 35 percent, while female teenagers by 25 percent, and in 1998 itself, 6338 new cases involving adolescents were reported. To no surprise, the Malay Muslim contributed the biggest figure. Even in 2016, the Ministry of Health Malaysia revealed a total of 3,980 cases of 28.8% of 13,831 teenagers who were born out of wedlock in the age of 10 to 19 years, while the Royal Malaysia Police confirmed that 432 cases of baby dumping were reported from 2011 to June 2015. (Nurul Husna Rosidi, 2017). These data and reports depicted that the supposed identity of teenagers of Malay Muslim are slowly degrading. Thus, researcher will study the status of aqidah education and its importance in battling the challenges of Muslim behaviour.

The Study

A qualitative approach has been applied throughout the process of completing the study. During the data collection process, all the printed materials are regarded as primary and secondary data for the purpose of building a basic theoretical framework of the study. Therefore, the basic primary data that touch on the topic of Muslim's faith and background of Islam in Malaysia will be used further in the analysis so that the theoretical foundation on the basis of Islamic religious education is based. Hence the printed materials produced by experts in the field of Islamic faith are used in constructing the theoretical basis of this study. Apart from that, secondary data are obtained from books, journals, magazines, academic papers, scientific studies, dissertations, theses, pamphlets, websites and any form of information which found to be helpful are being referred to assist researcher to achieve the objectives of the study. These secondary data act as a helping hand because it allows the researcher to gain different perspectives of the study by comparing the concepts and debates among authors and authoritative researchers in the field of Islamic faith, in particular, relating to Muslims in Malaysia. In this case, the method of document analysis is being used.

To analyze the data, this study emphasizes on the basic theory of Islamic faith; the Quran and the Sunnah of the Prophet. The basic theories will be constructed based on description and details by the leading Islamic scholars. From this theory, obtained data regarding the faith and behaviour of the Malaysian Muslim community will be evaluated and analyzed.

The study applies the aqidah theoretical framework which means the belief, confidence and firm imaan cannot easily be shaken and unravelled by any influence capable of damaging either from internal (spiritual) or external aspects (physical) a person's self. Tauhid means knowing, believing, acknowledging and pledging that the God is true and right to be worshiped. Apart from Him, it is untrue and not worthy to be worshiped. Appreciation of the tauhid includes pledging with the heart, expressing it by tongue and proving by deeds. Therefore, a person who is a believer in tauhid must know, understand and live by the faith. The faith then is translated into absolute obedience through behaviour towards the teaching of Islam. In fact, the faith is a driving force for those who earnestly believe in God and keep them away from all the prohibitions of Allah ('Al-Jazairi, Abu Bakar Jabir, 1985). Thus, during the analysis process, researchers are trying to analyze the forms of behaviour of Muslim society in Malaysia. From the findings, this study will analyze and evaluate whether the forms of behaviour of Muslim society in Malaysia are derived from Islamic religious education or otherwise.

Finding

Today, it is undeniable that the development of Islamic education has gained its place in the heart of the Muslim society, as compared to the 1980s where the society overlooked the importance of Islamic education. The tahfiz

institution back then did not receive encouraging response from parents to send their children there. But as time passed, the tahfiz education system has been upgraded and equipped with better facilities and able to be at par with the academic education system. The discipline of the tahfiz education system in Malaysia has also been reviewed to meet the established standards, be it in the aqidah or co-curriculum implementation as stipulated by the religious affairs of the Selangor Islamic Religious Department (JAIS), the Department of Islamic Development Malaysia (JAKIM) and the Ministry of Education. In fact, there are also Tahfiz Institutions that integrate the discipline of memorization of al-Qur'an with the common academic system taught in regular schools in order to produce the professional huffaz who can fully remember the whole Qur'an. This progress has led Muslims to be more confident to send their children to the Tahfiz institutions to strengthen the understanding of the aqidah in the face of a challenging era. The changes made by the founders of these tahfiz institutions has contributed to curbing and reviving the Western's influences that could spoil the faith of Muslim community in Malaysia (Nor Kamariah Abdul Manaf, 2013).

Even at the tertiary education level in Malaysia, the implementation of the Islamic and Asian Civilization Curriculum (TITAS) has an important role in strengthening the aqidah of the Muslim youth comprising the students of both public and private universities. The execution of the TITAS curriculum is not only aimed at enhancing the understanding of Islamic teachings, but also a way to study the glorious history of Islamic civilization in Malaysia and Asia, thereby strengthening the aqidah of students so as not to be affected by the growing threat of liberal thinking in today's society. (Nor Hayati Fatmi Talib, 2014).

However, the practice of Islamic education and teaching systems in Malaysia are still accustomed to traditional teaching and learning methods whereby the input and explanations are solely given by teachers. This one-way teaching method is not helping the students to develop a sharp-minded thinking and curbing the freedom to ponder about religion, because the pattern of thinking, be it about ibadah, hadith, aqidah, sirah and akhlaq are centralized on teachers instead of students. The problem of teacher-centred teaching and learning need to be changed in order to be in line with the current will to attract students to learn about Islam and thus enhance the belief towards Allah S.W.T. (Zakaria Bin Abdullah, 2012; Alias Azhar, 2013, p.59-72). This has led to the emergence of some forms of religious deviation in Muslim society in Malaysia which can be categorized as follows:

1. Deviation of faith in word.

This kind of deviation takes place when a Muslim deliberately renounce matters that can invalidate the faith as per the fundamentals of ahlu Sunnah Wal Jamaah, that is to say something with a view to deny the proven nass. For example, according to Abur Hamdi Usman et. al (2016), the anti-Hadith group disregarded the Prophet Muhammad's Hadith as the second source of Islamic law that they solely depended the legal resources to be taken from the Quran. The arguments adopted by the anti-Hadith group are as follows;

- a) They claimed that the hadith as a deviation from the teachings of the Prophet Muhammad s.a.w and can not be accepted as a source of Islamic law as they were not recorded during the Prophet's lifetime
- b) Qur'an is a revelation sent down to Prophet Muhammad s.a.w through Angel Gabriel and is considered complete, perfect and detailed. Therefore, the Qur'an does not require any form of interpretation nor translation.
- c) The true teaching of God is during the lifetime of the Prophet Muhammad s.a.w as the last Prophet and brought by him is only the Qur'an and nothing else.
- d) Regarded the hadith as a historical record that may and should be examined by researchers to understand and assess the times.
- e) The expression of syahadah by the Muslims nowadays is prohibited by the Qur'an because the compulsory syahadah is only La Ila Haillallah.
- f) Refused to believe in Qada' and Qadar which is one of the most important aspects of the Pillars of Faith because it was revealed through the hadith and considered contrary to what is found in the Qur'an.
- g) The interpretation of the word al-hikmah in surah al-Baqarah verse 2 which was interpreted by al-Imam al-Syafie as Sunnah or hadith is unreasonable. They referred to the interpretation by Maulana Muhammad Ali which stated that the word al-hikmah is one of the names of the Quran. (Abur Hamdi Usman, et. al, 2017).

2. Deviation of faith through deeds.

The deviation occurs when a Muslim intentionally acts without compromising matters that is against the fundamentals of ahlu Sunnah Wal Jamaah. Among the corrupted acts according to Izhar Ariff Mohd Kashim (2016) are as follows;

- a) Performing shirk practices that can debauch the aqidah, for example the worship of ancestral spirits, feeding the occult matter during certain times, worshipping shirk things which are believed to increase the wealth, to get offsprings and to guard the property and residence.
- b) Participating in the practice of the non-Muslims through the act or speech that associates worshipping and praising other than Allah SWT. It is permissible for Muslims to engage in non-Muslim ceremonies, as long as it

is not related to religious rites such as celebratory ceremonies, provided that the ceremonies are not incorporating the illegal things in Islam, such as drinking alcohol, promiscuity, consumption of non-halal food and the likes of it.

c) Wearing garments that resembles other religions or insulting Islam, for example wearing garments that have the symbol of the cross, praising Jesus or any images and wordings that might be offensive for Islam (Wardati Mohd Saini, et. al, 2015).

3. Deviation of faith through writing.

To write something that contradicts the aqidah in conscious abandonment is assumed as deviation of faith. The dissemination of the writings are as follows:

a) Shame Writing Against Islam.

The writing can be in the form of stating Shari'a law is not in accordance with the country law to be applied to the basis of the nation's advancement. For example, the practice of sharia law can stave off the progress of a country or declaring that Islam is no longer relevant to the era of globalization of the world whereby situation of a country will not be safe if the people still practice the Shari'a law (Muhammad Qutaibah Suliman, et. al, 2105).

b) Liberalism Writing.

Liberalism is an ideology, a western philosophy and a political perspective, based on the understanding that freedom from religious guidance in the development of a country is the main foundation. Liberalism has the goal of building a liberated society with equal freedom of speech and freedom of thought for every individual. Liberalism repudiates the boundaries of ideas controlled by government and religion. The liberalism writing emphasize that the exchange of ideas must be free, individuals must not be economically exploited and reject the restrictions on individual ownership. The objective of liberal writing is to create a secular state that separates the religion interests of the individual with the interests of the state, but in a condition where the state still protects the interests of the individual and makes the principle of religion only as an individual's interest. Liberal writers aim to liberate the nation from the influence and upperhand of religion where the state has no rules and does not intervene in religious matters. The policies laid down have the meaning that the country does not prohibit or encourage a person to follow the rules of religion, any guidance made for the development of the country is based on the results of national leaders' decisions and it must be final and enshrined in the country's legislation which is believed to be a positive basis for national progress. Meanwhile, religious issues are individual problems that have been separated from the state (Haslinda Binti Hassan, 1999).

Conclusion

All forms of behaviour that have been marked as the abolition of the aqidah (deviation of faith in the form of words, deeds and writing) is a manifestation of the method of Islamic education which is in the form of text teaching without a thorough understanding and far from the appreciation of the aqidah is capable of being a driving force for every Muslim's behaviour. As a result, the Islamic knowledge is not being fully understood and failed to be translated into life and one's behaviour. To add up, with the challenges of today's technological achievement influenced by the lifestyle of materialism and secularism, the old approach of the Islamic education has made it difficult and weaken the appreciation of the Islamic faith. The concept of Tauhid cannot be grasped comprehensively so as not able to give a positive impact on life. The understanding of God or the aqidah is only understood by the Muslim community just to comply with specific deeds such as fasting, zakat and hajj only. Although the Islamic education system has been implemented at the school and tertiary level, it indicates that Islamic education is in dire need of improvements and enhancements of the quality of its learning outcomes. This is because these forms of faith deviation still exist among Muslims in Malaysia.

Acknowledgement

The authors would like to express gratitude and thanks to Universiti Kebangsaan Malaysia for the fund allocated for the research project entitled: The Development of the Current Profile of Malaysian Muslim Youth: Research on the Solution for the Fragility of Faith Problem, research code (GUP-2016-026), which resulted in the presentation and publication of this article.

The Consequences Arising from the use of Social Innovation in Small Schools of Thailand

Thanakorn SRIWIPHAT^{1*}, Dawruwan THAWINKARN² and Chupol POOLPATARACHEWIN³

Faculty of Education, Khon Kaen University, Thailand

*thanakorns@kkumail.com

Abstract

Social innovation is the concept, processes, methods, or result from the creative in small school to make the change in the direction of improved effectiveness. The development model for learning and development needs of society by supporting the involvement of the society is divided into four components including 1) changes in society, 2) productivity, 3) creativity in methods, and 4) supporting the participation of society. This research aims to study the consequences arising from the use of social innovation of small schools. The methodology of the research is grounded theory research by understanding the phenomenon of social innovation for small schools from the perspective of the phenomenon and who is involved by means of a study into the field with in-depth interview, focus group discussion, documents analysis, observation, and field-note to get insight in all-round and through triangulation.

The results showed that : the consequences resulting from the use of social innovation, there are two levels: 1) The sequel to the external network, including civil society and the state to a stable, prosperous, sustainable, balanced social dimension, and equality and social justice, and 2) a sequel that takes place within the school, including cultural and creative performance, a community of creative, innovative and rich social intelligence, and quality of life and social values as well.

Keywords: *Consequences, Social Innovation, Small School, Thailand*

Introduction

Nowadays, among many technological advances and developments, we are encountering the time of rapid disruptive innovation changes that have never occurred before. Thus, small organizations with insufficient resources or limitations are able to take the challenge and make an impact in society, which corresponds to chaos theory (Boeing, 2016). This causes a change insubsystems of small organizations to affect bigger systems as in butterfly effect phenomenon (Guastello, 2013), which could stimulate sustainable growth of organizations using innovation and difference-making by participants struggling for new ways. On the other hand, we are also dealing with problems that are increasing, such as economic and social inequality, political and cultural controversy, or serious environmental problems. These problems are complicated and linked together; hence, efficient solutions require the key factor in order to creatively come up with a solution to social problems or to improve people's quality of life – that is, to develop “Social Innovation”, especially in educational system that determines to solve many problems in human society caused by cultural changes. Moreover, Thai society is likely to be an individual society (DawruwanThawinkarn, 2015). Therefore, social innovation is essential for school development to reach a goal of various, efficient, and inclusive educational reforms, which is coherent to community's potential development and school reform's goal (Gold&Brown, 2003). Additionally, the principle of the success of small schools should urge the creation of new projects that make them proud of their schools and believe that they can do different things (Ewington et al., 2008). Even though small schools have limitations, deficiencies, and many problems, some of them are trying to invent and develop innovations and administration models and manage education that is new, different, and suitable for needs. Conditions of the community's context bring cooperation from all social sectors together in order to build standard quality and unique differences to succeed in efficient and effective educational management and administration of small schools so that they can be accepted and be a good model of a good school, community, and society. This is considered challenging to the trend of changing in many dimensions, yet these schools still have courage because the heart of education is students. They are also determined to overcome their limitations, which is corresponding to McGregor (2007) that thinks many successful organizations around the world focus on the use of creativity of their staff to create an innovation in the organization and that creativity is related to every activity at work. This creativity and innovation are used widely and interchangeably. However, a concept of creativity is unique and clear, which is different from that of innovation (Howkins, 2009). That is, creativity is either an individual or a team process, whereas innovation is a process on the organization level. It is a successful use of creativity (Amabile et al., 2002) as well as a creative social innovation for small schools. In other words, concepts, process, methods, or inventions from society's creativity in small schools can improve the society effectively by enhancing thoughts, mind, and realisation, which can be developed into a learning and development model responding to the needs of the society supporting the social involvement. It can be divided into 4 compositions: 1) a change by society, 2) concrete product, 3) creative methods, and 4) support for society's participation.

Therefore, it is an issue to study the consequences caused by the use of creative social innovation for small schools from people involved. It is the research area using qualitative research, which is to seek knowledge from consideration of social phenomenon in real life in every dimension (Supang Chantavanich, 2014). It is Grounded Theory Research – a form of systematical grounded theory research by Strauss and Corbin (2015) to gain new knowledge to develop successful learning management. Furthermore, a finding found that small schools under the office of basic education have applied innovations to their learning, and some compositions and applications correspond with creative social innovation and are able to be applied in different contexts properly to develop a complete human resource – good, talented, happy, useful, generous, and smart, to be able to creatively bring happiness to mankind in the future.

Research Objectives

To study the consequences arising from the use of social innovation of small schools.

Literature Review

Consequences From The Use Of Creative Social Innovation

PrawaseWasi (2013) states that to develop a strong society using creative social innovation involves an educational system development for it is a big organization and its effects can cause changes. Creative social innovation is a concept and a process for presenting the important changes according to the needs of the community. Moreover, the usefulness of the creative social innovation is not only to increase the efficiency of the organization but also to develop the country for long high-quality life. Roger (2003) explains the consequences or impacts of creative social innovation that can change the society as follows:

- 1) to encourage value in the society
- 2) to solve problems or develop the society
- 3) to help improve people's daily routine in the community or society
- 4) to be able to give value and use effectively after comparing

Moulaert, Martinelli, Swyngedouw & Gonzalez (2005) mentioned the consequences or impacts in the social dimension of creative social innovation as follows:

- 1) respond to needs and necessities of human society
- 2) improve the society
- 3) increase social and political capacity and access to resources

Martinelli (2012) mentioned three impacts of the use of creative social innovation on the national level:

- 1) respond to the needs that human ignores from what they deserve
- 2) energize an individual or a group
- 3) improve social relationships

Kanjana Saenglimsuwan (2012) has summarized three consequences of creative social innovation as follows:

- 1) The effect of the creative social innovation to life quality is the increased capacity of the government and life quality of people from World Development Indicator database. The innovation helps reduce the mortality rate of newborn babies, increase people's longevity and potential, and improvement of state structure that is represented by Government Effectiveness and Control Corruption index.
- 2) The social innovation helps solve educational problems and start a production and development of new media as well as the development of the curriculum to increase entrance rate.
- 3) There is a study of dust in the air which affects people's health; it is concluded that the social innovation helps reduce the amount of air pollution by collecting data from World Development Indicator to compare the relationship between how much dust in the air and entrance rate. The social innovation decreases air pollution and increases entrance rate.

Additionally, Saimon (2014) talks about the consequences of the use of the social innovation which are:

- 1) Integration of cross-sectoral
- 2) New relationships
- 3) Great pro-consumption and co-production
- 4) Development from a grassroots level
- 5) Mutualism
- 6) Development of capacities and assets
- 7) Better use of assets and resources

In summary, the consequences of the social innovation are the increase of the capacities to access resources, human needs, moral, economic growth, healthier relationship, to solve corruption problem, to be a strong society, to have a better environment, to develop from grassroots level, to use resources effectively, and to produce a great product.

Research Method

This qualitative research (Chai Potisita, 2016) had three phases of data collection, as follows.

- 1) The researcher reviewed 150 documents relating to social innovation to obtain data on components of social innovation. The simple random sampling method was used to select the papers reviewed for this research.
 - 2) The researcher conducted in-depth interviews with 10 social innovation experts, including school directors, academics, and researchers involved in social innovation development.
 - 3) Data were collected from 5 small schools that had been awarded national prizes and that had been named master schools with impressive social innovations. The schools were selected using purposive sampling in order to ensure they represented the values of good social innovation within schools and to confirm that they had been able to introduce positive changes within their communities.
- The data collection process involved field data collection, decoding of the school's successful practices, interviewing school stakeholders, and summarizing the data, with the purpose of offering recommendations for the consequences arising from the use of social innovation of small schools.

Results And Discussion

Findings on the consequences arising from the use of social innovation of small schools.

1. consequences in external network

1.1 public network for society and stability

The high-quality community is enthusiastic to continuously improve itself, follow the changes, and preserve its identity. Services from the government have high-quality and good governance on all levels; people also have an opportunity to participate, which make them feel a sense of belonging and cherish it. This then builds bonds, responsibilities, and the need to work to develop the society and schools from the belief and acceptance of the organization's goals and values. They would feel that they are a part of this organization or society, and they would be willing to work to maintain their organization and reach its goals.

From such situation, it shows determination and desire to improve the society and gain people's acceptance of the organization through teamwork and everyone's involvement in order to step into the new generation of the strong, wealthy, and sustainable society.

1.2 Social balance

When using strategies to drive social innovation until it becomes successful in small schools, they can maintain as well as the community or society will balance – there are a giver, a receiver, and discipline; there are fewer problems in the society and more of creativity. Normally, a good balance of the society should bring civilization and justice to all area. Socially, there should be a balance between groups and classes – the balance that focuses on equality and prestige of human. Effective administration is a result of learning and emphasis of balance in the workplace especially the ability to manage limited resources such as budget, material, staff etc., to reach the goals through a neat process and effective use of resources.

1.3 equality and social justice

To establish equality, people with the least number opportunities should receive support the most; the ones with advantages do not have to receive as much support, but should give more to those who do not have as much as them. In today's society, equality in a political implication tells that everybody in the society is equal in every way so people can live together peacefully. Inequality is the cause of many conflicts in the society, and it is a matter that we are aware of as well as understand that inequality is natural in the society because of unequal treatment. This has to be perceived seriously as people are basically different especially their bodies, minds, emotions, statuses, and roles in the society. These differences are natural problems that prevent equality although we are naturally different. However, we, as human beings, have rights as many as others, which is an important factor when living together in the society. Furthermore, as we are in the society with the democratic government, human equality is undeniably important. Equality means equal rights to receive services from the government; thus, a state with the democratic government has a responsibility to provide equal opportunities so that the people have access to its services. However, people's basic differences are a problem to the government services access. Without a good management, the gap of the inequality will occur and it will be difficult to understand.

2. Consequences within schools

2.1 creative culture and high potential organizations

To build a social innovation, it is to put a value on organization level reflecting from behavior and attitude of the staff in the organization that encourages a development of new work. Creativity in a team is for objectives achievement of the organization, which has to be from a cultivation of creative concept and a creation of an atmosphere in a workplace that stimulates creativity. The director must encourage and support teachers and staff to willingly bring their creativities into practical use to develop an ability to become the organization of innovations – to work efficiently without too strict control.

2.2 Community of innovations and the creation of a knowledge-based society

The 21st century is an age that information travels quickly resulting in new knowledge and technology all the time. It can be called the age of a knowledge-based society. Moreover, it is also the age of the economic competition, wisdom investment, and innovation creation that do not happen only in the country but on regional and international level as well. From these changes, educational organizations and teachers are expected to play an important role in solving social problems and develop the youth to become an efficient human resource with satisfactory qualifications so that they can compete on international level. This is corresponding with National Education Act B.E. 2542, which intends to produce good, talented, and happy students. Hence, it is a challenge to improve paradigm in educational administration by managing a more efficient school administration especially in human resource development, which is considered a valuable resource. The focus is also on to raise the value of staff in the organization to become a human resource, which is the heart of the development and building a happy organization or school. This then can become a tradition of an educational organization's happiness along with a tradition of efficient work, which advantages both to an individual in a better quality of life and to the organization itself in effectiveness and productiveness of the work. It is the consequence of the cooperation of the staff within the organization – to work together with enthusiasm, love, and bond toward the organization, resulting in good work evaluation and fame. The students will also learn and benefit from the teachers who are dedicated to their work because of the happiness built in their organizations.

2.3 Quality of life and good social value

An improvement of life quality is everyone's desire as well as the society in order to live happily and peacefully together. Therefore, the improvement of life quality is a basic improvement starting from ourselves – improve the lifestyles following the changes in the future, improve mental health, control emotions to be happy and optimistic, not stressed or anxious about schools or work, gain acceptance and admiration from society, respect the sense of belonging and the need to be a part of the society, learn new skills to know and understand more, and be creative in problem solving. Thus, the improvement of life quality involves every individual, community, and society; it is necessary to build a balanced system and maintain it under social changes because a good life depends on a happy society. At the same time, an efficient society depends on quality people as well.

Conclusion

When a school uses a strategy to drive social innovation successfully, its consequences affect both the organization itself and the staff or related matter as well as the influences of the contextual and intervening conditions, which are the consequences of the use of social innovation in small schools. It is composed of the consequences toward external network which are: (1) the network of civil state for society, stability and sustainability, (2) social dimensional balance, and (3) social equality and justice. In addition, there are consequences occurring within schools themselves: (1) creative tradition and high potential organization, (2) the creation of the society and to be the community of innovation, and (3) better life quality and social value.

The consequences of the social innovation use for small schools can be applied to strengthen their strong points, improve their weak points, and for more completion of the innovation in order to be a model of an effective and efficient small school administration. This happened after the cooperation of the government and private organizations, society and individuals who have the same belief that everyone is responsible for a good educational system resulting in a network that works together to also change the social concepts and make the public realise the power and ability to help change the education from where they are. Finally, this power is believed to put pressure until a change happens in Thai educational system to truly serve the demands of Thai people.

The Development Of Students' Desirable Characteristic For Private Elementary School

Phuwadon Chulasukhont, Ed.D.

Poggade Chulasukhont, Ph.D.

Faculty of Education hepsatri Rajabhat University Lop Buri, Thailand

phuwadon84@gmail.com

Abstract

The desirable characteristic of students is essential as well as the knowledge that they learned from the school because the society does need not only the genius but also the good person. The study aimed to study the realistic basis and desirable characteristic of students in the perspective of teachers in private elementary school, and develop the desirable characteristic of students through action research methodology at the sample school to suit the context. The procedure was divided into two phases; phase I: studied the problems and the developmental needs of the desirable characteristic by using questionnaires; phase II: designed and developed the desirable characteristic of students based on the results from studied, conducted with focus group discussion methodology and experimentation with students. The result of this research founded that the desirable characteristic of students was increased after finished the process.

Keywords: *Desirable Characteristic, Elementary Students, Private Elementary School*

Introduction

Nowadays, the private schools have the critical role in Thai education, to manage the education level from the early childhood level to the higher education level (Office of the Private Education Commission, 2015). Thereby, the quality of education was crucial for them. The indicators that can be told about the quality were students. All academics must develop educational quality. Schools should also develop their operation and reveal their operational results to the community or stakeholders, to reassure parents and communities that they will get the best quality from the school.

Youth is the critical resource, as hope and future of the nation. The prosperity and development of the nation will be increased or not were depended on the quality of people. The present social conditions were changed regarding economic, political, social and technological, and they were affected to the youth's development (Chareonwongsak, K., 2014) because they will learn everything from their surroundings and absorbed them unconsciously. Then they were developed into the characteristic of themselves. Each people have the personal characteristic that can remember and identify by the others (Meador, D., 2018), if they have the desirable characteristic, they will gain the self-confident and can be a person who was accepted by the society and also can succeed their life in the future.

The enhancing of the desirable characteristic should cultivate with the all ages students, (Peeters, J., 2016), especially in the elementary school. Because they are the beginner to learn anything, if they were learned the good things from the beginning, they were affected to be the good students (Chaisongkam, S., 2013). Therefore, the elementary schools are the essential organizations to cultivate desirable characteristics for the students. It was imperative to have the corporate sponsorship from the related organizations, include communities, temples, and parents to be the vital role in cooperating to successful them.

In fact, it was founded that some students have the impolitic characteristic and demeanor. Especially, speech and responsibility. The researcher realized the importance of the issues mentioned above. Therefore, the researcher has begun this research to develop the desirable characteristic of students, to guide the development of the quality of students by using action research methodology. (Kemmis and McTaggart, 1988) The experimentation process that worked for this research took place at Phatharadon School, in Roi Et province, Thailand.

Objectives

This research aimed to;

1. Study the realistic basis and desirable characteristic of students in the perspective of teachers in private elementary school.
2. Develop the desirable characteristic of students through action research methodology at the sample school to suit the context.

Limitations

The sample of this research in the first phase were 293 teachers of the private elementary school in Roi Et province, and they were randomly selected from the formulated by Yamane's technique from the 1095 population size. The second phase, the participants were 22 teachers and 392 students from Phatharadon School in Roi Et province.

The instruments of this research were 1) the questionnaire of students' desirable characteristics and 2) the activities that were set together by the teachers under the action research methodology.

Variables Under The Study

The 6 Aspects of students' desirable characteristics obtained through the synthesizing process from the study of 6 resources about the desirable characteristics of students. The researcher compared each resource if they were the same three items or more, it was chosen to be the variables of this research. Finally, the variables consisted of Diligence, Frugality, Discipline, Patriotism, Honesty, and Service Mind, the following table shows how the students' desirable characteristics were synthesized.

The Aspect of Students' Desirable characteristics	Desirable characteristics of students' resource						Frequency
	5 Basis Values of the Office of the National Culture Commission	Desirable characteristics under the core curriculum	12 Values Announced by the Head of the National Council for Peace and Order (NCPO)	9 Basic Virtues by the Ministry of Education	10 Characteristics of Great Students	10 Characteristics of a Successful Student	
1) Diligence	✓	✓	✓	✓	✓	✓	6

Methodology

This research process was divided into 2 phases;

Phase I: Studied the problems and the developmental needs of desirable characteristic.

The researcher began by surveying the needs and problems of students' desirable characteristic by using questionnaires. In the next step, the researcher participated in focus group discussion with the four private schools that belong to Roi Et province.

Phase II: Designed and developed the desirable characteristic of students.

The researcher chose a private school to develop and experiment with the students, the criterion of selection included 3 conditions; 1) the school was assessed by the Office for National Education Standards and Quality Assessment (ONESQA) in the third round and passed this assessment, 2) the school administrator had graduated in master degree or above in the major of educational administration, and 3) the school had allowed the researcher to experiment the process of research with their students.

After the considered of criterion above, Phatharadon school had allowed the researcher to experiment the research process in their school. Then, the researcher began to summarize the information from questionnaires and a focus group discussion in the first phase. When finished, the researcher participated in a focus group discussion, again with nine teachers in the school where was chosen, during the focus group, the teachers set the indicators and prepared projects together to support the indicators that were chosen based on the results from the study in the first phase. They also can develop the desirable characteristic of students under the indicators chosen by teachers through action research methodology, including plan, act, observe and reflect. (Kemmis and McTaggart, 1988)

Results

The results of the questionnaires on problems and needs for development showed that the overall of the desirable characteristic of students' problems was in a medium level when considering individual aspect in ascending order, there were service mind aspect, discipline aspect, and honesty aspect respectively. Moreover, the needs of development were in a high level, when considering individual aspect in ascending order, there were service mind aspect, discipline aspect, and honesty aspect also.

The Aspect of Students' Desirable characteristics	Problems			Need to Develop		
	\bar{x}	S.D.	Meaning	\bar{x}	S.D.	Meaning
1) Diligence	3.10	.34	Medium	4.12	.31	High
2) Frugality	3.13	.41	Medium	4.11	.33	High
3) Discipline	3.35	.36	Medium	4.35	.28	High
4) Patriotism	3.16	.39	Medium	4.27	.34	High
5) Honesty	3.17	.38	Medium	4.28	.33	High
6) Service Mind	3.38	.41	Medium	4.43	.25	High
Total	3.21	.16	Medium	4.26	.12	High

Furthermore, the results from the focus group discussion of the teachers in private school where was chosen showed that the desirable characteristic should be developed to focus on the discipline aspect and service mind aspect to solve the problems, especially on the issues of punctual, endurance, environmental protection, sacrifice and working with other. Finally, all of the teachers agreed with the overview of the process.

The teachers together set 4 indicators from 2 Aspects to development process:

- 1) The number of discipline promoted activities organized.
- 2) The percentage of students who were disciplined.
- 3) The number of activities that were organized to encourage students to learn and work together and
- 4) The percentage of students who had a service mind.

The Aspect of Students' Desirable characteristics	Project Name	Number of Indicators	The indicators that were set by the teachers
1) Discipline	1) Students' discipline enhancement.	2	1) The number of discipline promoted activities organized. 2) The percentage of students who were disciplined.
2) Service Mind	2) Students' service mind enhancement.	2	3) The number of activities that were organized to encourage students to learn and work together. 4) The percentage of students who had a service mind.

Then the researcher and all the teachers developed all indicators under action research methodology. This is an example of an indicator development;

Indicator 2: The percentage of students who were disciplined.

Project name: Students' discipline enhancement project.

Activities: 1) The training of students by the military program.

- 2) Responsible areas' organizing for the environmental protection.

Development Operation: Loop 1	Development Operation: Loop 2
Plan: Prepare the project; set the project organizers; set project period; communicate to the military organization to invite their staff. Plan and set the training programs together with the military staff and the teachers.	Revise Plan: The teachers set the activity together. (They organized the responsible areas for each group of students for the environmental protection); set the period for the participation of students; prepare the materials and set the project organizers.
Act & Observe: The operation followed the training program that was chosen; interviewed the military staff and the teachers who participated in this project about the cooperation and behavior of students.	Act & Observe 2: The operation followed the activity programs that were set together; observe the behavior of the students; interview the teachers again and use the questionnaire on students' discipline satisfaction.
Reflect: Teachers were satisfied with their students who participated in the activity, some teachers need to set other activity that controls by themselves only. In the first period of the project, they could participate in only one activity. Recommend: Should let all teachers together set the activity by themselves without staff from outside.	Reflect 2: All teachers were satisfied with their students' behavior of discipline and needed these activities every year; focus on the participation of teachers and staff from outside, both activities suit all students. Recommend: Should set more types of activity; the school director should support the activity that set from the teachers focus on the students' behavior enhancement.

The result of other indicators showed that: Indicator 1 and 2: students were more disciplined than before and the school area was cleaner, the atmosphere was better. Indicator 3: students learned more and worked together better, and the relationship among the students was better, and some students showed leadership qualities, and indicator 4: the students were more service mind, the relationship among the students was better. The following table summarizes the success of all indicators.

Indicators	Targets	Results	Conclusion
1) The number of discipline promoted activities organized.	2 activities	2 activities	Successful
2) The percentage of students who were disciplined.	90%	95%	Successful
3) The number of activities that were organized to encourage students to learn and work together.	2 activities	2 activities	Successful
4) The percentage of students who had a service mind.	90%	80%	Unsuccessful

This concluding table showed that three indicators were successful and one indicator was unsuccessful. Although some indicators were unsuccessful, all indicators were developed under the action research methodology and showed increased quality.

Conclusion And Discussion

The needs of development showed that the service mind aspect and discipline aspect was in a high level, because of some students still focus on their benefit as the primary objective, if they satisfy they will do. On the other hand, if they cannot gain some benefits from them, sometimes they will refuse to do. That is the reason why the teachers should enhance them about the service mind. The process begun from the researcher and teachers participatory about the expected activities and targets, the designing of this process was based on the problems according to Weir (1974), and the development operations were driven under action research methodology of Kemmis and McTaggart (1988); finally, the almost activities were accomplished.

From the four indicators that were identified by the teachers founded that three indicators were successful. However, all indicators were developed and showed the desirable characteristic of students were increased. This was because the teachers design the activities suited with the contexts of school (Feeney, Christensen and Moravick, 1987), and allowed the students developed themselves from the real practice was consistent to the principle of learning by doing of Dewey (1972).

The results were also according to Ramitanont (2018), who identified that the characteristic was not something that accidentally or naturally occurred, but that the students' culture formed them under the process over time, and that the culture was a society of students construct and together developed themselves. It eventually became a circuit of culture how the students treated each other. In addition, there are some of the educators who see that culture directly related to the characteristics. They supported the view that cultural patterns in each school result from teaching and training at an early age (Benedict, 1970), that was the reason why their characteristics were developed.

Recommendations

From the variables, only two aspects of 6 were developed. In the future as many aspects as possible should be developed. Furthermore, this research was only conducted over one semester. In the future, research should be conducted at least more than one academic year.

Acknowledgements

The researcher expresses his appreciation to all teachers of private elementary school who were the samplers and all experts in educational and research methodology for their expertise and cooperation in checking research instruments, Phatharadon School, a coordinator, and everyone who participated in this research.

Abstract

The variety of the information is important for 21st century students who were growing up together with technology, and they should know how to apply it to their learning. This study aimed to the comparison of students' information literacy skill using the blended learning with the Think-Pair-Share technique before and after learning of Rajabhat University students, and study of students' information literacy skill through the using of the blended learning with the Think-Pair-Share technique of Rajabhat University students. The procedures of the blended learning with Think-Pair-Share technique were as follows; phase I: define the challenging problem from the classroom and the online resources; phase II: Brainstorming and discussion in the topic of the issues that they found; and phase III: sharing and publicizing the knowledge from the media that they created. The result of this research found that the information literacy skills of students after used the blended learning and Think-Pair-Share technique higher than before began the process.

Keywords: *Blended Learning, Think-Pair-Share Technique, Information Literacy Skills*

Introduction

The variety of the information is important for 21st century students who were growing up together with technology, for example, computer, network, and technology literacies and they should know how to apply it for their learning and to gain the information in the format of image, sound, and text as the new media or new technology under the era of rapid change (Kathleen Tyner, 2014).

National Science and Technology Development of Thailand need to enhance the Thai student's skill of information communication technology (ICT) and internet using, screening the information under the reason, communicated skill and presentation skill. In addition, The Thailand Qualification Framework for Higher Education (TQF) focus to enhance the student skill of interpersonal skill and communication and information technology skills to support the working market in the future (Sinlarat, P., 2010).

Consistent of the faculty of education in Thepsatri Rajabhat University (TRU) that created the teacher who can use and select the information under the reason, self-expression, accept the opinions from the other, and be in the community happily. The instructional management in the university that brings the concept of learning both Face-to-Face in the classroom and teach them through the internet as known as the blended learning (Curtis J. Bonk, Charles R. Graham, 2013). This concept can help the students learn through the technology, practice to the selection of the various types of information and bring the data that were learned to have the discussion both inside and outside the classroom. Moreover, the teaching technique of Think-Pair-Share can give them the opportunity to practice and receive the information back from their friends in the classroom (Frank Lyman, 1987), the knowledge sharing of classmate increase the courage of counseling and presentation their work.

For that reason, the method that encourages students to access resources, identify and refer the sources, evaluate the information and apply it efficiently by using the blended learning and the Think-Pair-Share technique to enhance the literacy skills of students in Rajabhat University.

Objective

This study was aimed to;

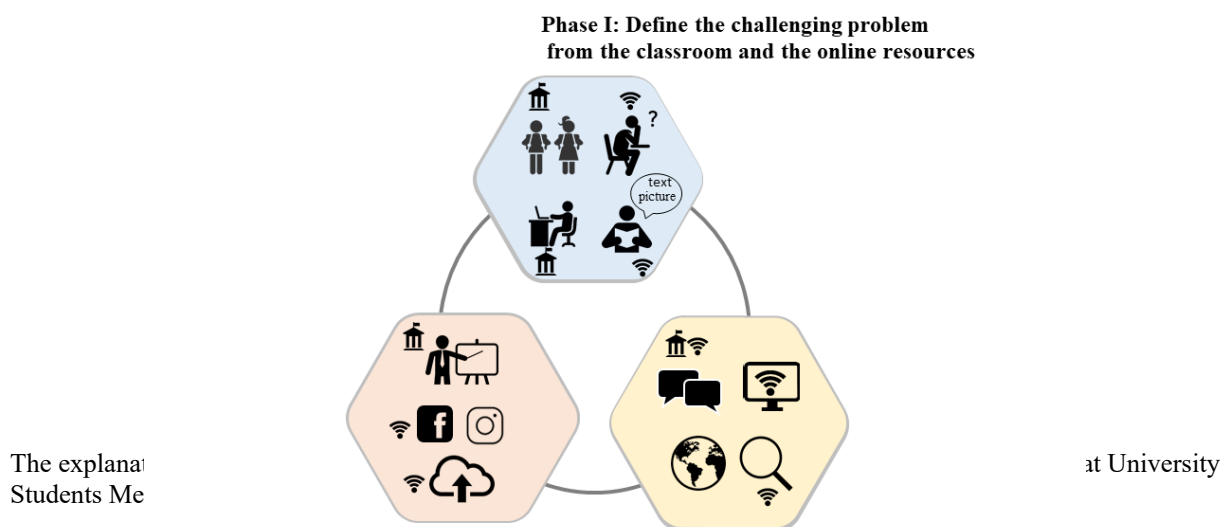

1. Comparison of students' information literacy skill using the blended learning with the Think-Pair-Share technique before and after learning of Rajabhat University students.
2. Study of students' information literacy skill through the using of the blended learning with the Think-Pair-Share technique of Rajabhat University students.

Limitations

The sampling group of this research was 52 students who were programming in English education, who were studying “innovation and information technology in education” course in the second semester of 2017 academic year at Thepsatri Rajabhat University. The sample of this research was from a purposive technique. The samplings were paired to twenty-six, for each is two students and take part in any activities provided in the study and create the media about the own infographic. The instruments of this research were; 1) Information literacy website, and 2) information literacy skills test form.

Methodology

The research process of the blended learning with the Think-Pair-Share technique was divided into 3 phases as follows; Phase I: Define the challenging problem from the classroom and the online resources; phase II: Brainstorming and discussion in the topic of the issues that they found; and phase III: Sharing and publicizing the knowledge from the media that they created.

Phase I: Define the challenging problem from the classroom and the online resources
This is the first phase of the research process. The students began with the teacher explained the role of student, then the students chose the buddy voluntarily to be the helper, discussed and shared ideas about the topic that was assigned. Next step, they designed and created the infographics for each of them from the challenging topic, to the planning step for identified the scope of contents, knowledge pursuit, data format, information sources consideration, and the instrument that use to find, including the assessment of their necessary skills to create the infographics. After that, the students explained their plan in the report and uploaded it to the teacher's website for the data discussion, and assessed their skills in the scope of working with their buddy in the classroom.

Phase II: Brainstorming and discussion on the topic of the issues that they found

In this step, the students practiced the activity on the internet and studied the contents of how to search for information effectively and the principles of infographic media design. Then, the students search the information through the method that they found by identify their source, identify the methods used to search information, identify the website, data found types such as message, image, video, and sound, the technique of data searching and how to select the credible information and useful. Next step, shared the method how to search and select the information for used it in their infographic with the buddy. All of the methods in this phase, there was the communication among teacher students and their buddy both within the classroom, on the internet and social network. When all the students came into the class, they were brainstorming and discussion on the topic of the issues that they found

Phase III: Sharing and publicizing the knowledge from the media that they created.

The last step of this research, after the students finish their infographic in the second phase, they presented their work and explained it in the classroom about the concept of design and the information selection for created their work. Then, they discussed the presentation of the classmate and recorded the video clip for upload to the network. In the part of each work of infographic, the students had published their work on the social media, such as Facebook, this is an opportunity for people to gain the knowledge from their work through pictures. After two weeks, the students uploaded their work and the results of publishing in the social media, and then they analyzed how the others feedback about their work from the social media.

The role of teacher and students in the blended learning process

The role of teacher	The role of students
Face-to-Face	Face-to-Face
1. Clarified the rules and procedures, such as single activity, buddy activity, activity in the classroom, and activity on the network. 2. Designed of activity in the classroom, each couple of students shared ideas and exchanged the information from the source of documents and on the internet. 3. Gave the instructions, reflective of ideas by face to face with the activity in the classroom	1. Random selection of the topic that students had been assigned to find out the relevant information about the innovations, to challenge the ability of the students. 2. Pair with the other students as the buddy to work together and assigned the role of themselves. 3. Shared the ideas of the information that each student received from their study between the buddies. 4. Presented each students' work and discussed together, then record the video clip for upload to the network.
Online	Online
1. Determined the sequence of online activities. 2. Designed the activity and assigned the task for students 3. Evaluated the results of activity and the students' work.	1. Communicated with their teachers as the consultant and receive the instruction through the network. 2. Study the contents, participated in the activity, completed the exercise within the lesson on the network.

Findings

The effect of blended learning with Think-Pair-Share technique to enhance the information literacy skills of Rajabhat University students, after using the Think-Pair-Share technique had the Information literacy skills increased, the details of it as shown in the table below.

Range	Number of Students		Percentage		Meaning
	Before	After	Before	After	
28 – 36 points	0	13	0	25	Highest
19 – 27 points	0	37	0	71.15	High
10 – 18 points	21	2	40.38	3.85	Medium
0 – 9 points	31	0	59.62	0	Low

The above table result showed that before used the Think-Pair-Share technique found that, 31 students (59.62%) had the low level of Information literacy skills, and 21 students (40.48%) had the medium level of Information literacy skills. However, after used the Think-Pair-Share technique had the Information literacy skills increased, there were 37 students (71.15%) had the high level of Information literacy skills, and 13 students (25%) had the highest level of Information literacy skills.

The Information literacy skills of students had overall in the high level, as shown above, this skill was assessed including 12 sub-skills that synthesized from Sconul (2011), NSTDA (2015), Michael and Robert (1987), and the association of college and research libraries (2000). There were 12 sub-skills consisted of 1) ability to determined scope of topic for information searching, 2) ability to determine the sources of information searching, 3) ability to topic identifying for searching and wording selection that clearly and easily to understand, 4) responsibility for information searching under the time limit, 5) ability to identify what they need to find more, 6) ability of using tools for information searching, 7) ability to identify and searching the variety of information format to utilize, 8) ability to consider, select, and evaluate the credibility of information, 9) ability to identify the sources of information for correct reference, 10) ability to design for information presentation appropriately, 11) ability to select the tools for publish the information appropriately, and 12) ability to solve the problems and obstacles encountered during the operation.

Conclusions

1. The comparison of information literacy skills by the blended learning and Think-Pair-Share technique, found that the information literacy skills of students after used the blended learning and Think-Pair-Share technique higher than before used it, this might be the cause of the information literacy skills can practice to increase it by applied the process and merge to the learning curriculum, contents selection, and the activities that allow students to practically, according to Scott and Sullivan (2005), Daniel, Dominique and Kraemer (2014), said that information literacy skills are the things that the teacher can integrate into the curriculum because the credible of data searching, to enhance them to learn and apply it to work in the future.

Corresponded with the research of Michael (2008), stated that the information literacy skills is essential in the present, it can help us to search, evaluate, and use the information we need, and filter unwanted data in the

overwhelming information world, to select it to use as much benefit as possible. However, the information literacy skills can be learned through the learning process and affected to the success of the activity is the task identified clearly, defining of objectives searching, using of tools and resources appropriated, and the decision of data selection. The skills that were mentioned above are necessary for the students in the university to learn before they will work in real life. It can be seen that if the teachers designed the appropriate instructional activities, they would be able to improve the student's information literacy skills more than before.

2. The information literacy skills of students overall were in the high level, this might be the cause of the step design of blended learning and Think-Pair-Share technique that focus on the benefits of learning by using technology and the tools for access to the information, the contents of lesson, communication channel, interaction between teachers and students, or among students quickly. According to the research of Habidge, Sanderson, and Tin (2015) that studied about the using mobile technology to enhance undergraduate student digital information literacy skills with group Canadian case study founded that students feel challenge when collaborative or exchange the opinions according to think-pair-share technique that can enhance the discussion of the students until the presentation step, including the face-to-face learning, that increase the opportunity for students to had the reflection together, share ideas with classmate, knowledge sharing, learn from the other perspective to develop the skills of student.

According to Bill Johnston & Sheila Webber (2003), studied about the information literacy in higher education founded that, the success of students in information literacy skills development was from the operation both in the classroom and outside, and allowed the students had the participation in the classroom, decision making, and evaluated their work and classmate, these can motivate the students to operated and develop themselves. In addition, the Think-Pair-Share technique that the students shared ideas and consulted with their buddy, can encourage the learning under the target of each student, and controlled themselves to operate in the activity.

It's also in conformity with the research of Houtman (2015) that studied the motivation of students learning by using the Self-Regulated Learning for the information retrieval, found that the using of Think-Pair-Share technique in the activity can open-minded of students and express their opinion among the classmate more than communicated directly with the teacher, and efforted to operate the activity for information searching, listening and learn from other work to improve their work better. From this process that was mentioned above, affected to increase the student's skill of information literacy.

The Effect Of Essential School Leadership On Innovative Organization Of Thai Secondary Schools

Kanokorn SOMPRACH

kanoklin@kku.ac.th

Faculty of Education, Khon Kaen University, Thailand

Correspondence should be directed to: Kanokorn, SOMPRACH kanoklin@kku.ac.th

Abstract

This research aimed to examine linear structural relationship model of essential leadership styles of school administrators in promoting organizational innovation of basic secondary schools in Thailand. This is followed up with development of an approach for innovating school organizations. Researchers employed a mixed mode design using a combination of quantitative and qualitative methods to collect data. Researchers used the quantitative findings from Structural Equation Model (SEM) to explain and interpret the qualitative findings. The effect of leadership styles namely learning leadership, creative transformational leadership, and learning-centered leadership on innovation of school organization were examined using a quantitative survey questionnaire. A total of 760 school administrators and teachers were involved in the first phase. This is followed by in-depth interviews at the second phase to five experts in order to develop leadership style factors that have high factor loading based on the findings from first phase. The final phase was carried out with five academic experts and five practitioners to develop an approach and provide solutions for innovative issues. Quantitative data was analyzed using SEM while qualitative data was analyzed using content analysis and MACR (Multi Attribute Consensus Reaching) method. The quantitative findings show that all the three leadership styles were affecting the innovation of school organization. Learning leadership was found to have the highest effect ($\beta = 0.877$) and contributed 87.7 percent to the structural relationship model. This is followed by the creative transformational leadership ($\beta = 0.381$). The least capacity leadership style was learning centered leadership ($\beta = 0.264$). Moreover, it was found that the measurement model of leadership style factors has goodness fit with evident data, with $\chi^2 = 162.269$, $df = 136$, $p = .067$, $\chi^2/df = 1.193$, CFI = .997, TLI = .995, RMSEA = .028, and SRMR = 0.013. Finally, qualitative findings of this research have successfully proposed an approach for school administrators to develop organizational innovation.

Keywords: *Creative transformational leadership; innovative organization; learning centered leadership; learning leadership*

Introduction

Educational leadership is an essential factor to ensure the development of the country so that it can keep it up with the changing world. Current education situation has to transform rapidly from time to time due to the impact from academic and technological progress to Thailand's education and educational leadership (Aritatana, Sirisooksilp, & Tang, 2016). Howell and Costley (2001) stated that a leadership style not only covers leadership behavior directly but also concerning about leader's trait as leader is the one who produce successful work for the group outcomes and work performance. On the other hand, school organizations need to be more creative and innovative in order to compete, grow, and lead. Therefore, ChanLin, Hong, Horng, Chang, and Chu (2006) emphasized that school organizations have to help students to perform in the realm of innovative behavior which requires changes in both educational policy and teaching practices that are controlled by school administrators.

Leadership is considered as a key factor to promote innovative and positive change to the school organization. A school organization will be lost of direction to change and could experience negative change instead without an essential leadership (Moo & Yazdanifard, 2015). According to Ganta and Manukonda (2014), leadership is a kind of power possessed by leader who has the ability to influence or change the values, beliefs, behavior, and attitudes of other individuals. Moo and Yazdanifard emphasized that school administrator who has his full power to control the direction of the school, as well as through the influence they exert on their teachers that will motivate them to bring the school to greater success.

Somprach, Tang, and Popoonsak (2017) highlighted that school administrators have to adopt different leadership styles in order to match the astonishing diversity of school organizations, ranging from small, rural primary schools to extra-large secondary schools, across different contexts in Thailand. Current school administrators should utilize the application of information and communication technologies to provide innovative teaching and learning process in the rapid changes of school organization (Somprach, Prasertcharoensuk, & Tang, 2016). Somprach et al. (2016) found that school administrators should apply the standards of the Malcolm Baldrige National Award or the Thailand Quality Award as a framework to promote effective leadership.

In addition, Thai Ministry of Education (2011) summarized the three key features of education reform with regards to the second decade of this century (2009 to 2028), namely improvement in quality and standard of education and learning of Thai people, increment of life-long educational opportunities thoroughly and effectively, and encouragement sector participation and systematic reformation and learning in Thailand. This is further supported by Thai Ministry of Education (2015) by fostering the transformation of the education system with a tactic used based upon enriching moral and ethical values, in conjunction with a central program for cultivating excellence in education. Both government calls seemed to be in line with Somprach et al.'s findings (2017). They found that school administrators should obtain knowledge, competency, ethics, morality, creativity, systematic thinking, and good professional code of ethics so that they can exhibit effective leadership styles to achieve goals, improve quality standards, and use techniques that can lead to problem solving and accomplishment.

Literature Reviews

Somprach et al. (2017) explored the role of essential leadership styles of school principals in encouraging teachers' participation in professional learning communities in basic education schools in northeastern of Thailand. They found that learning, transformational, collaborative, and invitational leadership styles of the school principals contributed 55.6 percent of the variance in teachers' participation in professional learning communities based on 731 respondents' perceptions. Specifically, the impacts of learning leadership was 46.6 percent, that of transformational leadership was 6.7 percent, that of collaborative leadership was 1.6 percent, while that of invitational leadership was just 0.7 percent. In conclusion, the two essential leadership styles were learning leadership and transformational leadership in terms of promoting teachers' participation in their professional learning communities.

The National College for School Leadership (NCSL) (2004) defined learning-centered leadership as a set of strategies which influence the quality of teaching and learning in the classroom. School administrators should play their essential roles to lead learning, raise standards, and focus on students' achievement (NCSL, 2004). Leithwood and Riehl (2003: 2-7) stated that learning centered leadership has significant effects on student learning, the quality of curriculum, and teachers' instruction. Therefore, successful school administrators not only need to respond productively to challenges and opportunities that created by the accountability-oriented policy context but also respond productively to the opportunities and challenges of educating diverse groups of students.

Prasertcharoensuk and Tang (2016) investigated the effect of creative transformational leadership and teachers' teaching behavior in teaching efficiency of schools under the Office of Khon Kaen Educational Service Area 5, Thailand. Their findings showed that the relationship between creative transformational leadership as well as teachers' teaching behavior and teaching efficiency were positive and significant level at 0.01. In addition, their findings also indicated that there were two dimensions of creative transformational leadership, namely intellectual and contingency reward could be used to explain 81.76 percent of teaching efficiency at the macro level according to 150 school administrators. Finally, the multilevel analysis findings of Null Model, Simple Model, and Hypothetical Model revealed that the average value of teaching efficiency of 4.388, 4.394, 4.402 and the variance of parameter as 0.01656, 0.01420, 0.00302 respectively.

Hsiao and Chang (2011) investigated the effect of creative transformational leadership on organizational innovation thus examined whether organizational learning would be the mediator or not using SEM to test the relationship model. Hsiao and Chang have successfully provided the evidence that creative transformational leadership and organizational learning had significant and positive effects on organizational innovation from 330 teachers who are in charge of administration in postsecondary schools in Taiwan. Their findings also demonstrated that there was significant effect on the role of organizational learning as mediator on the relationship between transformational leadership and organizational innovation. Hsiao and Chang suggested that school administrators in Taiwan should use the strategies of creative transformational leadership and organizational learning simultaneously because organizational learning was found to be highly effective in term of achieving organizational innovation in the post-secondary schools in Taiwan.

RESEARCH OBJECTIVES

Based on the previous literatures above, researchers would like to study linear structural relationship model of the three essential leadership styles consisted of learning leadership, learning centered leadership, and creative transformational leadership toward innovation of school organization at the secondary basic education in Thailand. The following are the specific objectives of this study:

- i. To examine the relationships between the key factors of school leadership styles and innovation of school organization in a structural relationship model.
- ii. To examine the congruence of the structural model with empirical data.

- iii. To investigate the strategies for developing an innovative school organization.

Conceptual Framework

The independent variables are identified as learning leadership, learning-centered leadership, and creative transformational leadership and the dependent variable is innovative organization as elucidated in Figure 1. The learning leadership factors consist of creativity and courage, powerful environment, self-directed learning, team learning, transformation process and tailor making, technology, and integration according to Somprach and Tang's (2016) findings. The learning-centered leadership has been determined by Somprach (2016) as an essential leadership. The learning-centered leadership is comprised of vision for learning, high standard of achievement, rigorous curriculum, quality instruction, a connected community, and accountability. The final independent variable is creative transformational leadership identified from Brewer and Tierney's (2010) findings. This creative transformational leadership variable consists of four factors, namely systematic thinking, technological competency, innovative culture, and change management. All the three leadership styles are hypothesized to be essential leadership styles to shape the organizational culture and innovative environment.

School administrators are accountable to assemble and lead their teachers to optimal performance outcomes. An effective school administrator recognizes the importance of embracing differences among the teachers and knows how to connect the differences amongst them to get the best outcomes from the teachers. This is so called as in cultivating a school environment of continuous improvements, innovation, and initiative. Subsequently, school administrators must foster a commitment from the team to embrace an innovation mindset where each teacher learns to apply the differences that exist in one another for their own success and that of the school organization (Llopis, 2014). The dependent variable of this study is innovative organization that including knowledge management, atmosphere and information communication technology management, value and innovative culture, and personal strategic management. The relationships between the three essential leadership and innovative organization are justified as how school administrators create new school environments that are suitable for learning and innovation, are flexible and responsive to change, and apply information technology to their work.

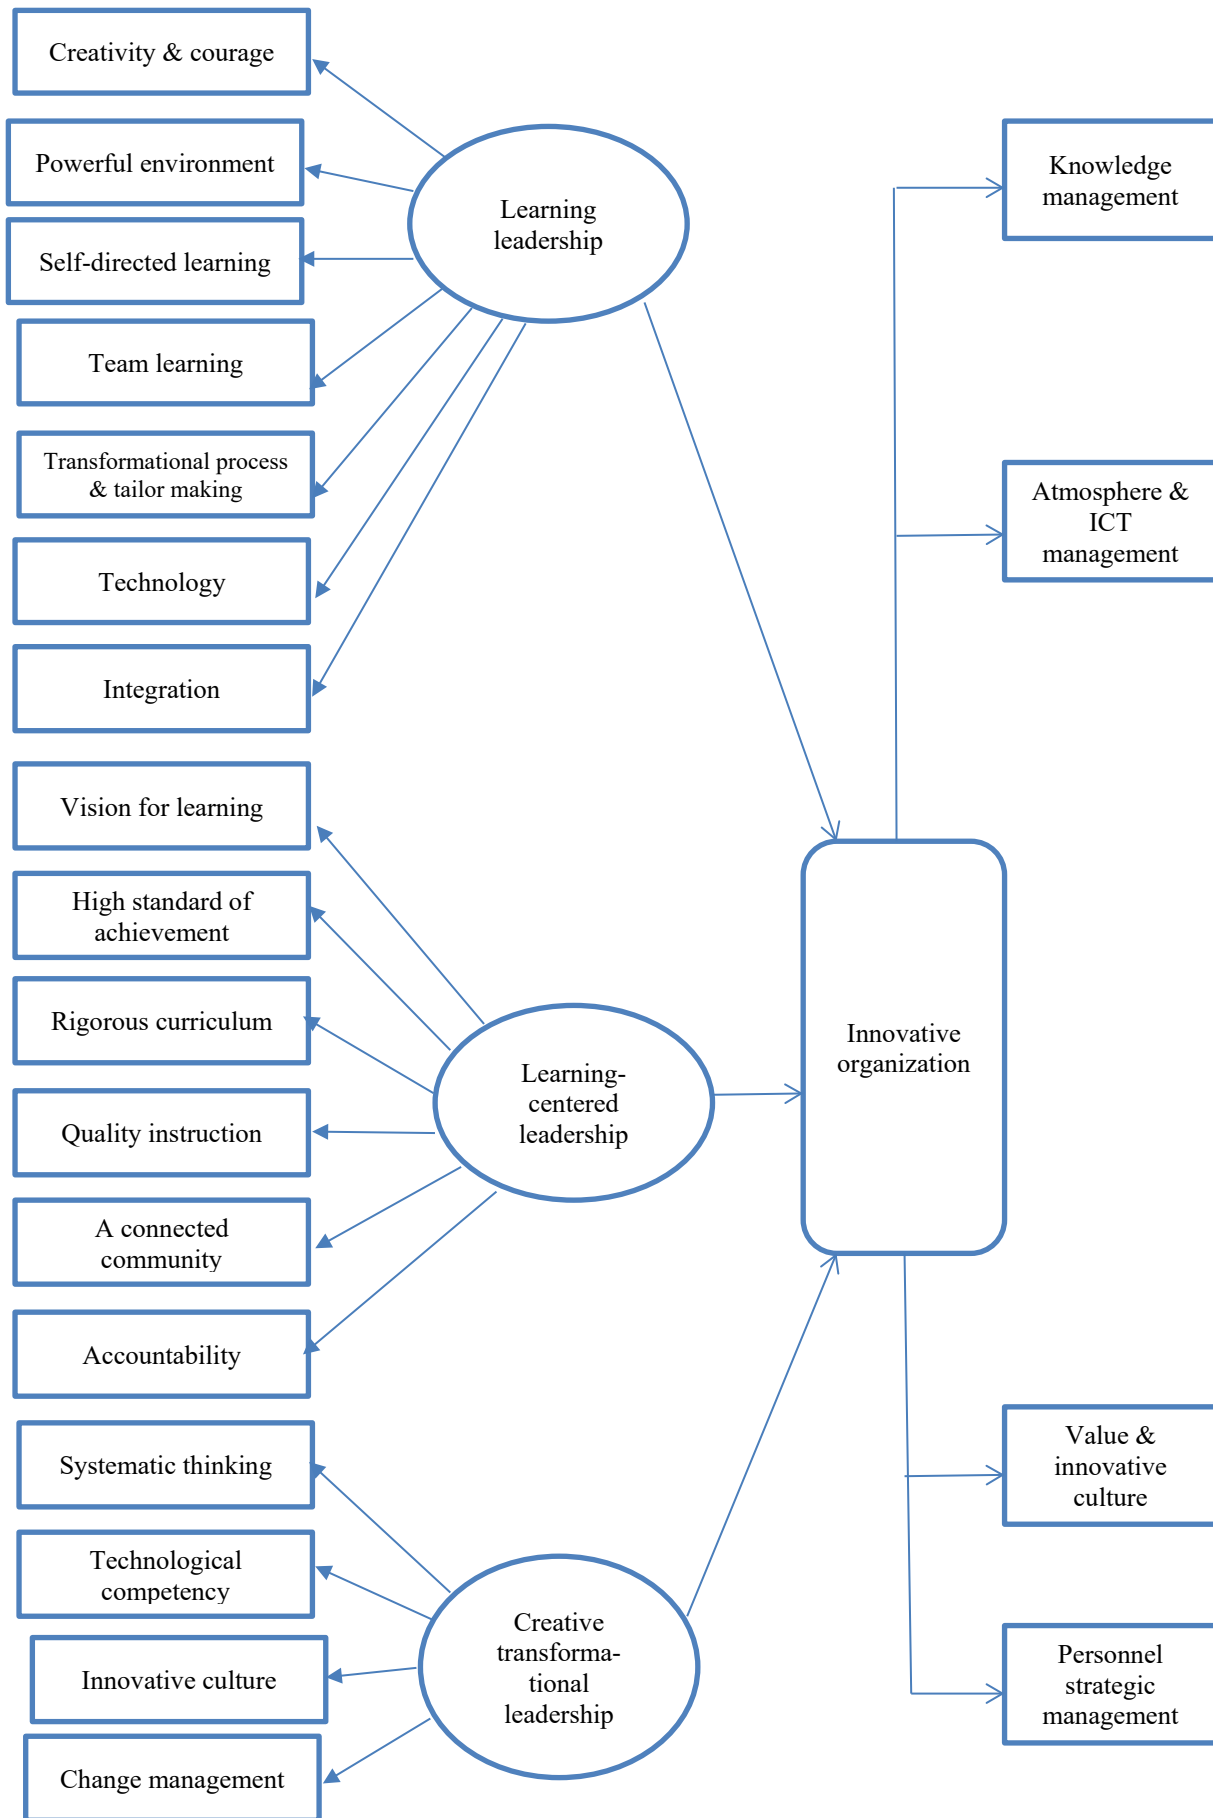

Figure 1. Conceptual Framework

Methodology

Researchers employed a mixed mode design to collect the quantitative and qualitative data using multiple ways to explore the research problem. It is referred as a combination of different modes of collecting data for a single research. Researchers begin to collect quantitative data followed by a collection of qualitative data to achieve the sequential explanatory of the collected data. Researchers intend to use the quantitative data analysis from Structural Equation Modeling (SEM) to assist in explaining and interpreting the findings of a qualitative study (Creswell, 2014).

At the first phase, a survey quantitative method was employed to 760 school administrators and teachers from 360 secondary schools utilizing a multi-stage random sampling technique. Sample size was determined based on Meyers, Gamst, and Guarino's (2006) rules of thumb because Meyers et al. proposed that suitable sample sizes depend upon the numbers of items available for factor analysis. The unit of analysis of this study was school using questionnaire as an instrument.

Quantitative data was analyzed using SEM in order to fit the model with empirical data. SEM is suitable to use because the theoretical constructs of this study are represented by the latent factor. The relationships between the theoretical constructs are represented by regression or path coefficients between the factors. The SEM implies a structure for the covariance between the observed variables. Confirmatory Factor Analysis (CFA) is used to validate the measurement model. Secondly, SEM directs around fitting the structural model by measuring the significance of the relationship between latent variables, which is accomplished through path analysis (Kaplan, 2000). CFA was used as a desirable validation stage preliminary to the main use of SEM to identify the causal relations among latent variables (Schumacker & Lomax, 2004)

At the second phase and final phase, researchers investigated to determine a suitable approach and guidelines for developing innovation of school organization. In-depth interviews with the five academic experts who were selected using purposive sampling were the method of qualitative data collection regarding development of leadership style factors based on findings from the first phase. The qualitative interview data was analyzed using content analysis. At the final phase, researcher employed MACR (Multi Attribute Consensus Reaching) method in order to find consensus concerning the approach with five academic and five practitioners. This MACR method required the five experts and five practitioners to give opinions, debate and find the solution for the attributes or issues in the meeting. The factor loading data gathered from the first phase adding with the information provided by the 10 informants from the final phase were used to outline an approach for innovation development which was coupled with the existing principles and concepts as well.

Findings

The findings of this study are presented in accordance with the research objectives stated above.

Quantitative findings of key factors of school leadership styles and innovation of school organization in a structural relationship model

According to the linear structural relationship of innovative organization model, there were seven key factors from learning leadership namely creativity and courage, powerful environment, self-directed learning, team learning, transformation process and tailor making, technology, and integration. On the other hand, there were six key factors from learning-centered leadership including vision for learning, high standard of achievement, rigorous curriculum, quality instruction, a connected community, and accountability. Finally, finding of the key factors from creative transformational leadership were systematic thinking, technological competency, innovative culture, and change management. CFA was used to validate at the preliminary stage to identify the causal relationships among the latent variables.

Findings related to factor loading values of all the key factors for innovation of school organization ranged from 0.679 to 0.816 are statistically significant at 0.05. Factor loading is the importance of standard factors of each observable variable in the relationship model of essential leadership factors and innovative organization that had been taken into account. The co-variance with innovative organization was from 67.90 to 86.00 percent.

An overview of learning leadership as indicated in Table 1 below shows that each factor had its loading value ranging from 0.683 to 0.774. The factor with the highest factor loading was technology ($\beta = 0.774$, $R^2 = 0.802$). This second highest factor was integration ($\beta = 0.768$, $R^2 = 0.781$). This is followed by transformational process and tailor making, self-directed learning, powerful environment, and team learning respectively. The factor that had the lowest factor loading was creativity and courage. As a result all the key factors of learning leadership are found to be important construct for innovation of school organization.

Table 1. Factor loading and validity of learning leadership in the measurement model

Factors	Matrix of Factor loading			
	β	SE	t	R ²
Creativity & courage	0.683	0.038	17.95	0.794
Powerful environment	0.705	0.041	17.098	0.747
Self-directed learning	0.706	0.040	17.565	0.773
Team learning	0.694	0.039	17.617	0.775
Transformational process & tailor making	0.759	0.040	18.804	0.837
Technology	0.774	0.043	18.135	0.802
Integration	0.768	0.043	17.728	0.781

Table 2 shows the overview of learning-centered leadership and its factor loading value ranging from 0.757 to 0.816. The key factor with the highest factor loading value was accountability ($\beta = 0.816$, $R^2 = 0.836$). The second highest factor loading value was quality instruction ($\beta = 0.766$, $R^2 = 0.831$). This is followed by high standard of achievement, vision for learning, and rigorous curriculum respectively. The factor that had the lowest factor loading was a connected community. As a result all the key factors of learning centered leadership are found to be important construct for innovation of school organization.

Table 2. Factor loading and validity of learning centered leadership in the measurement model

Factors	Matrix of Factor loading			
	β	SE	t	R ²
Vision for learning	0.762	0.044	17.517	0.770
High standard of achievement	0.764	0.041	18.743	0.835
Rigorous curriculum	0.759	0.041	18.679	0.831
Quality instruction	0.766	0.041	18.670	0.831
A connected community	0.757	0.044	17.180	0.752
Accountability	0.816	0.043	18.756	0.836

An overview of creative transformational leadership shows that each factor had value ranging from 0.568 to 0.698 (refer to Table 3). The key factor with the highest factor loading value was innovative culture ($\beta = 0.698$, $R^2 = 0.860$). The second highest factor loading value was change management ($\beta = 0.685$, $R^2 = 0.766$). The lowest factor loading value was systematic thinking ($\beta = 0.568$, $R^2 = 0.679$).

Table 3. Factor loading and validity of creative transformational leadership in the measurement model

Factors	Matrix of Factor loading			
	β	SE	t	R ²
Systematic thinking	0.568	0.036	15.742	0.679
Technology competency	0.679	0.039	17.283	0.763
Innovative culture	0.698	0.038	18.172	0.860
Change management	0.685	0.040	17.333	0.766

Table 4 shows the factor loading values of dependent variable that is innovation of school organization. The factor loading values were ranged from 0.731 to 0.766. The key factor with the highest factor loading value was knowledge management ($\beta = 0.766$, $R^2 = 0.891$). The second highest was atmosphere and ICT management ($\beta = 0.753$, $R^2 = 0.917$). The third highest was value and innovative culture ($\beta = 0.749$, $R^2 = 0.874$). Finally, the lowest factor loading value was personal strategic management ($\beta = 0.731$, $R^2 = 0.838$).

Table 4. Factor loading and validity of school organizational innovation in the measurement model

Factors	Matrix of Factor loading			
	β	SE	t	R ²
Knowledge management	0.766	0.039	19.876	0.891
Atmosphere & ICT management	0.753	0.037	20.370	0.917
Value & innovative culture	0.749	0.038	19.482	0.874
Personnel strategic management	0.731	0.039	18.773	0.838

Findings of CFA showed that all the three leadership styles were confirmed factors that affecting the innovation of school organization. Learning leadership had the highest factor loading value ($\beta = 0.877$). This is followed by

creative transformational leadership ($\beta = 0.381$). The least capacity of the effect on innovation of school organization was learning-centered leadership ($\beta = 0.264$). It can be concluded that all the three leadership styles were affecting the innovations of secondary basic school organizations in Thailand with 87.7 percent, 38.1 percent, and 26.4 percent in respect to learning, creative transformational, and learning centered leadership styles as shown in Table 5.

Table 5. Results of CFA of school leadership styles on innovations of school organization in the measurement model

Leadership factors	β	S.E.	t
Learning leadership	0.877	0.336	2.608
Learning centered leadership	0.264	0.104	2.532
Creative transformational leadership	0.381	0.143	2.651

Quantitative findings of congruence of the structural model with empirical data

Findings from the correlations between the factors of leadership styles could be assessed in the standard component score (β) which indicated significantly high and positive correlations at 0.05. Besides, it was found that the measurement model has a goodness fit with evident data, with $\chi^2 = 162.269$, $df = 136$, $p = .067$, $\chi^2/df = 1.193$, CFI = .997, TLI = .995, RMSEA = .028, and SRMR = 0.013. Finding shows that the structural relationship model of innovation of school organization were consistent with empirical data.

Qualitative findings of an approach for developing an innovative school organization

Qualitative findings are derived from the 10 experts' responses. The 10 experts shared with researchers regarding the challenges that the school administrators faced in terms of innovations. This is followed by debating the unique ways to respond to these innovative challenges in order to successfully overcome them. Once, they found the solutions for the innovative issues and proved that school administrators in basic secondary schools can create some types of creative approach to be innovative, researchers could accumulate them and consider as an approach. The followings are the qualitative findings:

- i. School administrators should focus on the three key factors of learning leadership, namely technology, integration, and transformational process and tailor making. Learning leadership has been justified from quantitative findings that it is the most powerful force for developing an innovative school organization. In addition, these initial quantitative findings were further having goodness of fit with empirical data in the structural relationship model. As a result, school administrators need to be competent, knowledgeable, creative to develop innovation and extending innovative potential of teachers.
- ii. School administrators should create a self- and team-learning culture in their school organization. In order to create this kind of culture, school administrators should open and be trusted. An environment of trust reduces defensiveness when innovative issues are raised. Teachers react honestly, ask questions more frequently, and are more spontaneous with their innovative ideas. School organization derives greater value from school administrators' talent, and teachers get to develop their competence and contribute to innovative success.
- iii. Conflicts and unfulfilled commitments are expected to occur whenever there are innovative issues. School administrators have to manage the differences among the teachers by looking into the alternatives and options without a predetermined outcome. Teachers are encouraged to express real opinions and resolve the innovative issues more effectively.
- iv. School administrators should know very well about their teachers' strengths. Hence, school administrators are able to match their talent and task effectively because they understand teachers' strengths and how best to elicit them. They and their teachers focus less on closing gaps and more on learning and building on strengths.
- v. School administrators should focus on development of communication and technology with the aim of making it accessible anywhere and anytime, as required by students and teachers. School administrators should know how to make the innovative implementation with clarity, precision defining what needs to be accomplished and how as a razor-sharp focus and simplicity. The commitment should come from all levels of the organization to remove the complexity from the way of implementing innovative issues.

Discussion

The main objective of this study was to examine the effect of school leadership styles, namely learning leadership, creative transformational leadership, and learning centered leadership toward basic secondary school organizational innovation. The findings reveal that when secondary school administrators used strategies such as learning leadership had a highest effect for the achievement of school organizational innovation. This is followed

by creative transformational leadership and learning centered leadership. This implies that school administrators play the major role in organizational innovation. School administrators have important responsibilities and should lead their teachers in making innovative changes at schools.

Qualitative findings reveal that school administrators should work together with their teachers and discuss the importance of innovative in the school system with their teachers. This finding is in accordance with Prasertcharoensuk and Tang (2016) as well as Somprach et al. (2017). Previously, Hsiao and Chang (2011) proposed a causal model of creative transformational leadership as an important effect on organizational innovation. According to Kursunoglu and Tanriogen (2009), school organizations need to transform in order to survive and be effective in current increasingly rapid innovation environment. For example, previous researchers such as Hsiao and Chang (2011), Somech (2010), and Zhang (2009) highlighted the importance of organizational innovation-specific meaning in schools and its relationship with actual innovational behavior. The findings of this study are in full support of the findings of these previous studies.

Researchers would like to suggest to Thailand Ministry of Education to conduct training which incorporating the three leadership styles, namely learning leadership, creative transformational leadership, and learning centered leadership to encourage organizational innovation. Our findings suggest that human resource department at the Ministry of Education needs to recruit school administrators who have potential for constructive learning, creative transformational, and learning-centered leadership as a means to facilitate innovative issues of school organization. Other practical consideration may involve the facilitation of an increasing understanding and appreciation of research evidence to help basic secondary school administrators specifically and teachers generally on how to incorporate organizational innovation, signal the importance of this type of behavior, and promote maximum innovative performance (Sanchez & Levine, 2009).

Abstract

The study aimed to investigate the effects of flipped vocabulary learning (FVL) on vocabulary students' achievement and explore the students' attitudes towards flipped learning after experimenting such approach. Total of fifty students participated in the study; twenty-five students involved in the flipped learning approach (FLA) as the experimental group and twenty-five students were taught in the non-flipped learning environment as a control group. During the intervention, students in the experimental group were exposed to practice materials such as video clips (fill in vocabulary logs), PDF file and chatting via Whatsapp Application before face-to-face activities in the classroom; while during the classroom, the students did exercises on the practice materials in pairs/groups. To measure students' performance, a vocabulary pre-test and post-test were administrated, and an independent t-test for post-test were used to compare the control group and the experimental group's performance. Moreover, to assess the experimental group's attitude toward their learning experience through FLA, an attitude survey questionnaire was distributed. The findings indicated that the experimental group outperformed the control group in vocabulary learning and they had a positive attitude toward the FLA.

Keywords: *Flipped learning, Vocabulary Achievement, Students' Attitudes.*

Introduction

Vocabulary knowledge is one of the most crucial components of any language proficiency (Harley, Cummins, Swain, & Allen, 1990). Without a wide range of meaningful vocabulary, it is a challenging task to communicate with people and initiate conversations with them (Gardner, 2013; Thornbury, 2006). Gardner (2013) and Thornbury (2006) stated that developing a wide range of vocabulary can assist learners in mastering foreign or second language. Additionally, most foreign language learners have a common understanding about the importance of learning English vocabulary. In their studies conducted in Korea, Fujiwara (2011) and Horwitz (1999) concluded that learning vocabulary appeared to be the most significant part of learning a foreign language in the learning process category. In Oman, students' lack of vocabulary is one of the main reasons for not being able to communicate well using the English language (Al-Maawaliya, 2008; Al-Siyabi, 2016; Al Hosni, 2014). Moreover, Omani students find difficulties in answering higher level questions in the extensive reading programs because of lack of basic vocabulary (Al-Maawaliya, 2008).

In response to the importance of mastering vocabulary, researchers have suggested different strategies and techniques to promote foreign language vocabulary learning such as repetition, mnemonics and using paper-dictionary (Nation, 1982; Rossiter, Abbott, & Kushnir, 2016). These researchers have claimed that these strategies are effective in learning foreign vocabulary but they have somehow considered them old-fashioned, however. Most Recently, with the emergence of technology, researchers in language teaching field have experimented different types of technological tools to promote vocabulary achievement such as augmented reality (Santos et al., 2016; Solak & Cakir, 2015), mobile applications (Ghazali & Ali, 2017; Lu, 2008; Zhang, Song, & Burston, 2011) and computer-based space (Chukharev-Hudilainen & Klepikova, 2016). These tools have been maintained to be effective in learning foreign language vocabulary (Chukharev-Hudilainen & Klepikova, 2016; Mahdi, 2018; Santos et al., 2016).

One of the evolving approaches that has emerged in the educational field with technology use and it has been widely used in the last decade is the flipped learning approach (FLA). The FLA was first initiated in 2007 by science teachers, Sam and Bergmann, who requested their students to watch video clips at home and then to discuss the content of the lesson in the class where the focus was on high-level skills in Blooms' taxonomy. Thus, The FLA can be defined as "a pedagogical approach in which direct instruction moves from the group learning space to the individual learning space, and the resulting group space is transformed into a dynamic, interactive learning environment where the educator guides students as they apply concepts and engage creatively in the subject matter" (Flipped Learning Network, 2014). Further, FLN specifies four essential pillars which constitute the four letters of the word "FLIP". These pillars are "flexible environment", "learning culture", "intentional content" and "professional educators" which stand for the four letters of the word "FLIP" respectively.

Statement Of The Problem

Flipped learning approach (FLA) is widespread and is used in different kinds of disciplines whether in higher education level or K-12 education (Lo & Hew, 2017; O'Flaherty & Phillips, 2015). Many researchers have maintained that FLA can be utilized in teaching a foreign language and it can promote learning achievement in different skills of the foreign language (Hung, 2014; Lee & Wallace, 2018; Lyddon, 2015). In addition, some studies revealed that FLA had changed the attitudes of learners towards learning English as a foreign language positively (El-Esery & Radwan, 2017; Lee & Wallace, 2018). However, some researchers have called for further studies to investigate the effect of flipped learning approach in different skills and sub-skills of the language (Kim, Park, Jang, & Nam, 2017; Moranski & Kim, 2016) and some researchers have called for further research in K-12 Education globally (Huang & Hong, 2016; Lo & Hew, 2017) and in Oman specifically (Lane-Kelso, 2015). More recently, Wang, An, and Wright (2018) recommended that vocabulary knowledge should be measured in details when investigating the effect of FLA on the foreign language skills.

Although an extensive research has been carried out on FLA, there seems to be few studies that have examined the effect of flipped vocabulary learning on learning achievement and the attitudes towards it in the Omani context. For example, this approach had been investigated in the science discipline in one of the Omani Government Schools (Al-Hosni, 2015), but not in teaching English..

Further, by providing evidence/s on the effect of flipped vocabulary learning on the achievement and attitudes, teachers can be aware of the benefits of flipped learning and they might consider applying this approach with their students while teaching vocabulary. Therefore, this study comes to explore more about the FLA in the context of teaching new vocabulary in Oman Basic Education schools and to explore students' attitudes towards the approach.

Research Proposes

The purposes of the study are:

1. To investigate the effect of flipped vocabulary learning approach on the vocabulary achievement in the Omani schools.
2. To explore the students' attitude towards flipped vocabulary learning after the implementation of the approach.

Research Questions And Hypotheses

- What are the effects of flipped vocabulary learning on vocabulary achievement?
- What is the attitude of grade nine students towards learning vocabulary using FLA?
- There is a significant difference between the flipped vocabulary learning group and non-flipped vocabulary learning group in the post-test vocabulary achievement test in favor of the flipped learning group at $p \leq .05$.

Research Design

The study employed quasi-experimental design in which the researcher developed a pre-test and a post-test to assess the vocabulary knowledge for the control group and experimental group. The control group was taught vocabulary explicitly at the beginning of each class and they practised some exercises pertinent to the explained vocabulary. Whereas, the experimental group learned the same words through flipped vocabulary learning approach. A questionnaire was administered to the flipped group to investigate the students' attitudes towards learning vocabulary through FLA. At the same time, students were asked about their preferences for and the benefits of flipped vocabulary learning as open-ended questions. The steps of the procedures are summarized in the following points:

- * Before the experiment, the researcher did a training presentation for the experimental group to show the proper way of watching video clips outside the classroom and before they come to the classroom as suggested by Sam and Berg and other researchers (Bergmann & Sams, 2012).
- * Then, each student in the flipped learning group was given a student vocabulary log where they can write some notes while they are watching the video clips. This vocabulary log was adopted from (Hadley & Charles, 2017) and adapted in Kang's (2015) study which is about flipped classroom.
- * Before each lesson, a video clip was sent to the students through Whatsapp application containing vocabulary items that they would study in the lesson the coming day. The new words range from seven to twelve words per video and the video clip lasted from four to seven minutes.
- * The students were asked to fill in the student vocabulary log and to answer questions related to the words embedded in the video while the students were watching the video clips.
- * In the classroom, the students did some activities pertinent to the words that they had watched outside the classroom. The activities focused on higher-order thinking skills in Bloom's Taxonomy and students answered open-ended questions and quizzes in pairs or in groups.
- * The students involved in Pair-and -Share activities through which students discussed the words in pairs and then they shared their ideas with the whole class (DeLozier & Rhodes, 2016).

* The teacher also organized students presentations at the beginning of the lesson as a lead-in activity so that five students presented what they had watched in the videos clips outside the classroom (DeLozier & Rhodes, 2016).

* For the control group, the teacher explained the same vocabulary items to the students in the classroom at the beginning of each lesson.

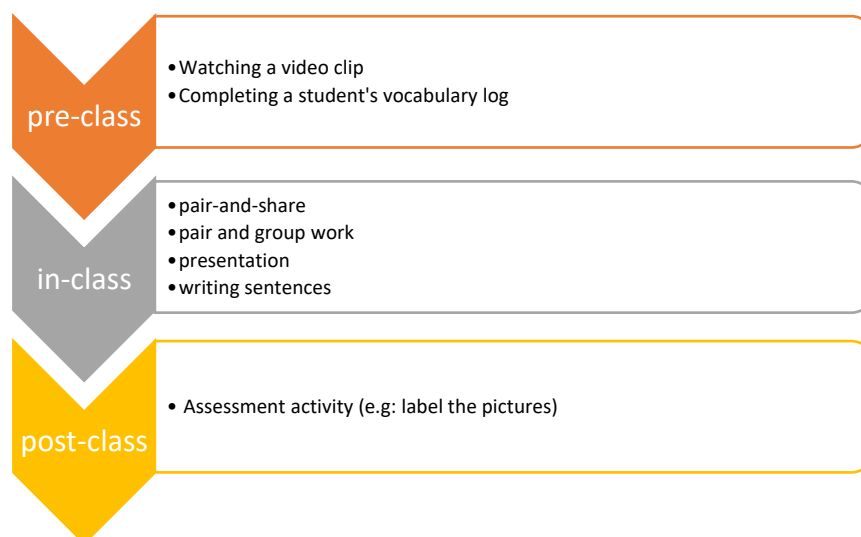

Figure 1. Illustration of stages of flipped vocabulary learning approach

Population And Sample

The population of the study was all grade nine students in Al Batina North Governorate in 2017/2018. The sample size was two male groups from different schools in Saham studying in two classrooms. The experimental group was from Alarqam Bin Alarqam School consisting of 25 students and they studied the vocabulary items using FLA. The experimental group was selected at the convenience of the researcher, and it was taught by him as FLA is new to English teachers in the Governorate. Prior to commencing the intervention, the students' parents signed in a consent form for approval as the students are under 18 years old (A sample of the consent form in Appendix B). The control group, randomly selected, comprised 25 learners studying in a nearby school. This group received explicit vocabulary instruction at the beginning of each lesson. A pre-test was administered to both groups to specify the homogeneity of these two groups.

Research Instrumnets

Vocabulary Achievement Pre-Test

The vocabulary pre-test was administered for the experimental group and the control group three days prior to teaching unit three. The researcher performed an independent t-test to ascertain that both groups are homogeneous and have the same breadth of vocabulary knowledge regarding the words they would study. Table 2 displays the results of the independent t-test.

Table 2 *Vocabulary Pre-test Independent T-test for Groups Equivalence*

Group	N	Mean	SD	t-value	p-value
Experimental	25	3.76	1.45	-.094	.926*
Control	25	3.72	1.57		

Total score is 10. *p < .05.

The results in table 2 indicates that there is no significant difference between the experimental group and the control group in the mean scores regarding the vocabulary knowledge.

Vocabulary Achievement Post-Test

The vocabulary post-test contained four different types of questions and each question measures specific vocabulary skill. For example, question one is multiple-choice and it measures guessing from context knowledge (Sasao & Webb, 2018). The second question was designed using defining context format and it measures the student's form recall ability (Kremmel & Schmitt, 2016). Laufer and Nation (1999) stated that this type of questions can assess the active vocabulary knowledge for the students. The third question is also a multiple-choice questions where the word definition is provided and the students have to choose the correct answer. Kremmel and Schmitt (2016) classified this kind of question as a form recognition test where the students can link the meaning with its suitable form. The fourth and last question is also guessing from context test (Sasao & Webb, 2018) in which students read a dialogue and they have to fill in the gaps according to the context provided. Both groups learned the vocabulary items through the intervention process while they are learning vocabulary using flipped learning for the experimental group or the traditional way for the control group.

Students' Attitudes Post-Questionnaire

To determine the reliability of the questionnaire, it was piloted by 10 students in grade ten (not the experimental group) studying in the same school. These students experienced learning English via video clips last year but they watched the videos in the classroom. The analysis of the piloted questionnaire revealed that the Cronbach's alpha is .918, showing a high level of reliability as presented in Table 3.

Table 3 Cronbach's Alpha for Studnets' Attitudes Post-Questionnaire

Cronbach's Alpha	N of Items
.918	15

Results And Discussion

First Research Question: Vocabulary Achievement

What is the effect of flipped vocabulary learning on vocabulary achievement?

Table 4 Descriptive Statistics of the Vocabulary Post-test for the Experimental and Control Group

Group	N	Mean	SD	Std. Error Mean
Experimental	25	9.0	4.4	.88
Control	25	6.56	3.9	.78

Table 4 illustrates that the experimental group (M = 9.0, SD = 4.4) obtained higher marks in the vocabulary post-test than the control group (M = 6.65, SD = 3.9).

In order to respond to the first question, an independent-sample *t*-test was calculated to find any significant difference between the experimental group and the control group. The results are illustrated in Table 6.

Table 5 Results of Independent-Sample T-test for the Vocabulary Achievement Post-test

Group	N	Df	Mean	t-value	p-value
Experimental	25	48	9.0	2.057	.045*
Control	25		6.56		

Total score is 20. *p < .05.

Table 5 shows that the statistical difference between the two groups is significant at p-value= .05 in the mean scores of the vocabulary achievement post-test; the experimental group (M= 9.0) outperformed the control group (M= 6.56) in the vocabulary achievements, suggesting that the FLA had a positive effect on students' performance in the vocabulary knowledge. Therefore, the null hypothesis is rejected, and the alternative hypothesis is accepted. There is a significant difference between the two means in favour of the experimental group.

These findings of the study are in line with previous findings in Alnuhayt, (2018), Kang, (2015), Mori's et al. (2016) and Zhang et al., (2016) who reported higher achievements in the vocabulary achievement due to implementing flipped

vocabulary leaning, but contradict with Oh's (2017) study which showed insignificant statistical difference in the scores between the control group and the experimental group.

Second Research Question: Students' Attitudes

What is the attitude of grade nine students toward learning vocabulary using flipped learning approach?

Table 6 below shows the results of the questionnaire's responses.

Table 6 Means and Standard Deviations of the Experimental Group's Attitudes toward FLA

Statements	Mean	SD
10- I see that watching the video clips before the lesson is a useful way to learn new words.	4.36	.95
1- I enjoyed learning English vocabulary using the video clips at home before the lesson.	4.32	1.03
8- I enjoyed watching video clips via Whatsapp application.	4.28	.89
2- I felt comfortable when I learned vocabulary through the video clips that I watched outside the classroom and before the lesson.	4.24	.83
9- I felt more prepared to participate in in-class activities after I watched the video clips outside the classroom and before the lesson.	4.24	.92
5- I enjoyed the activities that I did in the classroom with my group.	4.2	1.2
14- I learned the meanings of some English vocabulary items during the discussion with my classmates in my group.	4.12	1.01
15- I felt bored while I was doing in-class activities that were related to English vocabulary items.*	4.12	1.23
7- I did not like learning new vocabulary items through watching video clips.*	4.08	1.18
6- Watching video clips at home helped me learn new vocabulary more promptly and efficiently.	4.04	1.06
4- Watching the video clips helped me learn vocabulary items through repeating them several times.	4.0	1.15
13- Watching video clips as homework increased my study load.*	3.72	1.24
12- Watching English vocabulary items in the video clips made them easy to remember.	3.68	1.25
11- Learning new vocabulary items is difficult via video clips.*	3.08	1.35
3- I learned new words more from face-to-face instruction than from the video clips at home.*	2.4	1.41
Overall total	3.93	1.11

*Negative statements that are reverse-coded

The table reveals important facts about students' attitudes toward FLA. First, the overall score displays that students have positive attitudes toward FLA in general ($M = 3.93$, $SD = 1.11$). Item#10 "I see that watching the video clips before the lesson is a useful way to learn new words" obtained the highest scores ($M = 4.36$, $SD = .95$). The second highest item in the scale is item#1 "I enjoyed learning English vocabulary using the video clips at home before the lesson" which has a mean of 4.32 and SD of 1.03. On the other side of the scale, item#3 "I learned new words more from face-to-face instruction than from the video clips at home" has the lowest mean ($M = 2.4$, $SD = 1.14$) and students were confused which technique is better whether to learn words with their teacher's instruction or learning words using the video clips. This claim can be supported by some of the students' answers to the first open-ended question as one of the students reported that "*I enjoyed watching video clips at home, but I understand more when the teacher explains the words in the classroom*". Item#3 is followed by item#11 "Learning new vocabulary items is difficult via video clips" which is the second lowest item in the scale ($M = 3.08$, $SD = 1.35$). Although item#11 has the second lowest

item, it is still in the range of positive attitude toward learning vocabulary through video clips and the SD of this item indicates the responses' dispersion is widespread as it is the highest score among the items.

It is safe to say that overall the students' attitudes toward learning vocabulary is positive, and it is in line with the results from (Adnan, 2017; Ahmed, 2016; Al-Harbi & Alshumaimeri, 2016; Kang, 2015; Lee & Wallace, 2018; Wang et al., 2018; Wanner & Palmer, 2015; Wong & Chu, 2014). However, it contrasts with DeSantis, Van Curen, Putsch, and Metzger (2015) findings.

Conclusion

This quasi-experimental study set out to examine the effect of flipped vocabulary learning approach on vocabulary achievement and attitudes of Omani grade nine students. This chapter shows a summary of the main findings regarding the two research questions, implications for using flipped vocabulary learning generally and specifically in Oman and recommendations for further research.

Based on the results obtained from the statistical analysis of the vocabulary achievement post-test, there was statistical difference between the experimental group and the control group in favor of the experimental group. A possible explanation for this result is that flipped learning is suitable for elementary level (Mori et al., 2016) and millennial students enjoy employing this approach while learning vocabulary (Roehl, Reddy, & Shannon, 2013).

This study has found that generally students in the experimental group have positive attitude toward FLA. Students enjoyed the new approach more than anything else in the process of learning vocabulary.

The Effect Of Multiple Graphical Representations On Learning Algorithms

Zoltán KÁTAI, Erika OSZTIÁN, Beáta
LŐRINCZ Department of Mathematics and
Informatics Sapientia University Romania
katoi_zoltan, osztian, lorinczbea@ms.sapientia.ro

Abstract

Computational thinking is included among the 10 top skills that will be needed for success in the near future. A well-trying method to develop this skill is teaching and learning programming, but this is a challenging task. Among reasons researchers highlight that programming assumes the understanding of computer algorithms that are inherently abstract entities. A suggested method to bridge this impediment is algorithm visualization. The AlgoRythmics tool generates such a teaching-learning environment that includes multiple algorithm visualization methods: dance choreography videos and computer animations. In the present study we proposed to analyze the strengths and weaknesses of this kind of multiple graphical representation. Experiment results emphasize that students (especially novices) failed to benefit from the multiple graphical representation (video + animation). Interestingly, if single representation was used, novice students achieved better results when they studied the algorithms by dance choreography videos compared to computer animations.

Keywords: *Computational thinking; teaching-learning programming; algorithm visualization; multiple graphical representations*

Introduction

Teaching-learning programming is a challenging task. Accordingly, first year programming courses have the highest dropout rates in comparison with other courses, despite the high popularity of Computer Science subjects (O'Brien & Humphreys, 2016). Among reasons researchers highlight that programming assumes the understanding of computer algorithms that are inherently abstract entities. In line with Knuth's famous quote, "an algorithm must be seen to be believed", teachers try to bridge this impediment by algorithm visualization (Knuth, 1968, Section 1.1, Page 4).

Technologies of algorithm visualization usually includes video or computer-based animations that graphically illustrate algorithms in terms of their high-level operations. If the learning process includes both video and animation students are faced with multiple graphical representation. Most of the previous studies (Schwonke, Berthold, & Renkl, 2009) in this field analyzed the pros and cons of this method using static representations. In the present study we proposed to analyze the strengths and weaknesses of environments that include both video and animation based illustrations of computer algorithms.

Students who participated in the experiment were invited to study sorting algorithms in the AlgoRythmics (<http://algo-rythmics.ms.sapientia.ro/>) environment. In line with previous studies novices failed to benefit from watching both the video and the animation of the algorithm. They performed better by viewing the animation twice. On the other hand, if the environment did not change, novice students achieved better results when they watched the dance choreography video twice than in the case of watching the computer animation repeatedly.

Computational Thinking, Algorithms And Algorithm Visualisation

According to Wing computational thinking (CT) is the fourth basic skill next to reading, writing and arithmetic. Wing suggested that CT is a "universally applicable attitude and skill set everyone, not just computer scientists, would be eager to learn and use" (Wing, 2006). In line with this, the Future Work Skills report of the Institute For The Future includes computational thinking among the 10 top skills that will be needed for success in 2020 (Davies, Fidler, & Gorbis, 2011).

We will use the term in accordance with its revised definition, i.e. as the thought process involved in formulating problems so that "their solutions can be represented as computational steps and algorithms" (Aho, 2012). In their attempt to define CT, the International Society for Technology in Education (ISTE, 2017) and the American Computer Science Teachers Association (CSTA, 2017) identified several related concepts: data collection, data analysis, data representation, problem decomposition, abstraction, algorithms, automation, parallelization and simulation. Correspondingly, promoting CT is a complex and challenging task. A well-trying method to develop this skill is teaching and learning programming. According to the authors of (Mannila et al., 2014) study, programming promotes CT if it includes all phases of the programming process: analysis, decomposition, design and implementation (coding). Végh and Stoffová (2017) concludes that one of the reasons why programming is so challenging for the first-year computer science students is that it assumes comprehending computer algorithms characterized by abstract data structures, and dynamic change of data. To bridge the gap between abstract concepts and real life objects

algorithm visualization comes to our help. The term algorithm visualization (AV) refers to the graphical illustration of a computer algorithm that represents the high-level operations of the algorithm, usually with the purpose of enhancing the understanding of its procedural behavior. AV technologies include video or computer based animations that illustrate how the algorithm works in action (Katai, 2014). Recent studies comparing instructional animation with static pictures confirmed that animations have a higher educational effectiveness especially when procedural behavior needs to be represented. Accordingly, several algorithm visualization tools have been developed to present the steps of an algorithm using graphical effects (Tekdal, 2013).

Multiple Algorithm Visualization

Multiple representations have the potential to improve learning because different representations: (1) highlight complementary aspects of the material to be studied and (2) produce different effects on mental processing. Prior research in this field is based mostly on a so-called symbol-systems approach, since it focuses on learning with text and one additional graphical representation. On the other hand, learning materials, especially in STEM domains, usually include, beside the textual descriptions, multiple graphical representations (Rau, 2013).

Different graphical representations might be beneficial because they emphasize complementary aspects that can provide a more accurate model of the domain. On the other hand, while an extensive model can have remarkable positive effect on the learning process it can also lead to a cognitive overload in the pictorial part of the memory (Clark, Mayer, & Thalheimer, 2003) and shift the attention from the domain concepts that are represented to the actual representation instead of its interpretation. Additionally, to benefit from multiple graphical representation students need to understand each individual representation and make connections between them. In line with previous studies, domain experts can rely on their previous knowledge to interpret the different representations, while novices might have insufficient domain knowledge to effectively transfer between them (Rau, 2013). Consequently, the author of the previously cited paper concludes that students benefit from multiple graphical representations based on their skills.

Our goal was to test this phenomenon regarding multiple *algorithm* visualization using dynamic illustrations (videos and animations). We emphasize this aspect, because other studies focused mostly on static illustrations.

The Algo-Rythmics Enviroment

The project was started in 2007 at Sapientia University with the production of 6 dance choreography videos illustrating the following sorting algorithms: bubble-sort, insert-sort, selection-sort, shell-sort, merge-sort, quick-sort. The platform was extended since then with a new sorting algorithm: the heap-sort. In addition to the sorting algorithms searching algorithms such as the linear-search, binary-search and backtracking algorithms were produced with the help of professional art institutes using flamenco and ballet dance styles. These videos aim to offer students a sensory experiment using a creative approach. The article that presents the project details the goals of the project: “We focused on how dance can be involved in informatics education (sorting algorithms). The method takes additional multi-sensory elements into the programming-education through arts (dance, music, rhythm, theatrical role-playing). Combining these art forms teachers could create a multi-sensory learning environment that involves almost all the senses: visual, auditory, kinesthetic and tactile.” (Katai, Toth, & Adorjani, 2014)

Figure 1. Searching (linear, binary, backtracking) and sorting (selection, bubble, insertion, shell, merge, quick, heap) algorithms

The environment introduces a web application as well (<http://algo-rhythmics.ms.sapientia.ro/>) that includes attached computer animations of the algorithms, and additionally invites users to actively participate in the learning process by reconstructing and orchestrating the studied algorithms.

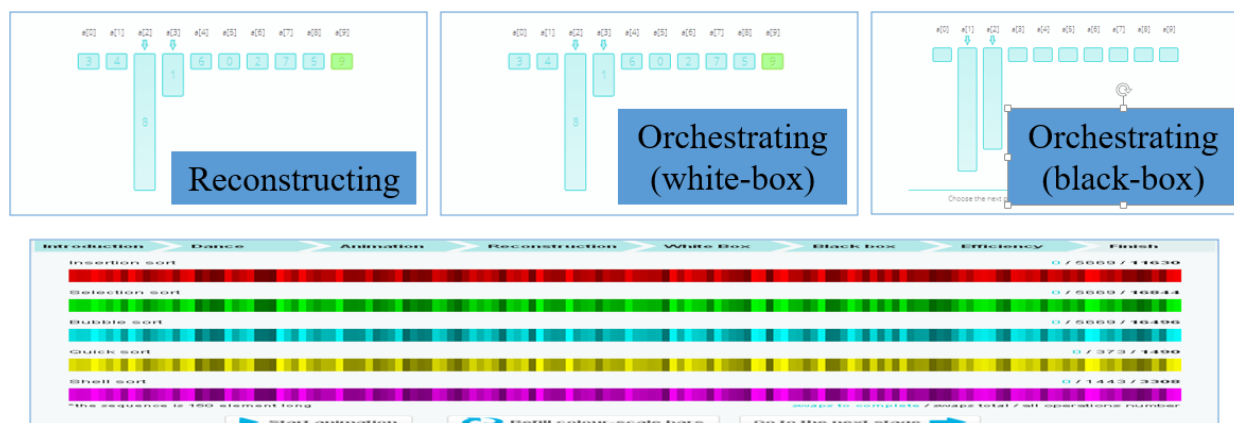

Figure 2. Studying algorithms in the Algo-Rhythmics environment

Method

The study we performed took place at Sapientia University during the educational year of 2017/18 when 181 students took our Programming-I course. The charts below depict the students' previous studies, the programs they enrolled in and the number of year they have been studying programming in their high-school years.

Figure 3. Programming-I course at Sapientia University: participants (2017/18)

The first diagram shows the remarkable diversity of the previous high school curriculum that includes subject such as human studies, biology, chemistry or mathematics and computer sciences. The second chart lists the enrollment programs including computer sciences and several engineering programs. In addition to the third chart we emphasize that students with 1 or 2 years of prior programming studies were initiated into searching and quadratic sorting algorithms, while students with 4 years of prior knowledge studied even the concept of algorithm complexity.

Before the experiment students received a minimal intro in programming and were familiarized with the environment on a minimal level by watching and superficially analyzing the video and animation of bubble- and selection-sort algorithms.

Participants and procedure

In the first experiment students enrolled into engineering programs were divided into two groups. The first group watched the computer based animation of the insertion sort algorithm twice. Out of the 46 students taking part on the experiment 23 had no prior programming knowledge, and the other 23 studied programming from 1 to 4 years. The second group was invited to watch the dance choreography once followed by the watching the animation once. Out of the 56 participants of this group 18 had no prior knowledge and 38 students studied programming from 1 to 4 years.

The task after watching the animation twice, respectively the video once and the animation once was to reconstruct the algorithm on a random input.

The second experiment carried out, grouped the students enrolled into engineering programs into two groups, so that the first one watched the animation four times (21 novice students and 25 students with prior knowledge in programming) and the second one the video two times (26 students with no prior knowledge and 20 students with 1 to 4 years of previous programming studies). The reason for playing the animation 4 times and the video only twice was that all students spend about the same time on watching the videos and animations (as the length of the video is about the double time compared to the length of the animation). The algorithm represented by the video and animation was the shell sort, which is a more complex algorithm compared to the insertion sort of the previous experiment.

The same task was assigned to students, reconstructing the algorithm on a random input.

Results And Discussion

The result of the first experiment showed that in both cases students performed similarly, there was no significant difference between watching the animation twice or the video combined with the animation. Students with no programming experience performed slightly better when watching the animation twice, while students with some prior knowledge performed better with the combined option (see Table 1 and Figure 4).

	Without prior knowledge	With prior knowledge	Entire group
Animation twice	69.13%	73.47%	71.3%
Video + Animation	60.83%	77.36%	72.05%

Table 1. Performance results of the first experiment

Figure 4. Results of the first experiment (insertion sort)

Surprisingly, but in line with previous studies both groups (with or without prior knowledge in programming) failed to benefit from the multiple representation of the algorithm.

The results of the second experiment are surprising as there is a significant difference in the case of novice students, they performed significantly better ($p=0.01$, 29.52% vs. 51.15%) when watching the video twice. In case of students with prior knowledge the difference was also substantial, but not statistically significant (see Table 2 and Figure 5).

	Without prior knowledge	With prior knowledge	Entire group
Animation four times	29.52%	57.6%	44.78%
Video two times	51.15%	70.75%	59.67%

Table 2. Performance results of the second experiment

Figure 5. Results of second experiment (shell sort)

Taking into account both groups the difference (in favor of the video) is also significant with a p value of 0.03 (44.78% vs. 59.67%).

Conclusions

A possible reason why students failed to benefit from the multiple representation of the algorithm (video illustration plus computer animation) is that they were disturbed by the change of the environment. They were incapable to connect the two representations without being distracted from the logic of the algorithm. In line with previous studies novices were more affected.

On the other hand, interestingly, if the environment did not change, both groups achieved better results when they watched the dance choreography video twice then in the case of watching the computer animation repeatedly. These results, favoring our video illustration versus computer animation, before being generalized, obviously, have to be tested on other algorithms too.

Abstract

The aim of this research was to examine the school and class factors that affecting teachers' teaching effectiveness by investigating the relative impacts of the variables as class and school factors at the micro and macro levels respectively. This study utilized quantitative survey design using two types of questionnaires. A total of 513 respondents comprised of 68 school administrators at the macro level and 445 teaching staff at the micro level in schools under the Office of Secondary Educational Service Area 25. The ratio between of samples was 20:1 meaning that 20 samples to each observable variable. The hierarchical linear model (HML) analysis was utilized to test the fixed effect and random effect of null model, simple model, and hypothesis model. Results of null model regarding the fixed effect analysis showed the mean score of teachers' teaching effectiveness was 3.237 ($\gamma_{00}=3.237$ at significant level (0.01) $t = 99.329$ (while the random effect analysis showed the statistical significance for the mean score of teachers' teaching effectiveness was 0.01) Wald $Z = 3.619$ (and the variance in parameter estimation was 0.038, while the intra- class correlation coefficient) ρ was 0.285. Next, results of the simple model regarding fixed effect analysis showed that the mean score of teaching effectiveness was 3.208 ($\gamma_{00}=3.208$ at significant level (0.01) $t = 28.480$.(Analysis of random effects from simple model showed that school differences u_{0j} at significant level (0.01) Wald $Z = 3.106$ (and a variance in parameter estimation of 0.007. Finally, results of the hypothesis model relating to fixed effects showed a mean of teaching effectiveness of 3.213 ($\gamma_{00}=3.213$ at significant level (0.01) $t = 6.815$ (meanwhile analysis of random effects showed a decrease in values relative to the null model analysis .School differences u_{0j} showed at significant level (0.05) Wald $Z = 1.920$ (and a variance in parameter estimation of 0.005.

Keywords: *Classroom factors; school factors; teachers' teaching effectiveness*

Introduction

Teaching effectiveness is important because effective teaching assists student learning. According to Chianese (2015), an effective teacher can have an enriching effect on the daily lives of students and their lifelong education and career aspirations are also have a direct influence in enhancing student learning. Sirisooksilp, Ariratana, and Tang's (2015) study found that there are two types of leadership styles namely supportive leadership and participative leadership of school administrators have significantly affecting teachers' teaching effectiveness. They also found that these two leadership styles have jointly predicted teachers' teaching effectiveness for 56.80 percent at the significance level as 0.01. This implies that school administrators should promote, practice, and improve these two leadership styles to increase teachers' working effectiveness.

Somprach, Prasertcharoensuk, and Tang (2016) studied on the factors that affecting the effectiveness of World Class Standard Schools in Thailand. Their findings showed that strategic planning factor were identified as most effective factor but teacher professional development factor had the least capacity. Consequently, their results revealed that there were four significant predictors namely information and communication technology, teacher professional development, internal process management, and the focus on students and stakeholder were factors that have successfully contributed 65.60 percent variance of effectiveness of Thai World Class Standards Schools.

Prasertcharoensuk and Tang (2017) investigated the effect of strategic leadership factors of administrators on school effectiveness under the Office of MahaSarakhm Primary Educational Service Area 3, Thailand. Findings from 510 samples indicated that all the comparison result either strategic leadership of administrators or school effectiveness was significantly difference to school size respectively. In addition, the structural equation model of strategic leadership factors which affecting school effectiveness was fitted but there was no significant effect of administrators' strategic leadership factors toward school effectiveness at 0.05 level.

Conceptual Framework And Research Hypothesis

The main aim of this study was to examine the effect of school-level factors and classroom-level factors on teaching effectiveness in schools under the administration of the Office of Secondary Educational Service Area 25, Thailand. Therefore, this study was conceptualized that school-level factors and classroom-level factors influence the teachers' teaching effectiveness at macro and micro levels. Specifically, researchers evaluated the relative impact of factors that exists at classroom and school levels of analysis on teachers' teaching effectiveness.

The variables in this study include classroom-level factors, school-level factors, and teaching effectiveness. Classroom-level factors are (i) bio-social characteristics of teachers; (ii) social support for teachers; (iii) teaching performance, and (iv) teaching atmosphere. On the other hand, school-level factors encompass (i) school size; (ii) academic leadership; (iii) school culture, and (iv) school atmosphere. Teaching effectiveness is concerned with particular teacher dealing with students in a particular environment as teacher attempts to achieve a particular instructional goal by presenting the ideas and activities involved in a teaching unit that most facilitates the regular and systematic development of the students (Thawinkarn, Tang, & Ariratana, 2018). In regard to Thawinkarn et al.'s (2018) definition, teaching effectiveness which acts as a dependent variable refers to (i) academic achievement; (ii) satisfaction of teacher's teaching performance, and (iii) participation of parents and community. The proposed conceptual framework is shown in Figure 1 below:

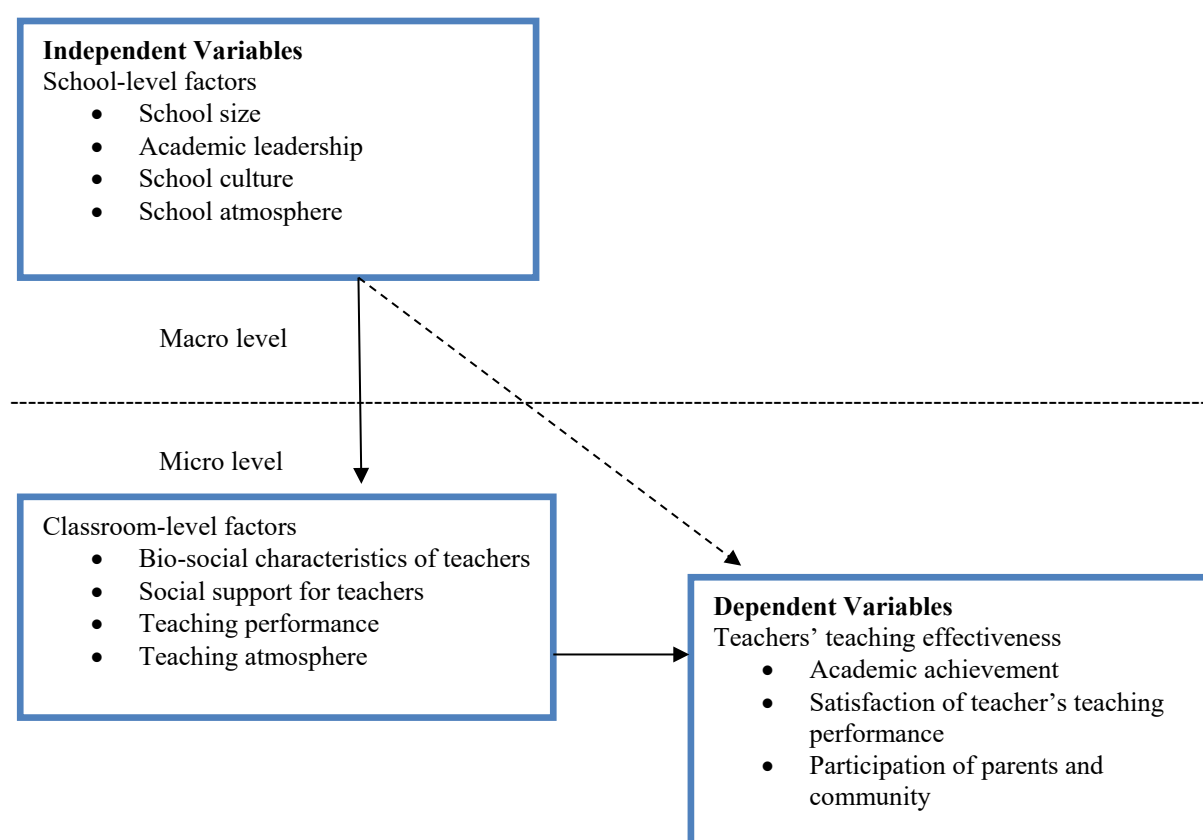

Figure 1: Conceptual Framework

The first model to test is a null model which was conducted on the dependent variables without taking into account any independent variables. The null hypothesis 1 was tested on the extent that the fixed effect and random effect on teachers' teaching effectiveness as follows:

Ho₁: There is no fixed and random effects of null model

When the micro level variables could be used to explain the teachers' teaching effectiveness, researchers would be able to perform to test the effects on the simple model. To what extent that the fixed and random effects on teachers' teaching effectiveness, null hypothesis 2 was tested:

Ho₂: There is no fixed and random effects of simple model

Finally, researchers used the multi-level analysis to test the fixed and random effects of hypothesis model on teachers' teaching effectiveness as indicated in Ho₃

Ho₃: There is no fixed and random effects of hypothesis model

Method

Survey design was employed using questionnaire as a method to collect quantitative data. A total of 3,914 population of this study consisted of 188 administrators at the school organizational level (macro) and 3,726 teachers or teaching staff at classroom level (micro) from 28 schools under the Office of Secondary Educational Service Area 25, Thailand. Multistage sampling technique followed by proportional simple random sampling technique was administered to select samples according to the two levels. Therefore, the target groups were divided into two levels, namely school-level and classroom-level. At the school-level, there were 50 schools, with 68 administrators acting as respondents. The schools and classroom were randomly selected from different school size such as small, middle, large, and extra-large size schools. Since researchers employed Hierarchical Linear Modeling (HLM), a large sample size is needed in order to find accurate group variation. Hair, Back, Babin and Anderson's (2013) proposed that the proper ratio of samples is 20:1 or 20 samples per one observable variable. Since there were 21 observable variables in this study, the required sample size was 445 samples of teachers. On this line of reasoning, simple random sampling technique was utilized to select 513 of classroom to fulfill Hair et al. (2013) suggestion that sample size should not less than 100.

Two types of survey questionnaire were used in this study catering for macro and micro levels respectively. The two types of questionnaire were administered in the Thai language to ensure that the respondents could understand about the statements. This survey questionnaire method benefits this study in terms of obtaining data more efficiently as time, energy, and costs would be minimized (Wyse, 2012), hence provides an excellent means of measuring attitudes and orientation in a large population which can, therefore, be generalized to a larger population (Gay, Mills, & Arirasian, 2012).

Results Of The Study

Results of this study are presented in accordance with the research hypothesis that is indicated above. The initial result is the descriptive results related to the three variables namely classroom-level factors, school-level factors, and teachers' teaching effectiveness. This is followed by results from HML analysis for null hypothesis testing.

Descriptive Results

Descriptive results showed that teachers' teaching effectiveness was at moderate level. Specifically, the components of teachers' teaching effectiveness satisfaction of teaching performance and participation of parents and community were identified at high level whereas academic achievement was at low level. Furthermore, descriptive results of school-level factors were generally evaluated to be at highest level such as academic leadership, school culture, and school atmosphere was evaluated to be at high level. Besides, 40 percent of the schools that researchers investigated are categorized as small size schools. On the other hand, the bio-social characteristics of teachers as classroom factors revealed that 70.18 percent of the teachers are female, 32.11 percent were 41 to 50 years old, 55.04 had a bachelor's degree, and 38.30 percent had more 20 years of teaching experience. Other classroom-level factors were found at high level such as school atmosphere, teaching performance, and social support for teachers, in descending order.

Null Model Analysis

The micro-level analysis of HML was conducted in two steps. The first step (null model) was conducted on the dependent variables without considering any independent variables. As indicated in Table 1, the results of fixed effect test showed that the total mean score of teachers' teaching effectiveness was 3.237 ($\gamma_{00}=3.237$ with a (statistical significance of 0.01). The test of random effect showed that the statistical significance for the mean of teaching effectiveness was 0.01) Wald Z= 3.619 (, and the variance in parameter estimation was 0.038, while the intraclass correlation coefficient (p) was 0.285. The school variance was 28.50 percent meaning that the classroom variables were able to indicate teaching effectiveness. Therefore, researchers were able to use the simple model analysis for the second step (simple model).

Table 1: Results of null model from fixed effect and random effect

Fixed effect	β	Standard Error	t-test	df	p-values
INTRCPT, γ_{00}	3.237**	0.033	99.329	48.961	<0.001
Random effect	β	Standard Error	Wald Z	p-values	
School differences (U_{0j})	0.038**	0.011	3.619	<0.001	
Classroom differences (r_{ij})	0.096	0.007	13.9927	<0.001	

**p<0.001

Simple Model Analysis

Based on Table 2, the results of fixed effect test showed that the total mean of the teachers' teaching effectiveness was 3.208 ($\gamma_{00}=3.208$ with a statistical significance of (0.01) $t = 28.480$).(Independent variables at the classroom-level that provided positive effects on teaching effectiveness were social support for teachers ,teaching performance ,and teaching atmosphere ,with every factor having a statistical significance of 0.01 .The regression coefficient of each factor was 0.333, 0.113, and 0.171 ,respectively .This implies that promotion of social support for teachers ,of teaching performance ,and of teaching atmosphere can improve teaching effectiveness. Analysis of random effect showed that school differences(U_{0j}) having a statistical significance of 0.01 (Wald $Z = 3.106$) and a variance in parameter estimation of 0.007. Independent variables at the classroom-level showed variance of dependent variables at 52.62 percent, as shown in Table 2.

Hypothetical Model Analysis

Hypothetical model analysis includes all the independent variables for every level. Analysis of the fixed effects showed a mean of teachers' teaching effectiveness as 3.213 ($\gamma_{00}=3.213$ at a statistical significance of (0.01) $t = 6.815$).(The school-level factors)macro-level independent variables(on teaching effectiveness was not statistically significant. However, the school-level factors that provided a positive effect on teachers' teaching effectiveness were: being a large- size school and having 5-10 years of teaching experience, with a statistical significance of 0.05 ($\gamma_{83}=0.430$, $t = 1.998$), and being an extra-large size school and teaching performance with a statistically significance of 0.01 ($\gamma_{123}=0.385$, $t = 2.891$). However, being an extra-large size school and teaching atmosphere was shown to provide a negative effect on teachers' teaching effectiveness, with a statistically significance of 0.05 ($\gamma_{133}= 0.244$, $t = -1.986$). Analysis of random effects showed a decrease in values relative to the null model analysis. School differences (U_{0j}) showed a statistically significance of 0.05 (Wald $Z = 1.920$) and a variance in parameter estimation of 0.005. The classroom model (micro level) indicated a 37.50 percent variance of dependent variable, as shown in Table 3.

Discussion And Conclusion

Descriptive results showed that the overall teachers' teaching effectiveness was at moderate level. However, two of the components of teachers' teaching effectiveness showed at highest level namely satisfaction of teaching performance and the participation of parents and community. Nevertheless, low academic achievement was initially indicated by the low 2016 O-NET scores, thus low academic achievement as a component of teachers' teaching effectiveness was an inevitable result. This result is consistent with Sirisooksilp et al. (2015).

School-level factors are naturally generated by school administrators, teachers, and the involved personnel, as mentioned by Somprach et al. (2016). Somprach et al. revealed that school-level factors such as leadership, management of resources, and organizational atmosphere were significantly affecting school effectiveness while classroom-level and student-level factors are at second and third place, respectively.

Classroom-level factors were generally identified at high level and arranged in descending order as teaching atmosphere, teaching performance, and social support for teachers. This implies that good cooperation between teachers and students can generate effective teaching and learning. This is supported by Thawinkarn et al.'s study (2018) who emphasized that a safe learning environment, with no disruptions to teaching and learning, and clear school vision are important elements to improve teachers' teaching effectiveness. Besides, teachers have to play their essential roles in the direction of teaching, priority setting, assessment process, and showing leadership in teaching.

Nevertheless, school administrators should be open-minded and able to adapt to any strategy that assists the school in creating an effective teaching environment. School administrators should create an atmosphere of high expectations, requiring teachers to indicate their success with students' learning that resulting in all basic skills. Meanwhile, teachers should show their dedication to teaching by planning activities in basic skill learning for students and also by regularly following up on students' progress. This implies that positive bonds between school and homes would encourage parents to support the school mission in order to accomplish optimal results.

Results of fixed effect analysis revealed that the overall teachers' teaching effectiveness was 3.206 with a statistical significance of 0.01. This implies that classroom-level factors which acted as independent variables that provided a positive effect on teachers' teaching effectiveness were social support for teachers, teaching performance, and teaching atmosphere at significant level as 0.01. It can be concluded that promotion of social support for teachers, teaching performance, and teaching atmosphere can improve teachers' teaching effectiveness. This result is supported by Prasertcharoensuk and Tang (2017).

The school-level factors analysis showed that the mean of teachers' teaching effectiveness was 3.213 with a statistical significance of 0.01. The effect of school-level factors failed to affect teachers' teaching effectiveness when taking into account the constants in the analysis. On the other hand, school-level factors are subordinate factors that help teachers in their classroom management. Researchers would like to suggest the Office of Secondary Educational Service Area 25 to incorporate teacher development strategies to enhance their knowledge, communication skills, and teaching competencies in order to improve the educational quality.

On top of that, a demonstration of various teaching techniques and assessments has to implement and improve individual academic achievement among students. Friendly supervision and suitable information technology has to be introduced to elevate teachers' teaching effectiveness. In addition, school administrators, teachers, and other involved parties should form networking to establish a learning community so that enable the Thai society to respond to the concept of an Asian Community. Moreover, good teaching morale and ethics have to be continuously supported in order to build pride in the teaching occupation, as well as to lead students by example.

The Effects Of Emotional Intelligence And Intuitive Thinking On Decision Making And Management Skills

Okan ŞENELDİR

Kocaeli Vocational School Kocaeli University Turkey

seneldir@kocaeli.edu.tr

Abstract

Emotional intelligence is the sense of one's own feelings and the feelings of other individuals. Emotional intelligence is gathered under five main headings. These: 1. A person's awareness of their own feelings, 2. Managing your own feelings, 3. Motivation of the person himself, 4. Empathy, 5. Social skills. The ability to immediately understand or know something based on emotions is intuition. Intuition helps to make decisions that feel safe. Scientists have discovered that the feelings born to us are the second brain. The reason for this is the large number of neurons that cover the intestinal walls. But those who are strong in intuition know that their feelings are filled with wisdom and intuition. Very powerful people with intuition need to spend time and time alone. So they can gather their inner powers and audition themselves. That is why such people have a very introverted personality. "Decision" is a choice between alternative actions in case of uncertainty. While trying to make a good decision, it must evaluate the positive and negative aspects of each option according to certain criteria and take into account all options. Uncertainty, perfectionism, fear of failure, anxiety and stress; are among the emotional difficulties that affect decision making. Especially in strategic decisions, risk and uncertainty increase. Management skills are grouped under three headings: Conceptual skills, human skills and technical skills. Depending on the level of management of an administrator, the need for these skills varies. Emotional intelligence and intuitive thinking can affect the number of decision-making criteria.

Introduction

The life is a learning process. Therefore, the people must master the ability to continue to learn as a self-directed and lifelong learner. Emotional intelligence can be learned and it also increases learning power. Emotional intelligence is conceptualized as an ability that can be taught, learned, and changed (Birks & Watt, 2007: p.368). The skills associated with emotional intelligence, such as perceiving, understanding, using, and managing emotions, can be improved through training that specifically addresses these skills (Johnson, 2015: p.183). Emotional intelligence is directly related to interpersonal communication. People with intrapersonal problems can be defined as those who struggle due to personal internal conflicts or anxiety. Whereas a certain degree of anxiety is useful for performance, to an excess it can become debilitating and lead to many other problems (Hendren, 1988: p.596). Emotional intelligence may significantly diminish employees' withdrawal intentions because of the ability to better regulate emotions. Being in positive affective states is of importance in the sense of not becoming despondent in the face of daily and even more profound obstacles occurring in organizational life (Carmeli, 2003, p.797). Managers seek alternative ways of obtaining and interpreting information and knowledge. Here, managerial intuitive potential begins to play an important role. Intuition is considered to be one of the least defined and operationalized elements of human capital (Fields, 2000). In recent years, there has been an increased interest in intuition. This is due to the characteristics of the environment in which modern managers are forced to work. Intuition enables decision making in situations of lack or excess of information, in conditions of risk and uncertainty, under time pressure and in the case of individual problems. It can be noted that contemporary decision-makers, especially at the strategic level, deal with exactly such situations and conditions. Based on the literature, it can be stated that intuition is most often defined as the act of cognition without rational inference. Optionally, it is recognized as a way of learning that takes place beyond consciousness, in which a decision-maker acquires knowledge, but is unable to identify the source of this knowledge. Intuition is used in every decision-making process, but with varying intensity. It may also be additional information in the event of an information gap. It acts as a kind of "signpost" that directs a decision-maker towards a favourable solution (Malewska, 2015: p.24). Management skills are grouped under three headings: Conceptual skills, human skills and technical skills. Depending on the level of management of an administrator, the need for these skills varies. Emotional intelligence and intuitive thinking can affect the number of decision-making criteria. How effective is emotional intelligence and intuitive thinking on management and decision making skills?

Emotional Intelligence Concept And Definition

The success of the individual in both business and social life is influenced by many other factors besides IQ. One of these factors is emotional intelligence. Emotional intelligence has different sub-dimensions such as being aware of one's own feelings, understanding others' feelings, adapting to new situations and circumstances, solving problems between individuals, controlling individual feelings and being independent (Türker, 2016, p.7). Salovey and Mayer (1990) introduced the concept to the literature. They have studied the dimensions of emotional

intelligence; (1) being aware of emotions, (2) being able to cope with emotions, (3) being able to motivate oneself, (4) being able to notice others' feelings, and (5) being able to engage in relationships (Tuğrul, 1999: p.15). These dimensions can be expressed as dimensions that constitute emotional intelligence. Researchers have generally expressed emotional intelligence as "the ability of individuals to deal with emotions" (Wong & Kenneth, 2002: p.245). Erkuş (1998) defined the concept as having the necessary mental capabilities for selecting, forming and adapting any environmental position. Goleman (1996) defines the concept; "The individual has defined himself as able to act, to continue in spite of incompetence, to be able to postpone satisfactorily by controlling the prosperity, to regulate his mood, to empathize, to hope, to not allow problems to be prevented from thinking".

Emotional intelligence, in general, refers to the ability of an individual to have the ability to understand and use emotions, as well as being defined as the ability of an individual to be aware of their emotions and the feelings of the people around them (Nelson et al., 2003: p.9). Nelson et al. (2003) identified thirteen different dimensions of emotional intelligence, called the Emotional Skills Assessment Process, in the individual. Researchers; They developed a total of 213 expressions to measure the factors that they call what they call aggression, respect, consolation, empathy, decision making, leadership, self-esteem, stress management, difficulty in coping, time management, business ethics and change needs, tested on their students. Min (2012) suggests that some factors of DBDS may be necessary to be successful in the tourist guidance profession; They have adapted the short version to tourist guides that include factors such as seeking, difficulty coping, time management, business ethics, change need and stress management. It has been emphasized that in both studies (Nelson et al., 2003 & Min, 2012), in which the individual's emotional intelligence is an intelligence that improves emotional intelligence skills, emotional intelligence may be possible if efforts are made to detect and eliminate weak abilities. The development of emotional skills and, consequently, emotional intelligence opens the way for the individual to be more successful in social and professional life.

Intuitive Decision-Making

Emotional nature, expression and responses are unwelcome in the business world. People acting on their emotional impulses are usually not seen as credible. We emphasise rationality and rational decision-making. By controlling our emotions, we suppress them, thereby also suppressing creativity (Kovacic et al, 2013: p.3). If we are able to trust ourselves and what we feel, intuition can take us beyond the borders of the known and act as a new partner in learning, action and acquiring of information necessary for holistic decision-making. In spite of very strong and positive initial feedback we find that the business world is still very reserved towards intuition. We all live with it, but we are reluctant to talk about it. The circumstances in which we use intuition are usually turbulent and chaotic, with complex and unstructured problems, quick shifts in consumer expectations, constantly shortened cycle of product development, the need for efficient decision making without all necessary information, etc. We therefore use intuition in critical situations under the pressure of time when we cannot rely on other sources of information or there is no time to obtain the necessary information.

Senge et al. (2008) find that we make decisions and adhere to habitual patterns when we feel fear or pressure. Senge stresses that in the learning process an individual only hears what he or she can recognise, while the interpretation of the heard message depends on one's beliefs, past sensations and experience. He continues that due to the tendency to maintain entrenched patterns of behaviour an individual is only ready to change his or her actions within the boundaries of the known. This represents horizontal interaction between the phases of thinking and action where an individual exhibits only minor changes in actions. Using vertical interaction between the two phases we are able to reach deeper within ourselves which can result in radical changes in personality. Through the process of learning an individual deepens their knowledge of self. They discover their deeper personal levels, which in addition to thoughts also include emotions and will. Usually, this leads to uncovering hidden virtues which people can observe, develop and use consciously. In turn, this often leads to a change in personality, but only if they are able to recognise and change their habitual patterns.

At the deepest levels of learning, intuition is able to connect hidden threads of thought, emotions and will between seemingly unrelated ideas. Thus, we gain more comprehensive insight, and consequently the ability to make holistic decisions. Holistic decision-making leads to more comprehensive acting, particularly from the aspect of socially responsible actions of individuals, groups and the society. Strategic business decisions are aimed at the future and thus very rarely revisable. The usefulness of knowledge and experience in this process is very limited therefore we rely on intuition and creativity. It is a proven fact that more intuitive decisions are made on the strategic management level than on the tactical and operational levels. Everyone uses intuition whether we are aware of it or not. Until we are able of conscious use of intuition, it is something that "happens" instead of being used. Therefore, we need to develop the ability to sense intuition and gain experience on how we use it as individuals (Kovacic, 2012: p.13). The process of intuition based decision-making is a useful business tool with an alternative approach and a different view of the decisionmaking process.

Management Skills

Skill; from the knowledge that one earns through education, from his experiences, intelligence and innate abilities. "Management skills" are the factors that make the management case successful. According to Katz's Theory, a successful manager has triplet managerial skills (conceptual, human and technical). Managerial skills are required to implement quintuplet functions of management (planning, organizing, directing, controlling, evaluating) (Seyedinejat et al., 2014: p.34). Managerial skills are one of reasons in consecutive organizational successes. Management effectiveness and efficiency require managerial skills. The first scientific and structured discussion of "Management skill" was presented by Robert L. Katz. The article called "skills of an affective administrator", was published in Harvard Business Review in January 1995. He has classified the required skills for a manager in three groups herein mentioned briefly but in the following sections, due to their pivotal role, each is explained separately and completely. According to his theory, technical skill is more important in lower management levels and conceptual skill is more significant in upper management levels and human skill is regarded equally important in all three management levels (Mirsepassi, 1991: p.23). Technical skill implies an understanding of, and proficiency in, a specific kind of activity, particularly involving methods, process, procedures or techniques. Technical skill involves special knowledge, analytical ability within that specialty and facility in the use of the tools and techniques of the specific discipline (Robbins & Decenzo, 1998). Human skill is the ability to understand, create motivation and work with employees. According to Robert Katz, human skill is the ability to work effectively as a group member and to build understanding and cooperative effort in the team he leads. Human skill is the ability of manager to work effectively as a group member and to build effective understanding and cooperative effort in the team he leads (Ahmadi, 2011).

One of the triple management skills is conceptual skill also known as perceptual skill, analytical skill, the skill based on general understanding, theoretical skill and cognitive skill. The skill based on general understanding is referred to as the power to consider institute as a whole unity i.e. manager must recognize how different functions of organization depend on one another and change in each part necessarily influences other parts. This skill can be extended to the understanding of the relationship between the said institution and industry in general and also society and political, social and economic factors of an entire nation. By recognizing such relationships and understanding the important elements in any situation, the manager would be able to act in a way that leads to the improvement of organization (Razaghi et al., 1991: p.35).

Conclusion

In this study, it is examined that relations of emotional intelligence and intuitive thinking with decision making skills. Furthermore, how this kind of relations influences management skills are discussed. One of the most important of management skills is decision making. Also, one of the most important elements of emotional intelligence is intuition. Our decisions affect our entrenched habits. The decision-making provides us with solutions for achieving the wanted benefits with as few unwanted consequences as possible. The circumstances in which we are making decisions are often not entirely clear and the available information usually limited. The question of being able to obtain adequate information for qualitative decision-making is always present. Intuition, knowledge and experience are the three natural channels that provide us with information necessary for holistic decision-making. We acquire knowledge based on learning. We acquire experience based on our actions. Our knowledge is affirmed and deepened through practical application and complemented by experience. We need to develop the ability to quickly and lastingly learn from our experiences. Repeating same experiences over and over and revisiting the same situations because we are unable to learn our lessons quickly and lastingly is futile endeavour. Another important aspect is the fact that learning and acting draw information from the conscious sphere, while intuition draws from the unconscious. If we make decisions based only on the conscious aspect, we subject to oversight and unilateral thinking. By searching our inner selves and using intuition we can reach information in the unconscious sphere which complements the information in the conscious. Only by merging the two information flows can we obtain adequate information for holistic decision-making. Decision-making process primarily depends on awareness developed through the processes of learning and acting. We also need to emphasise that there are two diametrically opposite types of consciousness: (1) Consciousness directed inwardly towards its centre and (2) consciousness directed outwardly. A regular person's consciousness is entirely outwardly directed. It is immersed in the outer world. Intuitive decision-making requires redirecting our consciousness from the outside towards the inside. The process of learning enables us to reach deeply within ourselves and uncover hidden personal qualities. Attempting to better utilise one's inner potential often leads to personal change. Accordingly, we change our existing behavioural patterns and start acting differently. Our actions become more holistic, and consequently we become more socially responsible as individuals, organisations and the society. Although holding on to the conscious and rational aspects of decision-making might be safer, this intuition based model for making business decisions is encouraging us to go beyond the borders of comfort.

Managers' effectiveness and efficiency requires having management skills and implementing these skills in various organizational situations and positions leads to achieving the objectives. Therefore, one can say that the manager, who has the required management skills and implements them in appropriate situations and conditions, is successful in fulfilling his duties and roles. Thus an important factor for being successful in management is management skill and ability to implement it properly. Decision making has long been regarded as a cognitive process resulting in the selection of a course of action among several alternatives. Especially in the business environment, the decision making has been based on rational analysis. However, the time available to examine data and relationships has been reducing. Moreover, the information needed for the analysis prior to decision making is often unavailable. Managers face a growing dissatisfaction with the established decision making processes. With a growing rate of the unprecedented change in the environment, intuition is becoming an important part in the decision making process.

The Effects Of Reading Not Stereotyped Illustrated 3-6 Years Children Books On The Creativity Of Children By Showing Pictures Or Not

Şeyda İnce Sezer
seydagul34@gmail.com

Fatma Yücel Dinç
fatma.yucel.fy@gmail.com

Nuri Doğan
nuridogan2004@gmail.com

Day by day the importance of the creativity in whole development of children is increasing. Creativity can affect all developmental features of children directly or indirectly like academic, social emotional, artistic etc. When examined the illustrated 4-6 year olds children books, it can be seen a lot of stereotype pictures in many books. These kinds of books can cause to ruin the creative drawings of children. On the other hand, some qualified illustrated books may support the creativity of children with using stereotype pictures.

So, this research focuses to show how children's creativity skills in drawings are affected by not stereotype illustrated books when are read children with showing or not showing the pictures of stories. The study was done with about 80 private preschool children from 5 classrooms. 3 qualified illustrated children books were chosen to read the children. The study was semi-experimental. Firstly, researchers read the chosen book 1 without showing to children. Then, drawings were wanted by children what they imagined, thought and understood. After 10 days researchers showed the illustrations of book 1 to children when they were reading the story. After that again drawings were wanted by children what they imagined, thought and understood from the story. The second and third books were read children with same way. Three books application for this study were taken about 35 days. Results were analyzed by three researchers by examining the drawings of children according to four main categories which are done by Lowenfeld about the child draws. These categories are color, shape, space and expressiveness. Colors which were used by children were examined according to color types, toning and how children can have a command of the colors. In terms of shape category; details, movement expression, used objects and image richness in the draws of children were examined. When space category was examined these were looked; whether or not children have space sense and the skills how they can put the objects on the space. In the last category; expressiveness; how much children have a grasp of reading story and how much they understood the story were examined. All categories were analyzed by using 5 point likert scale.

The Exploration of Meanings of Study for Married Immigrant Women Becoming University Students

Park, Misuk
INHA University. Republic of KOREA
altmr9631@naver.com

Abstract

The purpose of this study is to explore the academic experiences of married immigrant women as university students and to suggest ways to support their study. This study interviewed 6 married immigrant women, and analyzed the reasons why they continued their studies, the difficulties in studying, and the coping with their difficulties. This study suggested a support plan for marriage immigrant women to foster their competence as a global leader. This study contribute to a hope that married immigrant women are able to become a part of Korean society as well as a private diplomat between Korea and their mother countries.

Keywords: *Married immigrant women as university students, academic experience, difficulty in studying, academic support plan, within-case analysis*

1. Introduction

Due to the informatization and globalization, diverse people cross the borders to emigrate, and diverse immigrants started gathering into Korea as well. With the increase of diverse types of immigrants for labor, marriage, and study, the central and even local governments established the measures for the integration through new policies and systems. In order to newly adapt themselves to Korean society, the immigrants live as new members of Korean society by overcoming various difficulties and conflicts. Especially, contrary to other types of immigrants, the married immigrant women face a turning point of new life by performing their roles as daughter-in-law, wife, and mother in Korea(Chunyang Li & Misuk, Park(2018)).

According to the Ministry of Justice(2018), there are about 283,000 married immigrant women in Korea. Out of them, total 125,750 women live as complete members of Korea by acquiring Korean nationality. With the increase of married immigrant women, the Korean government established/enforced the policies for married immigrant women, and even for their husbands, children, and their families. Such policies and systems helped the married immigrant women to stably settle down in Korean society. As their children grow up, these married immigrant women look back on themselves and have interest in activities for themselves. They could contribute to society through diverse volunteer activities and also achieve the self-growth through activities for self-development. Especially, people who raise and educate children in the educational system of Korea increasingly challenge new studies. Like this, people who try hard for self-development and self-growth live a bountiful life equipped with self-consciousness and insight through free and creative thinking(Kang, Hee-Sook·Lee, Jin-Heon, 2009). Just like the married immigrant women who stably settled down, as the settlement period of immigrants gets longer, it would be necessary to have researches for self-development and self-growth.

Thus, the objective of this study is to explore the meanings of academic experience for the married immigrant women attending university of Korea, and then to suggest the measures for promoting the self-growth of married immigrant women. For this, the in-depth interview was conducted/analyzed targeting the married immigrant women entering university. The results of this study could be used as basic data for promoting the self-growth of married immigrant women in Korea.

2. Married Immigrant Women and Study

With the increase of international marriage in Korea since 1990, the legal immigration of married immigrant women began. Even though their immigration is originated from personal choice, in the hidden side, the social, economic, and political factors caused by the capitalistic system are contained(Misuk Park & Mijeong Lee(2015)). There are total 157,431 married immigrants in Korea, and out of them, 131,254 immigrants are the married immigrant women, which is about 84% of the whole. In terms of their nationality, Chinese people(37%) are the most, which is followed by Vietnam, Japan, Philippines, and Cambodia in order. Besides them, including 125,750 naturalized immigrants by acquiring Korean nationality, the total number of married immigrant women in Korea are about 283,000(The Ministry of Justice. 2018). With the increase of married immigrant women, Korean society performs the integrated support policies for helping them to stably adapt themselves to Korean society by providing diverse support policies and services. Multicultural Families Support Centers are providing language education, social adaptation education, employment education, and parents education. The married immigrant women are protected through the enactment of Multicultural Families Support Act. Such policies helped the married immigrant women to stably settle down in Korean society as a confident member of Korean society.

According to Maslow(1943), humans continuously put efforts into self-growth. He also said that humans' desires would reach the stage of unity after going through the stages from physiological desire to desires for safety,

affiliation, respect, and self-realization. Also, Kolb(1984) called the creative process of knowledge through changes in experience 'experiential learning'. Jarvis(1987) said that the context of learning and learners' environment should be all considered for learning. Like this, the experience through diverse environments and contexts is led to self-growth and self-realization. Especially, the learning experience makes learners attempt to understand and solve their problems based on their personal experiences in the past. Through the critical self-reflection and introspection, learners lead the self-growth by recomposing or resignifying the semantic system(Seo Lynne Jeong & Young Hwa Key, 2011)

Like this, the new learning experience of university life to the married immigrant women who have stably settled down in Korean life, draws new meanings of their behaviors and also provides them with opportunities for behavioral changes and self-growth. Therefore, this study aims to explore the meanings of learning through the learning experience of married immigrant women attending Korea National Open University in Korea.

3. Research Methods

This study explores the meanings of academic performance process, experienced by married immigrant women who have stably settled down in Korea while attending university in Korea. The research was conducted from October 2017 to August 2018, and the research method was based on the qualitative research. Conducting the in-depth interview targeting the married immigrant women, the meanings of academic performance were analyzed. The research participants were the six married immigrants attending Korea National Open University. Their general information is as follows.

<Table 1> General information of research participants

Section	Age	Residence period in Korea	Hometown	Race	Academic background in homeland	Major
Research participant 1	37	7Y	Harbin	Han	High school graduate	Chinese language & literature
Research participant 2	41	10Y	Shenyang	Han	High school graduate	Chinese language & literature
Research participant 3	35	8Y	Shenyang	Han	Junior college graduate	Life science
Research participant 4	35	9Y	Jilin	Han	Middle school graduate	Chinese language & literature
Research participant 5	39	9Y	Weihai	Han	University graduate	Chinese language & literature
Research participant 6	45	5Y	Heilong Jiang	Korean in China	High school graduate	Chinese language & literature

Total six research participants included four women in their 30s and two women in their 40s. They lived in Korea from five years to ten years. The homeland of all the participants was China such as Harbin, Shenyang, Jilin, Weihai, and Heilong Jiang. In terms of race, there were five Han Chinese and one Korean in China. Regarding the academic background in homeland, there were three high school graduates, one middle school graduate, one junior college graduate, and one university graduate. All the research participants are currently attending Korea National Open University. In terms of major, there were five majors in Chinese language & literature and one major in life science.

For the data collection, the in-depth interview was performed after getting the written consent of research participation first. The in-depth interview was performed 1-2 times with each participant. Each interview lasted around one hour in a quiet cafe. The interview atmosphere was free, so that the research participants would not feel pressured. When the data was saturated, the interview stopped. As all the research participants were fluent in Korean language, the interview was conducted in Korean. The in-depth interview data was recorded after receiving the consent from the research participants, and the recorded data was all transcribed.

For the data analysis, the keyword work was performed focusing on the main themes of the transcribed data. In the analysis process, it was coded in each theme word by continuously and repetitively comparing through the

repetitive comparative analysis method by Glaser & Strauss(1967). Also, the reliability and validity of this study were increased by sending the analyzed contents to the research participants through mail in order to verify them, and also sending the categorized data to a colleague qualitative researcher for the verification.

4. Research Results

1) Recognized by husband and family

The married immigrant women who immigrated in Korea through marriage felt greatly happy about being able to study. In the beginning, they went to Multicultural Center to learn Korean language and also to adapt themselves to Korean culture. After learning about how to go to university in Korea, they gradually prepared for it with teacher's help. The university education became a chance for them to be recognized by husband and his family.

"Before starting study, I felt like my husband looked down on me. After starting study, he praised and encouraged me like 'You are smart, You can do it'. When I entered university, I even received congratulatory money." (Research participant 2)

"I got praised by husband's family. They said, 'You are so great!'." (Research participant 6)

2) Adaptation to the reality of education

It was not definitely easy for the married immigrant women to attend university in Korea. There were several difficulties for them to study as the courses were based on online classes due to the characteristics of Korea National Open University. When preparing for the qualification examination with Multicultural Center, considering the characteristics of married immigrants, the Korean language teachers slowed down classes or repetitively taught in case when they could not understand. In online courses of university, however, it was tough for them to catch up fast-speaking Korean. In order to cope with this realistic problem, they were using diverse methods.

"Even when listening to online courses, not many things are memorized in head. There are some parts I cannot understand. So different from lectures I took in the past. It is hard to understand academic words." (Research participant 1)

"In the center, the teacher who taught us slowly and repetitively told us. But, in the online courses, there is almost nothing I can understand. So I studied really hard like listening to them repetitively in order to get ready for finals. Sometimes, I cannot understand anything of a course even after listening to it numerous times." (Research participant 3)

3) Study through study groups with senior students

The married immigrant women who felt hardship in university life sought for their own methods to maintain their study. Joining a study group with senior students, they provided what they could do well to senior students, and they complemented their insufficient part through senior students. As most of them majored in Chinese language & literature, they taught the grammar and vocabulary of Chinese to Korean seniors while the seniors helped them on writing reports.

"I entered the Dept. of Chinese Language. So the 2nd & 3rd-year seniors teach the subjects we don't know to us and also give feedbacks on our reports. We teach Chinese language to them. So I often go to Learning Center in weekends." (Research participant 4)

"Writing reports is the most difficult thing to me. I look for data in library, internet, and books. I get lots of help from seniors. I sometimes ask them questions and they retouch my work." (Research participant 5)

4) Happiness of helping child education

The married immigrant women used to feel afraid of child education as their Korean skills were not sufficient without understanding the school system of Korea. Especially, as the child education methods of Korean parents were different from theirs in homeland, mostly, they could not intervene in child education. After that, the child education naturally depended on father or the child solved his/her own problems, so that diverse problems occurred. In the process of preparing for the qualification examination to enter university in Korea, they learnt about the education methods, curriculum, and textbook contents of Korea. Having confidence in child education, they helped their children's learning and spent more time with them. This became a chance to obtain the emotional stability of children and also the respect for mother from children. They were feeling happy for it.

"I would like to tell other people to study. It is tough, but fruitful. If I don't study, I cannot teach my children. I don't want to become a stupid mother." (Research participant 1)

"Nowadays, when my kids are studying, I can teach math problems and help them with homework. If I didn't study, I wouldn't know anything about math exam paper. But, now, I can solve anything as I have already done it before. I can even tell the meanings of English words to them." (Research participant 2)

5) Agent for self-growth

Maslow(1970) said that self-growth would be closely related to self-realization. When the married immigrant women entered university, they got psychologically stabilized, which became a chance to have the self-growth. As an alien of Korean society, they achieved the self-growth by overcoming the discrimination and prejudices, and cultivating the new competencies through learning. This self-growth became a power to survive in Korea and also an agent for seeking for new career for better life.

"My knowledge has been increased. So I have confidence. I think I have got smarter after studying." (Research participant 3)

"My dream was to graduate from high school and university. My husband knows how serious I am. I will continuously work harder to achieve my dream." (Research participant 6)

5. Conclusions

This study explored the meanings of academic experience of the married immigrant women attending university in Korea. In the results of conducting the in-depth interview with six married immigrant women attending Korea National Open University, the meanings of academic performance were drawn as follows. First, the academic performance in university became a chance for the married immigrant women to be recognized by their families. Second, through the academic performance, they had a chance to help their child education and also to commune with children about study. Third, through study, they obtained confidence and self-esteem, which became a new turning point. Fourth, study was an agent for self-growth, so that they could continuously work hard to achieve their dreams.

Like this, the university study provided a chance of self-growth and new career to the married immigrant women. Through such researches, our society should seek for the measures for vitalizing the provision of diverse opportunities to the married immigrant women, so that they could continue their study to achieve the self-growth.

The Fourth Industrial Revolution And The Changes And Responsibilities Of Sport

Chanryong Kim
Donggeui University
cksfyd@deu.ac.kr

Jaehyung Lee
Korea Maritime and Ocean University
jhlee3416@kmou.ac.kr

Abstract

The Fourth Industrial Revolution was raised in the 2016 World Economic Forum will bring a big change in our society as a whole. Sport is a social component and is greatly influenced by social change. At the Deep Mind Challenge with Google's Alpha Go and Sedol Lee, AI's victory suggests the need for a sense of crisis and response of big change from the fourth industrial revolution. The purpose of this study was to examine how sport will change according to the social changes caused by the Fourth Industrial Revolution and discuss the roles and responsibilities of sport in order to become a valuable sport in society. This research was conducted by literature study, conclusions were as follows.

First, sport will change both inside and outside. The internal changes in sport will bring about the technical development of sport participants, related regulations and institutions and supplies. The external changes in sport will bring about sport facilities, stadiums, sporting goods manufacturing, and various sport events.

Second, changes in social issues that are important to be accompanied by the fourth industrial revolution era are population aging, global warming, and changes in leisure awareness, which will lead to the development of silver sports, the activation of eco - sports, and the quality of participation in sports.

Third, the responsibility of the right sport in the social change according to the 4th Industrial Revolution era should be 1) The values of sustainable sports should be established. 2) Focus on promoting social capital so that social welfare through sports can be realized. 3) There should be a lot of discourse about ethics of sport fields. 4) The application of the fourth industrial revolution technologies to the sport should be applied in order to maintain the right sport value. 5) Sports science should become a more practical discipline, interact with the members of society and actively respond to these changes.

The Future Management Of Welfarehomes For Children In Thailand In Terms Of Management Strategy, Assistance And Coordination, And Providing Welfare And Services In The Next Decade

Abstract

The purpose of this research is to examine the future management of welfare homes for children (WHC) in Thailand in terms of management strategy, assistance and coordination, and providing welfare and services in the next decade. This research is focusing on 3 dimensions of management strategy of WHC, assistance to and coordination of the abandoned children, and providing welfare and services. In this study, the data were collected from 18 experts who have long term experience in WHC in Thailand. The 18 experts were selected according to purposive sampling and snowball sampling techniques and they were categorized into 4 groups: 1) the executives who play a role in Thailand national policy of WHC. 2) the directors who are working in the government WHC 3) the directors who work in the private WHC and 4) the social workers, academics, professors, and experts who have experience in WHC and the outcomes from the interview were created the rating scale questionnaires. The outcomes from the expert used for conclusions regarding the future management of WHC in Thailand were created according to the methodology of Ethnographic Delphi Futures Research (EDFR). The results of this study show that the future management of WHC in the next 10 years on management strategy will focus more on personnel who are working in the WHC in terms of recruiting staff and providing a fair benefit to employee. While the assistance to and coordination of the abandoned children is focusing on networking which is government organization, non-government organization, community and other organizations are working together with WHC in term of assist and coordination. And providing welfare and services of the WHC will focus more on children centralization which considering the needs of every child individually.

Welfare Home for Children

Introduction

The first Thai welfare home for children was located in a Buddhist temple. The Buddhist temple is the center of the community and provides all kind of services such as religious activities, education, entertainment, and social work. It is also a belief of Thai people that if there is an abandoned child he or she should be sent to the Buddhist temple and be taken care of by the monks.(Wanvisa Siwan, 2013). The Buddhist temple is not mainly built for taking care of the abandoned children. In 1890, the government of Thailand built a temporary home for abandoned children in Bangkok as a result of the increasing number of abandoned children, and then in 1911 Thai government built the first WHC in Bangkok. Since the starting point of WHC in Thailand until now (2018) more than 400 WHC have been built all around the country and located in many places. They were safe and secure, registered, and under the supervision of the Department of Social Development and Welfare of Thailand. (Department of Social Development and Welfare, 2013)

Currently, there are 30 government WHC, 138 non-government WHC, and more than 200 non-registered located all around the country. A WHC is categorized by the needs of the children and can accommodate 6-200 children according to the accommodation, personnel, and financial support. (Department of Children and Youth, 2015) Some WHC have had to be shut down and many WHC have a potential to be shut down according to the rapid changes in terms of poor management, financial support, economic, politic, and social interest (Rapee Kamhom, 2006). As a result, the management should be concerned and relate more about the recent situation because the failure of management might affect a big number of children who stay in WHC. According to the boiled frog theory by Tichy and Sherman (1993), which explained the metaphor for the inability of people or organization to react to significant changes that occur gradually or to events which have become commonplace, the WHC in Thailand is like a frog who is sitting in boiling water, if they do not know how to handle what will be happen in the future. Most of WHC still manage in the same way, same style, and still using Child Protection Act (2003) as a core for managing the welfare home for children which is out of date and as a result, the welfare homes for children might be a candidate for resembling a frog in boiling water.

Methodology

This study deployed EDFR, which is a future study about the future management of WHC in Thailand in the next decade, to construct the information from the WHC experts (Chumpol Poolpatarachewin, 2016). The researcher divided the procedure of this study into 5 stages (see Figure 1):

1. Studying Background: studying and collecting the information about the background of both government and private WHC by focusing on history, management style, and problems in terms of management from the beginning until now.
2. Grouping the experts: contacting the experts and asking them to be an information-giver to this study and grouping them into 4 groups for the comprehensive information from experts who have different aspects and points of view related to WHC which is 1) the executives who play a role in Thailand national policy of WHC 2) the directors who are working in the government WHC 3) the directors who work in the private WHC and 4) the social worker, academics, professors, and experts who have experience regarding WHC.
3. Collecting the information: for this stage, the researcher divided the procedure into 3 parts: 1) interview the experts and create a set of questionnaires from their information — 30 items of management strategy, 30 items of assistance and coordination, and 30 items of providing welfare and services 2) ask the experts to rate the probability of each items in the questionnaire. 3) ask the experts to confirm their answers from the first round.
4. Analyzing the outcome: gather together the information to analyze with the basic statistics such as percentile, median, inter quartile range and recruit the future management items to find the consensus from the 3 main topics (management strategy, assistance and coordination, and providing welfare and services) by rating in “high and highest level”, mode is over 3.50 and each item is confirmed with the 18 experts, scope of the quartile range is not over 1.50, and the satisfaction is over 80 percent.
5. Drawing a future picture: using the outcome from this study to draw a future picture of WHC management related to 3 main topics (management strategy, assistance and coordination, and providing welfare and services)

Results

The result from The Future Management of WHC in Thailand in the next 10 years, which contains the 90 possibility items for future management of WHC and is categorized into 3 main topics (30 items per each main topic): management strategy, assistance and coordination, and providing welfare and services.

The future management in term of management strategy of WHC which 53.33 % highest qualify and 20 % high qualify (19/30 items) in Figure 2 according to the selection criteria are (1) having a standard quality assessment system for WHC related to the content of each WHC (2) having a reasonable ratio between staff and children in WHC (3) having a shared knowledge and driving WHC into the same direction among the staff (4) developing all the skills of the staff for taking care of the children (5) creating a common sense approach and good relationship between staff, children, and WHC (6) creating values, organizational culture which benefit children in WHC (7) having a good system to manage budgets and all kinds of donations which benefit children in WHC (8) having an educational exchange program between WHC, related organizations, and the local community (9) using social media such as Facebook, Line, and Instagram for public relationship to provide information, activity, and contact with others (10) changing vision, mission, and operation related to the current situation (11) clearly changing the

laws about the identification of children who are staying in WHC (12) the framework of WHC should be flexible and rely on the situation (13) categorizing the special needs of the children more specifically (14) reducing the complicated procedure for using a budget for helping children in WHC (15) more focus on recruiting people who work with the children in WHC (16) having a good system to provide a fair benefit to people who work in WHC (17) managing the increasing number of donors, donations, and financial support properly (18) using WHC as a hub for training people in the surrounding community to assist children when they are in trouble (19) giving a chance to children who are in WHC to be a part of managing WHC.

Figure 2. The result of Management strategy items which highest qualify, high qualify, and disqualify

The future management in term of assistance and coordination of WHC which 43.33 % highest qualify and 16.67 % high qualify (18/30 items) in Figure 3 according to the selection criteria are (1) using networking for screening and assisting children (2) investigating the background of children in all detail as much as possible (3) processing all kinds of documents for children in WHC should be facilitated by one officer (4) helping and healing children in WHC should be considering the relative, neighbor, and community where the children come from as the same time relatives, neighbors and the local community can play a part on helping and healing damaged children (5) cooperating with local hospitals in terms of providing child psychiatry and forensic science (6) reducing process and period of time to using the budget for helping the children (7) arranging enough budget for assistance and coordination (8) arranging budget for the changing assistance and coordination situation in the future (9) the WHC nearby should support and help each other (10) sharing the personnel and other support between WHC (11) inviting government organizations, non-government organizations, the local community, and people to get involved with WHC (12) the staff who are working in WHC has to dedicate themselves to learn more about assistance and coordination (13) planning ahead about how to handle the growing number of children who are coming to stay at WHC (14) making an individual plan for each child (15) creating a network in the community to prevent damage and help children in their community (16) assisting and coordinating in the same standard and direction (17) government WHC should be a back-up for non-government WHC in terms of assistance and coordination (18) using social media such as Line and Messenger to communicate between social workers in WHC

Figure 3. The result of Assistance and coordination items which highest qualify, high qualify, and disqualify

The future management in terms of providing welfare and services of WHC which 30 % highest qualify and 33.33% high qualify (22/30 items) in Figure 4 according to the selection criteria are (1) promoting more about substitute family, foster family, and adoptive family (2) reducing the procedures of searching for substitute family, foster family, and adoptive family for children in WHC (3) supporting children more about their talents and interests (4) teaching children in WHC to become a giver rather than a receiver (5) children in WHC should rely on themselves rather than rely on others (6) helping each child in WHC to develop themselves to become a quality adult (7) adjusting children's negative attitude about being children who stay in WHC (8) using all kinds of

activities for developing, healing and building life skills for children in WHC (9) providing creative activities to fulfil children's development (10) cooperating more with community, government, religious organization, and people in this area to get involved with providing welfare and services (11) focusing more on giving love, warmth, and attention to children in WHC (12) children who stay with their relatives arranged by WHC is more beneficial than children who stay in WHC (13) creating a common sense among children in WHC to be aware that they are also a part of community (14) helping children in WHC to know about self-reliance, and how to help themselves, have courage, and self-confidence (15) creating more choices in life for children in WHC (16) keep in contact with parents, relatives, and the community where children in WHC come from (17) providing welfare and services by being aware of age, need, and development status of individual children (18) controlling the activities which are run by visitors and others should go together with WHC activities (19) involving parents and community to be a part of providing welfare and services (20) using local culture, tradition, and belief to get involved in the providing welfare and services (21) helping children to discover their talents and practice them more often (22) governments have awareness more about the immigrant children, stateless children, and foreigner children. In conclusion, the 59 items are qualified the selection criteria regarding to the 90 possibility items of future management of WHC (see Figure 5)

Figure 4. The result of

providing welfare and service items which highest qualify, high qualify, and disqualify

Figure 5. The total result of future

management in term of management strategy, assistance and coordination, and providing welfare and services (59/90 items) which highest qualify, high qualify, and disqualify

Conclusion

The results of this study show that the future management of WHC in the next decade in terms of management strategy is more about focusing on personnel who are working in the WHC in terms of recruiting staff and providing a fair benefit to employee. The future management WHC picture in terms of management strategy is more concerned with recruiting people to work in WHC with regard to quality of the staff, knowledge, skills, behavior, abilities, competency, attitude, human relationship, and job satisfaction. As a result, employees who are working in WHC are the key to indicate success or failure of WHC. If WHC have a good staff and each of them is an expert in their duty, self-development, and ready to learn and ability to adjust to new things, the employee will play an important role in the next decade according to the result of this study. Meanwhile WHC should provide a fair benefit to the employee, if they do not get a fair benefit, they might feel insecure and look for a new job

which gives them security in their life and at the end WHC will lose personnel and put the future of WHCs in danger.

While the results of this study also show that the assistance and coordination of the children in WHC is focusing on networking. Especially WHC, government organizations, non-government organizations, community and others organizations are working together with WHC in terms of assisting and coordination. The future management WHC picture in terms of assistance and coordination of the children in WHC will be a picture of assisting, coordinating, and working together between government organizations, non-government organizations, community and others organizations. It makes assistance and coordination system more effective than the last previous (one man show). It will be helpful, useful, and cover all dimensions in terms of assisting and coordinating and also help children to prevent the crisis when they are in trouble.

And the results of this study show that providing welfare and services of the WHC is more focusing on children centralization with consideration for the needs of every child as an individual. The future management WHC picture in terms of providing welfare and services will be considering the needs and benefit of children individually the most. According to these differences, each child has different needs and specific problems, and they need to be addressed specifically and individually, WHC cannot set up the same standard of welfare and services for every child because it might work with some child but it may not work with another child. It will help and benefit children a lot and the provision of welfare and services will more effective.

Abstract

The purpose of the study is to measure the social studies teacher candidates' level of social responsibility. In this regard, it has been tried to determine the levels of teacher candidates in terms of the variables of gender, class level, parental education level and number of siblings. The study was designed as a mixed method study. The quantitative part was conducted with survey model and the qualitative part was done with case study. The sampling of the quantitative part included 283 teacher candidates and the sampling of the qualitative part had 8 teacher candidates. Teacher candidates were selected at the level of each grade. The purposive sampling type has been utilized as the sampling type. According to the simple correlation test between the dimensions, there was a positive low level of correlation between ecological responsibility dimension and action-oriented responsibility; a positive medium level of correlation between ecological responsibility and altruist responsibility; a positive low level of correlation between ecological responsibility and national responsibility dimensions. There was a positive medium level of correlation between action-oriented responsibility and altruist responsibility. Moreover, there was a low level of correlation between altruist responsibility and national responsibility dimensions.

Introduction

Responsibility is a phenomenon ongoing from the day when the mankind exists up to the present. This phenomenon has its origin within the family, develops and shapes in time by the influence of social circle and education. Therefore, it can be regarded as the individual's fulfilling the duties and responsibilities anticipated by the society (Başer, 2015). In Turkish Language Association Turkish Dictionary (2018), the concept of responsibility is defined as the one's undertaking the consequences of his own behaviours or the outcome of any case within the realm of his own authority, personal liability and obligation. Responsibility is the individual's complying with, fulfilling his duties, respecting to the others and claiming responsibility for the consequences of his own behaviours (Erol, Elagöz and Şahbaz, 2010). Responsibility is the key point for the citizens of democratic societies (Nakamura and Watanabe-Muraoka, 2006). Individuals who have sense of responsibility act in a sound manner and judiciously in their decisions related to family, friend and inner circle in private and to society and state in general (Ergül and Kurtulmuş, 2014). Responsibility is one of the most important traits of human characteristics. A responsible individual fulfils the duties and liabilities to his own part at the right time and as is desired. Having responsibility is also the way of winning the respect, hearts and minds of people. Maybe, the first and foremost is its enabling us to have a grip on our own lives. In terms of overcoming the problems in every aspect of communal living, to have the sense of responsibility is significant. To approach the hardships of life with sense of responsibility supports us to be able to change some things (Sezer, 2008). It is expected that responsible individuals are more successful in social and communal life and attain their goals (Taylı, 2013). An official who does not duly perform his duties, a neighbour who is not beneficial to his around, an individual who cannot meet his own needs, a student who does not do his homework or have his class properly and timely is quite likely to have problems in communal living. An individual who is aware of fulfilling his/her responsibilities will be more responsive in order to do better. Thus, a more liveable world can be handed down the next generations (Aktepe, 2015).

Sense of responsibility develops as of very early ages, by the influence of the circles. The thing which ensures this feeling of responsibility to arise and maintain is the society where individuals lead their lives in. Society employs this feeling by formal and informal means such as family, law, education and so on (Akgül, 2010). Sezer (2008) also states that the source of this sense is the society and values unique to the society. From this aspect, responsibility is not an innate feeling, but a conscious gained afterwards (Taylı, 2013). The concept gains a social status through the internalization of this feeling by the individuals and the society's gaining a sense of responsibility in the way desired. This case, in literature, is defined as social responsibility. Social responsibility is the state of readiness to act in a socially responsible manner (Berkowitz and Lutterman, 1968). It is that individuals realize the social problems and get into the act for the solution of these problems (Deveci and Eryılmaz, 2017). Social responsibility can also be defined as each individual's acting so as to provide benefit to the society in which he/she lives (Akıncı-Vural and Coşkun, 2011; Toker and Tat, 2013). The control mechanism function of

the culture or societies in which we exist makes the individual's responsibility societal (Akgül, 2010). Therefore, we can state that social responsibility is a phenomenon which shapes the behaviours of individuals. Individuals having sense of social responsibility take the influence of society or circles on their behaviours into consideration (Ergül and Kurtulmuş, 2015). The ones who have sense of social responsibility adopt the cultures and values of their societies more easily (Berman, 1990). They are in tendency to help the ones who need assistance in the society (Bobo, 1991). This concept directs individuals to collaborate for a common purpose and envisages for the outcomes of this collaboration to be shared (Yılmaz, 2011). In this case, for the individuals whose sense of responsibility has less developed or who do not have this sense at all to maintain relations with the society and their social circles will get hard.

Although the fact that the fund of knowledge has increased and sharing knowledge has been getting easy in the world we live in improves the one's welfare and ease, some certain problems are also brought with it. In addition to the global environmental issues such as famine, wars, global warming, many other problems with which the societies face such as religion, race, migration, terror and so forth are making life more difficult day by day (Başer, 2015). The main problems encountered in the globalizing world are categorized as environmental and ecological problems; social, economic, political problems and intellectual issues (Kılıçoğlu, Karakuş and Öztürk, 2012). These problems have an influence upon not only a society or country but also other people out of the society which we live in. In this case, being deaf to problem encountered anywhere in the world becomes out of the question (Başer, 2015). At the present time when communication is maintained as swift as thought, problems confronted by the nations become a concern involving large masses, by reaching up to a universal dimension. In order that these problems can be solved, it becomes highly important that individuals act as a citizen of the world, i.e. a global citizen, from now on and make co-decisions (Yazıcı, 2013). All these encountered problems reveal out how important the sense of global social responsibility is in today's world. Global social responsibility is the sense of responsibility possessed in order to overcome global social issues beyond individual and local problems (Küçükşen and Budak, 2017). Globalization of social responsibility and its being considered in broader terms have widened the scope of social responsibility, and responsibilities under consideration that are intended for solving the social problems have extended to the solution of global issues (Başer, 2015). This situation assigns new roles and duties to the education provided in the schools in order to enable such a sense to be gained (Yazıcı, 2013). The fact that teachers' awareness about social responsibility has developed will also affect the viewpoints of the students whom they will educate. For this reason, it is required that teachers' social responsibility awareness must be developed just in the process when they receive their graduate education (Ergül and Kurtulmuş, 2014). It must be ensured that students recognize social problems within the scope of instruction programs implemented at various stages of education, and circumstances under which they will get into the act for the solution of problems must be established (Deveci and Eryılmaz, 2017). In this sense, it can be stated that the subject having the function of bringing forth this awareness to the students at higher education level is the subject of Community Service Practices. In the face of increasing social demands, universities have also included social responsibilities besides their primary duties such as education-training and research. It can be stated that universities, through the lectures on social responsibility, aim at raising individuals who can work towards a solution instead of being a mere spectator to the social problems. By the lectures on social responsibility (Community Service Practices) which state and foundation universities have included in their curricula, students comprehending their individual roles in lending a hand to the ones in need are going to lead the drive for building the civil society for democracy, as the adults of the future (Toker and Tat, 2013).

Community Service Practices have the quality of being a subject which aims at enabling prospective teachers to gain the sense of social responsibility both theoretically and practically, and enhancing the skills of collaboration, solidarity, effective communication and self-evaluation in the course of practice (Topluma Hizmet Uygulamaları Dersi Yönergesi/Instructional Directive for Community Service Practices/THUDY, 2011). With this instruction, prospective teachers gain skills for realizing current issues and bringing a solution to these. Prospective teachers' social consciousness, sense and awareness of social responsibility are developed (Uğurlu and Kırıl, 2011; Küçüköğlu, Ozan and Taşkın, 2016). That prospective teachers participate in various projects within the scope of social responsibility has influence over the development of their sense of responsibility (Kocadere and Seferoğlu, 2013). The fact that teaching is one of the professions requiring social responsibility demonstrates how important the gains from this instruction are. The prospective teachers who receive this instruction;

- are conscious of local problems / produce solution to these.
- are conscious of global problems / produce solution to these.
- are an active participant in solving local and global problems.
- devise new projects against local and global problems.
- take an active role in new projects against local and global problems / work in cooperation.
- establish an effective communication both in and out of the project scope while carrying out the projects.

- participate in scientific activities such as panel discussions, conference, congress, symposium and etc., as audience, speaker or organizer/supervisor.
- enhance their self-evaluation skills.
- use their creative thinking abilities and skills in all these activities (THUDY, 2011).

The development of awareness and sense of social responsibility on both individual and social bases through the subject of Community Service Practices will serve for social development. Moreover, this subject will contribute to the development of voluntariness phenomenon in individuals. The case that individuals perform works for the benefit of the society and world without looking out for their own interests sets a good example of both voluntariness and social responsibility (Saran, Coşkun, İnal-Zorel and Aksoy, 2011). Furthermore, considering that today's university students are actually the society leaders of tomorrow (Harris, Lang, Yates and Kruck, 2011), the role and importance of this subject in enabling that the role of social responsibility consciousness is gained will be understood.

While all individuals have responsibilities, it is required for some of them to act more responsibly towards this. Since teaching is a universal profession, it is significant that teachers have required qualifications and personal characteristics. In order that a society can embody responsible individuals, it is necessary that primarily teachers possess these characteristics. Ryan (1960), Good and Grouws (1979), Rosenshine and Stevens (1986) and Confrey (1990) emphasize that it is necessary for a teacher to have more outstanding traits compared to the other occupational groups. The fact that teaching is a profession holding social responsibility; teachers undertake considerable missions in shaping the societies' future; and teachers' being regarded as the figures to lead and convert the society requires the development of the sense of social responsibility during their undergraduate education (Yılmaz, 2011). It is essential that teachers, since they enable their students to gain the sense of social responsibility, have this conscious first (Deveci and Eryılmaz, 2016). Some certain branches and/or fields of teaching profession come into prominence in making the ones gain responsibility. Social Studies subject is a significant one in raising good and effective citizens. Deveci and Eryılmaz (2017) state that responsibility and social responsibility is inherent in Social Studies subject and it provides substantial contributions in citizenship education.

When the body of literature is reviewed, it is observed that studies related to responsibility, social responsibility and global social responsibility such as (Berkowitz and Lutterman, 1968; Berman, 1990; Bobo, 1991; Nakamura and Watanabe-Muraoka, 2006; Sezer, 2008; Akgül, 2010; Erol, et.al 2010; Akıncı-Vural and Coşkun, 2011; Harris, et. al 2011; Saran, et. al 2011; Yılmaz, 2011; Kocadere and Seferoğlu, 2013; Özen, 2013; Taylı, 2013; Toker and Tat, 2013; Ergül and Kurtulmuş, 2014; Selanik Ay and Dal, 2014; Yeşil, 2014; Aktepe, 2015; Başer, 2015; Başer and Kılınç, 2015; Sezer and Çoban, 2016; Deveci and Eryılmaz, 2016; Deveci and Eryılmaz, 2017; Küçükşen and Budak, 2017) are present. Studies for responsibility mainly focus on values education; studies for social responsibility are mostly dealt on corporational basis and in the scale of enterprises. As for the studies on global social responsibility (Başer 2015; Küçükşen and Budak, 2017), their being limited in number draws the attention. In education, especially for Social Studies education which is directly related to social and communal living, social responsibility and global social responsibility are considered important. In this context, the objective of this research is to evaluate the global social responsibility levels of prospective Social Studies teachers who will raise the individuals to be the teachers of future and citizens of tomorrow. Accordingly, prospective Social Studies teachers' global social responsibility levels were tried to be determined on the basis of variables of gender, class level, mother and father's educational level and number of siblings.

Method

Research Model

This study has been designed as a mixed method research. Mixed method is explained as the approach by which qualitative and quantitative methods are employed in combination (Balcı, 2009). In the quantitative part of the study, descriptive survey model was used. Descriptive survey model is the research within the scope of which data are obtained in order to determine the specific features of a study group (Büyüköztürk, Kılıç Çakmak, Akgün, Karadeniz and Demirel, 2012). In the qualitative part of the study, case study was used. Case study is the method by which a social group is analyzed as based on time and space (Büyüköztürk et. al, 2012).

Study Group

For the quantitative part of this study, 283 and in the qualitative part, 8 prospective teachers participated. Prospective teachers were selected from each class level. In this sense, the sample of the study is purposeful sampling. Purposeful sampling is the most appropriate type of sampling for the research which is selected in accordance with the research objective (Balcı, 2009). In this study, as the evaluation of the global social responsibility levels of prospective Social Studies teachers is aimed, this sampling type has been preferred.

The 55,5% of the prospective teachers participating in the study ($f=132$) is female, and the 44,5% of them ($f=106$) is male. Of the participant prospective teachers, 56 are the 1st year undergraduate, 73 are the 2nd year undergraduate, 61 are the 3rd year undergraduate students and 48 are at the 4th year undergraduate level. 17 of the prospective teachers are 18, 33 of them are 19, 56 of them are 20, 61 of them are 21, 33 of them are 22 years, 38 of them are up to 23 old.

In the qualitative part of the study, 8 prospective teachers participated. Prospective teachers have been determined in the way that one female and one male are present at each class level.

Data Collection Tool

In this study, in order to collect quantitative data, "The Scale for Global Social Responsibility" developed by Başer and Kılınç (2015) have been used. The scale was applied by the researchers, in the spring term of the academic year 2018-2017, to the prospective teachers at the undergraduate level of 1st, 2nd, 3rd and 4th year. In the qualitative scope of the study, questions structured as open-ended were prepared according to the dimensions (action-oriented, ecological, altruistic and national social responsibility) of the quantitative scale. The prospective teachers were asked to answer those questions in the structured interview form. In that context, the prospective teachers were addressed the following questions:

1. Have you ever taken part in social responsibility activities (Civil society organizations, benevolent associations, international organizations, Community Service Practices, voluntary activities, and so on)? State your reasons for participation.
2. What do you perform individually for protection of the environment? If you do not, state why.
3. How would your point of view be on a case/an issue which you have not experienced "by yourself" within the boundaries of Turkey (e.g. I concern / I do not concern about it.)? State the reasons for this.
4. Do you show awareness to a matter experienced in any country of the world? State the reasons for this.

Analysis of Data

Data obtained from the quantitative part of this study were analyzed by SPSS 21, by carrying out the analyses of Kolmogorov-Smirnov homogeneity test, independent samples t-test, one-way ANOVA and simple correlation. The qualitative part of the study was analyzed by descriptive analysis. Previous to the analysis, data obtained from the prospective teachers were coded, for instance; 1.F.P.T (1st year undergraduate female-prospective teacher), M.P.T. (4th year undergraduate male-prospective teacher). Afterwards, data were analyzed within the context of each question. Data obtained from this part of the study were used in order to support the quantitative part. For the purpose of ensuring the reliability of this part of the study, investigator triangulation was carried out. Investigator triangulation is expressed as the triangulation strategy as based on which data analysis is carried out by two or more researchers independently and their findings are compared (Patton, 2014). In order to ensure the reliability of the study, the other two researchers (2 Social Studies instructors as research associates) partaking in the study were asked for their opinions. Researchers gathered for the points on which they had dissented and it was tried to arrive at agreement.

Findings

In this part of the study, findings obtained through the answers that the prospective teachers have given to the scale of global social responsibility are included. Accordingly, the answers given by the prospective teachers for the scale were analyzed and evaluations were carried out in terms of the variables of gender, class level, parents' educational background and number of siblings. In addition to this, the relation among the dimensions in the scale was revealed and presented below in tables.

Descriptive statistics for the scores which prospective teachers have received from the scale as relevant to the dimensions of action-oriented, ecological, altruistic and national social responsibility are presented in Table 1.

Table 1: Teacher candidates' global social responsibility scores

Dimension	n	Lowest	Highest	\bar{X}	ss
Action Oriented Responsibility (12 items)	238	12	60	43,90	8,3
Ecological responsibility (5 items)	238	5	25	21,40	3,54
Altruist Responsibility (7 items)	238	7	35	26,32	3,4
National responsibility (6 items)	238	6	30	23,06	3,32
Global social responsibility (35 items)	238	30	150	109,27	14,43

When the lowest, middle and highest scores for awareness that can be obtained from the dimensions in the scale are examined, it is counted as the lowest score 12 (12x1), the middle score 30 (12x2,5) and the highest score 60 (12x5) in the dimension for action-oriented responsibility; the lowest score 5 (5x1), the middle score 12,5 (5x2,5) and the highest score 25 (5x5) in the dimension for ecological responsibility; the lowest score 7 (7x1), the middle score 17,5 (7x2,5) and the highest score 35 (7x5) in the dimension for altruistic responsibility; the lowest score 6 (6x1), the middle score 15 (6x2,5) and the highest score 30 (6x5) in the dimension for national responsibility.

Considering the findings in Table 1, as based on these scores, it has been found out that the action-oriented, ecological, altruistic and national responsibility scores of prospective teachers are above the middle score. The case in which these scores indicating prospective teachers' action-oriented, ecological, altruistic and national responsibilities differ according to gender variable was investigated and the findings obtained in consequence of the independent samples t-test performed for the mentioned case are presented in Table 2.

Table 2: Independent t-test results of teacher candidates, according to the gender regarding the dimensions of the global social responsibility scale

Dimensions	Gender	n	\bar{X}	ss	t	p
Action Oriented	Female	132	44,83	8,47	1,934	0,54
	Male	106	42,75	7,97		
Ecological	Female	132	21,61	3,84	,984	0,326
	Male	106	21,15	3,14		
Altruist	Female	132	27,06	3,24	3,881	,000*
	Male	106	25,41	3,31		
National	Female	132	22,61	3,23	-2,346	,020*
	Male	106	23,62	3,38		

*p<,05

When Table 2 is reviewed, it is seen that the averages of the altruistic and national responsibility scores received by the prospective teachers differ according to gender variable ($p=0,00$, $p=0,020$ $p<0,05$). Besides this, between the scores for ecological responsibility and the ones for action-oriented responsibility, a statistically significant difference has not been detected. As regards to the altruistic responsibility, female students have a higher score average ($\bar{X}=27,06$) than male students have ($\bar{X}=25,41$); but for the average of national responsibility scores, it is higher in the case of male students ($\bar{X}=21,59$) compared to female students ($\bar{X}=22,61$).

Another variable in the research is class level. For the class level, findings relevant to the students' action-oriented, ecological, altruistic and national responsibility scores are included in Table 3.

Table 3: Descriptive statistics and one-way anova of teacher candidates according to the class level regarding the dimensions of the global social responsibility scale

F, \bar{X} , SS					Anova Results				
Dimension	Grade	n	\bar{X}	ss	S.V.	S. S.	sd	M.S.	f
Action Oriented	1. Grade	56	45,57	9,43	B. G.	303,656	3	101,219	1,480
	2. Grade	73	43,19	8,01	W. G.	15999,924	234	68,376	
	3. Grade	61	42,69	7,66	Total	16303,580	237		
	4. Grade	48	44,56	7,96					
	Total	238	43,90	8,29					
Ecological	1. Grade	56	22,07	3,96	B. G.	134,659	3	44,886	3,692
	2. Grade	73	21,96	2,92	W. G.	2844,618	234	12,156	
	3. Grade	61	21,16	3,37	Total	2979,277	237		
	4. Grade	48	20,08	3,83					
	Total	238	21,40	3,55					
Altruist	1. Grade	56	27,55	3,56	B. G.	137,433	3	45,811	4,209
	2. Grade	73	26,38	3,09	W. G.	2546,656	234	10,883	

	3. Grade	61	25,80	3,28	Total	2684,088	237		
	4. Grade	48	25,46	3,33					
	Total	238	26,32	3,37					
National	1. Grade	56	22,77	3,000	B. G.	54,824	3	18,275	1,663
	2. Grade	73	23,78	3,08	W. G.	2571,230	234	10,988	
	3. Grade	61	22,67	3,59	Total	2626,055	237		
	4. Grade	48	22,81	3,64					
	Total	238	23,06	3,33					

When Table 3 is reviewed, it is realized that the prospective teachers' ecological and national responsibility scores are very close. In addition, it has been observed that a difference exists in their action-oriented and altruistic responsibility scores. In order that the differentiation in these scores received by the students in terms of the variable of class level can be analyzed, one-way analysis of variance has been carried out. While a statistically significant difference according to class level was found between the action-oriented responsibility and altruistic responsibility scores obtained by the prospective teachers; a significant difference between their ecological and national responsibility scores was not found ($F=3,692$, $p<,05$; $F=1,480$, $p<,05$; $F=4,209$, $p<,05$; $F=1,663$, $p<,05$). The Tukey test comparison of the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores as based on the variable of class level was made. Relevant results are given in Table 4.

Table 4: Tukey test comparison results for the class level variable of the dimensions in the global social responsibility scale for the prospective teachers

responsibility scale for the prospective teachers						
Dimensions		Class Level		Mean	Standard error	P
Ecological	1 st year	4 th year	1,99*	,66	,021	
	2 nd year	4 th year	1,88*	,65	,021	
Altruistic	1 st year	3 rd year	1,75*	0,61	,023	
	1 st year	4 th year	2,10*	,65	,008	

Based on Table 4, for the prospective teachers' ecological responsibility scores, a significant difference between the 1st and 2nd year and 4th year was found, in favour of the 1st and 2nd year undergraduate students. When their altruistic responsibility scores were examined, a significant difference between the 1st year and 3rd and 4th year was found, in favour of the 1st year undergraduate students. As is viewed overall, we can mention that the prospective teachers' responsibility levels decrease as the stages at which they receive education rise.

In the research, the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores were also examined according to the age.

When Table 5 is reviewed, it is seen that the scores for prospective teachers' action-oriented, ecological, altruistic and national responsibility are very close. One-way analysis of variance was carried out so that the differentiation of prospective teachers' responsibility scores as based on their ages could be investigated. A statistically significant difference in the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores according to the age has not been found ($F = ,966$, $p < ,05$; $F = 1,233$, $p < ,05$; $F = 1,878$, $p < ,05$; $F = 1,231$, $p < ,05$). In the research, the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores were also analyzed according to the mother educational level.

	Total	238	23,06	3,329					

When Table 6 is reviewed, it is realized that the scores for prospective teachers' ecological, altruistic and national responsibility are very close. However, a differentiation has been observed in their action-oriented responsibility scores. One-way analysis of variance was carried out in order that the differentiation of the prospective teachers' these responsibility scores mentioned as based on the educational level of mother could be examined. A significant difference in the prospective teachers' ecological, altruistic and national responsibility scores according to the age has not been found ($F = ,530$, $p < ,05$; $F = 1,522$, $p < ,05$; $F = 0,303$, $p < ,05$). However, in their scores for action-oriented responsibility, a statistically significant difference has been found.

Tukey test comparisons of prospective teachers' action-oriented, ecological, altruistic and national responsibility scores in terms of the variable of mother educational level was performed. Relevant results are given in Table 8.

Table 7: Tukey test comparison results of teacher candidates, candidates according to mother educational level the dimensions of the global social responsibility scale

Dimensions	Mothers Educational Status		M.D.	Std. Error	p
Action Oriented	Primary School	Graduate	6,57*	2,27	,049
	High School	Graduate	8,73*	2,64	,014

According to Table 7, in terms of action-oriented responsibility, a statistically significant difference has been found between the ones whose mothers received the primary and high school education and the ones who completed their postgraduate studies, in favour of mother educational level at postgraduate education. Based on this, we can state that action-oriented responsibility levels increase as mother educational level increases.

In the research, the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores according to the variable of father educational level were also analyzed.

When Table 8 is reviewed, it is seen that the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores are very close. One-way analysis of variance was carried out in order that the differentiation of the prospective teachers' these responsibility scores mentioned as based on the educational level of father could be examined. A significant difference in the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores according to the age has not been found ($F= 2,198, p<,05$; $F= ,775, p<,05$; $F= 1,037, p<,05$; $F= 1,013, p<,05$).

In the research, the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores according to the number of siblings were also analyzed.

Table 9: Descriptive statistics and one-way anova of teacher candidates according to number of siblings regarding the dimensions of the global social responsibility scale

	No siblings	7	24,14	3,34					
	Total	2	23,07	3,34					

When Table 9 is reviewed, it is seen that the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores are very close. One-way analysis of variance was carried out in order that the differentiation of the prospective teachers' these responsibility scores as based on the number of siblings could be examined. A significant difference in the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores according to the number of siblings has not been found ($F= 1,018$, $p<,05$; $F= ,721$, $p<,05$; $F= ,709$, $p<,05$; $F= 1,271$, $p<,05$).

Within the scope of the study, the relation among the prospective teachers' action-oriented, ecological, altruistic and national responsibility scores was also analyzed, and relevant results are presented in Table 12.

Table 10: Arithmetic mean, standard deviation and correlation values of variables

Dimension	\bar{X}	ss	1	2	3	4
1. Ecological Responsibility	43,90	8,29	1	,283**	,419**	,209**
2. Action Oriented Responsibility	21,40	3,55		1	,490**	,195**
3. Altruist Responsibility	26,32	3,37			1	,124**
4. National Responsibility	23,06	3,33				1

Considering the relation for the dimensions included in Table 10, low degree of positive correlation ($r=.283$, $p<,01$) between ecological responsibility and action-oriented responsibility; medium degree of positive correlation ($r=.419$, $p<,01$) between ecological responsibility and altruistic responsibility; and low degree of positive correlation ($r=.209$, $p<,01$) between ecological responsibility and national responsibility have been found. Also, medium degree of positive correlation ($r=.490$, $p<,01$) between action-oriented responsibility and altruistic responsibility, and low degree of positive correlation ($r=.195$, $p<,01$) between action-oriented responsibility and national responsibility have been found. Low degree of positive correlation ($r=.124$, $p<,01$) between altruistic responsibility and national responsibility has been found.

The findings obtained from the quantitative data in the study are as introduced above. Additionally, the reasons why the prospective teachers had developed action-oriented, ecological, altruistic and national responsibility were intended to be determined, as well. Based on this, four (4) questions were directed to the two (2) each of the prospective teachers from every stage of undergraduate education. The answers they gave to those questions were presented below.

The question "Have you ever taken part in social responsibility activities (Civil society organizations, benevolent associations, international organizations, Community Service Practices, voluntary activities, and so on)? State your reasons for participation." was directed to the prospective teachers. 5 of the prospective teachers stated that they had participated, and 3 of them stated that they had not. In the study, prospective teachers have given more than one answer to the questions. For this reason, the number of frequency is not equal to the number of prospective teachers participating in the study. Data obtained in this scope and information related to their frequencies are included in Table 11.

Table 11: Statistical data for the reasons of prospective teachers' taking in the social responsibility activities

Views	Participants	F
Lending assistance to the ones who need	1.F.P.T.-3.F.P.T.-4.M.P.T.	3
That helping the ones who need makes me happy	3.F.P.T.-4.F.P.T.	2
That I like taking responsibility and working in cooperation	3.M.P.T.-4.F.P.T.	2
Its enabling individual to get more active	3.M.P.T.	1
Making the ones who need happy	4.M.P.T.	1
That there has been no one to direct me in this way	2.F.P.T.-2.M.P.T.	2
That I do not have time	1.M.P.T.-2.M.P.T.	2
That I am not interested in these issues	2.M.P.T.	1
Total	8	14

As based on Table 11, it is realized that the prospective teachers have or have not taken their own parts in social responsibility activities due to different reasons. The prospective teachers stating that they have participated in the activities act in this way mostly in order to lend assistance to the ones in need ($f=3$). As for the prospective teachers stating that they have not participated in the activities, they put forward the reasons for not taking part through the opinions that there has been no one to direct me ($f=2$) and that I do not have time ($f=2$). Some of the prospective teachers answered this question of the study as the following:

3.M.P.T. *"I have taken part. I think that an individual must perform works in order to contribute to the nature and the society. This case enables the one to gain values such as responsibility and cooperation."*

4.M.P.T. *"I have participated in the social responsibility activities. My reason for doing so was that I was supposed to take part in the activities for some subjects. My aim was to aid my circle and the society, to enable that they were pleased, and to make them happy."*

The second question of the qualitative part of the study is "What do you perform individually for protection of the environment? If you do not, state why.". All of the prospective teachers have stated that they engage in the activities for protection of the environment. Data obtained by this question and frequencies are included in Table 12.

Table 12: Statistical data for the prospective teachers' views on the protection of the environment

Views	Participants	F
Warning the ones who throw litter	1.M.P.T.-2.F.P.T.-4.F.P.T.-4.F.P.T.	4
To pick and throw the rubbish I notice around into litter bin	2.M.P.T.-2.F.P.T.-4.F.P.T.	3
Not doing anything	2.M.P.T.-3.F.P.T.	2
Participating in the activities of environmental cleanup	3.F.P.T.	1
Denouncing the problems faced with to the authorities	3.M.P.T.	1
Trying to keep the environment clean	2.F.P.T.	1
Not to use environmentally hazardous substances	1.F.P.T.	1
Sharing via social media to create awareness	4.F.P.T.	1
Following the current news related to the environment	4.F.P.T.	1
Informing the ones who apply disinfectant wrong	4.M.P.T.	1
Total	8	16

As is seen from Table 12, it can be stated that the prospective teachers take part in different activities for the protection of the environment. The prospective teachers have expressed their views mostly as warning the ones who throw litter ($f=4$) and picking and throwing the rubbish I notice around into litter bin ($f=3$). Accordingly, it can be said that the prospective teachers' behaviours towards protecting the environment are generally for the rubbish thrown around. Some of the prospective teachers answered this question of the study as the following:

1.M.P.T. *"I warn the people and children around me. By telling about the mistakes they make, I enable them not to make again."*

2.M.P.T. *"I try to pick and throw it into the waste bin when I see around, on the ground. I do not think I do anything else."*

The question of "How would your point of view be on a case/an issue which you have not experienced "by yourself" within the boundaries of Turkey (e.g. I concern / I do not concern about it.)? State the reasons for this." was directed to the prospective teachers, as the third question of this study. 6 of the prospective teachers answered the question in the way that they concerned; 1 of them stated that it was based upon what the issue was; and 1 of them answered as I do not concern about it. Data obtained in this context and information on the frequencies are included in Table 13.

Table 13: Statistical data for the prospective teachers' concerning about the issues encountered in Turkey

Views	Participants	F
The idea that it is also possible for me to experience the same cases/issues one day	3.F.P.T.-2.F.P.T.-4.M.P.T.	3
That being aware towards social problems is a duty of every effective citizen	4.F.P.T.-4.M.P.T.	2
Being able to understand people by feeling empathy	3.M.P.T.-3.M.P.T.	2
That the problems encountered in my country also affect me	4.F.P.T.	1
I care about the problems related to human and environment	1.M.P.T.	1
If the problem is a particular concern to us, we have to be aware	1.F.P.T.	1
The problems which others experience are not my concern	2.M.P.T.	1
Total	8	11

The prospective teachers have stated that they would concern about the problems encountered in Turkey, by the reason of the idea that it is also possible for me to face with the same issue one day ($f=3$); based on the fact that being aware towards social problems is the duty of an effective citizen ($f=2$) and in order to be able to understand people by feeling empathy ($f=2$). As for the prospective teacher stating that it depends on what the matter is, the answer has been given as we have to be aware if the problem is a particular concern to us ($f=1$). The prospective teacher who has given the answer 'I do not concern' explained the reason for this by saying 'the problems which others experience are not my concern' ($f=1$). Some of the prospective teachers answered this question of the study as the following:

2.F.P.T. *"Of course, I concern about a problem encountered. Because every issue arising in our country should be a particular concern to us. If we are not experiencing it today, this does not mean that we will not face with this problem tomorrow."*

3.F.P.T. *"Sure, I concern. Since I think that it is possible to happen to me or people around me, I do everything that I can."*

The prospective teachers were finally asked for giving an answer to the question of "Do you show awareness to a matter experienced in any country of the world? State the reasons for this.". 6 of the prospective teachers have stated that they concern; 1 of them answered in the way that I do not concern and 1 in the way that I partially concern. Data obtained in this context and information on the frequencies are included in Table 16.

Table 14: Statistical data for the prospective teachers' concerning about the issues encountered around the world

Views	Participants	F
That the issues encountered in the globalizing world concern the whole humanity closely	4.F.P.T.-4.M.P.T.	2
That the cases happening in immediate surroundings affect us more	2.F.P.T.	1
Common problems related to the nature and humanity should be a matter of concern	1.M.P.T.	1
That the happenings to innocent people make me sad	1.F.P.T.	1
That a case occurring anywhere also affects other countries	4.M.P.T.	1
That our being aware towards social problems is assumed by our religion	4.M.P.T.	1
The probability that similar problems can be encountered in our country	4.M.P.T.	1
That only the situation of Turkish people and Muslims is a concern to me	3.M.P.T.	1
Total	8	9

The prospective teachers have stated that they would concern the problems experienced around the world by reason of the fact that problems encountered in this globalizing world are definitely of concern to the whole humanity ($f=2$). The prospective teacher who has given the answer 'I do not concern' explained the reason for this by saying 'the cases happening in the immediate surroundings affect us more' ($f=1$). Also, the prospective teacher stating a partial concern has explained the reason of this by putting forward the idea that only the situation of Turkish people and Muslims is a concern to me ($f=1$). Some of the prospective teachers answered this question of the study as the following:

1.F.P.T. *"Yes, I show awareness. Ultimately, we are all human and I believe that innocent people are everywhere. No one deserves to see wars and cruelty."*

4.F.P.T. *"Sure, I show awareness to the global matters. Even if I were not a citizen of the country where the problem was being experienced, I would act responsibly by approaching on the basis of humanitarian values. At the same time, any problem encountered anywhere in the globalizing world will also affect the other countries."*

Discussion And Conclusion

Considering the results of the study, while a statistically significant difference according to gender variable has been found in the altruistic dimension in favour of women and in the national responsibility dimension in favour of men, a significant difference has not been found in the other dimensions. In a study carried out by Berkowitz and Lutterman (1968), a significant difference in favour of women was revealed. Moreover, Akbaş (2004) found that females were more responsible than males, as based on gender variable. In the study by Abdi Golzar (2006), it was also observed that a significant difference was present in favour of women. In the research which Ercan (2009) carried out with the study group involving secondary school teachers, a significant difference according to gender variable was detected in favour of females. In the study which Altunay and Yalçinkaya (2011) performed with the participation of prospective teachers, a significant difference was again found in favour of women. In the study by Taylı (2013), with a study group consisting of high school students, a significant difference in favour of female students was found. Female students mostly have higher academic achievement during school years, as compared to male students (Paulson, 1996: 205). When considered that there is a positive relationship between achievement and responsibility (Lickel, Schamer and Hamilton, 2003; Wentzel, 1991), it is expected that the responsibility levels will be high for the female students demonstrating a higher academic achievement, in parallel. The fact that girls are raised so as to be more responsible due to the reasons arising from gender roles as of very early ages while being brought up supports this consequence. The case that the significant difference in the national responsibility dimension is in favour of male prospective teachers shows similarity with the results of the research which Küçükşen and Budak (2017) carried out with the high school students. That a significant difference according to gender variable could not be found between the individual and social responsibility scores within the scope of the research which Özen (2009) performed on a study group including primary school eighth graders also promotes this information attained at as a result of the research. Also, in the study which Başer (2015) carried out with prospective teachers and Sezer (2008) performed on a study group consisting of primary school students, a significant difference between genders was not detected. Similarly, Şahan (2011) did not attain at a significant difference as based on the variable of gender for the 8th graders, in the study within the scope of which those students' sense of responsibility was analyzed.

When the variable of class level is considered, in the altruistic and ecological responsibility dimensions, significant difference has been found. As based on the altruistic dimension, the 1st and 2nd year undergraduate students are more responsible than the 4th year ones. As related to the ecological dimension, 1st year undergraduate students are more responsible than the 3rd and 4th year ones. In other words, what is understood from this, lower stage of class has developed more responsibility as compared to the higher-stage class level. Various studies supporting this conclusion have been encountered in the body of literature. Duman (2014) reached at the result indicating that in comparison with the twelfth graders, the eleventh graders have more positive views on their schools' fulfilling the duties related to social responsibility. In their papers, Reason, Andrew and Kee (2013) concluded that continuing education at university level has a positive effect on the development of responsibility. However, in the study carried out by Başer (2015), differentiation according to the class level variable was not observed.

According to the variable of mother educational level, significant difference appeared in the action-oriented responsibility dimension. This difference is for the level of postgraduate education, against the level of primary and high school education. In the study by Taylı (2013), it was seen that the mother educational level had positive effect on the development of sense of responsibility. Also, in the study which Aladağ (2009) performed on a study group including primary school students, a similar result was attained at. Özen (2009) arrived at significant difference in the social responsibility levels according to the variable of mother educational level. According to this, as the mother's educational level rises, the levels of children's undertaking responsibilities increase. Since the ones who raise the child are mothers as prescribed by social role, we can state that mother's educational level has a positive influence upon the child's undertaking responsibility. Besides, Altunay and Yalçinkaya (2011) analyzed the prospective teachers' opinions on traditional, universal and hedonistic values according to mother educational level in their research, but a significant difference could not be found.

In the study, significant difference has not been found as based on the variable of father educational level. The study carried out by Başer (2015) and the study by Altunay and Yalçinkaya (2011) support this. But, in the research that Özen (2009) performed, significant difference was found in the social responsibility levels according to the variable of father educational level. According to this, if father is high school graduate or postgraduate, students' individual and social responsibility levels become significantly higher compared to all other educational levels of father. Duman (2014) obtained the result that students whose fathers were primary school graduate had stated positive views on the schools' fulfilling their duties related to social responsibilities more than the ones whose

fathers were college graduates or postgraduate. Taylı (2013), in the analysis made by controlling the influence of gender, introduced that father's educational background was determinative on responsibility. In this regard, it can be thought that students' individual and social responsibility levels also increase as father educational level rises.

In consequence of the research, a significant difference in all dimensions at the levels of global social responsibility of the prospective social studies teachers has not been found as based on the variable of the number of siblings. However, in the study by Özen (2009), a significant difference was found by the number of siblings. It was seen that the ones who were three siblings developed responsibility more. Actually, it is expected that the oldest sibling in a family has developed the sense of responsibility more. But in this study, the number of siblings is not regarded as an influential variable.

Based on the simple correlation test performed among the dimensions, low degree of positive correlation between ecological responsibility and action-oriented responsibility; medium degree of positive correlation between ecological responsibility and altruistic responsibility; and low degree of positive correlation between ecological responsibility and national responsibility were realized. Medium degree of positive correlation between action-oriented responsibility and altruistic responsibility, and low degree of positive correlation between action-oriented responsibility and national responsibility were found. Low degree of positive correlation between altruistic responsibility and national responsibility was found. In other words, as understood from this point, all dimensions interact.

The qualitative part has been prepared to promote the quantitative part of the study. Considering the results for this, it is seen that the prospective teachers have stated the reason of having action-oriented responsibility as lending assistance to the ones who need, and in the way that being in cooperation is for the benefits of the society. The reason of developing the sense of altruistic responsibility takes its source from the feeling of empathy. In the dimension of national responsibility, the prospective teachers have stated that showing awareness and/or acting responsibly is required since the problems encountered all around the world will affect everyone in the world. The reason for ecological responsibility arises from the fact that clean environment is important.

Suggestions

- This study has been carried out with the prospective teachers. It can also be performed by different sample groups.
- In order that prospective teachers' awareness towards global social responsibility can be expanded, it may be suggested that academicians assign various responsibilities to the prospective teachers through the extracurricular activities, within the process of education.
- The content of the subject of Community Service Practices may be rearranged in a way to promote the development of the prospective teachers' sense of global social responsibility.
- Studies with different sample group and in different methods can be performed.
- Being a member of civil society organizations has an effect upon global responsibility. Prospective teachers may be directed to the CSOs.

Abstract

Information and communication technologies are one of the driving forces of advanced economies (ICT). How ICT professionals are remunerated as compared to other workers shows the importance of this industry in a certain state. This article analyzes the remuneration of ICT professionals in the Czech Republic by achieved education. For our analysis, we used data from the Labor Force Survey that contains annual information about wages and salaries in the Czech economy. We analyzed data time series, using the MS Excel platform and functionality. Based on our analysis, we have concluded that the structure of ICT professionals on the Czech market changed during the researched time period of 2000– 2007 – the group of ICT professionals with a secondary education strengthened by 10 percentage points to the detriment of the group of ICT professionals with a university education. We have also concluded that the median wage of all ICT professionals is above the median wage in the Czech Republic. We have not been able to prove a correlation between year-to-year changes in the median wage of ICT professionals and year-to-year changes in GDP.

Keywords: *Level of education, year-to-year wage increase, elementary education, secondary education, university education, GDP, ICT professionals.*

Introduction

Information and communication technologies (ICT) have become an integral part of our existence. From the very beginning in the 1950s and 1960s until the present. The dependency of entire society on ICT is critical from a technological standpoint. Information and communication technologies are practically used in all banking transactions on the global market as well as in transportation, logistics and international trade (Matejka & Vltavská, 2013). ICT also play a major role in public administration and local governments where the need for highly qualified ICT professionals keeps growing due to an ever-increasing data volume (trend big data) and the implementation of cloud computing technologies and open data concepts (Novotný, Doucek & Fischer, 2016). We can also see how ICT application in business and non-business sectors increases the competitiveness of individual regions and states (Mand'ák & Nedomova, 2014).

The relevance and importance of ICT professionals is regularly declared and presented at different economic forums and in publications, both local (Doucek, Nedomova, Maryska, 2015) and international. However, the key question is whether or not the growing wages of ICT professionals are actually in line with ICT professionals' importance for the Czech economy (Hanclova, & Doucek, 2012, Šimpach & Langhamrová 2014).

Wages in this industry, which are often higher than average wages in the rest of the economy, represent an important dimension of ICT implementation (Torrent-Sellens, 2008; Hanclova et al, 2015; Marek, Doucek, 2016). This is also a topical discussion on equality – whether or not the same work is remunerated equally, i.e. whether or not there is equality in the remuneration of ICT professionals in the Czech economy (Fischer & Vltavská 2012).

Based on our longtime research, we analyze different aspects of the impact of information and communication technologies on human society as well as on microeconomics and macroeconomics.

Problem Formulation

Our article presents the structure of ICT professionals in the Czech economy by achieved education and analyzes the median wage of ICT professionals in the Czech economy during 2000 – 2017 by achieved education. We mostly compare the trend in wages represented by median earnings. For the purposes of our research, we formulated the following research questions:

RQ1: How did the structure of ICT professionals in the Czech economy by achieved education change between 2000 and 2017?

RQ2: What is the median wage in the Czech Republic and the median wage of ICT professionals by achieved education?

RQ3: Is there a correlation between year-to-year changes in the median wage of ICT professionals and year-to-year changes in GDP?

Material And Methods (Data Collection)

The Average Earnings Quarterly Survey is harmonized with the Structure of Earnings Research of the European Union (see Commission Regulation (EC) No. 1916/2000, as amended) and provides information about the gross monthly wage (salary), hourly earnings and wage (salary) components, i.e. bonuses, extra pay and reimbursements. The gross monthly wage in our data file is a multiple of hourly earnings in the second quarter and average monthly work hours in individual years. Average work hours were rounded off. We also show the number and structure of hours worked (e.g. overtime) and not worked (e.g. sick leave and vacation). The Average Earnings Information System (AEIS) includes Regional Statistics of Labor Cost (RSLC) that provides detailed information about the difference in wages in the individual regions of the Czech Republic. The Average Earnings Quarterly Survey is sponsored by the Ministry of Labor and Social Affairs (MLSA) and managed by a commission comprising of the representatives of the MLSA, the Czech Statistical Office (CSO), the Ministry of Finance, the Czech National Bank, the Czech-Moravian Confederation of Trade Unions, The Union of Industry and Transportation of the Czech Republic, the Center for Economic Research and Graduate Education of Charles University and the Economics Institute of the Czech Academy of Sciences (CERGE EI), the University of Economics in Prague and other institutions. The AEIS is prepared by TREXIMA.

For our research, we classified ICT professionals in the Czech economy in accordance with the CZ-ISCO methodology (ISCO, 2015) that divides ICT professionals into the following three main groups (CZSO, 2014):

- ICT managers (CZ-ISCO 133);
- ICT specialists (CZ-ISCO 25);
- ICT technicians (CZ-ISCO 35).

The wages during the researched time period are shown as the median instead of the average. The median represents the middle of all identified wages, i.e. 50% of employees have higher earnings than the median and 50% of employees have lower earnings than the median. The median is usually a better indicator of earnings than the average because it is not affected by extreme earnings and it directly shows the earnings of the “middle employee.”

Our data were processed, using mainly MS Excel and also big data processing tools, which in our case was Microsoft SQL Server and SPSS statistics software.

GENERAL DATA CHARACTERISTICS

Our analyses always work with data for the second quarter of the relevant year because such data are more stable than data for other quarters. The size of the analyzed sample of ICT professionals gradually increased from over 8,000 in 2000 to over 50,000 in 2017. The size of the analyzed sample concerning the entire Czech Republic increased from the original one million to over two million.

RESULTS AND DISCUSSION

The analyzed data were processed in MS Excel to obtain answers to our research questions.

RQ1: How did the structure of ICT professionals in the Czech economy by achieved education change between 2000 and 2017?

The trend in the structure of ICT professionals in the Czech economy from 2000 to 2017 is shown in [Figure 1].

Figure 1: The structure of ICT professionals in the Czech economy by achieved education (Source: authors. Data Trexima)

The data in [Figure 1] show that an elementary and vocational education is not practically represented. The percentage of ICT professionals with an elementary education is very insignificant. During the research time period, we identified ICT professionals only during three years and their percentage did not exceed 0.50%. The percentage of ICT professionals with a vocational education is small – 1.00% in 2011 and 1.09% in 2017. It means about one percentage point. The percentage of ICT professionals with a complete secondary education during the researched time period kept growing – from 25.17% in 2000 to 34.44% in 2017. The percentage of ICT professionals with a bachelor's degree went up during the researched time period from 2.57% in 2000 to 12.49% in 2017. The percentage of ICT professionals with a master's degree is the highest – 70.20% in 2000 and 50.27% in 2017. This decreasing trend is the result of a new perception of ICT professions. Contrary to the past, these professions now require only a secondary education. The percentage of ICT professionals with a Ph.D. decree was 2.07% in 2000 and 1.71% in 2017.

Overall, the percentage of ICT professionals with a university education dropped during the researched time period (74.83% in 2000 and 64.47% in 2017). On the other hand, the percentage of ICT professionals with a secondary education went up (25.17% in 2000 and 35.53% in 2017). It is important to point out that the absolute number of ICT professionals keeps growing. Therefore, even though there was a relative decrease in the percentage of ICT professionals e.g. with the highest education (Ph.D.), their absolute number went up.

RQ2: What is the median wage in the Czech Republic and the median wage of ICT professionals by achieved education?

In order to compare the median wage for each education level of ICT professionals with the median wage in the Czech Republic, we had to include in the chart the median wage in the Czech Republic. The chart shows the share of each level of education on the median wage in the Czech Republic. Therefore, if the chart shows that the level of education is 40% in positive numbers, it means that the median wage in this level of education is a 1.4 multiple of the median wage in the Czech Republic. These relations are shown in [Figure 2], where the median represents 0 on the Y axis.

Figure 2: The trend in the median wage of ICT professionals during 2000 – 2017 by achieved education and its comparison with the median wage in the Czech Republic (Source: authors. Data Trexima)

For a better comparison of the trend over time and the trend in the entire economy, the chart also shows year-to-year changes in GDP and year-to-year changes in the median wage of ICT professionals. [Figure 2] shows that the median wage for practically all levels of education of ICT professionals is above the median wage in the Czech Republic and that the median wage of ICT professionals with a university education (a master's degree and Ph.D. degree) went up considerably between 2006 and 2007.

The median wage of ICT professionals with a vocational education during the researched time period was on average a 1.27 multiple of the median wage in the Czech Republic. The median wage of ICT professionals with a complete secondary education was on average a 1.40 multiple of the median wage in the Czech Republic. The median wage of ICT professionals with a bachelor's degree was similar to that of the ICT professionals with a complete secondary education but was quickly going up during the past five years of the researched time period. [Figure 2] shows that the median wage of ICT professionals with a bachelor's degree was 1.42 times higher than the median wage in the Czech Republic mainly thanks to the last six years of the researched time period. The median wage of ICT professionals with a master's degree was 1.79 higher and the median wage of ICT professionals with a Ph.D. degree was even 1.88 times higher than the median wage in the Czech Republic.

The medians of all levels of education of ICT professionals basically represent an increase in the multiple of the median wage in the Czech Republic in the long run. In particular, in the case of ICT professionals with a master's degree and Ph.D. degree.

RQ3: Is there a correlation between year-to-year changes in the median wage of ICT professionals and year-to-year changes in GDP?

To answer this question, we also analyzed the GDP in the Czech Republic. The data are provided in [Figure 3].

Figure 3: Year-to-year changes in the wage of ICT professionals in the Czech Republic during 2000 - 2017 by achieved education (Source: authors. Data Trexima)

[Figure 3] shows a big disarray in annual increments of median wages. A big fluctuation in individual years for different levels of education indicates an acute shortage of ICT professionals of certain professions (ICT technicians – e.g. in 2003, 2011, 2014, 2015 and 2016 and ICT specialists in 2003 and 2007) during certain periods of time. Starting in 2015, year-to-year increments were relatively stable, and ICT professionals with a lower level of education show the highest year-to-year increment.

After having verified the assumptions, we used a correlation analysis to identify a correlation between the trend in the wage of ICT professionals (regardless of their achieved education) and the trend in GDP. The correlation coefficient for relations in the current year was 0.3776. We were unable to prove any statistically significant correlation between year-to-year changes in the GDP of the Czech Republic and year-to-year changes in the median wage of ICT professionals.

Conclusion

The overall conclusions of our analysis are as follows:

RQ1: How did the structure of ICT professionals in the Czech economy by achieved education change between 2000 and 2017?

- The percentage of ICT professionals with an elementary education is very insignificant.
- The percentage of ICT professionals with a secondary education in the Czech Republic during the researched time period went up from 25.17% in 2000 to 35.53% in 2017.
- The percentage of ICT professionals with a university education (a bachelor's degree, master's degree and Ph.D. degree) during the researched time period went down from 74.83% in 2000 to 64.47% in 2017.

Due to changes in the classification of ICT professions in the Czech Republic, we can expect that the percentage of ICT professionals with a complete secondary education and a bachelor's degree will go up because many ICT professions that used to require a master's degree were reclassified to a bachelor's degree or even a secondary education.

RQ2: What is the median wage in the Czech Republic and the median wage of ICT professionals by achieved education?

- The median wage for all levels of education of ICT professionals was above the median wage in the Czech Republic.

- The ratio between the median wage in the Czech Republic and the median of the level of education regularly increased during the past six years only in the case of ICT professionals with a bachelor's degree; other levels of education oscillate around the average multiple of the median wage of the Czech Republic.
- Average multiples of the median wage in the Czech Republic for the median wage of ICT professionals by achieved education are provided in [Table 1].

Table 1: A comparison of the median wage by achieved education and the median wage in the Czech Republic

Level of education	Multiple of the median wage in the Czech Republic
Vocational	1.27
Complete secondary	1.40
Bachelor	1.42
Master	1.79
Ph.D.	1.88

RQ3: Is there a correlation between year-to-year changes in the median wage of ICT professionals and year-to-year changes in GDP?

We were unable to prove this correlation. After having verified the assumptions for a correlation analysis, we calculated a correlation coefficient of 0.378, which is a very weak correlation.

tulinarinangenc@gmail.com

Abstract

The purpose of this study is to determine the effect of micro-teaching practices on prospective teachers. The research was carried out in Düzce University Faculty of Education Classroom Teaching Science and Technology Teaching course. Within the scope of this course, the effects of the practices which have been made with micro-teaching were investigated. After the weekly micro-teaching practice, prospective teachers are asked to evaluate the practices. Quantitative data in the research using the mixed research design was obtained with the "Micro-teaching Peer Review Form"; qualitative data were obtained by open-ended questionnaire. According to the results obtained, as the week progressed, the average of the quantitative data points increased; it has been determined that prospective teachers offer more suggestions in qualitative data. This can be explained as the fact that prospective teachers learn many things from micro-teaching and show that they have developed themselves, while at the same time helping them to think about more alternative practices. In this regard, it has been determined that prospective teachers are aware of their mistakes by evaluating themselves and their peers while developing their teaching abilities, and that they are able to overcome their weaknesses by recognizing their weaknesses and strengths.

The Influence of a Concept Mapping-Based Exam on Students' Exam Performance

Dawood Al-Hamdani

The Postgraduate Centre, Sohar University, alhamdani@soharuni.edu.om

Musabah Al Breiki

Faculty of Language Studies, Sohar University, 161286@students.soharuni.edu.om

Absrtact

The aim of the study was to explore the effect of Concept Mapping (CM) exam on students' retention and students' exam performance. Two sets of exams were developed: a regular format exam and a Concept Mapping-Based Exam. The Concept Mapping-Based Exam contained a blank concept maps similar to the ones in the 7th-grade student's science book. Both exams have the same number of questions. Seventy students from grade 7th at Al-Arqam Ibn-Abil-Arqam School, one of the Basic Education schools in Oman, were the sample of the study and were taught two units from the 7th-grade students' science book by the regular teaching method and by the same teacher. Thirty students participated in taking the exam, 16 were to do the regular exam and 16 were to do the Concept Mapping-Based Exam. The exams were distributed to them randomly. The study showed that the students who took the Concept Mapping-Based Exam outscored those who took the regular one. It is interesting that the study showed there was a positive correlation between recalling information and the presence of Concept Maps in the 7th-grade student's science book as the exams showed.

Introduction

Teachers need to know how their students learn to help them excel in their learning. In other words, it is important for teachers to know how students process, store and retrieve information. Some teachers teach students without having much formal knowledge of how students learn (Fry, Ketteridge, & Marshall, 2009). Therefore, teachers need to use techniques/approaches to help students learn information more effectively.

There are no simple answers to the questions 'how do learners learn?' and 'how teachers bring about learning?' The knowledge about the relationship between teaching and learning is still incomplete, but teachers do not know enough about learning to be able to make some firm statements about types of action that will usually be helpful in enabling learning to happen (Fry, Ketteridge, & Marshall, 2009).

Some literature shows that students learn through organizing the new information in a certain schema. Schema is the map about a certain topic or theme that helps the learners to put new information into a meaningful context (Anderson, 1984, p. 5). To do this, learners have to activate their schemata to interpret the texts and to make sense and this is called the schema theory which "focuses on the role of the individual in the comprehension process and how background knowledge and interests influence the reader' interpretation" (Omaggio, 1993).

Ausubel states that "as a result of this type of anchorage to cognitive structure, the newly-learned material is no longer dependent for its incorporation and retention on the frail human capacity for assimilating and retaining arbitrary associations" (Ausubel, 1967: 20). Morton (2018) maintains that "Concept mapping tools allow you or your students to visually depict a system of relationships by creating a map in which nodes represent ideas or facts, and lines or connectors between nodes represent relationships". This came along with the Schema Theory which suggests that learners take new information and stores it in pre-existing hierarchies or channels (Dye, 2000) and reduce the amount of incoming information through deleting the unimportant ones, they will easily store the information into their long term memory instead of the working memory and then they can remember them quickly (Sweller, 1988).

Vanides, Yin, Tomita, & Ruiz-Primo (2005) maintain that the teachers can have insights into how learners organize and represent knowledge when their students create Concepts Maps.

The Concept Maps can be also used as a tool to assess students' learning. Tuan & Thuan (2011) argue that Concept Mapping has been proven to be a powerful instructional tool which assists teachers to assess learners' understanding and make connections between concepts explicitly. Ruiz-Primo (2004) maintains that the use of Concept Maps to evaluate student declarative knowledge structure is appealing. A student's map directly reflects, to some degree, a student's understanding in a domain; there is a potential in using concept maps as assessment instruments.

Varghese (2009) views the use of Concept Map as an effective way of looking at what is inside the learner's mind and reveals a conceptual understanding that is not generally identifiable by other assessment tools such as written tests.

This can be a useful strategy for assessing the knowledge learners have before engaging in further learning or a new program or course (Hay, Kinchin & Baker, 2008).

The Significance Of The Study

In Oman Government schools, students' learning assessment is based on the traditional test. The items in the traditional test can be written in various formats such as multiple choice, matching, true/false, short answer, and essay. Some of these tests require students to memorize knowledge. The aim of this study is to explore the effectiveness of using Concepts Maps as an assessment tool for students' performance. Approving effectiveness, teachers can use Concept Maps as tools to assess their students' performance, helping to recall information easily in the process they learned information.

The Study Questions And Hypothesis

What impact does Concept Maps have over students' retention?

Is there any significant difference in the performance of students taking Concept Maps exam and of those taking normal exam?

Context Of The Study

The Government schools in Oman underwent an educational reform in 1998 and the Ministry of Education introduced a new schooling system called "Basic Education system" in the academic year 1999-1998 (Al-Issa & Al-Bulushi, 2012). The new system consisted of 10 years of Basic Education (Grades 1 to 10) and 2 years of Post-Basic Education (Grades 11 and 12). The Basic Education has two cycles which are Cycle 1, consisting of grades 1- 4, and Cycle 2, containing grades from 5 to 10 (Al-Jardani, 2014). The current study was conducted in one of the male schools in Cycle 2 (Al-Arqam Ibn-Abil-Arqam School) and specifically in grade 7 in the science subject. The science book consisted of five units and this study utilized unit 4 as it is the most suitable unit to perform the experiment and it is convenient to employ the Concept Mapping format for the assessment. The unit is entitled "Changes in the Earth Crust" and it contained five lessons. The teacher taught this unit for two weeks.

Study Design And Instrumentation

The study took place in semester two of the academic year 2017-2018. Before conducting the study, the researchers chose one class randomly and they divided the class into two groups randomly; the control group and the experimental group consisted of 16 students each. To check the homogeneity of the two groups, the researchers looked at the scores of the students in four tests taken previously. Table 1 and Table 2 show the students' scores in these tests.

Table 1 Shows the Students' Scores in These Tests

Group	Quiz1	Quiz2	Quiz3	Mean	Group	Quiz1	Quiz2	Quiz3	Mean
Control	8	4	5	13.7	experimental	4.5	8	7.5	15.0
Control	2	7	7	11.3	experimental	4	5	6	11.0
Control	6.5	4	7	12.8	experimental	3.5	10	8	16.2
Control	7	8	7	17.3	experimental	5	6	8	13.7
Control	3.5	5	6	10.5	experimental	7	10	7.5	19.5
Control	6.5	6	6	14.5	experimental	9	5	9	17.0
Control	9	10	10	22.3	experimental	10	9	10	22.3
Control	9	7	8.5	18.8	experimental	5.5	4	6.5	11.7
Control	2	5	7.5	9.5	experimental	7	8	8	17.7
Control	4	2	5	7.7	experimental	6	9	7	17.3
Control	10	8	7.5	20.5	experimental	10	10	8	22.7
Control	8	7	9.5	18.2	experimental	6	6	4.5	13.5
Control	8	6	5.5	15.8	experimental	8	9	5	18.7
Control	5.5	3	7.5	11.0	experimental	10	8	8	20.7
Control	5.5	6	6	13.5	experimental	8	9	10	20.3
Control	7	5	6	14.0	experimental	3	1	10	7.3

Table 2 Summarizes the Result

Group	Mean	N	Std. Deviation
Control	6.344	16	2.4408
Experiential	6.656	16	2.3503

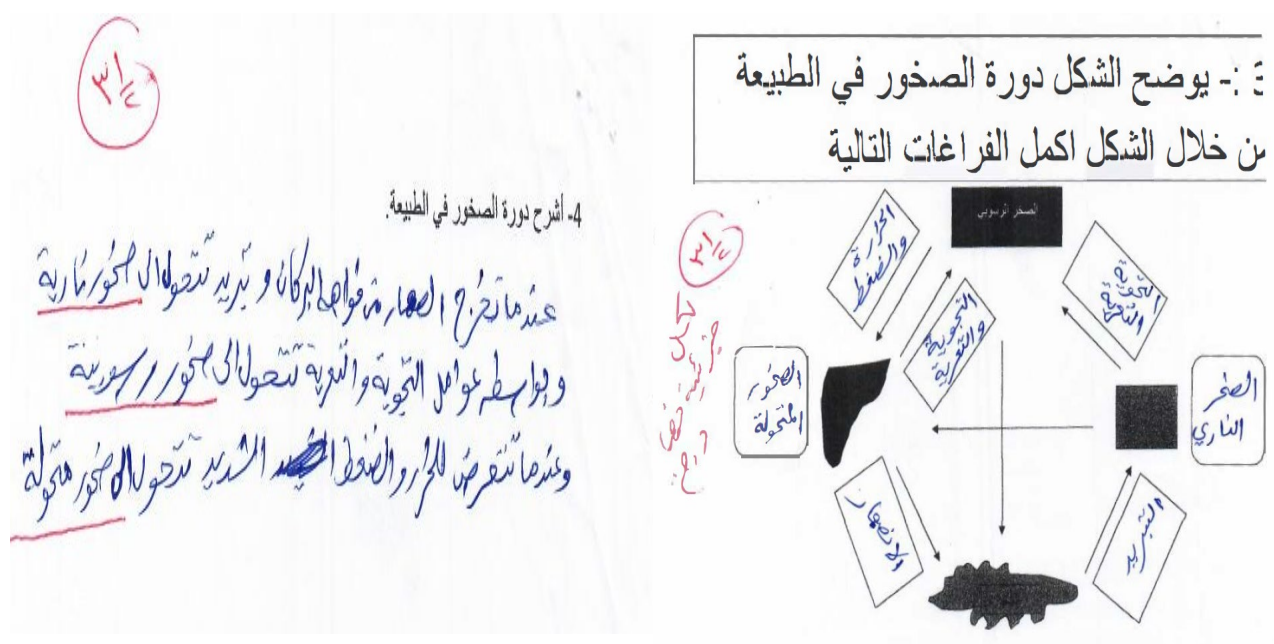

Table 3 shows the results of the tests indicating that there is no statistical difference between the two groups, thus, the two groups are homogeneous and equivalent for the purpose of conducting the study.

Table 3 Means and Stander Deviation for Groups Homogeneous Exam Results

	Groups	N	Mean	Std. Deviation	T	Sig
Quiz One	Control	16	6.344	2.4408	-.369	
	Experimental	16	6.656	2.3503	-.369	0.959
Quiz Two	Control	16	5.813	2.0402	-1.826	
	Experimental	16	7.313	2.5747	-1.826	0.263
Quiz Three	Control	16	6.938	1.4705	-1.361	0.787
	Experimental	16	7.688	1.6419	-1.361	

Measure

The teacher designed two tests that measured the knowledge which students learned in unit four. The two tests consisted of five questions, however, the first test assessed the conceptual knowledge in that unit in a normal way (as tables and points) for the control group and the second test assessed the same information using concept mapping format for the experimental group. After finishing teaching unit four, the researchers administered the two tests for the experimental group and the control group. Figure 1 shows an example of question 3 for the control group and Figure (1) illustrates an example of the same question for the experimental group.

**Figure 1.** Sample of Question (4) for the Control Group and Question (2) for Concept Map Exam.

Results

Table 4 shows that the experimental group outperformed the control group in all five questions of the test. Furthermore, the overall scores of the experimental group are higher than the control group indicating that the Concept-Mapping format has a positive effect on students' performance in the test.

Table 4 *Descriptive Statistics for Students' Exam Performance*

	Group	N	Mean	Std. Deviation
Q1	Control	16	2.625	2.1794
	Experimental	16	2.156	1.9555
Q2	Control	16	.000	.0000
	Experimental	16	3.063	2.6700
Q3	Control	16	.625	1.2450
	Experimental	16	1.969	1.4079
Q4	Control	16	.250	.5774
	Experimental	16	1.125	.8466
Q5	Control	16	.813	1.7970
	Experimental	16	.938	2.0484
Overall	Control	16	.8625	.72560
	Experimental	16	1.8500	1.37695

Moreover, Table 5 indicates that there is a significant difference between the control group and the experimental group in favour of the experimental group in the overall score.

Table 5 *Intendent T-Test for the Control Group and the Experimental Group*

	Group	N	Mean	Std. Deviation	F	Sig.
Overall	Control	16	.8625	.8625		
	Experimental	16	1.850	1.8500	7.066	.017

However, looking at each question separately, it is noticeable that questions 2, 3, and 4 obtained a statistical difference, though there was no statistical difference in questions 1 and 5.

Table 6 *The Independent T-Test for the Two Groups in Exam 5 Questions*

	T	df	Sig.	Mean Difference
Question#1	.640	30	.527	.4688
Question#2	-4.588	30	.000	-3.0625
Question#3	-2.860	30	.008	-1.3438
Question#4	-3.416	30	.002	-.8750
Question#5	-.183	30	.856	-.1250

The researchers contributed the result of no significant difference for question one and question five to the visual clues given in the two questions; the two questions in a traditional format contain tables which might help the students to recall the required information to answer the questions as shown in the figures below.

1- عدد طبقات التركيب الكيميائي للأرض.

أ- القشرة الأرضية
ب- الوشاح
ج- اللب

2- قارن في جدول بين طبقات التركيب الكيميائي للأرض :
من حيث (المفهوم - أمثلة - نسبته من الكرة الأرضية - السمك أو نصف القطر).

نوع الطبقة	مفهومها	أمثلة عليها	نسبتها من الكرة الأرضية	السمك أو نصف القطر
القشرة الأرضية	هي الطبقة التي تغطيها الحياة التي تقع فوق قشرة الوشاح	الأكسجين السيليكا الألمنيوم	0.5 %	بين 5 Km و 80 Km
الوشاح	هي الطبقة الواقعة بين القشرة واللب	المغنيسيوم الأكسجين السيليكا	66.5 %	2900 Km
اللب	هو الطبقة التي توجد من أسفل الوشاح وصولاً إلى مركز الأرض	الحديد - النيكل	33 %	3430 Km

6- المقصود بكلا من هذه الأنواع من أنواع التجوية:
ب- التجوية الميكانيكية: هي السابجة عن القوة المباشرة للصخور
ج- التجوية الكيميائية: هي السابجة عن تفاعل الصخور مع المواد الكيميائية في البيئة
د- التجوية الحيوية: هي عبارة عن التغير الفيزيائي أو الكيميائي للصخور التي تسبب فيه بعض الكائنات الحية.

7- أذكر أمثلة على أنواع التجوية في الجدول التالي:

حيوية	كيميائية	ميكانيكية
نمو جذور النباتات في الصخور	الحجر الجيري وحمول الجير والبيات	سقوط الصخور من الجرف الصخري

Figure 2. Question #1 and Question #2 in the traditional format

Furthermore, it is interesting to notice that the scores of the students higher for the information which is presented in maps concept (in the Ninth science book). For examples, the concept map in question two is similar to the concept map and the concept map in question three is similar to the concept map in the student's textbook: mean=3.063 and mean=1.85; see Figure (3) and Figure (4).

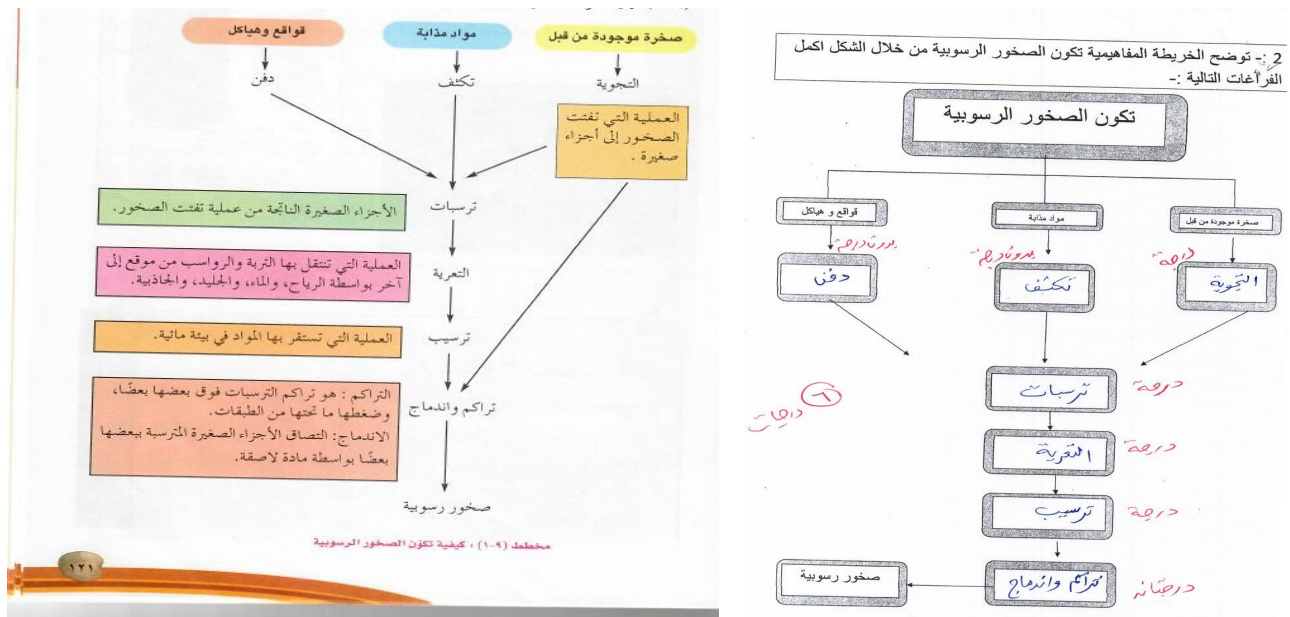

Figure 3. Page (121) from Student's Textbook and Question (2) from Concept Map Exam

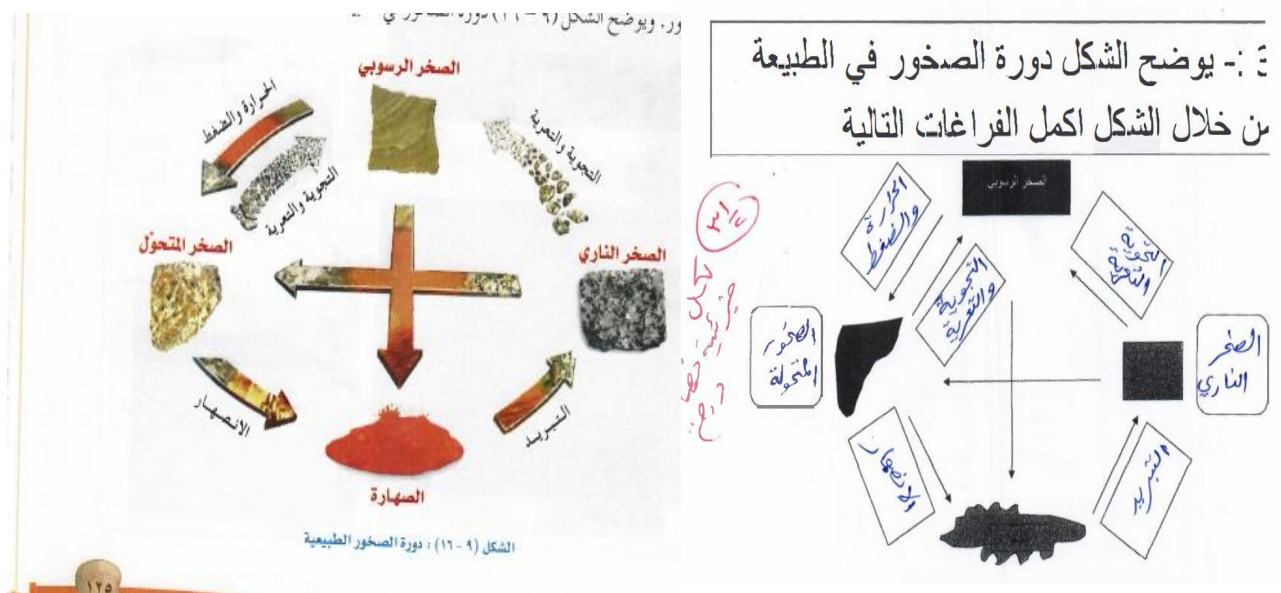

Figure 4. Page (125) from Student's Textbook and Question (3) from Concept Map Exam

Conclusion

Generally speaking, the study reveals the importance of Concept Maps in drawing a conclusion about how students learn, store and retrieve information. The study shows a positive impact of using Concept Maps in exams; the students who took the exam which contained Concept Maps scored higher than their counterparts; Also, the researchers found out the scores of the students higher for the information which is presented in Maps Concept (in the Ninth science book). Therefore, it is safe to say, that teachers can incorporate Concepts Maps in their exams to help their students retrieve the learned information effectively.

The Influence Of Rhyme Teaching To Articulation Skills Of Students At Anatolian High Schools, Learning German As A Second Foreign Language

Züleyha Evren
zkaraduman77@gmail.com

Şerif Oruç
soruc@gazi.edu.tr

Abstract

The aim of this study is to provide phonological awareness for students of Anatolian high schools, learning German as a second foreign language, by using rhymes during the lessons and to demonstrate the positive effect of this method to their articulation skills. Based on the opinion, that exercises offered in school books are not sufficient for students to pronounce words correctly in the targeted language and the fact that in lessons, there is not enough time spent for pronunciation exercises, researches, entreated the effect of rhymes to pronunciation and language learning, were examined, and the idea appeared, that learning rhymes could help students correcting their pronunciation mistakes devoted the targeted language. In the study, single group pre-test and final test model was applied to Anatolian high school students learning German as a second foreign language. for voices which are present in German but are written different from Turkish. In the pre-test, four voices present in German and different written in Turkish were determined and a paragraph was read by students, correct reading frequencies were noted down, and rhyme exercises were put into practice for six weeks(20 minutes per week).At the end of the period students were made to read sentences at the final test, containing the same voices but in words they never came across before and correct reading frequencies were noted down. Acquired results that for every voice, there was an increase in the right reading frequencies. Finally, a questionnaire consisting of completely structured questions was applied to the students. Also, the results of the questionnaire verify that rhyme exercises have a positive influence on students, providing phonological awareness and correcting pronunciation mistakes.

Key Words: *German as a second foreign language, articulation, pronunciation, rhyme, phonologic awareness*

The Landscape Of Blended Learning Practices: The Need For Better Understanding Of The Interventions And Implementations

Malissa Maria Mahmud
Sunway University
malissam@sunway.edu.my

Yazilmiwati Yaacob
Sunway University
yazilmiwati@sunway.edu.my

Othman Ismail Ismail
University of Technology MARA
othmani@salam.uitm.edu.my

Abstract

With the aim to examine the efficacy of technological uses and outcome of the measured dependent variables in blended learning studies, meta-analysis was applied. The effect sizes (ESs) yielded from the 96 included samples were acquired from the application of Cohen's d formula (1988; 1992), where the estimation was done using the standardized mean difference score, divided by the standard deviation pooled across the treatment and control group. Subsequently, the combined ES was probed to grasp the overall effectiveness. The 96 included samples with similar types of interventions and dependent variables had their individual ESs averaged to obtain the combined effect size (ES). The coalesced ES was interpreted using Cohen's (1988) Benchmark to yield a strength of either small, medium or large. The findings denote that all three categories of intervention implemented in blended learning are effective in improving learners' performance specifically in the context of language teaching and learning. Instances of small and negative ESs were also obtained suggesting adverse repercussions; however, should not be associated solely to an absolute poor execution yet the disparity of the ESs yielded implies that effectiveness is contingent and circumstantial to the context and how technology is applied, involving factors and debilities; an impediment which should not be resolved by one single average value when assembling a conclusion.

The Leadership Styles and Supervisory Competence of Master Teachers in Selected Schools in the National Capital Region as Base Reference for Competency Upgrading

Cipriano Bisco Jr.
Ricardo P. Cruz Sr. Elementary School
jrbisco428@yahoo.com

Elvira Bagacina
ebagacina@yahoo.com

Marilou Bisco

Introduction

Leadership indulged through leaders fractioned the influence of people's morale towards the organizations and its constituents. Accomplishing school endeavours was in great need of head teachers that were holistic in all aspect of leading his subordinates and his organization.

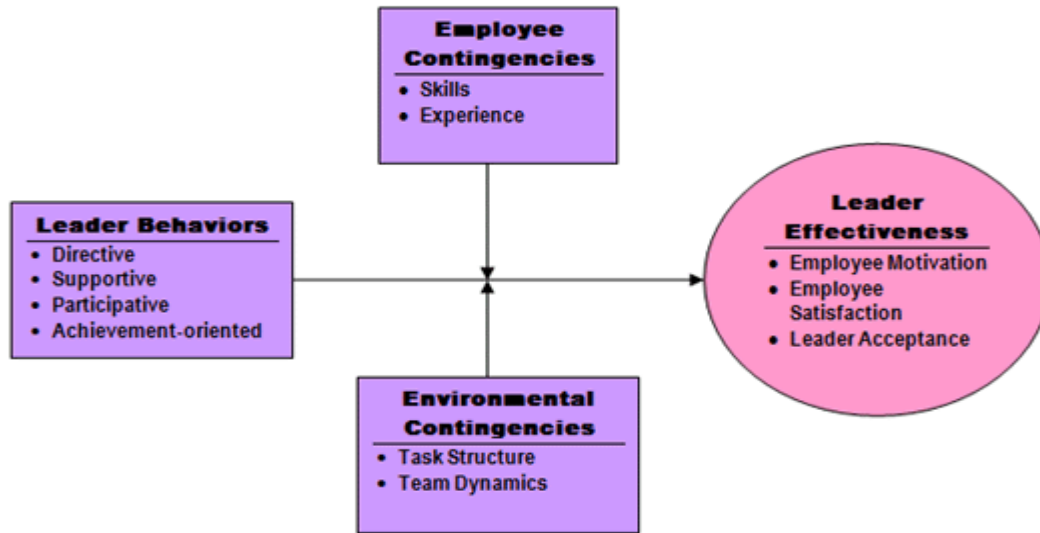

However, leader in today's environment of management who is not in an advocating change has many external environmental forces, such as economics, technology and even governmental regulations are affected in profound impact on such environment. With few resources, workers have realized that they must do more with less; they understand that jobs need to be restructured and new management systems need to be developed. They also know that if an organization is going to be efficient and effective, the work force must maximize to the fullest. Moreover, leaders' motivation towards school environment is one of the elemental notions that could largely influence their sentiments towards the institution. It's unimaginable to lead people and if teachers if teachers do not even have basic competence and feel threatened because of their lack of preparation for it.

One of the priorities of heads of school is to monitor the teaching learning process in their schools. Monitoring involves actions envisaged by the head to ensure that things are going according to the objectives set at different levels and at different points in time and also to see to it that things are revolving according to plan and in line with the target set. The purpose of monitoring is, as such, to increase efficiency and improve effectiveness of the system in place. Since teachers and heads are input variables in a school, the head, as an instructional leader must support and facilitate any initiative conceived by teachers.

Theoretical Framework

This presents related theories and concepts that will help the researcher create a clearer a picture to the research.

The path-goal theory of leadership, this theory states leader's behavior is important for good performance as a function of its impact on subordinates' perceptions of paths to goals and the attractiveness of the goals. When leader behavior clarifies these goals or makes them more attractive the satisfaction, performance, and the leader acceptance is expected to increase. The specific relationship between leader behavior and these criteria will depend upon the personality of the subordinate and the existing task environment.

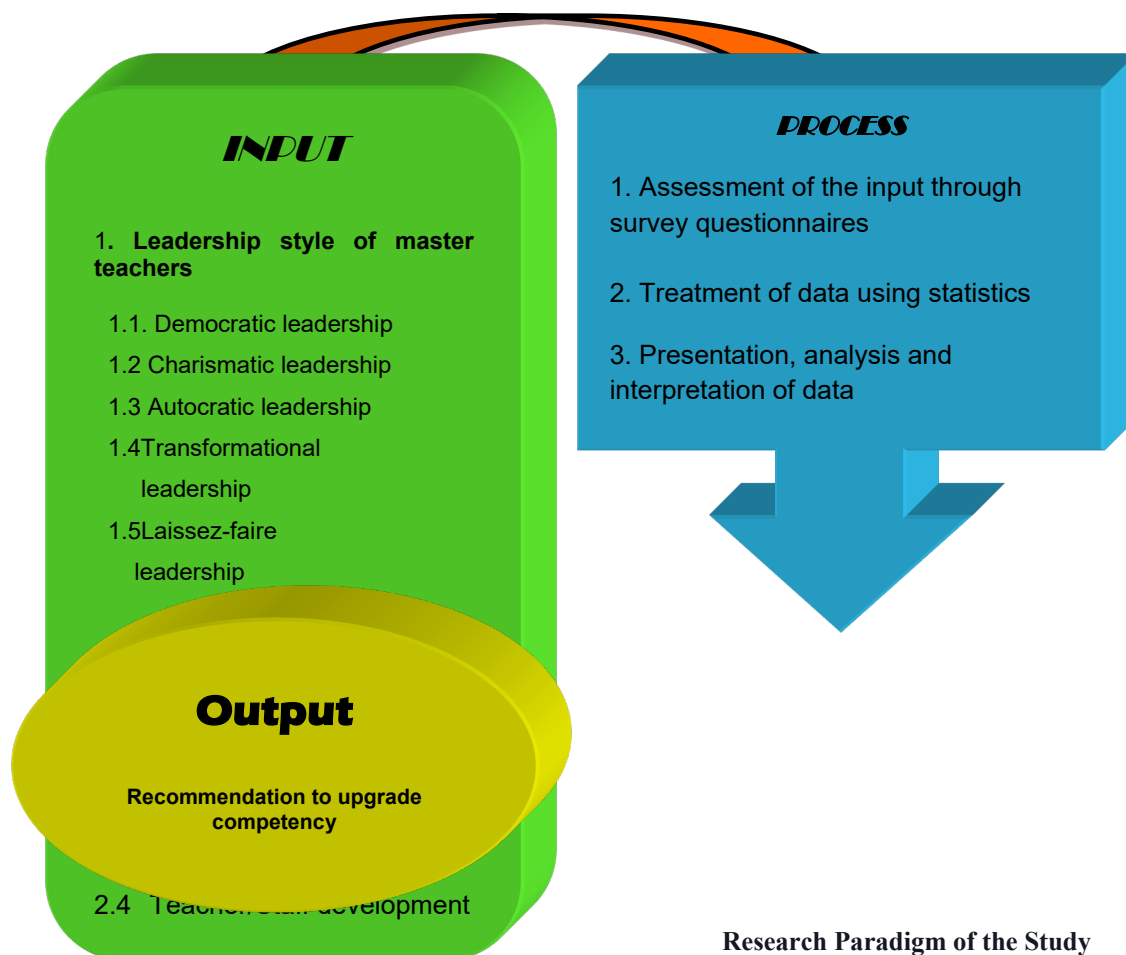

Path-goal Paradigm theory

Figure 2

Conceptual Framework

The research is guided by Path Goal Theory and researcher conceptualized an Input-Process-Output system which served as the direction of the research and it is represented in figure 2.

Research Paradigm of the Study

Figure 6

Figure 5 shows the relationship among the I- P- O system of the research study. The system starts with the INPUT which contains the data obtained from the Leadership style of master teachers; democratic leadership, charismatic leadership, autocratic leadership, transformational leadership, laissez-faire Leadership; And Supervisory function of head teachers, instructional supervision, school improvement, pupil's development; and teacher/Staff development. The PROCESS shows how the input will be processed through survey questionnaires. The data that will be gathered will be treated using statistics for presentation, analysis and interpretation of data.

Lastly, the OUTPUT shows the end result of the study which are the interventions to upgrade the teacher's level of competence.

Statement of the Problem

This study aimed to determine the leadership styles and supervisory competence of master Teachers in National Capital Region as Base Reference for Competency Upgrading.

Specifically, it sought to answer the following questions.

1. What leadership styles are embraced by the master teachers?
 - 1.1 Democratic leadership;
 - 1.2 Charismatic leadership;
 - 1.3 Autocratic leadership;
 - 1.4 Transformational leadership; and
 - 1.5 Laissez-faire leadership
2. What is the level of competence of the respondents in the performance of their supervisory functions in the area of:
 - 2.1 Instructional supervision
 - 2.2 School improvement
 - 2.3 Pupils development; and
 - 2.4 Teacher/Staff development
3. Do the leadership styles of the master teachers significantly affect their level of competence in performing their supervisory functions?
4. Based on the findings of the study, what could be recommended to upgrade the competency of teachers?

Hypothesis

The leadership styles of the head teachers do not significantly affect their level of competence in performing supervisory competence.

Significance of the Study

The study aimed to contribute empirical data on the issues of Leadership styles and supervisory competence of master Teachers in Division of Taguig City and Pateros: Base reference competency upgrading.

The result of this study would be beneficial to the following:

Department of Education (DepEd). It helps particularly the secondary education would be provided with the prevailing leadership styles or practices which could serve as basis understanding the dynamics or performance. Likewise it would improve the scope of in-service preparations programmes for head teachers to enhance efficient and effective leadership style.

Principals. It helps them to pre-examine and appraise their own leadership and make adjustments where necessary. They may also realize their leadership styles may vary depending on who they are dealing with and the situation they are in.

Head Teachers. It helps in formulating techniques and styles of leading the group and manage his/her works in the field of his/her skills and potentials on leadership and management to enhance the effectiveness and efficiency of his or her teachers.

Teachers. It may utilize the results of this study to participate actively in the decision making process in term of curriculum, planning, improvement of subject instructional materials and enhance their teaching performance.

Students. They will receive quality education will greatly benefit from the study and may lead other people in the most and better way styles and able learn the good value of without looking for any return.

Future Researchers. They will use to guide for them who may be interested to conduct other related studies about head teachers leadership styles.

Scope and Limitation of the Study

The study is concentrated in public secondary school master teachers from 14 schools in National Capital Region . The study primarily focused on determining the leadership styles such as democratic leadership, laissez-faire leadership, autocratic leadership, transformational leadership, charismatic leadership. And focuses also on level of competence of master teachers in their supervisory functions in terms of; instructional supervision, school improvement, pupils development; and teacher/staff development.

Findings

Organized according to the specific questions in the statement of the problem, the following were the findings of the study.

1. Leadership styles are embraced by the master teachers.

The respondents' Leadership styles embraced by the head teachers. Data shows that head teachers have transformational leadership got the highest frequency of 32 or 32.99 percent. In charismatic leadership got the frequency of 29 or 29.90 percent, while democratic leadership has a frequency of 23 or 23.71 percent. And, the laissez-faire leadership has a frequency of 11 or 11.34 percent. However, out of 5 leadership styles autocratic leadership has a frequency of 2 or 2.06 percent.

2. The Level of competence of the respondents in the performance of their supervisory functions.

2.1 Respondents have average level of Instructional Supervision with an (over-all weighted mean = 3.04) with a verbal interpretation of competent.

2.2. Respondents have average level for school improvement function with an over-all ($X = 2.73$) with a verbal interpretation of competent.

2.3 Respondents have average level for pupil development function with an over-all ($X = 3.16$) with a verbal interpretation of competent.

2.4 Respondents have average level for teacher and staff development with an over-all ($X = 2.81$) with a verbal interpretation of competent.

3. The leadership styles of master teachers significantly affect their level of

Competence in performing supervisory functions.

3.1 Respondents have average level for competence of head teachers in performing their supervisory function when grouped according to their embraced leadership styles with an overall ($X^2 = 2.94$) with a verbal interpretation of competent.

3.2 The respondents revealed the significant relationship between the leadership styles and the level of competence of master teachers in performing supervisory function in the area of instruction, the null hypothesis was majority rejected and the rest are accepted. In democratic leadership with a ($X^2 = 51.004$) its probability value of .045 the null hypothesis is rejected. In charismatic leadership with a ($X^2 = 42.385$) its probability value of .002 the null hypothesis is rejected. And also like with the transformational leadership with a ($X^2 = 36.516$) and has a probability value of .002 the null hypothesis. While, the laissez-faire leadership the ($X^2 = 32.511$) its probability value of .093 the null hypothesis is accepted. And the autocratic leadership too, with a ($X^2 = 27.308$) its probability value of .079 the null hypothesis is accepted.

3.3 The respondents for democratic leadership with has a (chi-square value of 56.113) its probability value of .089, charismatic leadership that a ($X^2 = 38.576$) and has its probability value of .05 and laissez-faire leadership with a ($X^2 = 30.431$) its probability value of .077 thus the null hypothesis is accepted, which has no significant relationship between the leadership styles and the level of competence of master teachers in performing supervisory function in the area of school improvement. While the autocratic leadership the ($X^2 = 24.224$) its probability value of .001 while transformational leadership with a ($X^2 = 38.197$) its probability value of .077) and the null hypothesis is rejected.

3.4 The respondents for charismatic leadership with a ($X^2 = 32.442$) and has a (probability value of .000) while, transformational leadership with a ($X^2 = 37.776$) and has a probability value of .000 are significant thus, the null hypothesis is rejected. While, democratic leadership the ($X^2 = 49.152$) its probability value of .078), autocratic leadership with a ($X^2 = 19.791$) its probability value of .203, laissez-faire leadership with the ($X^2 = 26.564$) its probability of .061 thus the null hypothesis is accepted.

3.4 In democratic leadership has a ($X^2 = 32.160$) its probability value of .003, charismatic leadership with the ($X^2 = 44.251$) its probability value of .000, transformational leadership the ($X^2 = 41.384$) its probability value of .024 while, laissez-faire leadership the ($X^2 = 29.662$) its probability value of .048) this means that are significant to the research therefore the null hypothesis is rejected, and the autocratic leadership with a ($X^2 = 20.677$) its probability

value of .083 It means it is accepted and it has no significant relationship between the leadership styles and the level of competence of head teachers in performing supervisory function in the area of teacher and staff development.

4. Base reference for competency upgrading for Head Teachers level of competence in terms of leadership styles that they may be seen for improvement.

Conclusions

Based on the findings of this study, the following conclusions were formulated:

- Respondents have average level of leadership styles embraced by the master teachers and the level of competence in performing their supervisory function, they also vary on their embraced or used to apply or implement that they may part of their ideals.
- Level of competence in performing their supervisory function in instructional supervision, school improvement, pupil development, and teacher and staff development they had different ways of performing function that caters for their specific jobs and tasks.
- The leadership styles of the master teachers do not significantly affect their level of competence in performing supervisory functions.
- The base reference that may recommend is through improvement of in-service trainings and some various seminars, workshops and innovative team building as well, that the head teachers could utilize it in their leadership and supervisory functions and its personal enhancement as a middle manager.

Recommendations

In view of the aforementioned conclusions, the following recommendations are hereby offered:

1. The school heads should implement programs of mass awareness for leadership styles of teachers and its supervisory functions. Teachers should be given an extensive, long- term and continuous professional development plan through seminars/ trainings to improve level of competence in performing supervisory function. These trainings/ seminars should be properly evaluated. The head teacher must have a closer supervision in crafting instructional objectives.
2. The master teachers and teachers should have a shared vision so they will collaboratively relate to each other. The master teachers must provide good models for faculty members are suggested. Since, the school is an organization the head teachers must show a good model of professionalisms.
3. It is highly suggested that the master teachers must have a thorough planning in scheduling activities and the other works in achieving a common goals. The master teachers must include the teachers in identifying strategies for improving student's achievement. It is suggested that the head teachers as one of the leaders in school must assist the teachers to work towards a common goal.
4. Encourage school managers to be acquainted with the art and science of leadership and its competence to supervisory functions in order to support their teachers in schools, and recommends similar study to the future researcher to be undertaken in a broader area to include principal as respondents, other form of principal/head teachers leadership styles and performance in their supervisory functions and the other scale of teacher morale

The Massive Flipped Classroom: Implementing And Conducting Compulsory Freshmen Modules

Kenneth Pinto
National University of Singapore
citpkg@nus.edu.sg

Absrtact

Flipped classrooms are normally conducted on a small scale, where the teacher can be an effective facilitator in class. This model is stretched when the class is big. This posed a conundrum when the National University of Singapore embarked on two massive flipped classroom modules: GER1000 Quantitative Reasoning and GEQ1000 Asking Questions. Each now caters to about 3000 students every academic year. This paper seeks to explore (1) the design of the modules, particularly with regard to technology use (2) how they were implemented and (3) future directions for each.

The Meaning of Mathematics for Vocational School Students

Abstract

The aim of the paper is to classify subjects connected to math education confronted by participant as coming from social science department participant of a vocational school and as given to math lectures, and to classify efficient teaching models seeming not achievable to be applied by the math teachers for vocational school participant. The study used a quantitative study method with a descriptive survey method. The study was directed using of likert-type questionnaires for the social science department participant from a vocational school in turkey. 196 participants were the answered to the study. Findings presented which there was a requirement for a explicit program for participant focusing on basic knowledge and skills and simplifying the content of the math tailored towards participant. Problems met by many of the participant when learning math are in memorizing math content, thinks math is not easy, having trouble in understanding and applying math formulae. If tracing starts in the early scores, participant do not accept the educational structure slabs they want for more progressive education later.

Keywords: vocational school, math, difficulty, academic achievement, learning environment

Introduction

A necessary emphasis transfer from the directorial subjects to the teaching important subjects, the quick answer of instructive organizations to the altering requirements of people is detected in the actions of the managing constructions at all levels of teaching (Kamariah at all., 2010). The development of the educational procedure administration is accepted as one of the main ways of efficient using of lecture material, procedures and human resources. The most efficient is the advance of new procedures of organization and administration built in the world. Math and mathematical sciences are serious and vital to the social, economy and, so progress of recent life a country (of at all, 2017; tola at all, 2017). The instruction of math wants wide-ranging preparation to confirm value teaching structure for the people. Though determined exertions would be had to teach all people, we could not lose vision of the attention of the vocational participant (Seita, 2004); Kılıçaslan at all, 2018). Education math for vocational participant is a miracle for some viewpoints and does not frequently happen with simplicity and easily.

The important way of the context of the vocational education, meant at the calibration of curricula and educational programs. The summary of the organization of educational credit system has big compensations, as long as the school flexibility of the participant (of at all, 2018; Kahraman at all, 2018; Zhamuldinow, 2013). Changed issues may cause to education problems in math for these participants. The issues are: the math language, symbols, problems in procedure of math, some pictorial mix-ups connected to math education, retention and classification problems, and remarkably much anxiety in connecting with math. Instruction of math for educators and learning math for vocational participant are starting to obtain consideration and educators have planned learning environments that are much inspiring when the process of analyzing of the difficulties are at a increasing phase. Moreover, there are singular requirements, and they would be taken an important consideration by math teachers (Koparan at all, 2018; Kamariah, A.B. At all., 2010).

Educational analyses studies for vocational school education lessons display which some problems in teaching models for learning math are happening in the mat laboratories (Wehlage & Rutter, 1989). The problems are, inadequate pledge which participant have related previous elementary information for learning the lesson and fast degree for presenting lots of the notions. Also, weak of rational consistency in the exhibition of math figures in the lectures and low communication and a lack of group study in many instructional actions. Moreover, inadequate practical exercise of instructors to help the participant transfer from the primary education phase to self-regulating learning and inadequate assessments to confirm which participant recall that they have got at the classrooms (Battal at all., 2017; Bostan, & Durmuş, 2016; Bostan & Durmuş, 2017; Durmuş, 2016; Seita, 2004). The objectives of the study are to determine and analyse;

- *Difficulties connected to math learning met by participant*
- *Difficulties connected to the teaching and learning of math*
- *Education environments for participant in learning math*
- *Effective teaching models commonly applied by math*
- *Effective teaching models which are apparent not possible to be used by math teachers in teaching math.*

Method

The study engaged a “quantitative, descriptive survey” study strategy, including social science departments (accounting, business, marketing) participant in a vocational school in turkey. Vocational school participant usually refers to participant with future academic planning problems and problematic academic accomplishment. 196 participants from social science from 1st year and 2nd year class level was applied for the study. The participant responded “separate 5-point likert measure questionnaires” “representing the level of arrangement to quantified objects in the survey for education math (Kamariah, A.B. at all., 2010). The data were examined with the light of the statistical values.

Findings

Constructed on the founded data composed by the questionnaire, it was expressed which common of the participant were male students about 66% and the other group were female students 34%. The proportion of participant who had accomplish math examinations were not much (21.73%). Additionally, the number of which approved the examinations were fairly little, most participant supposed which math lectures were entertaining and interesting to study. Outcomes exhibited which only about 16.1% of participant respondents don't liked math (table 1).

Table 1: participant view on math

View Category	math	
	frequency	percentage
Enjoy	109	55.6%
Moderate	59	30.1%
Dislike	28	14.3%
Total	196	100%

Participant answers for view of the difficulties at the time learning math specially which the topics were being trained theoretical rather than computational. For understanding of math, two basic problems were emphasized by common in the answers, orderly, on the ‘difficulty to remember formulae’ understood (70.0%) and ‘difficulty to remember math content’ (72.1%). And for the back of the problems connected to the learning of math this showed in table 2, moreover, many of the participant, replayed to test, showed which they met the problems, but a minor percentage had emphasized which they were getting the problems because of common of them did not highpoint the registered problems as they encountered at the time learning math. The outcome on stating the participant ‘do not like for math’, a minor proportion specified which they do not like math (16.4%) (table 2).

Table 2: form of participant’ opinions on problems in learning math

Types of problems	Math	
	Yes	No
Do not remember the formulae	70.0%	30,0%
Difficult to remember the math content	72.1%	27,9%
Do not understand the formulas	63.6%	36.4%
The concepts are difficult	58.5%	41.5%
Do not know how to apply the formulae	50.3%	49.7%
Do not understand what teachers are teaching	44.8%	55.2%
Teachers change to new topics very fast	20.5%	79.5%
Dislike math	16.4%	83.6%
Teachers did not give enough examples to answer the questions	11.4%	88.6%
Teachers did not repeat the subject	12.4%	87.6%
Teachers did not explain clearly	10.3%	79.7%
Teachers only asked to do the exercises on the white board	14.6%	85.4%
Teachers make us copy notes	12.7%	87.3%
We were given many problems as homework	16.3%	83.7%

Result

The construction and development of the teaching value calculation is specific application for the social, technical and vocational education system in turkey. The results connected to participant' opinion of their learning environment display which usually participants are progressive way to their learning environment. Moreover, at the time data connected to persons who decided to the bad thoughts were examined it was registered which meaningfully low capability participant approved to the undesirable thoughts associated with the maximum skill of accounting department participant.

Abstract

The objective of this study is to examine the mediator role of family support in the relation between continuous anxiety and mental toughness in athletes. The research group was composed of 236 athletes (Age_{Mean} : 20,83 + 2,787) in total, 120 of whom were females (Age_{Mean} : 20,32 + 1,515) and 116 of whom were males (Age_{Mean} : 21,38 + 3,591), who were actively dealing with sports. The participant athletes initially filled the voluntary participation forms, which were prepared by the researchers, and then they filled the data collection tools determined within the framework of the study. In order for the collection of data, Multi-Dimensional Social Support Scale, Mental Toughness Scale, and continuous anxiety sub-scale of State-Trait Anxiety Inventory were used. In the preparation process of the data collected, it was observed that 14 participant athletes filled the scales erroneously, and the analyses were evaluated based on 236-athlete sample. In the analysis of the data, in order to determine the relations among the variables, firstly, Pearson correlation analysis was conducted, as per determining the mediator role of the family support between continuous anxiety and mental toughness, PROCESS macro regression analysis was conducted. For testing whether the mediator role was significant, Sobel z test was used. The analyses were conducted in 95% confidence interval. For the analyses of the research, SPSS 22.00 package program was used. When the findings of the research are examined, it is observed that the continuous anxiety levels of the athletes have a negative linear relation with both the family support and mental toughness. Moreover, as the main hypothesis of the research, according to the findings regarding mediator role of the family support in relation between continuous anxiety and mental toughness, it was determined that the negative effect of continuous anxiety on mental toughness was decreased with family support and its negative effect was decreased. As the conclusion, it can be stated that mental toughness levels of the athletes have a negative relation with their continuous anxiety levels, and that family support can be benefited in decreasing the role of the continuous anxiety concerning the mental toughness performance.

Keywords: *Anxiety, Family Support, Mental Toughness, Athlete.*

Introduction

The concept of mental toughness has attracted much attention by sports psychology researchers, who have been trying to understand how psychological factors can support the success in sports (Bull, Shambrook, James and Brooks, 2005; Gucciardi, Gordon and Dimmock, 2008; Jones, Hanton and Connaughton, 2007). In developing literature, mental toughness is thought to be multidimensional and important psychological factor (including cognitive, affective and behavioral components) and associated with successful sports performance (Bull et al., 2005 ; Clough, Earle and Sewell, 2002 ; Connaughton, Wadey, Hanton and Jones, 2008; Kabuk & Clough, 2005; Jones et al., 2007). Unfortunately, there are different perspectives on this construct. For instance, while some researchers suggest that mental toughness can explain how physically skilled athletes become elite athletes (Gucciardi et al., 2008), some assert that the athletes having a proper mixture of physiological, anatomical and psychological features are more likely to display a successful sports performance (Crust, 2008).

When the evidence collected from two different qualitative studies conducted with elite athlete samples are examined (Bull et al., 2005; Connaughton et al., 2008), it is shown that the environmental factors such as motivational environment, family influence, the exposure to the environment in which one has grown up and challenging context (competitive) have critical role in the development of mental toughness. In this direction, the importance of family support, which is one of the cornerstones of social support, in the development of mental toughness is seen.

On the other hand, anxiety is the uneasiness, a type of fear feeling, against the events that the individuals do not know the source, however, accept that they are dangerous and threatening (Özgül, 2003). When viewed from this aspect, trait anxiety is the perception of the stressor conditions being dangerous and threatening, and increment of emotional reaction frequency and intensity, and gaining continuity (Öner, 1994). Konter (1996) defined trait anxiety as “the tendency to perceive certain situations as dangerous and threatening, and an athlete’s personality

tendency.”

In this context, this study aims to determine the role of family support in the relationship between trait anxiety and mental toughness of athletes.

Method

Research Model

This study is a relational screening model study designed to examine the role of family support in the relationship between trait anxiety and mental toughness. Karasar (2009) defined the relational screening models as the research models aiming at finding out the existence and degree of covariances between two or more variables. In line with this model, the role of self-esteem in the relationship between passion and psychological resilience levels of athletes. In this model, the role of self-esteem in the relationship between passion and psychological resilience levels of athletes will be examined. The hypothesized model is displayed below.

Figure 1: Research Model

Research Group

120 females ($Age_{mean}: 20,32 + 1,515$) and 116 males ($Age_{mean}: 21,38 + 3,591$), totally 236 athletes ($Age_{mean}: 20,83 + 2,787$), constituted the research sample. The athletes participated in the study filled the volunteer participation form first, then they completed the data collection tools. The sports experience mean score of the athletes was $Year_{mean}: 9.21 + 3.86$.

Data Collection

For the data collection, Multi-Dimensional Social Support Scale, Mental Toughness Scale, and Trait anxiety sub-scale of State-Trait Anxiety Inventory were used. In the preparation process for the analysis, it was observed that 14 participant athletes filled the scales erroneously, and the analysis was done based on a 236-athlete sample.

Multi-Dimensional Perceived Social Support Scale:

Zimmet and Dahlem (1988) developed the Multi-Dimensional Perceived Social Support Scale. Eker and Arkan (1995) adapted the scale to Turkish society. The scale includes twelve items that can be understood by the people at any educational level. The higher the scores, the higher the perceived support and the lower the scores, the lower or lack of the perceived support (Eker and Arkan, 1995).

State-Trait Anxiety Scale:

State-Trait Anxiety Scale was developed by Speilberger et al. (1970) and adapted to Turkish society by Öner and Le Compte (1985). The scale is a Likert type scale and includes 40 items assessing state and trait anxiety separately. The higher the scores, the higher the anxiety level and the lower the scores, the lower the anxiety level. The scale, translated into Turkish and tested the validity and reliability in 1975, has the sub-scales of 20-item state and 20-item trait anxiety. The total score of the whole scale ranges between 20 and 80. The higher the scores, the higher the anxiety level and the lower the scores, the lower the anxiety level (38). The items are rated between 1 and 4 including “never” and “completely” (39). The validity and reliability studies of the inventory in Turkey were conducted by N.Öner in 1977 (39). There are two different statements in the State-Trait Anxiety Inventory. The direct statements indicate the negative emotions; reverse items indicate positive emotions. The reverse items in state anxiety inventory are 1,2,5,8,10,11,15,16,19 and 20. The reverse items in trait anxiety are 21,26,27,30,33,36, 39 and 13. The mean score of the reversed items is subtracted from the mean score of the direct items after calculating the mean scores of direct and reverse items separately. Predetermined and unchanging value is added to this value. The unchanging value for state anxiety is 50, the one for trait anxiety is 35. The final value is the individual’s anxiety score. State Anxiety Scale (SAS) is a sensitive tool to assess the suddenly changing emotive reactions. The Trait Anxiety Scale (TAS) including 20 items in the second part of the scale assess the continuity of the anxiety that the individual generally tends to experience. Scores are between 20 (low anxiety) and 80 (high

anxiety).

Data Analysis

First, Pearson Correlation analysis was used to determine the relationships between variables; PROCESS macro regression analysis was used to find out the role of family support in the relationship between trait anxiety and mental toughness. The analysis was done at a 95% confidence interval. Sobel z test was used to determine whether the mediation was significant. SPSS 22.00 program was used for the analysis.

Findings

Table 1: The relationship between trait anxiety, mental toughness, and family support

		Mental Toughness	Trait Anxiety	Family Support
Mental Toughness	Pearson Correlation	1		
	Sig. (2-tailed)			
	N	236		
Trait Anxiety	Pearson Correlation	-,173**	1	
	Sig. (2-tailed)	,008		
	N	236	236	
Family Support	Pearson Correlation	,425**	-,258**	1
	Sig. (2-tailed)	,000	,000	
	N	236	236	236

** . Correlation is significant at the 0.01 level (2-tailed).

When table 1 was examined, it was found that the relationships between trait anxiety and mental toughness ($r = -.173$), family support and mental toughness ($r = .425$), trait anxiety and family support ($r = -.258$) were significant ($p < 0.05$).

Research Model

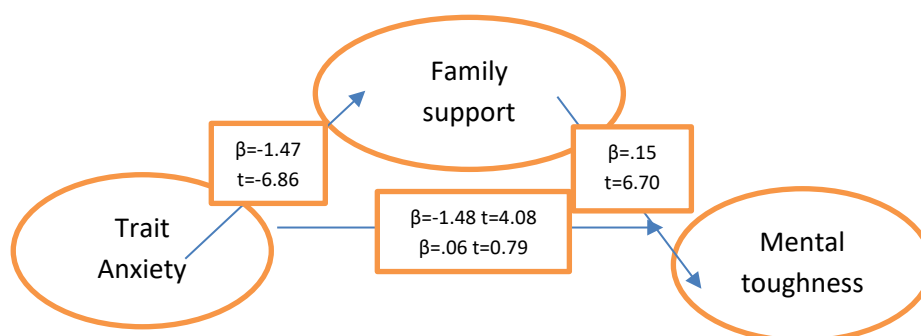

Figure 2: The role family support in the relationship between trait anxiety and mental toughness

The determination that there is a negative and significant relationship between trait anxiety and mental toughness allows testing the hypothesized mediation relation. PROCESS macro regression analysis was used to find out whether family support played a mediation role in the relationship between trait anxiety and mental toughness. In the first step of PROCESS macro regression analysis, the predictive effect of trait anxiety level on family support was examined and it was observed that trait anxiety ($\beta = 1.47$, $t = 6.86$, $p < .05$) explained the 18% of the total variances associated with family support ($R = .42$, $R^2 = .18$, $F = 47.13$, $p < .05$).

In the second step of the PROCESS macro regression analysis to determine whether family support played a mediation role in the relationship between trait anxiety and mental toughness, the predictive effect of trait anxiety level on mental toughness was examined. When the results were examined, it was observed that trait anxiety ($\beta = -.134$, $t = -2.02$, $p < .05$) explained the 2% of mental toughness level ($R = .134$, $R^2 = .02$, $F = 4.08$, $p < .05$).

In the third step of PROCESS macro regression analysis to determine whether family support played a role in the relationship between trait anxiety and mental toughness, family support was included in the PROCESS macro regression analysis and found that it was seen that family support contributed to the prediction of mental toughness at the level of 1%. Accordingly, it was found 14% of the total variances was explained via family support in the prediction of mental toughness by trait anxiety ($R = .47$, $R^2 = .14$, $F = 27.54$, $p < .05$). In the third step of the analysis, it was observed that the effect of trait anxiety on mental toughness decreased ($\beta = .07$, $t = 1.92$, $p > .05$). Thus, it can be said that family support has a full mediation role in this relationship ($\beta = .22$, $t = -6.73$, $p < .05$).

Table 3: The results related to the direct and indirect effects of trait anxiety on mental toughness

Direct Effect			Effect	S.E	LLCI	ULCI	t	p
Trait Anxiety	Mental toughness		-.0891	.0286	-.1540	-.0399	2.6852	.0078
Indirect Effect			Effect	S.E	LLCI	ULCI	t	p
Trait Anxiety	Family Support	Mental toughness	-.0576	.0419	-.1599	-.0447	-2.1091	.0085
Total Effect			-.1467	.0546	-.2543	-.0391		
Normal Theory Test for indirect effect								
Effect: -.0892		s.e: .0258		z: -3.4496		p: .0006		

In table 3, it was found that total effect (direct + indirect) of trait anxiety on mental toughness was negative (β : $0,089 + 0,071=0,434$) and statistically significant ($p=0,000$). Because the Z score (-3,450) of this model was bigger than 1,96 and significant, the existence of a mediator effect can be said.

Conclusions

This study aims to determine the role of family support in the relationship between trait anxiety and mental toughness of athletes. 120 females (Age_{mean} : $20,32 + 1,515$) and 116 males (Age_{mean} : $21,38 + 3,591$), totally 236 athletes (Age_{mean} : $20,83 + 2,787$), constituted the research sample. The athletes participated in the study filled the volunteer participation form first, then they completed the data collection tools. When the results were examined, it was found that total effect (direct + indirect) of trait anxiety on mental toughness was negative (β : $0,089 + 0,071=0,434$) and statistically significant ($p=0,000$). Because the Z score of this model was bigger than 1,96 and significant, the existence of mediator effect can be said.

When the results are examined, trait anxiety levels of the athletes negatively and linearly correlated with both family support and mental toughness. Moreover, according to the fundamental hypothesis of the study that family support had a mediation role in the relationship between trait anxiety and mental toughness, it was found that the negative influence of trait anxiety on mental toughness via family support. When related literature is examined, it is stated that mentally tough individuals tend to be social and extrovert. Because they stay calm and comfortable and have lower levels of anxiety than others, it was suggested that these individuals relatively stay unaffected from competitive and stressful conditions with the self-belief and the steady belief about controlling their destiny (Clough et al., 2002).

Considered from this perspective, negative relationship between mental toughness and trait anxiety coincide with related literature. For social support, in the study by Petrie, Deiters & Harmison (2014), in which the mediation roles of athlete's identity, social support and mental toughness in stress levels were examined, the positive contribution of mental toughness and social support was explained. Hence, it can be said that family support, which is an element of social support has a mediation role in the relationship between mental toughness and trait anxiety.

Consequently, it can be said that the mental toughness of the athletes has a negative relationship between trait anxiety levels, family support can be utilized to reduce the role of trait anxiety regarding mental toughness performance.

Author Note

This study is an improved version of the oral presentation presented in the International Conference on New Horizons in Education held between 18-20 July.

The Museum-Based Education As A Kind Of Art-Therapy. Considerations

Kinga Anna GAJDA

The Institute of European Studies, Jagiellonian University, Kraków, Poland

kinga.gajda@uj.edu.pl

Abstract

According to Hein the museum-based education is addressed to every individuals and groups. Puttman-Gelles underlines that "the purpose of art museum education is to enhance the visitor's ability to understand and appreciate the original works of art and to transfer (...) experiences into other aspects of visitor's lives". Museum-based education supports participants' reflection, invites them to build personal connections and builds the sense of community. It invites visitors to share their thought and feeling, memories and associations. The museum-based education as a form of art therapy use narrative methods, artwork, discussion as well as object therapy. The therapeutic tools of museum-based education are linked with dialog, interpretation, locality and memory - these aspects of museum-based therapy will be presented in the paper. The museum-based education answers at Maslows needs and can be compared with social work. It approves the goals of every education process are to educate and shape of pupils. The beneficial result of the education is wellbeing.

Introduction

Both educational and therapeutic practice of museum-based education consists in creating the physical and mental space of participants' development, supporting and facilitating the process of their creative and personal experience. Both activities use their resources to support pro-health activities, understand students' needs and enable them to prepare themselves for working in the everyday world. Both are finally entangled in the processes of interpretation and evaluation of human experience (Silverman 1989) and apply art as a communication tool or even support interaction with art. Art in both cases can be, as Mark O'Neil (2010) points out, prescribed. The very idea of the art of prescription is based on the belief that creative action, building a safe environment conducive to creativity has both educational and therapeutic dimensions. It is also a space that allows sharing of experience, building a sense of being accepted and belonging to *communitas*. It is the community of experience, commitment and analysis that has a therapeutic function. As emphasized by Elaine Aegyle and Gillie Bolton (2005): art does not have to be treated as a therapy vehicle, but it should be perceived as a therapeutic one.

Art is based on joint action, exchange of views, empathy and commitment. Such art functions are described, among others, by Swedish researchers as a "determinant of survival" (Konlaan, Bygren, Johansson 2000), because regular participation in the cultural life raises the frame of mind, leads to the perception of being a healthy person, absorbs the tension of the recipient and becomes a pleasure, and thus, reduces the level of stress and even promotes longevity (Johansson 1996). And perhaps all these effects are not so much the result of the action of art itself, but rather of social interaction, cultural involvement or catharsis. Some attempt to explain the phenomenon of therapeutic action of art and find its rational justification, link the activity of visiting a cultural institution with physical activity. They prove that visiting a museum or going to the cinema or theater is associated with moving: walking, strolling - it is this action that is the source of improvement of the physical and mental health of the recipients of art. However, it is indisputable that art affects the well-being, vitality and social functioning of the participants of cultural life. Participation in cultural events is therefore described as a cultural stimulus, and experiencing art as self-regenerating. Art stimulates creative behavior and positive attitude towards people, shows life as more significant and restores its meaning. What's more, scientists prove that art can become a mild addiction (O-Neil 2010), a dependency. And as Mark O-Neil emphasizes: "people must have a place where they can go out with their loved ones, they need their free time, when they do not work, to be meaningful and give meaning to their lives. Participation in culture is an important contribution to their quality of life, which should become an integral part of public health policy" (23).

Museum-Based Education And Therapy

Searching for the correct and effective relationship between education and therapy or building it is an element of museum education, and further a tool for therapy and individual understanding of oneself. Lois H. Silverman (2002) suggests that the museum contributes to the promotion of well-being and mental health in five ways: promotion of spending free time and rest; intervention and stimulation of beneficial changes in psychology and emotions or both; introspection affecting the mental health; supporting pro-health education; strengthening environments and healthcare institutions. Also Simone Alter Muri (1996) described the museum's activities in therapeutic categories,

pointing to its role in strengthening self-esteem, sublimation, socialization skills, introspection and creativity. Positive relation of experience-museum, participant-community is then transposed into the relationship of disease, lifestyle - health. And the main tools of museum-based therapy or gallery-based therapy are: dialogue, the opportunity to tell your story using museum objects and museum space or outside it - in the local space, often used by museum workers, referring to heritage and glacial memory. Dialogue as this element, which, according to Silverman, should be stimulated in the museum, especially discussions on so-called sensitive topics that allow the unconscious to become more aware, has an important therapeutic function. On the one hand, it is a reference to the philosophy of conversation, in the context of which the conversation is accompanied by mutual acceptance and affirmation of the individual. In addition, the very fact that the museum is open, accessible to all recipients, makes them a place for group and individual therapy. What is more, the fact that everyone can use the collection, independently read it and use it in a creative way, results in new recipients for the museum. Many participants of therapeutic activities visit the museum for the first time. Zhvitiashvili (Peacock 2012) calls the therapeutic attitude in the museum a "new dimension" expanding educational activities and inviting new audiences. Studies show that museums that have a special offer for people with dysfunctions are more likely and more often visited by people without any dysfunctions for two reasons. First, the ramps, lifts located in these institutions are used by, for example, parents with small children, which affects the fact that they go to this museum and not another. In addition, in the public opinion, institutions open to contact with people with disabilities are perceived as more hospitable, tolerant, benevolent, liberal, accessible, and building community. The museum thus becomes a safe place, a place of mutual acceptance. A space that allows you to overcome physical, mental and emotional barriers of people with dysfunctions or problems, as well as people who accompany them. Museum therapy has two faces: it is the therapy of disabled people, but also those who are able to learn to be open to otherness. A museum that often explores art as an element of influence during educational events, as Ray William (2010) emphasizes, allows to create an environment to support reflection and a sense of community. The museum is a space of peace and fantasy, a place for individual transformation and the preservation of the group's sense whether in a family, class, among friends or just a community of visitors and participants in a given event.

In this sense, the museum and its educational activities are close to the definition of art therapy created by American Art Therapy Association. She says that art therapy takes place using broadly understood art and media treated as a basic way of communication in a support environment in a creative process, the result of which is exploring feelings, controlling behavior, controlling anger, reducing anxiety, solving emotional conflicts, supporting self-awareness, developing social skills and competences, improving world orientation, raising self-esteem or self-imagination. Therapy leads to development through research and development of storytelling skills, personal extraction, individual narration through discussion and analysis of art, or transposition of emotions and problems into art. Art turns out to be a way to stabilize and express yourself, your defects, humors, problems. Museum-based therapy therefore refers to art therapy: plastic therapy, biblio-therapy, music therapy, teatro-therapy, drama, sometimes choreotherapy, but always with the use of museum exhibits, and successfully used in work with people suffering from cancer, diseases associated with the loss of memory, mental illness, developmental genetic diseases, mood disorders, social isolation, homelessness, traumatic experiences and post-traumatic stress, addictions, etc. Each condition can be treated by means of intellectual action or artistic. For people with memory problems, for example, the use of art materials alone, planning work can be therapeutic activity. Even more effective are the so-called memory walks and workshops of packing the suitcase in the right items before the trip, as well as meetings after the workshops in museum cafes, where informal conversations can take place. Sometimes debates are needed to stimulate the conversation of people with therapists or healthy people about similarities and differences, but also shared values - such meetings allow sharing their own experience, creating *communitas* and showing problems from many perspectives and ways of solving them and difficulties in finding them. Therapeutic functions also have joint activities - for example, work on the preparation of a temporary exhibition.

Therapeutic Methods Of Museum-Based Education

The therapeutic function has an interactive tour or walk. Using the collection to engage visitors, illustrating a certain idea and value, and overcoming social barriers is a very important and vital function of the educational mission of museums. An important role here is again exhibits, objects that stimulate activities, thought processes, stimulate creativity. These are intended to serve visitors, help their development. The task of museum professionals is therefore to show their possibilities, making them available to anyone who wants to see them. They indicate that the museum is important for people, objects and their experience, not just watching. According to Stephen Weil (1999) museum from institution has turned into an institution for someone. In this way, by becoming an institution of social change, it can even be a social space. Sometimes exhibits can be touched, which is not destructive for them. On the occasion of touch, you can also refer to the sense of smell - for example, the smell of sandalwood, from which it is made an

object. In this way, the collage becomes an element of multi-sensory experience (Classen 2007). Sometimes *museum exhibits* are only observed, but they can also be a contribution to social debate, the beginning of conversations, inspiration of artistic works, creation of thematic collections, reminiscences. It shows how surrounding objects affect people lives, how they can stimulate or strengthen well-being. Hence, in the literature on the subject, the term *object therapy* or *object-relations therapy*. It refers to personal or emotional relationships with objects and the object / exhibit itself treats as an aid in understanding how and why people interact with objects, and how objects represent human identity. The exhibits also enable emotional engagement, unblocking emotions and openness to a new perspective about oneself and the environment as well as interpretations of the world. Objective therapy and artefact makes a suggestive laboratory for understanding the relationship between people and things (Silverman 2010). Of course, this relationship will depend on the culture - in different cultures, objects are treated differently and attached to them more or less heavily. Tradition, historical knowledge, approach to the past, own experiences determine the cost of *museum exhibits*. They can be treated superficially as an element of consumption and permanent exchange, an impermanent thing, but you can also see in them an element of perfection, beauty, a sign of durability and continuity. In Japanese culture, for example, damaged ceramic items are restored in such a way that traces of repair are visible. In the place of glue, craftsmen apply gold or silver varnish, in order to give the object an additional value, to mark the trail of time on them, to sacrifice a new life or to show its history.

Museum like *Kintsugi* / *kintsugi* gives new meaning to objects, testify to the history, be part of the heritage, the product of human creativity, culture and become the basis or inspiration for new, individual history attenuated by the participants of education. These exhibits are therefore subject to a specific recycling - it gains the rank of an element of life of visitors, a way to express their emotions, a part of *storytelling*. Their transformation is a prerequisite for transforming storytellers. They allow you to tell a story, become its inspiration. The very fact of expressing yourself or your experience by means of storytelling becomes an essential element of therapy. And it is not the content of the story that is important, but the fact of telling a story, preparing it, presenting it. The storyteller becomes the owner, the subject of a unique, personal story and a new experience of exploring and expressing himself in a safe environment. In a creative way, he absorbs the sense of being and learns the different perspectives of self-assessment, his experience, which leads to empowerment and insight. History becomes a record or a metaphor of emotions, experience and well-being. And the fact of its disclosure leads to social involvement and a sense of communication with the group. And it is the feeling of belonging and being a part of the non-appreciation community that becomes the most important discovery for participants of therapy using the subject and *storytelling*. Not only art or storytelling, therefore, become a tool for therapy but the environment and atmosphere of their creation and sharing.

This form of education refers to the treatment of exhibitions or specific exhibits as enabling individual reflection. The same items can lead to completely different stories. They constitute a certain frame or reference point of the story.

Therefore, object therapy is described as an effective work to improve the well-being and presents for inclusion as part of the museum collection, or even intervention in many assisting institutions (Chatterjee 2008). It leads to life satisfaction, self-appreciation, makes it possible to see the intimate or imagined relationship with the exhibit. Although it might be better at this point to use the term the *extremity* that Slavoj Žižek follows Lacan. This category is a combination of what is external and intimate. Tony Meyers in the introduction in the Guide of Political Critique, devoted to the philosophy of the Slovenian thinker explains *extimacy* appealing to the eye vision. "If it seems to you a bit difficult to imagine - he explains to readers - think about the eyeball. You can see everything except what you can see - your own eyeball. The only way to see her is to look in the mirror, which is something external. The thing is similar with the subject: it is the point of view from which we look at reality, but which cannot be seen directly - it is necessary to use it for that purpose >> the mirror of << reality ' (Myers 2009). This mirror is a museum and its exhibits. It is in the narration of a storyteller narrated by museums that he discovers fragments that reflect his experience. What's more, the story is an intimate confession that also becomes *Extreme*, because it becomes public and can in a performative way influence the observers of the process of storytelling, recipients of history, stimulating them to tell their own story. There is a vanishing of the distinction between what is intimate and public, and the status of an *extreme*. Storytelling used in the museum as an element of education both inscribed in the narrative of the exhibition, the selection of artifacts, and the actions of the participants, thus begins to be a way to construct themselves as a person and a member of a given group. The story inspired by the exhibit is not only related to the remembrance and mimetic reproduction of what was, but also to creative thinking, imagining, creating a colorful story inspired by a story, subject, people, memory. *Storylines* are part of the personal narrative, which, however, are entangled in the social, cultural, political and historical context. Individual story overlaps the story of other group members and uses discourse or cultural model. *Personal story* refers to a unique, individual experience inscribed in the social order, a common story of a given group and a dominant cultural narrative known and reproduced by a social group in a given

place and time. Therefore, personal history seems to be determined and it is impossible for it to be freed from the universal narrative. Of course it can modify existing narrative, deny it, or replace, but will always be set against the dominant cultural narrative - compared to it, recognized it as such. Personal narration will therefore be a sub-narrative. Therefore, each museum story, both presented by museum professionals: curators and educators, as well as the one presented by the recipient whether publicly or intimately participates in the construction of the image, image of the individual and the group, which becomes an element of common, cultural narrative. The artifact is an essential element of this story - it testifies to a certain continuity, attributes specific details to the stories, places it at the time of the exhibit's origin and telling about it, and proves how this story has changed, how the story was different. One can apply the metaphor of the new literary machine used by the German playwright Heiner Müller to this history of the subject, reformulating it into the idea of a new narrative machine. To describe the story, Müller started a *new literary machine*, that is, he undertook a dialogue of the present with the past. This dialogue was to lead to the presentation of objective truth and in a performative way to influence the viewers - to stimulate their reflection. The playwright believed that "confusion (...) matter can create such a relationship between [the past] and the present, which can be called a *fiction of fact*, that is, an expression of what actually happened or edited, in the medium of linguistic fiction" (Walerich-Szymani 2004:77). That fiction actuality called by him *new literature engine* serves the purpose of finding the difference and similarities in the still repeating patterns and its present form. So to describe what is postmodern perception of everyday life as a result of certain events of history or heritage elements, should focus on the space between the two poles of time. Think about what the artifact was, what it proves, why it testifies what it witnessed, what it punishes remember and how it relates to an individual story, where a social story, a cultural code is caught up in a narrative, determines or shapes the history of an individual. Then reflect on what this object is today, what history allows to tell, which, according to museologists, is to tell why it is located in a specific place. These relations between the current meaning of the subject and its useful function in the past and between individual and social history constitute a narrative machine, allow to bend over the meaning of the past, its interpretation and the meaning of the individual past and its consequences. The metaphor of the narrative of the new machine allows you to show the history of (re)conceived of object show stories about *storytelling* as well targeted narrative, which often distorts, blurs or deconstructs the cyclical trend of autocratic history. And only the launch of a *new narrative machine* allows its disclosure and empowerment. Therefore, the concept of using museum objects to reflect on oneself and on general history it corresponds to the postmodern vision of the past based on a grid model, consisting in the reproduction of certain patterns, discourses - their repetition, transformation, exploitation, appealing to them, to say what is *extreme*.

Subject therapy therefore allows you to explore the object first and then the museum message and refer it to your own experience and then to interpret the values promoted by the museum. In this way gives you the opportunity to look from many perspectives on the issue of meters illness, loss, grief, helps in recovering a sense of dignity, respect and a positive sense of defining their identity. The subject as part of this therapy is a source of remembrance and telling the history of life. John Mack (2003) even claims that the object is a reservoir or an absorber of memory, and Allan Paivio (1986) shows that you are connected. This property has not only a long time, but short-term memory, and refer to both visual memory, and verbal and sometimes, as the authors note *Enhancing Cancer patient Well-Being With a Nonpharmacologica, Heritage-Focused Intervention* (Thomson, Ander, Menon, Lanceley, Chatterjee 2012), also refers to sensory memory. As writes Constance Classen (2007), an object in a museum can be a medical tool. By giving meanings, it intervenes in the everyday life and identity of the visitor.

In reference to space or exhibits - people involved in the process choose a *museum* or place to help them express themselves, where they feel safe and tell about their choice. The exhibits are used to express your experience, strengthen positive thinking, but also to be a witness to the development of other participants. Educators and therapists provoke further discussion, ask questions, stimulate conversation and prove that the museum is a safe place where everyone can feel accepted, express themselves and their own opinions. Art in the museum in this way makes people more socially open and the space of the museum is a sphere of engaged dialogue. The very fact of initiating or making a dialogue is its therapeutic function. Dialogue as this element, which, according to Silverman, should be stimulated in the museum, especially discussions on so-called sensitive topics that allow the unconscious to become aware, has an important therapeutic function. On the one hand, there is a reference to the concept of conversation, in which conversation is accompanied by mutual acceptance and affirmation of the individual. The philosophy of a conversation by Martin Buber (1992) says that you can express yourself only through a relationship with another person. Only during contact with another person can you experience a real encounter. And by presenting the interlocutors themselves and their views, gain the subjectivity, because in the eyes of the other person one gains the conviction of his being. Buber therefore preached the dialogic principle understood as co-participation, tolerance and *Einander-Zuwenden*. The philosophy of Józef Tischner's dialogue is also close to this principle. Similar correlations could be

multiplied. Each time, the philosophy of dialogue or conversation will show the exchange of information, meeting with other people as significant in shaping the subjectivity and identity of the individual. And it is the sense of this specificity that has a therapeutic function here. The mere perception of dialogue - which is the equivalent of health - allows internal democracy, because it leads to talk and exchange. In contrast, the monologue is identified with the disease, because it relies only on referring to a given form of the "I.I." Dialogue here is a conversation taking place at the structural, social and cultural levels, based on the exchange of views, seeking and understanding sense. It is kind of allegation (Głowiński 1986), and therefore the element of dialogue is opposed to unanimity and authoritarianism, quotes statements and interpretations of others to justify and make their own. It consists of four components: listening, analyzing, synthesizing and explaining. As Jerome Seymour Bruner (2006:43) remarks, dialogue allows you to discover wise and deep things. It enables sharing emotions and thanks to this a participant in dialogue or polylogue becomes involved. His mature attitude allows for a sense of satisfaction in achieving a certain level of skill and / or knowledge. The monologue is therefore connoted with a totalitarian regime or absolute rule. Meanwhile, dialogue leads to creative development, assimilation and reconciliation of the various faces of the "I". Dialogue is primarily a healing opportunity to speak with your own voice. It allows you to develop skills in building new, interpersonal relationships, building a dialogue attitude, co-creating social knowledge from the perspective of many "me", flexible entering into different relationships with other people and saying silent stories (Siodmiak 2008:176). Dialogue is not only understood here as asking questions and answering, but also replication, or the ability to understand and correctly respond to a conversation participant. What's more, it presupposes the existence of a speaking person and a social audience. It is based on the intersubjective opinions that are expressed both by the creator and the recipient of his work. It enables viewing the situation from many perspectives and it is necessary to refer to the interlocutor's opinion.

Conclusion

Philippa Winn (2001) proves that the museum allows you to look at life in a broader context and becomes a place of inspiration and relief from problems. Telling stories based on exhibits, making them the heroes of a story or telling their stories around objects allows not only for understanding art, combining life with art, but also for solving individual problems. Acts of reminding, for Maurice Halbwachs (2008) can be called the location of memories. The French sociologist, more importantly, also emphasizes that a story that interweaves or uses memories is not just an act of reproduction, but a creative one. And although he was usually critical and he was referring to the theory of another French philosopher, Henri Bergson (2012), in the matter of remembering he was inspired by his idea of remembering as a (re) presentation. He argued that the remembrance is rather an act of evocation, a creative, creative or even performative action. And similarly to those theorists of memory he indicates that the story is ruled by present rules, and this is subordinated to the present quoting past, for the purposes of the present moment the story is constructed.

Activation of these memories, both good and difficult or negative, is often associated with well-being, because it allows for positive reminiscences or purification. David Read Johnson (1987) describing therapy through art, refers primarily to traumatic memories, indicating that their release or disclosure and then sharing them allows one to deal with them. In this way, he proves that every time the memories have the power of *catharsis* (Philips 2008). Art therapy, including painting, sculpture, drawing, but also object therapy, meditation and analysis therapy allows one to get to know oneself in the process of interpretation, creation or narrative about artifact. Communicating your own perception of the world and referring to your own knowledge or experience helps you to better understand yourself and articulate your worldview, introduce yourself. Stimulates personal development as well as self-esteem and self-awareness. In addition, it helps to overcome monotonous and routine. Discussion and an attempt to defend one's own interests reveal what is unconscious, hidden or disregarded. What's more, it allows you to interact and build social relationships.

Abstract

It has become inevitable acquaintance with semiotics and cinema due to be one of the leading arts in own age and has a specific language in 1960's. Semiotics that is used in literary analysis previously, has aimed to find out how meanings become in a film, by merging with cinema. Greimas's analysis method which is based on Saussure's semiotics and Propp's narratology, is exemplified to first significant semiotics studies as part of structuralism. In the Greimas's analysis, textual progression from superficial stages of the text to deep meanings processes with codes like actants editing and competence/act. Deep meanings were based on antilogy about world and life. Greimas has constructed square of semiotics by considering these antagonisms like a quadrangle. In study, Akira Kurosawa's *Dreams* film was analyzed with Greimas's actantial model and square of semiotics. Findings of the studies prove also Greimas's rightness that asserts to review non-linguistic signs with semiotics analysis. Applying of this model that was improved by cinematic narrative to films demonstrates that film is a phenomenon which can be discussed at text grade. According to Greimas sections are important in cinematic narrative in point of regulating presentations and explanations of events.

Keywords: Semiotics, Semiotic analysis, Cinema

Introduction

Improvement and the use of semiotics that only used in literary analysis previously in cinema and historically based on old ages, was materialized in 20. Century. Great interests to cinematic semiotics have brought with a lot of studies. Semiotics in cinema has reviewed signs in narration, has explained relationships with each together and had become a method by many people that interested in cinema. Semiotics which is based on structuralist approach has made reinterpretation process with refinding process of producing meaning. Semiotics can apply on many fields like literal texts, theater, cinema, fashion, architecture, photography. Semiotics reviews producing process of meaning, tries to find out deep of meaning. In the study, Akira Kurosawa's film is called *Dreams* will be analyzed by this model that composed method of Greimas's semiotic approach, actantial model and semiotic square explaining.

There are sender, object, subject, opponent, receiver, helper like in the other narration types. People who mentioned in narration have analyzed depending on their actions. Greimas achieves positiveness and negativeness levels of text with explaining as semantic and logical. The semiotic square is become with adding many meanings together; it explains relations contained all conceptual antagonism by using quadrangle. Meaning in deep of the text has been found out at this quadrangle. Words in square have been based on relations that contained antilogy/paradox by scheduling positive and negative systems between sign units. Words in the square have been formed underlying structure.

The film, chose in the study, is important according to cinematic language of Kurosawa who has got Japanese culture roots strongly. Textual structure and patterning way of the film were analyzed in narrative and figurative level; were broke with sections according to actant model by depending with Greimas's model. Events were happened in films were boarded in the context of actant relations. Acts were exposed in the context of actant tables.

1. Greimas and Semiotics

First of all, semiotics is a science that related conceptual meaning and signs. It is concerned with how was organized texts like in film, television and other art products. Semiotics is a science which characterized interdisciplinary; it describes what sign is and how they work (Berger, 1996: 11). Semiotics tries to respond meaning forming and questionings about how it is presented by using linguistic and logical method and it gets source from structuralist approach. Its starting point is reinterpretation request of person their own environment and world where lives (Erkman-Akerson, 2005: 77-78). Many linguists as Lois Hjelslev, Algirdas Julien Greimas, Roman Jakobson, Julia Kristeva have contributed to develop of modern semiotics (Parsa and Parsa, 2012: 4-5). Morphology of the story has affected developing of semiotics with Todorov's and Propp's assistance by considering of universal values. Particularly, semiotics has become an autonomous science at 1950's.

Greimas who has asserted that narrations were formed common patterns, has achieved own analysis method with structuralist approach which was developed by himself while reviewing Propp's tales. Greimas's analysis method that has benefited from Saussure's semiotics and Propp's narratology in the scope of structuralism has precipitated

to make first of significant semiotic studies (Soydan, 2007: 1). Greimas has affected many litterateurs with an approach as structural.

Greimas has said there is a common semantic axis which is found out in the all texts. Parts which formed semantic axis can be put in order like this: Basic Semantic Dimension: is the deepest structure and contains oppositions. Basic Semantic Dimension and Syntactic Narrative Dimension: is deep structure of the text. It handles basic oppositions of life.

Syntactic Narrative Dimension and Surface Dimension: is surface structure of the text and revenge becomes an individual work (Erkman ve Akerson, 2005: 149).

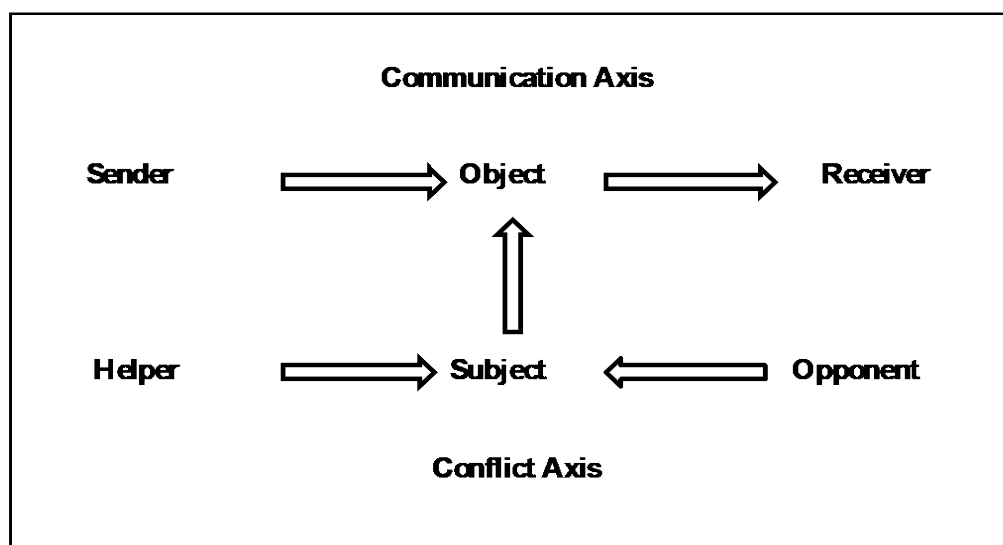

While narrative dimension of the text in surface structure, discursive and thematic parts are reviewed, basic narration grades that have universal qualified and were formed surface structure of the text are determined (Öztoğat, 2004: 152). Greimas's structuralist studies draw sequential analysis which depends on comparison near syntagmatic which depends on combining. Greimas has spread semiotics over a wide area by carrying linguistic further. Greimas's semiotic theory is studied in that difference of narrative/contents (Parsa ve Parsa, 2012: 90).

Greimas has mentioned three essential layers in narration. These are figurative, narrative and thematic grades. People in the narration are exposed with their space and time functions in the figurative grade. Signs in the text are matched together. People in the narration are analyzed in narrative grade. It is faced with Greimas's actant model in this grade. According to Günay, Greimas's actant model is a relation between sender, object and receiver depending on own interaction of actant each together, a relation between object and receiver, an interaction between subject and object, an imperative axis between sender and object, a testing axis between helper, subject and opponent eventual. Subject is interrelated with whole actants (Günay, 2007: 195). Greimas's actant model is sender (determiner of the act), object (topic of the act), receiver (person whom the action was took place for him or her), helper (person who helps to the act), subject (person who is the actioner) and opponent (person who blocks to the act). He thinks, these characteristics formed narration in every text (Parsa ve Parsa, 2012: 90).

Another significant topic is narration grade that converted initial situation to result, is called as narrative curriculum by semiologist. Greimas has classified narrative curriculum in four stages:

1. Manipulation: is first stage. Sender directs the subject to a purpose, a situation, position or an object in this stage.
2. Competence: subject controls whether he/she can or cannot get the action that directed from sender
3. Act: subject starts the action that signified by sender.
4. Sanction: in the result of the action that signified to subject, subject is awarded or punished (Günay, 2007: 199).

Greimas says that narrative, semantic and enunciations structures are not closed in themselves and there are relations among them. These relations happen in significant liberties and limitations; structures are flexible. For instance, it can't be seen manipulation or sanction stage in every text. Semiotics has headed for making signification integrity theory instead of sign theory by transforming rhetoric semiotics gradually (Kıran, 2009: 8). When we reviewed actants as sender affects subject to prompt, narration grade that they directed, is called manipulation. Chain of events start to become at this stage. A subject does the on another subject at this stage in other words it can be said to get action done. Subject controls own abilities if they enough or not for going into the action at competence stage. Sender and helper is two actants that help to subject. The action is seen if it becomes or doesn't in the result of control at stage act. It is the phase in which the subject took place action that subject decides to do in narration. In the result of the action, subject becomes sender or awards or punishes in person at sanction stage that is the last one of four gradual models (Rifat, 2007: 31-33). Greimas has converted the actions to six actants and has demonstrated relations between each together like in table (Gündeş, 2003: 56):

Chart 1: Actantial Model

Subject: Looking for the object

Object: Looked for by the subject

Sender: Of the subject on its quest for the object

Receiver: Of the object to be secured by the Subject

Helper: Of the subject action-helping

Opponent: Of the subject obstructing action (Günedeş, 2003: 57).

The six actants are divided into three oppositions, each of which forms an axis of the description (Kıran ve Kıran, 2000: 216):

1. Axis of desire: Subject and object. The subject is what is directed toward an object. The relationship established between the subject and the object is called a junction, and can be further classified as a conjunction or a disjunction.

2. Axis of power: Helper and opponent. The helper assists in achieving the desired junction between the subject and object; the opponent hinders the same

3. Axis of transmission: Sender and receiver. The sender is the element requesting the establishment of the junction between subject and object. The receiver is the element for which the quest is being undertaken. To simplify, let us interpret the receiver (or positive receiver) as that which benefits from achieving the junction between subject and object.

Greimas evaluates actants by correlating own relations in four meaning axis. While relation between sender, object and receiver were forming communication axis, interaction between subject and object forms desire axis, relation between sender and object forms imperative axis. Communication axis demonstrates that sender needs to object or to convey anything to anyone or an object. Desire axis provides to reach of object to receiver with overcoming all obstacle of subject. Act axis means grade which subject is able to form the act that converted to materialize from desire. Helper provides this power to subject. Opponent is in a negative power situation which blocks subject's action. Also, this axis demonstrates relations between actants. Subject almost has got a relation with all actants. Every actant schema forms depending on subject, if we explain this situation clearly. Also changing of subject means that changing of actant schema (Günay, 2007: 195). It can't be together all component of actantial model. There are six actants together in some narrations, a few one can be seen in some (Yücel, 1999: 120-121). Relation between to actants exposes essential enunciation and essential enunciation is divided two parts as situation enunciation and act enunciation.

First of all, deep and intangible logic that regulates relations on rhetoric and narration grade in third layer of analysis which is the most intangible and the deepest grade of grade-meaning universe is searched. Primarily thing to do at this stage is determining relations which provides to materialize essential syntax, then, how happens logical transformation between each other must be searched. Types of relations are determined by logical transformation like completion (containment) and negation (opposition, contradiction, containment or complementation relation).

For this purpose, it is found out both relation types and logical transformation between each one with semiotic square (Rifat, 1996: 34-35).

Thematic grade is the deepest grade of narration. The text contacts with systems related with world and life in this grade. Essential semantic dimension, called the third dimension is one of the most important interpretation which Greimas has put on; he has mean deep meaning with this dimension. The text contacts with some systems from out literature in this dimension. This dimension related world and life was based on opposition. Every text reviews changing and transforming of these essential oppositions. Greimas thinks these oppositions like a quadrangle and he called it semiotic square. The semiotic square also goes to Aristoteles's principle of contradiction from structuralist approach (Erkman ve Akerson, 2005: 147).

Semiotic square is representation of relations which entailed all conceptual opposition in visual form. Relations in semiotic square are explained with *opposition/contradiction* and *containment (completion)* relations. If a policeman is a policeman with his visual and uniforms, this evaluation is conceptualized with (A) concept on reality/meaning axis. According to Greimas this reality takes place from two opposite sign units. These two sign units is opposite and complete each other, there is relation among them like and... and. a1 and a2 determine existence of two terms that conflicted themselves in the following two opposite sign units (Kıran and Kıran, 2000: 248-249).

Chart 2:**Chart 3: Semiotic Square**

Semiotic square is loaded up with semantic values while passing through semantic categories from symbolic categories. Firstly, structure of the text is destroyed and then it is rebuilt again by this method. In this way, it is descended through deep structure from surface structure of the text. Semiotic square classifies and exhibits intangible units that formed basic structure of any meaning world and relations between these units. At the same time relations system provides to evaluate basic semantic structure (dualism) that supplied to form a significant part in intangible and logical grade and basic syntactical structure (logical relations, transformations between dual components). Rifat has explained drawing of the semiotic square (with lexical units) and components in drawing as follow (2009: 79):

Chart 4: Semiotic Square

←-----→ Contrariety relation
 ----- Contradiction relation
 ←-----→ Complementarity relation

a1 ve a2 : Contrary
 a1 ve a2 : Contrary
 a1 ve a1 : Positive contradiction
 a2 ve a2 : Negative contradiction
 a1 ve a2 : Positive implication
 a2 ve a1 : Negative implication

When sample that shown in Table 5 was placed on the semiotic square, it will be clarified according to lexical units like 'the ugly one' is opponent component of 'the beautiful one'. 'The non-beautiful one' is contrary component too. At the same time, they contain themselves together mutually like 'the beautiful one' with 'the non-ugly one' and 'the ugly one' with 'the non-beautiful one'. Consequently, it can be achieved to opponent, contrary and components that contained from 'the beautiful one' or 'the ugly one'. Negation, completion and containment are logical operations that provide transformations. These relations become between a2-a1 and a1-a2 (Rifat: 2009: 80). Character can be investigated according to narrator or spatial perspective or a viewpoint which includes all of them together while the semiotic square was forming.

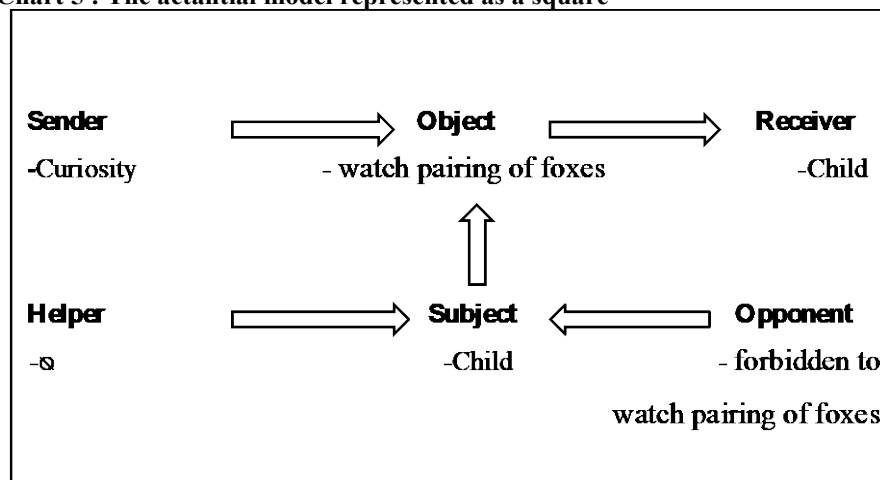

1. Investigation of the Film 'Dreams' by Semiotic Method of Greimas

Akira Kurosawa's film called *Dreams* (1990) becomes from eight short films that are independent from each other. 'Sunshine Through The Rain' narrates life of a child was forbidden to go out by her family in a holy day of society. 'The Peach Orchard' emphasizes results of human intervention through nature. He has narrated in 'The Blizzard' adventure of mountaineers who were stuck in mountain and try to achieve to camp while they were frozen to death, in 'The Tunnel', a commander who met with soldiers that he is in charge of their death. In 'Crows' he has narrated a painting student who has tumbled into picture while walking in Van Gogh's art gallery, and respect to Van Gogh and his art, he has narrated in 'Mount Fuji in Red' the end of world because of fatal gases from nuclear power plant explosion. 'The Weeping Demon' has issued nuclear power plants and demon who has mutated by exposing radiation despite being a human before. Eventually 'Village of the Watermills' ends in a village in peace and joy with hope despite all pessimisms. According to Kurosawa, nature is the biggest creative power. Spending life of creatures is possible only if they give up fighting with nature, respect to creative power of nature and submit to nature (2014: 293-295). Actually, these dreams are topics which Kurosawa wanted to query them his own language. Each of films make interrogate again to nature and life while looking landscape of today. The film 'Dreams' has reflected cultural components, myths and fears that take significant place in Japan life. Although it is shown like there isn't any connection between episodes in film, there is a timewise and holistic meaning connection. In this study, 3 dreams were included to review. These dreams are related subjects like nature, life, environment, nuclear energy, war, heroism, developing technologies, death; actants model and semiotic square have been formed in this subjects' context. Actants model of Greimas sorts text to sections in own while analyzing narration. It makes this in integrity of text. There is connection between sections and they doesn't make a sense by their own, in other words they become more meaningful in integrity. Film has been reviewed within these data by sorting sections and forming actants model in every section own.

2.1 First Section: Sunshine Through The Rain

A child at 8 years old goes out a day which is forbidden to go out according to Japan mythology. It is believed in Japans, foxes have celebration each together in rainy days and no one does not go out in this day which is accepted special. Kid goes to forest and watches pairing of foxes despite his mother's warnings. Actually, thing that shown like fox in film is people who are in human form. When child came back to home his mother said that foxes were very angry for him because of he did that he mustn't do, and they dropped a knife to kill himself for penal but if he apologizes maybe they will forgive him. Mother said to child that if he isn't forgiven, she will not take in home. Child goes through forest to apologize from foxes. It is uncertain that whether he is forgiven or not in the end of dream. Nature is a fact that must be respected in film and kid has interfered this. Nature was reflected blessed and it has been emphasized by mother's words "*go and apologize from foxes, otherwise I don't take you in home*" that intervention is an unforgiveness thing even a child does this. Many components included Japanese culture attract attentions. Traditional dance, special dresses, Japanese architecture are sample for this.

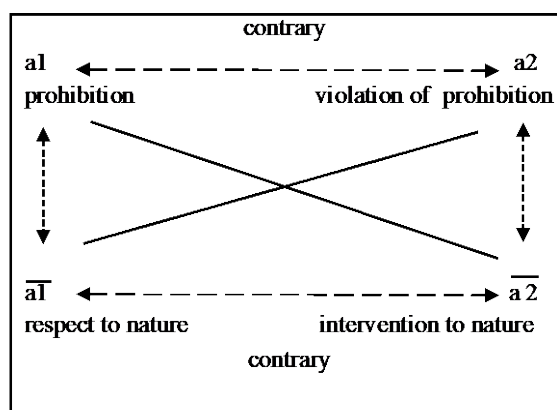

Chart 5 : The actantial model represented as a square

Subject= S_1 ,
 Object= O_1 ,
 Sender= S_2 ,
 Receiver= R_1 ,
 Helper= H_1 ,
 Opponent= O_2 ,
 Narrative Curriculum = NC_1

When we looked at communication axis of table, this is a watching for curiosity of how foxes celebrate their pairing at the same period in every year. The hero of the story and the person who will utilize from action is child. O_2 of sender S_1 has been forbidden to watch pairing of foxes that is society rules of Japanese society. S_1 has gone to forest and watched pairing of foxes to achieve value object despite warning of his mother. Initial situation, S_1 is neither separate nor in conjunctive position. Subject is both together and separate with its object. Subject and its object has switched into conjunct situation by going of the child to forest. $S_1 \wedge O_1$ situation has become. The subject has been warned due to make mistake by his mother and has been gone to forest to apologize in the act axis that includes subject and opponent. It is uncertain that whether the child is forgiven or not in the end of section.

Chart 6: Semiotic square

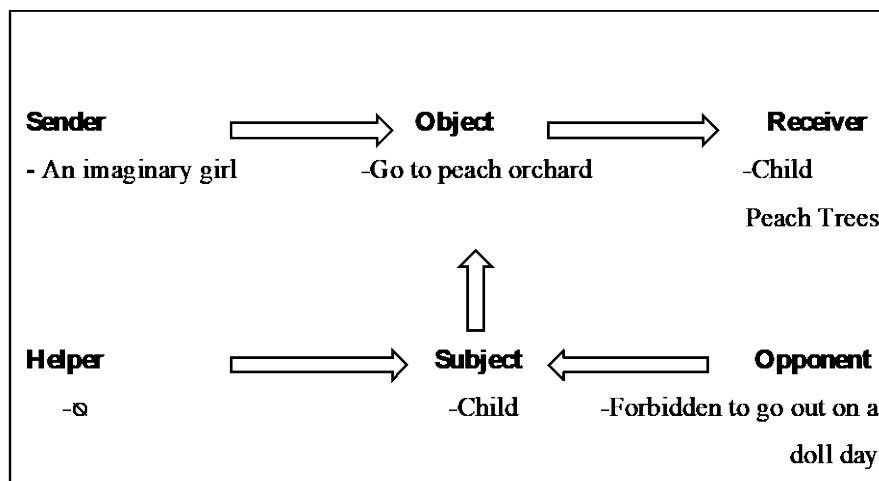

When we looked into deep structure of the dream, prohibition/violation of prohibition, respect to nature/intervention to nature are appeared. Contrary component of 'prohibition' is 'violation of prohibition', contrary component of 'respect'. At the same time they contains each other that 'prohibition' with 'respect to nature' and 'violation of prohibition' with 'intervention to nature'. Consequently, it can be achieved to contrary and containment components from 'prohibition' or 'violation of prohibition'. The child have gone to forest and watched foxes by don't pay attention on prohibition even though it is forbidden that going out and watching pairing of foxes. In the other one of these oppositions that are related Japanese culture one-to-one, holiness of nature opposition was formed. Child has watched pairing of foxes thereby he has interfered to nature and it is necessary that being holy of nature and respect to nature. In here, pairing of foxes is presented as a natural event. This situation has generated *opponent meaning stage*. Child who intervened to nature has endured results that he will pay the penalty. Director worried about future of nature whereat future of humans has mentioned clearly in first dream.

Second Section: The Peach Orchard

A little kid goes out thereby don't listen her sister's advice in a day called 'doll day' which is a festival of young ladies in Japanese culture. She arrives a peach orchard with following an imaginary girl who she can see only. When she arrived, she meets spirits of peach trees that cut down by her family. 'Baby day' is blooming day of peaches but it isn't celebrated without peaches. People said they are spirits of peach trees charges the child because of cut trees by her family. "What will you celebrate without peach trees?" he asked. The child starts to cry and specifies that how much she loves peach trees like "no, I like blooming of trees, I like that orchard, I can buy a fruit with money but is it possible that buying a peach orchard?". Then, one of the spirits says that child cried while trees were cutting, and she is a good girl. So, child allowed to watch blooming of peach trees once more by spirits. Human-like spirits are in there demonstrates blooming representatively with dance and music. Orchard gets full of trees suddenly and trees disappears frighteningly. Then, a sapling appears, and the child is happy. In this dream, emphasized thing is fruits that is given from trees as well as blooming, to be tree and to be grew in respect to nature. It is explained that it is necessary to not offend nature in dream that is finished with a hope which nature may be forgiver.

Chart 7: The actantial model represented as a square

Sender value object of S_1 on communication axis is curiously desiring to follow the girl who is seen only by her. Sender starts to move in terms of delivering a thing to receiver subject in communication axis on object and receiver axis. Opponent of subject is O_2 . Other children who have been in house where was celebrated doll day have warned S_1 about it is forbidden to go out on doll day. S_1 has followed girl thereby don't pay attention on warnings and she has achieved to peach orchard. Bearing helper actant role to S_1 is her going to peach orchard. Subject has achieved value object $S_1 \wedge O_1$ situation has become.

Chart 8: Semiotic square

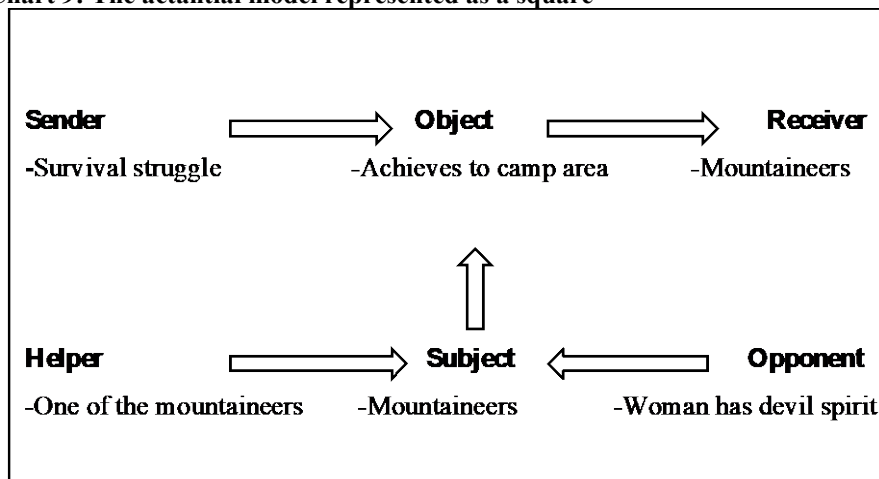

In shown words in semiotic square, 'intervention to nature' is opponent component of 'respect to nature' according to units. Also, contrary component is 'be offended peach trees'. At the same time, they contain each other that 'respect to nature' with 'blooming of peach trees' and 'intervention to nature' with 'offending of peach trees'. There is a *contradiction relation* between 'intervention to nature' and 'blooming of peach trees'. So, it can be achieved components that include opponent, contradictory and containment from 'respect to nature' or 'intervention to nature'. When we looked at deep meaning structure of The Peach Orchard dream, it is occurred like in first dream again that it is a necessary to respect to nature and little child's family had broken this. Re-blooming peach trees forms *opponent meaning stage* after intervention of little child's family to nature without respect and apologizing tearfully of child after peach trees were offended.

Third Section: The Blizzard

The Blizzard narrates survival fight of 4 mountaineer about to be frozen to death and snowstorm which they were caught on about to achieve to camp. Mountaineers who can't resist to snowstorm falls asleep and a woman comes to lay over mountaineer as she wants to their sleeping. One of the mountaineers doesn't want to sleep and woman presses him to snow and says, "snow is warm". Mountaineers resists and stands up suddenly and woman goes to

fly. Mountaineers tries to wake up the other friends. In the meantime, snowstorm has finished, and snows has started to melt. It was a hope to mountaineers that camp areas right over there. In here, woman represents evil spirit demon who is shown in Japanese cinema frequently. Mountaineer has rescued own and his friends by correcting the mistake at the last moment while he will be liable for disaster thereby intervention to nature and human fight. This dream has finished with hope like in the other dreams, too.

Chart 9: The actantial model represented as a square

Sender object of S_1 in communication axis is survival thereby rescuing from snowstorm. Person will utilize from act is S_1 . H_1 is helper to S_1 ; H_1 bears helper actant role. O_2 is on opponent situation of object. Although woman has devil spirit in opponent situation tries to persuade mountaineers to sleep in snowstorm, one of them stands up with resist and achieves to camp area thereby waking up the other friends. Shown actants in schema above exposes relations between units of narration in a narrative. Sender starts to move in terms of delivering a thing to receiver subject in communication axis on object and receiver axis. Communication axis of schema above is desire of mountaineers to achieve to camp area. Woman has devil spirit faces with us as opponent in desire axis which is subject object axis. In desire axis that is helper, subject, opponent axis, one of the mountaineers has succeeded to rescue his friends thereby resisting to woman has devil spirit. At the last moment, mountaineers about to death in snowstorm have been rescued. Thus, a change has been occurred between start and end of the action.

Chart 10: Semiotic square

Death/life and despair/hope that laid in deep structure of dream forms *opponent meaning stage*. 'Hope' is contrary component of 'death', 'despair' is contrary component of 'life'. There are *containment* relations between 'death' with 'despair', 'life' with 'hope'. So, it can be achieved to opponent, contrary and containment components from 'death' and 'life'. In one side, while there was no remedy but only death for mountaineers who caught on snowstorm and on top of it, there is a woman has devil spirit wants to kill them, the other side, there are choosing of one of the mountaineers to live with resistance to woman and rescuing the other friends. Storm blows over when mountaineers woke up and camp area is saw. Satan-like woman is like a messenger of death and despair. While losing of hope were taking away to death, hope has risen, and they have hold on to life with waking up one of the mountaineers.

Summary

In this study, Kurosawa's film called *Dreams*, has been analyzed with Greimas's actants model and semiotic square. Narrations in film has been reviewed thereby re-reading of films. It has been descended surface and deep structure of narrations that related each together. Firstly, films have been sorted to sections in study. Narration has been divided units with sections, articulations has been determined thereby detecting difference between sections. It has been demonstrated that story line which is presented syntagmatically, thematic stage and narration stage have formed surface structure of text; there are a sender, a receiver, a subject, an object, and an opponent. It has been discovered that every section has a system own and have an integrity. Logical-semantic stage that is results of transformations and articulations with reviewing deep structure of the text has been exposed. It has been demonstrated that meaning of the text has a deep and multilayered structure with this study. It has got easy how basic semantic structure analysis has been did and how meaning has been formed with Greimas's method. According to oppositions in structure of narration syntagmatic oppositions of film *Dreams* can be sorted like this: death/life, technological opportunities/technology related disasters, humanity/nonhumanity (being devil, being demon etc.), hope/despair, prohibition/ violation of prohibition. Meaning units that mentioned enables to be perceived of film as an integrity. In the light of these analysis, it has been achieved that deep meaning of film and it has been exposed what director wants to explain. Film that bore the stamp on own themes of Kurosawa cinema, included many sub-meanings, occurred from Japanese culture, traditions and problems of society has provided convenience to review with Greimas's semiotic square.

All in all, in Kurosawa's films, it is encountered like that nature-human relation, view of historical events, wars, love-friendship, poverty, history of samurai, nuclear disasters frequently. Kurosawa who based on Japanese culture, also emphasized hope despite all negations and social problems that he tackled, when examined to *Dreams*, it has finished hopeful. In *Dreams*, villagers who live in peace and compatible with nature is utopia of Kurosawa. What he wants to explain in all dreams are compatible with life and integration with nature by avoiding from exorbitances of technology. This is demonstrated with visual feast as well as aural feast in last dream.

Düşler Filmin Künyesi

Yönetmen: Akira Kurosawa, Ishiro Honda

Senarist: Akira Kurosawa
Yapımcı: Steven Spielberg, Mike Y. Inoune.
Müzik: Shinichiro Ikebe
Görüntü Yönetmeni: Takao Saito, Masaharu Ueda
Ülke: Amerika, Japonya
Yapım Yılı: 1990
Süre: 119 dakika
Oyuncular: Akira Terao, Mitsuko Baisho, Toshie Negishi, Mieko Harada, Mitsunori Isaki, Toshihiko Nakano, Yoshitaka Zushi, Hisashi Igawa, Chishu Ryu, Martin Scorsese.

The Needs Of Parents With Adhd In Parent Education: A Mixed Model Study

Gönül Akçamete

gonul.akcamete@neu.edu.tr

Abstract

Children with ADHD have special education needs. Participation of parents in the process plays an essential role in the effectiveness of the education. Concerning parent education which is a part of lifelong education, determination of the expectations of parents of children with special needs and preparing curricula accordingly bears considerable importance in terms of the development of the society. In this direction, the objective of this study is to identify the education needs of parents of children with ADHD. In addition, determination of stress and quality of life are sub-objectives of the study. The research employed a mixed model. Through special education teachers 200 parents (110 mothers and 90 fathers) were reached. “Quality of Life Scale”, “Perceived Stress Level Scale” and “Instrument of Determining Parent Needs” were used for quantitative data. According to the obtained results, the stress level of parents is a significant predictor of quality of life ($\beta = -.204$, $t = -2.738$, $p < .01$). Semi-structured interviews were conducted with 15 volunteers among the mentioned parents case study analysis was conducted for qualitative data. The answers given to the questions within the framework of themes created by the researcher were examined. Qualitative data showed that parents suffered from emotional inadequacy, had negative experiences with the community, and had difficulties in solving the school problems of their children. In addition, further investigation of the answers showed that participants frequently needed a practical education which aimed at problem-solving ($f=12$). An examination of the relevant literature shows similar research results indicating the challenges of having a child with ADHD. Devising of education programmes directed towards the needs of parents has been recommended.

Abstract

This study focuses on multicultural education support policy for migration children in The Republic of South Korea. Migrant children are reluctant to give up their education due to differences in educational opportunities and Korean language skills, and education support is in a state of urgency, and it is necessary to shift to practical support and customized support. This study on the appropriate point suggests the status and improvement direction of the multicultural education in Korea.

Introduction

With steady inflow of foreigners into Korea, foreigners staying in Korea in 2018 account for about 3.9% out of the total population (Monthly statistics of immigration and foreign policy, 2018). Accordingly, in Korea, the interest and policies regarding multicultural society increased. In Korea, laws such as FRAMEWORK ACT ON TREATMENT OF FOREIGNERS RESIDING IN THE REPUBLIC OF KOREA (2007), MULTICULTURAL FAMILIES SUPPORT ACT (2008), ACT ON THE PROTECTION AND PROMOTION OF CULTURAL DIVERSITY (2014), REFUGEE ACT (2016) have been enacted to aid social integration in response to a growing multicultural society. (Korea Ministry of Government Legislation)¹. These laws prescribe policies such as multicultural education that enables migrant children to learn Korean language and to receive support for education, and Korean to understand multicultural society and to accept changes, even though these are not enough. And education related laws such as elementary, middle, and high school laws prescribe institutions for guaranteeing education rights for children of international marriage or migrant children.

In particular, the increase in migrant children affected the interest in multicultural education or mutual cultural education and changes in educational policies. The Korean government came up with various policies of multicultural understanding education and promotion for guaranteeing education rights for children of multicultural families and for ensuring that Koreans understand multicultural society and accept changes.

Through these efforts, Korea has institutional foundation for multicultural education. However, regarding institutionalization of multicultural education, rather than central government but local governments implement policies in earnest. Even though Korea has not developed local autonomous governing system like Europe or the United States, but has strong local autonomous governing principle of education. Accordingly, multicultural education is also being implemented in local governments. To that end, 17 local governments has enacted and implemented ordinances for multicultural education. This study is aimed at analyzing and evaluating these multicultural education ordinances.

Emergence and major contents of ordinances for multicultural education support in Korea

In Korea, with the increase of immigrants, migrant children are also increasing. However, children of marriage migrants outnumber children of migrant workers. Migrant workers have to return to their own countries in principle after three years in accordance with short term circulation system, and they are not allowed to bring their families. On the other hand, as marriage migrants get married with Koreans and give birth to children, the number of migrant children rapidly increased. According to statistics of the year 2017 (National Statistical Office, 2017), the number of multicultural families attending elementary, middle, and high schools² about 110,000, accounting for 1.9% of the entire students. The number does not include children who are born in foreign countries and move to Korea with their parents.

As children of multicultural family have Korean nationality, they are not discriminated legally in terms of education. However, they may be late in learning Korean language and special curriculum is required. Besides, in

¹ www.law.go.kr

² In Korea, when immigrants of marriage marry and make households, they are called multicultural family, and the children born to them have Korean nationality and area called children of multicultural family.

the case of children who come to Korea with their parents such as children of compatriots of foreign nationality, remarriage households of international marriage, and migrant workers, they tend to give up their studies because of differences in educational chances and Korean abilities. Therefore, educational support for these migrant children is desperately needed. Even though the Korean central government comes up with measures, local education offices need to come up with policies for education support for them. In other words, in terms of education for migrant workers, of principled regulations such as discrimination prohibition, but change to practical support and customized support is needed at this time.

In the meantime, Korea's central government emphasizes multicultural education for all students and ordinary citizens. Legal grounds for multicultural education in Korea are prescribed mainly in multicultural family support law, not in laws regarding education. These laws especially prescribe "The State and local governments shall take measures, such as education and advocacy activities for understanding diverse cultures, necessary for preventing social discrimination and prejudice against multicultural families and for encouraging members of society to acknowledge and respect the cultural diversity." And they also prescribe education of understanding multicultural family at school and training for multicultural understanding of teachers. In addition, the Ministry of Education, Science and Technology announced 『Measure to advance education for multicultural students』 in 2012, and the measure emphasizes multicultural preparatory school and establishment of Korean as Second Language course(KSL), expansion of dual language instructor, and fostering global leading schools. However, the multicultural education of the central government focuses educational rights for migrant children and understanding about multicultural family.

Accordingly, local autonomous governments enacted ordinances for supporting multicultural education. The first ordinance for multicultural education was made in 2012, and as of 2018, all of 17 upper (metropolitan) local governments enhanced this ordinance. Educational policies regarding key multicultural prescribed in ordinances supporting multicultural include multicultural preparatory school for all students, Korean language course(KSL), emphasis on multicultural education, multiculture focus school, expansion of dual language instructors, training for multicultural education of teachers, and establishment of multicultural education support center.

Multiculture preparatory school has programs to help students who come to Korea middle way through or children of foreigner households. Centering on schools with certain number of children of migrant background, Korean as Second Language(KSL) classes are operated. In multiculture focus schools, multiculture sensitivity education is conducted for all students. Through training for teachers, teachers' competency in multiculture and expertise are enhanced. In addition, multicultural education center are established in local communities to support migrant children's entering into public education and adaptation. Rather than laws or policies of the central government, ordinances of local governments are thought to expand the multicultural education in line with the essential concept of multicultural education.

Evaluation and improvement direction of multicultural education support ordinance

It is encouraging that local governments expand multiculture education in accordance with multicultural education support ordinance. Multiculture preparatory schools are often favored by migrant children and they enter such schools. However, there are counterarguments about migrant children's going to multiculture preparatory schools. Because some think that the essential concept of multicultural education of integrated education is damaged. And it is pointed that in spite of multiculture education, there are perspective focusing on pure blood. These limitations are analyzed and improvement measures are suggested.

First, there are limitations on subjects of policies. Korea's laws do not use the term of migrant children, but use the term of children of multicultural family which premises the qualification for legal residing. For this reason, Korea's multicultural education tends to be confined to children of multicultural family. There is still perception that at least one of parents needs to be Korean, emphasizing the importance of pure blood. Therefore, there are risks of education's vacuum regarding children of foreign nationality(children who come to Korea middle way through, refugees included) or unregistered children. Admittedly, compared with the past, educational discrimination for children who come to Korea middle way through, migrant children of foreign nationality, and unregistered migrant children is decreasing, but education for them is not institutionally guaranteed. Rather than the concept of children of multicultural family, the concept of migrant children needs to be introduced.

Second, special programs for regions where migrant children are concentrated are needed. In other words, ordinances or multicultural education policies reflecting regional characteristics are needed. As Korea has strong characteristics of centralized authoritarian rule, the authorities of local autonomous governments are weak. For this reason, ordinances supporting multicultural education also fail to reflect regional characteristics and are composed of similar contents. However, there could be differences in the number of migrant children or regional characteristics, contents of ordinances supporting multicultural education need to reflect regional characteristics. For example, in the case of the regions where there are many migrant children, measures could be considered to designate the regions as special district for multiculture international school, or to strengthen dual language education.

Third, preparation measures need to be made for the students who drop out halfway through. In particular, children

who come to Korea midway through go to school with no experience in Korean language and Korean culture, and experience maladjustment, identity crisis, and psychological withering. Admittedly, for resolving these problems, preparatory schools exist to help them adjust to regular schools. However, as preparatory schools are conducted centering on elementary schools, proper preparatory schools need to be made for middle and high schools (Central multicultural education Center Policy School Business Explanation Database, 2017). In addition, for those who drop out midway through occupational education needs to be provided.

Fourth, multicultural education within school and outside of school need to be harmonized. For facilitating multicultural education and practical operation, the network role regional multicultural education center is emphasized. Multicultural education outside of school is expected to conduct multicultural education not only for migrant children, but also for ordinary citizens.

Fifth, strengthening competency of teachers for multicultural education requires training of teachers. Training of teachers is stipulated in some ordinances or included in multicultural education implementation plan. However, even in the case of training of teachers, the focus tends to be on multicultural family phenomenon and multicultural education has strong characteristics of education reform. Therefore, training of teachers needs to emphasize reform related with teaching and learning and teachers' multicultural competency and multicultural sensitivity.

Lastly, in line with the essential meaning of multicultural education, multicultural education for all students needs to be facilitated further. To that end, education to understand various environments and cultural background of minorities need to come first, and multicultural education to respect human rights and cultural characteristics of minorities. In addition, in Korea's current ordinances supporting multicultural education, reasons for prohibiting discrimination and concept of multicultural education need to be actively stipulated and multicultural education contents need to be expanded on educational sites (Sangwoo Chong·Hyunmin Kang, 2015:15). In other words, it should not be confined to 'understanding' education regarding 'multicultural family', but it needs to be changed to multicultural personality education based on prohibiting prejudice and discrimination, and cultural diversity.

Conclusions

Facilitating multicultural education pursues multicultural education for all students rather than being the education for social composition of minorities and emphasizes multicultural human rights education to understand various cultural characteristics. In addition, for functions of operating practical autonomous governance laws, under the policies and institutions of central government, understanding and spreading customized support and multicultural are needed. They need to be regarded as approaches to foster global talents who prosper in the internationalization era, not beneficiaries, and practical efforts based on institutional foundation between central government and local autonomous governments are required.

Abstract

Analysing the Hungarian frame curricula in Informatics, along with the number of classes and years dedicated to the subject, several contradictions were revealed. Informatics as a school subject is compulsory in grades 6–10, with one class a week. In special programs, classes are available for younger students and/or with a higher number of classes. However, regardless of the number of classes and/or years assigned to the subject, similar knowledge contents are required.

We have found that the paradox of the frame curricula is that it was intended to be tool, interface, and environment independent, but, ultimately, turned out to be over-generated. Furthermore, the curricula do not focus on fundamental, transferable skills, abilities, and knowledge. Instead, we revealed that it contains mostly vague expressions which do not provide enough of a guide for teachers to develop lessons with relevant content. Beyond that, it is not evident how the curriculum supports the development of computational thinking, algorithmic skills and the computer supported problem-solving abilities of students, which should be the primary concern of these documents. Furthermore, huge gaps are detectable between the different areas of Informatics, and between Informatics and other subjects, and there is no clear presentation of how they are connected, and how this knowledge can be transferred to real world problem-solving.

Our preliminary aim was to reveal and describe the paradox within the curricula. We further plan to test the students' knowledge according to the requirements of these documents, and find out how the different communities, schools, age groups, and teachers assign meaning to the over-generated expressions of the frame curricula. For this purpose, we created a test which aims to cover the most important aspects of the Hungarian frame curricula in Informatics, focusing on the students' fundamental ICT skills, including but not limited to file operations, algorithm analyzation and decoding, and text and data handling. In our current work we also present some of the questions and tasks of the test and provide details on how they are connected to the curriculum, to its dedicated areas, and to other school subjects.

Keywords: *Curriculum analysis, Informatics, algorithmic skills, computational thinking, computer problem-solving*

Introduction

Several research projects on the subject have revealed that the extremely high attrition rate in tertiary studies in Informatics is primarily rooted in the students' low level of computation thinking skills, their unawareness of the requirements of these courses, and their attitude to the subject area (Gombos & Csernoch, 2015; HIS, 2007; OECD, 2011; OECD, 2016; Csernoch & Biró, 2017).

Focusing on the students in our close environment – first year students of informatics at the University of Debrecen – the TAaAS project (Testing Algorithmic and Application Skills) revealed that the students' algorithmic, programming, and computer problem-solving skills are much lower than is expected according to university standards (Csernoch et al., 2015) and that the attitudes of students to computer sciences/informatics do not match the real nature of these sciences and the expectations of tertiary studies (Csernoch & Biró, 2017). The authors of the TAaAS projects concluded that that students' difficulties originate in their previous education in primary and high schools.

In addition to analysing the frame curricula, we aim to find out how teachers of Informatics interpret it, what contents and methods they apply in their classes, and how effective these methods are. For this purpose, we are planning to launch a test which aims to cover the most important aspects of the Hungarian Base Curriculum and the frame curricula in Informatics, focusing on the students' fundamental ICT knowledge, including but not limited to file operations, analysing and decoding algorithms, handling text and data, and students' knowledge-transfer and computer problem-solving abilities.

National Core Curriculum

In the 1995 National Core Curriculum a new subject area, “Informatics, computing and library use” (NAT, 1995) was introduced. In the more recent edition of this document released in 2003 (NAT, 2003), digital competence was declared as a key competence, a concept which was reinforced in the 2007 and 2012 National Core Curricula (NAT, 2007; NAT, 2012).

In the National Core Curriculum, digital competence is defined as follows:

“Digital competence embraces the confident and critical use of information society technologies in work, communication, and leisure. It is based on the following skills, [and] activities: recognition, retrieval, evaluation, storage, production, presentation, and exchange of information; as well as communication and networking through the Internet.” (NAT, 2003; NAT, 2007; NAT, 2012).

According to the National Core Curriculum, the use of digital technologies must become more prevalent in primarily and secondary education, which should make learning and teaching more effective; in the meantime, computational thinking should become the fourth basic skill alongside reading, writing, and arithmetic (Wing, 2006). Considering this concept, it is clear that the National Core Curriculum assumes a firm knowledge-transfer between the different subjects within informatics and encourages computer supported real-world problem-solving in other subjects.

However, we must bear in mind that it is a misconception (Kirschner and Bruyckere, 2017) that digital natives, i.e. the Z-generation (Prensky, 2001), do not need to study informatics because their everyday lives are accompanied by digital tools from birth. Indeed, it has been proved that every child needs to develop computer thinking skills, regardless of their year of birth (Kirschner & Bruyckere, 2017; Csernoch et al., 2018).

Implementation – Frame Curricula In Informatics

The official content

In the Hungarian education system children start school at the age of 6-7, and primary education usually lasts 8 years, and is followed by a further 4 years of secondary education. Informatics as a school subject is compulsory in grades 6–10, for one class a week. In special programs, classes are available for younger students and/or with higher number of classes. However, regardless of the number of classes and/or years assigned to the subject, similar knowledge contents are required (Kerettanternv, 2013).

Based on the current frame curricula (Kerettanternv, 2013a; Kerettanternv, 2013b; Kerettanternv, 2013c), digital competence includes the following activities and abilities assigned to primary school students.

Primary school students are supposed to (Kerettanternv, 2013)

- become more motivated to use ICT tools,
- be able to learn text and data management in informatics classes, in other school subjects, and in extracurricular activities,
- use information provided by computers and the Internet, (here, we must mention that we do not agree with the expression “information provided by computers”, since computers are not able to provide anything, and definitely not information),
- be able to create presentations and reports,
- be familiar with the opportunities offered by electronic communication and be aware of their dangers.

High school students, beyond the above requirements, are supposed to (Kerettanternv, 2013):

- be able to create aesthetic documents using word processing, spreadsheet and presentation programs,
- adhere to the ethical principles of communication and use of information,
- know and take into account copyright and legal principles pertaining to users.

The practice

The analysis of the frame curricula revealed that they are too ambitious, given the low number of classes, so it is impossible to teach the required contents to an appropriate depth. This is evidenced by the two information technology frame curricula currently available, which do not differ in their contents but only in the number of classes assigned to the subject (obligatory: Informatika kerettanternv, 2013b; Informatika kerettanternv, 2013d, optional: Informatika kerettanternv, 2013a; Informatika kerettanternv, 2013c; Informatika kerettanternv, 2013e). Consequently, teachers have their own ideas of what the terms of the curricula mean, but there is no consensus. Everyone teaches whatever they think is correct and acceptable: different subjects and different content, using different approaches – and not necessary those that have been proved to be effective and efficient. In general, there is too much freedom for teachers of informatics. On the other hand, it is important to note that, due to the absence

of organized post-graduate teacher education, there is no evidence that teachers are up-to-date, or that they are fully aware of the all required components of TPCK (Koehler & Mishra, 2009; Koehler, 2012) and of the National Core Curriculum and the frame curricula. To find evidence of how teachers implement the current frame curricula in informatics and how they prepare their students in accordance with the required contents, we administered a questionnaire in grades 7–10, accompanied by a questionnaire for the teachers of the students involved.

Examples Of Over-Generalized Expressions

In the following, samples (Tables 1, 2 and 3) are presented from the frame curricula in informatics to demonstrate its over-generalization, its vague and ambiguous expressions, the lack of the skills and competences it is meant to develop, and also of the background knowledge which is required to teach the contents effectively.

Expressions of the frame curricula	Research questions
create short documents	How long are short documents?
create bigger documents	How long are bigger documents?
create smaller documents	What is the difference between smaller and shorter documents?
create webpages	What elements should the webpage contain? What kind of webpage editor should be used? What level of webpage design is required?
basics of web design	What does the word “basics” mean?
different objects inserted into documents	What kind of objects? How many objects?

Table 1: Expressions from the requirements of the frame curriculum in the “Creating digital texts and audio-visual documents” area (left), and our questions, which draw attention to the ambiguous expressions.

Expressions of the frame curricula	Research questions
build algorithms to solve a problem	Which problem? What kinds of problem? What is the complexity of the algorithm?
create simple algorithms	What is a “simple” algorithm?
write simple programs	What does “simple” program mean? Which language(s) and which structures can be used?
implement the algorithm-solution of simple problems	What does a “simple” task look like? What does “algorithm-solution” mean? What kind of implementation is required, and in what programming language(s)?

Table 2: Expressions from the requirements of the frame curriculum in the “Problem solving with informatics tools and methods” area (left), and our questions, which draw attention to the ambiguous expressions.

Expressions of the frame curricula	Research questions
use functions	Which functions? All the 600 functions of MS Excel? All the functions of a programming language? What does “use” mean? Call functions?
edit formulas	Which formulas? What kind of formulas? What kind of operators? Call functions as well?
upload database	Where do we have to upload databases to? How should we upload databases? What kind of databases? Why do we have to upload databases?
compound interest, calculate the area, the surface, the volume of objects, relative frequency, probability, logarithmic function	The logarithm function is taught in class 11 in mathematics, and this expression is in the elementary school curriculum. When are relative frequency and probability taught in maths classes? The area of what? The surface and volume of what objects?

Table 3: Expressions from the requirements of the frame curriculum in the “Data management, data processing, information retrieval” area (left), and our questions, which draw attention to the ambiguous expressions.

We also must draw attention to the language of the frame curricula. We have not edited the expressions presented in Tables 1–3 in such a way as to present them in a bad light: they are given in their original forms. This means that the frame curricula contain ambiguous expressions rather than complete sentences, which makes understanding even more difficult.

Magic Words

There are words in the documents which we call “magic words” due to their high frequency and ambiguity, which also make the curriculum obscure. Some of these terms are included in the following tables (Tables 4 and 5).

basic operators	basic use
basic knowledge	basic relationships
basic mathematical operations	basic concepts
basic treatment	basic utility type
basic functions	basic service
basic instructions	basic elements

Table 4: A selection of expressions containing the magic word “basic”.

simple exercises	simple database development
simple development system	simple application programs
simple activities	simple floor plans
simple processes	simple spreadsheet operations
writing simple algorithms	simple models
simple events	simple user software

Table 5: A selection of expressions containing the magic word “simple”.

We compared the frame curricula of informatics to the frame curricula of the other subjects that students begin to study at a similar age, and also to finish at a similar age, and where, moreover, there is a subject relationship between informatics and these subjects. Based on these criteria the choice fell upon physics and chemistry. Students begin to study physics in class 7 and finish in class 11. Except for eight grade, they have two classes a week every year. Chemistry is started in the seventh grade with one hour per week and is studied for two hours a week over the next three years.

The following tables (Tables 6 and 7) show the frequency of “magic words” in the frame curricula for physics, chemistry, and informatics. The word “basic” occurs 21 times in the primary school curriculum for informatics, while in the secondary school curriculum for the same subject it occurs 13 times (Table 6, **Hiba! A hivatkozási forrás nem található.**).

basic	number of classes	frequency
physics	2+1+2+2+2	9+31
chemistry	1+2+2+2	17+10
informatics	1+1+1+1+1	21+13

Table 6: The frequency of the word “basic” in the frame curricula for physics, chemistry, and informatics subjects.

The word “basic” occurs in physics 40 times, and in chemistry 27 times. The word “basic” occurs 21 times in the primary school curriculum for informatics, while in the secondary school curriculum for the same object it occurs 13 times. (Table 6, Figure 1) The word “basic” occurs 21 times in the primary school curriculum for informatics, while in the secondary school curriculum for the same subject it occurs 13 times (Table 6, **Hiba! A hivatkozási forrás nem található.**).

All in all, these numbers are similar to the number for the informatics curricula (34 terms), but on average (frequency/hours) their relative frequency is highest in informatics (**Hiba! A hivatkozási forrás nem található.**).

Figure 1: The frequency of the word “basic” in the frame curricula for physics, chemistry, and informatics divided by the number of classes.

The situation is similar with other words. The word “simple” occurs 18 times in the primary and 10 times in the secondary school frame curricula in informatics (Tables 7 and 5, Figure 2). As with the frequency of the word “basic”, the word “simple” occurs more frequently in informatics than in the other subjects (Table 7, Figure 2).

simple	number of classes	frequency
physics	2+1+2+2+2	7+29
chemistry	1+2+2+2	9+8
informatics	1+1+1+1+1	18+10

Table 7: The frequency of the word “simple” in the frame curricula for physics, chemistry, and informatics subjects.

Figure 2: The frequency of the word “simple” in the frame curricula for physics, chemistry, and informatics divided by the number of classes.

Testing Computational Thinking Skills

Our preliminary aim was to reveal and draw attention to the paradox of the Hungarian frame curricula. We further planned to test the students’ knowledge according to the requirements of these documents, and find out how the different communities, schools, age groups, and teachers assign meaning to the over-generated expressions. For this purpose, we completed a test which aims to cover the most important aspects of the Hungarian frame curricula in informatics, focusing on the students’ fundamental ICT skills, which includes but is not limited to file operations, text and data management, and analysing and decoding algorithms. In our current work we also present some of the questions and tasks of the test and provide details on how they are connected to the curriculum, to its dedicated areas, and to other school subjects.

Task A: Data type recognition and knowledge-transfer

The following problems are presented in a Hungarian (European) interface. What data types are in each column starting from row 2? (multiple answers are accepted)

	A	B	C	D
1	Username	Uploads	Subs	Views
2	VamosART	484	1,107,555	226,195,766
3	Videómánia	338	833,23	254,545,702
4	PamKutya	120	809,866	223,441,355
5	LetsGoMartin	176	725,638	162,798,559
6	TheVR	1,062	592,675	213,550,948
7	luckeY	1,183	561,13	150,341,428
8	Peter Gergely	100	548,241	79,713,757
9	Scribble Netty	159	546,049	74,234,471
248	Szilvagliam	87	61,899	3,918,538
249	rance flow	524	61,863	53,275,385
250	KIS GRÓFO (official)	9	61,65	30,712,031
251	KODIAK	736	61,467	14,599,194

	Integer	Real	Text	Logical	Date	None
Column A	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Column B	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Column C	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Column D	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Figure 3: The sample table to test how students recognize the different data types in the presented table.

How many rows (records) are in the table?

The largest number in column B is:

The smallest number in column B is:

What does the following formula do? `{=SUM(IF(LEFT(A2:A251)="L",1))}`

Figure 4: Questions connected to the sample table in **Figure 3** to test whether students consciously selected the data types of the columns presented, or only did so by chance.

The problems presented and tested in Figures 3 and 4 are rooted in the different semantics of the comma in the different languages. The table is downloaded from the webpage entitled “Top 250 YouTubers Channels in Hungary” (YouTubers 2018; Figure 5), where the country can be selected, and the content is adjusted to this selection. However, the syntax of the selected language is ignored, and the English thousand separator character, the comma, is in use in the downloaded data table regardless of the language of the selected country. By opening this file in Hungarian spreadsheets – and in most European languages – the comma is translated as the decimal character, and the whole numbers consisting of one comma are converted into real numbers (Figure 3 cells B6 and B7, C3–C251), or in the case of two commas the whole numbers become strings (Figure 3 cells C2 and D2–D251) (Table 8).

Rank	Grade	Username	Uploads	Subs	Video Views
1st	A	 LetsGoMartin - Nursery Rhymes	194	2,050,447	493,359,935
2nd	B+	 REAL TRILL MUSIC	372	328,644	263,907,715
3rd	B+	 KerekMese	143	353,603	662,791,261
4th	B	 #MISSHMUSIC	124	340,360	201,745,398

Figure 5: The Hungarian version of the YouTubers using the comma as the thousand separator character.

In Task A, the focus is on the recognition of data types in spreadsheets and the correct/incorrect use of thousand separator and decimal characters, as well as the way knowledge about different data types can be transferred to further studies in database management and programming. However, we have to be aware of another aspect of knowledge-transfer, where the syntax of numbers – knowledge gained in grammar and/or language classes – is brought into informatics. In this chain of knowledge-transfer, spreadsheets serve as a link between natural and artificial computer related languages.

One further aspect of the table presented in Task A must be mentioned. Spreadsheet management is usually – with only a few exceptions (Gross et al., 2013; Csernoch, 2014) – taught without content, focusing only on the tools of the interface (Csernoch, 2017), although “...authentic tables contain real data whose content can be selected in accordance with the students’ interest, and as such can be highly motivating and easily converted into real world situations. ... Consequently, authentic tables can provide data which motivate students to use spreadsheets (Gross et al., 2013; Csernoch, 2014). Research has clearly proved that one of the reasons for failure when teaching spreadsheets is the decontextualized and technocentric teaching methods.” (Csernoch, 2017; Csernoch and Biró, 2018).

Knowledge-transfer items of Task A

- syntax of natural languages
- semantics of the comma
- data types: programming
- data types: database management
- content

Solution

Data column	Data types
Column A	text: (A2:A9) and (A248:A251)
Column B	integer: (B2:B5), (B8:B9), and (B248:B251) real: (B2:B7)
Column C	real: (C3:C251) text: C2
Column D	text: (D2:D251)

Table 8: The data types of the cells presented in the test (Figure 3).

Table 8 shows the data types of the columns presented in the test. There are hidden rows in the table, so altogether the table holds 251 rows, but the first row is reserved for the field names, so the table has 250 data records. The largest number presented in the sample in Column B is 736, while the smallest number in column B is 1,062 (1.062 in English terminology).

As is mentioned above, in most European languages the decimal character and the thousand separator are different from English language usage. The comma is used as the decimal character in European languages but as the thousand separator character in English. In English the dot is the decimal separator character. In European languages the space is the thousand separator character, while in the digital world the non-breaking space is a

better choice (Bujdosó & Csernoch, 2014; Csernoch, 2017). Awareness of these different usages is important when deciding what data types and values are contained in each column of spreadsheets.

If students know the different data types in spreadsheet management, they can use this knowledge later on in other environments, such as database management and/or programming. The reverse of this statement is also true. We usually teach spreadsheets before other interfaces which handle data, because spreadsheet interfaces are easier to handle and functional languages have been proved to be more effective as the first text-based programming language than database management or programming (Booth, 1992). Furthermore, MS Excel adjusts data according to the recognized data type: strings on the left side of the cell, numbers on the right side, while logical values are centred, so data types are clear in each cell. Even the unintentionally different types in a field are easier to reveal with this visualisation. However, (1) we must be aware of automated data recognition in spreadsheets, because not all the data are recognized in accordance with our original intention (for example see Figure 3) and (2) we have to learn how to read this visualisation. The results of the test can prove whether students of the Z-generation (Prensky, 2001) are born with this knowledge or not, and how these students can read non-text-based data and access information based on visual representation.

The formula in the last question (Figure 4) counts the number of users starting with the letter l or L. The array formula presented in the test is a three-level function, consisting of LEFT(), IF(), and SUM() functions, in the order of execution.

Knowledge-transfer items of the array formula of Task A

- spreadsheet: LEFT(), IF(), and SUM() functions
- mathematics: concept of function
- mathematics: n-ary and multilevel functions (not taught in normal maths classes in Hungary)
- programming: calling functions
- programming: writing functions
- programming: decoding
- programming: string constant
- programming: condition
- spreadsheet: condition
- spreadsheet: evaluating array formulas

We must also mention that the same result can be reached by using the built-in COUNTIF() function. However, this function has serious restrictions, one of which is that the function does not except embedded functions in its condition (Csernoch, 2014). Consequently, to solve this problem with the COUNTIF() function we must apply another concept, namely the use of the * character, which requires further transferable knowledge. The solution to the counting problem of Task A is the following: =COUNTIF(A2:A251,"L*"); however, with this solution we do not have access to the algorithm of the problem.

One further advantage of using multilevel array formulas is that their algorithms are transferable to similar problems (Csernoch, 2014) within the frame of Sprego and/or further studies in programming. Table 9 shows the algorithm of the conditional counting problem which can be coded with a three-level array formula.

1.	<i>Input:</i> string Calculating the first character of the string. <i>Output:</i> the first character the string
2.	<i>Input:</i> the first character the string and l/L Asking a yes/no question: Is the returned character of the previous step equal to l or L? <i>Output:</i> a vector of True and False values
3.	<i>Input:</i> a vector of True False values If yes, the record is marked with 1. If no, the record is ignored. <i>Output:</i> a vector of 1 and False values
4.	<i>Input:</i> a vector of 1 and False values Summing up the number of 1s. <i>Output:</i> a whole number

Table 9: Algorithm of the conditional counting problem solved with the array formula in Task A.

Computational Thinking – Task B

What happens when you double click on a document file (e.g.: zz.jpg, zz.html, zz.ods, zz.xls)?

Figure 6: Task B tests how familiar the students are with the algorithm of opening document files.

The question in Task B is whether the students can explain the algorithm which is executed between a double click and the opening of the selected document file. This is the algorithm which is carried out numerous times every day, but most of the time we do not give any thought to what happens between the two stages.

Knowledge-transfer items of Task B

- data file vs. program file
- data file vs. document file
- double click
- file extension
- associate program
- run a program
- open a data file

Algorithm

In the process of opening a document file with a double click, the recognition of agents plays a crucial role. The double-click is carried out by users, and after this the operating system takes control of all the steps of the algorithm.

We have to note here that the definition of the document file itself ensures that an association is already established between the file extension and a program, which is not obvious for most of the users.

agent	action
user	double click
operating system	checking file extension
	checking associated program
	starting the associated program
	opening the data file (document file)

Table 10: The agents and the steps of the algorithm of Task B.

Computer Problem Solving – School Subjects – Task C

In Task C the problem presented is borrowed from a French maths class. However, this problem is language and country-independent, so we decided to include it in the test. Furthermore, we are convinced that the introduction of pseudo-codes in maths classes greatly supports the development of knowledge-transfer skills between maths and informatics and opens up novel approaches in maths problem-solving (Wolfram, 2010 and 2015).

What does the following algorithm do?

```

A, B, C
If  $A^2=B^2+C^2$  or  $B^2=A^2+C^2$  or  $C^2=A^2+B^2$ 
  then "yes"
  else "no"
End if

```

Figure 7: A maths problem – Pythagoras' theorem – presented in a pseudo-code.

Knowledge-transfer items of Task C

- mathematics: Pythagoras' theorem

- programming: concept of variables
- programming: a conditional statement
- programming and maths: the OR logical operator

Computer Problem Solving – School Subjects – Task D

In Task D language problems were presented in a digital environment. The printed version of a sample text was selected to test the students' knowledge of the position of space characters, and the use of quotation and punctuation marks. Although the language of the sample text is Hungarian, some of the syntactic errors are obvious even to those who are not familiar with this unique language: the different face of characters substituting the quotation marks, the space characters left of the commas, the inner space on the right hand side of the opening parentheses, and the missing full stop at the end of the sentences (at the end of line 2).

Find the spelling errors on the sample. How many errors did you find? Circle the appropriate number.

A gyermekek·kitárt·karral·a repülő·méhecskét·utánozzák·, méhecske·hangját·hangoztatják·:·“z”·szaladgálnak·,·ha·leoltjuk·a·villanyt·,·leszállnak·virágport·gyűjteni·(·leguggolnak)·Felkapcsoljuk·a·villanyt,·s·folytatódik·tovább·a·játék.¶

0 1 2 3 4 5 6 more

Figure 8: Language problems presented in a digital environment.

Knowledge-transfer items of Task C – grammar

- punctuation mark: the comma
- punctuation mark: the full stop
- quotation marks
- parentheses

Summary

Previous research clearly states that one of the reasons for the high attrition rates in tertiary studies in Computer sciences/Informatics is rooted in the insufficient knowledge-base and the inappropriate attitude of students arriving from high schools. Furthermore, the different expectations students have of secondary and tertiary education might also be a source of this discrepancy.

To reveal how students are prepared for tertiary studies in informatics, and what computer related skills, abilities, and competencies are focused on in primary and secondary education in general, we launched a project to analyse the National Core Curriculum and the frame curricula in informatics. The project consists of two major subsections. The first phase is a thorough analysis and comparison of the documents mentioned above, in order to form conclusions regarding their contents. In the second phase, based on the findings of the first, we composed a test for students of grades 7–10 and for their teachers. The aims of the testing are to reveal (1) how the contents of the frame curricula can be implemented in classrooms, (2) the level of the students' computational thinking skills, and their computer problem-solving and knowledge-transfer abilities, (3) and the common misconceptions currently circulating.

Our analyses lead us to the paradox of the frame curricula in informatics. On the one hand, the curricula was intended to be tool, interface, and language independent, a concept which, in general terms, serves the students' interests. On the other hand, we encountered over-generalization in the form of vague expressions, non-specified contents which allowed different interpretations, tool-specific requirements, unconnected subjects within the discipline, and non-specified connections to other school subjects. This latter approach serves neither teachers nor students.

The Perception Of Students Of Ccee At The University Of Granada (Spain) On Quantitative Techniques

Ana Eugenia Marín Jiménez
anamarin@ugr.es

Rosaura Fernández Pascual
rpascual@ugr.es

Pilar Fernández Sánchez
pilarfs@ugr.es

Abstract

The design and validation of a questionnaire are proposed to collect information about the perception of the Quantitative Techniques 2 subject taught in the second semester of the second year, in the degrees of the Faculty of CCEE at the University of Granada.

The questionnaire has 14 items on a Likert scale 1-5, grouped in three dimensions: perception (motivation and usefulness), self-efficacy (practical theoretical knowledge) and satisfaction with contents, material, methodology and new technologies used in teaching.

The 194 participants belong to the Degrees in ADE, ECO, FICO and MIN with ages between 18 and 37 (mean 21.55 and SD 2.82). 50.6% are women.

The results reveal a high consistency and reliability of the questionnaire with a Cronbach alpha of 0.819. Regarding perception, the results show great homogeneity, which means that it exceeds the 3.5; in particular motivation (items 1 and 2) obtained an average 3.60, SD 1.02, and utility (3, 4, 10) was valued with an average 3.29, SD 1.16. The self-efficacy (theory 6 and 8; practice 7 and 9) has an average of 3.66, SD 1.01 in theoretical knowledge and 3.53, SD 1.09 in practice knowledge. The best punctuated dimension is satisfaction (11, 12, 13 and 14) with an average of 4.19, SD 0.93.

In this work it is also verified if perception changes according to each degree studied or students' sex. The results of this work will be taken into account to improve motivation, given its effects on academic performance. For this, we will prepare specific theoretical and practical materials that better qualify students to face the subject, as well as continue working in this way to maintain / improve the satisfaction declared by students.

The Political And Religious Dimensions Of The Concept Of 'Nation' In Katip Çelebi

Doç, Dr. Zübeyir Ovacık
Aksaray Üniversitesi Fen Edebiyat Fakültesi Felsefe Bölümü
zubeyirovacik@gmail.com

Doç. Dr. Osman Zahid ÇİFÇİ
Selçuk Üniversitesi İslami İlimler Fakültesi
ozcifci42@gmail.com

Abstract

Kâtip Çelebi, one of the leading thinkers of the 17th century Ottoman Empire, focuses on social issues. He draws attention with his intellectual long sightedness among the Ottoman thinkers. Katip Çelebi, who is affected by the ideas of İbnü Khaldun, discusses the problems within a broader framework while discussing political and social events. Instead of focusing on the quick practical solutions of political and social issues, Katip Çelebi is based on a perspective that takes in consideration the theoretical bases of problems. It seems that Katip Çelebi, who approaches social problems with an intellectual responsibility, discusses the issues pointed out by the concepts of the state and nation by using mind and common sense. Katip Çelebi writes some books such as *Mizânü'l-hakk fî ihtiyâri'l-ehakk* ((the right measure for choosing the most correct) ve *Düstûru'l-amel li-islâhi'l-halel* (Paths to correct disorders). Katip Çelebi analyzes the concepts such as nation, ummah, state by taking into consideration the social dynamics. Katip Çelebi handles the “community”, one of the element of state, in a different context from modern period political paradigms. He uses “nation” in a different meaning from the meaning pointed out by the nation state model emerged after the French Revolution. In this work, it will be emphasized how Katip Çelebi deals with the concept of “nation” with its political and religious extensions in his works, and a discussion will be made about whether this concept has changed in the historical process.

Key Words: Katip Çelebi, Nation, Religion, State, Civilization, Society,

The Presentation Of Aircraft Accident To The Press: Examples Of Pegasus Zeynep Plane Accident

Doç.Dr. Nilüfer CANÖZ

Öğr.Gör. Ümmü Özlem ÇERÇİ
Selçuk Üniversitesi Silifke Taşucu Meslek Yüksekokulu
ozlemcerci@selcuk.edu.tr

Abstract

Rapid changes in technology have affected both the industry and the aviation industry. Airplanes, one of the basic elements of aviation in particular, are among the most influenced by these developments. The rapid development of airplane technology will increase speed and comfort in transportation; thus leading to the preference of aircraft as a means of transportation. However, these technological developments, complicated systems, and their emergence have brought aircraft accidents to the agenda. Aircraft accidents are sometimes caused by technical, sometimes pilotage, and sometimes organizational errors. Whatever the cause of the mistakes, airplane accidents can cause many people to lose their lives and are seen by the media as news-related events. In addition to its many different functions, how the press, which has the function of informing and informing the society at the most, is a matter to be examined. For this purpose, in January of 2018, Pegasus' Ankara-Trabzon campaign 'Zeynep' made by the name of the aircraft is being investigated in the study of how it was presented at the beginning of the accident. The study was carried out by analyzing the content of Hürriyet, Sabah and Sözcü newspapers, which had the highest circulation in the week that they won.

Keywords: Aircraft, Aircraft Accident, Zeynep Aircraft, Press, Aircraft Accident in Press

Introduction

At the beginning of the twentieth century, the adventure of airplanes, which constituted the basic element of passenger transport in the air, began with the invention of a simple, motorized aircraft. This adventure continues with jet engine aircraft, followed by supersonic aircraft which is faster than voice, and finally with modern aircraft equipped with high technology, as a result of technological innovations coming in line. However, these developments did not only affect the aircraft, the capacity of the aircraft, the speed or the equipment of the aircraft, but also the whole aviation system. In other words, air navigation, air traffic control, security, safety and airport systems have become more sophisticated and more secure, which has led people to prefer more air travel each day. Despite all these developments, only unchanging reality in the aviation sector is the continued existence of aircraft accidents.

Even with all the innovations and improvements over the last forty years, the basic question "Why are the planes still crashing?" remains unanswered. It is not easy to answer this question. In the first years of aviation, planes were insecure due to mechanical failures and these failures often led passengers and pilots to lose their lives. However, in the course of time, modern era of aviation has begun with the successive transformation of aviation through technological developments (Shappell and Wiegmann, 2000: 1).

In modern era, thanks to resolution of mechanical faults of aircrafts over time with the developments in the aviation, the accidents caused by these faults have begun to decrease, but the accidents caused by people have begun to increase. Thereupon, attention has focused on the human factor in the event of an accident. These were sometimes accidents caused by pilots, sometimes maintenance officers, sometimes air traffic controllers, and sometimes airport workers.

The causes of aircraft accidents, whether technical, human, or organizational (ICAO, Doc.9859, 2013: 2-2), cause many people to lose their lives and experience financial losses. For this reason, it attracts attention of the press. Because, for the press, such accidents carry news value. For the press, an event or topic needs to bear certain conditions in order to be news. Factors such as concerning society, being interest, sudden development, rare occurrence of the event, and continuity of the news provide its news value. Although these factors vary according to the newspapers and journalists, many are still taken into consideration while news are created.

It is necessary to investigate how plane accidents, which hold an important position in media as soon as they occur, are presented in the written media. The aim of this study is to show how the accident of Zeynep aircraft belonging to Pegasus airline company, on January 13, 2018, was presented in the Turkish press. For this purpose, in Turkey, the highest newspaper circulation; Sabah, Hürriyet and Sözcü newspapers between 14 and 31 January 2018 were analyzed by content analysis. To analyse the data, the following questions have been taken into consideration:

-how is the news of Zeynep Aircraft handled in the manuscripts covering the duration of 18 days after the accident ?

-how is it interpreted?

-which aspect of the accident is more emphasized in newspapers?

The main problem of the study is that " which aspect of plane accidents are emphasized most in printed media ?"

Aircraft Accidents

In aviation, accident; with regard to the activities of an aircraft until the time when any person has boarded and descended;

In aviation, with regard to the activities of an aircraft until the time when any person has boarded and descended; accident is defined as ;

* A person is killed or seriously injured by exposure to one of the following events;

-in-flight or

- by the collision of any part of the aircraft, including in broken parts or

- by exposure to air pressure or,

* Damage or failure of the aircraft due to the structural force of the aircraft, its performance or flight characteristics being adversely affected and the alteration or repair of the affected component to be required,

* The disappearance of the aircraft or the failure to reach the wrecked plane (ICAO, www.emsa.europa.eu).

The International Civil Aviation Organization (ICAO) describes all incidents that occur in aviation as an accident, resulting in death, injury, or damage to the aircraft. Based on this, what Pegasus "Zeynep" plane lived on January 13, 2018, is evaluated as a plane crash.

According to the last decade statistics in ICAO's 2017 Safety Report, the rate of accidents per one million flights in 2006 is 3.1 and it is seen that this rate has decreased to 2.1 in 2016 (ICAO 2017: 13). In the 2017 Safety Performance Report of the International Air Transport Association (IATA), it is observed that there are 375 accidents in the last five years (2012-2017) statistics, 55 of these were fatal accidents and 320 of them were non-fatal accidents and 1634 of them lost their lives . 19 of total of 375 aircraft accidents were smashups, 30 were control losses in flight, 2 were crashes in the air, 82 were crashes in the track or taxiway, 35 were because of weather conditions, 39 crashes occurred on the ground, 12 crashes were in the course of descent , while 48 of them landed on the landing gear, 61 were on the front landing gear malfunctions, 21 were tail part crash on airstrip, 2 were forced landing on the sea and 10 were crash on airstrip (IATA 2017: 39-81).

Aviation agencies describe more than 40 different accident categories. These; according to operation type; passenger, cargo and other, according to the type of aircraft; large, small, medium jet, turboprop and piston, according to flight stages; park, taxi, departure, first climb, climb, flat flight, first descent, approach, landing. However, those causing the highest number of accidents are; get off the track, loss of control at the flight, hard or uneven landing, system / component failure which means failure or malfunction of an aircraft system or component due to design, manufacturing process or maintenance problem (AIRBUS 2017: 3).

The main factors that cause different types of aircraft accidents are classified as follows:

- Human errors, along with other factors,
- Errors that air traffic controllers made,
- Pilot errors,
- Inexperienced flight crew errors,
- Regarding mechanical failures,
- Errors in maintenance workshops and factories where systems are manufactured,
- Due to dangerous weather conditions,
- The result of terrorist acts,
- Mistakes due to military and semi-military operations (Janic 2000: 45-46)

Pilot fault and equipment fault are the two most common accident reasons. In fact, in study of Donmez (2017: 250) 60% of aircraft accidents in our country were found to be caused by insecure behavior of pilots and cockpit crews, 35% of environmental conditions, 25% of technical problems. The most common types of accidents are accidents on the track or taxi road. these sliding off the track kind of accidents named as Runway excursions (RE) occur by passing the edge of a runway or end of a track . These surface phenomena can include many factors, from when an airplane crosses, or when you take off, or from unsteady approaches to runway conditions. The accident of PEGASUS Zeynep plane also came out of the apex when the plane landed at the airport, and it was in the form of a swing towards the sea.

Presentation of Aircraft Accidents in Printed Media

When it comes to written press, newspapers are the first to come to mind. However, it includes not only newspapers but also magazines and other printed / periodicals. The basic function of all of them is to inform the society. The

press is one of the sources from which people can learn, socialize, argue and enjoy what is going on in the world. All of this is done by the press reporting the events and presenting them as news. The news is actually described as the presentation of events that take place in the world, in a way that attracts people's attention. In particular, the printed media deals with news in a more detailed and widespread way, can refer to the same subject over and over again, so it can create agenda and attract attention. The editorials of printed media considers the news values of the events, while deciding on news items to make a current issue and choosing news. When news is selected or rejected, news value is important and there are various criteria. News value criteria according to Galtung and Ruge (1965: 66-68) are; frequency, threshold value, openness, significance, compatibility, extraordinary, continuity, conformity or compilation to composition, being connected with elite nations, being connected with elite people, being related to individuals, negative events.

The value of the news is about journalists' value and the way they present them. News values are divided into three main categories: general values (negativity, closeness, innovation, continuity, simplicity, individuality), content values (disasters, stars, authorities are related) and development values (dramatization, conflict, being related to human and reality). The news media generally values the dramatic effect of bad news. According to them, the bad news is good news. Because an accident or catastrophe with death or a bad fall in the stock exchange has more news value than an accident or disaster where there are no deaths but casualties (Burton 1997: 142-143).

Disasters or accidents that arise suddenly and carry the value of the news (plane crash, earthquake, tsunami, ship accident, etc.) keep their value not only on the day they happen, but also in later days or weeks. When an aircraft accident occurs, both the press, the public and the authorities focus on it. The media / press is constantly speculating on the cause of the accident during the twenty-four hour news broadcast. The government squads are quick to investigate, they promise to find out the reasons, and sometimes the laws are put into practice quickly. Airplane accidents attract common attention; these accidents often reveal facts about aviation or aircraft that are unexplained and with unknown reasons (Cobb and Primo 2003: 2); they also put people at risk in flight areas (Gerede 2016: 9).

Airplane accidents with all necessary elements like death, destruction, mystery, human error and tragedy are important news for journalists. Pilotage errors, errors caused by airline operation, airport errors, mechanical errors in the air, etc. the reasons are important for the continuation of the news and are also attractive to the headlines. The news is shaped by adding slogans, visual images, expert opinions, expressions of the passengers, the description of the pilot, the status of the damage, victims, victims, acquaintances, relatives, eyewitness statements. Thus, airplane accidents, which are already regarded as a major disaster, become an event attracting people's attention with the contribution in the press.

Methodology

This study aims to reveal how aircraft accidents are handled, interpreted, and emphasized in which direction in printed media which plays a very important role in informing society. For this purpose, printed copies of Sabah, Hürriyet and Sözcü broadcasting at the national level with the highest circulation in Turkey were chosen as sample of the study. The survey was limited to the eighteen days between January 14 and January 31, 2018, the day after the day of the Pegasus Zeynep airplane excavation.

The study consists of two main parts, which are literature review and content analysis method that is one of the qualitative research methods. In the first part, aircraft accidents and how these accidents were presented in printed media were given, while in the second part, Zeynep flight accident news with the coding template was subjected to content analysis in the printed versions of the three journalists. The purpose of content analysis is to screen and evaluate information that is important for clearly defined research questions. In short, it is to make inferences that may be about the dimensions of social reality from the contents of texts. In this context, there is always a connection and a connection in content analysis (Gökçe, 1995: 26). Content analysis is a scanning with the aim of quantifying certain characteristics of a text, a book, a document. Perspectives in documents, philosophies, language, expression, etc. the depths of the properties and the solutions to be made according to certain criteria can be understood (Karasar 2010: 184). The answers to the following questions were searched by analyzing the numerical intensity and direction of the aircraft accident news which was prepared for the content analysis section of our research: "Which pages did the news take place on?", "What were the position of news on the pages?", "What was the news kind? what expressions were used ?, 'and' Were photographs used in news? "

Findings

Boeing 737-800 "Zeynep" commercial passenger plane belonging to Pegasus Airlines, which took off from Ankara on January 13, 2018 with 22 passengers, 2 pilots and 4 crew members at 22.26 pm, after landing to Trabzon Airport at 23.30, got off the track suddenly and started to slip towards the sea. There were no deaths in the accident where small-scale exploits occurred, the passengers were evacuated without any problems, and major damage was caused in the plane.

1. Numerical Distribution of Pegasus Aircraft Accident News by Journal:

The total number of news on the accident that the plane named "Zeynep" had, which belongs to the Pegasus company, published in Sabah, Hürriyet and Sözcü between 14 and 31 January 2018 is 28. 53.6% of these reports were published in Sabah, 28.6% in Hürriyet and 17.9% in the Sözcü newspaper (See Table 1).

Table 1: Numerical Distribution of Accident News by Journal

Name of Newspaper	Number	%Percentage	% Valid Percentage
Sabah	15	53,6	53,6
Hürriyet	8	28,6	28,6
Sözcü	5	17,9	17,9
Total	28	100,0	100,0

This table shows that most of the news on the aircraft accident were given in Sabah newspaper. In this context, it can be said that the Sabah newspaper has more coverage of the accident reports and put on the agenda more than the other newspapers do.

2. Historical Distribution of Accident News in Journal

The printed copies of the Sabah, Hürriyet and Sözcü newspapers taken as samples in the scope of the research were examined between 14th and 31st January 2018 and Table 2 shows the dates of the accident reports of the plane named "Zeynep" belonging to Pegasus company in the newspapers. When we look at the historical distribution of newspaper news, we see that 7.1% was on January 14th, 32.1% on January 15th, 17.9% on January 16th, 17.9% of them on January 18th, and 14.3% on January 19th.

Table 2: Historical Distribution of Accident News in Journal

Newspaper Date	Number	%Percentage	%Valid Percentage
14.01.2018	2	7,1	7,1
15.01.2018	9	32,1	32,1
16.01.2018	5	17,9	17,9
17.01.2018	5	17,9	17,9
18.01.2018	3	10,7	10,7
19.01.2018	4	14,3	14,3
Total	28	100,0	100,0

The eighteen-day prints that were published between January 4 and 31, 2018 were scanned and three journalists were found to have received these reports for only six days. On January 15, the number of news items increased and during the following 4 days the number of news decreased. The main reason for the small space occupation in the newspapers is the absence of any death or injury, the removal of aircraft wreckage, and the taking of the incident into the investigation.

3. Distribution of Pegasus Aircraft Accident News by Pages:

The total number of PEGASUS airplane reports published in Sabah, Hürriyet and Sözcü between 14 and 31 January 2018 is 28. It was seen that 28.6% of these reports were on the first page, 3.6% on the second page and 67.9% on the internal pages.

Table 3: Distribution of accident by pages

Pages that accident news take place on	Number	%Percentage	%Valid Percentage
1.page	8	28,6	28,6
2.page	1	3,6	3,6
Inside Pages	19	67,9	67,9
Total	28	100,0	100,0

The display of aircraft accident news on the first page makes its importance in the country's agenda visible. The presentation of the most important news items on the first page is of value in this respect. However, it is seen that the majority of PEGASUS Zeynep air traffic reports (67.9%) were published on the inside pages.

4. Distribution of Accident News Position on Newspaper Pages

Table 4 shows where the accident news are posted on the pages of the newspapers. According to the table, 7.1% of the news reports were in surveillance, 42.9% in the headline, 7.1% in the middle of newspaper, 17.9% in the fold and 25% in the lower part of newspaper.

Table 4: Distribution of Accident News Position on Newspaper Pages

News Position on Newspapers	Number	%Percentage	% Valid Percentage
Subhead	2	7,1	7,1
Head	12	42,9	42,9
Middle Part	2	7,1	7,1
Fold	5	17,9	17,9
Lower Part	7	25,0	25,0
Total	28	100,0	100,0

According to the findings, it is seen that the news is usually given in the headline and lower band. It is known that the subhead and headlines in newspapers are the most important positions in terms of attracting attention. That most of the Pegasus accident reports (42.9%) are cited in the headlines indicate that they care the incidents.

5. Types of Pegasus Aircraft Accident News

17.9% of the Pegasus airplane news reports published in Sabah, Hürriyet and Sözcü between 13-31 January 2018 were opinion column, 17.9% were interview, 3.6% were research reports and 60.7% were made up of event news.

Table 5: Types of Aircraft Accident News Cited in Newspapers

Types of News	Count	Percentage %	Valid Percentage %
Opinion Column	5	17,9	17,9
Interview	5	17,9	17,9
Research News	1	3,6	3,6
Event news	17	60,7	60,7
Total	28	100,0	100,0

The predominant part of the news about Pegasus plane crashes consists of event news with 60,7%. These news reports are about how the incident happened, the content of the incidents and the authorities' statements on them.

6. Photograph Use in Pegasus Aircraft Accident News Cited in Newspapers

Data about the accident related news as well as the photographs related to the accidents in the newspapers are given in Table 6. According to the table, in 24 (85,7%) of them photos were used, but in 4 of them (14,3%) no photos were not used.

Table 6: Distribution of Photographs Used in Aircraft Accident News Cited in Newspapers

Photos in News	Count	Percentage%	Valid Percentage%
Exists	24	85,7	85,7
Non-exists	4	14,3	14,3
Total	28	100,0	100,0

It is seen that the use of photographs aiming to reveal the value of the news, to attract attention and to make it understandable is high (85.7%)

Table 7. Distribution of Photographs used in Plane Accident News by Newspapers

Distribution of Photographs in News by Newspapers	Exists	Non-exists	Total
Hürriyet	8	0	8
Sabah	11	4	15
Sözcü	5	0	5
Total	24	4	28

Considering the distribution of photograph used by newspapers in accident news, 11 news in Sabah Newspaper used photos while 4 news didn't. Photographs were used in all news published in the Hürriyet and Sözcü newspapers (see Table 7).

8. Distribution of the Number of Columns concerning Aircraft Accident News in Newspapers

Column numbers of aircraft accident reports in the newspapers is given in Table 8. According to the table, 32.1% of the reports were given as 1 column, 42.9% as 2 columns, 3.6% as 3 columns, 10.7% as 4 columns and 10.7% as 5 columns.

Table 8: Column numbers of aircraft accident reports in the newspapers

Column Number of the News	count	Percentage%	Valid percentage%
1. column	9	32,1	32,1
2. column	12	42,9	42,9
3. column	1	3,6	3,6
4. column	3	10,7	10,7
5. column	3	10,7	10,7
total	28	100,0	100,0

According to the findings, it is seen that news is mostly (42.9%) given in 2 columns.

9. Expressions used in headlines of aircraft crash news in Newspapers

Given the expressions used in the headlines in the aircraft crash news in the newspapers; it can be seen that the following expressions have been used with following percentages: 14.3% fault, 14.3% rescue, 10.7% calamity, 7.1% right engine fracture, 7.1% miracle, 3.6% panic, 3.6% fear, 3.6% death, 3.6% got off lightly, 3.6% escaped with a whole skin, 3.6% injury, 3.6% had their heart in their mouth, 3.6% emergency code, 3.6% crashed, 3.6% what happened, 3.6% story, 3.6% slipped to the sea, 3.6% Pegasus (see Table 9).

Table 9: Expressions Used in Headlines of Aircraft Crash News in Newspapers

Expressions Used in News Headlines	count	%percentage	%Valid Percentage
fault	4	14,3	14,3
Rescue	4	14,3	14,3
calamity	3	10,7	10,7
Right engine fracture	2	7,1	7,1
miracle	2	7,1	7,1
Panic	1	3,6	3,6
fear	1	3,6	3,6
death	1	3,6	3,6
Got off lightly	1	3,6	3,6
escaped with a whole skin	1	3,6	3,6
injury	1	3,6	3,6
had their heart in their mouth	1	3,6	3,6
emergency code	1	3,6	3,6
crashed	1	3,6	3,6
what happened	1	3,6	3,6
story	1	3,6	3,6
slipped to the sea	1	3,6	3,6

Pegasus	1	3,6	3,6
Total	28	100,0	100,0

Accordingly, the most frequently used expressions in headings of newspapers are "fault" and "recovery". However, when the accident headlines are evaluated in general, it is seen that different and negative expressions are used.

10. Topics Contained in the Content of Aircraft Accident News in Newspapers

Given the topics contained in Pegasus airplane crash news published in Sabah, Hurriyet and Sozcu between 13 and 31 January 2018, it can be observed that 14.3% of them are pilot error, 64.3% of them are narration of the incident, 7,1% are comments, 10,7% are criticisms and 3,6% are stock market related issues (See Table 10).

Table 10: Topics Contained in the Content of Aircraft Accident News in Newspapers

Topics Contained in Content of News	count	%percentages	%valid percentages
Pilot Error	4	14,3	14,3
Narration of incident	18	64,3	64,3
Comments	2	7,1	7,1
Critics	3	10,7	10,7
Stock Market	1	3,6	3,6
Total	28	100,0	100,0

While the predominant part of the topics mentioned in news related to the Pegasus aircraft crashes is 64.3%, at least 3.6% of the news is constituted on news concerning the status of Pegasus in stock market. This demonstrates that newspapers are paying attention to how accidents have taken place rather than who are responsible for the accident or comments on it

11. Whether or not an Expert Opinion is Cited in the Aircraft Accident News

Considering if the expert opinion is included in the airplane news reports in Sabah, Hurriyet and Sozcu newspapers, it can be seen that 17.9% of the news includes it while 82.1% does not include (see Table 11)

Table 11: Whether or not an Expert Opinion is Cited in the Aircraft Accident News

Does the news contains an expert opinion?	Count	Percentage%	Valid Percentage%
Yes	5	17,9	17,9
No	23	82,1	82,1
Total	28	100,0	100,0

The findings show that 82.1% of the aircraft accident reports in the newspapers do not include expert opinions. Journalists often refer to expert opinions for information on matters which they are not experts in. It is seen that expert opinions are not included in the accident reports, only how the event happened is stated.

Conclusion

In the 21st century it is inevitable that accidents occasionally occur in the airway transportation that continuously develops in our country as well as all over the world. It is known that these accidents are considered newsworthy events from the press point of view. To show whether this is really the case, an examination of how the Zeynep plane accident belonging to Pegasus Airlines, which took place in 2018, will give important information about the matter.

For this purpose, this study examining "Zeynep" plane accident belonging to Pegasus Airlines was conducted and it was observed that the news about the accident was included in three newspapers, mostly in the Sabah newspaper; that the press always pay attention to the accident even though there are no death or injury reports, that it can be on subject to news for a certain period of time; in the first days the newspapers published it in the banner and front page, and in the following days mostly in the internal pages; the types of news mainly consist of event news; the use of photos in news was high; usually the news was given in 2 columns; generally negative statements were used in news headlines. It was also found that the contents of the news mostly included the narration of the event and the expert opinion was not included.

As a result, we can say that plane accidents are always newsworthy events attracting the attention of the press.

The Proactive Behavioral Effects Of The Kaizen Strategy And The Parkinson's Law On Organizational Problems

Okan ŞENELDİR

Kocaeli Vocational School Kocaeli University Turkey

seneldir@kocaeli.edu.tr

Abstract

Reactive and extreme bureaucratic organizations are in need of change. The reactive person is the waiter. He waits for things to happen and then reacts to the situation that results. The proactive person is the sharp one who anticipates the events that are about to happen and is ready with both a response and a plan to deal with the outcome. People who are aware of their surroundings and wish to avoid being taken by surprise by such things as odd job interview questions or negative results from medical tests will plan ahead, be wary, and try to forestall the worst of it by being prepared. Kaizen is a Japanese word for 'continuous improvement'. "One small step can change your life" is the gentle but potent way to effect change. "A journey of a thousand miles must begin with a single step. If the steps are small, the stress mechanism is quiet and the brain develops new habits from the repetition of small steps. The term "kaizen", also provides benefits in decision making. If someone has difficulty finding the purpose, the best Kaizen technique is asking a question each day, opening up the heart to hear the answer. Stress is an inevitable fact that's why there is stress management. Kaizen (small steps) and innovation (large steps) are both worthwhile strategies. Using big steps is fine but if the stress is too great or the motivation too little, Kaizen technique is necessary. Parkinson's law is a work that examines the results of rigid bureaucracy and rule in humorous dictionaries, especially in organizations. Parkinson mentioned that it is too long to fill in the time left for any job to be finished at all times. The first sign of organizational malaise is that it manifests itself in the organizational hierarchy of individuals who combine inefficiency and jealousy at a high level. None of these qualities are important on their own, but when they arrive at a certain density they react and bring a new self-name called "injelitance". The Kaizen Strategy and the Parkinson's Law can contribute to the resolution of organizational problems by showing proactive behavioral impact.

Introduction

A vital characteristic requisite for success is an efficient management system. A company must plan, discuss, and assign roles to provide fluid leadership, embodied in the management system, during the course of doing business. The operation and use of the management system also have to be documented and broadcast throughout the company so that all employees know what part they have in its implementation. The management system must provide a clear focus on the competitive landscape, because competition largely drives a company's initial strategy, with the structure and design following the strategy. The competitive environment is critical to a company's survival in any market, so any management system must accommodate the particular nature of each market. Building an effective organizational management system involves consideration for people, automated systems, and the business as a whole. If a business is expected to grow financially and be a contributor to the welfare of the community in which it exists, it must be able to control itself successfully. Vital to that control is a system that integrates all stakeholders, all parts of the organization, and all aspects of the business functions. Company management must realize that a management system encompasses virtually the entire culture of the business and can affect the culture of the surrounding community (Tiller, 2012: pp.20-23). There are many problems in the organizational management systems. Some problems with strategic planning are: Lack of clear focusing for the organization, frequent conflicting suggestions from Board and/or employees, continual shortage of funds across the organization, low attendance and participation from Board and/or employees, poor results from products and services, conflict between Board members and employees. Also some problems with teamwork are: Conflict between team members, inefficiencies in activities, high turnover of members, confusion about decision making and problem solving, poor performance among members, ineffective meetings, low morale. Proactive behavior is first action, initiating behavior. The Kaizen strategy and the Parkinson's law have direct proactive effects on organizational issues. Planning, organizing, directing, coordinating and controlling; known basic management functions. The Kaizen Strategy and the Parkinson's Law are also influential on all management functions.

Proactive Behavior Concept And Definition

Proactive behavior means letting people take initiative and assume personal responsibility for the value added to the customer, the quality of work and the work environment (Gong & Blijleven, 2017: p.534). Organizations need proactive employees who actively seek to "alter and improve their work environment" and seek to capitalize and "make things happen" that will lead to greater organizational outcomes (Parker and Wang, 2015; Ghitulescu, 2018; Wihler, et al., 2017). The most impactful employees are self-starting, forward-thinking, and willing to actively contribute (Schmitt, Den Hartog, & Belschak, 2016). People are not able to simply be passive recipients of

environmental constraints on their behavior and are no longer able to simply abide by job descriptions, policies and procedures, instructions and direction, and rules and routines. Rather, they must be able to intentionally engage and take initiative to directly change their current circumstances for the better (Crant, 2000). Proactive behavior is influenced by one's belief in their ability to overcome constraints by situational forces and the ability to affect positive and beneficial changes in the environment (Bateman & Crant, 1993; Thomas, Whitman, & Viswesvaran, 2010). Proactivity or proactive behavior by individuals refers to anticipatory, change-oriented, and self-initiated behavior in situations. Proactive behavior involves acting in advance of a future situation, rather than just reacting or adapting. It means making things happen rather than just watching things happen or waiting for something to happen. Whereas adaptability is about responding to change, proactivity is about initiating change (Joo and Bennett, 2018: p.2).

Stress has been one of the focuses of studies in psychology because of its negative impact on people and their health. Cartwright and Cooper (1997) underlined the detrimental effects of stress that it can lead to many problems like emotional distress, stomach disorder, headaches, sleeplessness, loss of energy, and so on. Moreover, in the long term, it can be more serious illnesses such as high blood pressure and cardiovascular disease. While traditional stress research tends to emphasize the things that we can do when we get stressed, latest coping research focuses on taking actions that can be taken before stressful events occur. This became materialized especially after the new conceptualization of coping due to the influence of positive psychology movement (Peiro, 2007) and now it involves personal growth and self-regulated goal attainment strategies (Schwarzer & Knoll, 2003). Therefore, a new conceptualization of coping has been proposed by Schwarzer and Taubert (2002) as proactive and preventive coping which focus on a proactive, goal-oriented, and adaptive way of coping, as traditional coping models focuses on the reactive nature of coping only for the past and current stressors. However, proactive and preventive coping deal with anticipated, possible stressful situations which have not occurred yet. Therefore, these are future-oriented motivational higher order concepts. While proactive coping is defined as an individual's efforts to go after achieving new challenges, create new opportunities, and enable promotion toward challenging goals; preventive coping is defined as the process where an individual construct resources and resistance toward the possible occurrence of stress in the distant future. Therefore the main purpose of preventive coping is just to be on the safe side while in proactive coping, is to further the situation to develop opportunities to grow and at the same time to be on the safe side (Ersen & Bilgiç, 2018: p.2).

Proactive Continuous Improvement

An active kaizen environment provides an organisation the means through which to integrate both the mental and physical and the necessary change management to create a dynamic organisation that is proactive and reactive to internal and external environmental changes. Within the organisation, proactive prevention activity and reactive problem-solving activity are possible through visual management tools and techniques. Production operating efficiency, quality and safety are continually improved through active tools, including analysis, feedback and clarification of operating methods. It is these tools that have been embraced by the West. As kaizen integrates the individual with operations and operations with the organisation, it becomes both pervasive and sustainable within that organisation. Workers tend to acknowledge kaizen as being both process-oriented and result-oriented, yet it is predominantly process-oriented. Kaizen serves different purposes for different people, being loose conceptual iterations of proactive change and improvement (Macpherson et al. 2015: pp.6-8).

Continuous improvement concerns the continuous effort of people to shift from reactive firefighting to proactive problem solving, and having the aim of relentlessly improving the execution and efficiency of processes in an ongoing manner. The Kaizen sessions conducted during each bilateral visit provide people with opportunities to discuss and communicate their ideas for improvement in an open and constructive manner. The Kaizen sessions are also the main formal channel for operational people to communicate their ideas across different managerial levels. In a research, those ideas are not only dedicated to the content of the information technology products to be developed, but also to personal efficiency and the processes of development. Those issues and the related actions are logged in a tool, which also contains information about the "action owners" and the feedback provided during a later stage about the results of the actions. During the Kaizen sessions, operational people proactively decide on the priorities of their work, together with their team members. Interviewees indicated that there is a cultural fit between the two factories. This is reflected by the similar proactive behavior of the people working in the factories. Both organizations indicated that all employees involved in information technology outsourcing relationship know what their roles and responsibilities are. At the same time, employees of both organizations also have their own employee performance and satisfaction evaluation processes to proactively help people improve their work. Those instruments are companywide and also used in this information technology outsourcing relationship. This information technology outsourcing relationship has a reward mechanism in place to stimulate proactive behavior. Employees and teams are put in the spotlight in case an improvement is realized. Every year, the best-performing individual and the team within the partnership are rewarded with nonmonetary prizes. The best-performing team

is always a mixed team that consists of people from both sides of the partnership. The purpose of Gemba walks is to proactively identify waste and opportunities for improvement. Knowledge from people involved in the partnership on how to improve the partnership is then extracted through leading with questions. Within the partnership, the daily stand-up sessions that are part of agile development are considered to be a 'light-version' of Gemba walks. During these sessions, the product owner, the scrum master, and the entire development team are present. The interviewees argued that the daily stand-ups boost the morale of the people involved in the partnership. People perform better if managers show genuine interest in the work performed, and when people know that their efforts are noticed and appreciated by their team and their managers. Within the partnership, the stand-ups are performed by the product owner, rather than executive management. While the respect for people and continuous improvement are relevant to knowledge accessing, systems thinking and proactive behavior facilitate knowledge integration and utilization (Gong & Blijleven, 2017: pp.533-539).

The Parkinson's Law Providing Proactivity In Time Management

Parkinson's Law is the phenomenon of expansion of work to fill the time available for its completion. It was coined by Cyril Northcote Parkinson, a British author. It first appeared in an article which appeared in *The Economist* in 1955. Parkinson's Law states "work expands so as to fill the time available for its completion." If something must be done in a year, it'll be done in a year. All projects take time-you certainly can't build a skyscraper in a day, or a factory in a week. The more complex the project, the more time it typically takes-to a point. What would it look like if you finished the project on a very aggressive timescale? If you had to build a skyscraper in a day, how would you go about doing it? Answer the question the way you would a counterfactual, and you'll discover techniques or approaches you can use to get the work done in less time (What is 'Parkinson's Law'? 2018).

Parkinson's Law's aim is to finish your work earlier be proactive. Deadlines are what give instant pressure to motivate us to work faster. Tasks don't get done if there's no deadline. So, once that deadline is set way too far from what the work really requires, you slack. For example, work can be compared to gas. Naturally, gas will take up the whole space. Their molecules will distribute randomly in space. So, if you give it a big or small container, it will take up the whole space of it. Like gas, work also expands and contracts. It depends on the time we allow for it (Parkinson's law to increase productivity, 2018).

The reality of Parkinson's Law is the more time passes before we take action, the more time that activity can spend in our minds haunting us, almost to a paralyzing state. How some people in the world are able to get so much done in a day and others feel completely overwhelmed with a significantly less workload? We all have the same amount of time in the day as Jeff Bezos, Oprah Winfrey, Kanye West or any other inspirational figure taking massive action in their lives. So what's the difference in how they operate? These leaders know what's most important and focus on it. Being able to focus on deep work is one of the most valuable skills a leader can develop. The work we create alone when uninterrupted is extremely important (Parkinson's law, 2018).

Parkinson's Law means that inefficiency has been around for a long time, and procrastination only increases the work effort. If you have a long-term project that you have days, weeks, or months to complete, you should break it down into smaller projects. Each project should have its own specific deadlines. It's crucial that you set specific deadlines for all of your projects, whether they are long-term projects or projects that take just an hour or two to complete. It is important to set deadlines that are shorter than what you would usually give yourself.

Conclusion

In this study, it is examined that relations of The Kaizen Strategy and The Parkinson's Law with proactive behavior. Furthermore, how this kind of relations influences organizational problems are discussed. Continuous Improvement is a process that needs everyone in the organization to support. Continuous Improvement applies not only to top management but also to a person that is least involved in the company. It requires everyone consent and support. Instead of imposing solutions on the people, the company must use their expertise to improve them. If training, education and proper guidance is provided to them they improve at realizing the potential improvement areas where the product/process can be improved. And if proper structure is provided, these improvements can be turned into reality. Once continuous improvement process has been established in an organization it is everybody's responsibility in the organization that it must be maintained. Parkinson's law suggests that people try to maximize performance by taking the full time allotted to them even though doing so will hinder their productivity. Parkinson's Law predicts that more time will be spent on a task when more time is available. Parkinson's Law states that the amount of effort necessary to complete our work adjusts to fit the amount of time we allocate for it. In other words, Parkinson's law suggests that people try to maximize performance by taking the full time allotted to them even though doing so will hinder their productivity. In fact, a Stanford study confirmed that paradoxically, "the more hours you work, the less you get done". The strong form of Parkinson's Law is obviously wrong because as time shrinks to zero the speed of work does not go to infinity. To pick but one example, limiting a novice

pianist's practice time to less than a second does not make the novice learn to play that much faster. However, in its weak form Parkinson's Law predicts that more time will be spent on a task when more time is available.

Briefly, proactive coping provides an increment in work engagement and decreases burnout. Therefore, in terms of practical implications for organizations and managerial perspective, proactive coping can be very important in which the demand for jobs is because of its alleviating effect on the negative impacts of stress and additionally its role in increasing potential for growth and well-being. Therefore, managers should take notice of its positive effects on employees and invest in the promotion of proactive coping strategy in the organizations. As a result, Kaizen Strategy and Parkinson's Law contribute to the reduction of organizational problems by proactively acting.

The Problematics Of Teaching Space Economy

Tomáš R. Zeithamer
zeith@vse.cz
Jiří Pospíšil
pospisil@fsv.cvut.cz

Absract

This paper deals with some qualitative and quantitative consequences of the influence of cosmic weather and solar wind on the Earth's magnetosphere, ionosphere and atmosphere as well as the Earth economy. It is assumed that cosmic weather is generated by solar flares, coronal plasma ejections, high-speed flows of solar wind, and solar energetic particles. New economic variables are derived, such as price jerk, price jounce, and price crackle. The theory of binary relations is used to formulate the principle of correspondence between a set of quantities of non-relativistic mechanics and a set of new economic quantities. The principle of correspondence is used to introduce a stationary field of retail gravitation with two components, such as the intensity of retail gravitation and induced retail gravitation. The next step is the introduction of a stationary field of cosmic retail gravitation. The possibilities of applying the correspondence principle in the teaching of the space economy are analyzed. The paper is one of the outputs of the preparatory work on the research project of the influence of the Sun - Earth relations on the terrestrial economy.

The Project-Based Learning Approach And Collectivistic Efl Learning: Me Vs We

Assoc. Prof. Dr. Najib SLIMANI
Faculty of Letters and Human Sciences
Cadi Ayyad University, Marrakech, Morocco

Abstract

Learning the English language is a challenging endeavor which requires a collaborative, team-oriented spirit. The belief that learners learn better when they learn together has indeed become a cherished motto of language experts and practitioners. This team-orientedness seems to be a requisite for all English language learners and tutors. In this regard, the project-based learning approach is hailed as a collectivistic, team-specific pedagogical instrument that enhances the “we” rather than the “me” attitude among English learning communities, particularly in the EFL context. Thanks to the implementation of the PBL underlying premises, EFL learners are prone to smoothly develop not only different language skills but also various life skills that can make of them added values to their communities and countries. Within this vein, this paper purports to answer the following set of questions: (1) In what way does PBL favor the “we” learning attitude? (2) Is it true that EFL learners cultivate linguistic and extra linguistic assets through PBL? (3) What constraints impede the adoption of the PBL approach in the EFLT context? The assumption which governs the elaboration of these research questions is that EFL learners are likely to display linguistic shortcomings that could be efficiently fixed up via PBL-bound strategies and techniques.

Key words: *PBL/EFL/teaching/individualistic learning/collectivistic learning/ linguistic skills/ life skills/ linguistic deficiency/ linguistic efficiency/EFLT context.*

Introduction

There seems to be a quasi-universal consensus among language experts and practitioners that teacher-centered learning is doomed to be fruitless and unproductive. Conversely, there apparently is a common scholarly agreement that student-oriented learning/teaching approaches and strategies tend to render the teaching/learning endeavor more meaningful and more purposeful (McKay 2002; Kern 2000; Richards 2006). Accordingly, the use of strategies which foster initiative-taking, responsible peer learning, self-reliance and self-development are hailed as practical pathways for stepping away from the teacher-dominant teaching/learning style. In the English as a Foreign Language Teaching (EFLT) context, there is a persistent need to endorse and apply the tenets of the student-oriented pedagogical methods which stipulate that learners learn better when they are autonomous, self-dependent and stress-free. Instead of focusing on language usage, the emphasis should be put on nurturing language use while putting in place learning environments that favor integrated, collaborative, authentic and life-related pedagogical practices.

Within this scope, project-based learning (PBL) is solicited as a didactic approach which helps learners to cultivate not only language skills but also life skills. Although some might think that it is an approach which is much more suitable and practical in scientific learning domains and environments, it is the purpose of this study to show that PBL is to be used within and across disciplines, namely in EFL learning. Taking the School of Arts and Humanities in Marrakech Morocco as a locus of investigation, this paper shows that the merits of PBL far outweigh its eventual demerits.

Project-Based Learning: Overview

As a theory, project-based learning did not appear from a vacuum. It is indeed a theory that builds on human development theories. Project-based learning finds its roots in the constructivist theory which maintains that every learner enjoys a Zone of Personal Development (ZPD) defined by Vygotsky (1978: 86) as “the distance between the actual developmental level as determined by independent problem solving and the potential of development as determined through problem solving under adult guidance or in collaboration with more capable peers.” A quick scrutiny of Vygotsky’s collectivistic, developmental ZPD notion would be enough to fathom the fact that PBL draws upon previous theories which take personal development as a locus of study.

In the literature, the definitions of project-based learning, regardless of how numerous they are, seem to converge on defining it as a learner-directed course of action that nurtures experiential learning whereby learners take the lead in the learning process (what to do/ why do it/how to do it) by figuring out problems and situations to be analyzed, processed and investigated. From this vantage point, the traditional role of the teacher as the main knowledge-purveyor is rethought. S/he ends up merely a supervisor or monitor of the end product. One very important didactic virtue which is promoted through this pedagogical ethos is that learners turn into active, autonomous asset holders whose learning needs and styles are keenly catered for. Stenberg (1998: 18) buttresses this didactic strand stating that “*instruction should be geared not just toward imparting a knowledge base, but toward developing reflective, analytical, creative, and practical thinking with a knowledge base. Students learn*

better when they think to learn ...They also learn better when teaching takes into account their diverse styles of learning and thinking”.

PBL and Collectivistic Learning

There is a proclaimed consensus among language educators and scholars on the academically rewarding, collectivistic nature of PBL-based teaching/learning (Hedge 1993; Solomon 2003; Stoller 1997). These scholars, among others, emphasize several key features of the team-bound specificity of PBL. First and foremost, PBL requires team involvement and collaboration in working out a complex issue over an extended period of time. The issue under investigation is invariably deeply embedded in society and calls for concentrated, extensive and collectivistic exploration. Second, PBL is a tutor-independent learning process. It is a process wherein the tutor sits back, and the learner takes the lead in terms of project planning, accomplishment and ultimate presentation. Third, the issues that are investigated are decided upon by the learners themselves, which guarantees the probing of topics and themes which truly capture the interests of learners. Fourth, the role of the tutor as the main actor and purveyor of knowledge is de-emphasized. Accordingly, the classroom turns into a teacher-free environment wherein feedback, experiential knowledge and tentative project-bound outlets are shared and worked out by the group of learners who endorse the project. Additionally, PBL-friendly learning provides an impetus for learners to incorporate ICTs in the learning endeavor through handling hands-on, technology-based activities and tasks. The use of technological platforms to manage data is also done on a collaborative basis whereby learners cooperate in terms of partaking, adopting and adapting their technical knowledge to serve in the realization of the end project. This collaborative spirit is what sustains and maintains learners' efforts to get through with the projects regardless of how challenging and demanding they may be. Each and every learner is considered as a real asset in the accomplishment of the whole project. Learners are basically endowed with various skills, be they social, managerial and/or linguistic, which they exploit together to come up with a valuable end product. Finally, the assessment of the project's quality as well as its presentation is the exclusive responsibility of the learners. What surfaces, then, is that PBL favors not only the notion of collective project realization, but also the notion of authenticity as a cornerstone, underpinning trait for its launching.

On The Notion Of Authenticity In PBL Learning

Markham et al. (2003) underline the authentic aspect of PBL. In contrast to traditional teaching content which is utterly life-unlike, PBL draws upon life-like situations and roles. Learners tend to opt for authentic projects that match their daily life circumstances. This option dovetails with the widely held scholarly belief that learners learn better when they do that in natural, life-related atmospheres. This way, learning is geared not just towards getting the learners to do well in final exams, but also, and most importantly, towards cultivating diverse life skills which can render learners engaged, effective and efficient social and societal actors.

PBL And Learners' Engagement

PBL slots in with several learner-bound development theories, namely Vygotsky's (1978) social development theory whereby the traditional conception of learning as being classroom-exclusive is verifiably refuted. The belief that learning can take place in environments other than classrooms is echoed early on in Dewey's (1902) inquiry-based learning approach which underscores the key significance of self-dependent learning (learning by doing). In so many ways, PBL endorses the premises of these, and other learner-specific, theories pertaining to engagement. In tune with this approach, learners are called for to show a multi-layered engagement, behavioral, emotional, intellectual, physical and social (Blumenfeld et al. 1991; Hutchinson, 2001). Learning, thus, turns out to be the corollary of "cognitive" as well as "non-cognitive parameters.

Behavioral engagement, for instance, is in place when learners are dedicated to the project in terms of regular attendance, continuous evaluation, opinion-sharing and other behavioral aspects. Emotional engagement is at stake when learners demonstrate affective, project-specific reactions. This type of engagement is apparent when learners proactively show an inner motivation to make things happen. Emotions of anxiety, interest, enjoyment and/or frustration are cases of emotional engagement in point. Likewise, cognitive engagement captures the learners' willingness to perform mind-challenging requirements in order to get the project accomplished and delivered to a large public. Given the afore-mentioned pros, PBL seems a potentially useful approach in the EFL teaching/learning realm.

PBL And EFL Learning

Throughout history, English language learning and teaching has undergone drastic methodology-bound changes. Brown (2000) elaborates on the myriad of EFL learning/teaching methods and rightfully assumes that there is no single best method for English language learning. A distinguishing characteristic of contemporary EFL learning/teaching theories is that they tend to give the learner a preeminent position in the classroom sphere while disregarding the "project" as a vehicle for skill-development.

Starting from the grammar translation method and the direct method through the audio-lingual method and the total physical response method to the communicative language teaching and the competency-based method, English language learning has not been project-oriented. The innovativeness of PBL is that it incorporates the underlying tenets of communicative language teaching and similar methods, and in parallel it enhances learners immersion by granting them genuine opportunities to handle real-life learning situations which require learners to operate collaboratively and independently from the tutor so as to foster the target language skills in more meaningful and realistic ways (Richards, 2006).

PBL And The EFL Tutor's Role

One of the biggest professional constraints that EFL tutors face and which result from the adoption of conventional, traditional teaching approaches is the burdensome workload. Because the teaching endeavors tend to be tutor-oriented, it follows that tutors are obliged to work extensively both inside and outside the classroom. Tasks like lesson planning, students' monitoring, exam designing and correcting, among several others, are both time and effort-demanding.

Contrastingly, the tutors' workload is relatively light and much more manageable with the application of PBL-based EFL learning. However, this does not in any way mean that tutors are passive actresses and actors, but they may fulfill other pedagogical functions. As a case in point, tutors can enlighten learners and project-holders on some pathways which can help them carry out their projects in effective and efficient ways. Providing feedback for learners at different stages of the project completion is also a way for tutors to be asset-holders in the project at hand. The implementation of PBL in EFL learning is bound to be useful within and across educational contexts.

EFL Learning In The Moroccan Context

For years, particularly since independence in 1956, the improvement of the educational system has been a top priority for decision-makers in Morocco. The recent educational reform outlined in the official Charter for Education and Training showcases the keen interest of the educational actors to put into operation a high-profile educational system. With regard to EFL learning/teaching, the official guidelines (2007 and 2009) provide clear-cut account on the strategies to be put in place so as to define the roles to be played by tutors and learners respectively. Accordingly, tutors are recommended to serve more as learning facilitators while learners are encouraged to be more autonomous and self-dependent learners. This language-bound policy applies to EFL learning both at school and university levels.

In recent years, there has been a remarkable tendency to give English a preeminent position in the Moroccan educational system- a system wherein Arabic and French used to be the key languages of education and employment. The National Charter of Education and Training, which is the legal framework for educational reform, clearly stipulates that Arabic, French and English are to be given due and equal importance. The rationale behind this reinforcement of a multi-lingual educational system emanates from an outspoken conviction of the decision-makers that speaking different languages would definitely boost Moroccan university alumni employability and marketability in the global job market. This official tendency has led to the implementation of up-to-date approaches in EFL learning/teaching.

Approaches To EFL Education In Morocco

As a practitioner in the Moroccan educational system, I give credit to the educational and pedagogical authorities in Morocco for doing their best to keep up-to-date with the latest trends in EFL learning/teaching. Having served as a language tutor for more than twenty years, I have had the sizeable opportunity to be exposed to and apply different EFL methods and approaches ranging from the age-old grammar translation method to the current standard-based approach. The adoption and adaptation of a large variety of methods and approaches has certainly rewarding benefits pertaining to learners and tutors alike.

At the Moroccan university level, English and English-related disciplines and studies are coveted by a large spectrum of baccalaureat-holders. This is presumably due to the fact that graduating from an English studies department has been a strong asset for professional hiring.

In the following section, I spotlight the pedagogical EFL teaching/learning avenue taken by Moroccan EFL tutors, especially in terms of PBL implementation. Data are collected from the Faculty of Letters and Human Sciences Marrakech, Morocco- a workplace where I am currently working as an EFL tutor. This faculty is an open access institute wherein students learn disciplines and subjects relating to social and human sciences.

Methodology

Given its numerous, scholarly acknowledged benefits, it seems worthy of investigation to collect and analyze data in a methodological way to figure out whether or not PBL is endorsed by Moroccan university practitioners.

Research Questions And Hypothesis

Through this paper, I purport to investigate the Moroccan university language tutors' stance towards PBL in terms of affective endorsement and actual implementation. Accordingly, the research questions to be covered are the following:

- 1- Are Moroccan university EFL tutors aware of the significance of PBL in promoting multi-skilled, authentic language learning?
- 2- Does PBL truly enhance collectivistic EFL learning?
- 3- What hindrances, if any, hamper the implementation of PBL EFL learning at the Moroccan university level?

The hypothesis which underpins the above research questions is as follows: PBL maximizes authentic, collectivistic and student-centred EFL learning. To corroborate or refute the merits of PBL, I have opted for an interview-based, qualitative research method.

The interview

The use of the interview is justified by its scholarly recognized usefulness in gathering experiential, factual data to understand specific phenomena (Kvale, 1996). Interviews are handy ways to get the gist behind the participants' experiential endeavors, orientations and practices. The interview at hand is a face-to-face, personal interview whereby the researcher works directly with the respondents- a method, according to Kvale (1996) that eases eliciting impressions and opinions. Specifically, I have opted for a 'General Interview Guide Approach' wherein the same areas of information are collected from each interviewee. It is also a 'standardized, open-ended' interview because the same questions are asked to all interviewees.

Sample

The target respondents in this investigation are people within my circle of influence, namely my colleagues in the department of English Studies, Faculty of Letters and Human Sciences, Cadi Ayyad University, Marrakech, Morocco. The respondents are chosen randomly because every language tutor in the English department constitutes a viable source of data. I choose 15 respondents for the main constraint of availability. That is to say, for personal and professional constraints, I could not reach out to all my colleagues. The gender identity of the respondents was of minor significance because this is a variable that is beyond the scope of this study to examine. After explaining the rationale behind the interview and specifying how long it would be, the interviewees were given the floor to ask for clarifications on and around the interview.

The interview for data collection

This interview is designed to elicit academic/professional stances towards project-based learning as an approach for EFL teaching/ learning at the Moroccan university level. The identity of the respondents will be kept confidential, and the information they provide will be used for purely academic purposes;

Q1: How long have you been teaching English at Cadi Ayyad University?

Q2: Do you have an idea about project-based learning? Specify

Q3: What are the merits, if any, of this approach?

Q4: Do you make use of PBL to teach specific subjects or disciplines?

Q5: In your opinion, what are the obstacles, if any, that hinder the implementation of this approach in the English department?

Q6: What recommendations, if any, would you suggest for adopting the PBL approach in the English department?

Thanks for your kind collaboration

Data Analysis And Findings

The interviewees responses to the first question pertaining to the number of years they have been serving as EFL tutors at Cadi Ayyad University reveal that all of them have considerably long years as practitioners inside the department of English. The years of experience range between ten and thirty, which means that the respondents have got enough experiential knowledge and practice to be valid and viable source of data for an experience-based investigation of the theme at hand. It is particularly important to mention that all the interviewees were willing and enthusiastic about providing data for this study.

In the second question, I tapped into the interviewees' background knowledge about PBL as an approach in the field of EFL teaching and learning. This question is of key significance in this analysis because having topic-specific knowledge would help in coming up with accurate and specific facts for analysis. This is the reason why I asked the interviewees to specify their bulk of knowledge pertaining to PBL. From the feedback to this question, the interviewees expressed their familiarity with PBL. Besides, they provided pertinent and valuable topic-specific information. After tallying the responses, I figured out three features which distinguish PBL in the interviewees' views. First, the interviews specified the collectivistic trait of PBL in contrast to the individualistic approach

wherein no peer collaboration takes place. Second, the interviewees emphasized the possibility to implement PBL within and across disciplines. Third, the respondents recognized that PBL endorsement was challenging but beneficial. These responses are valuable in the context of this investigation because they get the interview rolling smoothly. Otherwise, it would be impractical to interview them about a concept/approach that they were not acquainted with.

After considering the interviewees' acquaintance with and knowledge about some of the specific features that characterize PBL, I proceeded with the third question whereby I illustrated the eventual merits of PBL. The interviewees' experiential knowledge of the actual merits of PBL was quite discernible. The merits that the interviewees pointed were both various and complementary in so many ways. One of the recurrent merits in the interviews was related to learners' autonomy- an idea which stands out in the literature on PBL. In other words, all the tutors were conscious of the need to give learners more space for action in the teaching/learning process. One of the interviewees clearly specified that the learners' potential is to be keenly accounted for, and that the recognition of this potential does not in anyway underestimate or discredit the tutors' factual academic authority. As a researcher, I reckon that this kind of responses reflects high professional maturity by considering learners' as active asset-takers in the teaching/learning process. Another merit the interviewees accentuated is that PBL eases the accomplishment of tasks by learners themselves in a spirit of collaboration and knowledge-sharing, which reinforces the consideration of one's peers as associates rather than competitors. This team spirit indeed helps the learning process to be far-reaching. As the saying goes: "Alone we go fast, together we go far."

A last, but no minor, merit that the interviewees concurred upon is the authenticity of PBL- an idea that is also fore-grounded in the literature pertaining to PBL. In this regard, the interviewees pinpointed the fact PBL is a handy way to bridge the gap between classroom life and real life by granting learners to work on projects they themselves choose, in natural environments they see fit, and in ways they find most fruitful. The responses to this question reveal the interviewees' substantial awareness that the advantages of adopting PBL far outweigh any probable downsides.

In the fourth question, I zoomed upon the interviewees' actual use of PBL in teaching any discipline or subjects. Unexpectedly, there was a quasi-unanimous response among interviewees about stepping away from PBL as an approach. This response seemed quite weird for all the interviewees paid lip service to PBL as an academic approach, but the majority did not make use of it to teach any subject or discipline. This response was an impetus to promptly cover the fifth question relating to the obstacles that were likely to impede the implementation of PBL in the Moroccan EFL university context, namely in the department of English at the School of Arts and Humanities Marrakech.

The interviewees seem to have a tacit consensus on the constraints that prevent the endorsement of PBL in the department of English. First and foremost, the interviewees had real concerns about the heavy workload that they were up to. This workload was the result of the tutor-oriented educational policy in place in Moroccan universities. The tutor is in fact the sole actor in charge of effort and time-consuming tasks, such as teaching, examining, correcting and end-of-study "memoire" supervision. Another concomitant obstacle raised by all interviewees is the class-size which does not favor going PBL. With hundreds of learners to teach and monitor every semester, interviewees revealed, the implementation of PBL-bound English teaching strategies would be fallacious. A final, but no least significant, obstacle that the majority of the interviewees accentuated pertains to presumable flaws in the Moroccan educational system as a whole which does not cultivate a project-bound, collectivist, teacher-free approach to learning. The interviewees provide factual information showing that in Moroccan primary schools, junior high schools and high schools the spirit of autonomous, collaborative, project-based learning is not on the educational agenda. As a follow-up, the interviewees conceded, the implementation of PBL at the university level remains far-fetched.

So as not to remain at the descriptive stage, I asked the interviewees in question six to suggest experience-based recommendations to ease the implementation of PBL in the English department. Basically, the recommendations that the interviewees suggested overlapped in significant ways with the obstacles outlined above. One of the urgent recommendations consisted of reconsidering the burdensome workload assigned to each and every tutor on a semestrial basis. Another telling recommendation pertained to the absolute necessity to reduce class-sizes to facilitate all kinds of student-centred learning approaches, including PBL. One last recommendation drew upon raising learners' awareness on and initiating them to the fact that learning is a joint endeavor wherein the learners and the tutors need to be astutely involved.

Conclusion

This study focused on the implementation of PBL to ease collectivistic EFL learning at the Moroccan university level. The study was tutor-oriented in the sense that it sought to elicit the tutors' experiential consideration of PBL as a means to augment learners' skills and boost their ratio of autonomy and self-confidence.

In the literature review, I gave a general overview of PBL, and I exposed the presumable benefits of PBL in the language education context as a means to step away from a tutor-bound pedagogical process and to foster a student-oriented parameter whereby the learners are not there merely to internalize academic content but rather to nurture

skills that can render them self-dependent, engaging, driven, perceptive, sharp and responsible learners. All these assets, and more, can be cultivated through the involvement of learners in getting projects rolling.

In the practical part, I identified several variables which hamper a full implementation of PBL in the teaching of EFL at the Moroccan university. Using the qualitative interview as a means to elicit data, I interviewed a set of fifteen university professors in the department of English studies at the Faculty of Letters and Human Sciences Marrakech.

The findings account for the conspicuous awareness of Moroccan EFL university tutors of the multiple academic benefits of PBL. Data also reveal lack of tutors' readiness to go PBL, and this is because of a myriad of system-bound constraints. Eventually, the interviewees suggest practical pathways for a beneficial, smooth implementation of PBL in the EFL Moroccan university framework.

Far from overestimating PBL, this study argues for the absolute necessity to embrace this approach not only by Moroccan university EFL tutors, but also by educational decision-makers to hurdle the systemic hindrances that prevent its full implementation. Future studies in this area may involve a larger number of respondents nationwide. University EFL learners in different Moroccan universities may be also a source of valuable data. All things considered, this study puts forth PBL as an alternative, rather than a magic panacea, to ensure high-quality EFL teaching/learning in the Moroccan university.

Abstract

The purposes of this research were to study the relationship between ethical leadership of school administrators and the vocational education schools image. This research was survey research with the sampling group of 327 persons including 35 administrators, 196 teachers, 40 school committees, and 56 students of association of future Thai professional. The research instrument was the questionnaire with validity ($0.50 \leq \text{IOC} \leq 1.00$) and reliability (0.965). The statistical data was analyzed by statistics computer application to search the correlation coefficient by Pearson's Product Moment Coefficient. Research findings were as follows: The positive relationship between ethical leadership of school administrators in six components are responsibility, respectfulness, reliance, justice, empowerment, and honesty and the vocational education schools' image was found with statistical significance at the .01 level ($0.738 \leq r \leq 0.852$). The highest correlation coefficient of ethical leadership of school administrators through the schools image in descending order were responsibility ($r = 0.852$), reliance ($r = 0.847$), respectfulness ($r = 0.829$), honesty ($r = 0.824$), empowerment ($r = 0.822$), and justice ($r = 0.738$).

Keywords : *Ethical Leadership, Vocational Education, Schools' Image, Relationship*

Background and Significance of Study

Studies show that many institutions and departments have experienced similar problems with a shortage of qualified Thai labor who meet production standards and an absence of effective measures for quality assessment of the labor force. Hence, the great challenge, nowadays, is to provide a qualified workforce with a high capability for competing globally. A review of the data on management of vocational education and overall national education in Thailand shows that the ratio of students in general education to vocational education is 60:40. This ratio could be a result of the popularity of general education among youth; however it is a problematic trend in the context of needing middle-level manpower. Although a plan and preparation for enrolling and supporting more students at vocational and technical certificate levels have been made, the number of students enrolled in these programs has been considerably low relative to the target number. These findings are consistent with studies Kattiya Nutawatr (2009) and Theerawut Boonyasopon (2010), which found that the decreasing number of students in vocational education could be a result of many factors, i.e., values held by parents who want their children to get a certificate in general education so that they can work in other fields, a lack of information on the advantages of studying in vocational education, or the image of vocational institutes, which may appear to be violent due to disputes among certain groups of vocational students. The latter causes fear among parents toward sending their children to a vocational institute.

As mentioned, the number of students in vocational education continues to fail to meet the target as a result of school image and unpopularity among parents and students. Hence, these institutes' administrators need to adjust their management styles, especially in terms of ethical leadership. School administrators' behavior must represent strong ethical leadership in order to promote ethical values in the institute. Furthermore, an ethical leader represents philosophies and mechanisms that strengthen an organization and society. The difference between ethical leadership and other types of leadership is that ethical leaders are the heart of an organization; they are those who drive the organization forward using positive means rather than force. Ethical leaders concentrate on the following aspects of leadership: being a good and ethical role model, having a sincere relationship with subordinates and executives, promoting a pleasant work atmosphere and teamwork, engaging others in decision-making based on good ethics, paying attention to others, and encouraging others to develop and empower themselves

(Boonjan Sisan, et al., 2010). These essential components of leadership are similar to those discussed in Siwalee Sirilai (2007), which states that an institute's leader must be a smart and good person, where a smart person refers to one who has skills, knowledge, creativity, and proficiency, and a good person refers to one who has ethics and morals, devotion, honesty, a sense of justice, and responsibility. If school executives can gain respect and acceptance from students, instructors, parents, and their community by demonstrating ethical and moral behavior, they may possibly have an effect on and promote a positive school image and attitude, which can lead to a higher level of acceptance from society toward vocational education.

The challenges mentioned above drew the researcher to investigate the relationship between ethical leadership of educational institutes' leaders and the school image of institutes that provide vocational education in Roi Et Province. The researcher hoped to gain crucial information that would be useful for educational institutes in developing their school image and promoting characteristics of ethical leadership among school executives so that such institutes could enhance their efficiency in managing vocational education.

Research Objective

To study the relationship between the ethical leadership of leaders in educational institutes and the school image of institutes providing vocational education in Roi Et Province.

Research Methodology

1. Research Methodology: In this study, a descriptive research method was adopted to conduct a correlation study. The study was divided into two phases: Phase 1 consisted of research instrument development through focus group discussion, and Phase 2 involved surveying to collect data from the sample groups in order to investigate the relationship between the ethical leadership of educational institute leaders and the school image of institutes providing vocational education in Roi Et Province.

2. Sample Group: The total population of leaders and students in the study consisted of 35 leaders of educational institutes conducting vocational education in Roi Et Province and 56 students from vocational schools. The number of instructors and committee members of educational institutes was determined using Yamane's formula (Theerawut Akakul, 2000). With 5% allowable error and using a stratified random sampling method with a population divided by the size of the institute, the calculation resulted in an instructor sample of 196 instructors and a committee member sample of 40 committee members. Therefore, the total sample size of this study was 327 people.

3. Research Instrument: The questionnaire used to collect data on the relationship between the ethical leadership of educational institute leaders and the school image of the institutes providing vocational education in Roi Et Province consisted of 3 parts, as follows:

Part 1 consisted of five check-list items aiming to collect general information of the respondents: sex, position, education, experience in current position, and size of the institute.

Part 2 consisted of 26 questionnaire items on the ethical leadership of educational institute leaders in institutes providing vocational education in Roi Et Province.

Part 3 consisted of 27 questionnaire items on the school image of the institutes providing vocational education in Roi Et Province.

4. Data Analysis: The data collected from the questionnaires were analyzed by software to measure the Pearson's Product Moment Correlation Coefficient, which determined the relationship between the ethical leadership of educational institute leaders and the school image of the institutes providing vocational education, and a multiple regression coefficient analysis was conducted between ethical leadership of educational institute leaders and school image.

Results

The researcher investigated the relationship between the ethical leadership of leaders in educational institutes and the school image of institutes providing vocational education in Roi Et by finding the Pearson's Product Moment Coefficient. The results of the study revealed that the correlations among ethical leadership characteristics of educational institute leaders, including justice, honesty, responsibility, respect, trustworthiness, and implementation of school image empowerment, were positive, with correlation coefficients ranging from 0.738 – 0.825 and statistical significance at .01

among all variables for vocational institutes in Roi Et Province. Regarding the correlation of specific variables among the different ethical leadership characteristics, responsibility, trustworthiness, and respect were found to have the strongest positive correlations with school image, with correlation coefficients of 0.852, 0.847, and 0.829, respectively. In contrast, ethical leadership that demonstrated a sense for justice and involved implementation of school image empowerment were the two factors with the lowest positive correlations ($r = 0.738$), with statistical significance at .01, as shown in Table 1 below.

Table 1 Pearson's Product Moment Correlation Coefficients between ethical leadership of educational institute leaders and school image of institutes providing vocational education in Roi Et Province.

Variables	X ₁	X ₂	X ₃	X ₄	X ₅	X ₆	Y
X ₁	1						
X ₂	.898**	1					
X ₃	.841**	.931**	1				
X ₄	.848**	.899**	.866**	1			
X ₅	.855**	.935**	.930**	.903**	1		
X ₆	.843**	.932**	.922**	.889**	.936**	1	
Y	.738**	.824**	.852**	.829**	.847**	.822**	1

** Correlation is significant at the 0.01 level (2-tailed)

Discussion

The results of this study investigating the correlation between ethical leadership of educational institute leaders and school image of institutes providing vocational education in Roi Et Province show positive correlations among all facets, with statistical significance at .01. "Very strong" positive correlations were found for all of the facets apart from justice, which had a "strong" positive correlation. The findings conform to the hypothesis of this study, which anticipated that there would be a correlation between ethical leadership of educational institute leaders and school image of institutes providing vocational education in Roi Et Province, with a strong correlation between responsibility and school image at the highest level, and a strong correlation between justice and school image at the lowest level. That the correlation coefficient value of responsibility and school image ranked the highest could be a result of the nature of administrative work, which must drive the institute to achieve its vision, mission, goals, and objectives. In the work process, there should be task delegation and a committee to create more learning opportunities, including opportunities for all parties to participate in investigations. Additionally, school executives should take responsibility as role models for school staff. This can be achieved in a variety of ways, i.e., punctuality and devotion to doing work, with the priority being to show responsibility toward one's work and decisions made, regardless of whether the consequences are positive or negative. As explained in Theerawut Akakul (2000), positive behaviors, actions, and the expression of staff and officers in an institute or a department lead to a positive image. In addition, Boonjan Sisan, et al. (2010) concluded that the direction of an institute depends on the executives, and a good executive must have the knowledge and proficiency to lead. If an institute has such an executive, with good visions, management policy, and honesty, the institute will gain a positive image. This conclusion is consistent with Siwalee Sirilai (2007), which states that an institute's leader must be a smart and good person, where a smart person refers to one who has skills, knowledge, creativity, and proficiency, and a good person refers to one who has ethics and morals, devotion, honesty, a sense of justice, and responsibility. These qualifications explain why being responsible, which is one of the characteristics of ethical leadership that must be demonstrated by educational institute leaders, has a strong relationship with school image. This finding is further supported by Kamolthip Thongkamhaeng (2011), a research study on strategizing for ethical leadership development of public school executives

which found that at the time the study was conducted elements of ethical leadership for a career were rated highly, as well as all characteristics of ethical leadership. The two characteristics that ranked at the top were devoting one's full attention to one's work and working responsibly in a way to continually improve. These rankings also conform to Office of Teacher and Educational Personnel Commission (2005), a study exploring the ethical and moral leadership of school executives as perceived by teachers under the Secondary Education Service Area Office 38 (Sukhothai – Tak), which found that work performance was rated at a high level, and responsibility toward work and making decisions was rated the highest. Moreover, the findings from the present study are also consistent with Vachirawit Yangchai (2011), a study on factors affecting the school image of Suranaree University of Technology, which found a strong positive correlation between factors related to the school executives and school image, with statistical significance at 0.05. Similarly, Rungrawan Senarak (2009) investigated factors affecting school image for the Institute of Physical Education, and found that the executive group was a predictor variable that had a strong correlation with the image of the institute, according to perceptions of all groups, including administrative members, teachers, and students, with statistical significance at 0.01. In conclusion, responsibility as one of the characteristics of ethical leadership in educational institute leaders has a strong relationship with school image of institutes providing vocational education in Roi Et Province, as executives are the main mechanism in the development of education and the institution toward efficiency and effectiveness. Executives play a great role in school image, requiring that an executive have the following attributes: knowledge, management proficiency, characteristics of ethical leadership, good human relations, visions, and ethics and morals, as all of these traits greatly affect image, reputation, and the prestige of an educational institute. Such traits will also ensure learners, parents, the surrounding community, and society that the institute is accountable and effective in providing education, as this is a crucial element in making the decision to enroll in the institute. As a result, it is highly necessary to have executives that can demonstrate ethical leadership, especially in terms of responsibility, to enhance the level of credibility and trustworthiness of the institute. This would also lead to a good relationship between the institute and the surrounding community, as well as cooperation to help the institute become successful

The Relationship Between Foreign Language Anxiety And Motivation Of Turkish University Students In Learning English As A Second Language

Meltem Kaygusuz
Beykent University,
meltemkaygusuz@beykent.edu.tr

1.Introduction

Foreign language anxiety and motivation have been long considered vital elements having effects on language learning. Both of these constructs are highly correlated to foreign language achievement. The present study was conducted on university students studying in Turkey where English has become a priority among the subjects taught in curricula. It is the most widely taught foreign language at all stages of the education system. Most Turkish learners begin to learn English at early ages and keep studying English throughout and beyond their academic life although most of them cannot get the desired level of proficiency either in receptive or productive skills, or in both. The reason for being a great challenge for them is the limited contacts with native speakers of English, and lack of opportunities to put their learning into words by practicing in their everyday lives. The data from the studies based on the factors of the problem reveal that learners try to compete with difficulties of anxiety factors in the process. Hence, other studies revealed that anxiety and motivation are among the important predictors showing the relationship in view of their opposing effects in second language learning (Yang, 1998 ; Noels, Clément, & Pelletier, 1999).

1.1.Foreign Language Anxiety

English language plays a vital role in ensuring nation building. For English as foreign language students in Turkey, learning English has always been a great challenge due to limited contact with target-language speakers, and lack of opportunities to practice English in their daily lives. Most students are only exposed to English in classes, which make foreign language learning entirely difficult for them to remain motivated to learn English.

An issue of increasing importance in the study of second language teaching is the role of second language anxiety. Anxiety is one of the most significant and pervasive emotions and has been a main focus of a growing body of research in foreign language education for years. In light of the studies, the presence of anxiety and its extensive effects in language learning and teaching have been confirmed. In terms of definition, several researchers have offered definitions of foreign language anxiety. The phenomenon of anxiety has generally been defined as an emotional reaction to learning, an experience of uneasiness and unpleasant emotions associated with subjective feelings of tension and nervousness. According to Horwitz, foreign language anxiety is "a distinct complex of self-perceptions, beliefs, feelings, and behaviors related to classroom language learning arising from the uniqueness of the language learning process" (1986). Since it is mostly related to feelings of worry and apprehension, some concerns which are the feelings uneasy about potential failure or poor performance impair the performance and effort to employ some cognitive skills through the target activities have a remarkable impact to influence learners' motivation and performance in the process. . Similarly, Clement views foreign language anxiety as a complex construct which shows its impacts on especially learners' psychology in terms of emotional factors and self-confidence (1980).

Anxiety and language learning are two so complicated phenomena that countless studies have been conducted on the mainstream of impacts of anxiety on foreign and second language learning. Hence, foreign language anxiety cannot be studied in isolation because multiple provoking factors such as personal and interpersonal beliefs, personalities, level of achievement, apprehension, self-efficiency and self-concept of learners, limited cognitive skills, and learner and situational variables could play a vital role in the development of a level of anxiety in learners. The effects of variables and factors could result in poor performance or a side effect caused by some language learning difficulties both directly and indirectly. Adverse effects of anxiety could be observed when learners are constantly preoccupied with any negative effects and the threats posed by learning situation. In that case, it is really challenging to concentrate and maintain long-term attention on one's target. Likewise, high-anxious learners who tend to perform much worse than low-anxious learners choose to remain silent in classes and target activities because they are deeply worried about lack of oral proficiency in target language or making stupid mistakes and losing faces before their counterparts.

MacIntyre and Gardner (1991) identified three approaches to the study of anxiety, which are trait anxiety, state anxiety, and situation-specific anxiety. Over years, trait anxiety, state anxiety and situation-specific anxiety have become the mainstream approaches in foreign language teaching and learning since they have remarkably vital roles in enhancing learners' language acquisition and learning in some ways. Trait anxiety occurs in response to a perceived threat. Also, it differs from other types of anxiety in terms of its duration, intensity and the range of situations in which it occurs. It is a kind of stable personality characteristic that people with trait anxiety mostly experience excessive anxiety and worry by anticipating a potential threat of future events in a variety of situations. Hence, it is difficult to get rid of. Unlike trait anxiety, state anxiety can be described as a temporary unpleasant

feeling in a person who makes a mental assessment of a kind of threat. It is more likely to seriously disturb the learners' ability to react positively in a certain environment. However, if the events or objects perceived as a threat go away, the person having state anxiety no longer experiences the side effects of the unpleasant feelings. Situation-specific anxiety is considered as a trait anxiety, which is experienced in a changed or new situation a learner is exposed to. Often, learners become uneasy in crowds or a new atmosphere that makes them uncomfortable. Its occurrence is common in a learning setting.

Considerable attention has been directed to the examination of debilitating and facilitative anxiety. Debilitative anxiety is seen as a threat to learners' consciousness and production of second language while facilitative anxiety entirely encourages them to perform well. Scovel considers that a certain level of anxiety stimulates language learning effectively by promoting learners to overcome the perceived level of difficulty of foreign language (1978). On the other hand, an excessive amount of anxiety would lead to withdrawal, avoidance in a practical activity and an inefficient learning performance. As a result, it makes learners demotivated and unwilling towards target language since the impacts of debilitating anxiety interfere with learning a foreign language in a negative way.

Anxiety can be seen in two forms: harmful or debilitating anxiety and helpful or facilitating anxiety. According to the results of some studies, debilitating anxiety is regarded harmful because it inhibits learners' performance, reduces the creativity of learners in foreign language, and causes unwillingness towards learning in students. Alpert & Haber focus on its debilitating effect that motivates the learner to withdraw from the language task and leads him to adopt avoidance behaviors (1960). Anxious learners suffer from the fear of having inadequacy in acquisition, comprehension and production.

1. Motivation

One of the factors affecting the effectiveness of learning is motivation arising from desire that drives a person to strive and makes him eager to learn a foreign language and gain some skills of that language. It has long been considered to be an important predictor of second language learning and various definitions were made by the scholars (Gardner & Lambert, 1959; MacIntyre et al, 2001; Pintrich & Schunk, 2002). It can be called the desire, need or urge to learn, do, achieve or acquire something. McDonough describes motivation as "a general cover term – a dustbin – to include a number of possibly distinct concepts, each of which may have different origins and different effects and require different classroom treatment." (1981).

On the other hand, the pioneers of motivation research, Gardner & Lambert, conducted a study in 1959 in order to find out the relations between the attitudes of learners toward the community of a second culture and their motivation to learn the language of that culture. In the core of the study, they also focused the distinction of two types of motivation in learners; intrinsic and extrinsic motivation. Intrinsic motivation refers to internal desire to perform an action because it is enjoyable and satisfying while extrinsic motivation is viewed as a behavior that arises from external conditions and aims to gain an external reinforcement.

Two types of motivation are identified:

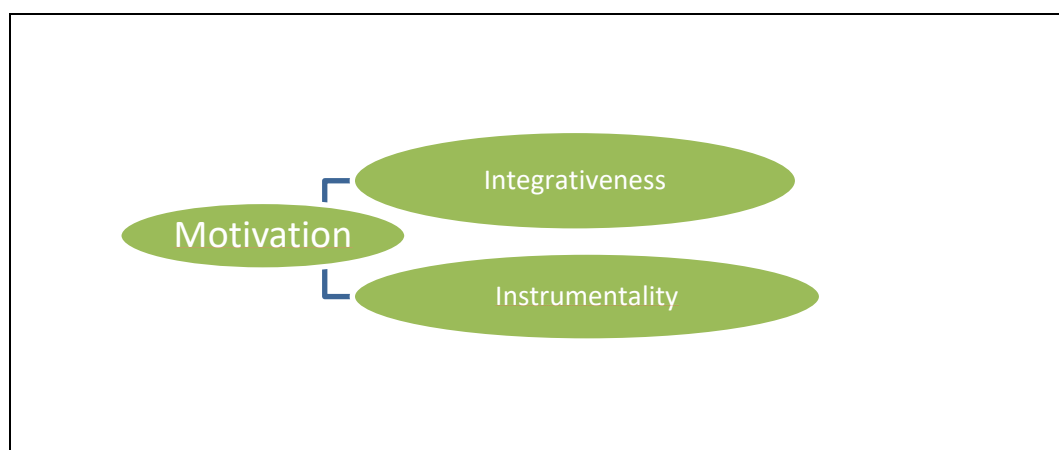

Figure 1. Types of Motivation

Intrinsic motivation is a willingness to communicate with others, having high level of enthusiasm towards learning English, improve oneself in L2 without having any ambitious to receive any instruments or rewards from outside. For instance, a learner who is interested in improving their English to speak well and fluently would be intrinsically motivated to do so without requiring contingent consequences such as praise from the parents or teachers. The effort of the intrinsically motivated learner is focused on the solution to a weakness or problem since the challenge

of overcoming the matter provides a sense of contented feelings. Gardner also claimed that intrinsic motivation has a positive relationship related to achievement in language proficiency.

Extrinsic motivation, however, comes from external factors driving learning for instrumental goals such as making money or being appreciated by others. It is a reward-driven attitude which is a type of conditioning focusing on awards, punishments or actions what individuals will receive as a result. In other words, these individuals are motivated to learn something not because they are willing to learn it, but taking an action to learn something in them is based on obtaining good scores, parental praise, instructor approval, etc. Even though it is stated that intrinsic motivation plays a crucial role in foreign language learning more, some researches showed that the learners who tend to be motivated more instrumentally than intrinsically in terms of gaining and improving the target skills in second language are fully conscious about their actions and can regulate their behavior because their behavior is carried out to achieve the result. A study conducted among Pakistani and Nigerian people shows that large populations and wide salary gaps create a strong motivation for the citizens to learn English to have a better economic condition and gain social prestige by joining the ranks of salaried professionals (December, 2010).

1.3. Foreign Language Anxiety and Motivation

Foreign language anxiety and motivation both are closely related to each other in foreign language learning process. In addition, they can potentially influence various levels of learners' language acquisition and achievement in some ways. Many studies regarding the relationships between language learning anxiety and motivation have drawn attention to the concern of some scholars. For instance, if students feel motivated, they have less anxious feelings and can expend effort to get involved in the learning activities more. And this was supported by the results of questionnaires conducted to find out the correlation between anxiety and motivation, as well. Liu and Huang pointed out that foreign language anxiety was significantly negatively correlated with motivation since the results revealed that low-anxious learners were willing to perform better than high-anxious learners who tended to speak mostly briefly or sometimes remained silent when having to speak target language (2011).

Motivation is one of the factors that influence the rate and success of language learning. Learners with high motivation and a low level of anxiety are thought to be better equipped for success in second language learning. And literature shows that there is a considerable link between anxiety and motivation to learn target language since both anxiety and motivation can significantly predict the English achievement of the language learners within language context. However, language anxiety often works against motivation to learn. According to Clément, Dörnyei and Noels (1994), learners who are more willing to learn a second language are usually less anxious learners who have better self-consciousness, higher achievement, and self-confidence. Another study has similar results to these findings. Sidhub indicated that if students have increasing level of anxiety in language context, it causes negative attitude and perception toward English in them, and also reduces the level of motivation of the students regardless of language proficiency, gender, intelligence, etc. (Jaina and Sidhub, 2012).

1.4 Statement of Problem

Considering the effects of anxiety for the learners who start learning English and carry out gaining and improving the skills throughout their life is a remarkable point that has to be considered by educators. The impacts of anxiety are negatively associated with motivational factors in effective teaching. According to Bailey, Daley and Onwuegbuzie, most learners display high level of anxiety due to poor knowledge, fear of making mistake, losing face, teachers' behaviors, embarrassment, etc. in their learning setting (1999).

1.5. Purpose of the Study

The current study investigates the possible relationship between foreign language anxiety and motivation in English Language teaching setting. In the light of other studies, it tries to find out the negative or positive impacts of anxious feeling in learners. And trying to find answers to the questions whether the anxious feelings play an important role in the learners' performances and how the learners are affected is another objective of the present study.

1.6. Research Questions guided in the study;

- 1- Is there any significant relationship between foreign language anxiety and motivation?
- 2- Do FLL have high level of anxiety in English learning?
- 3- How do the learners experience the effects of anxiety in their learning?

Method

2.1 Participants

The study was conducted at Beykent University in the second term of the Academic Year 2016-2017. All of the participants, 150 in total, were students attending a one-year English Foreign Language instruction at the School of Foreign Languages Preparatory Program. They were A1 level students who were placed according to the placement test results received by them at the beginning of the academic year. Most of them had to enroll in the preparatory school courses because it was a compulsory pre-requisite for their departments. Participants' age ranged was from 17 to 21 years.

The students of Preparatory Program have twenty-seven hours of English classes each week composed of a main course and skills courses that are listening and speaking, reading, and writing. A modular system that comprises of Breakthrough, Waystage, Threshold and Vantage levels is applied. Students are placed in the system according to their levels. And each module lasts for eight weeks. They have quizzes each week for the main course where they are assessed to monitor their progress. At the end of each module, they sit a final exam to pass the compulsory language program.

2.2 Data Collection Tools

By means of utilizing questionnaires used in existing studies in literature, data were gathered from the students. The original Turkish versions of the questionnaires were administered to the participants in case the students may misunderstand or cannot comprehend all of the statements in the questionnaires.

2.2.1 Questionnaire Concerning Anxiety

The questionnaire was originally developed by Kitano (2001), Schmidt et al (1996) and then translated into Turkish and used by Boyno (2011). In the questionnaire, there are 14 items scored on three-point scale with 1 meaning "Disagree", 2 means "Undecided", and 3 means "Agree". The questionnaire does not include any sub-headings yet 14 items investigating the statements of stress in learners and, gather specific information on the sources of foreign language anxiety from participants' perspective.

2.2.2 Questionnaire Concerning Motivation

The other questionnaire is a standard questionnaire developed by Kiss & Nikolov, 2005; Schmidt, Boraie & Kassabgy, 1996; Csizér & Dörnyei, 2005; Yashima, n.d.; Yashima, Zenuk-Nishide & Shimizu, 2004; and R. C. Gardner, 1985), translated into Turkish and used by Boyno (2011). It contains 34 Likert scale items scored on a 3-point scale. And it uses 2 different evaluation types. The items from 1 to 27 are evaluated in accordance with a three-point scale: 1 indicating disagree, 2 indicating undecided, and 3 indicating agree. The items from 28 to 34 were multiple-choice items. The items measured the dimension of motivation in the participant in terms of the instrumental or integrative motivation.

2.3 Data Collection Procedure

The permission from Beykent University and the Head of School of Foreign Languages was taken before the questionnaires were administered to the students. Also, the students were asked for approval to participate in the study and were informed about the nature and aim of the current study in order to create sincere and secure environment for them. Data were gathered at the beginning of the second term. The questionnaires were given to the students under the supervision of their instructors to conduct them in a reliable way.

2. Results

This part presented the analysis of the data obtained from the students who participated in the study. The figure was used to display and analyze the findings. The results were given in Table 1.

Table 1. *Correlation between Foreign Language Anxiety and Learner Motivation*

<i>Correlations</i>					
		Foreign Language Anxiety	Integrative	Instrumental	Motivation
Foreign Language Anxiety	Sig.		0, 004	0, 620	0, 037
	Pearson Correlation	-1	-0,232	-0,041	-0,170
	N	150	150	150	150

As seen in Table 1, the scores considering foreign language anxiety and motivation in learners are high. This can be explained by the fact that anxiety and motivation are significantly and negatively correlated in the findings. It is surprising to find that the only dimension of motivation having correlation with foreign language anxiety is integrative motivation ($r = -0.232$; $p < 0.05$). No statistically significant correlation between foreign language anxiety and instrumental ($r = -0.041$; $p > 0.05$), as well as motivation in general ($r = -0.170$; $p > 0.05$) was found. In addition, all correlations are negative.

Considering the results, it is possible to infer that anxiety hinders the learners from gaining positive perceptions towards learning English, thus the learners become demotivated and reluctant in learning setting. We can say that these findings prove the importance of the level of anxiety for a negative perception of learner autonomy.

3. Conclusion And Discussion

The purpose of this study was to find out the relationship between foreign language anxiety and motivation and to investigate the simultaneous effect of foreign language motivation and anxiety on students' learning. The findings reveal several significant facts about the correlation between foreign language anxiety and motivation in second language learning. The impact of anxiety on second language learning motivation without regarding other majors is undeniable, especially for non-English learners. The findings show that if the learners have some worries and anxious feelings about the target language, motivation is influenced negatively, and anxiety reduces the level of motivation in their learning process. As a result, they will probably gain a negative perception making them reluctant to take an active role in their own learning in the language learning process. It is possible to say that this negative perception hinders the learners to get involved in the classroom activities that are really effective to foster their receptive and productive skills in English. So, they tend to be remain quiet most of time when learning English due to the demotivating impacts of anxiety.

On the other hand, the level of integrative motivation in non-English majoring groups is remarkably high since most of the participants are willing to learn English for their own satisfaction and success. They put effort into gaining the abilities and practicing them properly in target activities. It is indicated that the learners participated in the study who are intrinsically motivated were able to overcome the difficulties of the impacts of anxiety they encountered in the learning process. This idea would be supported with an idea that intrinsically motivated learners have a moderate level of anxious feeling and also experience some problems in their English learning process because of anxiety. However, they have power to turn into the negative potential effects of anxiety into a pleasant and practical condition to be nurtured as intrinsically motivated learners to increase the control the emotions through their learning and performance in some way since they have a desire and ambition to achieve a goal to be successful. Thus, they can take control to reduce and overcome the challenges of anxiety appearing through the classroom activities by considering their wishes and goal. This type of learners is luckier to get rid of any problems about their learning thanks to their positive perception they have gained. In light of the findings, it can be thought

that the source of low language motivation could be a cause of anxiety. Other studies conducted (Clement, Dörnyei and Noels, 1994; Sidhu, 2012) are consistent with the findings of the present study in many ways. These studies also state that the higher the level of anxious feelings the learner has, the less the learner would have motivation for learning a new language.

It is not surprising to find out that the learners could not achieve to reach the desired level they wanted due to negative impacts of anxiety if they are extrinsically motivated to learn and acquire the skills of the target language. The environmental factors encourage them to take part in the learning process to get an award at the end of this process. If no an award or present, there is no need to make an effort to acquire any knowledge in target language.

Abstract

Communication behaviors, physical appearance, instructional skills of the instructor during teaching influence students' participation level and willingness of interaction with the instructor. It is claimed that positive evaluation of teaching attractiveness results in higher level of student participation and interaction motivation. Live instruction sessions require physical preparation of the instructor before the lessons. In addition, during live instruction, the instructor has to give great importance to his/her verbal and nonverbal communication behaviors. The aim of this study is to investigate the relationship between live session instructor's physical attractiveness, teaching attractiveness, and student motivation. The sample of this research was designed as relational research design. The sample includes 159 students who registered live broadcast courses at Sakarya University Faculty of Communication during December 2016. The students who participated in the research evaluated the lecturers who gave lectures on the live broadcast for the physical attractiveness and teaching attractiveness dimensions through a questionnaire. Participant students also answered questions about learning motivation through the same questionnaire. In the analysis of the data, correlational (Pearson) analysis and simple linear regression analysis were used to reveal the relationship and to predict a dependent variable based on predictive variables. The results show that there is a significant positive relationship between the instructor's physical attractiveness and student motivation level. Besides, the results revealed that there is a significant positive relation between teaching attractiveness and student motivation level. Moreover, linear regression analysis results illustrate that physical attractiveness predicts %39,7 of the student motivation level, and teaching attractiveness predicts %55,4 of the student motivation level.

Keywords: *Instructor attractiveness, online instruction, physical attractiveness, teaching attractiveness, student motivation.*

Introduction

The communication between the student and the instructor is a mutual interaction process based on verbal and non-verbal messages (Bekiari and Spyropoulou, 2016). Communication behaviors of the instructor during teaching influence students' participation level and willingness of interaction with the instructor. (Claus et al., 2012, 162). Non-verbal communication codes, such as the instructor's tone of voice, pace, eye contact, tense body and gestures and mimics may have an influential role on creating a positive atmosphere in the classroom (Hsu, 2006). Frymier and Houser (2000) have mentioned that the relationship between the instructor and the student can be improved related to the mutual communication skills of both sides. Understanding the communication behaviors of the instructor and the student not only helps the improvement of their mutual relationship but also gives an idea to the instructor about providing a quality learning environment (Weiss and Houser, 2007). Especially, the instructor's closeness, reliability, the ability of a sense of humor and physical attractiveness have a positive influence on students' participation in the class (Claus et al., 2012:162). This also helps students arrange their responsibilities towards the instructor so has a direct influence on the learning process (Westfall, Millar and Walsh, 2016:162). Interpersonal attractiveness is thought to be a distinctive factor for the improvement and the continuity of the relationships in social environments (Bekiari and Spyropoulou, 2016). At this point, interpersonal attractiveness shows the communication quality between the recipient and the sender (Curnalia, 2016). Individuals' sense of resemblance, past experiences, values, and beliefs influence the perception of attractiveness. For example, people may come across people who have similar behaviors with them. That's why they see them as attractive and have positive feelings towards them (Batoll and Malik, 2010). McCroskey and McCain (1974) take the interpersonal attractiveness into consideration in terms of three dimensions as physical, social and duty. Physical attractiveness includes being good-looking, having sexual attraction and being beautiful/handsome. The individual's face, weight, physical characteristics, being athletic should be evaluated in terms of physical attraction dimension (Curnalia, 2016). In his study, Westfall (2015, 9) has investigated the influence of the instructor's physical attractiveness on his/her instructional skills and has determined that students graded the physically attractive instructors as more skillful and more motivating. Similarly, in their research, Bokek-Cohen and Davidowitz (2008)

have determined the important influence of the instructor's physical attractiveness that was graded in the instructors' evaluation questionnaires of the students. Ünal-Çolak and Kobak (2011) have mentioned the positive relation between the instructor's physical attractiveness and student motivation. Myers and Huebner (2011) have determined that interpersonal attractiveness of instructors is a positive motivation for students who want to communicate with them. In addition to this, the instructional attractiveness of the instructor should also be questioned.

The student is getting ready for motivation to communicate with the instructor by testing the variables which are influential on their communication behaviors (Weiss and Houser, 2007:216). The instructor should have alternatives/alterations during the teaching process. The instructor's intelligence, his/her knowledge of the lesson content, his/her pedagogical knowledge, communication competence and general experience are all important during the teaching process. All these factors also influence the verbal and non-verbal communication behaviors of the instructor during the teaching process (McCroskey, Valencic and Richmond, 2004). An effective education requires positive instructional behaviors of the instructor such as closeness, clearness, and temperament and this is more influential on learning (Goodboy and Myers, 2008:154).

Student motivation is about the participation willingness of the student during the learning process. The instructor's advisor role, information source role, teaching role and technical role are among the factors that influence the student motivation (Vatansever Bayraktar, 2015). An instructor should be well-organised for the lesson, should emphasize the importance of the academic success, should be sure that students get what is taught in the lesson, should involve all students into the learning activities, should be knowledgeable about what s/he is teaching, should have presentation skills, should give sufficient feedback to the students in order to understand what they have learnt and what they have not, and should strengthen students' positive behaviours. Moreover, an instructor should choose different methods by considering the learning environment and should realize the education with visual-audial equipment (Vatansever -Bayraktar, 2015 cited from Balci, 1993; Ünal and Ada, 2003).

Sakarya University provides some live instruction sessions within the scope of SaüTv. Different university students have the chance of having these lessons via Massive Open Online Courses (MOOCs) and they can watch videos of these lessons whenever and wherever they want. With the MOOCs Project that has been brought out as a new modal in digital education, students who study at Sakarya University can register at "<http://saux.sakarya.edu.tr>" address, and they can have lessons in different fields. Aiming to realize effective communication, these lessons could also be from different faculties of the university. During the 2016-2017 fall semester, four live instruction sessions were carried out by instructors with different titles within the scope of Sakarya University, Faculty of Communications. One of these lessons was carried on as an object lesson. Live instruction sessions are lessons for which instructors get ready physically beforehand and for which they should be careful about their verbal and non-verbal communication behaviors. At this point, the instructor should have a brief preparation just before the live session. The flow of the course is live on the web and it is given as an in-class lesson. The live course is also supported with extra education materials when needed. What is more, the instructor is ready at the location where the live session takes place. In these lessons, in which synchronous education is adopted, there is also an interaction between the instructor and the student with questions and answers. Demographical characteristics of the instructor are as the following; 1 Male and 3 Females in terms of sex variable, 1 Professor Doctor, 1 Associate Professor and 2 Assistant Professors in terms of title variable.

Objective

The aim of this study is to investigate the relationship between the important role of instructor's physical attractiveness, teaching attractiveness, and student motivation in a live session course environment. For the purposes of the study, following questions are answered.

1. Is there a relationship between the physical attractiveness of the live session instructor and student motivation level?
2. Is there a relationship between the teaching attractiveness of the live session instructor and student motivation level?
3. Is the physical attractiveness of the live session instructor a predictor for the student motivation level?
4. Is the teaching attractiveness of the live session instructor a predictor for the student motivation level?

Problem Statement

Massive Open Online Courses have been increasing day by day. When compared to face to face education, more care and attention should be given for these courses as they are able to be far-reaching and they make it possible for students to access the content of the courses when and where they want. The instructor-student relationship is influenced by different variables in instruction communication. Besides the physical appearance and behaviors of the instructor, his/her verbal and non-verbal behaviors during the session could also be a determinant of this relationship. Live instruction sessions are lessons for which instructors get ready physically beforehand and for which they should be careful about their verbal and non-verbal communication behaviors. This situation may

change the students' perception for the instruction and the lesson. Moreover, it may alter students' interest in the lesson, their desire to learn and motivation. Though the relationship between the interpersonal attractiveness, especially the physical attractiveness, of the instructor and the student motivation was investigated in prior research, there has been no study about the evaluation of the physical and teaching attractiveness in terms of the live session courses and their influence on students' motivation. In addition, live session instructors experience a self-evaluation process. For this reason, different from the traditional lessons, the relationship between how instructors are evaluated by students and how their evaluations influence their learning motivation in live sessions should be questioned. In this study, the physical and teaching attractiveness of the instructor in live broadcasting sessions has been investigated.

Method

This study was designed as a descriptive survey model. Descriptive survey models aim to describe a situation in the past or now as it is (Karasar, 2004, 77). As for the purposes of the study, descriptive survey model was chosen to describe the relationship between the motivation level of the students during the live sessions and physical and teaching attractiveness of the instructor as it is.

Sample

In this study, a random sampling method was used. The study sample consists of 159 students studying at the Communication Faculty of Sakarya University. Students in the study are all obliged to take different lessons from four different instructors. Since there are no instructors who teach lessons in the same class, they have been evaluated by different students in live sessions who have been ready during the shot of the lessons. %78 of these students are female, %78 of them are males and %3 of them did not mention their sex. The age range of the participants is between 17 and 28, but the majority of them is (%76) between 18 and 21.

Data Collection

In the study, a questionnaire form has been used to collect the data. The form has been delivered to the students just before the live session and they have been asked to evaluate the related lesson and the instructor. Questions about the physical attractiveness dimension in the questionnaire form have been taken from the scale that was developed by McCroskey and McCain (1974). On the other hand, questions about the instructional attractiveness and motivation in the questionnaire form have been taken from the scale that was developed by Ellis (2000). Following the experts' approval for the first draft of the questionnaire, the revising process started. Finally, the questionnaire has consisted of 7 questions for physical attractiveness, 13 questions for teaching attractiveness and 8 questions for motivation level. The questionnaire items have been presented to the participants as a 5-point Likert-type scale with intervals of 1 Strongly Disagree to 5 Strongly Agree. Participants have responded to the items face-to-face.

Internal consistency reliability of the new questionnaire form has been determined as high as .956. Cronbach's Alpha values of sub-categories have been calculated as .860 for physical attractiveness, .896 for teaching attractiveness, and .875 for student motivation. These results illustrated that each categories' internal consistency reliability is over .40, hence internal consistency reliability is high.

Data Analysis

Data of the questionnaire of this study have been analyzed with SPSS 15.0 Windows version. First of all, the data set has been examined for possible data errors or data deficient. After being sure about the correct data input, unanswered questions by participants for any reasons have been examined. As a result of this examination, most of the items have been determined to be answered, less than %5 for unanswered ones. The result supports the impression that the participants did not experience any difficulty to comprehend the items.

In the study, correlational (Pearson) analysis and simple linear regression analysis were used to reveal the relationship between variables and to predict dependent variable based on predictive variables.

Findings

Mean Value for the Physical Attractiveness, Teaching attractiveness and Motivation

The mean value of the participants' responses to the questions instructor's physical attractiveness, teaching attractiveness and motivation is seen in Table 1.

Table 1: Mean Value for the Physical Attractiveness, Teaching Attractiveness, and Motivation

	N	Mean
Physical attractiveness		
S/he is very beautiful/handsome	159	3,38
S/he cares her/his personal cleaning	158	4,04

S/he is physically attractive	159	3,26
Her/his tone of voice and stress take my attention	158	3,63
S/he speaks Turkish fluently	158	4,02
Her/his clothes suit her/him well	159	3,84
S/he cares her/his clothing	159	4,04
Teaching attractiveness		
S/he is respectful to class hours	158	3,73
S/he is proficient in her/his subject	159	4,19
S/he is fair when giving word to students	158	4,20
I rely on her/his knowledge about the course	159	4,19
S/he helps me correct my mistakes.	159	3,82
S/he manages time well.	159	3,94
I have freedom of speech during her/his course	158	3,94
S/he keeps eye contact during the lesson	159	4,01
S/he never moves to a new subject before the previous one is comprehended	159	3,69
S/he uses visual materials during the course	159	4,15
Her/his answers to my questions satisfy me	159	3,87
S/he is always well-prepared for the course	159	4,13
I know her/his evaluation criteria	158	3,65
Motivation		
I can transfer theoretical information I get during the course in my daily life	159	3,55
I think this course is important	157	3,75
The course meets my expectations	158	3,55
S/he manages class discussions successfully	159	3,72
The presentation of the course and the content attract my attention	159	3,62
The content of the course meets my expectations and needs	158	3,57
The content of the course encourages me to think in different areas	159	3,61
I am appreciated when I am successful in the course	158	3,39

5 point Likert-type scale items are formulated as 4/5=0.80 and evaluated as between 1 and 1.80 “I strongly do not agree”, between 1.81 and 2.60 “I do not agree”, between 2.61 and 3.40 “I am not sure”, between 3.41 and 4.20 I agree, 4.21 and over is “I strongly agree”. When mean values are analyzed, it is seen that students did not choose the “I do not agree” option for any of the scale items except for the item 1 and 3 in physical attractiveness category (1. S/he is very beautiful/handsome. 3. S/he is physically attractive. On the other hand, it is seen that students did not choose “I strongly agree” option for any of the scale items.

Relationship between Physical Attractiveness and Student Motivation

In the study correlation analysis (Pearson) is used to reveal the strength of relationship between physical attractiveness and motivation.

Table 2. Relationship between Physical Attractiveness and Student Motivation Value

		Physical attractiveness	Motivation	
Physical attractiveness	Pearson Correlation	1	,630**	The
	Sig. (2-tailed)		,000	
	N	159	159	
Motivation	Pearson Correlation	,630**	1	The
	Sig. (2-tailed)	,000		
	N	159	159	

** . Correlation is significant at the 0.01 level (2-tailed).

findings show that there is a significant positive ($r = .630$) relationship between instructor's physical attractiveness and student motivation at the level 0.01. Namely, when the level of physical attractiveness value increases, student motivation level increases, too.

The Relationship between Teaching Attractiveness and Motivation Level

In the study correlation analysis (Pearson) is conducted to reveal the strength of relationship between teaching attractiveness and motivation level.

Table 3. The Relationship between Teaching Attractiveness and Motivation Level

	Teaching attractiveness	Motivation
Teaching attractiveness	Pearson Correlation	1
	Sig. (2-tailed)	,744**
	N	159
Motivation	Pearson Correlation	,744**
	Sig. (2-tailed)	,000
	N	159

** . Correlation is significant at the 0.01 level (2-tailed).

The findings illustrate that there is a significant positive ($r = .744$) relationship between instructor's teaching attractiveness and student motivation at the level 0.01. In other words, when the level of teaching attractiveness increases, student motivation level increases, too.

The Predictability of Student Motivation Based on Instructor's Physical Attractiveness

A simple linear regression analysis is calculated to predict dependent variable based on predictive variable. (Gürbüz and Şahin, 2014, 260). In this study, linear regression analysis was conducted to predict student motivation based on instructor's physical attractiveness.

Table 4. The Predictability of Student Motivation Based on Instructor's Physical Attractiveness

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	,630a	,397	,393	,66926

a. Predictors: (Constant), physical attractiveness

b. Dependent Variable: motivation

A significant regression equation is found ($F(1,157) = 103,456$, $p < .000$), with an R^2 of .397. Linear regression analysis illustrates that physical attractiveness predicts %39,7 of the student motivation level.

Table 5. ANOVA

ANOVA						
Model		Sum of Squares	df	Mean Square	F	Sig.
1	Regression	46,338	1	46,338	103,456	,000b
	Residual	70,321	157	,448		
	Total	116,659	158			

a. Dependent Variable: motivation

b. Predictors: (Constant), physical attractiveness

The Predictability of Student Motivation Based on Teaching Attractiveness

In this study, linear regression analysis was conducted to predict student motivation based on teaching attractiveness.

Table 6. The Predictability of Student Motivation Based on Teaching Attractiveness

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	,744a	,554	,551	,57589

a. Predictors: (Constant), öğretim çekiciliği

b. Dependent Variable: motivasyon

A significant regression equation is found ($F(1,157) = 194,758$, $p < .000$), with an R^2 of .554. Linear regression analysis illustrates that teaching attractiveness predicts %55,4 of the student motivation level.

Table 7. ANOVA

ANOVA						
-------	--	--	--	--	--	--

Model	Sum of Squares	df	Mean Square	F	Sig.
1 Regression	64,591	1	64,591	194,758	,000b
Residual	52,068	157	,332		
Total	116,659	158			

a. Dependent Variable: motivation

b. Predictors: (Constant), teaching attractiveness

Results And Discussions

Communication between an instructor and students is an interactive process includes verbal and non-verbal messages. (Bekiari ve Spyropoulou, 2016). The instructor's communication abilities have a direct effect on student enthusiasm for participation and interaction (Claus et al., 2012, 162).

As a part of interpersonal communication, attractiveness is a vital element to sustain relationships (Bekiari and Spyropoulou, 2016). From this perspective, attractiveness increases the effectiveness of communication between the sender and the receiver. (Curnalia, 2016).

According to McCroskey and McCain (1974) attractiveness can be categorized into three as physical, social and professional. Physical attractiveness is related with good looking, being sexy, being beautiful/handsome. Westfall (2015, 9) claims that instructors physical attractiveness change students' perception about their instructor. His study revealed that students perceive their instructor as more talented and encouraging when they find him/her more attractive.

On the other hand, the instructor's intelligence, proficiency, pedagogical knowledge, and experience are also determinant on student motivation level. (McCroskey, Valencic ve Richmond, 2004). Further, effective education requires sincerity, clarity, and humor of the instructor (Goodboy ve Myers, 2008, 154).

Other studies on student motivation highlight that student motivation is closely related with instructors teaching approach and methods, management skills and guidance abilities. (Vatansever Bayraktar, 2015). Organized, success oriented and presentable instructors raise the level of student motivation (cited in Vatansever -Bayraktar, 2015 from Balcı, 1993; Ünal ve Ada, 2003).

Sakarya University provides some live online lessons via SaüTv. These lessons, which are designed as Massive Online Open Courses can be taken by other university students and can be, followed anytime anywhere. In Communication Faculty four different courses are provided online by four different instructors. The flow of the lessons are similar to traditional in-class lessons, and when necessary supplementary materials are used. During these sessions, there is the possibility of instructor-student interaction since these lessons are broadcasted in a real class setting. Live session instruction requires preparation of the instructor both physically and instructional. In relation to this context, the aim of this study is to investigate the relationship between live session instructor's physical attractiveness, instructional attractiveness, and student motivation.

In this study, simple random sampling is used and 159 Communication Faculty students studying at Sakarya University participated in the research. Participants answered a survey investigating instructor physical attractiveness, instructional attractiveness, and student motivation. All surveys were conducted face to face. To reveal the relationship between physical attractiveness and student motivation, instructional attractiveness, and student motivation correlation (Perason) analysis was used. Following, a linear regression analysis was conducted to uncover whether physical attractiveness and instructional attractiveness predicts student motivation.

Results showed that there is a significant positive relationship between the instructor's physical attractiveness and student motivation. Besides, the results revealed that there is a significant positive relation between instructional attractiveness and student motivation. Moreover, linear regression analysis results illustrate that physical attractiveness predicts %39,7 of the student motivation level and instructional motivation predicts %55,4 of the student motivation level.

The results of this study are similar to prior studies that investigate the same questions for traditional teaching. However, there is still a limited research investigating the effect of physical and instructional attractiveness on student motivation during live sessions. Further research may question the factors that affect student motivation not in a classroom setting during a live broadcast, but while watching these lessons outside the classroom.

Abstract

The purpose of this research, pre-competition handball team in Turkey to investigate the psychological performance status and psychological well being. The researcher's universe consisted of 400 athletes, 168 women and 232 men, aged between 18 and 30, on 22 provinces, including 8 super league, 8 1st place, 3 2nd place, 3 regional league from 6 geographical regions.

As means of data collection in the survey; Psychological well-being scale, psychological performance scale and personal information form were used. Statistical analyzes were performed with the SPSS 20.0 package program on personal information form, psychological well-being scale and psychological performance scale. The personal information and inventory total scores and factor scores for the candidates were determined by determining frequency (f) and percentage (%) values. Pearson Moments Correlation Analysis (r) analysis was applied to reveal the relationship between the scores obtained from the scales. (B)

When the relationships between subscales of psychological well-being and psychological performance sub-dimensions are examined, self-confidence, attention control and attitude control between autonomy and self-confidence and visualization and imagination, between environmental domination and self-confidence, attention control and motivation level, between individual development and self-confidence, visualization and imagination, motivation level, positive energy and attitude control positive relationships between positive self-acceptance and positive energy were found.

As a result; the psychological well-being and psychological well-being of the athletes will be determined, the factors that will affect the performances of the athletes will be removed, and their performance will be influenced to the upper levels in the positive direction.

Keywords: *Psychological good, Psychological performance, Handball, Athlete*

Introduction

It is strengthening the psychological endurance of the individual to exhibit a strong appearance in the face of difficult living conditions and to be able to flip the difficult situations (Kararmak, Siviş Çetinkaya, 2011, pp. 30-43). The need for a detailed investigation of the concept of psychological well-being has emerged as people need to have a strong psychologically strong structure in their struggle against adverse situations (Önder, Gülay, 2008, p.192-197).

Psychological wellness involves the quality of one's relationship with other people. It shows whether the person is conscious of their life purpose and whether they are aware of their potential (Ryff, Keyes, 1995, p.719 - 727). In addition, we see that psychological well-being is defined as a concept that both materially and spiritually means that a person has a comfortable life and has the necessary qualities for it. The concept of psychological well-being reflects the concept of self-positive perception, the establishment of safe and warm relationships with other people around it, independent and autonomous decisions, the shaping of the environment to fulfill personal needs and desires, and the purpose and meaning of the life (Baysoy, 2014).

Ryff and Keyes (2002, p.161-180) are concerned about the psychological well-being, the individual's awareness of the aims of life, the formation of relationships among qualified people, the recognition of positive self, the acceptance of limitations and self- (Keyes, Shmotkin, Ryff, 2002, p.1007-1022), which is characterized by the ability to respond in a manner that is self-sustaining and entrepreneurial, aware of its capabilities and evolving.

In today's sport, excellence in physical fitness is not considered alone enough to bring sporting performance to the top. The athlete also has a psychological capacity and is at least as important as the physical direction. It is for this reason that the athletes experiencing changes in the emotional direction are unable to catch the expected success despite being physically ready (Tavacıoğlu, 1999). Besides the physiological and physiological capacities of many

top athletes; they are also thought to have excellent skills in psychological capacities such as motivation, managing their concerns, concentrating and determining goals (Koç, 2004).

Ramirez; psychological wellbeing, ability to heal quickly from disease, depression, alterations, or worse situations; to be able to recover itself, to be able to easily return to the old one after it has been torn; elasticity. This concept is defined as a talent, a psychological quality and contributes to the continuation of healthy development and also has some features such as being able to cope with such situations when encountering negative situations. (Masten, 1994, p. 3-25).

Individuals with a high level of psychological well-being are more attached to daily activities and jobs, keep their lives under control, and view unexpected changes as opportunities for improvement. Persons can easily determine what they want to do in their lives, believe that they can prevent problems from emerging, and have the power to be better than the past when correcting the present situation (Florian, Mikulincer, Toubman, 1995, p.687-695). In individuals with low levels of resistance, resistance to distance, external control and change is seen (Klag, Bradley, 2004, p.137-161).

When we consider the above information as a whole, it is seen that concepts of psychological well-being and psychological performance can be effective in different dimensions and levels in different areas of life. When the literature is examined, studies on psychological well-being and psychological performance are often integrated separately or in other contexts (Masten, Reed, 2002, p.74-88, Connor, Davidson, 2003, p.76-82, Noorafshan, Jowkarb, Hosseini, 2013, p.900-904, Sagone, Caroli, 2013, p.838-845, Gürkan, 2006, Bahadır, 2009, Güloğlu, Kararmak, 2010, Sezgin, 2012, s.489-502, Kirimoglu, Filazoğlu 2003, pp. 822-848, Falkenström, 2010, p.305-310, Schmutte, Ryff, 1997, pp.115-127, Ozen, 2010, pp. 46-58, Brown, Ryan, p.549-559, Sarıcaoğlu, 2011, Jeweler, 2012, p.1-24, Eksioğlu, 2011). However, no studies have been found on the psychological well-being and psychological performance levels in sports science. From this point; it is thought that this study made possible that this shortcoming in the field of sports science could lead to a different perspective on the field. The general aim of working in this context is to examine the psychological well-being and psychological performance of handball players before competition.

Material And Method

Methods

Studying Group

This research is in the relational screening model. This screening model can be defined as "... research models aimed at determining the presence and / or degree of exchange between two and more variables" (Karasar, 2015, pp.49-53).

Research; the descriptive qualities of handball players are due to the fact that the power to predict the psychological performances of their psychological well being and the demographic characteristics of the candidates are determined in the context of their relationship.

Data Collection Tools

Data collection tools used in research; Psychological well-being scale, psychological performance scale and socio-demographic information form were applied.

Creation of Voluntary Groups

Turkey Handball Federation of study within the Super League, Div 1, 2 League and regional ligte we played handball handball players from the 681 randomly method selected 400 athletes participated.

Table 1. Socio-Demographic Characteristics of the Participants

	Değişkenler	N	%
Gender	Male	235	58,8
	Female	165	41,2
Age	18-21	213	53,3
	22-25	92	23,0
	26-30	67	16,8
	31 and above	28	7,0
Age of Sport	1-5	58	14,5
	6-10	208	52,0
	11 and above	134	33,5
Position	Goalkeeper	55	13,8
	Right Playmarker	52	13,0

	Left Playmarker	62	15,5
	Middle Playmarker	48	12,0
	Right Wings	67	16,8
	Left Wings	51	12,8
	Pivot	65	16,3
League	Super League	139	34,8
	1. League	158	39,5
	2. League	69	17,3
	Regional League	34	8,5

Socio-Demographic Information Form

The socio demographic information form contains 5 questions in order to obtain participants' age, gender, sport age, position and league level information.

Psychological Well-Being Scale

Ryff (1989, pp. 35-55); autonomy, environmental dominance, individual development, positive relationships with others, life goals and self-acceptance. The scale consists of 84 items. Each sub-dimension has 14 items. This is a self-report measure measuring the characteristics of the psychological well-being and giving information about the individual. (1) I do not agree at all, (2) I do not agree a little, (3) I do not agree very little, (4) I do not agree very much, (5) I agree a little and (6) about half of the substances in a subscale are reverse coded. The adaptation of the scale to the Turkish language was done by Cenkseven (Cenkseven, 2004). Reliability studies were conducted on 475 university students. Correlations of 84 items with the total score from the Psychological Well-Being Scale. 25 to 57. When we look at the correlations of the total score of each item with the total score, the values are 42-70 for positive relations with others, .38-.60 for autonomy, .32-.63 for environmental dominance, .38-.61 for individual development, and between .37 and .63 for self-acceptance. Internal consistency coefficients (Cronbach Alpha) of the scale were found to be .83, .73, .76, .76, .76, .76, and .79, respectively. The overall internal consistency coefficient of the Psychological Well-Being Scale was .93. The correlation coefficients for test retest reliability were found to be .74, .77 for autonomy, .77 for environmental dominance, .74 for individual development, .75 for life purpose and .76 for self-acceptance. It was also determined that the test-retest correlation coefficient for the total score was .84.

Psychological Durability Scale

Loehr J.E. Psychological Performance Inventory (PPI), developed by the American Psychological Association, was used (Loehr, 1986) to produce the profile of the athlete's mental skills. 5-Likert-type closed-end scale question type answer inventory options; "Always", "often", "sometimes", "rarely" and "never". (Loehr, 1986). Studies on adaptation of PPE to Turkish have been made. The internal consistency coefficient for the Turkish version of the scale was 0.70, 0.63 for negative, 0.43 for attention control, 0.53 for visualization and imaging control, 0.62 for motivation level, 0.53 for positive control and 0.65 for attitude control ($p < 0,01$) (The Whoqol Group, 1996, pp. 354-356).

Analysis of data

The data obtained from the Personal Information Form, Psychological Resilience and Psychological Well-being scale were coded and entered into the SPSS 20.0 package program and the analyzes were made through this program. The personal information and inventory total scores and factor scores for the candidates were determined by determining frequency (f) and percentage (%) values. Pearson Moments Multiplication Correlation analysis (r) was applied to reveal the relationship between scores obtained from the scales. (B)

Findings

Table 2. Descriptive statistics of the players' responses to the questionnaire

	N	Minimum	Maximum	X \pm SD
Autonomy	400	29.00	65.00	49.98 \pm 5.96
Environmental Dominance	400	36.00	69.00	52.44 \pm 5.89
Individual Development	400	34.00	69.00	48.22 \pm 5.82
Positive Relations with Others	400	35.00	68.00	50.85 \pm 5.92

Life Goals	400	28.00	65.00	47.06±6.52
Self-acceptance	400	32.00	65.00	49.29±6.19
Self-Efficacy	400	10.00	30.00	22.32±4.50
Negative Energy	400	9.00	27.00	18.13±3.51
Attention control	400	8.00	28.00	18.24±3.90
Visualization and Imaging	400	8.00	30.00	21.40±4.64
Motivation Level	400	9.00	30.00	21.40±4.30
Positive Energy	400	9.00	30.00	21.17±3.59
Attitude Control	400	9.00	30.00	21.58±4.35

As seen in Table 2; the averages of the self-efficacy subscale of the athletes were 49,98, the average of the environmental dominance score was 52,44, the average of the individual development score was 48,22, the average of the positive relation scores was 50,85, the mean of the life purpose score was 47 , Mean scores of self-acceptance score of 49,29, mean scores of psychological well-being total score of 297,84, scores of psychological performance subscale scores of self-confidence score 22,32, negative scores of energy score 18,13, 21,40 for the visualization and imaging score, 21,40 for the motivation level score, 21,17 for the positive energy score, 21,58 for the attitude control score, and 144 for the psychological performance total score, 144, 22.

Table 3. Correlation Coefficients between the Players' Psychological Well Being and Psychological Performance (n=400)

	1	2	3	4	5	6	7	8	9	10	11	12	13
Autonomy¹	r p N	1 250

When Table 3 was examined, it was found that psychological well-being subscales had a low level of positive relationship between self-efficacy and psychological performance subscales ($r = .116$, $p = .020$) and visualization and imagery scores ($r = .106$, $p = .035$).

Self-efficacy scores ($r = .065$, $p = .032$), Attention Control score ($r = .116$, $p = .020$) and Motivation Level score ($r = .109$, $p = .029$), there were significant low levels of positive relationships. Self-efficacy score ($r = .143$, $p = .004$), visualization and imagery score ($r = .151$, $p = .002$) and motivation level score ($r = .174$, $p = .000$), Positive Energy score ($r = .137$, $p = .006$) and Attitude Control score ($r = .149$, $p = .003$) were found to be significantly low on the positive side.

Positive Relationships with Others from Psychological Well-being sub-dimensions and Positive Energy and Attitude Control scores from Psychological performance sub-dimensions did not find any significant relationship with the scores of Self-confidence, Positive Energy, Attention Control, Visualization and Visualization, Motivation Level. Self-efficacy score ($r = .194$, $p = .000$), Attention Control score ($r = .106$, $p = .035$) and Attitude Control score ($r = .149$, $p = .003$) were found to be significantly low on the positive side. Positive energy scores ($r = .108$, $p = .030$) were found to have a significant positive relationship with the psychological well-being subscales of Self-acceptance and psychological performance subscales.

Discussion And Result

The lowest score that can be taken from the psychological wellbeing scale used in this study is 84 and the highest score is 504. The increase in total score shows that psychological well-being increases. (Ryff, 1989, pp. 35-55). When Table 2 was examined, it was determined that the total score of the athletes' psychological well-being scale was moderate according to the scale average scores. On the psychological performance scale, it was found that each area requires special attention between 6-19 points, it needs to be developed between 20-25 points and has a very good skill level between 26-30 points (Loehr, 1986, p.157-160, Sucan 2012). When Table 2 was examined, it was determined that the total scores of the athletes on the psychological performance scale were moderate according to the scale average scores. It is thought that the athletes' psychological well-being and their psychological performance increase before the competition will be more motivated for the competition, they will trust themselves, concentrate more on the competition, determine their goals and objectives, and raise their competition concerns over them.

When the relationships between subscales of psychological well-being scale and psychological performance sub-dimensions are examined in Table 3, self-confidence, attention control and attitude control between self-confidence and self-confidence and visualization and imagination, between environmental domination and self-confidence, attention control and motivation level, between individual development and self-confidence, visualization and imagination, motivation level, positive energy and attitude control positive relationships between positive self-acceptance and positive energy were found.

People are known to be one of the important factors in their interaction with other people outside of themselves. Sport allows a person or team to interact with others, to be influenced or influenced by them. It is thought that individuals can learn to control their negative emotions such as anxiety, fear, aggression, unhappiness and violence while having the opportunity to express their emotions more easily through games and movements. The better one knows himself and his limits, the easier it will be to reach those limits, the more convenient and more equipped.

The psychologist's good state of being, his self-confidence before and after the competition, his positive and negative energy levels according to the changing conditions, his motivation and attitude towards the achievement of positive motivation and attitude It is thought to be influential in the direction.

Ryff and Singer (Ryff, Singer, 2003, p. 15-36) argue that enduring individuals are often better off physically and psychologically than stressful situations. Fredrickson (2001, p.218-226) also states that there is effective evidence that durability is the developmental effect of being psychologically good. The study of university students by Pidgeon and Keyes (2014, p.27-32) concluded that there is a positive and positive relationship between the two concepts. Malkoç and Yalçın (2015, p. 35-43) conducted psychological research on university students; psychological endurance has been achieved.

As a result, it is suggested that people with psychological endurance tend to be good psychologically. Therefore, it is considered that the psychological wellbeing and psychological well-being of the athletes will be determined, the factors that affect the performances of the athletes will be removed and the performance will be increased to the upper levels in the positive direction.

Abstract

The main purpose of this study was to reveal the extent to which the role of gatekeepers in traditional mass media is realized in agenda-setting in social media. In this context, this study focused on Twitter, the most common microblogging service classified under social media, examining the role of gatekeepers in agenda-setting on the Twitter accounts of major newspapers in Turkey. The Twitter accounts of three major national newspapers in Turkey were used as the research sample. The results revealed that all three Turkish newspapers followed their own agendas to a high degree, and those agendas demonstrated continuity. Namely, the newspapers continuously reported on certain issues on Twitter, which led to continuity within the own agenda of each newspaper. One of the most important roles gatekeepers play in the media in terms of agenda-setting is that of focusing on the same issues and report the same items in foreign and political news, as well as in sensational tabloid press news for creating a dramatic effect (Erdoğan and Alemdar, 2002: 215). It was observed that in the Twitter accounts of the newspapers in Turkey, the role of gatekeepers in agenda-setting mainly occurred within this context.

Keywords: Gatekeepers, Agenda-Setting, Social Media, Twitter, Turkey

Introduction

Gate-keeping, a term suggested by German-American psycho-sociologist Kurt Lewin with respect to the field of communication, was historically applied as a tool in traditional mass communication (Narmanlioğlu, 2016: 157).

As is known, not all news materials that are acquired by communications outlets can be turned into news; therefore, they do not all reach the community. Rather, gatekeepers inspect and make selections from the materials they have acquired and determine which to re-edit and present it to the public (Tekinalp and Uzun, 2009: 94). Thus, the term gatekeeper or door holder is used to refer to those individuals who handle the messages that are distributed to receivers through a mass communication outlet (Tekinalp and Uzun, 2009: 93). In other words, gatekeeping involves the process of taking control of the coding of messages or message components by selecting the information to be disseminated and making choices about a message's display, presentation, timing, storing and repetition (Donohue et al., 1972: 53).

Gatekeepers can refer to individuals or groups of people through whom a message passes as it proceeds from the sender to the receiver; the main purpose of the gatekeeper is to filter the messages that are sent. In this sense, while a gatekeeper may allow some messages to go through, they may also stop others from being distributed. For instance, an editor may decide to include one issue and to withhold another (Tekinalp and Uzun, 2009: 94). Weaver et al. (1975: 460) contend that gatekeepers always decide what is to be news and what is not, but that the news that is to be made public is not always evaluated justly. For instance, as they explain, in traditional newspapers, some items may be handled extensively, while others can be cut short; some stories may make the headlines, while others are left to a corner of the page. In this manner, newspapers reveal the importance they place on a story by the size of the headline and the arrangement of the page (Terkan, 2005: 71). Likewise, cases where some of the truth is included in the news, while some is left out; or where stories are edited to hide the facts of a political, economic or cultural interests issue, are also included as actions related to gatekeeping. Moreover, according to Narmanlioğlu (2016: 156), covering the main news stories in detail or leaving being covered with details or leaving certain events out altogether also comprises gatekeeping activities.

Even if the term gatekeeper is mostly based on news media's own economy politics, publisher's rules made in this line -general publication policy- other dynamics that affect this process are also mentioned. For instance, the personalities of those that make the news materials are also an important filter (Narmanlioğlu, 2016: 158).

Gatekeeping takes place in the important tasks that shape the agenda in media routines (Terkan, 2005: 69-70). As such, McCombs and Shaw (1972: 176) asserted that editors and publishers, through their choices, have an important impact on shaping the political reality. Because of this, the term gatekeeping is closely associated with agenda; by choosing the most important stories to disseminate, editors affect the public view according to their agenda (Carter, 1998: 392, as cited in Narmanlıoğlu, 2016: 157). According to Mcquail and Windhal (1993: 145), gatekeepers are the primary managers of the agenda of the organizations they work for, and as such, they contribute to defining the public agenda (Yaylagül, 2006: 73). Yüksel (1994: 109) likewise states that gatekeepers have significant influence on defining the agenda, a function that is considered as an extension of gatekeeping (İnceoğlu, 2000: 158, as cited in Terkan, 2005: 70-71).

Also, according to Erdoğan and Alemdar (2002: 212), with respect to agenda-setting, a given issue may or may not be repeated in the media in consideration of their importance in media. Mass communication outlets monitor information about agenda-setting; and in fact, agenda-setting and gatekeepers (also known as door holders) are equivalent in terms of the tasks they entail. In the process of agenda-setting, news and information pass through various gatekeepers before they are released for audience/reader use (e.g., for publication). For example, wire services such as the AP, AA and Reuters are important determinants or gatekeepers of a news agenda; the news items they emphasize are typically adopted by local mass media. Thus, gatekeepers' decisions about the selection, design, manifestation, timing, restriction, lack of delivery, and repeating or not repeating are important aspects of information supervision. In this sense, Erdoğan and Alemdar (2002: 214-215) summarize some important findings about the important roles of gatekeepers in agenda-setting in the media:

1. Gatekeepers act without thinking about their audience when making a decision about information bearing news content. Gatekeepers' decisions are more linked to what publishers or editors think than what the audience is interested in.
2. Wire services influence editors-in-chief.
3. In foreign news; politic news; sensational news that is reported to create a dramatic effect; and tabloid thematic news, gatekeepers dwell on the same issues and deliver same news. In this context, generally, there are rarely any news items delivered by one of these that are not delivered by the others.
4. Most news sources utilized by gatekeepers are official. News items are obtained from reporters' own efforts (interviews and research), from semi-official sources (confidential, other non-governmental organizations and institutions) and from the reporting of other news media.

When the media focuses on a particular issue, it has a tendency sustain the news related to that issue. As such, there are generally no other issues in an agenda when it is focused on a specific issue. Incidents may only enter a media agenda after they have reached a certain point in terms of politics and quality, after they have been viewed one by one. In short, the media keeps bringing forward the same issues in order to keep them on the agenda, thus increasing the interest of the public in the news (Retrieved July 13, 2016, from: http://hbgm.meb.gov.tr/modulerprogramlar/kursprogramlari/gazetecilik/moduller/gundem_organizasyonu.pdf).

Considering that nowadays news reporting has expanded to various forms of social media, it appears that gatekeepers have filtered into the realm of social media, as well. As with the traditional news media, the filter of the publisher also affects the information disseminated on the internet. However, the ease of use and the diversity of the internet allows us access, through diverse sources, to the information that any particular editor may have missed, deemed to be irrelevant or consciously left (Kahriman, 2013: 75).

The Purpose Of The Study

The main purpose of this study is to reveal the extent to which the role of the gatekeepers in agenda-setting in traditional mass-communication outlets is actualized in social media. In this context, the study focused on Twitter, the most popular micro-blog, as a social media source and examined the role of gatekeepers in agenda-setting in the Twitter accounts of major newspapers in Turkey. The goal of this effort was to determine the relationships between their own issue agendas of the Twitter accounts of major newspapers in Turkey.

Method

The Population and the Research Sample

The Twitter accounts of all national newspapers in Turkey make up the main population for this study. As entire the population was too large to be practical, the research sample was selected through purposive, rather than random sampling. As it is in all sample types, in purposive sampling, the ability to generalize from the sample to the larger population is fairly limited. However, in cases where there is extended information about a population, purposive sampling is recognized as a good alternative sampling method (Böke, 2009: 125). This method was

considered to be appropriate for agenda-setting research, as it allows the researcher to sample from media that have been shown in previous studies to play an agenda-setting role (Kushin, 2010: 56-57).

In this case, the Twitter accounts of Turkey's three leading major national newspapers were chosen as the research sample, including *Hürriyet*, *Sabah* and *Sözcü*. The Twitter accounts of these newspapers were chosen due to the newspapers' role as the most important agenda-setting channels, as opposed to other media sources (such as television). These newspapers were chosen on the grounds that they are the leading newspapers in Turkey, thus representing the other newspapers of the nation; more importantly, they are the newspapers with the highest profile in social networking. The chosen newspapers, published by the Press Ad Agency of national newspaper circulation in Turkey, are ranked among the top five newspapers in Turkey, according to the ranking report for September through October 2014.

The *Hürriyet* newspaper, which was established on May 1, 1948, joined Twitter in August 2009. From approximately 1.78 million followers on Twitter in October 2014, *Hürriyet* has 4.23 million followers as of July 2018 (Retrieved July 15, 2018, from: <https://twitter.com/Hurriyet>). This newspaper has the highest number of followers on Twitter among other newspapers of Turkey. Furthermore, the *Sabah* newspaper, published since April 22, 1985, joined Twitter in October 2009. From approximately 537,000 Twitter followers in October 2014, *Sabah* has 1.92 million followers by July 2018 (Retrieved July 15, 2018, from: <https://twitter.com/Sabah>). This paper has the second highest number of followers on Twitter in Turkey among the other newspapers in the sample. Finally, founded on June 27, 2007, the newspaper *Sözcü* joined Twitter in November 2010. There were approximately 486,000 followers on Twitter in October 2014, increasing to 1.57 million followers by July 2018 (Retrieved July 15, 2018, from: <https://twitter.com/gazetesozcu>). *Sözcü* ranks third in terms of the number of followers on Twitter among the newspapers in the sample.

Data Collection and Coding

In this study, the data were collected via content analysis. This step of the content analysis process, where the collection and coding of the data are carried out, is the one in which categories, time frames, coding units, and analysis units (also called contexts or resource units) are identified (Roberts et al., 2002: 457). This step, which McMillan (2000) also refers to as *defining the categories*, is the phase in which the time frame to be considered with the measuring instruments and units to be used in the study are determined. Budd, Thorp, and Donohew (1967: 33-36) identified two primary units of measurements used in content analysis studies as coding units and context units. Coding units are the smallest segment of content counted and scored in the content analysis. The analysis unit (source or context unit) is the body of material surrounding the coding unit. Therefore, it is the source of the variable to be measured. For example, if the coding unit is a word, the unit of analysis (the context unit) might be the sentence in which the word appears or the paragraph or the entire article. Many researchers use the term "unit of analysis" to refer to the context from which coding units are drawn (McMillan, 2000: 81-82).

The unit of analysis used in this study consisted of the tweets/posts that the three major national newspapers in Turkey shared in their official Twitter accounts. Furthermore, the coding units of the study consisted of content categories, which are commonly used by researchers working on content analysis on Web (see McMillan, 2000: 87). *Subject matter categories* are the most frequently used categories in content analysis. The goal is to determine what the communication is about (Holsti, 1969: 104). In this study, the content categories consisted of "subject matter categories". When the focus of study is on a specific issue, rather than on all the news stories published during a particular period, such an approach may overlook a clear relationship between agendas. Therefore, in this study, subjects that were routinely covered for a period of time were examined via the Twitter accounts of the major newspapers in Turkey, to reveal a clear relationship between their own issue agendas. The content categories/subject categories were used as coding units in the study were developed based on the previous literature and according to the contents of the tweets that the newspapers published on their official Twitter accounts during the time period examined.

In this study, the content analysis conducted in order to determine issue agendas of the Twitter accounts of major newspapers in Turkey, the resulting 21 subject categories are as follows:

Table 1: Issue Agendas of the Study

	Issue Agendas on Twitter of the Three Major National Newspapers in Turkey
1	Terror in Syria
2	USA
3	National Security
4	Terror in Turkey
5	National Policy
6	Foreign Policy
7	Military
8	Economy
9	Education
10	Science and Technology
11	Health
12	Sports
13	Art and Culture
14	Crime
15	Media
16	Environment
17	Law
18	Magazine
19	Human Rights
20	Travel and Transportation
21	Immigration

These 21 subject categories were defined and coded via content analysis. The total number of tweets in the Twitter accounts of the three major newspapers in Turkey and the issue agendas raised in this study are presented in Table 2:

Table 2: Total Number of Tweets and Issue Agendas

	Tweets	Issue Agendas
Hürriyet	965	2248
Sabah	334	951
Sözcü	491	1839

As shown in Table 2, during the time period the Twitter accounts were being examined, Hürriyet newspaper for a total of 965 tweets; Sabah newspaper 334; and Sözcü published a total of 491 tweets. The total number of agendas for all the issues covered in these tweets was 2248 for the Hürriyet newspaper; 951 for the Sabah newspaper; and 1839 for Sözcü. Among the newspapers, the one with the highest number of tweets, and in direct proportion to this, the one with the highest issue agenda, was Hürriyet.

One of the first steps in the content analysis was to specify the time frame of the study in which the categories were to be identified and the data collected. So far, there has been no research showing definitively the time period over which the agenda-setting process takes place on the Internet and/or social media. Winter and Eyal's (1981) standard duration of 4 to 6 weeks is still in use by most researchers, although it is known that researches covering other forms of social media often use a period of several weeks (e.g., Dunn et al., 2007).

As such, in this study, the Twitter accounts of the major newspapers in Turkey and the relationships between their own issue agendas were examined over a 4-week period in October of 2014. This specific period of time did not include any kind of groundbreaking or milestone events that endangered the stability of the news coverage. Namely, October of 2014 was chosen because it was a normal time period during which Twitter's newspapers were not exposed to external shocks; nor did it encompass a political campaign period, so as not to cause a convergence between their own weekly agendas. This was done in consideration of the fact that an important event or a political campaign can affect the entire agenda, as the media in general will continuously depict the same event or political content; thus, the various outlets display a convergence in their own agendas over time. With this in mind, a normal time frame was chosen to investigate the Twitter accounts of each of the selected newspapers in terms of whether there was a clear relationship between their own agendas. In this manner, it was assured that the situation under normal conditions was presented and that the surveys were objective. In other words, in case of an extraordinary event, the impact that the media takes the same event

constant on its agenda, the impact was under control. In this study, a 4-week time period was used, as suggested by Winter and Eyal's (1981) assertion that a 4- to 6-week time period is traditionally used in agenda-setting studies. Because the goal of analyzing each of the major newspaper's Twitter accounts was to determine the clear relationships between their own issue agendas, it was considered necessary to analyze the news tweeted over a sufficient period of time. Thus, a 1- or 2-week period was deemed to be insufficient. Moreover, a 4-week period was believed to allow for a more objective relationship analysis, since newspapers may not publish tweets on their Twitter accounts for some days (for example, on weekends), whereas during other periods, they may publish a large number. Thus, the 4-week time period was chosen to allow observations of both short-term (1 week) and long-term relationships (4 weeks) between the own issue agendas on the Twitter accounts of the newspapers. Furthermore, Lee, Lancendorfer and Lee (2005: 62-63) suggest that in such studies, it is more convenient to use four-time span than two-time span. For this reason, in this study, the time period for analysis was determined as four-time parts. These were arranged as follows. Week 1: October 1-7, 2014; Week 2: October 8-14, 2014; Week 3: October 15-21, 2014; and Week 4: October 22-28, 2014. Each week included 7 days, and the relationship between weeks was examined. In other words, the extent to which each newspaper maintained its own agenda for 4 weeks on Twitter was determined by examining each newspaper's relationship with its issue agendas on a weekly basis. Tweets were collected twice a day for 4 weeks, between 7:00-9:00 in the morning and 7:00-9:00 in the evening, because these are the time periods during which Twitter is most intensely used for news and the most tweets are sent. As such, these time periods are commonly known as morning and evening news hours.

Analysis of the Data

The data collection method for this study consisted of content analysis, which is one of the qualitative analysis types. Additionally, the data were analyzed with the use of frequency and Pearson correlation analysis, which are types of quantitative analysis. On account of this, this study is considered as mixed-method research.

Content analysis is considered as a first step in agenda-setting researches (Kushin, 2010: 62) and content analysis software is often used in for this purpose (e.g., Tedesco, 2005a; Tedesco, 2005b; Wallsten, 2007) (by Kushin, 2010: 64). The analysis that is carried in order to present the agendas of media outlets is considered content analysis (King, 1994: 50). The content analysis in this study consisted of an examination of the posts/tweets of the Twitter accounts of the major newspapers in Turkey in order to identify their issue/news agenda.

In this process, the statistical significance and relationships between the agendas were tested in the agendas that were identified by the researcher. The relationships between the issue agendas were identified using the Pearson correlation analysis method.

Findings

Relations among Newspapers' Twitter Agenda Contents in Turkey

The Pearson Correlations showing the relationships among the Twitter accounts of three major national newspapers in Turkey and their own issue agendas are shown in Table 3 below.

When the autocorrelations of Hürriyet's 4-week agenda in Table 3 were examined, it was determined that the correlation values were between about 0.86-0.93. This finding revealed that Hürriyet followed its own agenda to a high degree, and those agendas demonstrated continuity. When the autocorrelations of Sabah's Twitter agendas were observed for 4 weeks, the correlation values were found to be between about 0.72 to 0.93. These high autocorrelations indicate that Sabah is also a follower of its own agenda. When Sözcü's autocorrelations of Twitter account agendas were examined, it was found that the correlations were between 0.76 and 0.97. Maintaining its own agenda, which was observed in Hürriyet and Sabah, was also valid for Sözcü.

Table 3: Pearson Correlations among the Contents of Twitter Accounts of Turkish Newspapers

	Hür(T1)	Hür(T2)	Hür(T3)	Hür(T4)	Sab(T1)	Sab(T2)	Sab(T3)	Sab(T4)	Sözcü(T1)	Sözcü(T2)	Sözcü(T3)	Sözcü(T4)

* and ** indicate statistical significance levels of 5% and 1%, respectively.

Conclusions And Recommendations

In this study, the relationships between the own issue agendas of three major newspapers in Turkey, as evidenced by their Twitter accounts were investigated according to their autocorrelations. In other words, the autocorrelation of the four-week agenda of each newspaper in Twitter was examined.

In this study, it was found that statistically significant positive autocorrelations between its own issue agendas of Twitter accounts of each major newspaper in Turkey; the findings revealed high agenda autocorrelations in all three newspapers of Turkey over a four-week period. While *Hürriyet* had the greatest autocorrelation, *Sözcü* had the second-highest; and with a slight gap, *Sabah* had the third-highest autocorrelation.

These findings indicate that all three newspapers followed their own issue agendas throughout the period of examination. In conclusion, it has been found that all three newspapers followed their own agendas on Twitter and that they had a high level of continuity in this respect. *Hürriyet* followed its own agenda on Twitter most, often, followed by *Sözcü*, and then *Sabah*, with a slight gap.

The major Turkish newspapers put forward specific issue/issues in their agenda to attract public and followers' attention to these issues. This resulted in a continuation of agenda in each newspaper for four weeks, which accounts for the high agenda autocorrelation in each of these three newspapers. This finding can be explained by the role of gatekeepers in agenda-setting. In other words, the most important reason for the continuity of agendas in the Twitter accounts of the Turkish newspapers was the gatekeepers' agenda-setting role in the media.

As explained previously, one of the most important roles that gatekeepers play in agenda-setting in the media is their emphasis on the same issues in foreign news, political news, and also sensational (disruptive) and magazine themed news that creates a dramatic effect (Erdoğan and Alemdar, 2002: 215). The role of gatekeepers in the agenda-setting through Twitter accounts of Turkish newspapers has increased in this context, as the newspapers have made specific issues constant news items (for example, the *Hürriyet* magazine issues, or terrorism in Turkey; as well as in each of the three newspapers, the Syrian crisis, national security, foreign policy and national policy issues).

For example, in this study, it is seen that in the *Hürriyet*'s Twitter account, by giving place to issues that concern the whole country, as well as regular magazine issues, they keep this news at the top of their agendas, and that the magazine news has continuity in *Hürriyet*'s Twitter agenda. On the other hand, while this situation puts forward the role of gatekeepers in agenda-setting in the *Hürriyet* newspaper's Twitter agenda, the lack of magazine news that is put forward on the Twitter accounts of *Sabah* and *Sözcü* can again be explained by the role of gatekeepers in agenda-setting. A similar example from this study can be given in relation to sports news. Namely, while the sports news in *Hürriyet*'s Twitter agenda was given as much place as other important issues and events concerning the country, in the *Sabah* newspaper, only the most important sports news was given place in their agenda. In *Sözcü* newspapers' agenda, it was found that only the issues concerning the country are given more importance. On the other hand, as long as the terror in Syria, which stood out in October 2014, Turkey's most important agenda issues/problems terrorism and the issues relating to national security has also been seen on Twitter kept on the top of continuous agenda for 4 weeks by the newspapers. These examples show that the gatekeepers of all three newspapers are making decisions about which issues to keep at the top of their Twitter agendas.

The examples above support the findings of İrfan Erdoğan and Korkmaz Alemdar (2002) on the roles of gatekeepers on agenda-setting in the media, and indicate that these roles are also applied by Turkish newspapers on Twitter. Thus, in this study, the high autocorrelation levels on the Twitter agendas of Turkish newspapers are explained by the role of gatekeepers on agenda-setting in the media.

The most crucial benefits of this study are as follows:

- This study investigated the relationships between their own issue agendas of the Twitter accounts of major newspapers in Turkey.
- This study shows that Twitter is used by major newspapers in Turkey as an active and effective reporting tool in order to spread the news nowadays.
- This study shows that the specific issues that become prominent in mass media become also prominent in the Twitter accounts of major newspapers in Turkey; and that these issues are also frequently presented as news in the newspapers' Twitter agendas just as they are in the traditional media.
- This study shows that, just as the traditional and/or online media follow their own issue agendas, the major newspapers in Turkey also maintain their own issue agendas on Twitter.

- This study supports the findings of İrfan Erdoğan and Korkmaz Alemdar (2002) with reference to the roles of gatekeepers on agenda-setting in the media, and it also has revealed that these roles are also applied on Twitter by Turkey's newspapers. As such, the study shows that the role of gatekeepers on agenda-setting in the media are also applicable in the context of the newspapers' Twitter accounts.
- This study has extended the role of gatekeepers on agenda-setting in the media to Twitter.
- This study has important results regarding the media market and its implementers in Turkey. From the perspective of media markets, it is found that the Turkish newspapers are stable in terms of following their own agendas on Twitter. As such, there are no disruptions of their Twitter agendas in any sense and Twitter is consistently used by newspapers as a media tool. Thus, it can be seen that newspapers use Twitter as a media tool in terms of traditional media.
- This study shows the implementers of the news media embrace social media and use it actively. Because of this, it appears that traditional media has been integrated with social media, especially Twitter, in newspaper applications. The evidence in this study shows that social media tools such as Twitter have been embraced in terms of gathering news, publishing, sharing with followers and other media.

The most important recommendation arising from this study is that other social media tools, which the traditional media use as a news tool, should be used in order to test the role of gatekeepers on agenda-setting in terms of different media forms, time periods and issues.

s.c.wong@hw.ac.uk

Ai Ni Teoh
Teoh@gmail.com

Abstract

The purpose of the study is to explore the relationship between student's personality trait and university brand loyalty with university brand personality as mediator. Non-probability sampling and non-experimental research design were used in the study. Pearson correlation, stepwise regression and PROCESS analyses were adopted to test the hypotheses. The major findings were a significant relationship between student's personality trait and university brand loyalty except for neuroticism. Student's personality traits (extraversion, agreeableness, conscientiousness and openness) were correlated with university brand personality (prestige, sincerity, appeal and lively). University brand personalities has significant relationship with brand loyalty. Consumer with different personality traits will have different association towards brand loyalty, and brand personality mediate the relationship between personality traits and brand loyalty. The paper highlights the importance of developing university brand personality and the use of brand personality in extending brand loyalty by appealing to various types of personalities.

The Tpack Model In Teacher Training: Documentary Review

Javier Rodríguez MORENO

ortiz@ujaen.es

Miriam Ágreda MONTORO
University of Jaen (Spain)
magreda@ujaen.es

Abstract

The TPACK model is currently a high-impact advance in teacher training in terms of teachers' technological and pedagogical content knowledge. These basic dimensions, as well as the four intersections they generate with reference to Pedagogical Content Knowledge (PCK), Technological Content Knowledge (TCK), Technological Pedagogical Knowledge (TPK) and Technological Pedagogical Content Knowledge (TPACK), together with the context of training, are considered to constitute a solid model for a good diagnosis of teachers in both initial and ongoing training. This paper presents an analysis of publications in international databases that address the issue of the TPACK model. For this purpose, a review of scientific literature is carried out, applying documentation as a method for systematization. The study presented analyzes 43 contributions between 2014 and 2017, indexed in the WOS and Scopus databases, with TPACK and TPK applied descriptors. A search strategy based on four criteria has been used: target audience, topic, methodological design and main conclusions. The results show that the publications reviewed focus on basic and higher education studies and present methodological designs in which case studies, validation of instruments, quantitative empirical studies and mixed studies predominate. Consequently, among other aspects, the lack of longitudinal studies that show teacher's actions when applying TPACK in their daily practice is deduced from the empirical studies.

Keywords: *TPACK, TPK, Technological Pedagogical Content Knowledge, teacher training, learning, students, ICT.*

Introduction

This paper presents the importance of the TPACK model designed by Mishra & Koehler (2006), with reference to the integration of content knowledge with pedagogical knowledge and technological knowledge when introducing technology into the classroom by teachers. It is also necessary to know the interaction with other knowledge, in terms of Pedagogical Content Knowledge (PCK), Technological Content Knowledge (TCK) and finally Technological Pedagogical Knowledge (TPK).

The relevance of the study lies in the integration of technology by teachers in their teaching practice. Therefore, teacher training in ICT needs to investigate the theoretical bases that guide their application and use in the classroom, both at the disciplinary and pedagogical levels (Shulman, 1986, 1987) together with technological knowledge, on how ICT work in practice (Cabero, 2014).

The TPACK model distinguishes three basic dimensions of training and four intersections between them, identifying a total of seven dimensions, together with the differentiated context of training.

1. Content Knowledge (CK-Content Knowledge): refers to the teacher's knowledge on the specific topics or area to be taught to students, including, but not limited to, concepts, theories, facts, and procedures in their area.
2. Pedagogical Knowledge (PK-Pedagogical Knowledge): knowledge that the teacher has of the pedagogical activities, processes, practices or methods of teaching and learning that could be used in the teaching-learning process and how they relate to the educational goals to be achieved. This includes knowledge about techniques or methods that can be used in the classroom and strategies for student assessment.
3. Technological Knowledge (TK-Technological Knowledge): it refers to the knowledge that teachers have on the different technologies in order to develop their teaching activity. For example, it includes knowledge of operating systems and hardware, how to install programs, and how to create documents. It is also pointed out the importance of the ability to learn and adapt to new technologies.
4. Pedagogical Content Knowledge (PCK-Pedagogical Content Knowledge): it refers to the didactic knowledge about a content area, which implies facilitating the learning of the students about that area.

This includes knowing which teaching approaches and strategies are best suited to the content and how the different elements of the content can be worked on for effective teaching.

5. Technological Content Knowledge (TCK-Technological Content Knowledge): knowledge on how to represent specific concepts with technology, in other words, knowledge on how technology and content are related to each other. Teachers need to know how the contents of their area may be affected by the application of technology.
6. Technological Pedagogical Knowledge (TPK-Technological Pedagogical Knowledge): knowledge of the general pedagogical strategies that can be achieved through technologies. This may include knowing what tools exist for a given task, the skills to choose a tool based on effectiveness or adequacy to the task and the ability to apply pedagogical strategies when using technologies.
7. Technological Pedagogical Content Knowledge (TPACK-Technological Pedagogical Content Knowledge): knowledge of a teacher on how to develop specific teaching strategies on various topics using ICT to facilitate learning. Thus, it is a form of knowledge that goes beyond the three components (content, pedagogy and technology) and includes, for example, knowledge of pedagogical strategies that enable the use of technologies in an effective way to teach content and knowledge of what makes content easy or difficult to learn and how technology can help in some of the problems that students face.

We present the documentary analysis developed around the TPACK model, after analyzing the studies published in databases such as WOS and Scopus during the years 2014 to 2017, about investigations carried out on the technological pedagogical content knowledge.

Methodology

The methodology of the study is based on the documentary analysis, applying documentation as a method of data gathering (Sampieri, Collado & Lucio, 2014). We sought to analyze empirical studies of TPACK model. Documents located in databases such as Web of Science and Scopus were considered. The search strategy applies the “topic” option in “Web of Science (WOS)”, while in Scopus the “article, title, abstract and keywords” option is used. The search period is based on the studies of Castillejos-López, Torres-Gastelú & Lagunes-Domínguez (2014), from 2014 to March 2018. The total amount of papers considered was 43, being TPACK and TPCK the applied descriptors, of which a high percentage of the publications belonging to scientific journals and conference proceedings indexed in both databases are repeated. A search strategy based on four criteria has been used: target audience, topic, methodological design and main conclusions, determined by Wollscheid, Sjaastad & Tømte (2016) and Torres-Toukoumidis, Romero-Rodríguez & Pérez-Rodríguez (2018), which facilitate the categorization and synthesis of the information gathered between “TPACK and TPCK” on the Web of Science (WOS) and Scopus:

- Audience: childhood education, primary education, secondary education, higher education, training of trainers and general education.
- Topic: ICT integration, ICT attitudes, teacher professional development; TPACK conceptual framework.
- Methodological design: empirical with qualitative techniques, empirical with quantitative techniques, empirical with mixed techniques.
- Main conclusions: effects and consequences of the results.

Outcomes

Audience

Among the publications reviewed, 34.8% of them used samples of students in higher education and Primary Education (30.2%) in the investigations. Moreover, 4.6% are publications aimed at Secondary Education, 11.6% at Childhood Education, 9.4% are general for the general public, and 9.4% are aimed at training of trainers.

Table 1. Distribution of publications by audience

Audience	Publications
Childhood Education [5]	Tarraga-Mínguez, Sanz-Cervera, Pastor-Cerezuela, Fernández-Andrés, 2017; Almería, Orellana, Suárez, Díaz García, 2016; Muñoz & Repiso, 2016; Szeto, Ching, Hong, 2016; Roig-Vila, Mengual-Andrés & Quinto-Medrano, 2015.
Primary Education [13]	Avidov-Ungar & Shamir-Inbal, 2017; Koh, Chai & Lim, 2017; Makenney & Voogt, 2017; Munyengabe, Zhao, He & Hitimana, 2017; Spiteri & Rundgren, 2017; Getenet, Beswick & Callingham, 2016; Hansen, Mavrikis & Geraniou, 2016; Wong, Chai, Zhang &

	King, 2015; Wu, & Wang, 2015; Coklar, 2014, Koh, Chai y Tay, 2014; Lye, Wee, Kwek, Abas & Tay, 2014; Polly, 2014.
Secondary Education [2]	Jones, Schupbach, Harvey, Bulger & Voelker, 2017; Nasution, Sriyati, Riandi & Safitri, 2017.
Higher Education [15]	Gill & Dalgarno, 2017; Yerdelen-Damar, Boz & Aydin-Gunbatar, 2017; Holland & Piper, 2016; Meletiou-Mavrotheris & Prodomou, 2016; Handal, Gómez Chova, López & Candel, 2015; Yelken, Konokman & Tokmak, 2015; Çalik, Özsevgec, Ebenezer, Artun & Küçük, 2014; Celik, Sahin, Akturk, Kopcha & Ottenbreitl, 2014; Kopcha, Ottenbreit-Leftwich, Jung & Baser, 2014; Lee & Kim, 2014; Messina & Tabone, 2014; Mouza, Karchmer-Klein, Nandakumar, Ozden & Hu, 2014; Yurdakul & Coklar, 2014.
Training of trainers [4]	Zhang, Liu & Wang, 2017; Chova, Martínez & Torres, 2016; Okumuş, Lewis, Wiebe & Hollebrands, 2016; Kontkanen, Dillom, Karkkainen, Kukkonen, Valtonen & Vaisanen, 2015.
General education [4]	Cabero, Roig-Vila & Mengual-Andrés, 2017; Cabero & Barroso, 2016; Holland & Piper, 2014; Lefebvre, 2014.

Topic

In terms of keywords and general objectives, 37.2% of the articles deal with the integration of technology, within the framework of the TPACK model. A 9.3% of them focus on students' attitudes towards the use of ICT. In addition, a 32.5% refers to the professional development of teachers, either in their initial or continuous training, in university and non-university contexts. Finally, a 21% refers to deepening the theoretical framework of the TPACK.

Table 2. Distribution of publications by topic

Topic	Publications
ICT integration [16]	Jones, Schupbach, Harvey, Bulger & Voelker, 2017; Munyengabe, Zhao, He & Hitimana, 2017; Chova, Martínez & Torres, 2016; Hansen, Mavrikis & Geraniou, 2016; Holland & Piper, 2016; Okumuş, Lewis, Wiebe & Hollebrands, 2016; Szeto, Ching, Hong, 2016; Kontkanen, Dillom, Karkkainen, Kukkonen, Valtonen & Vaisanen, 2015; Roig-Vila, Mengual-Andrés & Quinto-Medrano, 2015; Coklar, 2014; Lee & Kim, 2014; Lye, Wee, Kwek, Abas & Tay, 2014; Messina & Tabone, 2014; Mouza, Karchmer-Klein, Nandakumar, Ozden & Hu, 2014; Polly, 2014; Yurdakul & Coklar, 2014.
ICT attitudes [4]	Avidov-Ungar & Shamir-Inbal, 2017; Yerdelen-Damar, Boz & Aydin-Gunbatar, 2017; Holland & Piper, 2014; Koh, Chai y Tay, 2014.
Teaching professional development (Digital Competence) [14]	Cabero, Roig-Vila & Mengual-Andrés, 2017; Gill & Dalgarno, 2017; Koh, Chai & Lim, 2017; Makenney & Voogt, 2017; Nasution, Sriyati, Riandi & Safitri, 2017; Spiteri & Rundgren, 2017; Tarraga-Mínguez, Sanz-Cervera, Pastor-Cerezuela, Fernández-Andrés, 2017; Zhang, Liu & Wang, 2017; Almería, Orellana, Suárez & Díaz García, 2016; García Valcárcel & del Pozo, 2016; Getenet, Beswick & Callingham, 2016; Meletiou-Mavrotheris & Prodomou, 2016; Muñoz y Repiso, 2016; Yelken, Konokman & Tokmak, 2015.
TPACK Conceptual Framework [9]	Cabero & Barroso, 2016; Handal, Campbell, Cavanagh & Petocz, 2016; Gómez Chova, López & Candel, 2015; Wong, Chai, Zhang & King, 2015; Wu, & Wang, 2015; Çalik, Özsevgec, Ebenezer, Artun & Küçük, 2014; Celik, Sahin, Akturk, Kopcha & Ottenbreitl, 2014; Kopcha, Ottenbreit-Leftwich, Jung & Baser, 2014; Lefebvre, 2014.

Methodological design

In the methodological design, the most used systematic process is the substantiation through empirical studies with quantitative techniques (48.83%). Regarding qualitative studies, (47.87%), compared to mixed studies (9.3%). Moreover, the instruments used in empirical studies are surveys and questionnaires in an 85%. To a

lesser extent, intervention and instrument validation studies also appear. Furthermore, the samples size is highly variable, meaning that there is no common sampling size of the different studies.

Table 3. Distribution of publications according to the methodological design

Methodological design	Publications
Empirical with qualitative techniques [18]	Avidov-Ungar & Shamir-Inbal, 2017; Gill & Dalgarno, 2017; Jones, Schupbach, Harvey, Bulger & Voelker, 2017; Koh, Chai & Lim, 2017; Munyengabe, Zhao, He & Hitimana, 2017; Spiteri & Rundgren, 2017; Chova, Martínez & Torres, 2016; Hansen, Mavrikis & Geraniou, 2016; Meletiou-Mavrotheris & Prodomou, 2016; Okumuş, Lewis, Wiebe & Hollebrands, 2016; Szeto, Ching, Hong, 2016; Gómez Chova, López & Candel, 2015; Kontkanen, Dillom, Karkkainen, Kukkonen, Valtonen & Vaisanen, 2015; Wong, Chai, Zhang & King, 2015; Kopcha, Ottenbreit-Leftwich, Jung & Baser, 2014; Lee & Kim, 2014; Lefebvre, 2014; Polly, 2014.
Empirical with quantitative techniques [21]	Cabero, Roig-Vila & Mengual-Andrés, 2017; Makenney & Voogt, 2017; Nasution, Sriyati, Riandi & Safitri, 2017; Tarraga-Mínguez, Sanz-Cervera, Pastor-Cerezuela, Fernández-Andrés, 2017; Yerdelen-Damar, Boz & Aydin-Gunbatar, 2017; Zhang, Liu & Wang, 2017; Almería, Orellana, Suárez, Díaz García, 2016; Cabero & Barroso, 2016. García Valcárcel & del Pozo, 2016; Holland & Piper, 2016; Handal, Campbell, Cavanagh & Petocz, 2016; Muñoz & Repiso, 2016; Roig-Vila, Mengual-Andrés & Quinto-Medrano, 2015; Çalik, Özsevgec, Ebenezer, Artun & Küçük, 2014; Celik, Sahin, Akturk, Kopcha & Ottenbreitl, 2014; Coklar, 2014; Holland & Piper, 2014; Koh, Chai y Tay, 2014; Lye, Wee, Kwek, Abas & Tay, 2014; Messina & Tabone, 2014; Yurdakul & Coklar, 2014.
Empirical with mixed techniques [4]	Getenet, Beswick & Callingham, 2016; Yelken, Konokman & Tokmak, 2015; Wu & Wang, 2015; Mouza, Karchmer-Klein, Nandakumar, Ozden & Hu, 2014.

Main conclusions

The last criterion allows us to evaluate the contributions of each of the selected investigations. The convergence between ICT and TPACK is positive in a 58.14% of the texts analyzed. Specifically, 34.89% of them reveal the importance of the acquisition of skills within the framework of the TPACK, the achievement of objectives, the development of practical objectives, task execution and problem solving. A 23.5% of the texts point to technological competence and specifically to digital competence, while a 16.27% emphasize the improvement of learning outcomes in the context of TPACK. Other studies consider the TPACK model as a diagnostic reference in professional development (20.93%), discovering few studies based on the obstacles posed by the use of technology in the educational context.

Table 4. Distribution of publications according to the main conclusions

Conclusions	Publications
TPACK skills [15]	Avidov-Ungar & Shamir-Inbal, 2017; Gill & Dalgarno, 2017; Makenney & Voogt, 2017; Munyengabe, Zhao, He & Hitimana, 2017; Nasution, Sriyati, Riandi & Safitri, 2017; García Valcárcel & del Pozo, 2016; Muñoz & Repiso, 2016; Okumuş, Lewis, Wiebe & Hollebrands, 2016; Gómez Chova, López & Candel, 2015; Çalik, Özsevgi, Ebenezer, Artun & Küçük, 2014; Celik, Sahin, Akturk, Kopcha & Ottenbreitl, 2014; Holland & Piper, 2014; Kopcha, Ottenbreit-Leftwich, Jung & Baser, 2014; Lee & Kim, 2014; Yurdakul & Coklar, 2014.

Polly, 2014.
Obstacles [2]	Hansen, Mavrikis & Geraniou, 2016; Lye, Wee, Kwek, Abas & Tay, 2014.

Discussion And Conclusions

It has been observed in most of the investigations that the TPACK model can favor technological skills together with pedagogical and disciplinary content. We have also found that personal and contextual factors have a relevant impact on the subsets of the analyzed competences. In addition, it is considered how the current university study programs of Primary Education are providing future teachers with a sufficient level of professional skills (based on the TPACK model), considering the need to improve a wide range of specific subjects on digital technologies applied to education.

The TPACK model from the perspective of teachers favors technological competence-digital competence, finding outcomes of self-perception of teachers much higher in technological competence in the use of ICT in some of the studies. It was found that some studies helped to clarify and delimit the framework for teachers' ICT skills.

Investigations show that in the initial training of teachers, technological knowledge is not excessively focused in reference to learning outcomes, as some authors suggest, finding better outcomes in pedagogical training in Spanish universities.

Regarding the teaching professional development, studies raise the need for teachers to bring into play the three types of knowledge: pedagogy, content and technology. The need to plan activities in an integrated manner is highlighted (Castillejos-López, Torres-Gastelú & Lagunes-Domínguez, 2014).

As limitations, we have found the lack of longitudinal empirical studies; the target audience consists mostly of students of higher education and primary education, with few studies of secondary education and general education for all audiences.

The Use Of E-Learning In Social Work Education : Five Years Of Experment

Pouliot Eve
Eve_Pouliot@uqac.ca

Abstract

Since 2013, University of Quebec in Chicoutimi's First Nations Centre Nikanite defined an e-learning program for Social Work, aimed at students in the native communities and social workers intervening with natives living in urban environments. This program includes four compulsory courses and one optional course. The main focus is the development of intervention skills to help with deviant, dependant, and delinquent behaviors or offenders, and provide accurate social care for children, youth, and elderly people.

For the design and development team, this was a real challenge. The program must be delivered in French -the second or third language of the target audience. Students are geographically distributed throughout Quebec where electronic services and equipment vary. Levels of experience are different, in the field of social work as well as in using technologies. Students are not available at the same time. The needs are enormous and a trained workforce is expected quickly. Since this program must help develop competencies in a social work context, students need to collaborate and interact in an authentic environment.

These limitations required team members think in terms of optimizing learning within a virtual context, based on imagination, experience and reinvestment instead of interactive technology. The purpose of this poster is to present the learning methodologies and hypotheses on which were built a mixed learning approach based on cognitive psychology in a socio-constructivist environment. The student is invited to resolve native social issues and problems in an asynchronous, collaborative, virtual context including both imaginative characters and real people case studies. Students meet the characters, develop their knowledge in a flipped classroom approach and reinvest their newly acquired knowledge in the next learning experience. We believe this mixed approach can lead students to better intervene in their future profession.

The Use Of Internet Content With Interest In Learning English On High Schools Students

Abstract

The official language in Indonesia is Bahasa. English is one of the foreign languages taught since junior high school and it is mandatory to learn. However, the motivation to learn English among students is still relatively low. This has result in low ability of English speaking students. On the other hand the Internet is very popular among students and has a lot of English-speaking content. This study aims to determine: 1) the intensity of students in using internet content in English; and 2) the relationship of the intensity of the use of air-English Internet content with interest in learning English. This research uses survey method to high school students in Jakarta. The results of the data are known that: 1) the intensity of internet usage of English content in High School Students is low, and 2) there is a significant relationship between the intensity of English internet content usage with the interest of learning English. Therefore, to increase students' interest in learning English, it is recommended that students frequently access English Internet content.

Keywords: *Internet, English Internet content, Interest in learning English*

Preliminary

The international language used by various nationalities is English. Indonesia officially starts teaching English from junior high school. There are also some schools, especially those who managed by the private sector, have learned English starting from elementary school. The Indonesian government has determined that learning English is mandatory for student's starts in junior high school level. English lessons have also been established as one of the subjects tested in the National Exam (UN). It shows the great attention of the Indonesian government to its citizens to be able to master English as an International language.

The government is very serious in English Lesson however this has not directly influences to the quality of learning English in schools. Student's ability in English language is still low, this is also a result from low quality methods of learning English in schools and university level. For instance English learning process in one of the private universities in the suburbs East Java province performed by Maghfiroh (2016). The results of the study indicates constraints that happened in learning foreign language in the program of education English language: 1) Indonesian language is still dominant in the learning process; 2) Low motivation to learn and master English language, and also feel ashamed and scared if they will make mistakes while speaking English; 3) Supportive environment for student to speak foreign language among college student was not created; 4) Less time to practice the skills learned in speaking English.

At the junior secondary level, the results of research conducted by Ariastuti, et al (2014) in junior high schools in Makassar, South Sulawesi have indicates problems in learning English: (1) explaining the textbook with guidance from textbook without variations; (2) the instructional media used is not attractive, rarely practice such as listening, speaking, reading, and writing. Students are prepared with material that was used to answer the exam questions, smart students is defined only students who has good test scores.

The low quality of learning is exacerbated by the low interest of students to learn English. Interest is the tendency of an inactive subject, it is very important to feel interested in a particular subject and being happy to learn the material (Winkel, 2004). According to Hilgard (Slameto, 1995) explains that interest is the tendency to recall and remember some of the activities that a person is interested, constantly paying attention accompanied by

stimulus.

Interest means an individual's attracted feeling or happy to learn, in this case learning English. If the facilities and learning environment is less supportive, but have a strong interest in learning English, then the learning results will be better. This is in accordance with holistic theories of learning, emphasizing that the behavior is *purposive*, which means that the intrinsic aspect (intention, determination, will) of the individual is the important determinants for the birth of certain behaviors even in the absence of stimulation (*stimulus*) coming from the environment (naturalistic). This means according to the holistic school that the determinants of learning success are intrinsic factors of students concerned, one of which is interest in learning (Anwas, 2009).

Interest is very important in improving learning achievement. The Liang Gie (1995) confirms the importance of interest in learning, gaining attention, facilitate the creation of concentration, prevent interference from outside, strengthen the memory/learning comprehension, and minimize boredom to learn. Therefore, to improve the ability of English, students' interest in English lesson needs to be improved.

Efforts to increase interest in learning English can be done by using information and communication technology (ICT). Research on the utilization of ICT can facilitate student learning ((Anwas, 2015), (Gray, et al, 2007), (Ghadirian and Job, 2017), Mikal et al (2014), Aberg et al (2016), (Wang, 2018)). The results of the study done by Aberg et al (2016) shows that using digital learning resources can improve writing ability in participants. Sabar and Rahman (2011) conducted research on the Head Office of Briton International English School Makassar, Indonesia. The study aims in knowing the role and function of multimedia center and value added obtained by the students from using the Web (e-Learning) through multimedia center at Briton International English school Makassar. The results of this study indicate that the use of Web (e-Learning) has made, the students earn various kind of value added (benefits), such as: a) attain many information and materials learning, with ease, fast and more detailed; b) could access information inform of text, images, and occasionally interesting video; and c) students could develop skills especially reading, writing, vocabulary, and grammar.

The Internet has a lot of content that uses English. The content contained on the Internet varies greatly in text, image, audio, video, simulation and animation formats. The content is designed specifically for learning and some are not specifically designed but can be utilized for learning (by utilization). All English-language content can be optimized to improve English learning ability and achievement. The problem is the frequency of students using English, and whether there is a relationship between the frequencies of the use of English content with the interest of learning English. This study aims to determine: 1) the frequencies of students in using Internet content in English; and 2) the relation of the frequencies of using English internet content with the interest of learning English.

Research Methods

This research uses survey method towards high school students in Jakarta. The population is high school students in Jakarta. Samples taken using random sampling techniques, in number of 185 people. Data collection was conducted in March 2018.

The data is collected through questionnaire about the frequencies of the students in using English Internet content and the interest of learning English. Student frequencies indicators using English Internet content are measured by how often the students use English Internet content. Interest indicator is measured by the feeling of the student's likes or dislikes on English lessons. This means that students who have a positive feeling to learn English means that they have a good interest in English lessons. On the other hand, if students dislike learning English they will be categorized with no interest in learning English.

The collected data was analyzed using descriptive statistics and statistics Spearman's correlation. To facilitate data processing used SPSS application version 23. Through analysis of data is expected to be able to answer the research question.

Results And Discussion

In accordance with the purpose of research, the variables studied in this study is two that is 1) the frequencies of students in using English-language internet content; and 2) the relation of the frequencies in the use of English internet content with the interest of learning English. The result of data is using descriptive statistics, obtained data is shown in **Table 1**.

Table 1. Intensity of Accessing English Internet Content

No		f	%
1	Never	5	2.7
2	Rarely	112	60.5
3	Often	54	29.2
4	Always	14	7.6

Table 1 explains that the majority of students 60.5% are rarely access English Internet content, and even 2.7% claim never. Only a small part of the 29.2% who claims often and only 7.6% who claim always accessing English Internet content. The data pointed that the students use English Internet content is still low. However the results of previous research conducted by (Chalim and Anwas, 2018) that in general the frequencies of internet usage by students in the city of Jakarta is quite high, the average of more than two hours per day. This means the potential of students to take advantage from English language Internet content is great.

The use of Internet is closely related to the availability of Internet infrastructure. The location of this research in the city of Jakarta in general the Internet infrastructure is better when compared with rural areas and other cities. The question is how the English internet content are use in other cities and villages where the availability of Internet infrastructure is lower than Jakarta. More research needs to be done, how frequent the use of English Internet content utilization in other area outside Jakarta.

Interest in learning English, the result of descriptive statistical processing described in **Table 2** as follows.

Table 2.Interest in Learning English

No		f	%
1	No interest	3	1.6
2	Less interested	104	56.2
3	Interested	67	36.2
4	Very interest	11	5.9

Table 2 shows that more than half (56.2%) of students stated less interest in learning English, and there were 1.6% of students who expressed no interest. 36.2% of students who expressed interest and 5.9% who expressed great interest. The data explains that most students are less interested in learning English, and only a small proportion indicates interest in learning English. This research was conducted in the capital city of Indonesia that shows low English proficiency, it can be generalize also in the city level in Indonesia. How students who live in the village in the remote areas can learn English is another interesting issue that need to do further research.

This interest factor is very important to improve learning achievement. This is explained in the studies conducted by The Liang Gie (1995), Maghfiroh (2016), research conducted Ariastuti, et al (2014), and Malek, et al (2011). Therefore, the low English proficiency among students is caused by the low interest of the students towards the English lesson.

Spearman correlation test results are presented in **Table 3** below.

Table 3. Correlation of Interest in Learning English

	r	sig
Frequencies Accessing English Content	0.263	0,000 **

Table 3 shows that from the correlation test results the correlation value is 0.263 with 0.000 significance values. It means that the students' ability to access English Internet content is positively related and significant with their interest in learning English, at 99 percent confidence level. It can be interpreted that if students' frequencies in accessing Internet content in English is high, then students' interest in English lessons is also high. In reverse, if the students' intensity in accessing English Internet content is low, the student's interest in English lesson is also low.

In **Table 1**, in general the intensity of students in accessing Internet content in English is low. Similarly, in **Table 2**, in general the students' interest in learning English is also low. It can be interpreted that to increase students' interest in learning English, we can achieve it through increasing student's frequencies in accessing English Internet content. Previous research conducted by Chalim and Anwas (2018) in Jakarta states that the level of Internet usage among

students is quite high. It means there are potential for student's to change on how they use the Internet into accessing English Internet content. Internet contents that being accessed often by students are mostly from social media that presented in Bahasa (Chalim and Anwas, 2018). It is also recognized that in Indonesia the use of the Internet is dominantly for leisure purpose and communication activities. Results of a study conducted by Tech in Asia (2015) shows that majority of Internet users in Indonesia search for news and entertainment, but the percentage of users that accessing educational content is only 5% of total. Likewise, the television programs favored by the majority of viewer's are entertainment and information (Kusuma and Hardiyanto, 2015). This potential can be diverted to not only communicate or search for content in Bahasa, but also content in English language. The students' ability to access Internet content, especially in English has the potential to be upgraded, so interest in English lessons can be improved as well. This can be attributed to the advantages of the Internet that is able to present the content in a varied form. The Internet is able to present text-based content, images/photos, audio, video, animation, and simulation. Text based Internet contents can be: news, information, articles, books, short stories, novels, and other forms. Audio contents can be: song or poetry, dialogue or monologue or dramatization. The results of research done by Ariastuti, et. al. (2014) shows that many students interested in learning a language by using audio-visual media. Qualitatively, atmosphere in learning English language will be more fun and create positive effects to students' development.

Video and animation Internet content could be in the form of movies, songs, or games. Simulation content could be in a form of demonstration or practice related to the language skills such as reading, writing, listening, and speaking. The results of the study done by Laren (2012) shows that utilization of technology in learning, especially using audio-visual media, makes the students feel happy to read poetry by using pronunciation, stressing, intonation, and pausing method. The diversity of this content becomes an alternative choice for students who match and in accordance with the habits or learning conditions.

Internet media also has the advantage, that is able to communicate interactively. Research done by John et.al (2016) asserted that learning *online*

could improve interaction and engagement of participants (student-centered learning). This communication can be done directly (synchronous) or indirectly (asynchronous). Students can practice their ability in communicating English with their friends, teachers, parents, or anyone else, through, for example: email, video call, or through social media (facebook, whatsapp, twitter, instagram, etc.).

Using Internet in learning is flexible. As long as there is availability of devices and networks, students can use the Internet wherever and whenever there is a chance. The Internet is capable and easily accessed through various devices, such as: laptop, PC, mobile phones, smartphones, tablets, and other various devices. This shows that there is great opportunity and chance for students to utilize English Internet content in improving the students' interest and achievement in learning English.

How to make students who are frequently accessing the Internet for regular purpose to be diverted to utilize English Internet content? The results of Chalim and Anwas (2018) study confirmed that to familiarize students accessing Internet content that supports learning is the involvement of parents and teachers. The result of this study proves there is a positive and significant relationship between the role of parents and teachers with the use of the Internet for learning purposes.

The results of Chalim and Anwas research can be synthesized with the results of this study that to familiarize students access English internet content, the role of parents and teachers is very important. Parents need to guide and direct their children to access positive Internet contents. In this case, the content is relevant to increase the interest and achievement of learning English. Teachers need to provide guidance including learning tasks so that students are encouraged to utilize content in English in order to increase their interest and learning achievement of English subjects. Through this practice, students are expected to be train in English as a foreign language, both in reading, writing, listening and speaking.

Conclusion

The frequencies of high school students in accessing English Internet content are low. Similarly, students' interest in English lessons is also low. The low usage of English Internet content has a positive and significant relationship with the low interest in learning English. If the students frequencies in accessing English Internet content are high, then students interests in English lessons are also high. Then, if the students' frequencies in accessing English Internet content are low, the student's interests in English lesson are also low. Therefore, to increase students' interest in learning English, it is recommended for students frequently access English Internet content. English Internet content could be presented in many kinds of form: text, images, audio, video, animation, and simulation, it is very popular for students. Therefore, the Internet can be utilized interactively and communicatively to practice English proficiency globally, including the native speakers.

3D Software Environment For Educational Sprego Programming

Ádám GULÁCSI

Faculty of Informatics University of Debrecen Hungary

adam.gulacsi@gmail.com

Nikolett DIENES Faculty of Informatics University of Debrecen Hungary

dienesniki@gmail.com

Abstract

The traditional methods for teaching spreadsheets are rather inefficient as they focus on the specific technical features of spreadsheet software. The main drawback of this approach is that students and end-users have to memorize an extensive amount of functions together with their arguments. Moreover, these functions can vary from interface to interface, or even become obsolete, be changed or be renamed in different versions of the same family of applications. With the technical details in the center, the focus is rather on the syntax and tools instead of developing the students' algorithmic and computational thinking skills and their ability to think abstractly.

By contrast, Sprego – Spreadsheet Lego – programming offers a scientifically proven, more effective alternative, because it establishes a concept-based problem-solving approach with real-world problems in focus, computational thinking, algorithmic and computer problem-solving skills and schema-construction to develop the students' capability to make reliable decisions at speed, yet it avoids the common pitfalls mentioned above.

Previous research and developments have introduced semi-unplugged tools for the visual representation of Sprego-implemented algorithms. Among them, a piece of software was implemented in a 2D environment which uses animations based on real-life examples to aid the students' learning process of the method. The application supports a searching algorithm and a counting algorithm, which are both fundamental parts of understanding Sprego programming principles. The research group has conducted experiments on applying this piece of software in education and the results were positive and promising, which clearly indicated that the visualizations of these algorithms are helpful for the students.

In our current work, we are presenting a new semi-unplugged application which transforms the functionality of the previously mentioned piece of software into a new 3D environment. Our aim is to increase the students' enthusiasm by creating a more engaging, modern and visually attractive representation of Sprego algorithms and formulae. The software is being implemented in Unity3D not just because it makes our project highly customizable, but it also provides support for a wide range of platforms including Windows, iOS, Macintosh, Linux and Android. This multi-platform availability will make it easy to use this application with distinct ICT devices such as smartphones, tablets and interactive whiteboards. In the subsequent phases of our research, we would like to improve our software by implementing new features and algorithms. After developing the application, we are planning to measure its effectiveness in classrooms in the near future.

Introduction

Sprego

The primary focus of our research is to develop a 3D visualization environment for Sprego-implemented algorithms. In this section we introduce Sprego methodology before discussing the details of our 3D software and the motivations for creating it.

Sprego is a relatively new method (Csernoch, 2014) which provides an alternative approach for spreadsheet-related real world problem-solving. The name Sprego itself is a portmanteau word which stands for **S**preadsheet **L**ego. In order to understand the core principles behind Sprego, we must start with examining the pitfalls and difficulties of the traditional method.

The first pitfall derives from the software itself because there are compatibility issues between the different versions. For example, spreadsheet functions can be renamed in newer releases as seen in Figure 1.

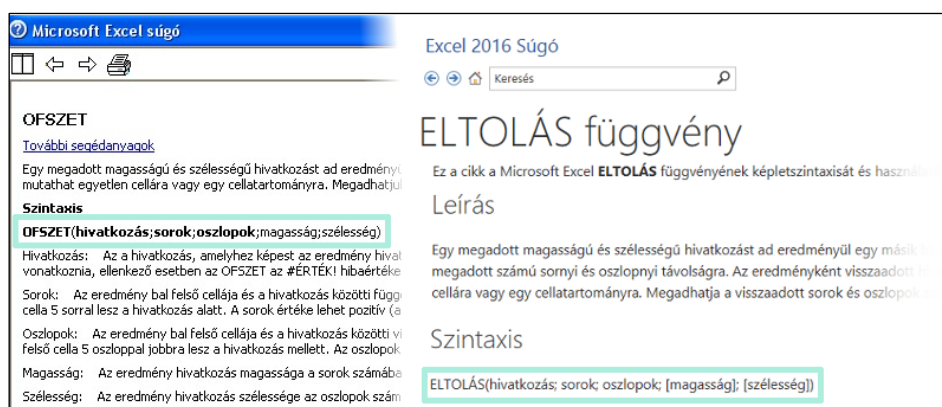

Figure 1. Name and syntax of the OFFSET() function in the Hungarian translation of Microsoft Excel 2003 (left) and 2016 version (right).

The second pitfall comes from an inconsistency between the order of the arguments of functions that are really similar in nature. As an example, SUMIF() takes its arguments in a completely different order compared to SUMIFS() which increases the risk of constructing semantically incorrect formulae (Sebestyén & Csapó, 2018). Another difficulty is related to the extensive amount of problem-specific functions. Memorizing these functions with their specific purposes and arguments is an overwhelming task, not just for students, but even for more experienced users. For instance, looking up a specific value from a vector or a matrix i.e. executing a linear search is a common problem in Spreadsheet environments. The user could theoretically solve the problem by using either LOOKUP(), HLOOKUP(), VLOOKUP(), or the INDEX(MATCH()) composite function (Microsoft 2018). However, the first 3 functions have their own limitations which makes them more problem-specific compared to using the INDEX(MATCH()) composite function (Table 1).

Table 1: Comparison of LOOKUP(), HLOOKUP(), VLOOKUP() and INDEX(MATCH()).

Function (or composite function)	Search vector	Sorting order of the search vector
LOOKUP()	both rows and columns	ascending
HLOOKUP()	only rows	ascending / unordered
VLOOKUP()	only columns	ascending / unordered
INDEX(MATCH())	both rows and columns	ascending / unordered / ascending

Teaching too many functions is not just unnecessary, but it is also inefficient as an average user only uses about 12 functions on a regular basis (Walkenbach, 2010). Furthermore, as we mentioned above, any of these functions can become obsolete or be changed in other spreadsheet software versions. Additionally, the most efficient way to develop students' programming skills in an environment like LOGO or Sprego is to gradually build up a set of instructions (in this case, functions) from 5 to a maximum limit of 15 (Freiermuth et al., 2008).

By contrast to the pitfalls of traditional spreadsheet education, Sprego offers an alternative which eliminates all the difficulties mentioned above. The core principle of this method is to use only 12 fundamental, general-purpose spreadsheet functions (Table 2).

Table 2: The 12 fundamental Sprego functions.

Text	Math	Miscellaneous advanced
LEFT()	MIN()	IF()
RIGHT()	MAX()	MATCH()
SEARCH()	SUM()	INDEX()
LEN()	AVERAGE()	ISERROR()

Focusing on functions that can be found in all interfaces ensures the compatibility of all variations of spreadsheet software and versions because these functions have been consistent in their names and arguments since their first appearances. Additionally, these 12 functions are unambiguous because they are properly named, and the names clearly indicate the one specific task that they carry out. In addition to this, a Sprego user needs to develop a

thorough understanding of these 12 functions only, which is less difficult compared to the countless amounts of problem-specific functions of the traditional spreadsheet workflow (Csernoch et al., 2014).

In addition, a crucial feature of the Sprego method is the usage of composite functions and array formulae. The main advantage of using composite functions is that it develops the students' algorithmic and computational thinking skills and it provides examples and applications for widening their mathematical knowledge in the subjects of functions and arrays (Csernoch, 2014 and 2017). Another benefit of using Sprego is that it opens up new opportunities for using unplugged teaching methods in the classrooms (Bell & Newton, 2013; Csernoch & Biró 2017). For example, Matryoshka dolls can be used to demonstrate how composite functions work and how they relate to functions in traditional text-based programming languages (Figure 2).

Figure 2. Unplugged teaching methods – Matryoshka dolls.

2D visualization of Sprego algorithms

Our software is based on a previous research project in which the researchers have developed a 2D visualization application for different Sprego-implemented algorithms (Figure 3). The application consists of two animations for two different scenarios, one visualizing conditional counting with a $\{=SUM(IF())\}$ array formula, and the other one simulating the execution of linear search with an $=INDEX(MATCH())$ composite function. The purpose of these animations is to provide a better understanding of the algorithms behind these Sprego solutions to show the executed actions step-by-step. The software features real-life based examples, coloured Matryoshka dolls (as avatars) and multi-platform availability to support Android, Windows, Mac and Linux (Csapó & Sebestyén, 2017; Csapó, 2017; Csapó & Sebestyén, 2018).

Figure 3. 2D Sprego visualization application.

MOTIVATION

The main goal of this piece of research is to transform the existing 2D visualizations into a 3D environment. More specifically, this transformation can be divided into two major areas:

- the first involves creating the 3D models, textures and UI elements for the new environment and
- the second is the programming aspect.

Our hypothesis is that if we implement a highly interactive, more appealing and videogame-like software into Sprego for students, they will show more interest towards Sprego in general, and it will result in increased efficiency regarding the understanding of the algorithms behind problems in Sprego.

We aimed to keep the core aspects of the 2D visualizations, i.e. the Matryoshka dolls, the authentic real-life examples and the multi-platform availability while implementing new features using the advantages provided by

the 3D environment (Figure 4). Interactivity is our further concern because we want to create a software that can be used efficiently in education that grasps the students' attention and facilitates their learning processes instead of making them passive observers.

Our distant goal is to create an application which serves a unique purpose in education, as it could be used to establish a bridge between the unplugged (for example, using Matryoshka dolls to demonstrate how composite functions work) and plugged-in methods (like solving spreadsheet problems in front of a computer).

Figure 4. Comparison between the 2D (left) and the 3D (right) environment.

RESULTS

Modelling

The modelling and art-related tasks of the creation process were carried out using Blender for most of the 3D models (Blender 2018), MagicaVoxel for the detached house models (MagicaVoxel, 2018) and GIMP for 2D textures and UI elements (GIMP, 2018). We decided to use these applications not just because they are freeware, but they are also popular and well-documented as well, which made it simpler to learn how to use them. The first step of the 3D modelling process was to establish an abstract environmental model. This specifically meant that we had to split the already given 2D environment into atomic elements. The abstraction provided an explicit list of 3D models we had to create one by one. This list was an efficient way to specify modelling tasks and to plan our workflow in advance (Table 3).

Table 3: Result of the abstraction process, a total of 38 3D models in the conditional counting (Forest) and the linear search (City) tasks.

Model	Scene	Number of variations
Tree	Forest	10
Bush	Forest	5
Campfire	Forest	1
Matryoshka Doll	Forest, City	10 (different textures)
House	City	9
Street lamp	City	2
Town sign	City	1

We have decided to aim for a low poly art style in our application for multiple reasons. First of all, performance is a crucial priority in educational software. When making a 3D application designed to use in schools, it is important to consider the possible hardware limitations. In addition to this, as we stated in subsection Motivation we want to target mobile platforms as well (primarily Android). Low poly art style is undoubtedly performant as it uses 3D models that only consist of a few polygons. Less polygons means less calculations for the graphics card which equals to better performance and lower system requirements for the application itself. Our second concern

was the students' perception of the visuals. The primary focus was to create the feelings of being in a video game and playfulness simultaneously in order to make the Sprego learning process more efficient. After considering a handful of options, we have decided to choose the low poly art style as it satisfied our criteria with its cartoon-like look and great performance (Figure 5).

Figure 5. A low poly tree model in Blender.

Modelling the Matryoshka dolls required a different workflow and technical approach as we had to apply textures to them. The first step was to create a doll geometry which is appropriate to act as an avatar in the application, yet looks similar to the real-world dolls. After that, the next task was to unwrap the geometry of the dolls and to draw all the different textures in GIMP. The bright and detailed textures ensured that the avatars stand out from the low poly environment, thus making the application more user-friendly. Finally, we used UV mapping to map each different texture to each doll geometry one by one (Figure 6).

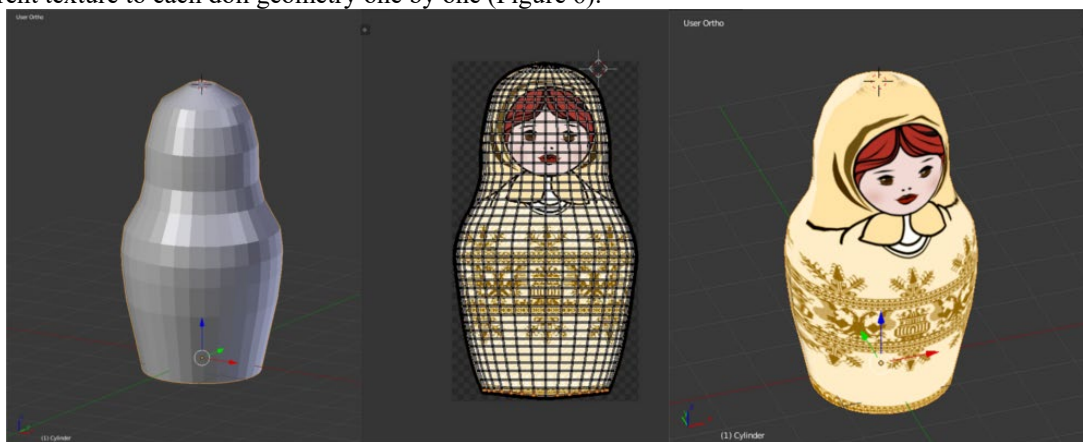

Figure 6. Applying the texture to the geometry via UV mapping.

Programming

Our software of choice was the Unity3D game engine (Unity Technologies, 2018) for the implementation process. Unity is a game engine which can be used to develop 2D and 3D applications via C# scripts and built-in tools. It is completely free for non-profit usage, and it is generally well-documented (Unity Documentation, 2018). Additionally, it is immensely popular and has a large, helpful and active developer community (Unity Forums, 2018). Furthermore, Unity is a feature-packed game engine, which made prototyping much easier compared to other available options. In addition to this, the easy learning curve and highly customizable behaviour provided the optimal workflow for our project.

Initially, we had to import all 3D models to build the environment from scratch using the Unity Editor. During this process we tweaked many settings to fit our visualization goals, including the lighting and shadows of the scenes (Figure 7). The prefab system of Unity made it possible to define reusable objects of the environment such as the dolls themselves. The primary advantage of using prefabs is that if you make any changes to the prefab, these changes are immediately reflected in all existing instances of this prefab.

Figure 7. Creating the forest scene in Unity3D.

The animation of the conditional counting algorithm works similarly to the one present in the 2D application (Csapó & Sebestyén, 2017). However, the animating process was rather different due to the differences between the nature and purpose of Construct and Unity3D. In Unity, we relied on two provided tools:

- Animation Assets and
- Unity Animator.

Animation assets are used to create frame by frame animations for any object that resides in the current project. Our task was to create a different animation for each position that the dolls can walk into, which adds up to a total of 24 animations. After that, we used C# scripts and the Animator component to control how the animation behaves. The Unity Animator is similar to a finite state machine in the following respects:

- the states reflect the current status of the animated object (a state usually equals to an animation)
- there are special states (for instance, entry point of the animation)
- transitions can be defined to change the state of the animator

With this in mind, we designed a finite state machine that gave us full control over the animation (Figure 8). This proved to be very convenient later on, as with the control that the animator provided we were able to implement useful features such as a slider that controls the speed of the animation in runtime.

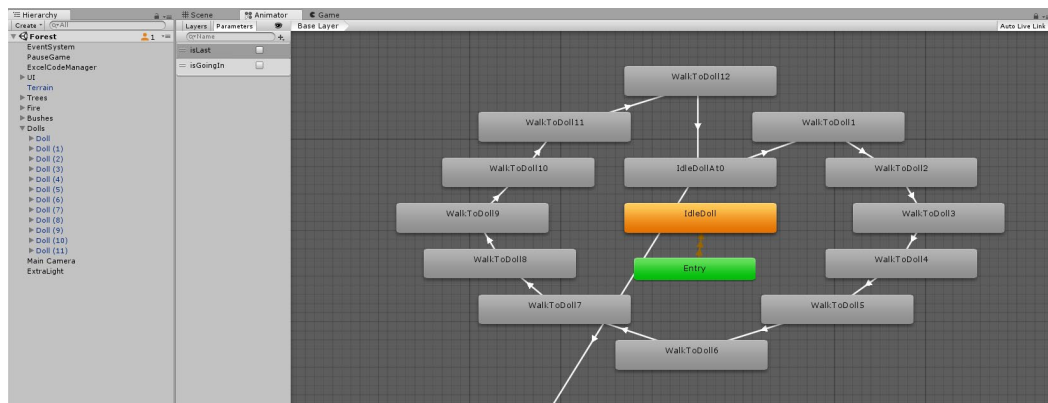

Figure 8. Part of the finite state machine that controls the forest scene.

After animating the dolls, our main focus was to assemble a user-friendly UI that can communicate easily with the animation-related components. Unity3D comes with a flexible UI system which includes many out-of-the-box UI elements such as buttons, sliders, panels and input fields. We drew fitting 2D graphics using GIMP to make the whole application visually appealing (Figure 9). Furthermore, we implemented a light setting feature which can be turned on and off with a checkbox. The reason behind this is that many classrooms are too bright during the day and we wanted to avoid the pitfall of the application being too dark while being presented with a projector under these conditions.

Figure 9. UI of the forest scene of our application.

As the last step, a localization manager system was created in order to provide multilingual support. Our primary concern was to make the system easily extendable in order to be more convenient to add more languages in the future (it currently supports English and Hungarian). The localization manager uses JSON files to store expressions as simple key-value pairs. Each language can be represented with a single data file in this way. The user can select the preferred language in the main menu from a dropdown list, and the application instantly loads the translations from the JSON file (Figure 10).

Figure 10. Changing language in the main menu of the application.

CONCLUSIONS

In conclusion, our primary focus was to create a 3D educational programme with the purpose of aiding the learning process of Sprego programming. Sprego is an alternative approach to traditional spreadsheet workflow and it relies on using composite functions and array formulae which are constructed using twelve fundamental functions (Csernoch, 2014).

Our 3D software is based on a previous research project in which the authors developed a 2D visualization application for various fundamental Sprego algorithms (Csapó & Sebestyén, 2018). Our goal was to implement the conditional counting and a linear search algorithm based on this 2D animations.

To achieve this, we had to transform the 2D environments into 3D while keeping the core aspects and advantages of the 2D solution and also implementing new features which we were able to implement because of the 3D environment. We have presented the details of our workflow and our application in the Results subsection.

In the future, we will keep developing the programme by implementing new features and algorithms and extending the range of supported languages. In addition to this, we will gather feedback from different sources in order to have reliable data that helps us in evolving the application in the right direction. Furthermore, we will deploy the software to Google Play to provide easy access for everyone. Moreover, we will test the efficiency of using this application with control groups in high schools and in tertiary education.

Abstract

Information and communication technology (ICT) is important in a rapidly changing world in which work and other activities are increasingly transformed by access to varied and developing technology. The study examined towards better E-Administration of tertiary institutions for quality Teacher education. Two research questions and one hypothesis were formulated to guide the study. The 10 college of education in the south-southern zone of Nigeria were used. A total of 240 respondents (academic and non-academic) administrators purposively selected from the 10 tertiary institutions formed the population. An observation checklist for available and functional facilities, structured questionnaire, focus group discussion for 200 level N.C.E i.e. 10 N.C.E 11 students from each institution were used for data collection. The reliability indices for the instruments obtained through cronbach alpha method was 0.93. The data collected were presented using percentages, mean and standard deviations and the null hypothesis tested at 0.05 level of significance using t-test. It was found that only very few ICT facilities such as flash drives, CD-ROMs amongst others are available. The colleges have low rate of utilization of ICT facilities in the administration of various task areas in the institutions.

Key words: *E-Administration, Tertiary Institutions, Quality teacher Education.*

The need for better Electronic administration of tertiary institutions for quality teacher education cannot be over-emphasized because to attain, interpret and implement the policies, procedures and training requirements of the would be teachers to perform their tasks as teachers within and outside the classroom requires the school administrators ability to utilize information and communication technology (ICT) tools to find, explore, analyze, exchange and present information. Administration in the 21st century has moved from the traditional setting of handling issues manually through the movement of files and documents from one office or table to the other to the transmission of information electronically through wire, wireless cables and sound waves. These changes have ushered in a new dimension which necessitates the acquisition of electronic literacy skills for educational managers and administrators. One of the indices for measuring the growth and development of any nation is hinged on her technological skilled labour force. The level of its manpower and technological skill paves way for her creativity, innovation and higher productivity. The activities in school administration encompasses all the efforts and duties of the school administrator to plan & coordinate all the human and material resources within the school for optimal achievement of the pre-determined objectives/goals of the school.

Effective and efficient data communication and networking facilities are vital to any enterprise like the education sector. For our tertiary institutions to meet their objective and compete favourably in this information age, it is expedient that the necessary information and communication technological facilities be made available in forms of modern computer laboratories, internet services and software packages like Microsoft word, Microsoft excel, data base, Microsoft power point, among others, fully installed and properly utilized. The world as a whole and Nigeria in particular is experiencing population explosion with the consequent increment in enrolment figures in our tertiary institutions each year. This increment in enrolment demands the provision of information and communication technology (ICT) facilities for more effective and efficient administration of educational institution. Such areas where the facilities are needed may include e-learning, research, online assignment, e-library, e-administration amongst others.

ICT embraces all the modern electronic techniques of processing, storing, retrieving and circulating information within and outside an organization with speed and with little or no stress. Jim, (2012) refers to ICT as all

technologies that provide access to information through tele-communications. Hooker (2009) suggested that ICT can be employed in education systems for three purposes: to widen access to education, to raise its quality and reform it. It is therefore obvious that an administrator's leadership effectiveness and efficiency, management skills and the quality of education service delivery have a direct relationship with the availability and the administrator's ability to utilize the available ICT facilities for the day to day running of the institution. An administrator cannot take any decision without information which is better obtained through ICT.

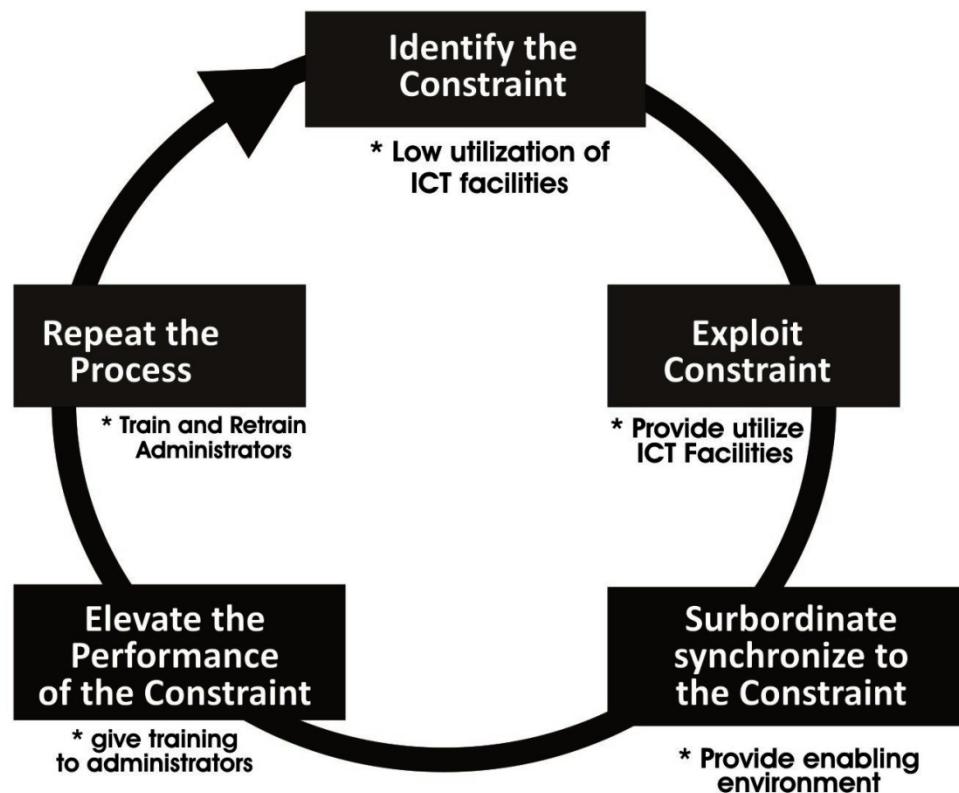

Based on this premise, it is the thrust of this paper to discuss the theme: Towards better E-administration of tertiary institutions for quality teacher education.

Theoretical Framework

This study is anchored on the theory of constraints which was propounded by Dr Eliyahu Goldratt in 1984 through his bestselling novel, 'The Goal'. The theory of constraint is a methodology for identifying the most important limiting factor that stands in the way of achieving a goal and then systematically improving that constraint until it is no longer the limiting factor. The theory of constraints takes a scientific approach to improvement.

The theory of constraints provides a powerful set of tools for helping to achieve that goal, including;

- ❖ The five focusing steps (a methodology for identify and eliminating constraints) i.e. ICT availability and utilization.
- ❖ The thinking process (tools for analyzing and resolving problems) ie Administrator's thinking process towards achieving quality teacher education through e-administration of tertiary institution.
- ❖ Throughput accounting (a method for measuring performance and guiding management decision) i.e. quality teacher education

**Fig 1: The theory of constraints uses a process known as the Five Focusing steps to identify and eliminate constraints (i.e. Bottlenecks).
Source adopted from Goldratt. 1984.**

This theory prioritizes improvement activities by trying to eliminate the current constraints, such as lack of ICT skills, high cost of setting up ICT infrastructure, unavailability of most ICT facilities is used to improve the constraints until it is completely eradicated. This will then lead to tertiary institutions achievement of effective and efficient management of different task areas such as staff personnel services, student personnel service, instructional service delivery and academic planning of tertiary institutions for quality teacher education.

Research Questions

The following research questions guided the study;

1. What ICT facilities are available for the administration of tertiary institution in south south Nigeria.
2. To what extent are the available ICT facilities adequate for effective administration of tertiary institutions in south south Nigeria.

Hypothesis

The following hypothesis was tested at probability level of 0.05 level of significance.

HO₁: there is no significant difference between the mean rating scores of academic and non-academic administrators on the adequacy of ICT facilities in tertiary institutions.

Methodology

The design of the study is descriptive survey research design. The design is also analytic survey because according to Nwankwo (2011), the variables being studied for any sample are compared for the various identified strata or categories of the sample; in this case, Academic and non-academic administrators in both federal and state government owned tertiary institutions through the use of hypothesis.

Area Of The Study

The area of study is the South-south zone of Nigeria. The states in the area include Akwa-Ibom, Bayelsa, Cross Rivers, Delta, Edo and Rivers States. These states are located in the South-Southern part of Nigeria.

Population Of The Study

The population for the study consist of 10 federal and state colleges of education in South South zone of Nigeria. The population of the respondent for this study is 240 academic and non academic administrators which consist of Dean, Heads of department, Coordinators of programmes, registrar, deputy registrars etc.

Instrument For Data Collection

In this study, a structured questionnaire and a check list for available ICT facilities and focus group discussion of selected 200 level students were instrument for data collection.

The questionnaire items were generated based on the research questions to elicit information from academic and non-academic administrators in the colleges of education in South South zone. The questionnaire, has items for answering research question 2 with response options (AV), (NA), (VAQ), (A), (LA) and (VLA) which means Available, Not available, Very adequate, Adequate, Less adequate and Very less adequate. While a checklist of 24 items was used to ascertain if these facilities are available in the colleges of education under survey and whether they are functional. A rater/researcher/research assistant is expected to identify and check those facilities available, the number available and whether they are functional.

Method Of Data Analysis

Research questions one was answered and analyzed using percentages while research questions 2 was answered using mean rating based on real limit of numbers on a four point scale as follows: 0.50 – 1.49 – Very less adequate, 1.50 – 2.49 – Less adequate, 2.50 – 3.49 – Adequate. The focus group was qualitatively analyzed.

t-test was used to test the hypothesis at $P \leq .05$

Results

Research question one

What are the ICT facilities available for the management of Colleges of Education in South-South Nigeria?

The data for answering the above research question are provided on Table 1 below.

Table 1: Frequency and percentages of ICT facilities available in colleges of Education in South-South, Nigeria (N = 10)

S/N	FACILITIES	ACADEMIC PLANNING UNIT		STAFF PERSONNEL UNIT		STUDENT PERSONNEL UNIT		INSTRUCT, SERVICE DELIVERY		TOTAL	%
		Freq	%	Freq	%	Freq	%	Freq	%

Freq = Frequency; % = Percentage. Source: FILED STUDY

Data on Table 1 reveal that items 1,2,3,5,8,9,14,19 and 20 had high frequency and percentage scores for availability of ICT facilities for the management of academic planning task area in colleges of education as follows: 7(70%), 10(100%), 7(70%), 9(90%), 10(100%), 10(100%), 8(80%), 8(80%) and 5(50%) and very low frequencies and percentages for items 4,6,7,10,11,12,13,15,16,17,18,21,22 and 23 as follows: 0(0%), 2(20%), 2(20%), 0(0%), 1(10%), 0(0%), 0(0%), 1(10%), 1(10%), 0(0%), 3(30%), 0(0%), 0(0%) and 0(0%). The summary of the checklist table for academic planning task area show that the internet-connected laptop, internet-connected computers, scanner, institutional cybercafé, CD-ROMS, flash drives, institution website, college e-mail address and computer-networking (Local Area Network) were available ICT facilities for academic planning task area in colleges of education. While Electronic library, fax(facsimile) machines, Department e-mail address, Computer Laboratory, multimedia projector, interactive board, digital camera, dept/school website, management/administrative software

packages, Risograph machine, institutionally – produced educational software, computer-Networking (Wide Area Network), Examination scoring machine (OMR), multimedia classrooms(Audio visual centre) were not available ICT facilities for academic planning task area in colleges of education in South-South, Nigeria.

The data in table 1 also reveal that items 1,2,3,5,7,8,9,14,19 and 20 exhibit high frequency and percentages scores of available ICT facilities for management of staff personnel services in Colleges of Education as follows; 10(100%), 10(100%), 6(60%), 5(50%), 5(50%), 10(100%), 10(100%), 6(60%), 8(80%) and 5(50%). There are low frequency and percentage scores for items 4,6,10,11,12,13,15,16,17,18,21,22, and 23 as follows:0(0%), 2(20%), 1(10%), 0(0%), 0(0%), 3(30%), 0(0%), 0(0%) 0(0%), 3(30%), 0(0%), and 0(0%) respectively. The summary for staff personnel services show that internet-connected laptop, internet-connected desktop computers, scanners institution cybercafé, Department/school email address, CD-ROMs, flash drives, college email address and computer-Networking (LAN) were available ICT facilities, while electronic library, fax (facsimile), machines, computer laboratory, multimedia projector, interactive Board, Digital camera, Dept/School website, management/administrative software, packages Risograph machines , institutionally produced educational software, computer-Networking (Wide Area Network), Examination scoring machine (OMR) and multimedia classrooms (Audio Visual Centre) were not available ICT facilities for management of task area of staff personnel services in Colleges of Education in South South, Nigeria.

The Table also further reveal that items 1,2,3,7,8,9,14,19 and 20 show high frequency and percentage scores of ICT facilities available for management of student personnel services as follows: 8(80%), 9(90%), 8(80%), 10(100%), 10(100%), 10(100%), 7(70%), 8(80%), and 5(50%). There are low frequency and percentages scores for items 4,5,6,10,11,12,13,15,16,17,18,21,22, and 23 as follows: 0(0%), 4(40%), 2(20%), 0(0%), 1(10%), 0(0%), 0(0%), 4(40%), 0(0%), 1(10%), 1(10%), 3(30%), 0(0%), 0(0%), and 0(0%) respectively. The summary of the checklist for task area of student personnel services show that internet-connected laptop, internet-connected desktop computer, scanner, Dept/School email address, CD-ROMs, flash drives, institution website, Colleges email address and computer-Networking (WAN) were available ICT facilities, while electronic library, institutional cyber café, fax (facsimile) machines, computer laboratory, multimedia projector, interactive Board, digital camera, Dept/School website, management/Administrative software packages, Risograph machines, institutionally – produced educational software, Computer – networking (WAN) Examination scoring machine (OMR) and multimedia classrooms (Audio Visual Centre) were not available ICT facilities for management of task areas of student personnel services in College of Education in South South, Nigeria.

The findings is in line with the results of the focus group discussion for students' in the colleges of education which revealed that internet services are not always available and functional, hence the students' are always left at the mercy of private cybercafé's providers outside the school. In addition, the few available ICT facilities are not accessible to student to the extent that some students have not come near the computers since they were admitted into the college.

However, the table finally reveal that items 1,2,3,4,5,8,9,11,12,13,14 and 23 show high frequency and percentage scores respectively of ICT facilities available for instructional services as follows: 10(100%), 8(80%), 9(90%), 7(70%), 9(90%), 10(100%), 10(100%), 7(70%), 6(60%), 10(100%), 7(70%), and 5(50%) and low frequency and percentage scores for items 6,7,10,15,16,17,18,20,21,22 and 23 as follows: 3(30%), 2(20%), 4(40%), 4(40%), 1(10%), 1(10%), 1(10%), 4(40%), 3(30%), 0(0%), and 0(0%) respectively. Therefore, the table shows that internet-connected laptop, internet-connected desktop computers, scanner, electronic library, institution cybercafé, CD-ROMs, flash drives, multimedia projector, interactive Board, Digital Camera, institution website, college email address and multimedia classrooms (Audio Visual Centre) are available ICT facilities for management of different task area in colleges of education. Fax (facsimile) Machines, Department/School email address, computer laboratory, department/ school website, management/administrative software package, risograph machines, institutionally-produced educational software, computer-Networking (LAN) Computer-Networking (WAN) and OMR reader or examination scoring machine (OMR) are not available ICT facilities for management of different task area in colleges of education in South South, Nigeria. The ICT facilities that are available for the management of colleges of education in South South Nigeria are Internet-connected laptop, Internet-connected desktop computer, scanner, institutional cybercafé, departmental/school email address, CD-ROMs, flash drives, institution website, college email address, computer-Networking (Local Area Network).

Research Question Two:

To what extent are the available ICT facilities adequate for effective management of staff personnel services, Students affairs, instructional management and Academic planning of colleges of education?

The data for answering the above research question are provided on Table 2.

Table 2: Mean and standard deviation of adequacy of available ICT facilities in the management of colleges of education. (N = 240)

S/NO	ICT FACILITIES	Mean x	Std. Deviation	Decision	Mean of TASK AREAS			
					Staff.	Student.	Instr.	Acad. P

Source: field study

Table 2 showed the mean and standard deviation of adequacy of available ICT facilities in the management of colleges of education in South-South Nigeria. Items 1 to 4 have low scores of 2.13, 2.24, 2.13, and 2.08 with standard deviation of 1.11, 1.12, 1.01 and 0.96 respectively. These indicate that: internet connected laptops,, internet connected desktop computers, scanners and electronic library were less adequate for the management of colleges of education. Item 5 has a mean score of 2.57 and standard deviation of 1.09. This means that institutional cybercafé was adequate for the management of colleges of education. Items 7 and 8 have means scores of 2.91 and 2.80 with standard deviation of 1.09 and 1.10 respectively. These show that CD-ROMs and flash drives were adequately available for the management of colleges of education. Items 9 – 13 have low mean scores ranging from 1.92 to 2.30 with standard deviation ranging from 0.92 – 1.10. these mean that Department/School website (x = 2.30, SD = 1.02), Computer laboratory. (x = 2.19, SD = 0.98), multimedia projector (x = 2.20. SD = 1.06), interactive board (x = 1.92, SD = 1.08), Digital Camera (x = 2.20, SD = 1.10) were less adequate for management of colleges of education. Item 14 have a mean score of 2.85 and Standard Deviation of 0.92. This indicates that institutional website was adequate for the management of colleges of education. Item 15 has a mean score of 2.33 and Standard Deviation of 1.11. This indicates that management/administrative software packages were less adequate for the management of colleges of education. Item 16 have a mean score of 2.04 and Standard Deviation of 1.07. This shows that Risograph machines

(RZ) were less adequate for the management of colleges of education; Item 17 has a mean score of 1.87 and standard deviation of 0.82. This means that institutional produced educational software was less adequate for the management of colleges of education. Item 18 have a mean score of 2.13 and standard deviation of 0.98. This means that computer-networking (Local Area Networking) was less adequate for the management of colleges of education. Item 19 have a mean score of 2.00 and standard deviation of 0.92. This means that computer-networking (Wide Area Network) was less adequate for the management of colleges of education. Item 20 and 21 have mean scores of 1.52 and 2.14 with standard deviations of 0.89 and 1.08 respectively. These mean that examination scoring machine (OMR) and Department/School email addresses were less adequate for the management of colleges of education. Items 22 and 23 have high mean scores of 2.86 and 2.55, and standard deviation of 0.81 and 1.06. These indicates that colleges email address and CD players were adequate for the management of colleges of education. Items 24 have mean scores of 2.03 with standard deviation of 0.93. These indicate that multimedia classroom (Audio Visual Centre) were less adequate for the management of colleges of education. Finally the cluster mean 2.33 and standard deviation of 0.70 indicate that ICT facilities were less adequate for the management of colleges of education in South South, Nigeria. Specifically ICT facilities for staff personnel services with a mean of 2.40, student personnel service 2.30, Instructional service delivery with a mean score of 2.05 and Academic planning with a mean score of 2.05 are less adequate.

Educational Implications

The findings of this have far reaching educational implications for quality teacher education in Nigeria in particular and the global community in general. The results have provided empirical evidence of low state of availability and poor ICT utilization in the administration of colleges of education in South South Nigeria toward E-administration of tertiary institutions for quality teachers education.

The implications of the finding are that the tertiary institutions are not ICT- compliant in the administration of the task areas.

Recommendations

1. The government should equip school ICT laboratories with functioning computers and internet services.
2. The government should institute and enforce ICT literacy and utilization as criteria for promotion of both academic and non-academic administrators in tertiary institutions.

Abstract

The Federation of Musical Societies of the Valencian Community (FSMCV) is a democratic association started 50 years ago, which represents and provides support to the 550 associations that integrate it, has the goal of promoting, spreading, and teaching music. It promotes associations and provides society with a way of developing cultural articulation, mainly carrying out its activities within the Valencian Community, although its activity at national and international level is quite notable. This article describes one of the proposals made to commemorate the 50th anniversary of the FSMCV. The Soundcool collaborative creation system was a key part of this project, over 100 students from music schools of the Valencian Community played with their own mobile devices. The creative framework helped by the staging of a story where the main character travelled throughout the Valencian territory favoured the creation of different soundscapes related to the places the protagonist visited. With the proposal of the FSMCV, we reinforce creative commitment through the production of sound by the students of the music schools. The analysis of the experience and the results obtained from introducing elements and creative strategies through new digital tools such as Soundcool, allow for new spaces in the teaching of music students further integrating contemporary languages and creativity, as well as favoring their digital competence.

Türkiye İsviçre Ve Finlandiya Ülkelerinin Okul Öncesi Öğretmenliği Yerleştirme Programları Ve Çok Kültürlülük Bağlamında Karşılaştırılması

Özet

Bu çalışmanın amacı Türkiye'de, İsviçre'de ve Finlandiya'da uygulanan okul öncesi öğretmen yetiştirme programlarını çok kültürlülük bağlamında incelemektir. Ayrıca üç ülkedeki okul öncesi öğretmen yetiştiren kurumların giriş koşulları, öğretim süreçleri, okul deneyimi ve öğretmenlik uygulamaları, program boyunca alınan dersler, programları bitirme ve öğretmen olabilme koşullarıyla ilgili benzerlikler ve farklılıklar karşılaştırılmıştır. Karşılaştırmalı araştırmalarda kullanılan yaklaşımlardan olan yatay ve tanımlayıcı yaklaşımlar bu çalışmada kullanılmıştır. Araştırma bulguları Türkiye'de çok kültürlü bir programın uygulanmadığını, buna karşın İsviçre'de ve Finlandiya'da çok kültürlü bir programın yer aldığını işaret etmektedir.

Anahtar kelimeler: Okul Öncesi Öğretmen Yetiştirme Programı, Türkiye, İsviçre, Finlandiya, Çok-kültürlülük..

Türkiye’de Arapça İlahiyat Programında Yürütülen Siyer ve İslâm Tarihi Dersi Öğretimindeki Bazı Problemler ve Öğrenci Beklentileri Üzerine Değerlendirmeler

Dr. Öğr. Üyesi Ali DADAN

Necmettin Erbakan Üniversitesi Ahmet Keleşoğlu İlahiyat Fakültesi Konya/Türkiye
alidadan@hotmail.com

Öz

Türkiye’de son dört yıl içerisinde öğretim vermeye başlayan Arapça İlahiyat programında Türkçe ilahiyat programlarında olduğu gibi Siyer ve İslam Tarihi dersi bulunmaktadır. Bu dersler birinci ve ikinci sınıfta her iki dönemde de zorunlu olarak yürütülmektedir. Tebliğimizde Türkiye’de Arapça ilahiyat programında yürütülen Siyer ve İslam tarihi dersi öğretimindeki bazı problemler üzerinde durularak bu konudaki öğrenci beklentileri üzerine değerlendirmelerde bulunulacaktır. Problemlerin tespit edilmesinde ve değerlendirmeler yapılabilmesi için Necmettin Erbakan Üniversitesi Arapça ilahiyat Programında okumak da olan öğrencilere bir anket yapılarak bu programın içerisinde Siyer ve İslam Tarihi dersinin mevcut durumunu betimlenmeye çalışılmıştır.

Özet

Sosyal medya, kişilerarası ilişkilerden toplumsal kültüre birçok alanda olduğu gibi siyasal iletişim bağlamında da dönüşüm heyecanı yaratmıştır. Özellikle Twitter, demokratikleşmeye öykünen akademik çalışmalara konu olmaktadır. Kuşkusuz, Twitter üzerinden oluşan siyasal tartışmaların yapıldığı yeni bir kamusal alanın varlığı inkar edilemez. Ancak, bu kamusal alanın niteliği tartışmalıdır. Zira, yeni kamusal alanın demokratik katılıma ne ölçüde etkili olduğu halen belirsizliğini korumaktadır. Şimdilerde, Twitter bir demokrasi idealinin yeni merkezi gibi görünmektedir. Bu çalışmada, Twitter’ın demokratikleşme idealine ne kadar yakın durduğu Müzakereci Demokrasi Modeli çerçevesinde araştırılmıştır.

Çalışmada, demokratikleşme bağlamında öğrencilerin Twitter’da siyasal gündemi takip etme, içerik paylaşma ve tartışma potansiyelini ölçme sorularından oluşan Likert tipi anket tekniğinin kullanıldığı nicel yöntem uygulanmıştır. SPSS 20 programı ile yapılan analiz sonucunda, öğrencilerin Twitter’ı sıklıkla kullandıkları, ancak Twitter’da siyasal katılım gerçekleştirme oranlarının düşük olduğu görülmüştür.

Anahtar Kelimeler: Sosyal Medya, Siyasal İletişim, Siyasal Katılım, Müzakereci Demokrasi Modeli, Twitter, Demokratik Katılım.

Giriş

Dünya, küreselleşme sürecine girmezden önce, medya/geleneksel medya merkezîyetçi bir yapıya sahipti. Ya iktidarların ya da uluslararası güçlerin tekelindeydi. Küreselleşen dünyada ise, internet teknolojilerinin gelişmesiyle birlikte medya araçları da değişime uğramıştır/uğramaktadır. Bu değişim karşımıza yeni medya kavramını çıkarır. Ve yeni medya, geleneksel hegemonyaları yıkmaktadır. Karagöz (2013), yaşanan yeni teknolojik devrim ile yeni bir toplumsal dönemin başladığına işaret etmektedir. Yeni medyayı, “artan bilgi, bireysel iletişime imkan sağlaması etkileşim ve evrensel erişim imkanı sağlaması gibi özelliklerinden dolayı katılımcı demokrasiyi gerçekleştirecek bir araç olarak” (s. 134) değerlendirmektedir. Nitekim, yeni medya, özellikle de sosyal medya dediğimiz iletişim ağları tüm dünyada demokrasi adına önemli bir güç olarak kendini göstermiştir. Bu anlamda, sosyal medyanın özellikleri demokrasi adına elverişli görünmektedir.

Sosyal medyanın katılım özelliği “ilgili olan herkesten geri bildirim almayı ve herkesin katkı sağlamasını teşvik etmektedir” (Aydın, 2015, s.89). Diğer yandan, mesajı gönderen ile alıcı arasında etkileşim sağlamaktadır. Ve bu etkileşim anında gerçekleşmektedir. Sosyal medyanın demokrasi bağlamında bir diğer önemli özelliği topluluk ve grupların hızla ve kolayca oluşmasına imkan tanımasıdır. Aynı şekilde, “sosyal medya ortamında iletişim ağı zincirleme biçimde kurulur. Örneğin, Facebook’ta arkadaşlık kurduğunuz birinin kendi arkadaş grubu da olduğu gibi sizin Facebook alanınıza eklenmiş olur” (Aydın, 2015, s.89). Sosyal medya bu özellikleriyle tüm insanlar için özgürlük fikrini çağrıştırmaktadır. Bu özgürlük, her kimlikten farklı bireyin kendilerini ifade etme olanağına kavuşmasını sağlamıştır. Örneğin, toplumlar dünyanın bir ucundaki insanların kendilerinden daha demokratik bir ortamda yaşadıklarını öğrenebildikleri gibi, başka toplumların yaşadıkları sıkıntılardan da haberdar olmaya başlamışlardır. Diğer yandan, sosyal medya sayesinde politikacılar ve toplum arasındaki etkileşimin arttığı da görülmektedir. Bu da, demokrasi ve özgürlük taleplerinin daha fazla ifade edilmesini sağlamaktadır (Çıldan, Ertemiz, Tumuçin, Küçük ve Albayrak, 2012).

Siyasal iletişim alanında ise sosyal medya, bir yandan siyasi partilere ve liderlere, siyasal iletilerini hedef kitlelere anında ve kolayca iletme, diğer yandan seçmenlere siyasal parti ve liderlerle etkileşime girme, siyasete katılma, içerik yayma ve kendi içeriğini oluşturma imkânı sağlamaktadır (Binark, 2009). Bu durum, siyaset kavramına da yeniden bakma ihtiyacını doğurmaktadır. Siyaset, bir iktidar mücadelesi olarak ya da değerlerin bölüşüm süreci olarak ya da değerlerin bir otoriteye dayanarak dağıtım süreci olarak tanımlanabilen geniş bir kavramdır (Kapani, 1992, s. 19-22). Bu bağlamda, hem bir çatışma alanı olarak görülmekte hem de bir uzlaşma ortamı anlamı taşıyabilmektedir. Sosyal medya ile birlikte, siyasetin ve siyasal iletişimin uzlaşma kültürüne, başka bir ifade ile demokratikleşmeye daha yakın durduğu yolunda bir kanaat oluşmuştur. “Facebook, Twitter, Youtube gibi sosyal paylaşım ağları milyonlarca insanı toplayarak yeni bir kamusal alan sağlarken, muhalif seslerin de yükseldiği yeni agoralar gibi değerlendirilmektedir. Özellikle Ortadoğu’daki büyük değişimle birlikte yaşanan süreçte yeni medya devrimci bir medya gibi ileri sürülmektedir ” (Karagöz, 2013, s. 132).

Kamusal alan kavramı, kamunun ne olduğu ve kamusal alanda kimlerin yer alacağı ile ilgili olarak üzerinde çokça tartışılmış bir kavramdır. Örneğin, Emmanuel Kant sadece özel mülk sahiplerinin kamusal alanda yer alabileceklerini yani burjuva kamusallığını savunurken, Karl Marx ücretli işçiler de dahil olmak üzere, herkesin kamusal alanda söz söyleme hakkına sahip olduğunu söyler (Habermas, 2017, s. 199-234). Habermas'a (2017) göre, "kamusal alanın asıl ödevi bir toplumun siyaset ile ilgili eleştirel kamusal tartışmada akıl yürütmesidir" (s. 52). Bugün, sosyal medyanın etkinliği Habermas'ın idealize ettiği toplumun bütün bireylerinin katılabilirdiği ve eleştirel akıl yürüttüğü kamusal alan fikrini yeniden canlandırmıştır. Sosyal medya platformlarının, pek çok kullanım tercihinin yanı sıra bu amaç için de kullanıldığını söylemek ise yanlış olmaz. Akademik çalışmalarda, örneğin Twitter'in *Arap Baharı*, *Wall Street'i işgal et* ve *Gezi Parkı* hareketlerindeki etkinliği bu duruma örnek gösterilmektedir (Köseoğlu ve Al, 2013).

Buna göre, devlet ile ilişkilerinde daha önce pasif konumda olan halk kitleleri sosyal medyanın gücü ile aktif hale gelmişlerdir. Bu durum önceden yerleşmiş geleneksel sistemin kültürel kodlarını birey merkezinde değiştirmiştir. Twitter gibi sosyal medya araçları sayesinde sosyal medya kişinin kendini ifade edebilmesini, kendini ait hissettiği örgütlü yapılara dâhil olmasını sağlayan bir platforma dönüşmüştür. Bu tip sosyal medya araçları organizasyon kurmak, organize olmak, fikirleri paylaşmak, belli inanç ve düşünceler etrafında toplanabilmenin yolunu açmıştır. Bu yeni yapı, rejim değiştirmeye yönelik hareketleri başlatmak üzere kamuoyunu harekete geçirecek güce değerlendirilmektedir (Eren ve Aydın, 2014, s. 198). Bir mikroblog uygulaması olan Twitter, sosyal medya platformları arasında oldukça popülerdir. "Mikroblog uygulaması; blog, anlık mesaj ve durum güncelleme gibi unsurları bir araya getiren devrim niteliğinde melez bir iletişim yöntemidir. Buna olanak veren olgu da, katılım ve geribildirimle dayalı bu kadar akıcı bir sosyal ağ içerisinde bu tür kısa güncellemeleri yayımlamanın kolaylığıdır" (Dağıtmaç, 2015, s. 51). Twitter, günümüzün en popüler mikroblog uygulaması olarak değerlendirilmektedir. Zira bütün dünyada, yaygın ve yoğun bir şekilde kullanılmaktadır (Dağıtmaç, 2015, s. 54).

Türkiye, sosyal medyanın siyasal hayattaki varlığına, gerçek anlamda ilk defa *Gezi Parkı Direnişi* sırasında Twitter'daki enformasyon trafiği ile şahitlik etmiştir (Binark, Karataş, Çomu ve Koca, s. 125). Bu noktada, sosyal medyanın gerçekten demokratikleşmeye hizmet edip etmediği tartışılması gereken bir konudur. Zira, bireylerin sosyal medyada siyasi içerik paylaşarak ya da tartışmalara katılarak sanal bir aktivizm içinde oldukları, bu faaliyetlerin demokratikleşmeye zannedildiği gibi fayda sağlamayacağı da diğer bir karşıt görüştür (Morozov 2009'dan Aktaran Fuchs, 2016, s. 260). Sosyal medyanın eleştirisinde, Twitter *sözde bir kamusal alan* olarak değerlendirilmektedir. Bu yaklaşımın en önemli dayanağı, "Twitter'da güçlüler (özellikle eğlendirici kişiler ve ünlüler) toplanma ve örgütlenme özgürlüğü alanında tanıtım açısından etkili ve siyasal açıdan belirleyici bir oligopolü ellerine tutarlar" (Fuchs, 2016, s. 278) biçiminde ifade edilmektedir. Dolayısıyla, Habermas'ın söylediği gibi kamusal alan burjuva sınıfının tekelinde olmaya devam mı etmektedir?

Şener, Emre ve Akyıldız'ın (2015, s. 91), sosyal medyanın siyasal katılıma etkilerini inceledikleri çalışmalarında *Gezi Parkı Direnişi* ile ilgili anket sonuçlarına göre yaptıkları değerlendirmede, Türkiye'de Twitter'ın zannedildiği gibi yaygın olmadığını, katılımcıların büyük çoğunluğunun protesto gösterileri ile ilgili haberleri televizyon ya da gazetelerden takip etmeyi tercih ettiklerini, Twitter'ın bu anlamda önemli bir etkisi olmadığını ifade etmişlerdir. Bu sonuç, Türkiye'de Twitter kullanıcılarının bir kamusal alan oluşturma potansiyeli hakkında bir kez daha düşünmeyi gerektirmektedir. Böylelikle, Türkiye'de sosyal medyanın demokratik katılıma ne ölçüde etki ettiği anlaşılabilmektedir.

Amaç

Sosyal medya eleştirisinde, teknolojik determinizm kavramsallaştırmasına göre, teknoloji ya olduğundan daha iyi ya da daha kötü algılanmaktadır/algılanması sağlanmaktadır. Buna göre teknolojik determinizm, tekno-iyimserlik ve tekno-kötümserlik olarak iki açıdan ele alınmaktadır. Tekno-iyimserlik, Twitter devrimine ve Twitter'ın kamusal alanı demokrasinin lehine güçlendireceğine dair inançla ilgilidir. Tekno-kötümserlik ise, 2011 yılında İngiltere'de meydana gelen isyanlarda, isyancıların *Twitter Çeteleri* olarak adlandırılmasıyla başlamış, hırsız ya da haydutların Twitter'ı amaçları doğrultusunda kullandıklarına dair olumsuz inançtır (Fuchs, 2016, s. 279).

Eleştirel kurama göre, Twitter konusunda bu denli iyimser ya da kötümser olmak teknolojinin gücünü abartmak yani teknolojik determinizmdir. Teknolojik determinizm kavramı, kabaca bütünü görebilme sorunsalına işaret etmektedir. Örneğin eleştirel kuramcılar, teknolojik determinizmin, olayların ya da olguların ekonomi politik boyutunu görememekten kaynaklandığını savunmaktadırlar (Fuchs, 2016, s. 281). O halde, bütünü görebilmek adına günümüzün ekonomi politik koşullarını akılda tutmakta fayda vardır. Dünya, Soğuk Savaş'ın sona erdiği tarihten günümüze küresel liberal politikaların yön verdiği bir sistemde dönmektedir. Ve tanık olduğumuz demokrasi kavramı bu sistemin dışında düşünülemez. Buna göre; "İnternet temsili demokratik sisteminin kurumsal sınırları içerisinde işleyen ve işlevleriyle bu sisteme katkı sağlayan bir konuma sahiptir" (Demirhan, 2017, s. 179). Aynı şekilde, Aziz'in (2003), "belli ideolojik amaçlarını, toplumda belli gruplara, kitlelere, ülkelere ya da bloklara kabul ettirmek ve gerektiğinde eyleme dönüştürmek, uygulamaya koymak üzere siyasal aktörler tarafından çeşitli iletişim tür ve tekniklerinin kullanılması ile yapılan iletişim" (s. 3) biçimindeki siyasal iletişim tanımı mevcut sistem içinde yadırganamaz. Diğer yandan, siyasal iletişimin "siyasette denetim ve şeffaflığı sağladığı" (Özkan, 2004, s. 38) yönünde bir yaklaşım da mevcuttur. Bu yaklaşım, siyasal iletişimin demokratikleşmesine vurgu yapmaktadır.

Demirhan (2017), liberal demokrasi, müzakereci demokrasi ve agnostik demokrasi yaklaşımlarını ele aldığı çalışmasında, demokrasi ve siyasal katılım hakkında geniş bir kapsam sunmaktadır. Buna göre; “Liberal modelde siyasal iletişim sürecinde katılımcı demokrasi anlayışından farklı olarak tabandan katılım aktörlerini güçlendirmek gibi bir hedef bulunmamaktadır. Bu modelde siyasal elitler siyasal iletişim sürecinde etkin olan temel aktörlerdir” (s. 178). Müzakereci demokrasi modelinde ise, sadece oy kullanmak siyasal katılım anlamına gelmemektedir (Demirhan, 2017, s. 179). Müzakereci demokrasi modeli, müzakere kavramının esasları üzerinde temellenmektedir. Müzakerenin usülleri, “iletişim sürecinde eşitlik, özgürlük, katılım, rasyonellik ve etkileşim öğelerini düzenlemeye yöneliktir” (Demirhan, 2017, s. 181). Bu modele göre, siyasal iletişimin amacı, ortak karar alma ve rasyonel uzlaşa sağlamaktır. Ayrıca, siyasal iletişim ortamı dikey bir hiyerarşik bir alan olarak değil yatay biçimde örgütlenmiş iletişim ağlarını ifade etmektedir (Demirhan, 2017, s. 182). Dolayısıyla, yeni medya ve sosyal medya platformlarının müzakereci demokrasi modeli için çok uygun bir ortam hazırladığını söylemek zor değildir.

Özellikle, mobil iletişim teknolojilerinin yaygınlaşması, herkesin doğal bir şekilde bu yeni ortamda yer almasını sağlamaktadır. Sosyal medya platformları, insanların yazılı ve görsel pek çok içeriğe ulaşmasına ve kendi içeriklerini paylaşmasına imkan sağlayan yeni bir yaşam biçimini oluştururken, her türlü sosyal medya platformuna erişim sağlayan akıllı telefonların sahneye çıkmasıyla bu yeni yaşam biçimi durmadan pekişmiştir/pekişmektedir. O halde, müzakereci demokrasi modelin işlerlik kazanması büyük ölçüde sosyal medya kullanıcılarına bağlıdır. Bu noktada, ilk olarak mobil iletişim teknolojilerini ve sosyal medya platformlarını etkin bir şekilde kullanan genç nüfus akla gelmektedir. Özkan’a göre (2004), gençler internetin imkanlarını kullanarak siyasal aktörleri daha iyi tanıyabilmekte ve siyasal gündemden haberdar olarak ülke sorunlarına karşı duyarlı hale gelmektedirler (s. 97). Şener, Emre ve Akyıldız (2015), “ ‘örgütsüzlerin’, genç kuşağın, toplumda sınırlara itilen kimliklerin bulunduğu *Gezi Parkı Direnişi*, sosyal medya kullanımını da etkileyerek sosyal ağları direnişin mekânları haline getirmiş, yeni alternatif katılım ağlarının doğmasına vesile olmuştur” (s. 97) şeklindeki yorumlarıyla, gençlerin demokratikleşme anlamında önemli bir rol üstlendiğine dikkati çekmektedirler.

Bu beklenti, teknolojik determinizm değerlendirmesinin dışına çıkmayacak bir hayal midir? Yoksa, müzakereci demokrasi modelinde olduğu gibi, Türkiye’de sosyal medya platformlarının katılımcı, özgür, eşitlikçi bir siyasal iletişimi sağlama noktasında beklenen etkinliği gösterme potansiyeli var mıdır? Bu sorular, halen belirsizliğini korumaktadır. Bu nedenle, Twitter aracılığı ile yürütülen siyasal faaliyetlerin Türkiye’de gençleri ne oranda etkilediği ve yönlendirdiği incelenmeye değer görülmüştür. Böylece, Twitter’da hız kazanmış görünen siyasal iletişimin gerçek dünyada siyasal katılımı ve demokratikleşmeyi artırıp artırmadığının müzakereci demokrasi modeli bağlamında ortaya konulması amaçlanmıştır.

Önem

İnternetin gelişimi siyasal tartışmalar ve siyasal katılımın sanal ortamda da yapılmasını mümkün kılmıştır. İletişim teknolojilerindeki gelişmeler ve internet, sanal platformda yeni bir kamusal alan sağlamış ve demokrasi olgusu gitgide sanallaşmaya başlamıştır. Bu durumun olumlu yanı katılım düzeyinde artış sağlaması fikridir. Küreselleşmenin öne çıkan iletişim aracı olan internet toplumsal muhalefetin etkileşimini artırmıştır. İnternet, kullanıcıların ortak bir siyasal bilince ulaşmalarını sağlamaktadır. Bu da egemen güç karşısında doğrudan muhalefet sergileyebilme olanağını doğurmaktadır (Karaçor, 2009).

Diğer yandan, geleneksel medyanın güvenilirliğinin tartışmalı olduğunu söylenebilir. Bu güvenilirlik sorununa karşı halkın isteklerini ve şikâyetlerini hükümete iletebilmesi sürecinde de en önemli araç internettir. İstek ve şikâyetlerin yazarak yönetime iletebiliyor olması iletişim teknolojilerindeki gelişmelerin katılım mekanizmasını geliştirdiği ve yönetimleri daha aktif kıldığını gözlemlemekteyiz. İnternetin temsili sisteme aracılık eden bir teknoloji olduğunu söyleyebiliriz. İnternetin bilgi yayılmasındaki hızı ve ucuzluğu siyasi kampanyalara önemli katkıları olan bir yapı haline gelmesini sağlamıştır. Yeni iletişim teknolojileri siyasal iletişimi geliştirici ve yaygınlaştırıcı faaliyetler üstlenmişlerdir. Bu faaliyetler ile yeni medya ve sosyal medya platformları çoğulcu ve katılımcı bir sistemin oluşturulmasında önemli bir noktada bulunmaktadırlar (Karaçor, 2009).

Sosyal medya platformları bu anlamda beklentilerle doludur. Özellikle Twitter, tüm dünyada *Arap Baharı*, *Wall Street’i İşgal Et* gibi hareketler nedeniyle, devrimsel bir anlama bürünmüştür. Öyle ki, bu hareketler *Devrim* (Bostancı, 2014, s. 88) olarak değerlendirilmiş, demokratikleşme ve siyasal katılım anlamında yeni bir umudun oluşmasına yol açmıştır. Örneğin, *Arap Baharı* 2010 yılında başlayan bir dizi sokak hareketleri zinciridir (Milliyet, 2013, 2 Ağustos). *Arap Baharı* sürecinde halkların meydanlara akın etmesinde sosyal medyanın etkisinin hayli fazladır. Akıllı telefonlar ile insan hakları ihlalleri ve olumsuzluklar anında dünyaya servis edilebilmiştir. Hatta, buna karşı koyamayan diktatörler koltuklarını bırakmak ya da daha demokratik haklar sunmak zorunda kalmışlardır (Toprak, 2014, s. 242-248).

New York’ta 17 Eylül 2011’de aktivistler tarafından başlatılan Wall Street’i İşgal Et hareketi de benzer biçimde sosyal medya aracılığı ile kısa zamanda Amerika’ya hatta dünyaya yayılmıştır. Hareketin amacı, özetle küresel ekonominin kurallarını belirleyen bankalar, çokuluslu şirketler ve zenginlere karşı mücadele etmektir. Wall Street’i İşgal Et, *Arap Baharı*’nın taktiklerini model almıştır (İhlas Haber Ajansı, 2011, 6 Ekim). Bu taktikler başarılı olmuş olacak ki, hareket kısa zamanda diğer ülkelere de yayılmıştır. Dünyanın birçok şehrindeki borsa

piyasalarına karşı aynı gün içerisinde protesto gösterileri ve işgal et kampanyaları başlatılmıştır. Bu harekette, Twitter, Facebook, Youtube ve hareketin resmi sitesi *occupywallst.org* organizasyon için etkin bir şekilde kullanılmıştır (Çıldan, Ertemiz, Tumuçin, Küçük ve Albayrak, 2012). Ancak, aktivistlerin liderliğinde gerçekleşen (Köseoğlu ve Al, 2013, s. 114) her iki hareketin de, demokrasi bağlamında bireylerin sosyal platformlarda oluşturduğu bir kamusal alan olup olmadığı ise tartışmalı bir konudur. *Gezi Parkı Direnişi* ile ilgili olarak da benzer şüpheler bulunmaktadır (İhlas Haber Ajansı, 2013, 1 Haziran). O halde, öncelikle neyin demokratik katılım olduğunu açıkça ortaya koymak, bir grup insanın her hareketini demokratikleşme olarak nitelendirmeye yönelik karışıklığı ortadan kaldırmak gerekmektedir.

Demokrasinin en bilinen tanımı, halkın yönetime katılmasıdır (Karaçor, 2009, s. 123). Dolayısıyla, siyasal katılımı zaten kendiliğinden ifade eder. Sosyal medyanın siyasal katılımı arttırmadığından elbette söz edemeyiz. Ancak bu katılım, liberal sistemin kuralları çerçevesinde gerçekleşmektedir. Başka bir ifadeyle, siyasal katılımın var olması katılımcı demokrasinin var olduğu anlamına gelmemektedir. Diğer yandan, Twitter aracılığı ile yayılan toplumsal hareketler, temsili demokrasiden katılımcı demokrasiye geçişin mümkün olup olmadığını tartışmaya açmıştır. Bu durum bizleri demokrasi üzerine yeniden düşünmeye sevk eder. Robert A. Dahl, demokrasinin beş ana kriterini belirlemiştir. “Bunlar; etkin katılım, oy kullanma eşitliği, bilgi edinebilme, gündem üzerine son sözü söyleme hakkı ve yetişkinlerin dahil olmasıdır” (Dahl, 2001’den Aktaran Karaçor 2009, s. 123). Bu kriterler arasında, siyasal katılım açısından kilit kavram *gündem üzerinde son sözü söyleyebilme* hakkıdır. Türkiye’de *Gezi Parkı Direnişi* de akademik olarak bu kapsamda değerlendirilmeye çalışılmıştır. Fakat, *Gezi Parkı* eylemlerinde Twitter’a yüklenen anlamın ne oranda gerçekçi olduğu ve eylemleri hazırlayan ve oluşturan nedenlerin ve Twitter’ın etkinliğinin iyi değerlendirilip değerlendirilmediği tartışmalıdır. En önemlisi, Türkiye’de üzerinden yaklaşık dört yıl geçen *Gezi Parkı Direnişi* sonrası katılımcı demokrasi anlamında bir ilerleme kaydedilip kaydedilmediğidir.

Bu çalışmada, Türkiye’de Twitter ile ilgili katılımcı demokrasinin gerçekleşmesine yönelik inancın doğruluğu ortaya konulmaya çalışılmıştır. Çalışma, sosyal medya aracılığıyla oluşan siyasal hareketler ile sınırlı tutulmamış, demokratik katılımın bütün kriterleri göz önüne alınarak, bireylerin Twitter’da gerçekleştirdikleri siyasal faaliyetler değerlendirilmeye çalışılmıştır. Bu anlamda, alana Twitter çerçevesinde kapsamlı bir demokratik katılım perspektifi kazandırılması umulmaktadır.

Kuramsal Temel

Hepimizin bildiği üzere ideal ve arzulanan demokrasi tipi doğrudan demokrasidir. Ancak teorik olarak en ideal sistem olsa da pratikte uygulamada bu sistemin modern devasa nüfus kitlelerinden oluşan sistemlerde uygulanabilmesi en azından günümüzde pek mümkün değildir. Doğrudan demokrasinin uygulanabilirliğinin durumu daha işleyebilir model olarak *temsili* kavramını içeren demokrasi yapısını ortaya çıkarır. Temsili yapısına bağlı olarak, birçok farklı demokrasi kavramı karşımıza çıkar (ekonomik, sosyal, ilerici, radikal, birleştirici, liberal vs.). Uygulanan yapıdan ideal kabul edilen demokrasi modeline doğru gidildikçe modern demokrasi yapıları belirginleşmeye başlamıştır. Bunlardan en öne çıkanı temsili, çoğulcu ve katılımcı demokrasi olarak karşımıza çıkar. Son yıllarda müzakereci demokrasi kavramının da bunlara eklendiğini görürüz. Türk Dil Kurumu’na göre müzakere kavramı “Bir konuyla ilgili fikir alışverişinde bulunma, oylasma” şeklinde tanımlanmaktadır (Türk Dil Kurumu, 2017).

Müzakereci demokrasi ise, her türlü sorunun çözüm aşamasında danışma ve karşılıklı görüşmeye önem veren bir yapıdır. Müzakereci demokrasi, liberal demokrasinin değişerek gelişen toplumların sorunlarının çözümünde yetersiz olduğu düşüncesi ile öne çıkan alternatif bir modeldir. (Kaypak, 2012, s. 174.) Müzakereci demokrasi katılım arar. Sadece katılım aramakla kalmaz, bir karar verilecekse bu karar ile ilgili olarak tüm bireylerin/vatandaşların eşit katılımı savunulur. Bundan hareket ile müzakereci demokrasi vatandaşların mevzu bahis olan konuya dair bilgilerini ortaya koyarak paylaşım sağladığı, toplumsal konuları konuştuğu, toplumu ilgilendiren konulara dair fikirlerin belirlendiği ve siyasi süreçlere katıldığı söylemci sosyo-politik bir sistemdir (Akdoğan, 2007, s. 38-39).

Liberal demokraside var olduğu iddia edilen temsiliyet krizine bir alternatif olarak karşımıza müzakereci demokrasi çıkar. Bu model, siyasi kararların alınmasını müzakere ve diyalog süreci ile ilişkilendirmektedir. Tabi bu müzakere sürecinin özgürce olması gereği önemlidir. Ön yargının olmadığı, kapsamlı, açık, eşit, şekilde yapılan bir müzakere süreci ister. Temsiliyet krizinin aşılması ile liberal demokrasinin meşruiyet krizinin de aşılabacağına işaret ederek bunun aşılmasının müzakereci demokrasi ile olacağı fikri kabul edilmektedir. Müzakereci demokrasi, temsil yerine vatandaşların karar alma sürecine katılmalarını, kararların müzakere ile alınması gereğine vurgu yapmaktadır (Eren ve Özden, 2014, s. 165).

Müzakereci demokrasi, Habermas’ın iletişimsel eylem kuramından yola çıkarak, Seyla Benhabib’in siyasal alanda yapılandırılan kuralların ve yasaların vatandaşların katılımı ile eşitlikle gerçekleştirilen müzakere süreçleri ile meşru bir yapı kazanmasını öngören modelidir (Aydın, 2017, s. 140).

Bu modelin çabası kararları etkileyen kültürü, geçmiş sistemleri, hukuksal kuralları sisteme uyarlamaktır. Dolayısıyla, Habermas’ın demokrasi modeli, siyasal sistemin ötesine genişleyerek, kamusal alan olarak isimlendirilen karmaşık ve geniş bir iletişim ağına yayılmaktadır (Satıcı, 2014, s. 144). Habermas’ın (2017, s. 107)

kamusal alan olarak ortaya koyduğu yapı katılımcıların kendi görüşlerini açık ve özgürce tartıştıkları bir platformdur. Habermas, vatandaşların eşitçe, eleştirel bir şekilde ve rasyonel olarak tartışabilmesini demokrasi için olmazsa olmaz kabul eder. Habermas'ın kamusal alanı müzakereci demokrasi ile bir bütün kabul edilir.

Müzakereci demokrasi anlayışı iletişimsel eyleme dayanır. Bu anlayışta toplum devletin çevresinde eklenmiş tek parça bir bütünden oluşmaz. Zira eğer ki demokrasi bağımsız yurttaşların kamu yararına akıl kullanımının kurumsallaştırılması şeklinde algılanıyor ise, ne devletin ne de bir başka kurumun merkezi rolüne ihtiyaç olmaz. Bu modelde birçok değere dair çoğulculuk var olsa da ortak yarara ilişkin kabul edilebilir formülasyonlara ulaşmak amaçlanır. Çıkar çatışmalarının söz konusu olmasına rağmen, insanlar işbirliği koşullarının varlığına ikna edilmez. Mağdur olan kişilerin bakış açılarını ortaya koyma şansının olduğu birlik oluşturma tarzları çoğulculuğuna öncelik tanınmaktadır. Bu demokrasi yapısı toplumsal bütünleştiricilik işlevini, meşrulaştırıcı gücünü, vatandaşlar arasında yapılan kamusal müzakereden almaktadır (Yükselbaba, 2008, s. 232).

Bu demokrasi yapısında iki aşama söz konusudur. İlki kamusal alandaki müzakerelerdir. İkincisi bu müzakereler sonucunda ele edilen kararların seçimler ile parlamentoya taşınır ya da iktidar uygulamaları veya yasalar şeklinde yurttaşlara geri yansır. Karar alma sürecindeki katılımın sağlanması ile sistem meşru hale getirilmiş olur. Habermas (1999, s. 47), demokrasinin tamamlayıcısı olarak kabul ettiği hukuk sisteminin kurucu unsuru olarak iletişimsel eylemi, müzakere sürecini görür. Ortak katılımın varlığı, demokratik adalet prosedürlerin işleyişi ile sağlanır. Bu sayede yasa yapma işlemi vatandaşa devredilmiş olacaktır. Bu durum da doğrudan demokrasiyi andıran bir rejimin ortaya konulmasını sağlar.

Özetlemek gerekirse, müzakereci demokrasi modelinde, vatandaşlar eleştirel ve özgür bir biçimde siyasal karar alma sürecine katılabilmektedir. Ayrıca, sürece katılan vatandaşlar, bu katılda eşit olmalıdırlar. Müzakere süreci, sadece ortak faydaya odaklanmalı, ortak faydaya yönelik olmayan hiçbir karara varılmamalıdır. Diğer yandan, bu süreçte siyasal diyalog, karşılıklı olarak birbirini anlamaya çalışma ve başkalarının fikirlerine saygı gösterme önemli nüanslardır. Bu durum, toplumun ortak faydasının en yukarıda tutulması gerektiğini ifade etmektedir. Ayrıca, anlaşmazlıkların çözülmesinde, siyasal diyalog en makul çözüm olarak öne çıkmaktadır (Young, 1999, s. 176, Tunç, 2008, s. 1128).

Literatür Taraması

Yapılan literatür taraması sonucunda bulunan araştırmalardan birincisi (Aydın, 2015); sosyal medya ve özellikle twitter hakkında kapsamlı bir açıklama sunmaktadır. Sosyal medyanın günlük yaşamımızı nasıl değiştirdiğine vurgu yapan çalışmada, sosyal medya kavramı “bireylerin internet üzerinden yer ve zaman sınırlaması olmaksızın fikirlerini ve görüşlerini belirtmelerine olanak sağlayan, internetin sunduğu multimedya özelliklerini sınırsız bir şekilde kullanım imkanı tanıyan, aynı zamanda başka bireyler ile görüş alışverişine ve paylaşımına dayalı bir interaktif ortamın varlığını hayata geçiren geniş tabanlı platform” (Aydın, 2015, s. 82) olarak tanımlanmıştır.

Sosyal medyanın özellikleri ise, Katılım; Açıklık; Konuşma; Topluluk; Bağlanmışlık/Bağlantılı Olma; Anındalık; Küçük Grup İletişimi; Multimedya; Uzamsızlık; Zincirleme İletişim ve Aşırı Enformasyon olarak sıralanmıştır. Bu çalışma, sosyal medyanın anılan özelliklerinden katılım, anındalık, topluluk, küçük grup iletişimi ve zincirleme iletişim özellikleri ile yakından ilişkilidir. Örneğin katılım özelliği, herkesin sosyal bir platforma katılabileceğini ifade etmektedir. Buna göre, bireyler kendi içeriklerini oluşturabilmekte ve yayabilmektedirler. Böylece, kitle iletişim araçlarının tek yönlü geleneksel iletişiminin dışına çıkan yeni bir iletişim biçimi ortaya çıkmaktadır.

Sosyal medya platformları arasında, özellikle Facebook, Twitter, Instagram, Foursquare, Pinterest Twitter ön plana çıkmaktadır. Bu çalışmanın Twitter ile sınırlandırılması nedeniyle Twitter ele alınmıştır. Aydın'a göre (2015) Twitter, “kullanıcıların (kişiler ya da kurumlar) ne yaptıklarını, düşüncelerini, görüşlerini, fotoğrafları ya da başka kullanıcılara ait içerikleri paylaştıkları ve 140 karakterle sınırlı olan bir mikroblog servisi olarak tanımlanabilir” (s. 84). Twitter'ın en önemli fonksiyonu, *retweet* özelliğidir. Retweet özelliği sayesinde, herhangi bir içeriğin hızla çok geniş bir kitleye yayılması mümkün olabilmektedir. Demokratik katılım bağlamında, Twitter'ı elverişli kılan ya da elverişli olduğu varsayımını ortaya çıkaran da tam olarak budur.

İkincisi; Karagöz'ün (2013), *Yeni medya çağında dönüşen toplumsal hareketler ve dijital aktivizm hareketleri* isimli çalışmasıdır. Çalışmada, iletişim teknolojilerinde meydana gelen gelişmelerin toplumsal hareketleri nasıl etkilediği araştırılmıştır. Bireyler, siyasal iktidara taleplerini iletebilmek ve örgütlenebilmek için yeni medya teknolojilerini kullanmaktadırlar. Karagöz (2013), Genç Siviller, Greenpeace ve Chance.org hareketlerini inceleyerek dijital aktivizm hareketlerinin yeni medyayı nasıl kullandıklarını ortaya koymaktadır. Buna göre, dijital aktivizm hareketleri demokratik katılım anlamında, önemli bir dönüşüm yaratmaktadır. Buna göre, “Yeni medya radikal medya görevi üstlenmiş ve konvansiyonel medyanın göz ardı ettiği grupların sesini duyuran bir kanala dönüşmüştür. Daha dünyanın çok farklı birbirine uzak kitlelerini eylem gruplarının birbirinden haberdar olmasını da sağlamıştır. Arap baharı, Greenpeace eylemleri gibi hareketler bu sayede yerel değil küresel ölçekte etkiler uyandırmaya başlamıştır” (s. 152).

Yeni medyanın aktivizm hareketleri bağlamında bu denli önemsenmesi, üzerinde düşünülmesi gereken bir konudur. Zira, bu anlayış yeni medya teknolojilerine kendi başına devrimci bir nitelik yüklenmesi sonucunu doğurmaktadır. Bu çalışmadan, yeni medya teknolojileri ve sosyal medya platformlarının siyasallaşma ve demokratik katılım anlamında dönüştürücü etkisini savunan bu yeni anlayışın kavranması bakımından

yararlanılmıştır. Karagöz (2013), Facebook, Twitter, Youtube gibi sosyal medya platformlarının, bireylerin ifade özgürlüğünün arttırdığı ve kolayca örgütlenebildikleri yeni bir kamusal alan oluşturduğu iddiasında bulunmaktadır ki, *Arap Baharı*'nın gerçekleştirdiği değişim tamamen bu kamusal alanın etkinliğine bağlanmaktadır. Hatta, bir süre sonra bireylerin aktivist hareketlere ihtiyaç duymaksızın bu yeni kamusal alanda doğal olarak örgütleneceklerini öngörür. Bu da bizleri *Arap Baharı* gibi toplumsal hareketleri ve bu hareketlerin sosyal medya ile ilişkisini yeniden düşünmeye sevk etmektedir.

Üçüncüsü; Köseoğlu ve Al'ın (2013) *Arap Baharı, Wall Street'i İşgal Et, Gezi Parkı Direnişi* gibi toplumsal hareketleri inceledikleri çalışmalarıdır. Mevcut çalışmada, sosyal medya platformları bir propaganda aracı olarak ele alınmaktadır. Köseoğlu ve Al (2013), internet teknolojilerinde gerçekleşen değişimin bireylerin iletişim alışkanlıklarını değiştirdiğini, diğer yandan siyasal iletişim ve propagandanın biçiminin de değiştiğini ifade etmektedirler. Bu nedenle, sosyal medyanın yalnızca toplumsal hareketler bağlamında değil, siyasal propaganda işlevi bakımından da ele alınması gerekmektedir. Zira, siyasal propaganda işlevi, demokratikleşme anlamında olumlu kabul edilmektedir. Yine *Arap Baharı, Wall Street'i İşgal Et* gibi toplumsal hareketler süresince sosyal medya platformlarının başarısından söz eden bu çalışmadan, bu hareketlerin nasıl organize edildiği hakkında fikir edinmek üzere yararlanılmıştır. Buna göre;

“Yapılan araştırmalarda, Arap Baharı olarak adlandırılan halk hareketlerinden önce ve bu hareketler süresince başta Facebook olmak üzere, Twitter, Instagram ve Youtube özellikle göstericiler tarafından kitleleri harekete geçirme ve hareketin dünya kamuoyuna duyurulmasında etkin birer araç olarak kullanılmıştır. Bunun da ötesinde söz konusu sosyal medya araçları, bu hareketlere meşruiyet kazandırma anlamında da birer propaganda aracı olarak aktif rol üstlenmişlerdir” (Köseoğlu ve Al, 2013, s. 112).

Sosyal medyanın siyasal propaganda aracı olarak kullanılmasının demokratikleşme anlamında avantajlarının vurgulandığı çalışmaya göre, internet teknolojilerine ulaşabilen her bireyin “bir siyasal aktör olarak propaganda yapabilme, taraftar toplayabilme ve siyasal sistemi etkileyebilme şansı bulunmaktadır” (Köseoğlu ve Al, 2013, s. 122). Diğer yandan, bu durum demokratikleşme anlamında heyecan verici bulunmaktadır. Temsili demokrasiden katılımcı demokrasiye geçişte sosyal medyanın sürece ivme kazandıracağı ileri sürülmektedir ki, bu iddianın en önemli dayanağı toplum içerisindeki her bireyin ve grubun kendini ifade etme şansının bulunmasıdır.

Dördüncüsü; Karaçor'un (2009), yeni iletişim teknolojileri bağlamında siyasal katılım ve demokrasiyi ele aldığı çalışmasıdır. Bu çalışmada, demokrasi bireylerin birbirlerine saygı gösterme ve siyasal katılım sağlama düzeylerine göre değerlendirilmiştir. Medya ise, bireylerin siyasal katılım gerçekleştirmelerinin önemli bir yoludur. Bu noktada medyanın işlevi, her bir bireyin düşüncesine yer vermek olacaktır. Yeni iletişim teknolojileri ile birlikte, medyanın bu işlevi de geleneksel olmayan yollarla gerçekleşmektedir. En basit anlatımla, “yeni iletişim teknolojileri ve siyasal iletişim çalışmaları sayesinde bireylerin seçim zamanlarında hangi siyasal partiye ya da adaya oy vereceklerini belirlemeleri daha kolay ve etkili olmaktadır” (Karaçor, 2009, s.130).

Diğer yandan, yeni iletişim teknolojileri, seçim zamanlarıyla sınırlı olmayan bir siyasal katılım olanağı sunmaktadır. Bireyler, sosyal ağlar aracılığı ile siyasal tartışmalara katılabilmekte, kendi siyasal fikirlerini ifade edebilmektedirler. Ayrıca, yeni iletişim teknolojileri sayesinde, bireyler kendilerinden düşünce, etnisite, inanç vs. bakımından farklı olanlarla karşılaşabilmekte ve iletişim kurabilmektedirler. Tüm bunlar, Karaçor (2009) tarafından demokrasinin gelişmesini ve yaygınlaşmasını sağlayan gelişmeler olarak nitelendirilmiştir.

Bu çalışmadan, ayrıntılı bir şekilde ele aldığı demokrasi kavramının anlaşılması bakımından yararlanılmıştır. Demokrasiden söz edebilmek için, hangi kriterlerin mevcut olması gerektiği konusunda Karaçor (2009), Dahl (2001)'den beş ana kriter aktarmıştır. Bunlar; “etkin katılım, oy kullanma eşitliği, bilgi edinebilme, gündem üzerine son sözü söyleme hakkı ve yetişkinlerin dahil olmasıdır” (s. 123). Özellikle, “gündem üzerine söz söyleyebilme” hakkı, demokrasinin esasen ne olduğunu anlamak bakımından önem taşımaktadır. Zira, temsili demokrasilerde oy kullanma eşitliği ya da bilgi edinebilme gibi haklar zaten mevcuttur. Ancak, gündem üzerinde son sözü söyleyebilmek, katılımcı demokrasiye ve demokrasinin gelişmesi sürecine ışık tutmaktadır.

Beşincisi; Bostancı'nın (2014) siyasal iletişim kavramını ele aldığı çalışması, siyasal iletişim ve demokrasi ilişkisinin anlaşılması bakımından önemli görülmüştür. Çalışmada, siyasal iletişimin sosyal medyanın etkisiyle nasıl değiştiği nicel araştırma yöntemi ile ortaya konulmaktadır. Buna göre, katılımcılara 12 adet anket sorusu yöneltilmiş, “katılımcıların siyasi parti üyesi olmasalar dahi sosyal medya üzerinden siyasi paylaşımlarda bulundukları, Twitter kullanıcılarının daha çok siyasallaştığı ve sosyal medyada paylaşılan siyasi içeriklerin kullanıcıların siyasi tercihlerini etkilediği gibi sonuçlara ulaşılmıştır” (Bostancı, 2014, s. 84). Çalışmada, Web 2.0 teknolojileri aracılığıyla yürütülen siyasal iletişim faaliyetleri *Siyasal İletişim 2.0* kavramlaştırmasıyla karşımıza çıkmaktadır. Siyasal iletişim ve Siyasal İletişim 2.0 karşılaştırması ise, alana yapılmış önemli bir katkıdır. Bu karşılaştırmaya aşağıda sunulmuştur;

“İletişim Aracı: Siyasal iletişim için geleneksel medya yani televizyon, gazete ve radyo stratejik bir öneme sahipken, siyasal iletişim 2.0 için sosyal medya yani Facebook, Twitter, LinkedIn vb. ortamlar olarak ön plana çıkmaktadır.

İletişim Türü: Siyasal iletişim kitle iletişimini daha sık kullanırken, siyasal iletişim 2.0 kitle iletişiminin yanında kişilerarası iletişimi tercih etmektedir.

İletişim Şekli: Siyasal iletişim’de propaganda, tek yönlü iletişim ve monolog yaygın kullanılırken, siyasal iletişim 2.0’de iki yönlü iletişim ve diyalog daha yaygın kullanılmaktadır.

Mesaj: Mesaj siyasal iletişimde genelde kitleleri hedef alırken, siyasal iletişim 2.0 mesajı kitlelere, gruplara ve bireylere göre şekillendirebilme imkanı sunmaktadır.

Geri Bildirim: Siyasal iletişim’de geri bildirim seviyesi ve imkanı düşüken, siyasal iletişim 2.0 geri bildirim kolaylığı sağlamakta ve geri bildirim seviyesi yüksek olmaktadır.

İletişim Maliyeti: Siyasal iletişimde kampanya ve tanıtım maliyetleri yüksek iken, siyasal iletişim 2.0 maliyeti daha düşük hatta ücretsiz kampanya çözümleri sunmaktadır” (Bostancı, 2014, s. 88-89).

Altıncısı; sosyal medyanın siyasal katılıma etkilerini incelen bir diğer çalışma Şener, Emre ve Akyıldız’ın (2015), *Türkiye’de sosyal medyanın siyasal katılıma etkileri* başlıklı çalışmasıdır. Çalışmada, telefonla anket görüşme tekniğiyle katılımcıların sosyal medya platformlarını demografik özellikler ve üç bağımsız değişken üzerinden ölçen bir araştırma yapılmıştır. Bu üç bağımsız değişken, siyasi görüş ve siyasete ilgi düzeyi, sosyal ağlara erişim ve kullanım düzeyi ve *Gezi Parkı* eylemleri olarak belirlenmiştir.

Çalışmanın bulguları ise, sosyal medyanın siyasal katılıma zannedildiği kadar etkisi olmadığını ortaya koyması bakımından ilginçtir. Bulgulara göre, bireyler sosyal medyayı siyasal ilgiden çok yakın çevreyle iletişim kurma motivasyonunun daha fazla olduğu tespit edilmiştir. Katılımcıların % 66.4’ü sosyal medyayı siyasal içerik paylaşmak için kullanmadıklarını ifade etmiştir. Hatta, sosyal medya platformlarının siyasi bir arena olmadığı kanaati de ironik bir şekilde yaygındır. Diğer yandan, özellikle sosyal medyayı etkin bir şekilde kullanan genç insanların, sosyal medya platformlarında siyasal içerik ve siyasal aktörlerin faaliyetlerine ilgi düzeylerinin az olduğu görülmektedir. *Gezi Parkı Direnişi* sırasında da gelişmeleri sosyal medya yerine gazete ve televizyondan takip edenlerin oranının daha fazla olduğu tespit edilmiştir.

Çalışmadan, bu çarpıcı sonuçların sosyal medya platformlarının siyasal katılıma katkılarının beklenildiği gibi olmayabileceği tartışması için yararlanılmıştır. “Türkiye’de, yeni medya olanaklarının yaygınlaşması sosyal ağ üyelikleri ve kullanımına etki etse de, siyasal anlamda katılımın sağlanması için yeterli görünmemektedir” (Şener, Emre ve Akyıldız, 2015, s. 95). Ayrıca, Türkiye’de siyasal aktörlerle sosyal ağlar aracılığı ile iletişime geçme isteği bulunmamaktadır. Aynı şekilde, Şener, Emre ve Akyıldız (2015) siyasal aktörlerin de böyle bir iletişime mesafeli olduklarını ifade etmektedirler. O halde, Türkiye’de sosyal medyanın siyasal ve demokratik katılımı arttırdığından söz etmek zorlaşmaktadır.

Yedincisi; Balcı ve Sarıtaş’ın (2015), 2014 Yerel Seçimleri’nde Facebook’un siyasal katılıma etkilerini araştırdıkları çalışmadır. Çalışmada, yöntem olarak 2014 Yerel Seçimleri bağlamında Konya’da bulunan üç üniversitenin öğrencilerinden oluşturulan örnekleme, siyasal katılımı ölçmeye yönelik anket tekniği uygulanmıştır. Çalışmanın bulgularına bakıldığında, “katılımcıların; son dakika gelişmelerini takip etme, bir politik aday veya partiyi beğenme, profile siyasi bir haber ekleme ya da silme, anlık sohbet uygulamasında siyasi bir bilgiyi tartışma gibi Facebook aktivitelerini daha sık gerçekleştirdikleri” (Balcı ve Sarıtaş, 2015, s. 511) tespit edilmiştir. Ayrıca, bir partiye bağlılık ve Facebook kullanım sıklığı arasında anlamlı bir ilişki olduğu görülmektedir.

Bu çalışmadan, 5’li likert tipi anket sorularının oluşturulması anlamında yararlanılmıştır. Çalışmada kullanılan katılımcıların Facebook’ta siyasal katılım düzeylerini ölçen anket soruları, Twitter olarak değiştirilerek uygulanmıştır. Sorular şu şekildedir: Son dakika siyasal gelişmeleri takip etme; Bir politik aday veya partiyi beğenme; Facebook profiline siyasi haber ekleme veya silme; Facebook anlık sohbet uygulamasında siyasi bir bilgiyi tartışma; Siyasi bir olayın fotoğrafını paylaşma; Siyasi bir içeriğe yorum yapma; Facebook mesaj uygulamasında siyasi bir bilgiyi tartışma; Siyasi içerik taşıyan bir durum güncellemesinde bulunma; Siyasi bir uygulamayı ekleme veya silme; Siyasi bir belge paylaşma; Siyasi konularla ya da adaylarla ilgili videolar paylaşma; Siyasi bir link paylaşma; Başkalarına siyasal konularda cevap yazma/ davet gönderme; Siyasi bir anket yapma veya ankete katılma; Siyasi bir gruba katılma veya gruptan ayrılma; Siyasi bir kişi, aday ya da liderin fotoğrafını paylaşma (Balcı ve Sarıtaş, 2015). Bu sorular, Türkiye’de Twitter’ın demokratik katılıma etkilerini ölçebilecek nitelikte bulunduğu, soruların içeriğinde bir değişikliğe gidilmeden, Facebook yerine Twitter bağlamında katılımcılara sorulmuştur.

Sekizincisi; Arıcı’nın (2015), siyasi parti liderlerinin sosyal medya kullanımlarını araştırdığı çalışmasıdır. Bu çalışma, siyasal aktörlerin sosyal ağlar aracılığı ile bireylerle iletişim kurmaya ne ölçüde açık oldukları hakkında fikir edinmek bakımından önemli bulunmuştur. Çalışmada, AK Parti, MHP, CHP ve Barış ve BDP’nin ve parti liderlerinin internet ve sosyal medya hesapları üç aylık bir zaman diliminde içerik analizi yöntemi kullanılarak incelenmiştir.

Çalışmanın bulguları ise, demokratik katılım anlamında bir veri sunmamaktadır. Zira, Arıcı’nın (2015), en önemli tespiti, partilerin ve parti liderlerinin internet siteleri ve sosyal medya hesaplarını sadece kendi kitlelerine hitap eder şekilde kullandıkları yönünde olmuştur. Diğer yandan, siyasal aktörlerin sosyal medya platformlarını kendilerini tekrarlar bir biçimde ve geri bildirim olmaksızın kullandıkları görülmektedir. Bu durum, demokratikleşme anlamında olumsuz bir görünüm vermektedir. Arıcı (2015), Türkiye’de siyasal aktörlerin sosyal medya kullanımını şu şekilde özetlemektedir;

“Parti teşkilatlarınca yürütüldüğü anlaşılan ‘kimliksiz’ sosyal medya hesapları, ortama özgü stratejiler geliştirmeden, hedef kitle analizi yapılmaksızın mevcudiyet kaygılı temsil içermektedir. Bu doğrultuda Türk siyasetince içselleştirilemeyen sosyal medya olgusu, siyasal iletişimi sanal boyuta taşımaktan uzak görünmektedir. İnternet üzerinden seçim yapılmasının, sosyal medya seçim stratejilerinin ve sanal partilerin tartışıldığı günümüz yeni medya çağında, sosyal medya kampanyalarının, içerik tasarımının ve sanal temsilin uygulamaya dönüşmediği Türk siyaseti, sosyal medya gerçekliğine mesafeli durmaktadır” (s. 64).

Literatürde benzer sonuçlara ulaşan başka çalışmalar da mevcuttur.

Dokuzuncusu; Genel’in (2012), 2011 Genel Seçimleri bağlamında, siyasal iletişim kampanyalarında sosyal medyanın kullanımını araştırdığı çalışma da bunlardan biridir. Türkiye’de sosyal medyanın seçim kampanyalarında nasıl kullanıldığının ele alındığı çalışmada, 2008 yılında Amerika Birleşik Devletleri Başkanlık Seçimleri’nde Barak Obama’nın sosyal medya kullanım başarısı örnek olarak sunulmaktadır. Bu noktadan hareketle, Türkiye’de seçim kampanyalarında siyasal aktörlerin sosyal medya kullanımlarının ne ölçüde başarılı olduğu araştırılmıştır. Çalışmanın bulgularına bakıldığında, Türkiye’de de aktörlerin sosyal medyayı kullandıkları ancak siyasal kampanya yürütmede anlamlı bir başarı sağlayamadıkları sonucuna ulaşılmıştır. Örneğin;

“siyasi liderlerin teknik olarak sosyal medyayı yeterince kullanamadıkları anlaşılmaktadır. Özellikle twitter hesaplarının takipçilerin mesajlarına kapalı olması, Liderlerin yok denecek düzeyde takip listelerinin azlığı, siyasi kampanya süreci dâhilinde sosyal medyaya çok kısa denebilecek derecede zaman ayırmaları, sosyal medyayı daha çok ‘demeç verme’ platformu olarak görüp etkileşimden uzak durmaları dikkat çeken olumsuzluklardan bazılarıdır” (Genel, 2012 s. 30).

Adalet ve Kalkınma Partisi’nin kurumsal olarak sosyal medyayı diğer partilere kıyasla iyi kullandığı görülmektedir. Ancak, lider düzeyinde teyit edilen resmi bir hesap bulunmamaktadır. Cumhuriyet Halk Partisi Genel Başkanı’nın çoğunlukla iktidar partisine muhalefet eden paylaşımlar yaptığı, Milliyetçi Hareket Partisi Genel Başkanı’nın *Milliyetçilik* eksenli paylaşımlarda bulunduğu ve Barış ve Demokrasi Partisi Genel Başkanı’nın ise, etnisite vurgusuna dayanan paylaşımlarının çoğunlukta olduğu görülmektedir. Sonuç olarak, Türkiye’de siyasal aktörler sosyal medyada siyasal kampanya yürütme ile ilgili bir strateji belirlemedikleri, geleneksel olarak kendi gündemlerini devam ettirdikleri açıkça görülmektedir.

Onuncusu ise; Bayraktutan, Binark, Çomu, Doğu, İslamoğlu ve Aydemir’in (2012), yine 2011 Genel Seçimleri sırasında, sosyal medya platformlarında siyasi partilerin ve liderlerinin paylaşımları ve seçmenlerin tartışmaları arasındaki ilişkiyi inceleyen çalışmalarıdır. Çalışmada öncelikle, çevrimiçi kamusal alanların sınıflandırmasına yer verilmiştir. Buna göre, beş tane çevrimiçi kamusal alan vardır. Bunlar; siyasal alanlar, gazetecilik alanları, siyasal savunuculuğun yapıldığı alanlar, alternatif aktivist alanları ve e-devlet alanıdır (Dahlgren, 2009, s. 168).

Bu kamusal alan iddiası, sosyal medya platformlarında siyasal aktörler ve bireyler arasında bir etkileşim olduğu varsayımından beslenir. Amerika’da 2008 yılında yapılan Başkanlık Seçimleri’ni inceleyen çalışmalar bu iddiayı desteklemektedir. Zira, bireylerin Başkan adaylarıyla sosyal medya platformlarında etkileşim halinde oldukları görülmüştür. Türkiye’de sosyal medyanın seçim kampanyalarında nasıl bir rol üstlendiği ile ilgili çalışmalar ise oldukça azdır. Bayraktutan vd. (2012), 2011 Genel Seçimleri ile ilgili olarak başarılı bir nitel araştırmaya soyunmuşlardır. Henüz tamamlanmayan çalışmada, sosyal medyada bireyler ve siyasal aktörler arasındaki etkileşimi ortaya koymak üzere geliştirilen nitel yöntem, alana önemli katkılar sağlayacaktır.

Bu çalışmaya göre, Türkiye’de 2002 yılından 2011 yılına kadar siyasal anlamda internet ve sosyal medya kullanımının çok zayıf olduğu söylenebilir. Genel olarak bakıldığında, siyasal partilerin sosyal medyada yürüttükleri Amerika’daki gibi bir seçim stratejisinden söz etmek güçtür. Siyasal aktörler, sosyal medyayı yalnızca seçim dönemlerinde bir siyasal reklam aracı olarak kullanmaktadırlar. Diğer yandan, çalışmada, 2002 yılında siyasi partilerin hemen hemen hiçbir stratejileri bulunmazken, 2009 yılına gelindiğinde, sosyal medyanın siyasal reklam aracı olarak kullanılması umut verici olarak değerlendirilmiştir. Ayrıca, bireylerin siyasi partilerin sosyal medya platformlarında geribildirimde bulunabildikleri ifade edilmiştir.

Literatür taraması ışığında, sosyal medyanın demokratik katılımı arttırdığına dair iddialara rastlandığı gibi, demokratik katılım açısından sosyal medyanın bu denli etkili olmadığı yönünde görüşlerin de olduğu görülmektedir. Bu çalışmada, Sakarya Üniversitesi İletişim Fakültesi öğrencileri örnekleminde nicel bir analiz yapılarak, sosyal medyanın Türkiye’de gençlerin siyasete ilgi düzeyini, siyasal katılımı ve son kertede demokratik katılımı artırıp artırmadığına ilişkin bir sonuca varılmak hedeflenmiştir. Diğer yandan, vatandaşların oy vermek, siyasal liderleri takip etmek gibi siyasal katılım aktiviteleri göstermelerinin, müzakereci demokrasi modeli bağlamında demokratik katılımın kusursuz bir biçimde gerçekleşmesi anlamına gelmediği ortaya konmak durumundadır. Bu nedenle, siyasal katılımı ölçen anket bulgularının değerlendirilmesinde müzakereci demokrasi anlayışı çerçevesinde bir bakış açısı geliştirilmeye çalışılmıştır. Vatandaşın iktidarın kararlarını etkileme gücünün olup olmadığı sorunsalı, bu çalışmanın ileri bir tarihte siyasetçilerin vatandaşların sosyal medyadaki aktivitelerinden nasıl etkilendiklerini ortaya koyan bulgular eklenerek devam etmesi gerektiğini göstermektedir.

Yöntem

Problem Cümlesi

Türkiye’de Twitter’ın Demokratik Katılıma Etkileri: Sakarya Üniversitesi İletişim Fakültesi Öğrencileri Örneği.

Alt Problemler

1. Öğrencilerin cinsiyeti, Twitter kullanım amaçlarına göre anlamlı bir fark oluşturmaktadır mıdır?
2. Öğrencilerin yaşı, Twitter kullanım amaçlarına göre anlamlı bir fark oluşturmaktadır mıdır?
3. Öğrencilerin ailelerinin aylık gelir düzeyi, Twitter kullanım amaçlarına göre anlamlı bir fark oluşturmaktadır mıdır?
4. Öğrencilerin bir oturumda Twitter kullanım süresi, Twitter kullanım amaçlarına göre anlamlı bir fark oluşturmaktadır mıdır?
5. Öğrencilerin Twitter’a erişim aracı, Twitter kullanım amaçlarına göre anlamlı bir fark oluşturmaktadır mıdır?
6. Öğrencilerin cinsiyeti, Twitter’da siyasal katılım aktiviteleri sıklığına göre anlamlı bir fark oluşturmaktadır mıdır?
7. Öğrencilerin yaşı, Twitter’da siyasal katılım aktiviteleri sıklığına göre anlamlı bir farklılık fark oluşturmaktadır mıdır?
8. Öğrencilerin ailelerinin aylık gelir düzeyi, Twitter’da siyasal katılım aktiviteleri sıklığına göre anlamlı bir fark oluşturmaktadır mıdır?
9. Öğrencilerin bir oturumda Twitter kullanım süresi, Twitter’da siyasal katılım aktiviteleri sıklığına göre anlamlı bir fark oluşturmaktadır mıdır?
10. Öğrencilerin Twitter’a erişim aracı, Twitter’da siyasal katılım aktiviteleri sıklığına göre anlamlı bir fark oluşturmaktadır mıdır?

Araştırma Modeli

Bu çalışmada, öğrencilerin Twitter’daki siyasal katılım düzeylerini ölçen sorulardan oluşan anket tekniğinin kullanıldığı nicel yöntem seçilmiştir. Böylelikle, Twitter’da demokratik katılımın gerçekliği ile ilgili bir sonuca varılması umulmaktadır. Öncelikle kavramsal çerçevenin oluşturulabilmesi adına literatür taraması yapılmıştır. Daha sonra, mevcut literatür içerisinde araştırma ile ilgili olanlardan yararlanılmıştır. Uygulama olarak, Sakarya Üniversitesi İletişim Fakültesi öğrencilerinin Twitter’da siyasal katılım düzeylerini ölçmek için 100 öğrenciyle anket yapılmıştır.

Evren

Çalışmanın evrenini, Sakarya Üniversitesi İletişim Fakültesi’de öğrenim gören 934 Lisans öğrencisi oluşturmaktadır.

Örnekleme

Çalışmanın örneklemini Sakarya Üniversitesi İletişim Fakültesi öğrencileri arasından 100 kişi olarak seçilmiştir. Örnekleme *rastgele örnekleme yöntemi* ile belirlenmiştir.

Veri Toplama Aracı

Veri toplama aracı, Balcı ve Sarıtaş’ın (2015), *Facebook ve siyasal katılım: 2014 yerel seçimleri araştırması* isimli çalışmasında kullanılan 50 sorudan oluşan anket formunun iki bölümünden oluşmaktadır. Bu çalışmada, kullanılan anket formunda Facebook ifadesi yerine Twitter ifadesi kullanılmıştır. Öncelikle, ankette bulunan katılımcıların demografik özellikleri, Facebook kullanım alışkanlıkları ile siyasal tutum ve davranışlarına ilişkin sorulardan, demografik özellikler ve Facebook kullanım alışkanlıklarını ölçen sorular Twitter olarak değiştirilerek bu çalışma için seçilmiştir. Buna göre, cinsiyet, yaş, katılımcıların ailelerinin aylık gelir düzeyi demografik özellikler olarak belirlenmiş, katılımcıların hangi üniversitede okudukları sorusu, bu çalışma Sakarya Üniversitesi ile sınırlı olduğundan çıkarılmıştır. Katılımcıların yaşı, ailelerinin aylık gelir düzeyi ve bir oturumda Twitter kullanım sürelerine ilişkin yanıt maddeleri anket formunun bu bölümüne ulaşılamadığından yeniden düzenlenmiştir.

Likert tipi soru formunun ilk bölümünde (1: Hiç katılmıyorum, 5: Tamamen Katılıyorum aralığında) 10 soruluk bir ölçekle katılımcıların Twitter kullanım amaçları sorgulanmıştır. Ölçeğin güvenilirliğini ortaya koyan Cronbach’s Alpha: 0,832’dir. Twitter’da siyasal katılım aktivitelerini gerçekleştirme sıklığını ölçmek için ise, 16 maddelik (1: Hiç, 5: Her Zaman aralığında) tipindeki Balcı ve Sarıtaş’ın (2015), *Facebook’ta Siyasal Katılım Aktiviteleri Ölçeğinden* yararlanılmıştır. Ölçeğin güvenilirliğini ortaya koyan Cronbach’s Alpha: 0,67’dir. Bu bölümden sadece Facebook ile ilgili olan iki soru Twitter’ın özelliklerine göre yeniden düzenlenmiştir. Buna göre, Facebook anlık sohbet uygulamasında siyasi bir bilgiyi tartışma sorusu Twitter’da anlık olarak siyasi bir bilgiyi tartışma; Facebook mesaj uygulamasında siyasi bir bilgiyi tartışma sorusu Twitter direkt mesaj uygulamasında siyasi bir bilgiyi tartışma; Siyasi içerik taşıyan bir durum güncellemesinde bulunma sorusu Siyasi içerik taşıyan anlık bir paylaşımda bulunma; Siyasi bir gruba katılma veya gruptan ayrılma sorusu Siyasi bir gruba (liste) katılma veya gruptan ayrılma olarak uyarlanmıştır.

Veri Analizi

Anket sonuçlarından elde edilen nicel değerler SPSS 20 programı ile çözümlenmiştir. Analizde, öncelikle yüzdelikler hesaplandıktan sonra, t-testi ve anova analizi uygulanarak Sakarya Üniversitesi İletişim Fakültesi öğrencilerinin Twitter kullanım amaçları ve Twitter’da siyasal katılım düzeylerini ölçen sorulara verdikleri yanıtlar arasında diğer sorulara göre anlamlı bir fark olup olmadığı ölçülmüştür.

Varsayımlar

Varsayım 1:

Twitter öğrencilerin fazlasıyla vakit geçirdikleri bir sosyal medya platformudur.

Varsayım 2:

Twitter’da öğrencilerin aktiviteleri siyasal katılıma yönelik değildir.

Varsayım 3:

Sosyal medya öğrencilerin siyasal katılımını arttırmamaktadır.

Varsayım 4:

Üniversite öğrencileri gençleri temsil ederler.

Varsayım 5:

Öğrenciler, anket sorularını dürüst bir şekilde yanıtlamışlardır.

Sınırlılıklar

Bu çalışma, Sakarya Üniversitesi İletişim Fakültesi Lisans öğrencileri ile sınırlandırılmıştır. Türkiye’deki bütün insanlara ulaşmak mümkün olmadığından ve üniversite öğrencilerinin sosyal medya platformlarını etkin bir biçimde kullandıkları varsayımından yola çıkılmıştır. Böylece, çalışmanın evreni Sakarya Üniversitesi İletişim Fakültesi öğrencileri olarak belirlenmiştir. Anketin uygulandığı dönem, 2017-2018 Eğitim ve Öğretim Yılı Güz Yarıyılıdır. Çalışmanın örnekleme, anket uygulaması için rastgele örnekleme yöntemiyle seçilen olan 100 kişi ile sınırlandırılmıştır.

Tanımlar

Sosyal Medya: Web 2.0 teknolojisinin hayata geçmesiyle birlikte, etkileşimli, anında ve eş zamanlı bilgi paylaşımı sağlayan bir yeni medya sistemidir.

Siyasal İletişim: Yönetenler ve yönetilenler arasındaki etkileşimi ifade eden, tarafların birbirlerini etkiledikleri iletişim biçimidir.

Siyasal Katılım: Vatandaşların siyasal karar verme süreçlerinde yer almasını ifade eden bir kavramdır. Temsili demokrasilerde, oy verme davranışı ile özdeşleşmiştir.

Müzakereci Demokrasi Modeli: Vatandaşların siyasal konularda belirleyici olma gücüne sahip olduğu siyasal bir sistem modelidir.

Twitter: Kullanıcıların internet aracılığı ile içerik oluşturduğu, paylaştığı ve birbirleriyle iletişime geçtikleri bir mikroblog uygulamasıdır.

Demokratik Katılım: Siyasal katılımdan daha geniş bir kavram olup, vatandaşların hak arama, düşüncelerini özgürce ifade edebilme ve çözüm süreçlerine katılmaları olarak tanımlanabilir.

Bulgular

Öncelikle, ankette bulunan bütün sorulara verilen yanıtların yüzde hesabı yapılmıştır.

Tablo 1-Cinsiyetiniz

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	kadın	55	27,2	55,0	55,0
	erkek	45	22,3	45,0	100,0
	Total	100	49,5	100,0	
Missing	System	102	50,5		
Total		202	100,0		

Katılımcıların cinsiyetini ifade eden Tablo 1’e göre, katılımcıların %55’i (55 kişi) kadın ve %45’inin ise (45 kişi) erkek olduğu görülmektedir.

Tablo 2-Yaşınız

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid 17-19	26	12,9	26,0	26,0
20-22	61	30,2	61,0	87,0
23-25	8	4,0	8,0	95,0
Diğer	5	2,5	5,0	100,0
Total	100	49,5	100,0	
Missing System	102	50,5		
Total	202	100,0		

Katılımcıların yaşını ifade eden Tablo 2'ye göre, katılımcıların %61'i (61 kişi) 20-22, %26'sı (26 kişi) 17-19, %8'i (8 kişi) 23-25 yaş aralığında ve %5'i ise (5 kişi) diğer yaş aralığındadır.

Tablo 3- Ailenizin Aylık Gelir Düzeyi

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid 1000 TL-2000 TL	28	13,9	28,0	28,0
2000 TL- 3000 TL	32	15,8	32,0	60,0
3000 TL ve üzeri	36	17,8	36,0	96,0
Ailemin geliri 1000 TL'nin altında ya da yok	4	2,0	4,0	100,0
Total	100	49,5	100,0	
Missing System	102	50,5		
Total	202	100,0		

Katılımcıların ailelerinin aylık gelir düzeyini ifade eden Tablo 3'e göre, katılımcıların %36'sının (36 kişi) 3000 TL ve üzeri, %32'sinin (32 kişi) 2000-3000 TL, %28'inin (28 kişi) 1000-2000 TL ve %4'ünün ise (4 kişi) ise ailemin geliri 1000 TL'nin altında ya da yok yanıtını verdiği görülmektedir.

Tablo 4- Bir Oturumda Twitter Kullanım Süreniz

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid 5 dk.-30 dk.	78	38,6	78,0	78,0
30 dk.-2 saat	17	8,4	17,0	95,0
3 saat ve üzeri	5	2,5	5,0	100,0
Total	100	49,5	100,0	
Missing System	102	50,5		
Total	202	100,0		

Katılımcıların bir oturumda Twitter'ı ne kadar süre kullandıklarını ifade eden Tablo 4'e göre, ankete katılımcıların %78'inin (78 kişi) 5 dk.-30 dk., %17'sinin (17 kişi) 30 dk. ve üzeri, %5'inin (5 kişi) 3 saat ve üzeri yanıtını verdiği görülmektedir.

Tablo 5- Twitter'a Erişim Aracınız

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid Bilgisayar	2	1,0	2,0	2,0
Akıllı telefon	58	28,7	58,0	60,0
Her ikisi	40	19,8	40,0	100,0
Total	100	49,5	100,0	
Missing System	102	50,5		
Total	202	100,0		

Katılımcıların Twitter'a erişim aracını ifade eden Tablo 5'e göre, katılımcıların %58'inin (58 kişi) Akıllı telefon, %40'ının (40 kişi) Akıllı telefon ve Bilgisayar, %2'sinin (2 kişi) Bilgisayar kullandıkları görülmektedir.

Twitter Kullanım Amaçları

Tablo 6- Olaylar Ve Kişiler Hakkında Bilgi Sahibi Olmak İçin

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid				
Hiç katılmıyorum	8	4,0	8,0	8,0
Katılmıyorum	8	4,0	8,0	16,0
Kararsızım	20	9,9	20,0	36,0
Katılıyorum	28	13,9	28,0	64,0
Tamamen katılıyorum	36	17,8	36,0	100,0
Total	100	49,5	100,0	
Missing System	102	50,5		
Total	202	100,0		

Olaylar ve kişiler hakkında bilgi sahibi olmak için sorusunu ifade eden Tablo 6'ya göre, katılımcıların %8'i (8 kişi) hiç katılmıyorum, %8'i (8 kişi) katılmıyorum, %20'si (20 kişi) kararsızım, %28'i (28 kişi) katılıyorum ve %36'sı (36 kişi) ise tamamen katılıyorum yanıtını vermiştir. Katılımcıların %64'ü (64 kişi) Twitter'ı olaylar ve kişiler hakkında bilgi sahibi olmak için kullanmaktadırlar.

Tablo 7- Arkadaşlarla İletişimde Bulunmak İçin

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid				
Hiç katılmıyorum	36	17,8	36,0	36,0
Katılmıyorum	19	9,4	19,0	55,0
Kararsızım	19	9,4	19,0	74,0
Katılıyorum	15	7,4	15,0	89,0
Tamamen katılıyorum	11	5,4	11,0	100,0
Total	100	49,5	100,0	
Missing System	102	50,5		
Total	202	100,0		

Arkadaşlarla iletişimde bulunmak için sorusunu ifade eden Tablo 7'ye göre, katılımcıların %36'sı (36 kişi) hiç katılmıyorum, %19'u (19 kişi) katılmıyorum, %19'u (19 kişi) kararsızım, %15'i (15 kişi) katılıyorum ve %11'i (11 kişi) ise tamamen katılıyorum yanıtını vermiştir. Katılımcıların %55'i (55 kişi) Twitter'ı arkadaşlarıyla iletişimde bulunmak için kullanmamaktadırlar.

Tablo 8- Mesaj Göndermek Ya Da Mesaj Almak İçin

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid				
Hiç katılmıyorum	49	24,3	49,0	49,0
Katılmıyorum	20	9,9	20,0	69,0
Kararsızım	15	7,4	15,0	84,0
Katılıyorum	11	5,4	11,0	95,0
Tamamen katılıyorum	5	2,5	5,0	100,0
Total	100	49,5	100,0	
Missing System	102	50,5		
Total	202	100,0		

Mesaj göndermek ya da mesaj almak için sorusunu ifade eden Tablo 8'e göre, katılımcıların %49'u (49 kişi) hiç katılmıyorum, %20'si (20 kişi) katılmıyorum, %15'i (15 kişi) kararsızım, %11'i (11 kişi) katılıyorum ve %5'i (5 kişi) ise tamamen katılıyorum yanıtını vermiştir. Katılımcıların %69'u (69 kişi) Twitter'ı mesaj göndermek ya da mesaj almak için kullanmamaktadırlar.

Tablo 9- Eğlenmek Ve Rahatlamak İçin

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiç katılmıyorum	15	7,4	15,0
	Katılmıyorum	12	5,9	27,0
	Kararsızım	19	9,4	46,0
	Katılıyorum	23	11,4	69,0
	Tamamen katılıyorum	31	15,3	100,0
	Total	100	49,5	100,0
Missing	System	102	50,5	
Total		202	100,0	

Eğlenmek ve rahatlamak için sorusunu ifade eden Tablo 9'a göre, %15'i (15 kişi) hiç katılmıyorum, %12'si (12 kişi) katılmıyorum, %19'u (19 kişi) kararsızım, %23'ü (23 kişi) katılıyorum ve %31'i (31 kişi) tamamen katılıyorum yanıtını vermiştir. Katılımcıların %54'ü (54 kişi) Twitter'ı eğlenmek ve rahatlamak için kullanmaktadır.

Tablo 10-Tanıdıklarının Fotoğraflarına Bakmak / Fotoğraf Yükleme İçin

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiç katılmıyorum	60	29,7	60,0
	Katılmıyorum	12	5,9	72,0
	Kararsızım	13	6,4	85,0
	Katılıyorum	6	3,0	91,0
	Tamamen katılıyorum	9	4,5	100,0
	Total	100	49,5	100,0
Missing	System	102	50,5	
Total		202	100,0	

Tanıdıklarının fotoğraflarına bakmak / fotoğraf yüklemek için sorusunu ifade eden Tablo 10'a göre, katılımcıların %60'ı (60 kişi) hiç katılmıyorum, %12'si (12 kişi) katılmıyorum, %13'ü (13 kişi) kararsızım, %6'sı (6 kişi) katılıyorum ve %9'u (9 kişi) ise tamamen katılıyorum yanıtını vermiştir. Katılımcıların %72'si (72 kişi) Twitter'ı tanıdıklarının fotoğraflarına bakmak / fotoğraf yüklemek için kullanmamaktadır.

Tablo 11- Boş Zamanları Değerlendirmek İçin

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiç katılmıyorum	14	6,9	14,1
	Katılmıyorum	15	7,4	29,3
	Kararsızım	28	13,9	57,6
	Katılıyorum	13	6,4	70,7
	Tamamen katılıyorum	29	14,4	100,0
	Total	99	49,0	100,0
Missing	System	103	51,0	
Total		202	100,0	

Boş zamanları değerlendirmek için sorusunu ifade eden Tablo 11'e göre, katılımcıların %14'ü (14 kişi) hiç katılmıyorum, %15'i (15 kişi) katılmıyorum, %28'i (28 kişi) kararsızım, %13'ü (13 kişi) katılıyorum ve %29'u (29 kişi) ise tamamen katılıyorum yanıtını vermiştir.

Tablo 12-Tanıdıkların Duvarına Yazmak/ Duvarıma Yazılanları Okumak İçin

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiç katılmıyorum	35	17,3	35,0	35,0
	Katılmıyorum	21	10,4	21,0	56,0
	Kararsızım	19	9,4	19,0	75,0
	Katılıyorum	12	5,9	12,0	87,0
	Tamamen katılıyorum	13	6,4	13,0	100,0
	Total	100	49,5	100,0	
Missing	System	102	50,5		
Total		202	100,0		

Tanıdıklarının duvarına yazmak/ duvarıma yazılanları okumak için sorusunu ifade eden Tablo 12'ye göre, katılımcıların %35'i (35 kişi) hiç katılmıyorum, %21'i (21 kişi) katılmıyorum, %19'u (19 kişi) kararsızım, %12'si (12 kişi) katılıyorum ve %13'ü (13 kişi) ise tamamen katılıyorum yanıtını vermiştir. Katılımcıların %56'sı (56 kişi) Twitter'ı tanıdıklarının duvarına yazmak/ duvarlarına yazılanları okumak için kullanmamaktadırlar.

Tablo 13- İnsanların İletişim Bilgilerine Ulaşabilmek İçin

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiç katılmıyorum	36	17,8	36,4	36,4
	Katılmıyorum	22	10,9	22,2	58,6
	Kararsızım	20	9,9	20,2	78,8
	Katılıyorum	10	5,0	10,1	88,9
	Tamamen katılıyorum	11	5,4	11,1	100,0
	Total	99	49,0	100,0	
Missing	System	103	51,0		
Total		202	100,0		

İnsanların iletişim bilgilerine ulaşabilmek için sorusunu ifade eden Tablo 13'e göre, katılımcıların %36'sı (36 kişi) hiç katılmıyorum, %22'si (22 kişi) katılmıyorum, %20'si (20 kişi) kararsızım, %10'u (10 kişi) katılıyorum ve %11'i (11 kişi) ise tamamen katılıyorum yanıtını vermiştir. Katılımcıların %58'i (58 kişi) Twitter'ı insanların iletişim bilgilerine ulaşabilmek için kullanmamaktadırlar.

Tablo 14-Kişisel Sunum Ve Profil Bilgilerimi Paylaşmak İçin

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Hiç katılmıyorum	42	20,8	42,0	42,0
	Katılmıyorum	23	11,4	23,0	65,0
	Kararsızım	11	5,4	11,0	76,0
	Katılıyorum	14	6,9	14,0	90,0
	Tamamen katılıyorum	10	5,0	10,0	100,0
	Total	100	49,5	100,0	
Missing	System	102	50,5		
Total		202	100,0		

Kişisel sunum ve profil bilgilerimi paylaşmak için sorusunu ifade eden Tablo 14'e göre, katılımcıların %42'si (42 kişi) hiç katılmıyorum, %23'ü (23 kişi) katılmıyorum, %11'i (11 kişi) kararsızım, %14'ü (14 kişi) katılıyorum ve %10'u (10 kişi) ise tamamen katılıyorum yanıtını vermiştir. Katılımcıların %58'i (58 kişi) Twitter'ı kişisel sunum ve profil bilgilerini paylaşmak için kullanmamaktadırlar.

Tablo 15-İnsanları Daha İyi Tanımak İçin

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid				
Hiç katılmıyorum	31	15,3	31,0	31,0
Katılmıyorum	19	9,4	19,0	50,0

Başkalarına siyasal konularda cevap yazma davet gönderme	Equal variances assumed	4,774	,031	-2,183	98	,031	-,556	,255	-1,061	-,050
	Equal variances not assumed			-2,135	83,549	,036	-,556	,260	-1,073	-,038

Cinsiyete göre t-test analiz sonuçları değerlendirildiğinde, Twitter kullanım amaçları ile ilgili yanıtlar arasında anlamlı bir fark bulunamamıştır. Tablo 32 incelendiğinde, Twitter'da siyasal katılım aktivitelerini ölçen üç soruya verilen yanıtlarda anlamlı fark bulunmaktadır. Bir politik aday veya partiye beğenme sorusunun yanıtlarında, hesaplanan α değeri 0,04 normal α değeri 0,05'ten küçük olduğu için cinsiyete göre anlamlı bir fark vardır. Ortalamalara göre erkekler kadınlardan daha fazla bir politik aday ya da partiye beğenmektedirler.

Twitter’da anlık olarak siyasi bir bilgiyi tartışma sorusunun yanıtlarında, hesaplanan α değeri 0,014 normal α değeri 0,05 ten küçük olduğu için cinsiyete göre anlamlı bir fark vardır. Ortalamalara göre, erkekler kadınlardan daha fazla Twitter’da anlık olarak siyasi bir bilgiyi tartışmaktadır. Son olarak, başkalarına siyasal konularda cevap yazma/ davet gönderme sorusunun yanıtlarında hesaplanan α değeri 0,05 normal α değeri 0,05’e eşit olduğu için cinsiyete göre anlamlı bir fark vardır. Ortalamalara göre, yine erkekler kadınlardan daha fazla Twitter’da başkalarına siyasal konularda cevap yazma/ davet gönderme aktivitesinde bulunmaktadır.

Yaşa göre anova analiz sonuçları değerlendirildiğinde, Twitter kullanım amaçları ile ilgili yanıtlar arasında anlamlı bir fark bulunamamıştır. Tablo 33 incelendiğinde, Twitter’da siyasal katılım aktivitelerini ölçen sekiz soruya verilen yanıtlarda anlamlı fark bulunmaktadır. Bir politik aday veya partiyi beğenme sorusunun yanıtlarında, hesaplanan α değeri 0,016 normal α değeri 0,05’ten küçük olduğu için yaşa göre anlamlı bir fark vardır. Bu anlamlı fark, 17-19 ile 23-25 ve 20-22 ile 23-25 yaş aralığındadır. Twitter direkt mesaj uygulamasında siyasi bir bilgiyi tartışma sorusunun yanıtlarında, hesaplanan α değeri 0,007 normal α değeri 0,05’ten küçük olduğu için yaşa göre anlamlı bir fark vardır. Bu anlamlı fark, 17-19 ile 23-25 ve 20-22 ile 23-25 yaş aralığındadır. Siyasi bir uygulamayı ekleme veya silme sorusunun yanıtlarında, hesaplanan α değeri 0,036 normal α değeri 0,05’ten küçük olduğu için yaşa göre anlamlı bir fark vardır. Bu anlamlı fark, 17-19 ile 23-25 yaş aralığındadır. Siyasi bir belge paylaşma sorusunun yanıtlarında, hesaplanan α değeri 0,008 normal α değeri 0,05’ten küçük olduğu için yaşa göre anlamlı bir fark vardır. Bu anlamlı fark, 17-19 ile 23-25 ve 17-19 ile 20-22 yaş aralığındadır. Siyasi bir link paylaşma sorusunun yanıtlarında, hesaplanan α değeri 0,018 normal α değeri 0,05’ten küçük olduğu için yaşa göre anlamlı bir fark vardır. Bu anlamlı fark, 17-19 ile 23-25 yaş aralığındadır. Başkalarına siyasal konularda cevap yazma/ davet gönderme sorusunun yanıtlarında, hesaplanan α değeri 0,015 normal α değeri 0,05’ten küçük olduğu için yaşa göre anlamlı bir fark vardır. Bu anlamlı fark, 17-19 ile 23-25 yaş aralığındadır. Siyasi bir anket yapma veya ankete katılma sorusunun yanıtlarında, hesaplanan α değeri 0,00 normal α değeri 0,05’ten küçük olduğu için yaşa göre anlamlı bir fark vardır. Bu anlamlı fark, 17-19 ile 23-25 ve 20-22 ile 23-25 yaş aralığındadır. Siyasi bir kişi, aday ya da liderin fotoğrafını paylaşma sorusunun yanıtlarında, hesaplanan α değeri 0,037 normal α değeri 0,05’ten küçük olduğu için yaşa göre anlamlı bir fark vardır. Bu anlamlı fark, 17-19 ile 23-25 yaş aralığındadır.

Ortalamalara bakıldığında, 23-25 yaş aralığındaki katılımcıların bu sorulara diğerlerine göre olumlu yanıt verdikleri görülmektedir.

Tablo 34-Anova- Gelir Düzeyine Göre Twitter'da Siyasal Katılım Aktiviteleri Sıklığı

		Sum of Squares	df	Mean Square	F	Sig.
Siyasi bir link paylaşma	Between Groups	12,331	3	4,110	2,935	,037

Katılımcıların Twitter'a erişim aracına göre anova analiz sonuçları değerlendirildiğinde, Twitter kullanım amaçlarını ölçen bir soruya verilen yanıtlarda anlamlı fark bulunmaktadır. Tablo 36 incelendiğinde, boş zamanları değerlendirmek için sorusunun yanıtlarında, hesaplanan α değeri 0,017 normal α değeri 0,05'ten küçük olduğu için Twitter'a erişim aracına göre anlamlı bir fark vardır. Bu anlamlı fark, bir oturumda akıllı telefon ve bilgisayar kullananlar arasındadır. Ortalamalara bakıldığında, akıllı telefon kullananların bu soruya diğerlerine göre olumlu daha olumlu yanıt vermişlerdir.

Tablo 37- Anova- Twitter'a Erişim Aracına Göre Siyasal Katılım Aktiviteleri Sıklığı

	Within Groups	170,396	97	1,757		
	Total	182,990	99			

Katılımcıların Twitter'a erişim aracına göre anova analiz sonuçları değerlendirildiğinde, Twitter'da siyasal katılım aktiviteleri sıklığını ölçen dört soruya verilen yanıtlarda anlamlı fark bulunmaktadır. Tablo 37 incelendiğinde, son dakika siyasal gelişmeleri takip etme sorusunun yanıtlarında, hesaplanan α değeri 0,034 normal α değeri 0,05'ten küçük olduğu için Twitter'a erişim aracına göre anlamlı bir fark vardır. Bu anlamlı fark, bir oturumda akıllı telefon ve bilgisayar kullananlar arasındadır. Twitter'da anlık olarak siyasi bir bilgiyi tartışma sorusunun yanıtlarında, hesaplanan α değeri 0,018 normal α değeri 0,05'ten küçük olduğu için Twitter'a erişim aracına göre anlamlı bir fark vardır. Bu anlamlı fark, bir oturumda akıllı telefon ve bilgisayar kullananlar arasındadır. Siyasi bir uygulamayı ekleme veya silme sorusunun yanıtlarında, hesaplanan α değeri 0,034 normal α değeri 0,05'ten küçük olduğu için Twitter'a erişim aracına göre anlamlı bir fark vardır. Bu anlamlı fark, bir oturumda akıllı telefon ve bilgisayar kullananlar arasındadır. Siyasi konularla ya da adaylarla ilgili videolar paylaşma sorusunun yanıtlarında, hesaplanan α değeri 0,031 normal α değeri 0,05'ten küçük olduğu için Twitter'a erişim aracına göre anlamlı bir fark vardır. Bu anlamlı fark, bir oturumda akıllı telefon ve bilgisayar kullananlar arasındadır. Ortalamalara bakıldığında, akıllı telefon kullananlar bu sorulara diğerlerine göre olumlu daha olumlu yanıt vermişlerdir.

Sonuç

Yapılan analiz sonucunda, ankete katılanların %55'inin kadın olduğu, %61'inin 20-22 yaş aralığında olduğu, %78'inin bir oturumda Twitter kullanım süresinin 5dk.-30 dk. olduğu, %58'inin Twitter'a erişim aracının akıllı telefon olduğu görülmüştür. Twitter kullanım amaçlarına bakıldığında, katılımcıların Twitter'ı çoğunlukla olaylar ve kişiler hakkında bilgi sahibi olmak için ve eğlenmek ve rahatlamak için kullanmayı tercih ettikleri görülmüştür. Twitter'da siyasal katılım aktiviteleri sıklığına bakıldığında, en yüksek oranın son dakika siyasal gelişmeleri takip etme olduğu görülmüştür. Bu bölüme ait diğer soruların yanıtları, Twitter'da siyasal katılım oranlarının düşük olduğunu göstermektedir. Müzakereci demokrasi modeli bağlamında da olumlu bir sonuca ulaşamamıştır. Müzakerecinin niteliği ile ilgili olan, Twitter'da anlık olarak siyasi bir bilgiyi tartışma, siyasi bir içeriğe yorum yapma, Twitter direkt mesaj uygulamasında siyasi bir bilgiyi tartışma, siyasi bir belge paylaşma, siyasi bir link paylaşma, başkalarına siyasal konularda cevap yazma/davet gönderme, siyasi bir anket yapma veya ankete katılma, siyasi bir gruba (liste) katılma veya gruptan ayrılma sorularına verilen yanıtların çoğunlukla olumsuz olduğu görülmüştür.

T-testi ve anova analiz sonuçlarına göre, erkeklerin, bir politik aday ya da partiyi beğenme, Twitter'da anlık olarak siyasal bir bilgiyi tartışma, başkalarına siyasal konularda cevap yazma/davet gönderme aktivitelerini kadınlara oranla daha fazla gerçekleştirdikleri görülmüştür. Genel olarak, en fazla 23-25 yaş aralığındaki katılımcılar siyasal katılım aktivitelerini gerçekleştirmektedirler. Twitter'ı 3 saat ve üzeri kullananların çoğunlukla mesaj göndermek ve mesaj almak, eğlenmek ve rahatlamak, boş zamanları değerlendirmek, kişisel sunum ve profil bilgilerini paylaşmak için kullandıkları, siyasal katılım aktivitelerine ilgilerinin bulunmadığı görülmektedir. Katılımcıların büyük çoğunluğunun akıllı telefonu bulunduğu halde, Twitter'ı çoğunlukla boş zamanları değerlendirmek için kullandıkları görülmüştür. Akıllı telefon ile Twitter'a erişim sağlayanların siyasal katılım aktivitelerinin ise, çoğunlukla son dakika siyasal gelişmeleri takip etme, Twitter'da anlık olarak siyasal bir bilgiyi tartışma, siyasi bir uygulamayı ekleme veya silme, siyasi konularla ya da adaylarla ilgili videolar paylaşma olduğu görülmektedir. Sonuçlar değerlendirildiğinde, katılımcıların Twitter'da siyasal konulara ilgilerinin oldukça az olduğu görülmektedir. Buna göre, Twitter'ın demokratik katılımı arttırdığını söylemek, müzakereci demokrasinin böylece gelişeceğini umut etmek oldukça güçtür.

Türkiye’deki Ergenlerde Çokboyutlu Yaşam Doyumunun Yordayıcısı Olarak Ebeveyne Bağlanma

Tuncay Oral
Pamukkale Üniversitesi
toral@pau.edu.tr

Ali Karababa
karababa_ali@hotmail.com

Özet

Bu çalışmanın amacı ebeveyne bağlanma ile çokboyutlu yaşam doyumu arasındaki ilişkileri Türkiye’de lise öğrenimlerini sürdüren ergenler üzerinde incelemektir. Araştırmanın diğer amacı ebeveyne bağlanmanın çokboyutlu yaşam doyumunun alt boyutlarını (aile, arkadaş, çevre, okul, benlik) anlamlı şekilde yordayıp yordamadığını belirlemektir. Araştırmanın amacı doğrultusunda çalışma ilişkisel tarama modeline uygun olarak gerçekleştirilmiştir. Araştırmanın çalışma grubu 2016-2017 eğitim-öğretim yılında Denizli’de öğrenim görmekte olan ve araştırmaya gönüllü olarak katılan 470 lise öğrencisinden (237 kız %50.4 - 233 erkek %49.6) oluşmaktadır. Araştırmada Huebner (1994) tarafından geliştirilen ve Türkçeye uyarlama çalışması Çivitci (2007) tarafından yapılmış olan Çokboyutlu Öğrenci Yaşam Doyumu Ölçeği ile Raja, McGee ve Stanton (1992) tarafından geliştirilen ve Günaydın, Selçuk, Sümer ve Uysal (2005) tarafından Türkçeye uyarlanan Ebeveyne Bağlanma Envanteri kullanılmıştır. Bu çalışmada analizlerden önce verilerin normal dağılım gösterip göstermediği kontrol edilmiş ve veriler normal dağılım gösterdiği için parametrik testler kullanılmıştır. Araştırma sonuçlarına göre liseye devam eden ergenlerin çokboyutlu yaşam doyumlarının tüm alt boyutları (aile, arkadaş, çevre, okul, benlik) ile anne ve babaya bağlanma arasında pozitif yönde anlamlı ilişkiler bulunmuştur. Araştırma bulgusuna bağlı olarak liseye devam eden ergenlerin ebeveyne bağlanma düzeyi arttıkça yaşam doyumu düzeylerinin de arttığı söylenebilir. Araştırmanın diğer sonucuna göre ergenlerde anne ve babaya bağlanma, çokboyutlu yaşam doyumunun tüm alt boyutlarını (aile, arkadaş, çevre, okul, benlik) değişen düzeylerde anlamlı olarak yordamaktadır. Araştırma bulgusuna bağlı olarak liseye devam eden ergenlerde ebeveyne bağlanmanın, çokboyutlu yaşam doyumunun tüm alt boyutlarını değişen düzeylerde açıkladığı söylenebilir.

Anahtar Kelimeler: *Çokboyutlu yaşam doyumu, ebeveyne bağlanma, ergenler*

Usability Analysis Of The Mobile Instruction For Computer Programming: The Comparison Of The User Satisfaction Based On The Task Completion Time

Emre YILMAZ & Ömür AKDEMİR

Management Information System Department Ankara Yıldırım Beyazıt University Turkey

emre1yilmaz@gmail.com - omurakdemir@gmail.com

Abstract

Accessing information gains more importance than ever before. The developments made in this direction affect all segments of the society. Now people are in the effort to reach the right information faster and more effectively. Mobile application market is growing in an astonishing speed. There are many players in the mobile application market who develop applications. Among many alternative, users decide which application to use or not in few seconds after seeing the interface of the applications. The most important point in providing continuity in the rapidly growing mobile application world is developing useful applications. In an effort to increase the usability of the mobile application this study is designed to investigate whether the user satisfaction changes based on the task completion time for the mobile instruction which is designed to learn the Hypertext Markup Language. Participants of the study are selected from the students of the Department of Computer Education and Instructional Technologies. All participants have passed the English Proficiency exam. The adopted questioner was used to measure the user satisfaction. The study participants have completed the freely available mobile application designed to learn the Hypertext Markup Language. The application can run on Android and iOS mobile operating systems. The mobile application has several learning modules. Users have to complete each module in order to proceed to the next module after answering all questions correctly at the end of the each module. Findings of the study revealed that users who complete the activities on mobile application faster are more satisfied from using the mobile applications than the other users. Therefore, it is suggested that while developing mobile applications, time to complete the application must be taken into account to increase user satisfaction. The usability test must be completed before the release of the mobile applications. Therefore, developers of the mobile applications should pay attention to the task completion time to increase the sale rates in the mobile application market.

Keywords: *Usability testing, mobile application, user satisfaction, task completion time*

Introduction

With advancing technology, accessing information gains more importance every day. The developments made in this direction affect all segments of the society to a great extent. Now people are in the effort to reach the right information faster and more effectively. In the past, people who have had to visit the libraries to reach information, now can quickly access information from their computers through the development of the internet. Even this speed has begun to lose its validity to people over time. As a result, the mobile age began to show itself. People, today, have instant access to information with their mobile devices. There are about 5 billion mobile users worldwide for 2017 (Statista, 2018). This shows the tendency to mobile devices.

These developments brought with it a number of questions and problems. How impressive are mobile apps for end users? Can people use mobile applications comfortably? The availability of answers to these questions comes into play. Usability can be examined with various parameters such as efficiency, productivity, learnability, memorability, error, satisfaction, flexibility and attitude (Nielsen, 1994). Usability testing of mobile devices is an emerging area of research (Beck, et al., 2003).

The purpose of this study is to compare the user satisfaction rate based on the task completion time. Therefore, the research question of this study is; “Does the user satisfaction rate change based on the task completion time? There are numerous publications in the literature about the design phase or usability testing done on an existing application. Namlı (2010) conducted a study for the Turkey’s first mobile banking application. Results revealed that the availability of mobile applications will increase with the development of user-friendly interface components. One of the usability tests conducted for mobile applications in the literature was conducted on mobile web sites of Middle East Technical University, Koç University and Sabancı University by (Özen-Çinar, 2015). The aim of the research was to investigate usability issues of mobile websites of these universities. According to the results, it is seen that the websites of universities have higher participant satisfaction than mobile web sites. Designs are not mobile responsive, inconsistent navigation between main pages and sub-pages, small font sizes and user interface problems caused by uneven page structures are basic problems for mobile design.

Regarding the impact of the availability of mobile applications, the usability is found to be the most important element after the security for the user's acceptance of the application (Ryan & Gonsalves, 2005). Usability studies have been used for many years in the Human-Computer Interaction research for the purpose of improving the technology-based products and services and making them easy to use (Hallahan, 2001). In this context, when an application is being developed, the approaches of users who will use it should be foregrounded. Otherwise, users will not be able to use these applications. According to Norman and Draper's User Centered System Design (1986), the focus shifts from system to user in the design (Norman and Draper, 1986) because users decide to use or give up within few seconds of seeing an interface. This situation puts the importance of satisfaction in mobile applications. The completion time of tasks affects to user satisfaction (Çağıltay, 2011).

User Centered Design

The User Centered Design approach is an interactive system development approach that focuses on increasing the usability of system interfaces based on the needs of users. In User Centered Design, users are directly involved in the design process. The methods of this design were described by K.D. Easton in 1982 with the following scheme (Userspots, 2009).

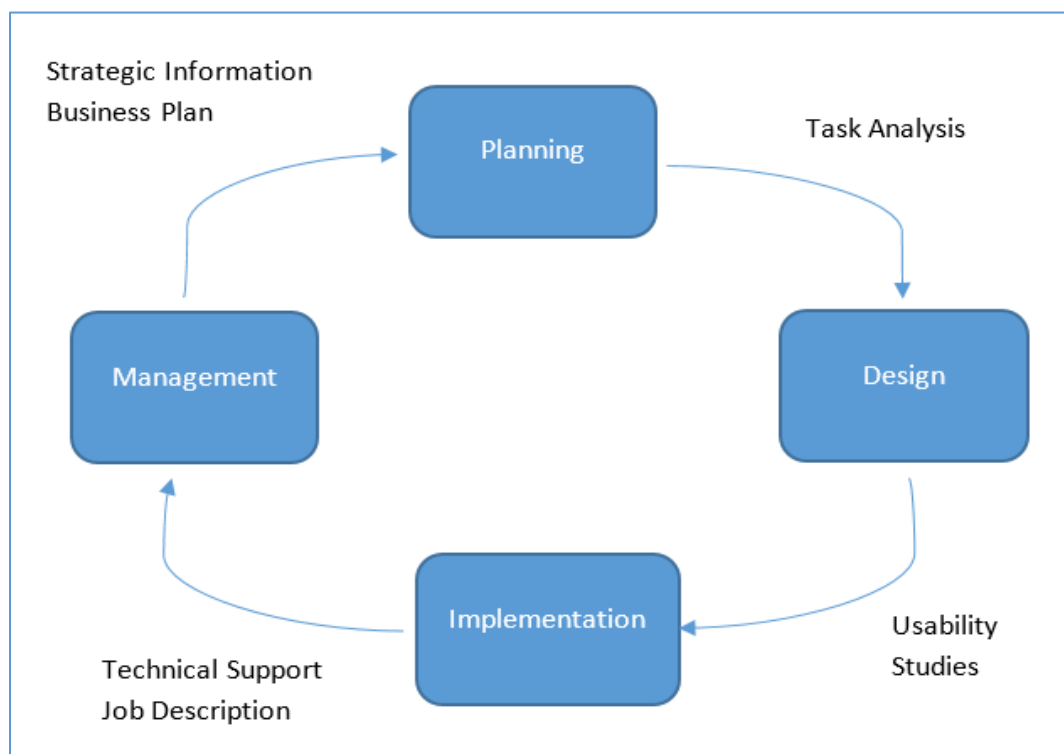

Figure 1: User centered design life cycle (Userspots, 2009).

According to the Figure-1, the user-oriented design consists of successive and recurring Planning, Design, Implementation and Management methods. Usability tests are also taking place between the design and implementation in this design model.

What is Usability?

Usability is defined as the ability to use tasks specified in an application easily and effectively in appropriate environmental conditions, after the necessary training and technical support is given by the users identified as the target audience (KAMIS, 2018). Effective use of a product, users' accuracy and completeness for specific purposes; efficient use is assessed by measuring the resources spent on accuracy and completeness of the goals achieved (ODTU, 2018). According to Nielsen, usability is mainly examined under five headings: learnability, efficiency, memorability, errors and satisfaction (Nielsen, 1994).

- Learnability means how easily the system can be learned.
- Efficiency means how efficiently the learned system can be used
- Memorability refers to the ability to easily remember the use of the system when it is used again after a

certain period of inactivity

- Errors indicate that the error rate of users is low and can be easily corrected when error is made.
- Satisfaction is the satisfaction of using the system of users and the measure of positive or negative thoughts

Usability Measurements

Tests are made before the product is marketed. User testing with real users is the most common and the most basic method of evaluation (Kılıç and Güngör, 2006). The persons representing the user's group are made to implement on the system. The user tests are carried out in human-computer interaction laboratories specially prepared for usability measurements. In these measurements, participants use a software (web site, game, educational software) while the movements of the pupils are being monitored and the environment is being recorded with the camera (ODTU, 2018).

The Study

Participants

Students of the Department of Computer Education and Instructional Technologies were selected as participants for this study. Since the mobile application is in English language, participants were selected among those who know English. Twelve students participated in the usability study. According to Nielsen (1994) the minimum number of users needed for usability testing should be five so the number of participants selected in this study is enough for the usability testing. Four participants are woman and the others are man. Their ages range between 22 and 24.

Figure 1: Number of problem found and the number of evaluators (Nielsen, 1994)

Measurements

The Website Analysis and Measurement Inventory (WAMMI) questionnaire was modified for the mobile application and it was used for the data collection. The questionnaire was created to assess the user satisfaction rate of the selected application because usability questionnaire is directly related to the end user, with easier and faster results when compared with laboratory evaluations, expert opinions and checklist use (Hartson, & Hix, 1988). In order to learn the background of users, questions regarding the demographic information were added to the questionnaire.

Steps of the Study

After the identification of the tasks that users will complete during the study, the study was completed in five steps. Initially users were trained to use the mobile application for the Hypertext Markup Language. Then time count was initiated after given users direction to start using the applications. Users were asked to use the mobile applications

(Figure 4, Figure 5). The time count was terminated for users who finish using the mobile application. Then the total time to complete the mobile application was calculated. At the end of the study, users were asked to complete the questioner measuring the user satisfaction rate. The steps of the study is presented in Figure-3.

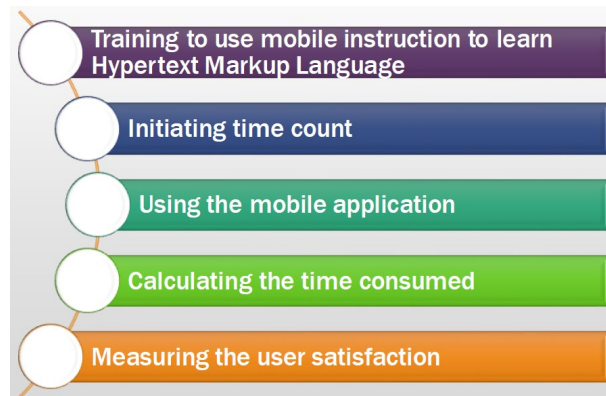

Figure 2: Steps of the study

Mobile Application

The mobile application freely available for the users to learn the Hypertext Markup Language was chosen for the study. The application can run on Android and iOS mobile operating systems. The mobile application has several learning modules. Users have to complete each module in order to proceed to the next module after answering all questions correctly at the end of the each module.

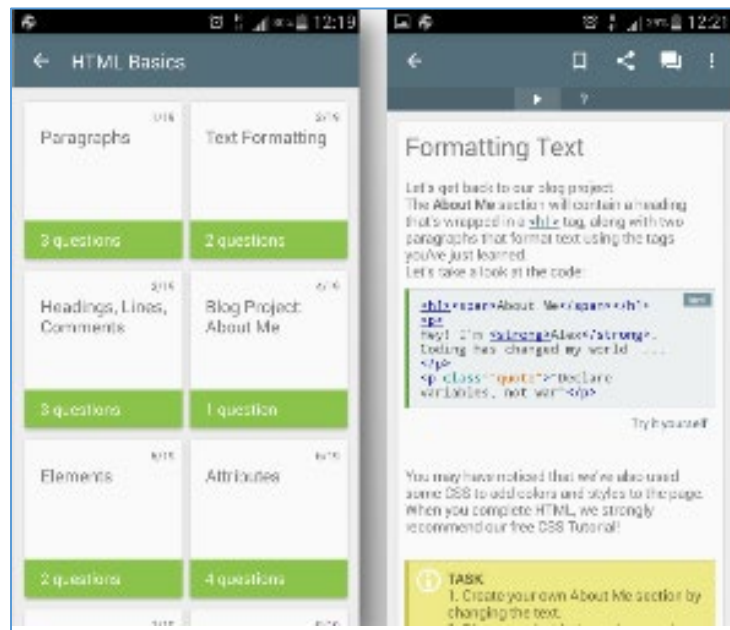

Figure 3: The sample interfaces of the mobile application

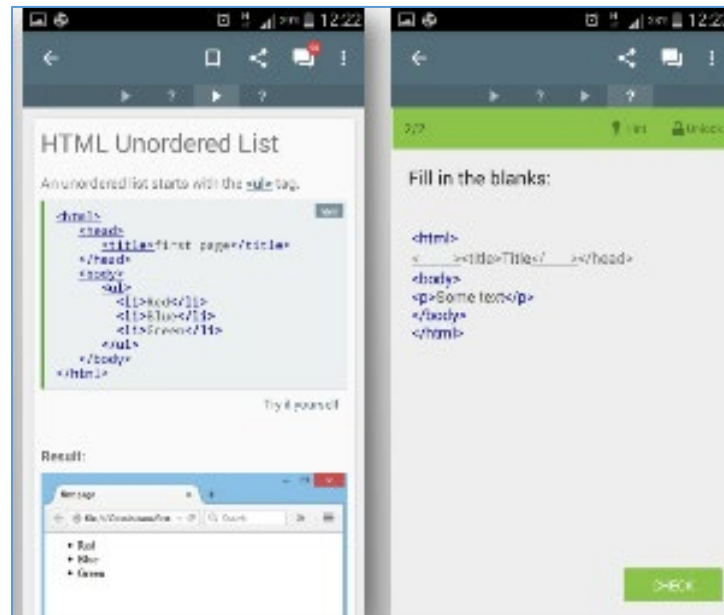

Figure 5: The sample interfaces of the mobile application

Analysis

The average users can complete the planned tasks in the study in five minutes. Based on the task completion time, participants of the study were divided in two groups. 8 participants completed the given tasks under five minutes while others finished the tasks in more than five minutes. The user satisfaction rate of the participants was compared using the Mann Whitney U-Test.

Findings

The user satisfaction rates of the participants were presented in Table 1. Results show that users are satisfied from using the mobile application to learn the Hypertext Markup Language. In order to compare the user satisfaction rates of the participants who complete the mobile application in less than 5 minutes and participants who complete the application in more than five minutes, the Mann-Whitney U Test was used. Results of the analysis indicated that user satisfaction rates of participants who complete the mobile application in less than five minutes are higher than the participants who complete application in more than five minutes ($U=0,0$, $p < 0,05$).

Table 1: The user satisfaction rate of participants

	Strongly Disagree	Disagree	Natural	Agree	Strongly Agree
	%	%	%	%	%
I can access the information easily in this mobile application	0	25	8,3	66,7	0
Mobile application seems to be logical for me	0	8,3	25	25	41,7
Application interfaces in the mobile application are attractive	0	25	16,7	58,3	0
I feel I have the control when using the mobile application	0	33,3	0	16,7	50
I have difficulty to find the location to go on the mobile application	25	41,7	0	33,3	0
It is easy to understand everything on this mobile application	0	16,7	0	66,7	16,7
I feel sufficient when using this mobile application	0	0	33,3	16,7	50
I did not have any difficulty when first using	0	33,3	0	33,3	33,3
Using the mobile application is difficult	50	16,7	16,7	16,7	0
I enjoy using the mobile application	0	33,3		66,7	0

Table 2: The comparison of the user satisfaction rate based on the task completion time

Task completion times	n	Mean Rate	sd	U	p
Less than 5 minutes	8	8,5	1	0,0	0,006
More than 5 minutes	4	2,5			

Conclusion

Accessing information gains more importance than ever before. The developments made in this direction affect all segments of the society. Now people are in the effort to reach the right information faster and more effectively. However, the most important point in providing continuity in the rapidly growing mobile application world is developing useful applications. In an effort to increase the usability of the mobile application, this study is designed to investigate whether the user satisfaction changes based on the task completion time for the mobile application which is designed to learn the Hypertext Markup Language. Findings of the study revealed that users who complete the activities on mobile application faster are more satisfied than the other users. Therefore, it is suggested that while developing mobile applications, time to complete the application must be taken into account to increase user satisfaction. It is important the pay attention to the fact that the usability test should be completed before the release of the mobile applications on market.

Use Of Gaussian Processes For Demand Forecasting In Revenue Management

Ednan AYVAZ
ednanayvaz@hotmail.com

The optimization of revenue management in airlines is primarily based on passenger demand model. Also, due to the uncertain demand problem of the airline fleet management and schedule planning modules, it is not possible to be fully effective and optimal operation. The rapid change in the external environment has increased the number of parameters in the demand model to a considerable extent, while making airline revenue management more complex. This situation requires intense efforts in the forecasting demand.. In this study, the Gaussian model indicate has the highest performance when it is compared with other demand forecasting models.

Use Of Google Drive And Whatsapp For The Follow-Up And Development Of The Final Master's Project Through M-Learning

Abstract

Mobile Learning can be defined as the teaching-learning process that takes place at any place and time, thanks to the use of mobile devices with wireless connection. These tools allow us to access the required information through the network. In this study we analyse the influence of Google Drive and WhatsApp Application to investigate and develop the final Master's Project in students enrolled in the Master's Degree in Teacher Training in Compulsory Secondary and Upper Secondary School Education, Vocational Training and Language Teaching in the Campus of Ceuta. In this case the research has been applied to a group of six volunteer students. It is a descriptive method with an analysis developed from a qualitative approach. In order to obtain the research results, an outline for a half-structured interview was elaborated and validated by content validity. The interviews were individual and recorded for later transcription and ordering. The results show that students value the experience in a positive way, highlighting the possibility of asking and solving doubts through WhatsApp anywhere and anytime, not only with the teacher, but also with the opinion and participation of the rest of classmates, being able to see and solve the inadequate aspects that arose in the elaboration of the final Master's Project through the teacher's comments. As a conclusion we can argue that the experience was positive, adapted to the students' style and learning rhythm, receiving a positive feedback in less than 48 hours for writing the final Master's Project and solving the doubts along its creation.

Introduction

Technologies have permeated with great force in the lives of all citizens, although to a greater extent in the lives of the youngest people. Up to a point that we have begun to speak of "digital bottle" which is nothing more than the mixture of large doses of computer, video games, Internet and mobile (Castell, 2003), not conceiving our existence without search engines, email, WhatsApp or social networks (Del Barrio & Ruíz Fernández, 2014).

So much so, that we can say that we are witnessing one of the main changes that are taking place in society in recent years, due to the unbridled development of Information and Communication Technologies (ICT). These changes are taking place in all areas of society: communication, organization, work, fun, searching for information, way of relating, and, to a greater extent, in education (Raposo-Rivas & Salgado-Rodríguez, 2015).

Regarding education, now it is possible to bring cultures closer through the different tools of instantaneous communication, both synchronous and asynchronous, that the network offers us, with a very high flexibility for sending and receiving all kinds of information and multimedia elements in different formats (Leiva-Olivencia, Moreno-Martínez & Peñalva, 2016):

- Chat and / or video conference: Skype; WhatsApp; Hangouts; Line; Telegram
- Email: Hotmail; Gmail; Yahoo
- Social networks: Twitter; Facebook
- Cloud storage: Google Drive.

The present study has precisely been carried out with the objective of analyzing to what extent two of these tools, Google Drive and WhatsApp, can influence the follow-up and development of the final Master's project in students of the Master's Degree in Teacher Training in Compulsory Secondary and Upper Secondary School Education, Vocational Training and Language Teaching in the Campus of Ceuta.

Carrying out this study has been considered necessary to know the teaching and learning process, These two resources are mainly associated with the mobile learning methodology, understanding this as *"the learning that occurs from the mediation of mobile digital devices"* (Aznar-Díaz, Romero-Rodríguez & Rodríguez-García, 2018, p. 259).

Theoretical Framework

M-Learning

The Mobile Learning as a topic of research in educational technologies, had its beginning in the first decade of this century. Its main characteristic is ubiquity, that is, the teaching and learning process can be carried out at any time and place. At first it could be associated with any mobile technology, but if we focus on the educational field, three stand out: tablets or digital tablets, smartphones or smart mobile phones and phablets, a device resulting from the combination of the previous two (Brazuelo & Gallego, 2014).

In this line Sharples and others (2007) cited in Padrón (2013, p.127)) consider that Mobile Learning "is a combined experience on five main axes", which are (Table 1):

- Mobility in the physical space Movilidad de la tecnología
- Mobility in a conceptual space from a personal interest that evolves
- Mobility in the social space in the different social dimensions in which we move, and finally
- Learning dispersed over time, as a cumulative process that gathers a great variety of experiences in formal and informal contexts.

Table 1: Mobility characteristic of Mobile Learning

Mobility characteristic	Description
PHYSICAL SPACE	Learning is not linked to a specific physical space. Mobile technologies allow us to release moorings in the physical space.
MOBILE DEVICE	Portability of devices: Telephones, PDAs, laptops. Access to information and resources in any space and time through mobile digital networks: Wireless.
CONCEPTUAL SPACE	Learning starts from a personal interest and advances and is modified according to personal interests and curiosity.
SOCIAL CONTEXT	Learning occurs in the different social contexts in which we participate: family, work, school...
DISPERSION IN TIME	Learning is a cumulative process that gathers a great variety of experiences in formal and informal contexts.

Source: Padrón (2013, p. 128)

According to Romero-Rodríguez and Aznar-Díaz (2018) it is a matter of time before this methodology is used habitually in the classroom, taking into account the social reality with which we meet every day. Although they affirm that we must not forget that it is another resource that the teacher has for teaching, and therefore it must be completed with other tools or techniques.

With the development of ICT and its application in the educational field we can speak of a before and after in the teaching and learning process as evidenced by experiences carried out with Google Drive and WhatsApp.

Google Drive

Currently, there are many services offered by the Internet to work collaboratively online, although, we will focus on one of the tools that have been best valued by the Centre for Learning & Performance Technologies, which annually collects the opinion of international experts in the field of education about the best tools to be used in the teaching and learning process. We are addressing Google Drive (Castellanos-Sánchez & Martínez De la Muela, 2013).

Google Drive is a service for hosting files in the cloud that allows the development of text documents, spreadsheets, presentations and surveys editable by several people who share the document (Rodrigo-Cano, Iglesias-Onofrio & Ignacio Aguaded (2015). Gómez, Palomares & Pino (2010, p.2) claim that Google Drive is a tool that facilitates "the collaborative work of the teams, groups and people who come together to share, work and learn in a virtual common space and achieve the proposed objectives". As an example, we cite some research in this regard:

Álvarez Ferrón and Sánchez Cañizares (2014) carried out an investigation with 622 students (417 women and 205 men) from the IES Prince of Asturias in Lorca (Murcia). One of the objectives of this research was to verify to

what extent the applications contained in Google Drive can facilitate cooperative work in educational centers. As a method we used a questionnaire with 20 closed questions that was developed with the Forms application included in Google Drive. The data was collected online. The results show that 100% of the students who systematically use Google Drive consider it very useful as a tool to work cooperatively, since the doubts can be solved both by the teacher and by the classmates, leading to reciprocal learning. The results show that 100% of the students who systematically use Google Drive consider it very useful as a tool to work cooperatively, since the doubts can be solved both by the teacher and by the classmates, leading to reciprocal learning. Likewise, 59.71% of the participants consider that this method of work facilitates learning and the task to be carried out, thus influencing motivation.

Morales (2015) presents an experience with 94 students (40% of students of the School of Medicine and 60% of the School of Nutrition and Dietetics) on the use of Google Drive in the subject of Computing in the Faculty of Public Health of the School Higher Polytechnic of Chimborazo (Ecuador). The most outstanding activity was to make a student portfolio. A survey was designed using the Google Drive Forms tool and was applied through email and social networks to students. According to the results obtained, 91% of respondents prefer to use the Google Drive Platform to manage the portfolio. Likewise, 92% state that this tool should be used as an institutional policy in all subjects.

Martín Roda and Sassano (2015) state that Google Drive is an easy-to-use tool with basic knowledge in computer science. It allows you to work from anywhere and with any mobile device, saving information in an authoritative way. You can share files and work with them synchronously and asynchronously, increasing the activity among the students and thus improving the teaching-learning process. These statements coincide with the results of other studies such as that of Barrios and Casadei (2014).

On the other hand, Brescó and Verdú (2014), conducted a study to assess to what extent the tools Wikispace and Google Drive can contribute to the improvement of group projects in university students. The sample consisted of 124 students of the first year of the Primary Degree of the Faculty of Educational Sciences of the University of Lleida. The students did two group projects, one carried out with the Wikispaces tool and the second with the Google Drive document tool. After this experience the students came to the conclusion that Google Drive is a better tool to carry out group projects and to encourage communication between students.

Rowe, Bozalek and Frantz (2013) developed an experiment at the Western Cape University (South Africa) with the aim of encouraging interaction between teachers and students. For this, the teachers created a learning environment using Google Drive in which the students carried out activities to develop critical thinking. The results show that Google Drive is an innovative pedagogical tool that changed the way of thinking of students.

WhatsApp

"The wide diffusion of the use of smartphones or smartphones in our country has meant the modification of some of our ways of relationship and social communication" (Diez-Ros & Aguilar-Hernández, 2016, p. 344). Currently the most used device to access the Internet is the Smartphone (88.2%), placing itself ahead of the computer (78.2%). In relation to the first is instant messaging, mainly WhatsApp (90.9% of the population, 100% among young people from 14 to 19 years old), the element most commonly used to communicate with family and friends (Telefónica, 2016. Quoted in Alonso-Ferreiro and Fraga Varela, 2016). In addition, in recent years, it has become an innovative pedagogical resource, as the following investigations demonstrate:

Padrón (2013), carried out a study with 8 participants (4 urbanists, 2 lawyers, 1 architect and 1 administrator) with ages between 25 and 44 years, to analyse to what extent the didactic strategies based on WhatsApp can promote collaborative learning, both in the formal and informal processes, in the master's degree in urban transport at the Simón Bolívar University (Venezuela). The participants created a virtual collaborative group through which they proposed how to perform the tasks, what procedures were to be used, how the work would be distributed, as well as tutorials with the teacher to resolve some doubts. The results show that the use of WhatsApp in education, integrated as a training strategy, improves communication and the construction of knowledge.

Monguillot-Hernando, González-Arévalo & Guitert-Catasús (2017) show a research carried out at the Open University of Catalonia (UOC) with 3 Physical Education teachers from different educational centre in Barcelona, with the aim of knowing how the use of WhatsApp can promote virtual collaborative work among teachers. The results obtained show the importance of the use of WhatsApp "as a synchronous and asynchronous tool to be taken into account in the monitoring of collaborative learning situations" (p.56). The faculty has advised the use of WhatsApp to other teachers making them see that it is a tool that encourages collaboration, breaks with the professional isolation that involves being in a classroom, promoting, at the same time, the relationship and

interaction between teachers.

Methodology

Type of study

The type of study developed is descriptive, applying an analysis from a qualitative approach (Colás y Buendía, 1998).

Objective

The objective of the research is to assess whether the use of Google Drive and WhatsApp favors the follow-up and development of the final Master's works, being the premises marked by the m-learning method.

Subjects

The research has focused on students who are enrolled in the Master's Degree in Teacher Training in Compulsory Secondary and Upper Secondary School Education, Vocational Training and Language Teaching in the Campus of Ceuta in the academic year 2017/2018, mainly in the Final Work of Master (TFM).

The population is composed of 6 volunteer students, where 66.6% are women and 33.4% are men. The ages of these students are between 24 and 31 years old, being 24 years old (16.6%), 25 years old (50%), 26 years old (16.6%) and 31 years old (16.6%).

The speciality that are studied in the Master are Orientation (33.3%), Spanish Language and Literature (16.6%), Mathematics (16.6%), Drawing (16.6%) and Training and Labor Orientation (16.6%).

Instrument

The interview is ad hoc, created specifically to analyse the objective set out in the research. It is of semi-structured type and consists of 6 items that try to analyze if the procedure followed is adequate or not.

The instrument, to be validated, has gone through a content validity, through the contribution of 5 expert doctors in the subject addressed. The recommendations focused mainly on the elimination of certain items, as they were not considered adequate for the aspect that was to be analyzed. The recommendations were taken into account.

Process

The information collection procedure is carried out during the development of the TFM, after two months from the beginning of the meeting in which the work to be done by each of the members was arranged, to know the situation in which they were in relation to the experience developed.

In the interview we had, a recording was made, for its subsequent transcription and analysis. The predisposition of the students was always positive and collaborative.

For the analysis of the interview, we have selected key ideas in each of the questions, with the intention of obtaining similarities or differences between the opinions.

Results

At a general level, the opinions of the students regarding the use of Google Drive and WhatsApp for the development of the Final Master's Project are positive.

In relation to the question posed on whether it has supposed to know new resources for the process of teaching and learning, the students have been unanimous in confirming it, that the fact of developing the FMP following the m-learning method has made them see the resources they usually see every day in another way.

I have always used WhatsApp for leisure and entertainment issues, and now that we have developed the training process this way, I have seen it as another pedagogical resource. I liked this new perspective [Participant 1].

It's the first time I see Drive, before I always kept the documents on a pendrive. Thanks to the development of this method of work I have observed that in addition to storage, I can modify the document anywhere and at any time, and receive modifications from the teacher without having to send and receive continuously the Word document [Participant 3].

Regarding to whether this method of teaching has contributed to learning, students have stated that, rather than

contributing to learning, it has made the task much easier.

I would say that it has helped me to perform the task more easily. I give you an example, the other day I was going away for the weekend with my family, the time that I was waiting to embark and during the passage in boat, I had the chance to consult doubts by WhatsApp and to complete the work by means of Drive [Participant 2].

To me it has facilitated the learning, as much the professor as my companions, since by means of the WhatsApp group, when I have been a doubt, they answered in a little time any of them, solving the doubts [Participant 4]

Regarding the question of whether it favors teamwork, students agreed, but in those situations when work dealt with the same topic for all of them.

It has helped me personally, especially my colleagues who had to do the Didactic Unit, because they quickly solved my doubts. In this case, we have been able to work as a team [Participant 6]

If we talk about working as a team to develop a project, I personally think not, especially in my case, that developed a Plan of Attention to Diversity and was the only one, so I have not been able to receive much advice from my colleagues. If we see it through the perspective of helping each other, I think so, because at certain times, colleagues with similar FMP lines have helped each other a lot [Participant 4].

When asked if this method matched their learning, the students said no at the beginning of the implementation, but as they progressed they observed that there would be another way to learn and that it could fit in with their new way of learning. Learnin.

I have been used to listen to the teacher in class and take notes all my life. He did not make decisions, he only copied and studied by heart. With this new form, I see that I am the one who must set my pace and guide the development of my work to my needs. Personally, I like it a lot, and I think it can be useful for my classes tomorrow [Participant 5].

Well, if we see it through the perspective of what I've lived so far, it does not fit, because I'm not used to this way of learning. If we see it through the perspective of what I just learned and put into practice, I would say that it does fit with my way of learning, because it makes my work easier and adapts to my rhythm and learning style [Participant 4].

Finally, the assessment has been very positive on the part of all students, emphasizing that this type of experience should be promoted more frequently in the university environment.

My assessment is positive. On the one hand I value the performance of the teacher who has been pending at all times to resolve the doubts about WhatsApp, and on the other hand the help received from my colleagues [Participant 6].

My assessment? Very good, the truth is that I did not know that these things could help so much academic development, in addition to offering me another type of teaching that is not masterly. I intend to apply it tomorrow. [Participant 3].

Conclusions

The students who have completed the Final Master's Project have positively evaluated the teaching and learning process that has been developed following the guidelines set by the m-learning method.

They consider that it has supposed to them to see novel teaching and learning processes through new educational resources, which has facilitated the training development, coinciding with Álvarez Ferrón and Sánchez Cañizares (2014), facilitating the completion of the various tasks and promoting group work, being in line with what was established by Gómez, Palomares and Pino (2010, p.2).

At first they had objections when developing the educational action in the manner proposed, but as the activity progressed, they saw the advantages that it entailed. They emphasize the fact that they can do their work anywhere and at any time, coinciding with what was established by Martín Roda and Sassano (2015) and Padrón (2013) as well as raising questions in the group and being answered, not only by the teacher, but for the student, which

could solve doubts adequately, generating a reciprocal learning (Álvarez Ferrón and Sánchez Cañizares, 2014).

These students believe that it would be necessary, especially in a Master oriented to teacher training, to present innovative methodologies, to facilitate both the acquisition of content and models to apply tomorrow in school coinciding with Monguillot-Hernando, González-Arévalo and Guitert-Catasús (2017) that advise the use of WhatsApp among teachers, making them see that it is a tool that encourages collaboration, breaks with the professional isolation that is being in a classroom, and it improves the relationship and interaction between teachers.

Use Of Mobile Learning For The Application Of A Multidisciplinary Program In Health: The Case Of The Beatriz De Silva School

Jesús López BELMONTE
Research Group AREA HUM-672
University of Granada, Spain
jesuslopezbelmonte@gmail.com

Abstract

The use of mobile learning is justified in the relevance of learning today through resources and electronic devices, pursuing autonomy, portability, adaptation and learning innovation. Thus, the purpose of this paper is the study of the application of a methodology based on mobile learning to develop a program of healthy contents, from the perspective of the different areas that make up the curriculum in Spain. Specifically, this study was conducted at the Beatriz de Silva School in the educational stages of preschool, primary and secondary with the objective of promoting the styles and habits of healthy living with new technologies. In addition, as the awareness to reduce, the high index of sedentary and health problems derived from the scarce physical activity and bad eating habits. To carry out this study, we opted for the use of a quantitative research methodology, based on the statistical study of the data collected through an ad hoc questionnaire. The most significant results reflect a high degree of student motivation for learning through digital resources and certain deficiencies to develop a healthy lifestyle. In summary with this teaching methodology, the student becomes the main actor of their own learning, being able to manage their own process and evolution of it.

Keywords: *Mobile learning, innovation, ICT, health, children population.*

Introduction

ICT have come to society to simplify everyday tasks and make life easier, but to a certain extent they are affecting and complicating other fundamental aspects such as health (Echeburúa, & De Corral, 2010).

At the educational level, ICT are considered as tools that offer great possibilities, but in the field of health, they are not so well positioned, because they are closely related as one of the great causes of sedentary lifestyle, causing even problems arising in the academic performance (Puig, Llamas, & Portolés, 2015).

It is necessary that students in the early stages of education become aware of good healthy habits. The educational centres acquire a relevant role towards the promotion of an active life, promoting sports and physical activity as the best possible medicine for cardiovascular diseases. Also important in this promotion of healthy styles is the involvement and collaboration of families, as a prominent pillar within the Educational Community, giving rise to a triangulation of the teaching and learning process among teachers-students-families (Macías, Gordillo, & Camacho, 2012).

The absence of physical activity in today's society causes one of the greatest dangers, increasing the possibility of suffering from cardiovascular diseases, obesity or diabetes, among others. It is worrisome the amount of hours that young people today spend in front of new technologies, conditioning the time of physical activity or leisure and recreation games with people in their environment (Beltrán, 2011).

The adolescent population uses ICT in an abusive manner, devoting much of their free time to escape and interact with their peers through social networks and the Internet. This scenario leads to an increase in the rate of sedentary lifestyle, inactivity, even affecting even the eating habits, leading to changes in diet, promoting fast food, as a result of technological interaction (Pérez, Quiroga, Olivares, & Pérez, 2017).

Any action or activity carried out without control can cause an addiction and that is what is happening with new technologies in the hands of the youngest, as more active users who neglect other fundamental aspects such as health (Echeburúa, & De Corral, 2010). It is important to know the main sedentary behaviour of people in order to establish the best strategies to combat it and its problems derived (Cantallos et al., 2012).

In developed countries is where there is greater overweight and obesity. About 30% of the child population suffers from this type of problems, evidenced by the decrease in physical activity due to technological incidence, leading to future serious problems related to health (San Mauro et al, 2015).

For González, Gómez and Navarro (2016), obesity has become the great epidemic of the new century, being one of the causes of death in the world. In Spain, obesity is suffered by 62% of the population. Obesity has been increasing in recent years due to the change in life that has led to technological influence.

Following Fonseca, Maldonado, Pardo and Soto (2007), in their studies they allude to one of the recommendations of the World Health Organization (WHO), such as the promotion of active and healthy habits and lifestyles to prevent diseases. In order to lead a healthy life and prevent the risks caused by physical inactivity, it is essential to make humanity aware of the critical use of technology that surrounds us and indirectly affects our health, due to

the change in the way of living, working and interacting with the environment and the people around us (De Diego, Fernández, & Badanta, 2017).

According to Beltrán (2011), although it seems a contradiction, the use of ICT and videogames has been used to counteract the sedentary lifestyle and the passivity that has caused technological development in our society. In an era marked by the incidence and rapid technological expansion, in order to achieve an active and healthy lifestyle, we must trust in the potential of ICT and develop strategies and actions that result in a digital and active practice of activities focused on promoting of the health.

Today's education is conceived as a search towards the active learning of the learner, based on discovery and from different perspectives, all of this at the hand of technology, allowing to make more motivating and attractive activities and resources for students. That is why the development of technological equipment in schools has been increased and improved in recent years, as a result of the integration of ICT in our lives (Chacón et al., 2016).

Following the studies of Mora (2013), mobile learning or mobile learning has been favoured by the development of technologies in today's society. It is conceived as a new methodology focused on mobility, communication, learning in different contexts and the collaboration of students to carry out tasks or solve problems, in an active and participatory way, through mobile devices. Authors such as Moreno, Leiva and Matas (2016), consider mobile learning as an emerging methodology with a high incidence in education. Romero, Rodríguez-García and Aznar (2017), understand it as new environments that offer students great possibilities to develop knowledge, have a great source of resources as well as the promotion of digital competence and collaborative work. For Brazuelo and Gallego (2014), one of the characteristics of mobile learning is ubiquity, which means that at any time and place the learner can get in touch with the contents and build their own learning.

That is why we must resort to technology and take advantage of its potential to motivate and increase the practice of physical activity, in addition to the respect and care of our body (González, Gómez, & Navarro, 2016), being mobile learning an ideal methodology to achieve it.

The Study

Context

This research has been carried out in a very particular geographical setting such as the Autonomous City of Ceuta, a Spanish city located in the North of the African continent, separated from the Iberian Peninsula by the Strait of Gibraltar. Ceuta presents the peculiarity of being a multicultural city, in which 4 cultures coexist peacefully, such as Christian, Muslim, Hebrew and Hindu.

Specifically, this study has been carried out in an educational centre of the city, specifically in the Beatriz de Silva School, which acts as a teaching cooperative. This centre is located in the downtown area of the city, encompassing a population of students whose families have an average socioeconomic power.

The Beatriz de Silva School covers an approximate number of 700 students, divided into the first 3 educational stages proposed by the law in education, such as the preschool, primary and secondary stage, in turn each course has two educational lines. The teaching faculty that composes this teaching cooperative is composed of 40 education professionals. Table 1 shows the distribution of students and teachers in each educational stage.

Table 1: Demographic characteristics of the educational centre.

Educational stage	Teachers	Students
Preschool Education	10	150
Primary Education	17	340
Secondary Education	13	210

Source: Self-made.

Objectives

This research is based on the idea of applying a healthy program in the school population by means of two methodologies, a mobile learning and a traditional one.

From this main purpose derive the following specific objectives to finalize the study:

- To know the habits and lifestyles of the students of the Beatriz de Silva educational centre.
- To raise awareness in the educational community about the importance of following healthy habits.
- To know the deficiencies that students have in the field of health.
- To check the scope and effectiveness of each methodology used.

Methods

To carry out this study, we chose the choice of a quantitative method, focused on the statistical study of the data obtained. At the same time, several descriptive and correlative analyses have been carried out to better approximate and understand the current reality found in the educational centre in question.

Sample

The subjects that participated in this research covered a figure of 300 students, selecting 100 participants from each stage, following a simple random sampling. The resulting sample remaining as shown in table 2.

Table 2: Sample of participants.

Educational stage	Students
Preschool Education	100
Primary Education	100
Secondary Education	100

Source: Self-made.

Instrument

The measuring instrument used to carry out the information collection process has been the questionnaire. In particular, an ad hoc questionnaire has been prepared for this research, created specifically to meet the requirements of this study, covering various dimensions that allow obtaining the necessary results to fulfill the purposes of this study.

The questionnaire consists of 35 items divided into 4 dimensions as shown in table 3.

Table 3: Dimensions of the questionnaire.

Dimensions	Variables
Sociodemographic	6
Healthy habits	12
Harmful habits	12
Methodology used	5

Source: Self-made.

The items presented by this instrument have been drawn up in their vast majority to be answered following a Likert rating scale, between the values 1-4, with 1 being the lowest value and 4 being the highest.

To know the reliability and validity of the questionnaire, this has been submitted to evaluation by an expert judgment composed of 4 PhD of the University of Granada, who evaluated the instrument in a positive way. On the other hand, to know the reliability of it, the Cronbach's Alpha test was applied, reaching the values shown in Table 4.

Table 4: Cronbach's alpha.

Dimensions	Results
Sociodemographic	0,867
Healthy habits	0,859
Harmful habits	0,842
Methodology used	0,851

Source: Self-made.

These results obtained by applying the Cronbach's Alpha demonstrate a high internal consistency index in the different items that make up the questionnaire, giving rise to a fairly reliable instrument to develop such research.

Process

In order for the research process to be carried out satisfactorily, a plan was drawn up that covered each and every one of the phases that have been carried out during the course of the study.

In particular, the research was developed in 5 different stages, marked in a schedule of action so that each action was carried out effectively, not altering or conditioning the evolution of the study in question.

The first stage integrates all those actions that give origin and life to this investigation, such as the realization of documents and formal writings to obtain the authorization and necessary permits to carry out the study in an educational centre. Table 5 lists all the documents prepared for such purposes.

Table 5: Authorizations and necessary permits.

Issuance of requests to:	State
Management team of the educational center	Permission granted
Provincial Delegation of the Ministry of Education, Culture and Sports	
Ministry of Education	
Families of the students	

Source: Self-made.

These writings were made and sent digitally, through the official email of each institution. After several days, the positive responses of each of these organisms were obtained, not receiving any problem to carry out the research.

In the second stage, in order to grant officialise, formality and commitment on the part of researchers to the research, each institution involved and mentioned above was visited personally, explaining in situ the purposes and purposes of the study.

The third stage encompassed the realization of a schedule where dates and hours were established to collect the data, this planning was carried out jointly with the members of the School Management Team, establishing a schedule that did not disturb the normal course of the day school. Once the planning was done, a pre-test was carried out to obtain an initial assessment and mark the starting point. In order to promote the use of ICT, to preserve and educate the students about the respect and care of the environment and to obtain an increase in the motivation of the study participants when filling out the questionnaire, it was carried out through of "all in one" model computers donated by the educational centre, as shown in figure 1.

Figure 1: Computer model used for data collection.

Source: Self-made.

In the fourth stage, the previously planned 4-month application of a teaching methodology based on mobile learning was produced, but only in certain groups of students, from an autonomous, participatory, social, communicative, portable and in new environments of learning, thanks to the use of said methodology, through devices such as the one shown in figure 2.

Figure 2: Mobile device used for mobile learning.

Source: Self-made.

The rest of the students remain under a traditional teaching methodology, covering the development of various contents related to healthy habits and lifestyles, as shown in the following table 6.

Table 6: Developed contents.

Physical activity
Alimentation
Postural hygiene
Corporal hygiene
Control of ICT

Source: Self-made.

In the fifth and final stage, the second data collection process was carried out that allowed to compare the data obtained initially with those obtained after the application of a program of contents related to health.

Findings

After the statistical analysis of the different variables that make up this research, the most relevant results obtained after the quantitative study are presented below.

As shown in figure 3, after analysing the data collected from both teaching methods, it is determined that the educational stage that follows healthier living habits than the rest is Preschool Education, with 60% of the subjects who follow such healthy styles, followed by 25% of students belonging to the stage of Primary Education, until reaching a lower 15% of the sample that represents the students of more advanced ages, corresponding to the stage of Secondary Education, who follow some habits of healthy life to a lesser extent than the rest.

Figure 3: Healthy habits by educational stage.

Source: Self-made.

Of the two teaching methods applied in this research, as reflected in figure 4, those students who have developed the contents related to health from a digital and innovative perspective through mobile learning, have expressed greater predisposition and motivation in the accomplishment of the learning tasks. It is worth noting the overwhelming difference between the two methodologies, highlighting the dynamising supremacy of mobile learning that has managed to motivate a total of 120 students, compared to the traditional one that has only promoted 37 students.

Figure 4: Degree of motivation achieved at the methodological level.

Source: Self-made.

As shown in figure 5, the evolution of students in the acquisition of healthy habits in a range of 4 months, is notable for its increasing character, increasing each month the number of students who have consolidated an active and healthy life, arriving to the figure of 105 students in the 4th month of study.

Figure 5: Evolution of the traditional methodological group.

Source: Self-made.

Therefore, figure 6 shows the evolution of the group that has developed an innovative methodology, focused on the use of mobile devices, which show a less pronounced growth between each month, but the number of students that have improved they have learned and implanted in their lives the healthy lifestyles developed in the contents taught.

Figure 6: Evolution of the mobile learning group.

Source: Self-made.

In the stage of Preschool Education, as reflected in figure 7, there are peaks in each of the items related to healthy life, with a lower number of 52 students not following appropriate postural hygiene, which may lead to a future problems related to the child's health and normal development and growth.

Figure 7: Healthy habits in Preschool Education.

Source: Self-made.

Regarding the Primary Education stage, figure 8 shows that the data obtained are still high, although in a smaller proportion than the previous educational stage. The figure related to postural hygiene is still in decline, highlighting the beginning of the consumption of substances harmful to health.

Figure 8: Healthy habits in Primary Education.

Source: Self-made.

In figure 9, the results are more worrying, with a decrease in all the items, except the one related to the consumption of harmful substances that, as happened in the previous stage, as the student grows, this increases the consumption of harmful products to health.

Figure 9: Healthy habits in Secondary Education.

Source: Self-made.

Conclusions

After carrying out this research, significant and relevant information has been obtained about the reality of health in an educational centre. The results achieved have allowed us to clarify that the first two educational stages (Preschool and Primary Education) are those with the highest levels of healthy life, but it is from the Secondary Education stage, that is, in adolescence, when a Considered descent of healthy habits and styles in the students.

At the methodological level, the use of a methodology based on mobile learning has led to greater motivation, participation and enthusiasm in the learning process of students, thus increasing the incidence of the healthy content program, compared to the traditional method, which only has promoted a few groups of schoolchildren.

With respect to the evolution in the improvement and transformation of the attitude of the students towards an active and healthy life, in a period of 4 months, the mobile learning method has managed to capture and modify the behaviour of a greater number of students. In this short period of time, the students has worked, understood and assimilated the importance and need to follow some guidelines and recommendations to have a good state of health.

Therefore, it is concluded that this innovative method used in an educational centre for the promotion of healthy

habits and styles, through the application of a healthy content program through mobile devices, has been positive and enriching for the students, same time that has served for the promotion of the TIC and the work of the digital competence of the students for a healthy end in a transversal way.

Abstract

Web 2.0 has generated a change in people's attitudes ranging from static to dynamic thanks to the web tools that allow users to share, collaborate and participate, generating contents in a cooperative way. This research aims to identify whether the Wiki tool is suitable for contents creation, both theoretical and practical, following the philosophy of cooperative groups, in students enrolled in the Master's Degree in Teacher Training in Compulsory Secondary and Upper Secondary School Education, Vocational Training and Language Teaching in the Campus of Ceuta (n = 73). The method is descriptive and correlational, carrying out an analysis from a mixed approach (quantitative and qualitative). Two instruments were created to obtain the data: a questionnaire to evaluate the Wiki application as a valid tool for the teaching-learning process (post); and a debate outline for the discussion groups consisting of eight groups of 8 members, except one formed by 9. The quantitative results showed the application favoured the class group participation, the inquiry, collaboration and learning and in fact it offers new perspectives for the teaching process. The lack of time to properly develop the activity stands out as a negative aspect. At a qualitative level the results showed that students were reluctant to apply a new educational methodology, but as the classes progressed, they valued the action positively, considering the possibility of applying them when they were teachers. As an improvement proposal they suggested to create smaller groups to produce contents through the Wiki. We can conclude the Wiki application can be a valid tool for contents creation, as long as it is applied in smaller groups.

Introduction

There is no consensus when it comes to establishing the moment of the birth of the Web 2.0 term, for some authors (De Haro, 2010), the term was first coined by Dacy Dinucci to indicate the changes that were taking place at an aesthetic and design level various websites. For others (Martín, 2011, Palomo, Ruiz & Sánchez, 2008), the term appears in the mouths of Tim O'Reilly and Dale Dougherty, in 2004, referring to user communities, which could modify various applications thanks to the social collaboration.

It is in 2006, when the term Web 2.0, from Time magazine, which publishes it on its cover, reaches its peak. In this magazine reference is made to the paradigm shift of the web, which goes from being a content website to a web of people (Castellanos, et al., 2011).

When we define Web 2.0 we should consider two aspects. On the one hand, we can consider it as a series of tools that allow network members to share, collaborate and participate in the different contents that are generated in different Web (Chernoll, 2009; Casamayor, 2008); or, as a social philosophy, focused on the attitude of people, where webs, previously static, become dynamic due to the contributions of the community (Unturbe and Arenas, 2010, Zamarrazo and Amorós, 2011).

If something characterizes Web 2.0, it is because it is interactive (Zamarro and Amorós, 2011), dynamic, open (Unturbe and Arenas, 2010), collaborative, participative (De Haro, 2010), intuitive, simple (Castellanos, et al., 2011), modifiable (Martin, 2011) and free (Palomo, Ruiz and Sánchez, 2008). All these aspects make that the use of Web 2.0 has generated so much expectation and caused so much use by the community that accesses the Internet. At an educational level, the introduction of Web 2.0 in the teaching and learning processes have caused changes in the role of teachers and students. Teachers become guides of training, while students are responsible for their learning, marking the actions that really motivate them in their learning (Cela et al., 2010).

In addition, it generates new methods and learning styles (Dominguez and Llorente, 2009), being an example, the possibility of creating online spaces with large amounts of information sources thanks to the contribution of both teachers and students (Marqués, 2007).

The emergence of Web 2.0 implied the development of new resources, including the Wiki application, considered one of the most well known academic tools among the 2.0 (Barberá, 2009), which modified the way to obtain information, since it does not stay only in the reception of it, but you can modify it and edit it according to your

knowledge, favoring collective learning (Araujo, 2017).

The term wiki is based on the term "wikiwiki", which is Hawaiian, and refers to speed or informality (Villaroel, 2007; Mora, 2012; Sanz, Gil and Marzal, 2007). The first wiki was created by Cunningham in 1995 with the intention of sharing non-profit knowledge, being the impulse of new wiki with the same philosophy (Mur, 2015). We can define it as an instrument of collective participation and construction of knowledge, formed by tools for publication, shared editing and analysis of hypertext documents that allows users to access, through a web browser, create, edit, delete or modify a certain text, quickly, Interactive and simple, without having to do it in the same physical and temporal space, in a shared digital space, asynchronously (Gómez and Álvarez, 2011, Espinosa, 2014, Giménez and González, 2009, Vela, Medina and Rodríguez, 2017; Mora, 2012). This tool offers, for both formal and informal education, collaboration and mutual commitment to learning (Barberá, 2009).

When evaluating Wikis, they offer many advantages that make it a powerful tool for the social field and for the educational field. Wikis allows you to include many digital add-ons, users can edit and develop content, favors collaboration (Araujo, 2017, Giménez and González, 2009, Mur, 2015), offers temporal and spatial flexibility, allows you to work asynchronously or synchronously, they can be private or semi-private (Gómez and Álvarez, 2011; Giménez and González, 2009; Villaroel, 2007), freeze a document when it is finalized (Concepción, 2008), it is accessible, intuitive and friendly (Mora, 2012); favors the attention to diversity, controlled learning environments, allows to follow the whole process of elaboration (Espinosa, 2014; Giménez and González, 2009), retrieves information quickly and easily (García, 2016), offers a variety of templates for his creation; allows to manage permissions at user and page level; is free; does not require complex computer skills (Mora, 2012); it is flexible; improves the interaction between pairs and favors the involvement in learning (Vela, Medina and Rodríguez, 2017).

Although, as in all the resources that we can find, they also have disadvantages, which we must know to minimize their effect as much as possible. What we can find is the difficulty of evaluating individual work (Araujo, 2017); the contents presented can not be directly contrasted; depends on the internet connection; the modifications made do not ensure that they are of better quality (Giménez and González, 2009); Teachers may not know how to give enough support to encourage participation (Gómez, 2017); loss of information, either by mistake or by malpractice, in the modifications made by users (Mora, 2012); the lack of motivation can damage its didactic application (Vela, Medina and Rodríguez, 2017).

At an educational level, and focusing on the perspective of the students, those who have developed the digital competence, are those who value the resource positively and see useful purpose. On the other hand, those who have not developed it, value it negatively, and do not see functionality in their daily work (Giménez and González, 2009).

It is important that students have a participatory spirit, and are themselves responsible for their learning, in a coordinated manner, as this will allow for better results in the use of the Wiki resource (Sanz, Gil and Marzal, 2007).

At a methodological level, the Wiki favors and enhances collaborative work (Gómez and Álvarez, 2011), allowing both teachers and students to work closely and jointly on a specific topic, although it must be accompanied by a clear objective. This collaborative learning requires coordination, commitment and effort on the part of all the members of a group (Araujo, 2017; Mora, 2012), as well as establishing the problem to be addressed and providing solutions among all (Barberá, 2009), planning in detail all the actions to be developed (Giménez and González, 2009).

If we want its use for the teaching and learning process to be successful, we must contextualize the activity, determine the objectives, establish the work plan, select the human and technical resources, indicate the evaluation system (Giménez and González, 2009). This fact should be applicable to any educational action that is developed, its use not being exclusive for the Wiki resource.

The student must be an active part of the teaching and learning process (Mora, 2012), generating skills at the negotiation level, to jointly generate knowledge (Gómez, 2017), while the teacher must become a guide and guidance of learning, positioning itself within the constructivist paradigm (Vela, Medina and Rodríguez, 2017; Mora, 2012), offering an alternative to the resources used in the traditional methodology (Gómez and Álvarez, 2011). Moving from being a classic tutor to an e-tutor (Mur, 2015).

Before starting to use it, we must train students in its use, especially in basic operations, to familiarize with the tool (Araujo, 2017), either through practical explanation or tutorial (Espinosa, 2014), thus avoiding demotivation due to lack of knowledge in its management.

When evaluating the academic development of students through the Wiki resource, it can be developed in various ways, either through self-assessments or co-evaluations (Gómez and Álvarez, 2011), or any evaluation procedure or technique. The important thing is to have planned the development of the activity, in addition to establishing clear qualification criteria on the final grade of the subject in which we are developing (Giménez and González, 2009). In addition, it is necessary to monitor the activity of the students on a constant basis (Gómez, 2017), so that they are aware that their work is being valued.

The use of the Wiki resource is ideal for teaching the writing process, as it promotes reflection, review, publication and observation of the results, becoming an interactive writing book (Araujo, 2017).

Methodology

Type of study

The study we have developed is descriptive and correlational, applying data analysis from a quantitative and qualitative approach (Colás and Buendía, 1998).

Objective

The objective of this research is to identify if the Wiki tool is suitable for the creation of contents, both theoretical and practical, following the philosophy of the cooperative groups, in the students enrolled in the Master's Degree in Compulsory Secondary Education, Baccalaureate, Vocational Training and Language Teaching in the Campus of Ceuta.

Subjects

For the research we have selected the entire population that form the student body enrolled in the Master of Training in Teaching Compulsory Secondary Education, Baccalaureate, Vocational Training and Language Teaching in the Campus of Ceuta in the academic year 2017/2018 in the subject of Educational Processes and Contexts.

The population is made up of 73 subjects, where there are more women (45.2%) than men (54.8%), where the students have an age range between 21 and 25 years (52.1%) mainly, followed by the interval between 26 and 30 years old (30.1%). There are also, but in a better proportion, students aged between 31 and 35 years old (9.6%) and over 35 years old (8.2%).

The specialties with which they are studying the Master are mainly Training and Labor Guidance (13.7%), Economy (13.7%) and Foreign Language (13.7%), followed by Educational Guidance (9.6%), Sanitary Processes (8.2%), Mathematics (8.2%), Biology and Geology (6.8%), Social Sciences (6.8%), Drawing (6.8%), Spanish Language and Literature (4, 2%), Physics and Chemistry (4.2%), ICT (2.7%) and Physical Education (1.4%).

The religion professed by the student enrolled is mainly the Christian religion (49.3%), followed by the Muslim religion (12.3%) and another, in which students have placed Buddhism (4.1%). There is a high percentage that does not follow any religion (34.2%).

Instrument

The questionnaire prepared is ad hoc, created specifically to analyse the objective set out in the investigation. The instrument consists of 9 items, distributed in a field, called "Use of the Wiki application in the teaching and learning process", composed of 5 items, in addition to sociodemographic data, formed by the items sex, age, specialty and religion who professes.

In order to be validated, the instrument has gone through a validity of content, through the contribution of 5 doctors, experts in the subject treated. The recommendations focused mainly on the modification of the wording of certain items, aspects that we took into account.

For reliability, we apply the coefficient of internal consistency of Cronbach's Alpha, through a pilot test applied to 35 trained during the 2016/2017 academic year. The average value of Cronbach's Alpha is 0.768; considered to be acceptable to be higher than 0.70 (George and Mallery, 2003).

The script was prepared ad hoc, composed of 3 questions, focused on the evaluation of experience, positive and negative aspects found and proposals for improvement in their application within the teaching and learning process.

The instrument was subjected to content validity by the same experts as in the questionnaire, who recommended grouping items, and modifying the approach to certain issues, which we had in mind.

Process

The data collection procedure is carried out once the Wiki application has been used during the teaching period Processes and Educational Contexts, in the month of December of the year 2017, without informing the students that a study was going to be carried out.

At the end of the day, they were told that they should complete a questionnaire, in addition to holding a discussion group with two people prepared in this regard.

Before filling out the questionnaire, the rules were explained to complete it, as well as giving them only 10 minutes to complete it. At all times the students presented good predisposition for its preparation.

Regarding the discussion group, the data collection period ranged between 15 and 20 minutes, depending on the group. All conversations were transcribed for further analysis. The predisposition shown was positive.

For the analysis of the questionnaire data, we made use of the IBM SPSS Statics 20 program, while for the discussion groups, we selected key ideas.

Results

Descriptive analysis.

In general terms, they show that the assessment of students in relation to the use of the Wiki application is positive, so much so that there are items that are not included in the data that we present below because they were not selected by the respondents.

Regarding whether the use of the Wiki resource provides meaningful learning, the majority of students agree (65.8%), while the rest are either not in favor or against (17.8%) or totally agreement (16.4%), noting that the use of the Wiki application has involved the acquisition of significant learning for students.

Table 1.Provides meaningful learning

		Frequency	Percentage	Valid percentage	Accumulated percentage
Valid	Neither agree nor disagree	13	17,8	17,8	17,8
	Agree	48	65,8	65,8	83,6
	Totally agree	12	16,4	16,4	100,0
	Total	73	100,0	100,0	

Graph 1. Significant learning in the use of the Wiki resource

As regard to whether it encourages collaborative learning, the majority considers that it is, in full agreement (35.6%) and in agreement (38.4%), while a minority is neither in favor nor against (16.4%) or disagree (9.6%). This shows that the formand values this resource as a tool that can encourage collaborative learning.

Table 2. Encourage collaborative learning

		Frequency	Percentage	Valid percentage	Accumulated percentage
Valid	In disagreement	7	9,6	9,6	9,6
	Neither agree nor disagree	12	16,4	16,4	26,0
	Agree	28	38,4	38,4	64,4
	Totally agree	26	35,6	35,6	100,0
	Total	73	100,0	100,0	

Graph 2. Collaborative learning in the use of the Wiki resource

Focusing on the issue itself encourages educational innovation, a high percentage considers it to be totally in agreement (46.6%) or in agreement (39.7%), while a small part of the respondents either do not agree or disagree (11%) or disagree (2.7%). For these students, the Wiki resource encourages educational innovation.

Table 3. Encourages educational innovation

		Frequency	Percentage	Valid percentage	Accumulated percentage
Valid	In disagreement	2	2,7	2,7	2,7
	Neither agree nor disagree	8	11,0	11,0	13,7
	Agree	29	39,7	39,7	53,4
	Totally agree	34	46,6	46,6	100,0
	Total	73	100,0	100,0	

Figure 3. Promotion of educational innovation through the use of the Wiki application

Regarding the question of whether it favors the involvement of the students, a high percentage considers it to be in agreement (42.5%) or totally in agreement (26%), while a minority is neither in favor nor against (17.8%) or in disagreement (13.7%). Therefore, the formand considers that the use of the Wiki resource favors the involvement in the training process.

Table 4. Encourages the involvement of students

		Frecuenc y	Percentag e	Valid percentage	Accumulat ed percentage
Valid	In disagreement	10	13,7	13,7	13,7
	Neither agree nor disagree	13	17,8	17,8	31,5
	Agree	31	42,5	42,5	74,0
	Totally agree	19	26,0	26,0	100,0
	Total	73	100,0	100,0	

Graph 4. Involvement of students in the use of Wiki

If the use of the Wiki resource supposes more advantages than disadvantages in the teaching practice, the trend is not as high as in previous questions, even though the evaluation is still positive, observing that 57.5% agree, 24.7

% neither agree nor disagree; while 9.6% strongly agree and 8.2% disagree. For the student, this resource may have positive aspects, although with some drawbacks.

Table 5. It supposes more advantages than disadvantages in the teaching practice

		Frequency	Percentage	Valid percentage	Accumulated percentage
Valid	In disagreement	6	8,2	8,2	8,2
	Neither agree nor disagree	18	24,7	24,7	32,9
	Agree	42	57,5	57,5	90,4
	Totally agree	7	9,6	9,6	100,0
	Total	73	100,0	100,0	

Graph 5. Advantages in the use of the Wiki resource in the teaching and learning proces

Analysis group discussion data

Regarding the evaluation of experience, 87.5% have positively highlighted the experience, given that they are offered another different reality in the teaching and learning process. 12.5% have valued it negatively, because they feel more comfortable in the traditional method, which is what they have always been used to.

This has been very complicated for us. It is the first time we have experienced this way of being taught, and above all, the first time we work with Wiki. We prefer the traditional manner, we are more comfortable [Group 1]

We are delighted with the proposal. At the beginning we recognized that we were reluctant to develop the activity, but as it has progressed, we have felt more comfortable, and what is more important, we have learned to have fun [Group 7]

Regarding the fact that they made reference to the positive and negative aspects, 87.5% highlighted mainly positive aspects, enhancing the possibility of seeing another methodology different from the one considered classic and favoring socialization among peers. 12.5% observe as negative aspects the shortage of time to carry out the activity.

We see many positive aspects in the activity itself. Mainly, we do not get bored and we are entertained, talking with colleagues about actions to be developed in the activities, something that is done to be grateful at this time of the afternoon [Group 5]

We have been overwhelmed drowned the whole class, first because there is very little time to do the activity; second because we are many and it is difficult to agree; and third because we do not master the subject, and so it is more difficult to develop the activity [Group 1]

Finally, when they have been asked to establish proposals for improvement, 62.5% of the groups have agreed to indicate that for future classes, tasks related to Wiki resources will be carried out in smaller groups, and not so numerous, the rest of the groups consider that the activity is fine as it is presented.

It has been a bit complicated, in fact, to get so many people in agreement with the preparation of the requested documents. Also, some of us have worked more than others, and that is not fair [Group 3]

Conclusions

Students enrolled in the Master's Degree in Teacher Training in Compulsory Secondary Education, Baccalaureate, Vocational Training and Language Teaching in the Campus of Ceuta positively assess the Wiki resource in general. The students consider that they generate significant learning; encourages collaborative learning, coinciding with what was established by Gómez and Álvarez (2011); promotes educational innovation; favors the involvement of students, as established by Araujo (2017), where a shared effort is required by all students; and it offers more advantages than inconvenience, as is reflected in the theoretical framework of this research, where the positive aspects are much greater than the negative ones.

The fact of applying it in class, and knowing the students' assessment of its application, also shows that their ratings are positive, being happy with the proposal, although at the beginning it was more difficult due to lack of knowledge rather than motivation, and a small amount of training was necessary. its use, coinciding with Araujo (2017), which defends that the students must familiarize themselves with the resource.

They value positively the fact of using another methodology different from the traditional one, offering an alternative to traditional resources, as marked by Gómez and Álvarez (2011).

They also consider that it promotes socialization among peers, coinciding with Barberá (2009), and Giménez and González (2009), where they consider that solutions must be provided among all, reaching agreement in a consensual manner.

As proposals for improvement, they assessed the need to develop the Wiki resource in smaller groups, and the need to have more time for the development of the activity.

The fact of using the Wiki resource with future teachers is motivating for them in the development of the teaching and learning process, in addition to offering new tools for the development of teaching. It is important to generate small groups, since large groups can harm the normal development of the classroom.

As future lines of research, the influence of gender and specialties on the use and evaluation of the Wiki resource can be considered in the students who take the Master's Degree in Compulsory Secondary Education, Baccalaureate, Vocational Training and Language Teaching national.

Using Area Estimation to Assess Equity among Diverse Populations

G. Gregory Selitto, PhD
Associate Professor and Chair– Mathematics Department
Iona College, New Rochelle, NY
gselitto@iona.edu

Abstract

Introducing students to the study of interesting “real-world” applications of mathematics is an important part of the educational experience. This session draws on applications from mathematics, science, and economics. Students can explore ways to utilize the concept of equity and to apply this concept to different aspects of society. Actual data are used to measure how wealth and resources are shared in different populations. This session provides a method to quantify and explore what it means to “share the wealth.” Data analysis, economics, and the area under a curve are all used. Student exercise worksheets will be provided.

Using Mobile Digital Resources –Mdr Model- To Remove Barriers In Education: Some Mequity Research Project Findings

Abstract

The objective of the Project “Improving Higher Education Quality in Jordan using Mobile Technologies for Better Integration of Disadvantaged Groups to Socio-economic Diversity” (mEQUITY) is to improve the teaching-learning process by fulfilling with the MDR Model the needs of the different recipients, as well as the adaptation of digital educational resources for mobile devices. mEQUITY is mean to promote the elimination of barriers and prejudices found in the integration of technologies for improving the education of people at risk of exclusion, especially people with disabilities. It is intended that all students, regardless of their circumstances and personal abilities, can benefit from better instruction and that teachers view technology as a resource with many possibilities. Results of the mEQUITY research project on the evaluation of a series of elements of quality such as utility/usability, usefulness and efficiency in the development and adaptation of a mobile application system with augmented reality are presented.

Üniversite Öğrencilerinin Bilgisayarca Düşünme Becerilerinin Belirlenmesi

Ertuğrul ERGÜN

Uzaktan Eğitim MYO Afyon Kocatepe Üniversitesi Türkiye

ertue@aku.edu.tr

Özet

Günümüzde tüm dünyada uygulanmaya başlanan ve Millî Eğitim Bakanlığının da ilköğretim müfredatına eklediği kodlama eğitimi 21. Yüzyılın en önemli becerileri arasında gösterilmektedir. Bu beceri ile ilgili önemli bir konu da bilgisayarca düşünme (computational thinking) olarak belirtilmektedir. Bilgisayarca düşünme, güncel yaşamda karşılaşılan problemlerin çözümünde bilgisayarları üretim aracı olarak kullanabilmek için gerekli olan bilgi, beceri ve tutumlara sahip olmak şeklinde tanımlanmaktadır. Bilgisayarca düşünme aynı zamanda bilgisayarların insan beyninin bir uzantısıymış gibi kullanabilme yeteneği olarak da tanımlanmaktadır. Bilgisayarca düşünme ile insanların zekâsı ile bilgisayarların işlem yeteneklerini birleştirerek gelişen dünyada daha başarılı bireyler yetiştirmek amaçlanmaktadır. Bilgisayarca düşünme, teknoloji ile düşünce birleşimini güçlendiren bir problem çözme yaklaşımıdır. Bilgisayarca düşünme, insanlar için problem çözme demektir. Belli bir bakış açısına göre bir problemi çözerken çözümleri düşünmeden önce problemin ne olduğunu anlamak gerekmektedir. Aksi takdirde bulunan çözümler kullanışsız olacaktır. Dijital çağın gerekliliklerini karşılamaya dönük bireylerin sahip olmaları gereken önemli olan bu beceriye dönük, alan yazında sınırlı araştırma bulunmaktadır. Bu çalışmada üniversite öğrencilerinin bilgisayarca düşünme beceri seviyeleri ve çeşitli demografik değişkenler ve özellikle de önceki bilgisayar ve programcılık eğitimleriyle ilişkisi ortaya çıkarılmaya çalışılmıştır. Araştırma kapsamında öğrencilerin bilgisayarca düşünme becerileri Korkmaz, Çakır ve Özden (2017) tarafından geliştirilmiş olan “Bilgisayarca Düşünme Becerileri Ölçeği” kullanılarak toplanmıştır. Araştırma sonucunda öğrencilerin bilgisayarca düşünme becerileri orta düzeyde bulunmuştur. En yüksek puan ortalaması yaratıcılık en düşük puan ortalaması ise problem çözme altboyutundadır. Daha önceden programlama dersi almanın algoritmik düşünme alt boyutunda istatistiksel olarak yüksek bir puan elde edilmesine yol açtığı söylenebilir. Yaratıcı düşünme alt boyutunda ise tersi bir durum söz konusudur. Kodlama eğitimi ilkokuldan üniversiteye kadar tüm kademelere yayılmaya çalışıldığı günümüzde, elde edilen sonuçların özellikle karar alıcılar açısından önemli olacağı düşünülmektedir.

Anahtar Kelimeler: *Bilgisayarca düşünme, algoritmik düşünce, programlama eğitimi.*

Üniversite Öğrencilerinin Sosyal Medya Bağımlılığı ile Sosyal Destek Arasındaki İlişkinin İncelenmesi

Cengiz ŞAHİN

Kırşehir Ahi Evran Üniversitesi, Kırşehir/Turkey
csahin40@gmail.com

Davut AYDIN

davut.aydin@ahievran.edu.tr

Özet

Bu çalışma, üniversite öğrencilerinin sosyal medya bağımlılığı ile sosyal destek arasındaki ilişkiyi incelemek amacıyla yapılmıştır. Araştırmanın çalışma grubu, 2017-2018 eğitim-öğretim yılında bir devlet üniversitesinin eğitim fakültesi'nde öğrenim gören lisans öğrencileri oluşturmıştır. Bu betimletici araştırma genel tarama modeli gerçekleştirilmiştir. Katılımcılar 428 (263 kız, 165 erkek) üniversite öğrencisinden oluşmaktadır. Veri toplama sürecinde Sosyal Medya Bağımlılığı Ölçeği-Öğrenci Formu ve Çok Boyutlu Algılanan Sosyal Destek Ölçeği kullanılmıştır. Çalışmada sosyal medya bağımlılığı ile sosyal destek arasında düşük düzeyde negative bir ilişki bulunmuştur. Çalışmanın sonuçları ilgili literatür ışığında tartışılmıştır.

Keywords: *Sosyal medya bağımlılığı, sosyal destek, üniversite öğrencisi.*

Giriş

İnternet, çağımızın en önemli iletişim aracı olarak kabul edilmektedir. İnternet aracılığı ile bireyler sosyal paylaşım siteleri aracılığıyla yeni insanlarla tanışıp arkadaşlıklar kurabilmekte, sanal mağazalardan alışveriş yapabilmekte, ihtiyaç duyulan bilgi ve kaynaklara kolaylıkla ulaşabilmektedir.

Türkiye İstatistik Kurumu verilerine göre 2013 ile 2017 yılları arasında hanelerin internete erişim oranı yüzde 49.1'den yüzde 80.7'ye yükseldiği görülmektedir. Hane halklarının evde internet kullanım oranının ise yüzde 80.7'ye yükseldiği kaydedildi. Yine aynı verilere göre Türkiye'de internet kullanan bireylerin oranı %66.8 olduğu belirtilmektedir. 16-24 yaş grubunda internet kullanım oranı % 87.2'dir. Bu oranın kızlarda (%91.5), erkeklere (%82.9) göre daha yüksek olduğu görülmektedir (TÜİK, 2017). Bu verilere göre, internet kullanım oranının lise ve üniversite öğrencilerinde diğer yaş gruplarına göre daha yüksek olduğu anlaşılmaktadır.

İnternetin ortaya çıkış amacı bilgiye güvenli, hızlı, ucuz ulaşmak ve iletişimi kolaylaştırmak olmasına rağmen günümüzde birey ve toplum üzerinde önemli değişimlere neden olan bir araç haline gelmiştir. İnternet kullanımının sanal bir ortam üzerinden zaman ve mekândan bağımsız gerçekleşiyor olması, kişilerarası iletişim biçimlerinin değişmesine yol açmakta, internet teknolojisinin bir uzantısı olan sosyal medya kişiler arasındaki iletişim kanallarını değiştirmektedir. Türkiye'de ve dünyada sosyal medya kullanımı giderek artmakta, özellikle gençler/öğrenciler yoğun bir şekilde ilgi göstermektedir (Şahin, 2018).

Aşırı, problemli ve patolojik kullanımlar bireylerin kişisel, sosyal, mesleki ve eğitsel sorunlar yaşamasına yol açmaktadır (Griffiths Kuss ve Demetrovics, 2014). Sorunlu internet kullanımının sınıflandırılmasını çevreleyen kavramsal karışıklığa bağlı olarak sorunlu sosyal ağ kullanımı ya da internet bağımlılığı tanımlanması konusunda araştırmacılar arasında görüş birliği bulunmamaktadır (Wegmann, Stodt ve Brand, 2015).

İnsanlar bağımlılığın genellikle uyuşturucu ya da alkol gibi maddeleri içerdiğini düşünürler. Kontrol edilemeyen alışkanlık veya uygulamalar da bağımlılık olarak tanımlanır (Harris, Nagy ve Vardaxis, 2014). Bu anlamda, gelişen teknolojilere bağlı olarak ortaya çıkan aşırı internet kullanım davranışlarını betimlemek için teknolojik bağımlılık kavramı da kullanılmaya başlanmıştır (Kuss ve Griffiths, 2012; Turel ve Seronko, 2012).

Sosyal medya bağımlılığı bir çeşit internet bağımlılığı olarak değerlendirilmektedir (Kuss ve Griffiths, 2012). Bireylerin sosyal medyada aşırı zaman geçirmeleri ve her şeyden anında haberdar olma ya da bilgilenme istekleri kontrol kaybı, iletişim kaybına ve zaman kaybı neden olabilmekte; kişiyi bu eylemlere zorlayan davranışlar sosyal medya bağımlılığı olarak açıklanabilmektedir (Şahin ve Yağcı, 2017).

İnternet ya da sosyal medya bağımlılığına ilişkin çalışmalara göz attığımızda, ele alınan değişkenlerden birinin de sosyal destek olduğu görülmektedir. İnsanların çevrelerinde güvenebilecekleri, onlara değer veren, onlarla ilgilenen kişilerin varlıkları sosyal destek anlamına gelmektedir (Durak Batıgün ve Kılıç, 2011). Sosyal desteğin olmadığı durumlarda çeşitli fiziksel ve psikolojik sıkıntıların olduğu belirtilmektedir (Holahan ve Moos, 1982).

Sosyal destek ile internet ya da sosyal medya kullanımı arasındaki ilişkilere baktığımızda, bazı çalışmalarda iki değişken arasında anlamlı bir ilişki olmadığı belirtilirken (Miller, 2008), bazılarında bir ilişkiden söz edilmektedir (Yeh, Ko, Wu ve ark., 2008; Karasu, Bayır ve Çam, 2017). Ayrıca özellikle erkeklerde sanal sosyal desteğin internet bağımlılığını doğrudan yordadığı belirtilmektedir (Durak Batıgün ve Kılıç, 2011).

Yukarıda açıklanan gerekçelerle bu araştırmanın amacı, üniversite öğrencilerinin sosyal medya bağımlılığı ile sosyal destek arasındaki ilişkinin belirlenmesidir.

Yöntem

Araştırma Grubu

Bu çalışmada verileri elde etmek için kolayda örnekleme yöntemi uygulanmıştır. Kolayda örnekleme yöntemi; bir bölge söz konusu olmadığı durumlarda, araştırmacının yakın çevresinde bulunana, ulaşılması kolay, araştırmaya katılmaya gönüllü bireyler ile çalıştığı örnekleme türüdür (Erkuş, 2011).

Araştırma grubu, 2017-2018 eğitim-öğretim yılı içerisinde Kırşehir Ahi Evran Üniversitesi'nde öğrenim gören toplam 428 öğrenciden oluşmaktadır. Öğrencilerin 263'ü (61.4 %) kız ve 165'i (38.6 %) erkek öğrencidir. Araştırma grubundaki öğrencilerin 113'ü (26.4%) birinci sınıfta, 116'i (27.1%) ikinci sınıfta, 102'i (23.8) üçüncü sınıf ve 97'si (22.7%) dördüncü sınıf öğrencisidir.

Veri Toplama Araçları

Araştırmada veriler "Kişisel Bilgi Formu", "Sosyal Medya Bağımlılığı Ölçeği: Öğrenci Formu (SMBÖ-ÖF)" ve "Çok Boyutlu Algılanan Sosyal Destek Ölçeği (ÇBASDÖ)" aracılığıyla toplanmıştır. Form ve ölçeklerle ilgili açıklayıcı bilgiler aşağıda verilmiştir:

Kişisel Bilgi Formu: Öğrencilerin cinsiyeti, sınıfı ve internet kullanım süreleri gibi özelliklerini belirlemeye yönelik sorulardan oluşan bir formdur.

Sosyal Medya Bağımlılığı Ölçeği- Yetişkin Formu (SMBÖ-YF): Ölçek, ortaokul, lise ve üniversite öğrencilerinin sosyal medya bağımlılığını belirlemeye dönük olarak Şahin (2018) tarafından geliştirilmiştir. Gerçekleştirilen açımlayıcı ve doğrulayıcı analizler sonucunda SMBÖ-ÖF'nun beşli Likert tipi, 4 alt boyut (sanal tolerans, sanal iletişim, sanal problem ve sanal bilgilenme) ve 29 betimlemeden oluşan bir yapıya sahip olduğu belirlenmiştir. Ölçeğin geçerlik ve güvenirlik çalışmaları kapsamında uzman görüşü, açımlayıcı faktör analizi (AFA), doğrulayıcı faktör analizi (DFA), madde toplam korelasyonları, alt ve üst grup ortalama farkları, iç tutarlılık katsayısı ve test-tekrar test korelasyon katsayıları hesaplanmış ve AFA ile DFA sonucunda ölçeğin toplam varyansın %53.16'sını açıklayan 4 faktörlü faktörlü bir yapıya sahip olduğu belirlenmiştir. Ölçeğin KMO katsayısı .96; Barlet anlamlılık değeri $\chi^2=12680.88$ ($p=.00$) düzeyinde anlamlı bulunmuştur. Tüm ölçek için iç tutarlılık katsayısı (Cronbach Alpha katsayısı) .93 olarak bulunmuş; alt faktörler için ise, iç tutarlılık katsayıları ise .81 ile .86 arasında değerler aldığı görülmüştür (Şahin, 2018).

Çok Boyutlu Algılanan Sosyal Destek Ölçeği (ÇBASDÖ): Orijinal formu Amerika Birleşik Devletleri'nde Zimet ve diğerleri (Zimet, 1988) tarafından geliştirilmiş olup, Türkçe'ye uyarlanması, geçerlilik ve güvenirlik çalışması Çakır ve Palabıykoğlu (Çakır ve Palabıykoğlu, 1997); Eker, Arkar, Yıldız tarafından yapılmıştır. ÇBASDÖ'nin üç farklı alt boyutu mevcut olup ölçek 12 sorudan oluşmaktadır. Ölçeğin alt boyutu maddeleri; aile, arkadaş ve özel insan maddeleridir. Likert tipi ölçek 1'den 7'ye kadar puanlanmaktadır. Ölçek alt boyutları en düşük 4, en yüksek 28 puan, ölçeğin toplam puanı en düşük 12, en yüksek 84 alınabilmektedir. Elde edilen puanın yüksek olması algılanan sosyal desteğin yüksek olduğunu göstermektedir. Yapı geçerliliği için yapılan faktör analizi sonucunda iç tutarlılıkta cronbach α katsayıları tüm ölçek için 0.89, ölçek alt boyut cronbach α katsayıları ise aile 0,85, arkadaş 0,88 ve özel insan desteği boyutu için 0,92 olarak saptanmıştır (Eker, Arkar ve Yıldız, 2001).

Verilerin Toplanması ve Analizi

Araştırma kapsamında veriler araştırmacılar tarafından, 2017-2018 eğitim-öğretim yılı bahar döneminde toplanmıştır. Araştırmada Kırşehir Ahi Evran Üniversitesi Eğitim Fakültesinin farklı bölümlerinde okuyan öğrencilere çalışma ile ilgili açıklama yapılmış ve çalışmaya katılmaya gönüllü olan öğrencilerden ölçme araçlarını doldurmaları istenmiştir. Uygulama sonrası ilgili bilgi formlar araştırmacılar tarafından tek tek kontrol edilmiş ve eksik doldurulduğu tespit edilen formlar değerlendirmeye alınmamıştır.

Araştırmadan elde edilen verilerin istatistiksel çözümlenmeleri SPSS 23 programı kullanılarak yapılmıştır. Verilerin analizinde değişkenlerin birbiri ile ilişkisi Pearson momentler çarpımı korelasyonu kullanılarak incelenmiştir

Bulgular

Öğrencilerin sosyal medya kullanım sürelerine ilişkin bulgular Tablo 1’de verilmiştir.

Tablo 1. Sosyal Medya Kullanım Sürelerine İlişkin Özellikler

Sosyal medya kullanım süresi (günde)	N (428)	%
0-2	208	48,5
3-5	136	31,8
6-8	64	14,9
9-11	11	2,7
12 ve üstü	7	1,6
Belirtmeyen	3	0,7

Tablo 1’de görülebileceği gibi öğrencilerin %48,5’i sosyal medyayı düşük düzeyde, %31,8’i orta düzeyde, sadece %5’i bağımlılık sınırları içerisinde kullandığı anlaşılmaktadır.

Eğitim fakültesi öğrencilerinin sosyal medya bağımlılığı ile sosyal destek arasındaki ilişki pearson momentler çarpımı korelasyonu ile incelenmiştir. Yapılan korelasyon analizi bulguları Tablo 2’de verilmiştir.

Tablo 2. Üniversite Öğrencilerinin Sosyal Medya Bağımlılığı ile Sosyal Destek Arasındaki İlişkilere İlişkin Betimsel İstatistikler

Değişkenler	Aile	Arkadaş	Özel insan	ÇBASDÖ toplam
Sanal tolerans	-.14*	-.11*	-.08*	-.18*
Sanal iletişim	-.06*	-.15*	-.11*	-.15*
Sanal problem	-.09*	-.14*	-.12*	-.17*
Sanal bilgilendirme	-.04*	-.26*	-.13*	-.09*
SMBÖ-Toplam	-.12*	-.21*	-.09*	-.16*

*p < .05

Tablo 2 incelendiğinde, toplam puanda sosyal medya bağımlılığı ile sosyal destek arasında düşük düzeyde negative ($r = -.16$, $p < .05$) gözlenmiştir. Diğer taraftan sosyal medya bağımlılığı ölçeği alt boyutlarından sanal tolerans ile sosyal destek ölçeği alt boyutlarından aile ($r = -.14$, $p < .05$), arkadaş ($r = -.11$, $p < .05$) ve özel insan ($r = -.08$, $p < .05$) arasında; sanal iletişim ile aile ($r = -.06$, $p < .05$), arkadaş ($r = -.15$, $p < .05$) ve özel insan ($r = -.11$, $p < .05$) arasında; sanal problem ile aile ($r = -.09$, $p < .05$), arkadaş ($r = -.14$, $p < .05$) ve özel insan ($r = -.12$, $p < .05$) arasında; sanal bilgilendirme ile aile ($r = -.04$, $p < .05$), arkadaş ($r = -.26$, $p < .05$) ve özel insan ($r = -.13$, $p < .05$) arasında düşük düzeyde negative ilişkiler tespit edilmiştir.

Tartışma

Sosyal medya günümüzde milyonlarca genç tarafından farklı amaçlar doğrultusunda kullanılmaktadır. Araştırmacılar internet kullanıcıların büyük çoğunluğunun özellikle 18-24 yaş aralığındaki genç yetişkinlerden oluştuğunu vurgulamaktadır (TUİK, 2017). Üniversitedeki öğrencilerin de büyük çoğunluğu bu yaş aralığında yer almaktadır (Boyd, 2010; Cheung, Chiu ve Lee, 2011; Durak Batıgün ve Kılıç, 2011; Glynn, Hugo ve Hoffman, 2012; Mason ve Rennie, 2008).

Araştırmada öğrencilerin büyük çoğunluğunun (%95) sosyal medyayı bağımlılık sayılabilecek oranların altında kullandığı tespit edilmiştir. Yang ve Tung (2007), haftanın 8,5 ile 21,5 saatini çevrimiçi geçiren bireyler bağımlı olarak değerlendirmektedir.

Çalışmanın diğer bir sonucuna göre, öğrencilerinin sosyal medya bağımlılığı ile sosyal destek arasında düşük düzeyde negatif yönde ilişki olduğu belirlenmiştir. Yine bu çalışmada sosyal medya bağımlılığı alt boyutları sanal tolerans, sanal iletişim, sanal problem ve sanal bilgilendirme ile sosyal destek alt boyutları olan aile, arkadaş ve özel insan arasında düşük düzeyde negative yönde ilişkiler bulunmuştur. Çalışmadan elde edilen sonuçlara göre aileden algılanan sosyal destek arttıkça sosyal medya bağımlılığının azaldığı söylenebilir. Başka bir deyişle, sosyal medya bağımlılığı azaldıkça aileden algılanan sosyal destek artmaktadır.

Alanyazında sosyal destek ile sosyal medya bağımlılığı arasındaki ilişkiyi inceleyen bir çalışmaya rastlanmamıştır. Ancak Karasu, Bayır ve Çam (2017), Batıgün ve Kılıç (2011) yaptıkları araştırmada internet bağımlılığı yüksek olan grubun algıladığı sosyal desteğin daha düşük olduğunu belirlemişlerdir. Bu araştırma bulguları çalışmada elde edilen bulgularla paralellik göstermektedir.

Sonuç ve Öneriler

Genel olarak, sosyal medya bağımlılığı ile algılanan sosyal destek arasındaki ilişkiyi inceleyen bu çalışmada bazı sınırlılıklar bulunmaktadır. Çalışma bir devlet üniversitesinin eğitim fakültesinde öğrenim görmekte olan öğrenciler ve tarama yöntemi ile sınırlıdır. Araştırmada verileri araştırmada kullanılan ölçeklerle elde edilen bilgilerle sınırlıdır.

Çalışmanın sonuçları ve sınırlılıkları doğrultusunda alanyazın için şu öneriler geliştirilebilir. Daha sonraki araştırmalarda, farklı üniversitelerde ya da birden fazla bölümlerdeki daha kalabalık örneklem gruplarıyla çalışmalar yapılabilir. Bu çalışma, rastgele seçilmiş öğrenci grubu üzerinde gerçekleştirilmiştir. Özellikle sosyal medya bağımlılık düzeyi yüksek öğrencilerin belirlendiği örneklem grupları ile araştırmalar planlanabilir. Üniversite öğrencilerinin öğrenim dönemlerinde ve meslek hayatlarında teknoloji kullanımı açısından izlendiği boyutsal çalışmalar gerçekleştirilebilir. Sosyal medya bağımlılığını okul öncesi, ilkökul, lise ve üniversite öğrencilerini kapsayan projeler geliştirilebilir ve yaygınlaştırılmalıdır.

Ayrıca gençlere yönelik sosyal medya bağımlılığını destekleyen ve koruyucu önlemleri kapsayan bilinçlendirici çalışmalar önerilmektedir. Benzer şekilde bilinçli sosyal medya kullanımı hakkında öğretmenleri, ebeveynleri ve ergenlere yönelik eğitimler verilebilir.

Üstün Zekâlı Öğrencilere Göre İdeal Öğretmen Kimdir?

Nagihan TANIK ÖNAL
nagihanta@gmail.com
Uğur Büyük
buyuk@erciyes.edu.tr

Özet

Toplumların geçmişten günümüze dek gelişimi incelendiğinde, toplumlara yön verip çağa damga vuranların ve geleceği şekillendirme noktasında umut vaat edenlerin genellikle liderlik, yaratıcılık, üretkenlik gibi niteliklere sahip üstün zekâlı bireyler olduğu görülmektedir. Üstün zekâlı bireyler, toplum içinde aktif azınlık adı verilen ülkelerin gelişmesi ve uygarlıkların ilerlemesinde kıymetli bir güç kaynağı teşkil eden özel bir gruptur. Bu bağlamda eğitim sistemi içerisinde üstün zekâlı bireylerin özel ve önemli bir yer tuttuğu ifade edilebilir. Üstün zekâlıların eğitimi bu bireylerin birbirinden farklı ve kendilerine özgü özellikleri dikkate alınarak esnek bir eğitim süreci şeklinde desenlenmelidir. Üstün zekâlı bireylerin sahip oldukları özelliklerine paralel, potansiyellerini destekleyen ve geliştirmeye aracılık eden bir eğitim almaları onlara sağlanan bir ayrıcalık değil onların haklarıdır. Bu süreçte ise öğretmenler kilit bir noktadadır. Çünkü öğretmenlerin üstün zekâlı öğrencilere yaklaşımları, sunacakları öğrenme ortamları, karma bir sınıfta üstün zekâlı olan ve olmayan öğrencilere bir arada gerçekleştireceği uygulamalar gibi pek çok faktör üstün zekâlı çocukların eğitimlerinin etkililiğini ve niteliğini etkileyecektir. Öğretmenler üstün zekâlı öğrencilerin eğitimi için bu denli önemli bir noktada olduğu için atılması gereken ilk adım üstün zekâlı öğrencilerin nasıl öğretmenler arzuladıklarının bilinmesidir. Buradan hareketle gerçekleştirilen bu araştırmada, üstün zekâlı öğrencilere göre ideal öğretmen prototipi araştırılmış ve bunun için üstün zekâlı öğrencilerden, velilerden ve öğretmenlerden görüş alınmıştır. Nitel araştırma yöntemi fenomenoloji deseni ile gerçekleştirilen araştırmaya 10 üstün zekâlı öğrenci, 7 veli ve 2 BİLSEM öğretmeni katılmıştır. Katılımcılarla gerçekleştirilen yarı yapılandırılmış görüşmeler içerik analizi ile çözümlenmiştir. Ulaşılan bulgular; üstün zekâlı çocuklar tarafından sıklıkla dile getirilen ideal öğretmen özelliğinin eğlenceli ders anlatımı olduğunu göstermiştir. Ayrıca üstün zekâlı öğrenciler; farklı zekâ tiplerine uygun öğretim yapan, genç, öğrencilerin fikirlerine önem veren, öğrencilerine rehberlik eden, üstün zekâlı çocukların akranlarından olgun olduğunu bilip bu şekilde davranan, projeler ile ders işleyen, öğrencilere bağırmayan ve bir başarısızlık durumunda sert tepkiler verip ‘bir de üstün zekâlı olacaksınız...’ şeklinde öğrencileri eleştirmeyen nitelikte öğretmenler istediklerini ifade etmişlerdir. Öğrencilerin velileri ise çocuklarının kendilerini sevip kendilerine ilgi gösteren öğretmenlerini sevdiklerini ifade ederek çocuklarının eğlenceli ders anlatan, deney ve projeler yaptıran, başarısı baskısı yapmayan öğretmenler arzu ettiklerini de belirtmişlerdir. Öğretmenlerle gerçekleştirilen görüşmelerden elde edilen bulgulara göre ise üstünlerin teorik ders anlatımından sıkıldıkları, uygulamaya yönelik etkinlikler gerçekleştirmek istedikleri bu nedenle de bu şekilde ve esprili ders anlatan öğretmenleri ideal öğretmen olarak algıladıkları ifade edilebilir. Bununla birlikte üstünler ilgi ve yeteneklerine göre desenlenmiş bir ders ortamı oluşturabilen öğretmenleri ideal olarak algılamaktadır. Görüşmelerden elde edilen tüm veriler göz önüne alındığında üstün zekâlı çocuklara göre ideal öğretmen prototipinin eğlenceli ders anlatma, öğrencilere rehberlik etme, başarı baskısı yapmama, pratiğe yönelik etkinlikler gerçekleştirme, öğrencilerini seven ve öğrencileri ile ilgilenen öğretmen şeklinde olduğu ortaya çıkarılmıştır. Buna göre üstün zekâlı öğrencilerin hem örgün eğitim kurumlarındaki öğretmenlerinin hem de BİLSEM öğretmenlerinin bu verilere göre yetiştirilmesi ve de hizmetiçi eğitimlerinde bu noktaların üzerinde durulması önerilebilir.

Validity And Reliability Study Of Exercise Imagery Inventory For Individuals Doing Exercise

Abstract

Imagery, one of the widely-used applications in sports psychology, is used in sports and exercise environments. The aim of this study is to test the validity and reliability of the Turkish version of the Exercise Imagery Inventory, which was developed by Giacobbi et al. (2010) with the aim of measuring the level of imagery of individuals in exercise environments. For this purpose "Exercise Imaging Inventory" was applied to 407 individuals doing exercise (age $X: 22.12 \pm 2.52$). Exercise Imaging Inventory consists of 22 items in five subscales: Appearance-Health (8 items), Exercise Feelings (4 items), Exercise Technique (4 items), Exercise Routines (3 items) and Exercise Self-efficacy (3 items). Exercise Imagery Inventory is assessed using 7-point Likert-type questionnaire. In order to test the structural validity of the scale, principal components factor analysis (varimax rotation) was carried out. Five factor structures were determined in accordance with the original inventory with the results of principal component factor analysis, and the items explain 88.33% of the inventory. Reliability of the inventory was examined by Cronbach's alpha internal consistency coefficient. Internal consistency coefficients calculated for Exercise Imagery Inventory are 0.98 for Appearance-Health, 0.97 for Exercise Feelings, 0.96 for Exercise Technique, 0.73 for Exercise Routines and 0.95 for the Exercise Self-efficacy. According to the analysis results, it can be said that the Turkish version of the Exercise Imagery Inventory can be used to determine Exercise Imagery levels of individuals doing exercise.

Keywords: *Motivational Self Talk, Mental Toughness, friend support, Athlete*

Introduction

Mental toughness seems to be one of the most important psychological structures related with a good sports performance and mental imagery has importance in many fields of life like developing language skill, improving motivation, learning motor skills and increasing sportive performance (Feltz & Landers, 1983; Gammage, Hall, & Rodgers, 2000; Paivio, 1985; Rodgers, Hall, & Buckolz, 1991). Authors have recently proposed that mental imagery is also important for exercise behaviors (Gammage et al., 2000; Hall, 1995; Hausenblas, Hall, Rodgers, & Munroe, 1999). Hall (1995) has proposed that imagery could have a motivational and cognitive function similar with using an exercise tool.

Based on this opinion, training individuals have been found to use imagery due to basic internal causes including energy, appearance and technique (Gammage et al., 2000; Hausenblas et al., 1999; Hausenblas & Symons, 2002). Energy imagery is defined as mental images related with elevated energy and feelings of coping with stress. Appearance imagery is related with a thinner, fit and healthy appearance. Finally, technique imagery is related with straight posture and form of the body.

While energy and appearance imagery are related with motivation, technique imagery has a cognitive function. Hall (1995) has proposed that imagery could influence participation in exercise through the expectations about self-competence and its outcomes. Namely, use of imagery of individuals who do exercise enable them to image as if they have reached their target (for example, a better appearance, a better technique) and this increases the likelihood of maintaining exercise due to its effects on self-efficacy. Self-efficacy-related cognitions and also beliefs about this have been found to increase as exercise imagery increases (Hausenblas et al. 1999; Rodgers & Gauvin, 1998; Rodgers, Hall, Blanchard, & Munroe, 2001).

Researchers have reported that individuals who do sports more use more energy, appearance and technique imagery compared to individuals who do sports less (Gammage et al. 2000; Hausenblas et al. 1999). Consequently, exercise imagery has been found to be positively related with exercise dependence symptoms, consistently with the suggestions of Hall (1995) (Hausenblas & Symons Downs, 2002; Rodgers et al. 2001). Further studies are required for detecting whether the interventions which aim at changing imagery patterns are effective on risky individuals for exercise dependence and for evaluating the frequency and nature of imagery use. No studies have been encountered in literature investigating exercise imagery in Turkish population. In brief, exercise imagery is positively related with exercise motivation, self-efficacy, exercise dependence symptoms and exercise frequency. Based on these preliminary findings, a strong justification is present for performing a constant exercise imagery study. Because this may help our opinion about achieving and maintaining physical activity behavior. In addition, exercise imagery may be used as an interventinal tool for improving exercise behavior through increasing

motivation and self-efficacy for regular physical activity. This is important given that 40% of adults in USA do not do exercise in their spare time (USDHHS, 2000) and 50% of these sedentary adults abort exercise program until 6 months (Dishman, 2001).

Our knowledge about exercise imagery may not be sufficient to explain the reasons for how individuals use exercise imagery, content of imagery and the purpose for using imagery. Under the light of these data, the aim of the present study is to adapt Exercise Imagery Inventory to Turkish culture.

Method

Reliability and validity of Exercise Imagery Inventory were tested on a total of 407 (Xage: 22.12 ± 2.52) participants (247 females with Xage: 22.72 ± 3.10 and 160 males with Xage: 21.72 ± 1.97) who were doing exercise as groups or individually at the universities and private training centers during 2014-2015. Mean duration of exercise was $71,42 \pm 48,71$ months for the participants who do different exercises (fitness, step-aerobic, pilates, zumba etc.).

<i>Gender</i>	<i>N</i>	<i>%</i>
<i>Female</i>	<i>247</i>	<i>60,7</i>
<i>Male</i>	<i>160</i>	<i>39,3</i>
<i>Total</i>	<i>407</i>	<i>100,0</i>

<i>Exercise type</i>	<i>N</i>	<i>%</i>
<i>Team</i>	<i>231</i>	<i>56,8</i>
<i>Individual</i>	<i>176</i>	<i>43,2</i>
<i>Total</i>	<i>407</i>	<i>100,0</i>

Data collection tools

Personal data form

The form was created by the researchers for collecting data about demographic characteristics of the participants like gender, age, exercise type.

Exercise Imagery Scale

Exercise Imaging Inventory was developed by Giacobbi et al. (2010) with the aim of measuring the level of imagery of individuals in exercise environments. Exercise Imagery Inventory is assessed using 7-point Likert-type questionnaire, it consists of 22 items in five subscales.

Translation and data collection

Standard translate-retranslate method which was recommended by Brislin (1986) was used for translation. The scale was translated to Turkish from English first and from Turkish to English thereafter. English scale was translated to Turkish by one specialist in English and two specialists in sports field. The items were compared with each other and the items which had the same translation were detected. The items with the same and different translation were translated to English again by the same specialists. Re-translated items were compared with original items, differences and errors were detected. The English translation was compared –with the original scale and the closest translations formed the final version of the scale. The scale was applied with face-to-face interviews by the researcher and took about five minutes.

Data analysis

In order to test the structural validity of the scale, principal components factor analysis (varimax rotation) was carried out. Reliability of the inventory was examined by Cronbach's alpha internal consistency coefficient. Analyses were done with SPSS 22.0 package program.

Results

Validity of Exercise Imagery Scale

Principal components factor analysis (varimax rotation) was carried out to test structural validity. In principal components analysis, KMO test was used to test whether partial correlations are small, distribution is sufficient for factor analysis and found as 0.88 for all participants. Barlett test was used to test whether factor analysis is proper for variables and found as 12429.817 ($p < 0.05$) for all participants.

Factor loads, variances and self-values of subscales obtained with principal components factor analysis varimax rotation performed for detecting factor structure of exercise imagery scale are presented Table 1.

Table 1: Factor analysis results of Exercise Imagery Scale

Subscales	Items	Factor loads	Self-efficacyr	% Variance	% Cumulative
Factor 1 Exercise health	h2	,94	9,241	42,003	42,003
	h4	,94			
	h1	,93			
	h3	,93			
	h8	,92			
	h6	,92			
	h7	,92			
	h5	,86			
Factor 2 Exercise feeling	f3	,91	4,616	20,983	62,986
	f2	,90			
	f1	,89			
	f4	,89			
Factor 3 Exercise technique	t1	,88	2,811	12,779	75,765
	t3	,88			
	t4	,88			
	t2	,87			
Factor 4 Exercise routines	r2	,94	1,680	7,638	83,403
	r1	,93			
	r3	,91			
Factor 5 Exercise self-efficacy	s3	,79	1,085	4,931	88,335
	s2	,79			
	s1	,78			

Five factor structures were determined as the result of factor analysis. Structure of five factors determined as the result of principle component factor analysis explains 88.35% of “Exercise Imagery Scale”. Factor loads vary between 0.78-0.94. Eight items under factor 1 constitutes exercise health, 4 items under factor 2 constitute exercise feeling, 4 items under factor 3 constitutes exercise technique, 3 items under factor 4 constitute exercise routines and 3 items under factor 5 constitute self-efficacy subscales.

Reliability of Exercise Imagery Scale

Cronbach alpha value was tested for determination of reliability of “Exercise Imagery Scale” which is a Likert type scale. Item prediction power of the items in subscales of the scale, Cronbach alpha reliability coefficient of the subscale when item is deleted and multiple correlation values for all participants are presented in the table below.

Table 2: Analysis of each item related with exercise health subscale of Exercise Imagery Scale

	Scale Mean if Item Deleted	Scale Variance if Item Deleted	Corrected Total if Item Deleted	Item-Squared Multiple Correlation	Cronbach's Alpha if Item Deleted
h1	32,85	186,893	,938	,912	,980
h2	32,71	186,527	,948	,929	,979
h3	32,81	186,610	,941	,908	,979
h4	32,77	185,609	,951	,911	,979
h5	33,14	192,086	,833	,706	,985
h6	32,96	186,991	,933	,892	,980
h7	32,95	187,554	,930	,908	,980
h8	32,91	187,193	,941	,908	,979

Cronbach's Alpha= 0,983

Cronbach alpha internal consistency coefficient of exercise health subscale was found as 0.98. When Cronbach alpha coefficient obtained when each item is deleted is evaluated, reliability coefficient is seen to decrease. Total correlation coefficient of subscales in exercise health subscale were found between 0.83 (item h5) and 0.95(item h2).

Table 3: Analysis of each item related with exercise technique subscale of Exercise Imagery Scale

	Scale Mean Item Deleted	ifScale Variance Item Deleted	ifCorrected Total Correlation	Item-Squared Correlation	MultipleCronbach's Alpha if Item Deleted
t1	13,52	32,196	,920	,850	,957
t2	13,40	32,452	,918	,850	,957
t3	13,43	32,753	,921	,853	,957
t4	13,54	31,673	,917	,847	,958

Cronbach's Alpha= 0,968

Cronbach alpha internal consistency coefficient of exercise technique subscale was found as 0.97. When Cronbach alpha coefficient obtained when each item is deleted is evaluated, reliability coefficient is seen to decrease. Total correlation coefficient of subscales in exercise technique subscale were found between 0.91 (item t4) and 0.92 (item t3).

Table 4: Analysis of each item related with exercise feeling subscale of Exercise Imagery Scale

	Scale Mean Item Deleted	ifScale Variance Item Deleted	ifCorrected Total Correlation	Item-Squared Correlation	MultipleCronbach's Alpha if Item Deleted
f1	13,85	34,826	,910	,839	,954
f2	14,00	34,660	,929	,868	,949
f3	13,95	34,458	,930	,865	,948
f4	14,06	35,652	,880	,779	,963

Cronbach's Alpha= ,965

Cronbach alpha internal consistency coefficient of exercise feeling subscale was found as 0.97. When Cronbach alpha coefficient obtained when each item is deleted is evaluated, reliability coefficient is seen to decrease. Total correlation coefficient of subscales in exercise feeling subscale were found between 0.88 (item f4) and 0.93 (item f3).

Table 5: Analysis of each item related with exercise self-efficacy subscale of Exercise Imagery Scale

	Scale Mean Item Deleted	ifScale Variance Item Deleted	ifCorrected Total Correlation	Item-Squared Correlation	MultipleCronbach's Alpha if Item Deleted
ö1	9,75	29,390	,676	,745	,583
ö2	9,49	28,551	,722	,760	,543
ö3	9,33	15,493	,508	,267	,926

Cronbach's Alpha= 0,727

Cronbach alpha internal consistency coefficient of exercise feeling subscale was found as 0.73. When Cronbach alpha coefficient obtained when se3 item is deleted is evaluated, reliability coefficient is seen to increase and it is seen to decrease when other items are deleted. Total correlation coefficient of subscales in exercise feeling subscale were found between 0.51 (item se4) and 0.72 (item se3).

Table 6: Analysis of each item related with exercise routines subscale of Exercise Imagery Scale

	Scale Mean Item Deleted	ifScale Variance Item Deleted	ifCorrected Total Correlation	Item-Squared Correlation	MultipleCronbach's Alpha if Item Deleted
r1	9,08	15,289	,882	,794	,927
r2	9,03	14,938	,916	,841	,900
r3	8,92	15,259	,866	,759	,939

Cronbach's Alpha=0,947

Cronbach alpha internal consistency coefficient of exercise feeling subscale was found as 0.97. When Cronbach alpha coefficient obtained when se3 item is deleted is evaluated, reliability coefficient is seen to decrease. Total correlation coefficient of subscales in exercise feeling subscale were found between 0.87 (item r3) and 0.92 (item r2).

Conclusions

This research was conducted with the aim of presenting some empirical evidence about reliability and validity of Exercise Imagery Scale which was developed by Giacobbi et al. Internal consistency reliability coefficients were between 0.69 and 0.83 for subscales of Exercise Imagery Scale, test-retest reliability coefficients were found

between 0.73 and 0.98. Internal consistency reliability coefficients obtained for each of five subscales are between 0.80 and 1.00 which is stated as quite reliable by Alpar (2001). Internal consistency reliability coefficients of Exercise Imagery Scale which is composed of 22 items and 5 factors were found between 0.65 and 0.80 in the study of Giacobbi et al. (2010). As stated by DeVellis (2016), internal consistency coefficient's being between 0.65 and .80 indicates sufficient values.

Turkish form of Exercise Imagery Scale of which final version was formed under the light of translate-retranslate method and expert opinions was applied to exercise participants. Basic components analysis was done for testing structural validity of the scale. Five factor structures were detected for Exercise Imagery Scale. Structure of five factors determined as the result of basic component factor analysis explains 88.35% of "Exercise Imagery Scale". Factor loads vary between 0.78-0.94. Eight items under factor 1 constitutes exercise health, 4 items under factor 2 constitute exercise feeling, 4 items under factor 3 constitutes exercise technique, 3 items under factor 4 constitute exercise routines and 3 items under factor 5 constitute self-efficacy subscales. Alpar (2001) states that .45 and above factor load is acceptable. Erefe (2002) and Özgüven (1999) report that item factor load up to .30 is acceptable. So the values obtained in this study may be stated to be consistent with criteria.

In conclusion, it may be stated that Exercise Imagery Scale could be used reliably and valid for measuring exercise imagery levels of the participants under the light of the results obtained from reliability and validity study of Turkish form of the scale. The results of the present study should be evaluated considering some limitations. For example, structural validity and internal consistency coefficients of only validity and reliability were analyzed. Additional researches are required for obtaining more detailed information about psychometric features of the scale. Testing the scale in different groups is also required. It is suggested that performing criteria validity of the scale, analyzing the relationship between different concepts and making factor analysis separately for males and females in future studies would contribute to reliability and validity of the scale. The relationships between the above mentioned variables could be understood better in future longitudinal and/or cross-sectional studies.

Abstract

In our country, visual arts instruction which has an important role of contributing to one's artistic development and awareness, is in the curriculum as from elementary school. Visual arts instruction is given by the classroom teachers in elementary schools, therefore classroom teachers have to be knowledgeable and experienced in it. For this reason, "Visual Arts Instruction" course takes place as a compulsory course in the departments of elementary education bachelor's degree programmes. Through this course, it is aimed that classroom teacher candidates acquire certain knowledge and skills on the visual arts instruction. Hence, it is important to determine the opinions of the classroom teacher candidates about this course. In this study, it is aimed to determine the views and thoughts of the classroom teacher candidates about the visual arts instruction course. Case study design which is a qualitative research is used as the method of this research. The 3rd and 4th year students in Elementary Education Programme of the Primary Education Department of a public university are the study group of this research.

The research sample includes 8 teacher candidates which divides as 6 female and 2 male students. The research data was collected with an interview form which was developed by the researchers. The interview form which contains 3 questions, was lastly formed according to the views of 2 field specialists and 2 classroom teachers. The acquired data was analyzed with content analysis. The concept codes were determined through analysis and the themes were created by pairing up the related codes. As a result of analyzing the themes and codes, the views and expectations of the teacher candidates about the content of the visual arts instruction course were put forward and the conclusions and suggestions were presented.

KeyWords: *Classroom teacher candidates, visual arts instruction course, qualitative research, content analysis.*

Virtual Laboratories Concepts And Tools

Abstract

While some fields of knowledge do not in fact require practical learning or scientific research in the laboratory, this is unfortunately not the case for a very large number of disciplines, most of which are science and applied sciences. The questions that arise are how to recreate, in a virtual campus context, a generic laboratory concept for carrying out the research and practical learning inherent in different scientific or technological disciplines, taking into account certain barriers such as impossibility of direct physical manipulation and limitations of the possibilities of sensory observation (sight and touch especially, but also hearing), among others. How to exploit the infrastructure of broadband networks to facilitate access, presentation and exchange of information between researchers in a scientific field and between learners engaged in this particular type of distance learning activity?

Visualising Sprego Inequality Problems With 2d Representations

Abstract

In K-12 ICT education it is a common practice to solve spreadsheet problems by browsing various problem specific functions. This approach leads students to utilize methods that only require slow thinking on a low abstraction level, and therefore does not lead to long-lasting knowledge and reliable decisions. The Sprego (Spreadsheet Lego) methodology focuses on solving real world problems by building up step-by-step algorithms. This allows and encourages students to deconstruct problems into smaller subtasks using high mathability approaches and solutions. The coding process is based on the functional language of spreadsheets with a reasonably small function-base, strictly restricted to general purpose spreadsheet functions. Beyond that Sprego emphasizes the connection between this approach and common programming principles. Previous research has proved that this methodology not only develops the students' algorithmic and computational thinking skills, but does so in a more effective way than working with the built-in, problem specific functions in distinct spreadsheet management interfaces.

To support the learning processes with Sprego, various unplugged and semi-unplugged tools have been developed and introduced in education. In our previous work we presented our 2D HTML5 application designed to provide visual representations for the most common Sprego implemented spreadsheet problems and their composite formulas: conditional counting and linear search. We designed the software to include game-like experiences with visually engaging presentations based on real-world examples that stimulate multiple sensory organs. We introduced our application to students and teachers alike and both groups found it helpful and supportive in teaching with the Sprego methodology.

In our current work we made several adjustments and amendments to our software, based on feedback received. We also introduced a visual representation of the generalization of the conditional counting problem, applying composite array formulas. The generalization is presented in a new example-problem, which is based on inequality borrowed from a real-world situation which pupils are familiar with, namely the various restrictions (weight, height, age, etc.) in place in amusement parks. Using Sprego to solve this inequity problem is based on the algorithm of conditional equality problems. The extension of the Sprego 2D application is in accordance with our practice of including real-world spreadsheet problems in our teaching methods. Beyond this, it further supports schema-construction, applying the algorithm introduced in the first version of the application. This approach facilitates learning with Sprego, and spreadsheets in general, and prepares students for further studies in traditional programming and database environments.

Introduction

Our Sprego project focuses on developing the algorithmic, computational thinking, and high-mathability computer problem solving skills of elementary and high school students. Generally, these skills only emerge in the context of programming education (Soloway, 1993; NAT, 2012; Kerettanerv, 2013); however, we have found that treating these problems as birotical software-related problems serves our purposes and covers a large chunk of the curriculum (NAT, 2012; Kerettanerv, 2013). Beyond its educational goals, using birotical applications is part of our everyday life and work; these are programmes which cannot be avoided.

Recognizing the necessity of birotical applications, software companies promote their products as user-friendly, with interfaces and tools including wizards and various help tools. Applying this approach results mainly in unplanned sequences of commands carried out by untraceable series of mouse activities, which only require slow thinking on a low abstraction level (Panko, 2013). Consequently, most birotical documents are error-filled, which wastefully uses up both human and computer resources (Ben-Ari, 1999; Panko & Port, 2013; Panko, 2015; EuSpRIG, 2018).

In addition to the software companies' user-friendly slogans, the frame curricula for Informatics in Hungary – in both primary and secondary education (NAT, 2012; Kerettanerv, 2013) – mainly focuses on the tools used, while the textbooks mainly cover non-practice-based topics (Anderson, 2017; Csernoch, 2017). This approach covers

only one level of the three knowledge levels defined in the IEEE&ACM report (2013).

- familiarity: “The student understands what a concept is or what it means. This level of mastery concerns a basic awareness of a concept as opposed to expecting real facility with its application. It provides an answer to the question ‘What do you know about this?’.”
- usage: “The student is able to use or apply a concept in a concrete way. Using a concept may include, for example, appropriately using a specific concept in a program, using a particular proof technique, or performing a particular analysis. It provides an answer to the question ‘What do you know how to do?’.”
- assessment: The student is able to consider a concept from multiple viewpoints and/or justify the selection of a particular approach to solve a problem. This level of mastery implies more than using a concept; it involves the ability to select an appropriate approach from understood alternatives. It provides an answer to the question ‘Why would you do that?’.”

The definition of the three levels of knowledge is in complete accordance with the well-known concept-based problem-solving method developed by Pólya (1954). The only difference is that while Pólya envisaged four steps, emphasizing the importance of planning – the second step –, this report, which deals with computer related levels, merges the understanding and the planning steps (Csernoch & Biró, 2015a).

In general, the user-friendly classical methods ignore the first level of mastery – familiarity –, and also make the third level – assessment – inaccessible (IEEE&ACM, 2013). We concluded that both the user-friendly approaches and most of the textbooks are restricted only to the second level – usage (Csernoch, 2017). These low-mathability approaches in spreadsheets recommend browsing around and using numerous problem-specific functions (Csernoch & Biró, 2018), whose number in MS Excel was close to 600 at the time the present paper was written (Microsoft, 2018a). Furthermore, in the Hungarian spreadsheet textbooks we analyzed almost 200 problem specific functions were mentioned (Csernoch et al., 2014). It is unreasonable to expect students to memorize all the names of the functions, their lists of arguments, and (sometimes non-conventional) syntactic rules (Csernoch, 2014). It was for these reasons that it was found necessary to introduce a novel teaching approach – Sprego: Spreadsheet Lego – for end-user spreadsheet management (Csernoch, 2014). As with all novel methods (Anderson, 2017), we found that there are teachers who, despite being aware of more effective methodologies than the ones they use in practice, prefer to stick to their “good old” approaches. This attitude to novel approaches can, on the one hand, be explained by the sunk-cost fallacy (Kahneman, 2011), and on the other hand, by teachers’ belief in the fixed nature of the sciences (Chen et al., 2015).

Sprego

Our research team focuses on the development of the algorithmic and computational thinking skills used in birotical interfaces. This novel approach uses methodologies that support the learning processes by focusing on high mathability (Pólya, 1954; Baranyi & Gilanyi, 2013; Biró & Csernoch, 2015a, 2015b) concept-based problem-solving methods. Among these methods Sprego (Csernoch, 2014) is developed to teach end-user spreadsheet management and functional programming (Wakeling, 2007; Sestoft, 2011). In Sprego, instead of using a high number of problem specific functions, the focus is on a low number of general purpose functions, and algorithm and schema construction (Skemp, 1971; Merriënboer & Sweller, 2005; Csernoch et al., 2014, 2015). One further priority of Sprego is the application of authentic content, which plays a crucial role in motivating students and in applying the four levels of concept-based problem-solving (Pólya, 1954) and the three levels of knowledge (IEEE&ACM, 2013) in real-world problem-solving environments (Csernoch, 2009; Csernoch & Biró, 2015a, 2015b, 2015c; Csapó, 2017a; Csernoch & Dani, 2017). Using concept-based problem-solving approaches to build algorithms, and composite and array formulas to code the algorithms is intended to develop the students’ algorithmic and computational thinking skills (Wing, 2006). The method was designed (based on the general functions and programming concepts it uses) so as to be able to work in all well-known spreadsheet management environments, and therefore it is software and version independent.

Because the primary goals of Sprego are to develop fundamental skills, to aid the construction of algorithms, and to make the understanding and problem-solving processes more effective, we use unplugged and semi-unplugged tools (Bell & Newton, 2013; Biró & Csernoch, 2017a, 2017b). Within this framework, we developed a 2D graphical educational software for the Sprego methodology to provide visual context and graphical tools for the Sprego problems. Our application was published in 2017 and dealt with two problems: (1) conditional counting and (2) linear search (Csapó & Sebestyén, 2017).

Motivation

We have found that one of the major problems with user-friendly teaching approaches is that they focus on interfaces and tools, instead of the problems themselves. These surface-approach methods, beyond the excellently communicated and marketed “user-friendly” slogans, is well-represented by the decontextualized material used in help tools and coursebooks (Angeli, 2013; Csernoch, 2017). In general, we can conclude that in the user-friendly “usage-focused” methodologies tools receive most attention, and the primary objective is to use these tools;

consequently, they belong to the category of low-mathability computer problem-solving approaches (Baranyi & Gilanyi, 2013; Panko, 2013; Biró & Csernoch, 2015a, 2015b). As a result, the knowledge gained in such environments – if knowledge is developed at all – cannot be transferred to other problems or other interfaces. If the interface or/and the topic changes, or students have to apply their knowledge to solve a problem in a real-world setting, they are not able to do so (Csapó, 2003). Consequently, students cannot use these unconnected pieces of information (knowledge fragments) in other school subjects, nor outside of school.

With our high-mathability approach, we focus on real-world problems whose contents are interesting and motivating. Beyond developing the fundamental skills, our further goal is to create long lasting and transferable knowledge which students can use in various settings. This explains why we focus on building schemata which can be called upon by the use of fast thinking (Kahneman, 2011). To build up schemata, beyond the application of the minimalized number of Sprego functions, our method is to present a great number of similar problems in different authentic and motivating contexts, and make students recall the suitable algorithm(s) and apply and/or modify them to the actual problem (Skemp, 1971).

Completed Problems

Prior to our current work, our 2D graphical representation application contained two spreadsheet problems (Csapó & Sebestyén, 2017). Because Sprego makes intensive use of multilevel functions and the Russian matryoshka dolls as our unplugged tools in order to demonstrate the connection between the domains and ranges of the functions, the avatars in our application are digital matryoshka dolls.

The first problem is based on conditional counting with a three-level array formula, and the second is a linear search problem with a two-level composite formula.

The structure of the Sprego application is the following:

- By launching the application, the problems are listed in the main menu. On this page the users can select the problem they would like to deal with.
- After selecting the problem, the users must decide on the initial settings of the problem. These selections provide the input data for the variables set up in the application. For example, on this opening page we can select the color of our avatar.
- Furthermore, the software includes options to select the language of the interface and the formulas (currently English and Hungarian languages are supported), and a button is provided to turn on/off the sound effects.
- To start the animation of the selected problem we must click on the Start button. After that, the presentation page appears on the screen and the animation starts automatically.

The presentation page is divided into two panels:

- The left panel contains the real-world setting and the animation which plays the representation based on this real-world situation.
- The right side of the screen is reserved for the formula-evaluator, which is similar to those that can be found in spreadsheet interfaces (Csernoch, 2014). Using the formula-evaluator the students can follow the steps of the evaluation process in parallel with the animation.

Conditional counting: the equality problem

One of the tasks presented in our previous paper (Csapó & Sebestyén, 2017) is a conditional counting problem, where the program counts the number of dolls which match the condition (the selected color). The question for the problem is that “*How many dolls have the selected color?*”.

The steps of the algorithm are the following. (Note that the steps described here are based on our previous publication and are modified in our current work which includes the revised version of the presentation based on the feedback our team received.)

The users select a color on the opening page and the program switches to the animation page. On the animation page both the play (left) and the evaluation (right) panel start automatically. In the play panel the dolls are dancing around a campfire, while the evaluation panel follows the play (Figure 1).

1. At the top of the animation area there is a check-point (marked with a pile of rocks), where the program tests the color of the passing dolls by asking yes/no questions. The question for each doll is whether the color of the passing doll is the same as the color of the doll selected in the menu. The results of the tests can be either True or False logical values, which are displayed in the evaluation panel. In the play panel, if the doll's color does not match the selected color, the dancing doll is faded. In the other case, when the two colors match, the doll keeps her original opacity.
2. In the second round, the role of the check-point changes: here the True answers must be marked. Since we display two panels on the screen, we use two markers in parallel. In the play panel the True dolls are moved into an inner circle (Figure 1), while in the evaluation panel they are marked with 1s, as occurs in the formula.

3. The final step is the counting itself. The program counts the number of dolls in the smaller circle by adding the 1s of the vector consisting of 1s and Falses, displayed in the evaluation panel.

Figure 1: A campfire setting with our avatar dolls in the play panel (left side) and with the evaluation panel (right side). In the scene presented here a conditional counting problem with checking equality was solved.

The modification of the equality problem

In the first version of the 2D Sprego educational application, the first two steps were merged. The program automatically changed the dolls' markers to 1s before the True logical values were displayed. However, during the testing period we found that separating the two steps makes the students understand the algorithm more effectively, the solution more general, and more easily transferable to other problems and interfaces.

Linear search

The second problem completed in the first version of the 2D Sprego application was linear search.

A street scene is set up, where the postwoman must deliver a letter to the selected doll living in the corresponding house, so she has to know in which house the doll lives. The exact question is "In which house does the doll live?".

The algorithm involves the following steps:

As in the conditional counting problem, the users must select a doll from nine different colors offered in the menu. The arrangement of the animation page is the same as in the case of the conditional counting problem: the left side contains the play panel, while the right side shows the evaluation panel. However, the set-up is different. The problem is placed in a street scene: nine houses with nine dolls are displayed and a postwoman stands at the beginning of the street.

1. The postwoman goes from doll to doll and checks their color. Every checked doll gets an index starting at 1, then 2, etc., which is their record number, shared by the doll and the house. These numbers are displayed on the evaluation panel (Figure 2).
2. When the postwoman finds the selected doll, both she and the animation stop for a moment to emphasize the separation of the steps. In the following step, the selected doll, based on its record number, is matched with the corresponding house in the vector of the houses, and the letter is delivered.

Figure 2: A street setting with our avatar dolls and their houses in the animation panel (left side) and with the evaluation panel (right side). In the scene presented here a linear search problem was solved.

The modification of the linear search problem

Compared to the first version of the linear search problem representation we included several modifications to help students better understand and separate the distinct steps of the algorithm. Adjustments were made in the timing of the steps, and supportive new graphical elements and animations were added to the formula-evaluator.

Novel Features: A Conditional Inequality Problem

Background

In the first version of our 2D representational program a conditional counting problem was presented, as discussed in the “*Conditional counting: the equality problem*” subsection (Csapó & Sebestyén, 2017), where the equality of values was checked. In traditional user-friendly approaches, using and/or browsing built-in spreadsheet functions, handling equality, inequality, and inequality with constants and variables require different and non-conventional syntax (Csernoch, 2014):

- =COUNTIF(A1:A4,10), equality with constant (Microsoft, 2018b),
- =COUNTIF(A1:A4,D1), equality with variable (Microsoft, 2018b),
- =COUNTIF(A1:A4,"<3"), inequality with constant (Microsoft, 2018b),
- =COUNTIF(A1:A4,"<"&D1), inequality with variable (Microsoft, 2018b).

Similar conditional built-in functions make things even more complicated when the order of the arguments varies according to the number of conditions (one condition or more, *IF() or *IFS() functions, respectively) (Figure 3):

- COUNTIF(range, criteria) (Microsoft, 2018b),
- COUNTIFS(criteria_range1, criteria1,...) (Microsoft, 2018c),
- SUMIF(range, criteria, [sum_range]) (Microsoft, 2018d),
- SUMIFS(sum_range, criteria_range1, criteria1) (Microsoft, 2018e),
- AVERAGEIF(range, criteria, [average_range],...) (Microsoft, 2018f),
- AVERAGEIFS(average_range, criteria_range1, criteria1,...) (Microsoft, 2018g).

Figure 3: The changes in the order of arguments in the SUMIF() and SUMIFS() built-in functions (Csernoch, 2014).

To avoid this discrepancy, Sprego would serve our interest. With Sprego, the same algorithm and the same syntax are used regardless of the logical operator and whether it is a constant and/or variable which contains the values we wish to compare (Csernoch, 2014; Csernoch & Biró, 2015a, Csernoch, 2017). With the generalized and conventional form of handling yes/no questions we can provide sufficient background to build schemata and recall them.

Design

To represent the algorithm of an inequality problem, and following from the logic and contexts of the previous presentations, we selected a real-world problem, familiar to students. Our choice fell upon an amusement park, where there are attractions which can only be used if certain conditions in terms of weight, height, or age limits are met. We created an amusement park design with a roller coaster in the background and a Ferris wheel with 8 cabins. In addition, we modified our avatar dolls to match the requirements of the real-world set-up. For the selection of dolls based on height and weight we created dolls of different shapes and heights as the avatars of the amusement park (Figure 4).

Furthermore, we wanted to introduce variables and inequality logical operators, so in the menu the users must select the desired height value and the operator associated with it. The selected height limit is stored in a variable and presented both on the play and evaluation panels of the animation page.

Figure 4: The modified blue dolls of different heights and shapes.

How many dolls are shorter/higher than the selected limit?

The new problem we included is based on the following question: “How many dolls can sit on the Ferris wheel?” (Figure 5). This new problem is based on the inequality of a chosen height-limit-value stored in a variable and the height-value of each doll avatar.

The steps are the following:

1. Similarly to the equality problem, the first step of the algorithm is to ask yes/no questions – for example: «*dolls' height > selected height limit?*». The outputs of the yes/no questions are True or False values for each item in the vector. The True and False values are displayed on the evaluation panel, while in the play panel the False dolls lose their original opacity and become dimmed in the queue.
2. In the following step a marker must be selected. Here, the IF() function is called. The True dolls receive 1s and can sit on the Ferris wheel, while the False dolls must leave the scene with their False values.
3. In the last step of the algorithm, we sum up the 1s and Falses stored in the output vector of the IF() function, which means that we sum up the 1s and ignore the Falses. With this final step we can answer the question of how many dolls can sit on the Ferris wheel.

Figure 5: An amusement park setting where a conditional counting problem with inequality and a variable was solved. In the scene presented here the play panel is on the left side, while the evaluation panel is on the right side. In the screenshot the IF() function marks the True values with 1, while the False values are left to the default forms.

We can apply the same algorithm if we want to set up any other restriction in the different attractions of the amusement park. In this case, the measuring tool has to be changed to a different type of scale. This option offers the possibility of expanding our application with further representations on novel inequality problems in the future.

Development

The development process of our new problem presentation started with a revision of the existing conditional counting problem. Since the algorithm behind the two problems is identical, it was logical to first establish a frame for these algorithm representations on which our novel problem can be built. Deriving from the first version, the software was developed using the Construct 2 event-action based visual programming engine (Scirra, 2018a), and as such this process also serves as an example of how educational applications can be developed using visual programming IDEs (Integrated Development Environments).

The implementation of the inequality problem brought with it the need to refactor several aspects of the previous code in order to keep the existing functionality running uninterruptedly while also expanding the possibilities of the codebase. This step mainly affected the design and code behind the evaluation panel. During the development of the animation of the amusement park setting we kept in mind the need to design the code in such a way that it allows rapid modifications at several stages of the presentation in case the need arises after feedback has been received from students and teachers.

Developing with Construct 2 comes with several advantages, including the rapid implementation process and the ease of constructing 2D environments using the built-in tools. However, developers working with this IDE have to take its limitations into account. Given the design of the underlying engine, we had to resort to some workarounds while implementing specific features. Because Construct 2 does not include out-of-the-box advanced tools for creating paths for objects to follow, we had to set up several checkpoints on the layout (Figure 6). Our algorithm examines the state of each doll in order to determine the next checkpoint it has to reach. In the following step, it calculates the dolls' movement angle based on these data.

Figure 6: The movement checkpoints placed on the layout to manage the movement system of the dolls.

Another stage of the development process that slowed down the implementation was the automatic resizing of the dolls. When the avatars first appear on the left side of the play panel they have to change their displayed image size to match the observable distance between them and the closest point of the amusement park (the scale) without users noticing this. To achieve this, our application constantly changes the size of each doll in advance of being measured on the scale. Their scaling rate is calculated based on their current Y position relative to the Y position of the scale. The dolls' sizes reach their maximum values (which were randomly selected in given intervals at the beginning of the presentation) when they reach the level of the scale on the Y-axis, and they keep their size until their height is re-evaluated by the IF() function (when they pass through the gate).

The dolls whose height makes them suitable for sitting on the Ferris wheel must be resized again while they walk towards their cabin. In addition, their size must be changed by a different scale ratio than before. We developed an algorithm that calculates the height of the moving dolls based on the Y coordinates of their start (at the gate) and end (at the cabin) positions, the distance of which is the difference between these two values (the travel distance on the Y-axis) and the current Y coordinate of the dolls. Using these coordinates and calculated data, the algorithm resizes the moving dolls seamlessly based on their current Y position. At the end of their movement (when they arrive at their cabins) the dolls will have a preferred, smaller size compared to the original, symbolizing the observable distance between the gate and the Ferris wheel.

Following on from our practice while developing the first version, we also focused on optimizing the application to make it run seamlessly on older or slower devices, as well. Optimizations include minimizing the GPU fill-rate as well as lowering the CPU consumption of by the objects present on the screen.

The new version of the Sprego Application is available to download for free on Google Play (Csapó & Sebestyén, 2018) for Android devices with built in WebKit support (Android 5 or newer versions). Given the nature of the Construct 2 engine, our application is also available in HTML5 format, currently integrated into the Sprego Virtual Collaboration Space (Csapó, 2017b).

Since the release of the first Sprego application version, the beta edition of its successor engine, Construct 3 has been released (Scirra, 2018b). Nowadays, Construct 3 can be considered a stable option to develop applications. Therefore, we plan to port our code to the new version of the engine in the near future. This can bring several enhancements to our workflow and to the end-user experience in terms of more convenient and professional development tools and a more efficient runtime.

Conclusion

The Sprego methodology to teach spreadsheet-management and to prepare students for further studies in programming and/or database-management in ICT education is already used in several high-schools and is a more effective method than traditional surface-approach low-mathability practices. It focuses on problem-solving and schema-construction to develop the students' algorithmic and computational-thinking skills while creating long-lasting knowledge. This methodology is supported with various unplugged or semi-unplugged tools to make the understanding of the algorithms easier. Among these tools we created an educational application to visually represent the most common Sprego problems the students encounter. In this paper we described a novel presentation of an inequality problem set in the context of an amusement park. We designed our new representation

based on the already implemented conditional counting algorithm, focusing on an authentic context that the students are familiar with.

Previously we have received positive feedback and experiences regarding the effectiveness of our application as used in classes. In the near future, we plan to conduct tests to statistically measure the effectiveness of using the application in Sprego classes.

Regarding the development roadmap of the application we aim to expand the available problems with further conditional summing algorithm representations. To help students of different nationalities working with Sprego to understand our application better and use it more effectively we plan to include more languages in addition to the two options currently available. Furthermore, we plan to switch to the new version of the underlying engine, Construct 3, to complete these development goals.

Ahmet Bikiç
a.bikic@iku.edu.tr

Özet

Günümüzde yapısalcılıktan esinlenen öykü incelemesi pek çok araştırmacı için oldukça ilginç bir araştırma konusu olmaktadır. 70 lerden sonra, yoğunlaşan modern anlatım biçimi için de, klasik anlatıdan sıyrılan yeni anlatım biçimleri ile farklı filmler yapılmaya başlanmıştır. Bilinçaltı psikolojik anlatım ve şiddetin pornografisi olarak ortaya çıkan anlatım biçimleri gibi... Kayıp Otoban filmi modern anlatı bakımından ve film kurgusu açısından örnek olarak karşımıza çıkmaktadır. Karanlık denizler, derin uçurumlar, hiçbir yere varmayan yollar ve zihinsel kısır döngüler boyunca belirsiz ve klostrofik mekanlarda kimliklerini arayan, özgül benlikleri üzerindeki kontrollerini yitirmiş iki erkeğin, birbirlerinden ayrı ve aynı zamanda birbirleriyle kesişen şizofrenik dünyalarını ele alan “Kayıp Otoban”ın (Lost Highway), film-noir (kara film) türünün son dönemdeki başarılı örneklerinden biri olmaktadır. Bu çalışmada, 1997 yapımı “Kayıp Otoban” adlı film, halkbilimi uzmanı Vladimir Propp’un “Masalın Biçim Bilimi” adlı kitabında yer verdiği kuram çerçevesinde incelenecektir. Propp, olağanüstü masalların oluşturucu bölümlerini tespit ederek, bu bölümleri karşılaştırmaktadır. Çalışmanın sonucunda ise biçimsel bir yapı ortaya çıkmaktadır. Vladimir Propp, yapıtında 31 işlev ve 7 eylem alanı kahramanından söz etmektedir. Bu çözümlemede 7 eylem kahramanı tespit edilecek ve bu kahramanların işlevleri belirlenecektir.

Anahtar Kelimeler: *Kayıp Otoban, V. Propp, Yapısalcılık, Kara Film*

Vr Apps For Engaging The Prep School Students

Betim Neyran Can
Istanbul Medipol University
neyrancan@ymail.com

Abstract

According to Schwienhorst (2002) “virtual reality (VR) comprises the notion of collaboration and interaction between users in an intuitive computer-generated environment that appears real, with full integration of artificial intelligence products and information tools. Virtual reality has been used in areas such as education, observation, testing, entertainment and health. It seems that virtual environments enable students to engage in realistic environments, provide rich perceptive clues and versatile feedbacks, enable virtual experiences to be easily transferred to real environments, enhance interaction with content, entertain students in learning, and facilitate learning of concepts (Doğan et al., 2011). It has also been shown that learning has made it possible to achieve high levels of achievement, which is still effective and engaging. The feeling of being in the environment and imagination improves the problem-solving skills of learners by providing highly interactive learning experience for the learners and provides excellent environments for brainstorming, structuring of knowledge and information synthesis from different sources (Can and Şimşek, 2016). In our study, we have used VR apps to engage the students at a Prep School of a private University in Istanbul during general English lessons and have observed an increase of motivation and higher level of participation specifically to the speaking tasks.

When Reading Is Predicting: Didactic Text Comprehension Activities Beyond Motivation

José António Costa
Politécnico do Porto - Escola Superior de Educação
joseacosta@ese.ipp.pt

Abstract

As Giasson (2000) pointed out, the comprehension of a text depends on factors resulting from the textual structure, the context and the reader. When preparing class activities, the teacher needs to focus on each of these aspects in order to foster reading ability in his pupils. Therefore, the way we *get into* the text appears to be crucial to promote reading comprehension, so that students may be transformed "at all times into active readers" (Solé, 1998: 114), as they increase their capacity to formulate predictions regarding what it is going to be read (Solé, 1998; Giasson, 2000).

Following an ethnographic methodology, through the implementation of two questionnaires in a professional development course, we have noticed that teachers see pre-reading activities mostly as a way to get their pupils involved with the text, regardless of a better understanding of what it is said.

Motivation is a very important factor for learning (Caballé & Clarisó, 2016), but it does not assure by itself a better reading ability. Thus, we believe that the main purpose of pre-reading is to get the student to activate previous knowledge, because "the clue is not in knowing what the text says, but in knowing what is necessary to get to know more from within the text" (Solé, 1998: 103).

In order to go beyond the motivation factor, we have presented pre-reading strategies (Solé, 1998; Ribeiro et al., 2010), which were illustrated with some activities during the course. Teachers were then invited to create their own didactic paths for their school contexts, as a way to anticipate text content, but also to promote an holistic approach in a language classroom.

In this presentation, we aim at analyzing and discussing some of the teachers' proposals, which focus on strategies such as setting reading goals (essential within instructional texts, for instance), paying attention to relevant text aspects (illustrations, titles, excerpts, types or sizes of letters and keywords) or encouraging students to expose what they already know.

“Why Students Leave: A Qualitative Study of Persistence of First-Time, Full-Time Students at a Regional Hispanic Serving Institution.”

Dr. Angela Spaulding

Vice President of Research and Compliance and Dean of Graduate School, West Texas A&M University

Christine Dorsett

BS, Graduate Research Assistant, West Texas A&M University

cdorsett@wtamu.edu

Dr. Emily Hunt

Dean, Engineering and Computer Sciences, West Texas A&M University

James Webb

Chief Information Officer, Information and Technology, West Texas A&M University

Abstract

According to recent data, only 23% of a freshman cohort will graduate within four years of entering a university, and rates fall even lower for those of minority status. Hispanics graduate at a rate of 16%, and those of other minorities are even lower. To assist with rates of retention and promote diversity in higher education, the US Department of Education has designated that institutions having at least 25% of the overall student population represented by Hispanic students as a Hispanic Serving Institution (HSI), and allows these institutions to have access to additional resources, such as grants or funding.

This study draws on the framework of symbolic interactionism to locate and analyze the processes through which first-time, full-time students at a rural HSI failed to persist. One of the best ways to understand how students determine whether to persist in college or not is to simply ask them. For this reason, the research design combines the qualitative data collection techniques of surveys and semi-structured telephone interviews.

Participants for this study are first-time, full-time degree seeking freshman who began at a rural, regional HSI university and failed to persist. A qualitative survey was developed for administration to this population and includes demographical questions and open-ended questions aimed at investigating students' experiences and reasons for absence from re-enrollment. Through the use of open-ended questions, the students' are allowed to openly express their opinions and experiences related to their university attendance. By exploring reasons for lack of re-enrollment, this study hopes to contribute to the identification of variables correlated with retention rates at a rural regional HSI.

Preliminary conclusions of the data indicate that many students enjoyed their experiences at the university, but were not able to continue for financial reasons as a majority of the participants lived well below the US poverty line. Surprisingly, many students enrolled at the rural university as a starting point for their education with the anticipation of continuing at a larger university. Challenges presented during the course of this study include contacting this population, as many former students have changed contact information or have relocated since enrollment.

Women Entrepreneurship And Communication: Presentation Of Women's Entrepreneurs Association Of Turkey (Kagider) In The Printed Media

Prof. Dr. Aytekin İŞMAN

Sakarya Üniversitesi İletişim Fakültesi İletişim Tasarımı ve Medya Bölüm Başkanı
isman@sakarya.edu.tr

Nilgün ÖZDEMİR

Sakarya Üniversitesi Sosyal Bilimler Enstitüsü Doktora Öğrencisi

Abstract

Media has become one of the most important tools that set the agenda today, not even to set the agenda, but also it has led the masses. This feature of the media is the fourth strength of our day after legislation, execution and judiciary. News that can quickly reach to mobile platforms subsequently the press and televisions connect masses to the media and the news is used as a consumption material. This situation has made the media a new force as a news producer.

With the increase of democratic rights and freedoms, non-governmental organizations (NGOs) have made the masses shoulder the responsibilities on social problems, and NGOs has become the third sector after public and private sector. NGOs that draw it's strength from the community should be recognized, approved and supported by the community. For this purpose, NGOs often need to be involved in the media to promote themselves and to socialize. Women's entrepreneurs association of Turkey (KAGIDER) which is one of the non-governmental organization try to inform the public about women's entrepreneurship, to promote its projects for women, to encourage the women for entrepreneurship and to offer the solutions for the problems faced by women entrepreneurs.

Purpose of this study is to determine how KAGIDER is involved in the news agenda of the printed media. In this context, the research aims to determine how often, when, with which themes the printed media gives news about KAGIDER. In this study content analysis method is used. Content analysis method is common and one of the direct observation method. It is aimed to contribute the literature with concrete determination and the examination of presentation of news regarding KAGIDER in the printed media.

Keywords: Women Entrepreneurship, Communication, Media, News.

Introduction

Democracy, which includes the method by which the individuals forming the society have a right to say in their governance, becomes functional with non-governmental organizations in modern times. During the process of urbanization and modernization, the individual with the role and responsibility on non-governmental organizations ensures that democracy develops as well (Bayhan, 2002, s. 1).

Apart from the governmental organization, voluntary organizations carrying out some political, cultural, economic and social activities are called as non-governmental organizations (Kalaycıoğlu, 1998). Non-governmental organizations, one of the most important basic means of redirecting liberalism in the world, are important actors in directing societies. The importance of non-governmental organizations is increasing day by day.

The phenomenon of the non-governmental organization, which reflects the recent interesting changes has started to have a wide spreading range from economy to politics, from all aspects of culture to social life (Drucker, 2000). Today, non-governmental organizations play a role as determinants of power and even one of the factors that will ensure their continuity.

The most prominent features of non-governmental organizations are their independence from governments, public authorities, political parties, commercial interest surveys, profit-oriented interests and their mediation between central authorities and citizens (Avrupa Komisyonu Türkiye Temsilciliği, 2001).

Individuals and communities in society need solidarity with other individuals in order to be more effective in their various interests and benefits. Non-governmental organizations are reporting the problems, needs, demands, and requests of these society members. In this respect, non-governmental organizations, above all, perform a function such as 'building public opinion' in related issues (Özer, 2008). Sensitivity to common problems in the society has increased with the increase of countries' education and culture levels. Non-governmental organizations, which are called by the United Nations as the third sector after the public and private sectors, continue their activities in education, culture, health, employment rights, violence towards women, environmental pollution, politics and religious foundations.

Entrepreneurship and Women Entrepreneurship

The notion of globalization is a process of change that involves competing in the world's business context and in this context it requires a struggle with international competitors in terms of technology, speed and innovation

(Aslan ve Atabey, 2007). An entrepreneur is an innovative person who sees market opportunities, transforms them into business ideas, takes risks and brings resources together (Tekin, 2000).

Entrepreneurs' profile generally can be characterized with main factors such as personal characteristics (intrinsic motivation, hard work, positive thinking, creativity, etc.), business and management skills, utilization of existing resources and new resource search capacity and information on utilizing business ventures (vision for venture), communication effectively with others, interpersonal skills to understand the social impact of business development (Özgöner, 2003, s. 100).

Globalization has resulted in businesses and entrepreneurs working in a more intense competitive environment. Because, the closed economy period, (the concept of government-protected management against external competition) has left its place to customer-oriented flexible and rapid production and management approach which is continuously self-renewal (Kapu, 2004, s. 32).

The entrepreneurs who are the essentials of economic growth, are the actors who create the opportunity of employment in a country. They ensure that economic resources are directed from areas of low productivity to areas of high productivity. They play an active role in bringing new ideas, innovations and advanced technologies to the country (Zeybekçi, 2017).

The roles of entrepreneurs in creation of new business lines, accelerating the economy, and eliminating regional economic disparities are also remarkable (Kurt vd. 2006, s. 99).

Women constitute the half of our society. Therefore, the half of our workforce should not be ignored. The fact that our society has a patriarchal structure and men are more dominant causes a challenge for women's business life (Sayın E. , 2011).

It can be said that women entrepreneur overcome cultural obstacles to participation in the workforce more easily and manage both business and home life. Policies to increase women's participation in the workforce should take into account the structural differences between paid employees and entrepreneurs. Since it is difficult to remove cultural barriers with economic policies, encouragement, and support of entrepreneurship will be more effective in increasing women's participation in the workforce (Karakoç ve Kolaşın, 2008).

Although women have started to take their place in the economic and social fields in Turkey more actively, it should be stated that there is not a rapid increase as there is in the western countries (Soysal, 2010, s. 89).

Motivation to own a workplace and unwillingness to work for a payment and wage for various reason are among the most important factors that motivate women entrepreneurs. Although the desire for economic independence requires taking economic, social and psychological risks and working long hours, it directs women to own their business (Şahin, 2006).

Women Entrepreneurship in Turkey

In the 1980s, Turkey has taken its place in history as a period in which the women's movement gained momentum. Researchers examined the women's movement in Turkey mention about three stages historically: The Ottoman period, the first years of the Republic and the post-eighties period (Soysal, 2010). Women entrepreneurs in Turkey have taken the attention with their investment in different sectors. Some entrepreneur women have started entrepreneurship because of their desire to succeed, others have started entrepreneurship because of their dreams, and the others have started entrepreneurship because they have been forced.

The problems which women have faced in the work life are closely related to traditional, economical and socio-cultural structure of Turkey. Discrimination in society based on male dominant culture reflects us women are smothered in their social life. Less benefit for women from educational opportunities, deficiencies and inaccuracies in legal regulations can be given as an example (Besler ve Oruç, 2010).

As of 2016, the population of 79 million 814 thousand consists of 40 million 43 thousand men and 39 million 771 women. While 78% of the population live in cities, 22% of the population live in towns and villages (TÜİK, 2016). According to the results of household labor force survey; In 2015, the employment rate in the population aged 15 and over in Turkey is 46%. While this ratio is 65% for male, it is 27.5% for female.

When the labor force participation rate is examined according to educational status, it is seen that as the level of education increased, women participated more to the workforce (TÜİK, 2016).

The percentage of illiterate women participating in the workforce is 16.1%, the labor force participation rate of women completed under-high school is 26.6%, the labor force participation rate of women completed high school is 32.7%, the labor force participation rate of women graduated from vocational or technical high school is 40.8, the labor force participation rate of women graduated from higher education is 71.6% (TÜİK, 2016).

Women Entrepreneurs Association of Turkey (KAGIDER)

Association of Women Entrepreneurs whose acronym is KAGIDER carries on its activities as structuring the future business world and creating active women entrepreneurs on nationwide. KAGIDER was established as a non-profit governmental organization in 2002.

It is stated that the purpose of the association is to enable women to gain their economic freedoms and for this purpose, some projects such as “Seminars for awareness on Entrepreneurship” and “Funds for Women” have been developed. Entrepreneurial women are encouraged by the association, projects are supported, consulting services for business-own women are provided by expert members.

Since its establishment, studies and projects are developed and carried out with public, private and non-governmental stakeholders at local, national and international level. Having about 300 members, KAGIDER gives education, guidance and mentorship support for the empowerment of women entrepreneurs in the direction of its vision and mission. And also KAGIDER works to strengthen the economic position of women and conducts studies for advocating the equality between women and men (KAGIDER, 2018).

KAGIDER is a non-governmental organization that aims to empower women through entrepreneurship. It aims to empower women not only economically but also politically and socially. KAGIDER supports women's entrepreneurship for changing the unequal and exclusionary social positions of women. Benefits provided by women entrepreneurs will contribute to the empowerment of women and gender equality.

KAGIDER has close relation with respected international organizations in terms of women's rights in different parts of the world. Following the world agenda on women's empowerment, gathering and sharing with women entrepreneurs and preparing common grounds for action are the priorities of KAGIDER (KAGIDER, 2018).

The Purpose For The Study

There are some additional factors (such as reconciling business and family) that make entrepreneurship a less attractive option for women than men. Women Entrepreneurs Association and relevant ministry are trying to overcome obstacles and encourage more women to start their own companies.

KAGIDER is one of the most important association in Turkey, supporting women entrepreneurship. The aim of this study is to determine how KAGIDER is involved in the news agenda of the written press. Following questions will be answered in this context:

1. In which newspapers, the news article about KAGIDER is published?
2. How often does the press give the news about KAGIDER by years?
3. How often does the press give the news about KAGIDER by months?
4. In which type of writing (news, opinion column, interview) the news about KAGIDER was published?
5. In which parts of the journal does the press give the news on KAGIDER?
6. The place of published news about KAGIDER in the following subtitles in the literature of the news coverage will be examined in following context: Impressing private entrepreneurship and bring an effort, trying to win public opinion support, turning negative opinions about the association into positive, gaining respect via creating a positive image about the association, increasing the number of women entrepreneurs, reintegrating qualified entrepreneurs into the society, promoting relations with NGOs, enlightening the public and adopting the works, facilitating the work of women entrepreneurs, getting information from the public, informing the the public about the laws, cooperating with the public, having contact with the public for law draft and fulfilling social responsibility duties.

The information to be obtained with this study is important in terms of the measures that KAGIDER will take in the context of corporate promotion, inter-institutional relations and strategic communication. It is expected that the information obtained at the end of the study will be taken into consideration by KAGIDER. This assessment will be based on the way in which all activities and projects undertaken by KAGIDER take part on the press and regulations may be applied in its short term or strategic planning.

This study will be an factor that will be taken into account in the work of the Ministry of Family and Social Policy, since with this study, it will be determined how KAGIDER, a women's NGO, is involved in the press agenda at the same time.

Again with this study, the results of how KAGIDER's activities that reflect women's contribution to the economy in economic terms are reflected in the agenda will be a kind of feedback of the efforts of the Ministry of Economy to develop opportunity of recruitment and also to increase private entrepreneurship.

The issue is also important in terms of observing the effect of the activities of KAGIDER which is an NGO when it is considered from the point of view of non-governmental organizations (NGO).

When it is looked at European Countries (EC), women face challenges while establishing and running a business. These are;

- access to finance
- access to information
- training
- access to networks for business purposes
- reconciling business and family concerns (European Commission, 2018).

This study will also examine how this topic has become a part of the agenda in the context of the Agenda Setting Theory which is one of the Mass Communication Theories. It will be determined how the press presents and features the news about KAGIDER.

Significance of the Study

Although many project and programme based efforts are initiated every day in the name of developing women's entrepreneurship in Turkey, the extent and the number of studies identifying this increasing trend in relevant activities are rare and they are merely written within a theoretical framework.

Although entrepreneurial culture is extremely important as the driving force of the new economy, the proportion of women entrepreneurs in Turkey remains low in terms of both number and importance. Turkey has the lowest proportion of women entrepreneurs in all OECD and European countries (Ünay, 2010).

It is seen that women are behind in entrepreneurship due to the factors such as patriarchal society structure, traditional male and female roles, lack of learning, lack of experience in the workforce.

There are very few women entrepreneurs for being role model, especially for women in rural areas, where young women can take the example of establishing new jobs. Women who imagine having business owners are also influenced by factors that block entrepreneurship, such as lack of capital, lack of access to credit facilities. Lack of learning and work experience further obstructs women entrepreneurs (OECD, 2011).

There is also a relationship between the level of education of women entrepreneurs and reasons for establishing a business in our country. While the factors that attract women to entrepreneurship are mostly for university graduate women, pushing factors are more common for primary and secondary school graduate women.

Women can make room for themselves in the business world where they are often dominated by men, only through raising their educational level, knowledge and skill enhancement. When women enter the labor market with disadvantages of training, they have to concentrate on jobs that require little knowledge and skills, and as it is very difficult to survive under these conditions, the chance of achieving entrepreneurial experience is diminishing (Keskin, 2013).

The information obtained from this work will primarily be useful for the work of KAGIDER, the Ministry of Family and Social Policy and NGO's.

One of the important features that contribute to the success of entrepreneurs is personal relationships. In other words, one of the most important factors that make an entrepreneur successful or unsuccessful is public relations and human relations.

The role of women and women entrepreneurship in the economy has been increasing over the years and women entrepreneurs have become important economic power. For example, the number of women entrepreneurs has been increasing in many countries that are members of the Organization for Economic Cooperation and Development (OECD). In the future, the importance of women in the economy will increase even more (Ball, 2005, s. 2).

This study was conducted to determine the importance of the role of women's entrepreneurship in solving the employment problem, one of the major problems of our country. One of the main challenges of working on the role of women's entrepreneurship in creating jobs is the lack of robust and reliable data. The main material of the study is the TUIK data and the secondary data are the other studies related to the subject.

Women entrepreneurship offers both new business opportunities and a significant contribution to the economy. It is very difficult for women entrepreneurs who want to spend their business thoughts in an environment where the business environment is often complex and ambiguous to be able to maintain their assets and competitive advantages.

It is important to identify women entrepreneurship that will result in value creation and to measure and measure entrepreneurial influences

This study will be an factor that will be taken into account in the work of the Ministry of Family and Social Policy, since with this study, it will be determined how KAGIDER, a women's NGO, is involved in the press agenda at the same time.

Theoretical Framework

People are addicted to the media to understand what is happening in the world. While mass media pays more attention to some issues in the community, it may pay attention less interest in some issues or ignore them (Yaylagül, 2016).

With the development of scientific research in the field of communication, various approaches which suggest that mass media are sensitive to community and have long-term influences have been developed. One of the most important of these approaches, which clearly demonstrates the different kinds of effects of the media on society, is the agenda -setting theory (Atabek, 1998).

Agenda setting has methodically looked for to archive the impacts of mass media on the audience's cognitions. By ideals of making a shared, national pseudo-environment, mass media fulfill the critical work of building an open agreement on the imperative issues of the day (McCombs, 2004). The theory, defined when conventional media organizations possessed the instruments of content creation and organization dissemination, remains mostly unattempted in the unused, intuitively media age (McCombs, 2004).

The primary importance of its role in setting a nation's agenda and also to draw the public's attention to specific issues of concern remains indisputable. The way news media presents an issue to the public indicates the prominence of that issue (Shaw ve McCombs, 1972).

The core of this theory is based on the idea that with its way of presenting the news, the media defines the issues that citizens are contemplating and talking about. Briefly, by creating its own agenda, the media influences what most people will talk about and what the audience will see as facts (Yaylagül, 2016).

The role of the media in determining the country agenda and attracting the attention of the public to specific issues undisputedly comes first. News media's way of conveying the issue to the public indicates the importance of that issue (Shaw ve McCombs, 1972).

For example, the most important issue that a journalist sees as a newspaper is published as headline news. For a television channel, the most important news is the first published news. More space and time are allocated to topics that are important to the newspaper or television. Less space or time is allocated or no space is provided for less important news or news items (Yüksel, 2007).

Issue attributes have shown that traditional media play a strong role in mediating the agenda-setting impact. Previous research has shown that the media's agenda-setting effect is stronger with less important problems or problems that the viewer has less direct, personalized experience with real-world contexts. (Zucker, 1978). The ability of the media to influence the audience's agenda with their agendas is also about the nature of the subject: abstract subjects are more easily conveyed to the audience than concrete problems (Yagade ve Dozier, 1990). The media can better align the agenda with more dramatic and controversial events and shorter time frames.

The image in people's minds about the outside world has been greatly influenced by the mass media about what the images are about or what they are. The agenda-setting effects of mass media have an important influence beyond the images created in people's minds. Beyond attitudes and thoughts, images of reality created by mass media have implications for personal behavior, ranging from university preference to voting preferences (McCombs, 2004).

Media does not make news on every incident or phenomenon in the world. By deliberately including some of the incidents or ignoring some of them, media creates the public agenda and opinion (Yaylagül, 2016).

The power of the news media to determine the agenda of a country is a tremendously well-documented effect, focusing public attention on several important public topics. Not only people get factual information about public affairs, but readers and audiences learn how to attach importance to a subject based on the emphasis placed on the news. The newspapers offer a series of tips on topics of interest in daily news – cover story on page one, other front page display, large headlines, etc. (McCombs, 2004, s. 1).

Literature Background

In the survey, conducted by Sayın (2011) on the subject of "the problems of women entrepreneurs", the analysis of women in the business sector, which constitutes the half of our society, is important for the future regulations in business life. In this study, Sayın (2011) analyzed the problems of women entrepreneurs in business life and society, the comparison of female entrepreneurs with male entrepreneurs in the provinces of Aydın, how well Aydın Business Women Association was recognized and the activities they carried out to support women entrepreneurs.

A questionnaire was applied to 109 female entrepreneurs working in the sectors of food, energy, heat and ventilation, textiles, electrical and electronics, furniture, paint and chemicals, paper printing and labeling, out of a sample group including 34 female entrepreneurs who are selected by simple random sampling. In this study, problems encountered by women in entrepreneurship were put forward and efforts were made to measure the application success and level of recognition of Aydın Business Women's Association.

According to the findings of the study and the result of the viewpoint of the social and cultural environment that affect the woman's entrepreneurial life, it is necessary that the viewpoint of the society against the woman is more modern or more study is needed in this regard. Reduction of the pressure of patriarchy structure, women entrepreneurs will have more comfortable working conditions. Thus, they will be able to enter a more prolific and fruitful working discipline. It is clear that improvements should be made in order to change the point of view of the society with the organization of seminars and meetings.

In the research regarding the role of women entrepreneurs in global competition studied by Aslan and Atabey (2009) entrepreneurship concept and features of entrepreneurs, women entrepreneurship concept, characteristics of women entrepreneurs, the importance of women entrepreneurship in the development of the country and issues related to activities for the promotion of women entrepreneurship were studied.

The study including how entrepreneurship in the world and Turkey was discussed, the roles of males and females, its influence on women's entrepreneurship, its reflection on women entrepreneurship and especially the characteristics of women entrepreneurs in our country was studied with literature review method. Start-up age of women entrepreneurs and its reasons and which sectors women chose about entrepreneurship depending on their gender roles was put forth.

Aslan and Atabey (2009) gave information about women's entrepreneurship and what women's entrepreneurship should have. In the study, the following conclusions were reached regarding the causes of business establishment of female entrepreneurs: provide additional income to the family, be strong against man, prove oneself, have the desire to be independent in the economic sense, independent, autonomous and productive.

As a result of investigations carried out in Turkey, at the basis of the common problems related to women entrepreneurs lack of education and funding, families reactions, stereotypes roles of women in social area and the need to make more effort than men on trust were seen.

In terms of emphasizing equality between men and women in Turkish culture, it is necessary to establish community consciousness in this issue by cooperating with educational institutions, media, press release etc. communication institutions. The increasing number of women in the working life in our own countries and the existence of legal regulations that specify women's equality based on international contracts are not enough to change the mentality against women.

Another study on women's entrepreneurship is conducted by Sosyal (2010) about women Entrepreneurs in Turkey. With the prioritization of the policies and projects that will ensure that women take part in men's life in economic life, it is possible to make them potential forces that provide significant contributions to economic and social development. However, it can be argued that women face significant obstacles in their entrepreneurial activities and are quite challenged. This study, in today's world where entrepreneurship accelerated, from Turkey's perspective, aims to handle the barriers encountered by women in entrepreneurial activities and the opportunities women will create in a theoretical framework.

Especially the more educated, determined, ambitious and stable of the woman both enables him to strengthen his independence in economic sense and position in society and saves him from being dependent on man. The most important fact that provides this power to women is its entrepreneurial nature. On the one hand women with entrepreneurial activity gains material and spiritual benefits, on the other hand women have the opportunity to turn women's judgments with the features of financial opportunities, community service, work security, family employment and challenge. on gender discrimination in favor of women.

In recent years, it has been observed that women are more successful in business life than man. The reasons are the success of women in jobs that are believed to be peculiar to men, diminishing the difference of knowledge and experience on entrepreneurship between men and women, becoming much better organized and being more sensitive, quieter, more intense human relations to events. Woman who plays an important role as an entrepreneur in economic life have significant impact on transferring the experiences gained in the business to efficient channels, making short and long term plans for the business, optimum use of resources, establishing and maintaining human relations. The women's power in terms of financial sense may be the factor for reducing the mismanagement, violence, devastating conflicts and bribe that may arise.

The study conducted by Gül ve Altındal (2016) gives information about the adventures of women entrepreneurship in Turkey. Participation of women in working life and taking active role in entrepreneurial activities are seen one of the key improvement of development. The areas of activity for women entrepreneurship of public and non-governmental organizations increasingly diversified. Micro-credit applications for women's entrepreneurship have increased. Since structural problems blocking women's employment such as obstacles to access to economic resources, cultural resistance which women entrepreneurs face, prejudices and discrimination often were ignored, the success level of programs, policy and applications to support women's entrepreneurship were limited. In this study the adventures of female entrepreneurship in Turkey were discussed and the gender context was evaluated in the light of the literature.

Development of female employment and support for female entrepreneurship in the form of regular income within the scope of social security pave the way for the societal empowerment of a greater number of women still have access to a higher gender

Existing entrepreneurship support and programs, having their own and strategies for developing entrepreneurship focuses on increasing the supply of women in the human capital and the labor market. The cultural resistance which women entrepreneurs face, prejudices, discrimination and obstacles to access to economic resources and structural problems blocking women's employment aren't considered. Women-specific experiences and conditions should be taken into account in the incentives and the policies for women entrepreneurs who set up their own operations and also existing women entrepreneurs should be supported.

In the study conducted by Besler and Oruç (2010), the studies of women managers in press media were discussed. What topics the women managers were reported in the printed media with the method of content and text analysis. The study examines which topics women managers took in the printed press in the year of 2003.

The study consists of five categories including success news, news about discrimination, news about positive discrimination, descriptive news and other news. It is seen that senior women managers in Turkey come from a higher socio-economic level. In Turkey discrimination news for women managers, it is proved that "glass ceiling" case couldn't be broken in a male-dominated society. It is seen that positive discrimination practices in Europe aren't sufficiently applied in our country for reaching an equal level of women and men.

In this research-based news, it is an important finding that women also do not want to work with women managers and that women can not reach the executive levels even in professions called "women's work". Categories obtained from the analysis results reveal that there are many obstacles for reaching the senior management level of women in Turkey. Much effort is needed to overcome these obstacles. Male-dominated structure in Turkey prevents women from being accepted as managers in their workplaces. One important structure supporting this is the adoption of gender stereotypes of women and men. The prejudices that gender and culture feed on make it difficult for women to break the "glass ceiling".

In the study conducted by Tekeoğlu (2013) integrated marketing communication, women entrepreneurship and the studies of KAGIDER were examined. This study using entrepreneurship, entrepreneurship towards women and integrated marketing communications and non-governmental organizations' integrated marketing communications is based on publicizing the projects of non-governmental organizations and the importance of resource creation efforts. The studies of KAGIDER being one of the important milestones on women's entrepreneurship in the context of the dissemination of women entrepreneurship and a case study on KAGIDER's communication projects was conducted. After in-depth interview with KAGIDER communication director, a point of view has been presented about planning, implementation, barriers and opportunities for these projects. Emphasize the added value that communication creates / will create and thereafter opinions have been expressed to form a model for similar communication studies.

Only 6% of the entrepreneurs in our country are women and there is a very small amount in the general but an increasing number of participants attending the contest named "Turkey's Woman Entrepreneur Contest" is impressive in the last six years. In the light of these studies, KAGIDER, the most influential women entrepreneurial community in our country cannot be ignored because KAGIDER all the time supported women entrepreneurs in the context of both training for women entrepreneurship and project and leadership studies

In the study conducted by Leyla (2011) new actors of women's movement, women NGOs and their potentials were studied. The feminist movement is no longer the movement of a specific class or ethnicity but rather includes groups and compositions that have different features. In the context of the Turkish nation and supranational women, sensitive actors and gender-blindness of mere political struggle contribute to this process. Non-governmental organizations of women which have different economic and social capital can contribute to the aim of widening public space and can turn the discourse of civil society woman-sensitive. KAGIDER (Women Entrepreneurs Association of Turkey) and KAMER (Women's Centre)

moving from two different cultures and two different civil society organizations seems possible to develop an idea about the early period of women movement in Turkey. KAGIDER and KAMER organizations whose working fields and issues are different seem to be united for the empowerment of women although their working fields and working methods are different. In short, although the political-intellectual tradition by which both the civil society organizations are nourished on their political means and target group, their public discussion is creating gender sensibility. All these efforts of non-governmental organizations make it necessary to emphasize the potential of producing policy and politicizing the demands. In spite of these efforts, it must be added that the civil society organizations of women mostly see between bringing service and operating the mechanisms that remain restricted in reaching out to women.

In the study named women, entrepreneurship and regional development conducted by Yalman and Gündoğdu (2014) an application was realized in Kayseri, Sivas and Yozgat. Entrepreneurs face many problems arising from being women, general economic conditions or environmental impacts. Reducing the problems which women entrepreneurs face and solving the problems will increase the economic growth. For this reason, it is important that the proposals for the solutions and policies to be developed should be prepared considering the local characteristics.

It is aimed to conduct a survey in consideration of local characteristics, to obtain original data, to identify the problems women entrepreneurs face, to find the solutions to these problems and also to introduce the suggestions that will help increase the contribution of women entrepreneurs to develop. It is aimed to give information to women entrepreneurs operating in the TR72 region (Sivas, Yozgat, Kayseri) about general profiles of women entrepreneurs, the problems they face, the variance of these problems according to the provinces, the determining the concerns and expectations of women entrepreneurs in this regard.

Information about incentives which women entrepreneurs experience on the flotation of during and after the establishment phase and especially the microcredit system should be introduced effectively. Although the TR72 region is located in the east of Anatolia and is a region where the relatively traditional structure still prevails, contrary to the expectations of women entrepreneurs, it was seen that they haven't been neglected in their work for reasons

such as social pressure or being a woman. In order to abolish and reduce the main obstacle for women to participate in their working life, such as women are reluctant and discouraged, do not take enough support, lack of adequate education, women can be provided with personal and vocational training.

In the study conducted by Keskin (2014) the status of women entrepreneurs in Turkey were discussed. Women can make a significant contribution to their own economies, communities and employment through

entrepreneurship. But this contribution is not sufficiently developed in our country. In 2012, the ratio of employers + self-employed women is 12.1 percent, and only 14.9 percent of total entrepreneurs are female entrepreneurs. In this study, some studies on women's entrepreneurship in Turkey and the current situation of female entrepreneurs has been tried to be presented in line with the existing data.

Although women constitute half of the population in Turkey, figures indicate that women with significant entrepreneurial potential are not used effectively in entrepreneurship. Women entrepreneurs should also be supported in the formation of technology, knowledge-based, innovative businesses. Financial management training, technology training and the use of modern technology, technical assistance, financial support, credit availability, and infrastructural support should be provided to women entrepreneurs. In addition, the necessary incentives and facilities should be provided in order to have a deep knowledge of the field in which to operate and to know marketing and service delivery techniques, to provide confidence building training, e-commerce, efficient time management and skills.

The participation rate of women into the labor force and the increase in paid employment should be emphasized by Turkey. In this regard, long-term women's employment policy should be established at national level and women's entrepreneurship should be regarded as an important but not exclusive element of this policy.

Method

Problem Statement

Women Entrepreneurship and Communication: Women Entrepreneurs Association of Turkey in printed media (KAGIDER)

Statistical Hypothesis

- In which newspapers did KAGIDER become the agenda?
- How often did KAGIDER become the agenda?
- In which context did KAGIDER become the agenda?
- Which public relations activities KAGIDER conducted?

Research Model

In this study, a literature review was made primarily and the content of the research was designed by obtaining those related to the research within the existing literature (Robson, 2017, s. 92). Flexible research design includes qualitative data collection techniques. The data is summarized and detailed information on the data collection is given (Robson, 2017, s. 155). It was examined how frequently and with what subject national newspapers cover the news on women entrepreneurs association of Turkey (KAGIDER) that is influential and effective in women's entrepreneurship in Turkey. Content analysis technique was used to study the nature of the news and their sources. The study is a descriptive study. Content analysis is a research technique used to analyze available communication dimensions and to make unbiased, systematic quantitative descriptions of the content of the communication (Aziz, 2015, s. 133). The main purpose of the content analysis is to reveal the facts that may be hidden in the collected data. There are six basic elements in content analysis: Data collection, unitization, sampling, registration guide, analysis, deduction and reporting of study (Aziz, 2015, s. 136).

Identification of the Population and Sample

The population of the study is the national daily newspapers published in Turkey. According to the Press Ad Agency; all published issues of Sözcü, Hürriyet, Sabah and Posta newspapers, which are in the first three ranks determined by taking into consideration the national newspaper circulation between 01 January 2014 and 31 December 2017, were taken as the variable probabilistic sampling method. In the probable sample, the number of elements that will be included the groups is obvious. Sub-groups are formed for it. Number of members to enter groups is obvious. When this method is used, the measurement based on the sampling must be explicitly stated (Aziz, 2015, s. 143). When the survey was conducted between January 01, 2014 and December 31, 2017, all news related to KAGIDER was taken into account in the sections of the three newspapers that were called news.

Instrument

Within the theoretical and conceptual knowledge of the researcher, The content analysis category form and content analysis coding form were developed. With the help of the category form given below, 251 news articles about KAGIDER were examined.

About Content Analysis Categories and Coding Form:

The year the newspaper was published: It refers to the year of publication of the newspapers between 2014 and 2017.

The month the newspaper was published: It refers to the month of publication of the newspapers between 2014 and 2017.

The date the newspaper was published: It refers to the date of publication of the newspapers between 2014 and 2017.

The name of the newspaper: According to circulation, it refers to Hürriyet, Sabah, Sözcü and Posta

The type of the newspaper: It refers to opinion column , news, and Interview.

The news section of the newspaper: It refers to agenda, politics, economy, education and world news.

Media coverage activities: Impressing private entrepreneurship and bring an effort, Trying to win public opinion support, Turning negative opinions about the association into positive, Gaining respect via creating a positive image about the association, Increasing the number of female entrepreneurs, Reintegrating qualified entrepreneurs into the society, Promoting relations with NGOs, Enlightening the public and adopting the works, Facilitating the work of female entrepreneurs, Getting information from the public, Informing the the public about the laws, Cooperating with the public, Having contact with the public for law draft, Fulfilling social responsibility duties, equality of women and men, Encouraging women to work, Reacting to the silence of women's organizations against sexual harassment.

Opinion Columnist: Opinion Columnists who write about KAGIDER are Özlem Doğaner, Şeref Oğuz, Şelale Kadak, Emre Aköz, Bülent Cankurt, Elvan Demirkan, Ayşe Arman, Nuran Çakmakçı, Gila Benmayor, Fatih Çekirge, Vahap Munyar, Müge Akgün, Adnan Kaya, Gökhan Kimsesizcan, Jale Özgentürk, Emel Armutçu, Yalçın Doğan and Melis Alphan.

Data Analysis

First of all, all data were recorded in the form of the category for the research. The recorded data was then transferred to the statistical data analysis program (SPSS 20). Then the categories of the identifier of the data obtained from the statistical values to the number of each of the variables and the number of values percent frequency tables and the comparison between the categories of the variables to be able to number and percentages of the cross that has been obtained in the tables. The obtained tables are interpreted according to the information given in the theoretical section.

The obtained tables are interpreted according to the information given in the theoretical section.

Assumptions

Assumption - 1:

KAGIDER is a result-oriented NGO.

Assumption - 2:

KAGIDER works on women entrepreneurship.

Assumption - 3:

KAGIDER is an important voice of women in the media.

Assumption - 4:

Communication between KAGIDER and women entrepreneurs is advanced.

Assumption - 5:

There are also different NGOs on women entrepreneurship.

Limitations

1. In the research, only the first three newspapers were analyzed according to circulation reports.
2. The research covers the dates between January 01, 2014 - 31 December 2017.
3. The research is limited to newspapers only.

According to the Press Ad Agency; all published issues of Sözcü, Hürriyet, Sabah and Posta newspapers, which are in the first three ranks determined by taking into consideration the national newspaper circulation between 01 January 2014 and 31 December 2017, were analyzed.

It was examined how frequently women entrepreneurs association of Turkey (KAGIDER) took place on national newspapers.

Findings

KAGIDER is one of the most important association in Turkey, supporting women entrepreneurship. The aim of this study is to determine how KAGIDER is involved in the news agenda of the written press. In this study, the distribution of KAGIDER news by years, newspaper, months, types, sections and columnists were examined.

Table 1 – Distribution of KAGIDER News by Years

Year of the news	Frequency	Percent
2017	103	41,0
2016	65	25,9
2015	47	18,7
2014	36	14,3
	251	100,0

Table 1 shows that between the dates of the research, it is observed that a total of 251 news items were published and the most news was published in the year of 2017 with the rate of 41%. The least news was published in the year of 2014 with the rate of 14.3%.

Table 2 – The Distribution of KAGIDER News by Newspaper

Name of the Newspaper	Frequency	Percent
Hürriyet	187	74,5
Sabah	61	24,3
Posta	3	1,2
Total	251	100,0

In this period, the most news published about KAGIDER is in Hürriyet newspaper with the rate of 74.5% while at least one is in Posta with the rate of 1.2%. The rate of news published in Sabah is 24.3%.

Table 3 – Distrubution of KAGIDER News by Newspaper and Years

Year	Name of the Newspaper			Total
	Hürriyet	Sabah	Posta	
2017	88	14	1	103
2016	48	17	0	65
2015	32	13	2	47
2014	19	17	0	36
	187	61	3	251

Table-3 shows the distribution of KAGIDER news according to years and newspapers. Hürriyet published the most news in 2017. In 2014, the number of news published by Hürriyet and Sabah is almost the same. The number of news about KAGIDER has increased every year in the newspaper named Hürriyet.

Table 4 – Distrubution of KAGIDER News by Newspaper and Months

Month	Name of the Newspaper			Total
	Hurriyet	Sabah	Posta	
January	8	6	0	14
February	16	1	0	17
March	27	14	0	41
April	18	6	1	25
May	21	2	1	24
June	12	1	0	13
July	10	3	0	13
August	6	1	0	7
September	13	6	0	19
October	21	8	0	29
November	22	5	1	28
December	13	8	0	21
Toplam	187	61	3	251

When the news items of the newspapers monthly period is examined, it is seen that it is the most in November at Hürriyet newspaper, followed by October and May. The least published news was in Hürriyet in August. While the month which is the most published news in Sabah newspaper is March, the least one is in June. In Posta newspaper published only three news articles about KAGIDER, news articles were published in April, May and November.

Table 5 – Distrubution of KAGIDER News by Types

Types of the News	Frequency	Percent
News	176	70,1
Opinion Column	65	25,9
Interview	10	4,0
Total	251	100,0

When the types of the news published regarding KAGIDER news are taken into consideration, it is seen that they are mostly published in the categories of "news", "opinion column" and "interview". In terms of news types, 176 news, 65 news in the opinion column and 10 news articles in the interview section were published.

Table 6 - Distrubution of KAGIDER News by Sections

Sections	Frequency	Percent
Agenda	17	6,8
Politics	4	1,6
Economy	212	84,5
Education	8	3,2
World News	5	2,0
Culture / Art	5	2,0
Total	251	100,0

Table 6 shows that the most published news was in the Economy section with 212 news items. The number of news published in the section of politics, culture/art and world news are nearly same. After the economy section, the most published news is in the section of "Agenda".

Table 7 – Distrubution of KAGIDER News According to News Coverage

News Coverage	Frequency	Percent
Trying to win the public support	1	,4
Getting reputation by creating a positive image about the association	69	27,5
Increasing the number of women entrepreneurs	75	29,9
Reintegrating the qualified entrepreneurs into the society	13	5,2
Developing relations with NGOs	40	15,9
Enlightening the public and adopting the works	1	,4
Facilitating the work of women Entrepreneurs	6	2,4
Getting information from public	1	,4
Informing the public about the law	3	1,2
Fulfilling the social responsibility duties	3	1,2
Equality of woman and man	24	9,6

Encouraging women to work	12	4,8
Reaction to violence / Sexual harassment	3	1,2
Total	251	100,0

When news coverage about KAGIDER is examined, it is seen that the news was published to increase the number of news regarding women entrepreneurs. 75 news were published to “increasing the number of women entrepreneurs”. With 69 news, the title of “getting reputation by creating a positive image about the association” is in the second.

40 news articles were published under the title of “developing relations with NGO’s”. The least published news is from the title of “getting information from public”, “enlightening the public and trying to win the public support”.

Table 8 – Distrubution of KAGIDER News by Columnists

Columnists	Frequency	Percent
Özlem Doğaner	3	1,2
Şeref Oğuz	2	,8
Şelale Kadak	9	3,6
Emre Aköz	1	,4
Bülent Cankurt	1	,4
Elvan Demirkan	1	,4
Ayşe Arman	15	6,0
Nuran Çakmakçı	1	,4
Gila Benmayor	14	5,6
Fatih Çekirge	1	,4

Gila Benmayor and Ayşe Arman became columnists who made the most column writing about KAGIDER. Şelale Kadak and Vahap Munyar were the third and fourth writers respectively. 18 opinion columnist made news articles about KAGIDER and also 65 opinion column were published in the newspapers examined on KAGIDER.

Conclusion

News about KAGIDER of three national newspaper included in the sampling was examined in this study. It was determined that the number of news items differs according to topics, years and months. Among 2014- 2015-

2016- 2017 years, it is observed that a total of 251 news items were published and the most news was published in the year of 2017 with the rate of 41%. The least news was published in the year of 2014 with the rate of 14.3%. It is seen that in this period the most news regarding KAGIDER was published in Hurriyet newspaper with the rate of 74.5%. The least news published in Posta newspaper with the rate of 1.2%. The rate of news published in Sabah is 24.3%.

When the distribution of KAGIDER news according to years and newspapers is examined, it is seen that Hürriyet published the most news in 2017. In 2014, the number of news published by Hürriyet and Sabah is almost the same. The number of news about KAGIDER has increased every year in the newspaper named Hürriyet.

When the news items of the newspapers monthly period is examined, it is seen that it is the most in November at Hürriyet newspaper, followed by October and May. The least published news was in Hürriyet in August. While the month which is the most published news in Sabah newspaper is March, the least one is in June. In Posta newspaper published only three news articles about KAGIDER, news articles were published in April, May and November.

When the types of the news published regarding KAGIDER news are taken into consideration, it is seen that they are mostly published in the categories of "news", "opinion column" and "interview". In terms of news types, 176 news, 65 news in the opinion column and 10 news articles in the interview section were published.

The most published news was in the Economy section with 212 news items. The number of news published in the section of politics, culture/art and world news are nearly same. After the economy section, the most published news is in the section of "agenda". As the primary purpose of KAGIDER is to develop women entrepreneurship, the most published news section which is "economy" parallel with its purpose. The news regarding KAGIDER was made in the section of politics, education and culture/ art. It shows that KAGIDER wouldn't take part in only economy sections. The news named "KAGIDER will be the companion of women entrepreneurs" is an example for "economy" news according to section. The news states that the biggest obstacle in front of women entrepreneurs is education, access to finance, lack of market access and role model. The news named "women's quota in incentive package" is an example for "economy" news according to section. The news states that KAGIDER Chairman Sanem Oktar made suggestions for giving important incentives to women and increasing incentive rates.

When news coverage on KAGIDER is examined, it is seen that the news was published to increase the number of news regarding women entrepreneurs. 75 news were published to "increasing the number of women entrepreneurs". With 69 news, the title of "getting reputation by creating a positive image about the association" is in the second place. 40 news articles were published under the title of "developing relations with NGO's". The least published news is from the title of "getting information from public", "enlightening the public and trying to win the public support". The news named "Deadline 31st of July" is an example for "increasing the number of women entrepreneurs" news according to news coverage. The news states that "Turkey's Woman Entrepreneur Competition" is organized with the collaboration of Garanti Bank, Women Entrepreneurs Association of Turkey (KAGIDER) and Economist magazine and also every women entrepreneur can apply it.

Gila Benmayor and Ayşe Arman became columnists who made the most column writing about KAGIDER. Şelale Kadak and Vahap Munyar were the third and fourth writers respectively. 18 opinion columnist made news articles about KAGIDER and also 65 opinion column were published in the newspapers examined on KAGIDER.

safaksoydas@gumushane.edu.tr

Abstract

At Vocational School level, work is specified final years of an apprentice level course. Since the lot began to vary human-focused situation by the outcome of up to date life, every firm tried to proffer the best class. At the end of the on hand check it is central to weigh up whether much loved areas are reached. Didactic institutions are the elementary originalities where these areas must be modernized (Tuononen at all., 2015).

The cram aimed to investigate how working even as studying is associated to cram victory and took lines to erudition and the scenery of the work. A total of 154 student done a feedback form at the point in time of their promotion day. The conclusion exhibited that doing a new abstract work was associated to focal point to erudition, and non-abstract work was associated to an uncomplicated cram of courses. Also, we set up that considered studying has an imperative responsibility in terms of application practice. By focusing student' organizing helps and highlighting their deep-level erudition, student come across it straightforward to construct connection between work and sermon studies.

Key words: *Vocational school, student, work, graduation, non-academic work*

Introduction

Periods of work and work-based learning is a useful application that most young people work the work environment. Vocational School students every greater than the world fit into place in pay while erudition at school. Explore studies explain that the sum of working student has amplified in numerous countries over the years, for case in point in turkey, Czech republic and Nederland (Barley, Z., Lauer, P., Arens, S., Apthorp, H., Englert, K., Snow, D., Akiba, M. 2002; Tuononen at all., 2015; Ryan et al. 2011; Manthei And Gilmore 2005). Robotham (2009) argues that numerous students could expend supplementary time at their work place than in university programs. In addition, the authors bear the plan that the student must expend supplementary time at their work place than in university programs. For foremost explanations of student work during learning at school we can say two intentions that top the rate of existing settings and in advance work for coming occupation. But it is wanting to add the student' work is commonly non-abstract, for example, working in the textiles or package sector (Broadbridge And Swanson 2006). And, the work is frequently not associated to their training grounds and potential occupations because of their first measures to first-class the working dwelling is cost-effective to a certain extent than educational (Tuominen at all., 2015).

Methods

The study was passed out at Kocaeli Vocational School of Kocaeli University In Turkey. The facts were together in the spring of 2017 from beginning to end an electronic questionnaire. A total of 154 business department student done the opinion poll at the time of their promotion. The contestants were female 54 % (n = 83) and male %46 (n = 71). The ages varied from 21 to 38 years (m = 27, sd = 6.3): more than a third of the contestants were fresher than 23 eons. (Tuononen at all., 2015).

The useful feedback form precise the student' work and lines to erudition. The scenery of the work was not speaking into three categories: own abstract work, other abstract work and non-abstract work (Tuominen at all, 2015).

- *Other academic work meant work that was academic but differed from the student's own study field.*
- *Own academic work meant work that was related to the student's discipline or major.*
- *The third type had no connection to university studies.*

This cataloging planned by the playwrights of the flora of the work connected with the student' own estimations of their works. Student was inquired how many hours they achieved unlike varieties of work on usual per week thru the second year of education. The ruler stayed 1 = none, 2 = less than 20 h and 3 = more than 20 h. For the student may have had unlike varieties of works, it was fashioned a flexible work in which 1 = no work, 2 = own abstract work, 3 = non-abstract work, 4 = both own abstract work and non-abstract works (Barley, Z., Lauer, P., Arens, S., Apthorp, H., Englert, K., Snow, D., Akiba, M. 2002; Tuominen at all, 2015). Variables calculating the flora of work and training victory are existing (table 1).

Table 1. Variables measuring the nature of work and study success (Tuominen at all., 2015)

<u>Variable</u>	<u>indicator</u>
Nature of work	
Own academic work	1 = none, 2 = < 20 h, 3 = ≥ 20 h
Other academic work	1 = none, 2 = < 20 h, 3 = ≥ 20 h
Non-academic work	1 = none, 2 = < 20 h, 3 = ≥ 20 h
Work	
1 = no work	
2 = own academic work	
3 = non-academic work	
4 = both own academic and non-academic works	

Findings

The outcome showed that 88 % of the student had worked all through their last year of studies. 30 % had own academic work and 21 % non-academic work. Also, 37 % had both an own academic and non-academic works. Only 12 % of student had no work. More than half of the student worked less than 20 h per week and 44 % of them more than 20 h. The number of students' works are presented in table 2 (Tuominen at all., 2015).

Table 2. The nature and amount of student' works

	F	%
<u>Nature of work</u>		
No work	18	11.7
Own academic work	46	29.9
Non-academic work	33	21.4
Both own academic and non-academic works	57	37.0
A total of cases	154	100.0
<u>Amount of working (per week)</u>		
None	25	16.2
<20 h	61	39.6
≥ 20 h	68	44.2
A total of cases	154	100.0
<u>Nature and amount of work</u>		
<u>Own academic work</u>		
None	60	39.9
<20 h	56	36.4
≥ 20 h	38	24.7
A total of cases	154	100.0
<u>Other academic work</u>		
None	99	64.3
<20 h	35	22.7
≥ 20 h	16	13.0
A total of cases	154	100.0
<u>Non-academic work</u>		
None	78	50.6
<20 h	46	30.0
≥ 20 h	32	19.4

A total of cases	154	100.0
------------------	-----	-------

When we investigated the facts, a few misplaced ethics was observed. The sum of not their morals regarding the work variables was from top to bottom near: other abstract work 18 %, non-abstract work 14 % and own abstract work 5 %. When missing values turned out in the work variables with non-missing values in another work variable. The values were replaced by zeroes. For example, if a student had a missing value in “non-abstract work” and “other abstract work” and a non-missing value in “own abstract work”, the two missing values were replaced by zeroes to explain the situation that the student had only worked in own abstract field (Tuominen at all, 2015).

The relationships between the flora of work and gender/age were analyzed with irritable-organizations and devious chi square (χ^2) statistics. The connections between the total and flora of work and study success were first investigated by Anovas. Then, the outcome sizes were planned to use g^2 ethics on condition that by SPSS 16. The entity feedback form stuffs were not integrated in the investigates because they were unsurprisingly recognized to compare lofty near (Tuominen at all., 2015).

The factors model performed as the root for the organizational model for the representations. The autonomous factors (the factors associated to flora and quantity of work) were categorical in flora. Dummy factors had created, that the sort “no work” effective as a represent. The relapse factors connected to the factors testified under the model are so taken as representing from the situation value. The possessions of the autonomous variables on the product factors are explained as virtual to the situation variables (Tuominen at all., 2015; Hayes and Preacher, 2014; Katsikas, 2013).

Results

The outcome of this study explains that financial, common and pay conditions could not be similar in different countries, but it give the impression that comparisons on hand in work can sustenance student’ knowledge period if working periods are comparatively not much. In this cram we understand that even though the instruction program organization is different from the supplementary republics, the outcome is unmoving in contour with the prior scholarships about this question (Tuominen at all., 2015). In conclusion, to scrutinize these comparisons and transformations in supplementary detail, more examination is desirable to comportment in numerous republics with dissimilar instruction and community classifications.

Student who worked not as much of than 20 h acknowledged supplementary education glories than that the person worked over 20 h per week. Moreover, the education created that non-working student established much education glories than student who worked a lot of hours, but which students didn’t be different from student who worked lower than 20 h weekly. This mean that the education proved the subnormal connection between working hours and education accomplishment. Student who had both own abstract field and non-abstract works got more education credits than the student who only one type of work or no work (Tuominen at all., 2015).

Wrestling with the Future in Vocabularies of Tradition: The New Entrepreneurial Subject of the Postcolonial Elite School

Cameron McCarthy
Department of Educational Organization and Leadership
University of Illinois at Urbana-Champaign
cmccart1@illinois.edu

Abstract

“Given the socio-cultural structure of post slavery Barbadian society, this invariably meant some sacrifice of the essence of negritude, of what it meant to be quintessentially Black and African. Similarly in an age when for most Blacks formal schooling was the main avenue of social mobility and the Established Anglican Church, the bastion of social privilege, to internalize collective norms and values of the Grammar School and the Established Church was to improve one’s chances of achieving upward mobility from the working class.” (Jemmott, 1998, p. 48).

Even now...like my uncles...my mother...they are asking me...well, when are you applying to Harvard....Oh, next year you will be going to Yale.... So, these are my expectations and I just live up to it...I have a cousin who went to Harvard at age 15.....(Ashley, Sixth Form Student at Old Cloisters High School, Barbados)

Introduction

The story I am about to tell of Barbadian Postcolonial Elite Schooling is a story paradoxically about a group of working and lower middle-class youngsters who embrace excellence as a pure line vehicle to middle class futures. It is a story of aspirant subjects in an aspirant nation, an aspirant island. It is a story written against methodological nationalism and rooted in the existential transnationalism that defines the modern history of the island from its founding in British 17th century colonial expansionist trajectory in the region. In telling the story of findings of ethnographic research on “Barbados Elite Schools in Globalizing Circumstances,” I begin with a satirical quote from Regent Jeffrey— a white alumnus of one of the two schools I am studying there, Old Cloisters (the other school in the study is called Ardent Arbors)—on the occasion of the school’s 250th anniversary. Regent Jeffrey’s mock serious quip inverts the liquid commonsense of the “tourist/vagabond” motif that Zygmunt Bauman argues is embedded in the globalization discourse of late modernity (Bauman, 1998): “Barbados got the most talented and intelligent African immigrants, and the most intellectually backward deportees from England, Scotland and Ireland...Over the years we whites have been content to get kicked out of school around third form, run businesses, fornicate, drink rum and use language laced with expletives leaving the intellectual side of things to our more erudite black brethren” (Jemmott, 2006, p. 159). Let’s establish Regent Jeffrey’s mischievous comments as a place marker of sorts in the swiftly shifting sands of the new century. Besides, Jeffrey’s quaint attachment of prestige to the vernacular, his elevation of the vulgar gaze as symbolic capital, and his re-scripting of Pierre Bourdieu’s inventory of dispositions or habitus, what is important here is that Jeffrey’s comments allude to the making process of the island’s intellectual class, its transnational character, and in our interested case, the recruiting of post-C. Wright Mills elite ethical subjects from deep within the subaltern classes of Barbadian black labor. [These are the subjects that V.S. Naipaul tells us in his books *Middle Passage* and *Half A Life*...are “halfmade”] The postcolonial scenario of the worlding of elites is one not of class reproduction, therefore, so much as of class making. This then leads me to a larger starting point. That is that, any examination of the interface of education and globalization with respect to what Aihwa Ong and Saskia Sassen call “post- development states” such as India, Argentina, Singapore, Hong Kong, South Africa and Barbados—whose elite schools are the focus of our international research collective — must be voiced in a postcolonial timbre (Ong, 2006; Sassen, 2008). That is to say, that the coordinates at this intersection of dynamic worlding processes must be set within the long durée of the project of modernization and the aspirational riddle of modernization theory in particular—From Juan Ginés de Sepúlveda and Bartolomé de las Casas’s debate on the question of does the native have a soul? to the neo-soul of Rihanna, Cover Drive, and the new aspirations of Barbadian youth hitching a ride with their school diplomas to Christopher Lasch’s North America as the “one and only true heaven.” In this presentation, I take a distinctly Benjaminian approach, drawing on his insistence in his discussion of the Janus nature of Paul Klee’s haunting painting, *Angelus Novus*, that the past buffets the present. There is he said “a storm in paradise” (Benjamin Year and page)...This storm maybe in the case of this study the

roiling ambitions of the Barbadian young, juxtaposed to the powerful traditions in their school system inherited as it is from the British metropolitan paradigm.

The modernization project as it bears upon education in Barbados has a strong existentially transnational character. In what follows, I briefly outline the transnationalist history and context to elite schooling in the island, always with this long relief of modernization thinking in mind. Because, following Arjun Appadurai's essay "The Spirit of Weber," under neoliberalism the modernization project has been transformed from a proposed policy initiative of socially caring emerging TW states into something else: the work and care of the self articulated chiefly in the adventurism and the risk taking of the young. It has become as Madhavi Murty ("It's True, India Has Emerged": Gender, Class, and the Entrepreneurial Subject in India's Mainstream Media) suggests the project of the entrepreneur—the new heroic figure rising from the ashes of the collapsing Keynesianism of welfarist states. I discuss the schools in light of this. I introduce some of the students as exemplars of new neoliberal calculations—representatives of the spirit of enterprise. And, I draw some conclusions bearing upon what the venerable geographer, David Harvey calls "ruptures with continuities."

History as Context

Barbados from the very beginnings of its modern British colonial settlement in 1627 has always been an island defined by powerful processes of absorption and expulsion. The logics of this are rooted in its precarious but steely economic existence, its particular race/class configuration, its peculiar insertion into the global economy as a plantation/post-plantation society, and the compensatory and the muscular aspirations of its people articulated most poignantly, deep inside its gentrified, largely landless, working class. This has meant—despite its historical and popular depiction of continuity, relative economic prosperity, solidity and cultural conservatism—continuous diremption, mobility and a pragmatic transnationalism, circulation and extension of its population. It has meant the movement of labor from Birmingham, Liverpool, Dublin (<https://bimchat.wordpress.com/tag/ireland/>), later from Africa, India, China and the continuous circulation of population across the islands of the Caribbean sea, to the South American Continent, to England and North America. This is captured in novels such as George Lamming's *The Emigrants*, V.S. Naipaul's *The Mimic Men*, Samuel Selvon's, *The Lonely Londoners* and Jamaica Kincaid's *Lucy*. Lamming's *Emigrants*, for instance, foregrounds the motley crew of cooks, masons, and transportation workers from all over the Caribbean, along with intellectuals like Lamming and Naipaul, leaving for England on the same ship, the Empire Windrush, in the 1950s. The foundations of this mobility (real and vicarious)—residing in matters of its constrained space (a tiny island of 166 square miles) and its relative lack of natural resources—has often meant a fundamental investment in the care of the self as the only viable means of production available to the property-less working class. The is class that the Cloisters school historian, Rembrandt Simmons, calls the gentrified working class—defined by the home-school-church nexus, a taste for light classical music, old country and western songs...Jim Reeves, Marty Robbins, Charlie Pride ...and the whole venue of slow music, a rigorous investment in the law and an insistence that the law be followed. A significant dimension of this working class expression of the care of the self has been linked to an existential cosmopolitanism and outward movement. Significant elements of its population have always anticipated movement, even as its relative prosperity and regional ascendancy has meant the migration of peoples from other Caribbean islands to it. This movement has been polyvalent—within the Caribbean region, to the US, Canada and the UK, to Europe, Latin America. And, increasingly China, Singapore, etc have become points of reference. As Claire Livingston, curriculum leader at Old Cloisters, told me in our interview: "There is a saying: 'You can find a Bajan (a Barbadian) everywhere, even on the moon.'"

This framework of liquid global connections, forces and imaginations—the Burawoyian parameters that inform our research exploration—melt and flow into each other in the lived and commodified existence of real existing subjects of the Old Cloisters school we are studying in Barbados. The Barbadian educational system was profoundly externalized from its very beginnings in the seventeenth and eighteenth centuries. Old Cloisters and Ardent Arbors were historically exemplars of the British grammar school transplanted overseas. All of Cloisters headmasters, right up until almost the last quarter of the twentieth century came from Oxford or Cambridge and the schools' faculty came out of the British elite public school tradition to spawn a high stakes, high achievement culture in the island (show a list of these headmasters and their public school origins). The Barbados educational system was therefore hooked up to the British educational system, with a sponsored minority ending up in Oxford and Cambridge (The Mitchinson Report, cited in McCarthy 1983, p. 205).

But we now were entering a research context in Barbados at a flashpoint of profound change and disruption of the British grammar school model as the forces of globalization, the downturn in the global economy and the emergence of the post-development state (Barbados has set 2020 as the date when it expects to transition into First World developed status), the expansion of the media environment dominated by American cultural form, and the

ubiquitous access to cell phones and the internet that define the everyday life of the young, have generated new rambunctious aspirational and entrepreneurial desires and imaginations for exotic career futures within the contemporary youth communities that exceed the capacities of the school and the nation. This has resulted in strategic action on the part of students reflected in new curricular choices (management of business, information technology, computer science, law, economics, accounts, communications studies, Spanish are displacing the traditional liberal arts subjects of history, geography, Latin, Greek, etc and the complete demise of the classical sixth form around which the School had built its identity as a school of extraordinary academic excellence) parked alongside the old liberal arts emphasis that constitutes historical bequeath of these schools .

As Ardent Arbors and Old Cloisters' students turn their gaze towards futures beyond the island, reciprocal developments of great import are occurring. New aggressive recruitment drives are being launched by universities and elite high schools in the US and Canada targeting academic talent in Barbados (<http://www.nationnews.com/articles/view/universities-eye-local-students/>). This reciprocal investment—precipitated by a metropolitan generated opportunism underwritten by the new priorities of NAFTA and WTO to externally integrate third world economies (inclusive of services such as health and education) into the global system—has brought the phenomenon of the annual International College Fair showcasing US, Canadian and UK universities and colleges onto the Barbadian setting fomenting new powerful desires in Barbadian school youth for something that their schools cannot satisfy.

This hard court press on the Barbados elite schools was corroborated by Judith Pim, guidance counselor at Ardent Arbors, who informed us that: “We have a College Fair every year in Barbados and a number of universities from within the Caribbean, US, Canada and England are in attendance. However most of them, if not all, try to get a special visit to our schools. That I can remember now—Canada...Waterloo, Queens, Western Ontario, Humber/Guelph, St. Mary's, York, University of Toronto—these come about every year. A rep from Waterloo has come in and done a workshop for me on 'Job Preparation,' actually we will meet-up later in the month for a send-off for the students going this year.” The International College Fair and the recruiting practices of the international universities and colleges help set up and bolster the powerful drive of Ardent Arbors and Old Cloisters students to look to a future outside of Barbados.

These developments have set off powerful configurations of needs, interests and desires and reflect themselves in extraordinary juxtapositions and hybridities. The British grammar school tradition is evident as a powerful imperial symbolic that materially dwells within the zone of reference that Basil Bernstein calls a “restricted code” (1977, p. 4) of school uniform, emblems, flags, school songs, and the ritual of time—Michaelmas Term, Hilary Term and Trinity Term—old ways of ordering the school world that have disappeared elsewhere. There is evidence of these colonial condensations everywhere. The students clearly embraced this sense of tradition and saw their schools as markers of distinction that also helped to define them as unique and different and “elite.” But at the same time, these students are not orienting to England in the ways of the past. They are orienting to North America and increasingly also to China, which now has committed itself to providing 5,000 scholarships to students in Caribbean and Latin America. Students are therefore pursuing two parallel curriculums: often the schools' liberal arts/humanities collection code as well as their neoliberal calculative project defined around business studies. Elements of this parallel, neoliberal curriculum were often pursued outside the school as several of the students attended “lessons” with “master teachers” in their particular chosen subjects of study.

Most of the students we interviewed expressed a strong interest in entrepreneurship. One student, Ginger, going so far as to indicate that she wants to found a magazine because this would allow her to combine her interest in writing and the creative arts with her interest in business:

CM: Now as you kind of think about your schooling and...your future ...is this informing how you are taking your school subjects?

Ginger: Well I do management of business, economics and literatures of English...When I got into sixth form I chose...I want to work at a Magazine and eventually own my own...So then I chose business to go with that and... literatures in English....

M.M: ...Why the push to business...how then to business now?

Ginger: Because business...business...well business basically rules the world!

It is this powerful discourse of entrepreneurialism that suffuses the air in the nation's popular, in the newspapers and electronic media, in the language of politicians and the speeches of government leaders and cheerleaders of the young. And, at Old Cloisters and Arbors Ardent youngsters are making the rational calculations that the venue that would support entrepreneurial activity is not, Barbados but somewhere “abroad.” The idea of making something from nothing, of creating a new productive activity drives these young imaginations. As, one

student at Ardent Arbors (Megan) noted: “Globalization is big!” Megan felt that the island and the schools have been overtaken by the speed and force of these changes:

CM: We were talking about globalization and were wondering if you had thoughts about that...we are interested in how young people are being prepared for globalizing futures...

Megan (with her friends Kelvin, Alistair, Abigail and Safiya): It (Globalization) is big now...We talk about it a lot in our classes because the Caribbean is very susceptible to it...as a small... as a number of very small open economies with the influx of all of these foreign goods...they are talking about the effect on domestic producers....different things are happening in the world...the taxation on the airfares ...the effect that it is having on our economy....the recession in the other countries....

CM: So what you are articulating is that globalization is being experienced as a kind of vulnerability of the region and its economies and Barbados in particular...

Megan: ...Before we use to have our preferential markets, you know, our exports... but things like that are disappearing...Because there are some people who don't see it [the challenges and the decline]...I am talking about adults here. I am like how can you not know this?

In response to this sense of the overwhelming challenge of globalization some students like Kelvin felt, more positively, that globalization offered opportunities. “It” was “useful... because it exposes us to different cultures.” Kelvin saw globalization as offering a world of convergence and online community: “you get to learn a lot.” The “world” he believed was available in the BlackBerry revolution:

Kelvin: Because right now, right now, I am kind of losing my grades in Spanish [laugh]... and I actually have a Spanish friend in Mexico and every now and then she would help me to revise and stuff...

MM: So, she is a native speaker?

Kelvin: Yes...

CM: And you are in touch with her ...How? ...Through Facebook?

Kelvin: Skype and basically everything else...

MM: How did you meet her?

Kelvin: Well....it was basically on an online game...

Not all Old Cloisters or Ardent Arbors students want to be entrepreneurs. A few of them like Blaise Pascal or Floyd Pitts see their peers as “sheep” (Floyd Pitts) who are blindly following “what is on television” and “online”...Pitts maintained that he was not part of the “BlackBerry” revolution. Neither was he overly taken by tertiary education in North America. He felt, that except for universities like Harvard, a good liberal arts degree from the University of the West Indies was “equal to any abroad.” His colleague, Blaise Pascall at Old Cloisters, was even more critical of his peers and their quest for lucrative professional futures:

Blaise: I do have to commend the staff of the institution. They are very devoted...But I do think that there is still the emphasis, the enduring emphasis...probably since colonial times....especially since education is seen as a tool of social mobility and we have this uh...this drive to become doctors and medical doctors and lawyers and what not.....it has become really like an oversaturation of those in job markets now...every street you see in Barbados ...there is always such and such attorney at law...we really do have this drive for technical-scientific subjects...everybody in my class...I don't know... I find them really irritating... “Oh I want to be doctor”...Good...really unique!

MC: Why do they want to be a doctor?

Blaise: Because if they told me they wanted to help people then I would be a little more interested but...everybody knows it is the money...Because if they were really concerned about helping people, they would join something like Médecins Sans Frontières..They are not concerned with helping people. They are concerned with the very lucrative profession that it is.

Students like Blaise at Old Cloisters and Megan at Ardent Arbors, who articulated such a keen sense of the challenges facing their school and country, were attending the three-day International College Fair, held at the Sir Erskine Sandiford Sherbourne Convention Centre with a keen sense of curiosity and optimism even when they were skeptical. There, they talked to recruiters from North America about prospects and possibilities of job futures in areas that range from underwater welding to robotics, artificial intelligence, control engineering and business to theater and comedy— exceeding the establishment curriculum taught in the school. In other words, students at Old Cloisters and Ardent Arbors were wrestling over their futures as they both embraced and struggled with the symbolic layers of tradition that defined their school pasts, and of which they were the current custodians. They were also wrestling with the wider society, as well, which they saw as overtaken by events and a block to their aspirational desires:

Blaise: The problem we are having now is that because the orientation of tourism [to eco tourism]...I find Barbados itself is not really competing.....

This perceived sense of the limited range of options informed the encounter between students and recruiters. Students were seeking new avenues and futures that they felt could be realized at the universities in North America. Recruiters told us that it was better to talk to the students without their parents because the parents still wanted the traditional career paths—doctors and lawyers. The encounter with recruiters, then, was a well-managed collusion among students and recruiters and the school personnel who recognized that these universities offered the promise of material futures for their students. I have discussed this rendezvous of stakeholders elsewhere...Given the constraints of time I would like to conclude and summarize here.

Schools Ancient and Modern: Old Cloisters and Ardent Arbors

In our many visits to Old Cloisters and Ardent Arbors grammar schools in Barbados, we were struck by one overwhelming and persistent feature. These schools wrapped up like the island itself in myths and traditions deeply rooted in a British colonial restricted code of ritual, distinctive emblems, school flag, distinctive school uniform and a pyramidal structure of authority going back to the seventeenth, eighteenth and nineteenth centuries were now caught up, despite themselves, in a swirl of change linked to globalizing pressures, national and regional imperatives, and the dynamic global imaginations of school youth. To understand this change from the perspectives of actors and stakeholders (students, teachers, parents, policy makers, politicians, business community, etc.) within the school and without, one must attempt to understand something of the long relief of the past of these schools (which still plays into the present) and the way a key variable that animates our research investigation, “elite” has overtime come to be redefined. Both Old Cloisters and Ardent Arbors were schools that were founded to promote the education of white youth (boys in the case of Old Cloisters; girls in the case of Ardent Arbors) who could not afford the exclusive education overseas in England (Eton, Harrow, Rugby) or in the United States (William and Mary). But these same schools would quickly become the preserve of fee-paying planter/mercantile elites who saw the schools rise in status as educational institutions of excellence. One only needs to look at the photographs aloft on the walls of the school halls [show pictures of these]. Every single school principal, right up to the early part of the post independence era came from England. The school pictures also foreground, during this long durée, a preponderance of planter mercantile youth. But on our research visit, visible and embodied evidence of change was everywhere registered: the schools’ principals, the teachers, the students, its key stakeholders were now Afro-Barbadians. This transition—we were told in our interviews with students, principals, teachers and critical analysts outside the school—did not happen by some process of natural attrition of Barbadian local whites but reflected a mix of Fabian socialist educational and social policy interventions pursued by the first Prime of Minister of Barbados, Errol Walton Barrow in the early 1960s and consolidated thereafter. These policies aimed at expanding access to the grammar schools to “all Barbadians” (Stuart Calmley at Old Cloisters) based on competitive exam results (scores in the Common Entrance Exams) as part of policy agenda of universal secondary education. This policy opened the floodgates to lower and middleclass black youth on the island. Old Cloisters and Ardent Arbors are emblematic markers of this policy of meritocratic re-orientation of the schools. But Barbados is now entering a new phase that might be called post developmental. There is a strategic engagement with globalization and neoliberalism in terms of the vaunting of entrepreneurship as the means-ends rationality of all institutions, which has now entered these schools. Old Cloisters and Ardent Arbors therefore represent uneven, contradictory, conflicted and hybrid institutions animated by the nodal discourse of globalism, cultural heritage linked to England, national assertion that articulates a useable Africanism and diaspora discourses, regionalism and externalist globalist imagination of young fueled by the cell phone, the internet, popular culture and the mass media.

We found that “eliteness” at Old Cloisters and Ardent Arbors was an investment in a plenitude qualified by the gap between aspirations and real existing conditions and resources. Cloisters and Arbors were schools marked by the play of contradictions and haunted by what Harry Harootunian calls a pregnant past.

- There was a powerful discourse of meritocratic justification that effaced race and class. The principals, teachers and students all maintained that it was “ability” and success in the steeple chase-like Common Entrance Exam that determined admission into the school. These schools were sites of disavowal of stratification of any kind, to use the language of Hommi Bhabha and Edward Said. Old Cloisters’ principal, Stuart Calmley, noted: “we have students from every strata.”
- These schools—which were overwhelmingly white, planter mercantile class up until the middle of the 20th century—are now overwhelmingly black, with a sprinkling of Indian, Chinese, and white students, the children of expatriates and multinational corporations.

- We found surprisingly that these students—who saw themselves as the best of the best— were often the children of masons, carpenters or police officers along with children of the professional middle class—lawyers, doctors and financial consultants.
- We did not find any children of the white planter mercantile class...There was a sense that these children were going to other schools, often private schools...one like Codrington High which we made a brief visit to and found children there represented from about 50 different nationalities.
- Old Cloisters and Ardent Arbors are schools defined by high academic achievement but this achievement is tied to a strategic set of actions and orientations of the students that, in the language of Tom Cross, an alumnus of Old Cloisters is undermining the ethos of intellectual cultivation that defined these schools in the past.
- This strategic action was reflected in new curricular choices that are displacing the old liberal arts curricular emphasis. Students were choosing such curricular subjects as business, economics, law and accounts and communication studies...instead of literature, history, geography, and mathematics. They are strategically putting together courses with the goal of pursuing professions in business, accounts, law, medicine etc.
- Both schools are also feeling the pressure to sustain their traditions in the context of new student orientations and central government pressure for the schools to participate in reproducing the new type of school subject that will better fit into the new Caribbean and the world, the new desire to orient to creative knowledge economy.....
- While this is the case, Old Cloisters which is located in the urban center seems to be struggling more with this change than Ardent Arbors where the principal, Kent Greene, who has two or three management degrees, is leading a strategic reorganization of the school. Ardent Arbors now competes in international exam competitions organized by the University of Waterloo in Canada among other things. Greene also runs professional retreats for his faculty in educational law, management, as well as first aid. Indeed, Ardent Arbors offers courses such as law and economics that students at Old Cloisters are choosing to take.

Conclusion

Forget the brain drain – today’s highly skilled migrants circulate between the US and developing countries, creating new technology businesses and spreading prosperity along the way. (Anna Saxenian, http://people.ischool.berkeley.edu/~anno/Papers/IMF_World_Bank_paper.pdf)

In her extraordinary essay, “Higher Learning in Global Space,” Aihwa Ong (2006, pp. 139-156) usefully observes that the North American university has become the grand bazaar, the great global marketplace, for international students from around the world in pursuit of globally valid credentialing and careerist futures. The university has been, in her view, disoriented from its endogenous role of preparing young people for citizenship within the US democracy and national space. According to her, the North American university has re-engineered its mission towards capturing substantial market share of the trans-border population of the worldly, upwardly-mobile and rationally-calculative young citizens increasingly leaving the Global South to seek their fortunes in the United States or Canada. The thrust of Ong’s writing in this fascinating essay is on the transformations, in light of these developments, occurring in US higher education. What the Barbados elite schools study illustrates is a reciprocal action on the part of the gentrified working class students who now turn away from traditional attachment to England and from unqualified nationalist affiliation and identity given their deep-bodied aspirational quest for educational and professional futures in North America. Here, we are ever mindful of the fact that the global ambitions of Barbadian youth are part of a larger set of processes linked to the revivification of modernization as a project that does not simply involve structural and economic processes but also practices of the care of the self that have a long historical backdrop in countries moving out of colonial pasts. Such processes of self-transformations linked to institutional change in the postcolony are often marked by disjuncture, contradiction and hybridity. The aspirational element of working class behavior as Schielke has told us in his brilliant essay on Egypt (“Living in the Future Tense: Aspiring for World and Class in Provincial Egypt”) is expressed in a new desire to breakaway entirely from the state apparatus that supported the old middle class tied to the elaboration of third world bureaucracy. Aspiration expresses itself in a lack—a pervasive sense of pressure on existential postcolonial lower middle class and working class subjects for a middle class respectability and material fulfillment—a semiotically bolstered dream of a plenitude that never comes and whose shadow side is an empty, unfulfilling debt-driven consumption represented in the North American middle class life. The Barbadian elite school subjects in this tale see their academic success and attainment as the only possible guarantee of access to this imagined life. Their idol then, their ambition as they tell it, is not to touch the garment of the heroic national transformer symbolized by the politician, the lawyer and the

doctor of the past...but to embrace the new figure of the entrepreneur who can turn water into wine....Schooling is thereby stripped of its sui generis meaning.....No student seemed interested in the toil of the teacher or the academic...who now fall steadily beneath their gaze.

Özet

Günümüzde teknoloji artık hayatımızın her alanını etkiler hale gelmiştir. Bu etkilerin en yaygın şekilde görüldüğü alanlardan biri de sanal gerçekliktir. Kesintisiz odak sağlaması, görsel öğeler sayesinde verilen içeriğin hafızada canlı kalması ve tecrübe ettirerek öğretmesi sayesinde sanal gerçeklik ile öğrenim eğitim alanında oldukça etkili bir yöntem haline gelmiştir. Özellikle yabancı dil öğreniminde en verimli yolun konuşma pratiği, en büyük engelin ise konuşma pratiği konusunda çekingenlik ve başarısızlık korkusu olduğu düşünülürse gerçeğini yansıtan sanal bir ortamda çeşitli yöntemlerle tekrar tekrar deneterek konuşma pratiği kazandıran ve bu sayede İngilizce konuşma konusunda çekingenlik ve korkuyu azaltan bir sanal gerçeklik uygulaması oldukça etkili olacaktır. Bu çalışmada yabancı dil öğretiminde seyahat İngilizcesi için seyahat sürecini tecrübe ettiren ve bu süreçte konuşma becerisini geliştiren bir sanal gerçeklik uygulamalarının kullanımının incelenmesi amaçlanmaktadır.

7 Haziran Ve 1 Kasım 2015 Genel Seçimlerinde Chp ve Mhp'nin Kampanya Stratejilerinin İncelenmesi

Prof. Dr. Abdullah ÖZKAN
İstanbul Üniversitesi İletişim Fakültesi
abdullahozkan@istanbul.edu.tr

Özet

Seçimler demokratik sistemin vazgeçilmez unsurudur; milli iradenin tecelli ettiği yer olan sandıkta seçmen oyunu kullanarak arzu ettiği siyasal partiyi iktidara taşımaktadır. Ancak seçmen kararını oluştururken siyasal bilgiye ihtiyaç duymakta, partiler ve adaylar arasındaki farkı anlamayı, kendisi için hangisinin daha yararlı olacağını görmeyi arzu etmektedir. Seçmene bu imkanı sağlayan ise siyasal iletişim kampanyalarıdır. Seçmenin ihtiyaç duyduğu bilgilerin belirli bir yöntem ve kapsam içerisinde seçmene sunulması, siyasal iletişim yönetiminin temel fonksiyonunu oluşturmaktadır. Siyasal iletişim yönetiminin içerisinde seçim kampanyasının planlanması, siyasal reklamlar, halkla ilişkiler, medya yönetimi, iletişim stratejileri vb. pek çok unsur bulunmakta; bütün bu unsurların tümü, seçmenin demokratik sistem içerisinde özgürce kanaatini oluşturmaya yardımcı olmayı amaçlamaktadır. Siyasal iletişim yönetiminin odak noktası olan seçim kampanyaları son yıllarda çok önemli gelişmeler kaydetmiş, iletişim teknolojilerindeki gelişmeler ile internetin ve sosyal medyanın hayatımızda kapladığı yer, seçim kampanyalarının teknik ve yöntemlerine de hızla yansımıştır. Siyasi partiler, hedef kitlesi olan seçmeni tanımak, anlamak, derdini anlatmak ve ikna etmek için tüm etkili yol ve yöntemlere başvurmakta, 'seçilen/tercih edilen' olmak için büyük bir çaba harcamaktadır. Kimi partiler bu amaçlarına ulaşırken, kimileri de başarısız olabilmektedir. Seçimlerden arzu ettiği sonucu alamayan siyasi partilerin karşılaştığı en önemli sorunların başında kendisini doğru ve etkili şekilde seçmene anlatamaması, ikna edici bir iletişim stratejisi ortaya koyamaması ve güven tesis etmekten, inandırıcı olmaktan uzak olması gelmektedir.

Çalışma siyasal seçim kampanyalarını incelemekte, başarılı olmak için neler yapılması gerektiği üzerinde durmakta, seçmeni ikna eden iletişim stratejilerine vurgu yapmaktadır. Makalenin örnek olay incelemesi 7 Haziran ve 1 Kasım 2015 genel seçimlerinde Cumhuriyet Halk Partisi ile Milliyetçi Hareket Partisi'nin siyasal seçim kampanyalarıdır. Her iki partinin anılan tarihlerdeki seçimlerde izledikleri kampanya stratejileri çeşitli boyutlarıyla ele alınmış, analiz edilmiş ve başarılı/başarısız oldukları yönler ortaya konulmuş, ilerisi için bir yol haritası sunulmuştur.

Anahtar kavramlar: *Siyasal iletişim, Seçim kampanyaları, İletişim stratejileri*

Giriş

21. yüzyıl bilginin bollaştığı, hızının arttığı, etkisinin çoğaldığı bir yüzyıl.. Bu yüzyılda bilgi ile birlikte iletişim de aynı hızlı süreci yaşadı, hayatımızın odağına yerleşti. Bilgi sahibi olan, bunu da çok hızlı bir şekilde gerçekleştiren bireylerin farkındalıkları arttı, dünya görüşleri genişledi, daha çok şey görür, bilir, anlar hale geldi. Bu durum, eskiden ikna etmenin nispeten daha kolay olduğu kitlelerin ikna edilmesini giderek çok daha zorlaştırdı. Bilgi kaynakları çeşitlenen, enformasyonu çok hızlı bir şekilde değişik mecralardan alabilen kitleler, kendilerine söylenenler karşısında daha temkinli yaklaşımaya başladılar. Bu tabloyu siyasete bağlayacak olursak, son yirmi yılda pek çok şeyin değiştiğini, hızla dönüştüğünü görürüz. Siyasal iletişim yönetiminden, seçim kampanyalarının içeriklerine kadar bu alandaki değişimler gözle görülür, elle tutulur niteliktedir. Siyaset kurumunun/siyasetçinin seçmenle kurduğu ilişki biçimi değişmeye başlamış, eski yöntem ve teknikler, teknolojinin de gelişmesine paralel olarak, yerini yeni olana bırakmaya başlamıştır. Yeni olan nedir diye bakıldığında, öncelikli olarak karşımıza "Yeni Medya" (sosyal medya) çıkmakta, eskiden miting yapmayı seçim kampanyasının en önemli işi gören siyasi partiler artık sosyal medyada tweet atmayı öncelemektedir. Eskiden seçmeni sokak sokak gezerek arayıp bulan ve derdini anlatan siyasetçiler, şimdilerde internet ortamında seçmeniyle buluşmakta, sanal ortamda canlı yayıp yapabilmekte, seçmeniyle etkileşimli bir ortamda mesajını verebilmekte, seçmenin derdini dinleyebilmektedir.

21. yüzyılın bu değişim ve dönüşüm parametrelerini anlayıp ona göre kendisini yeniden tasarlayabilen partiler; seçimlerden başarılı sonuçlar alabilmekte, seçmene kendisini doğru şekilde anlatabilme imkanı bulmakta, seçmeni ile sağlıklı bir iletişim köprüsü inşa edebilmektedir.

Makale siyasal iletişim yönetiminde yaşanan bu değişim ve dönüşümlere dikkat çekmekte, siyasi partilerin yeni yüzyılda gelişen iletişim teknik ve yöntemlerini kullanarak gerçekleştirdikleri seçim kampanyalarını incelemektedir. Çalışmanın evreni Türkiye'de 7 Haziran ve 1 Kasım 2015 tarihlerinde yapılan iki genel seçimdir. Örnek olay olarak ise Cumhuriyet Halk Partisi ile Milliyetçi Hareket Partisi'nin sözü edilen seçimlerde yürüttükleri siyasal kampanyalar seçilmiştir. Her iki partinin siyasal kampanyaları söylem analizi yöntemiyle incelenmiş, detaylı şekilde analiz edilmiştir.

Kavram Olarak Siyasal İletişim

Siyasal iletişim demokratik toplumların bir uygulamasıdır. İktidara talip olan siyasi partilerin iletişim yöntem ve tekniklerini kullanarak kendilerini seçmene anlatmasına, onları ikna ederek oylarını almasına siyasal iletişim yardımcı olmaktadır. Siyasal iletişim için yapılan en anlamlı tanımlardan biri “siyasal arenada partilerin/politikacıların/seçmenin birbirini anlama ve anlatma biçimi” şeklindedir (Kentel, 1991: 40). Bu öz tanım aslında içerisinde pekçok unsuru barındırmaktadır; Anlama ve anlatma işin özünü oluşturmaktadır. Sadece tek yanlı bir “anlatma” demokratik sistemin ruhuna aykırıdır, aynı zamanda anlatanların, başkalarını anlamaya çalışmaları da elzemdir. Başka fikirlere açık olan, başka düşüncelerin de doğru olabileceğine inanan, gerektiğinde kendi düşüncesini revize eden siyasiler, bu davranışlarıyla toplumsal barışın tesis edilmesine katkı sağlayacaklardır. Öteki türlü bir tek yönlülük, “sadece benim fikrim doğru, yalnızca benim anlattıkların en tutarlısı” gibi bir mantık uzlaşmaya değil, çatışmaya hizmet edecektir.

Bu pencereden bakıldığında siyasal iletişim aslında siyasal arenada farklı fikirlerin seslendirilmesine imkan tanımakta, sesi pek duyulamayan partilerin/siyasilerin siyasal iletişim kampanyaları vesilesiyle kamuoyu önüne çıkmasına yardımcı olmakta, çok sesli bir demokratik ortamın inşasına katkı sağlamaktadır.

Siyasal iletişim, ortaya çıkan siyasal sorunların tanımlanmasına yardımcı olma, bu sorunların siyasal tartışma ortamına dahil edilerek meşruiyet kazanmasını temin etme ve tartışma konusu olmaktan çıkmış, ortak bir görüşe varılmış konuları da gündemden düşürme gibi üç önemli fonksiyonu icra etmektedir (Özkan, 2007: 25). Siyasal iletişim; hem seçmenlere neyin söyleneceğini araştıran, bulan, kurgulayan, dizayn eden bir stratejik iletişim yöntemidir, hem de hangi araçla bunu söylerse daha etkili/başarılı sonuçlar alınabilir sorusunun cevabını en sağlıklı şekilde bulabilecek potansiyele sahiptir (Özkan, 2015: 13). Kamuoyu araştırmaları, kitle iletişim araçları, siyasal pazarlama ve siyasal reklamcılık siyasal iletişimin öğeleri arasında yer almaktadır. Katılımcı demokrasilerde sadece sistemce meşru kabul edilen siyasal örgütler değil, siyasal süreç içinde güçlerini kabul ettirmeye çalışarak siyasal bir meşruiyet kazanmaya uğraşan tüm kişi ve kurumlar, siyasal iletişimin aktörleri olarak kabul edilmektedir. Bunların arasında siyasi partiler, kamu yararına çalışan örgütler, sivil toplum kuruluşları, baskı ve menfaat grupları, medya kuruluşları, merkezi ve yerel hükümetler ile vatandaşlar yer almaktadır (Özkan, 2015: 13).

Görüldüğü gibi siyasal iletişimin kapsamında pekçok aktör rol almakta, hepsinin de birbiriyle doğrudan ya da dolaylı ilişkisi bulunmaktadır. Bu ilişki ağını sağlıklı şekilde yönetebilen siyasi partiler kendilerini daha doğru ve etkili anlatabilmekte; bu da beraberinde ikna edilmiş seçmen kitlesini getirmektedir.

Seçim Kampanyası Olgusu ve Siyasal Reklamlar

Siyasal iletişim yönetiminin sahada uygulanan kısmı seçim kampanyası olarak tanımlanmakta, siyasal reklamlar da kampanyaların bel kemiğini oluşturmaktadır. Seçim kampanyası mutlaka uzman ve ehliyet sahibi bir ekip tarafından yönetilmeli; ekiye sadece iletişim bilimciler, reklamcılar değil, aynı zamanda sosyologlar, siyaset bilimciler, psikologlar, ekonomi, dış politika vb. alanlarda uzmanlar da yer almalıdır. Çünkü seçim kampanyası yönetimi çağımızda hem çok önemli hale gelmiş hem de eskiye oranla daha karmaşık bir yapıya kavuşmuştur. Seçmenin bilgi ve ilgi düzeyi artmış, beklentileri yükselmiş, yeni fikirlerin seslendirilmesini talep etmeye başlamıştır. Zor tatmin ve ikna edilen seçmenlere kendi fikir ve iddiasını kabul ettirmek isteyen partilerin/siyasilerin çok stratejik davranması gerekmekte, arzu ve talepleri karşılayan, farkındalık oluşturan bir vizyon ortaya koymaları beklenmektedir.

Siyasal kampanyaların odak noktasında yer alan siyasal reklamlar; bir parti ya da adayı en çok sayıda seçmene tanıtmak, öteki adaylarla arasındaki ayrımı belirtmek ve seçimi kazanmak için en çok oyu toplayabilmeyi amaçlamaktadır. Siyasal reklamcılık; siyasal partilerin uygulamalarını haklı çıkarmak ve meşrulaştırılmasını sağlamak hedefi de taşımaktadır. Siyasal parti ve adayların seçim kampanyası boyunca seçmenleri bilgilendirmek ve onları ikna etmek için kullandıkları siyasal reklamlar, olumlu bir imaj oluşturmak ya da var olan imajı daha da olumlu anlamda pekiştirmek işlevi de görmektedir. Bu nedenle siyasal iletişim uygulamalarında siyasal reklamlar artık diğer tutundurma araçlarıyla birlikte en çok tercih edilen iletişim yöntemlerinin başında yer almaktadır (Uztuğ, 1999: 122).

Siyasal reklamın bilgilendirme gücü, hem kaynağından hem de sahip olduğu içerikten kaynaklanmaktadır. Çünkü siyasal reklamlar kampanya yöneticileri/aday ya da partiler tarafından oluşturulduğu için mesajın denetlenebilme imkanı vardır. Bu denetim aynı zamanda medyada aday veya parti hakkında çıkabilecek olumsuz, yanlış, hatalı bilgileri düzeltme imkanı da verir. Siyasal reklamlar seçmenlere doğrudan vaatleri ulaştırırken mesajları açık ve etkileyici şekilde sunar. Bu da seçmenin ikna edilmesinde önemli bir katkı sağlamaktadır (Uztuğ, 1999: 316).

Siyasal reklamlar; seçimlere pek ilgi duymayan, ya da oy kullanmaya son anda karar veren seçmenleri ikna etme konusunda da yardımcı olmaktadır (Kaid-Johnston, 2001: 23). Ayrıca siyasal reklamlar; partizan oyları ve taraftar seçmenlerin kanaatlerini daha da kuvvetlendirmek için de kullanılmaktadır. Siyasal reklamcılıkta başarı, iletişim kaynağının güvenilirliğine olduğu kadar, iletişimin doğru planlanmasına ve uzun süreli sağlıklı bir şekilde uygulanmasına da bağlı olmaktadır (Devran, 2004: 19).

Etkili siyasal reklamlar hem seçim kampanyasını renklendirmekte, akılda kalıcılığı artırmakta, hem de seçmene verilecek mesajların doğrudan aktarımını sağlamaktadır. Ancak şu hususun da altını çizmek gerekmektedir; siyasal reklamlar tek başına seçim kampanyasını kotaracak bir kahraman değildir, kampanyanın mutlaka diğer unsurlarında da başarılı çalışmalar ortaya konulmalıdır.

7 Haziran ve 1 Kasım Genel Seçimlerinde Siyasal Kampanyalar

Türkiye 2015 yılında 7 Haziran ve 1 Kasım tarihlerinde üst üste iki genel seçim yaşadı. 7 Haziran seçimlerinden sürpriz bir sonuç çıktı; üç dönemdir tek başına iktidarda olan AK Parti, seçimden tek başına hükümeti kuracak çoğunlukla çıkamadı. Koalisyon hükümeti olasılığı gündeme geldi. Seçmenin mesajını alan siyaset kurumu, koalisyon hükümetinin kurulması için harekete geçti. Hükümeti kurma görevini alan dönemin AK Parti Genel Başkanı Ahmet Davutoğlu diğer partilerle yürüttüğü temaslara rağmen ortaya bir hükümet tablosu çıkamayınca Türkiye yeniden seçim atmosferine girdi. 1 Kasım 2015 tarihinde genel seçimler yenilendi. Ama bu seçimlere toplumda büyük bir tedirginliğe, güvensizliğe ve endişeye yol açan terör olaylarının gölgesinde girildi. Alışık olduğumuz renkli seçim kampanyası sürecine 1 Kasım'da rastlamak mümkün olmadı; partiler çoğu siyasal iletişim faaliyetini iptal etti, geniş katılımlı miting yapmaktan vazgeçti. Zaman da dar olduğu için partiler kapsamlı yeni bir hazırlık yapmak yerine bu seçim döneminde çoğunlukla önceki siyasal iletişim materyallerini kullanmayı tercih etti (Özkan, 2016: 2).

Bu çalışmada 7 Haziran ve 1 Kasım 2015 seçimlerinde Meclis'e girmeye hak kazanmış Cumhuriyet Halk Partisi (CHP) ile Milliyetçi Hareket Partisi'nin (MHP) izlediği siyasal iletişim yöntemi ve seçim kampanyası stratejileri incelenmiştir.

7 Haziran seçimleri uzun bir süredir iktidarda olan AK Parti'nin tek başına iktidarı kaybettiği bir seçim olması açısından önem taşımaktadır. Bu anlamda muhalefet partileri olan CHP ve MHP'nin nasıl bir seçim kampanyası stratejisi izlediği sorusu merak konusudur. CHP ve MHP'nin seçim kampanyasında gösterdikleri performansın bu tablodaki payı da çalışmanın cevabını aradığı sorular arasındadır.

7 Haziran seçimleri sonrası hükümet kurulamayıp kısa süre sonra 1 Kasım tarihinde yeniden seçimlere gidilmiş ve bu defa AK Parti tek başına hükümet kuracak çoğunluğa erişmiştir. Bu manada 1 Kasım seçimlerinin kampanya yönetimlerine, seçmene ne söylendiğine de bakmak önemli hale gelmiştir.

Çalışmada önce CHP'nin, daha sonra da MHP'nin 7 Haziran ve 1 Kasım 2015 genel seçimlerindeki kampanya stratejileri kapsamlı şekilde incelenecektir. Bu incelemede daha önce kaleme aldığım ve SETA tarafından yayınlanan "7 Haziran ve 1 Kasım seçimlerinde Siyasal iletişim" başlıklı (Ocak 2016, Analiz no:146) analizimden büyük oranda yararlanılmıştır.

Cumhuriyet Halk Partisinin Seçim Kampanyaları

Cumhuriyet Halk Partisi, Türkiye'nin ana muhalefet partisi olarak iktidara en yakın parti konumundadır. İktidarın en yakın aday olan partiden kendisini iktidara taşıyacak bir siyasal iletişim vizyonu ve yönetimi beklentisi kuşkusuz yüksektir. CHP'nin 7 Haziran seçim kampanyası 'ses getiren' bir kampanya olarak kayıtlara geçse de 1 Kasım için aynı şeyi söylemek pek mümkün değildir.

7 Haziran Seçimlerinde CHP

Cumhuriyet Halk Partisi 7 Haziran seçimlerine reklamcı Ali Taran ile hazırlanmıştır. Taran, geçmişte Genç Parti'nin seçim kampanyasını da yönetmişti. Reklam sektöründe çarpıcı sloganlar bulması, konuyu basitleştirerek anlatması ve marka ile anılacak figürleri oluşturma becerisi ile tanınan Taran'ın, hem Genç Parti hem de CHP'nin seçim kampanyasında da reklamcı reflekslerinden vazgeçmediği, bilindik yöntemlerini siyasi partiler için de uygulamaya koyduğu görülmektedir.

Cumhuriyet Halk Partisi'nin 7 Haziran'da nasıl bir seçim kampanyası tasarladığının ve uyguladığının işaretlerini yayınladığı "2015 Genel Seçim Süreci Parti İletişim İlkeleri" isimli belgede bulmak mümkündür. Bu belgeye göre CHP iki aşamalı bir seçim kampanyası planlanmış, birinci aşamada "Milletçe alkışlıyoruz" ana başlığı kullanılarak siyasal iktidarın uygulamalarını protesto etme amacı taşıyan bir seçim kampanyası yapacağını açıklamıştır. Bu

protesto alkışının toplumsal bir değer kazanarak yaygın ve sürekli bir gösteriye dönüşmesi hedeflenmiş, protesto alkışı seçim kampanyasının bir simgesi haline getirilmek istenmiştir.

Kampanyanın ikinci aşamasında; seçmenlerle somut çözüm vaatlerinin paylaşılacağı, bu vaatleri “Yaşanacak Bir Türkiye” temasıyla ve aynı adlı logoyla açıklayacağı belirtilmiştir. CHP bu aşamada, televizyon reklamları, mitingler, basın ilanları, internet ve açık hava reklamlarıyla eşgüdüm içinde “Yaşanacak Bir Türkiye” temasıyla vatandaşa seslenmiştir. Böylece, kampanyanın ikinci aşaması ekonomiye ve çalışan sorunlarına odaklı olarak devam etmiştir. Kampanyanın üçüncü aşamasında ise “Sorunları Sıfırlıyoruz” teması ve söylemi kullanılmış, bu söylem ağırlıklı olarak kampanyanın son döneminde ve basılı materyallerde yer almıştır (Göksu-Özkoyuncu, 2015: 115).

Kampanya süresince televizyon reklamlarında ve diğer mecralarda “Gelin oy verin gitsinler” mesajı sürekli olarak yinelenmiştir. Kampanyanın geneline bakıldığında ekonomi üzerine inşa edilmiş bir vaatler bütünü görülmektedir. CHP, 7 Haziran 2015 Genel Seçimleri’nde yüz yüze iletişim çalışmalarına, geçmişteki kampanyalarına göre daha fazla ağırlık vermiştir. Seçim kampanyası çerçevesinde CHP teşkilatları tarafından vatandaşlara ev ziyaretleri gerçekleştirilmiş, çeşitli hediyeler verilmiştir.

CHP, son yıllardaki en ayrıntılı ve kapsamlı seçim bildirgesini 7 Haziran 2015 Genel Seçimleri’nde açıklamıştır. 203 sayfadan oluşan bildiğe, CHP’nin iktidar tasavvurunu ortaya koymakta, ekonomi odaklı seçim stratejisinin en önemli göstergesini oluşturmaktadır. CHP Genel Başkanı Kemal Kılıçdaroğlu seçim bildirgesini açıkladığı konuşmasında sosyal yardımların üzerinde durmuş, engellilere, kadınlara, askere giden gençlere, yaşlılara ve annelere nakdi yardımda bulunulacağını ifade etmiştir. Öğrencilere eğitim araç gereç desteği ve aile sigortası, seçim bildirgesinde dikkat çeken diğer başlıklardır. %10 seçim barajının kaldırılması ve medyanın üstündeki baskıların kalkacağı vaatleri de seçim bildirgesindeki diğer belirleyici unsurlardır. CHP seçim bildirgesinde; “Kredi faiz borçları silinecek”, “Vergi borcu olmayan KOBİ’lere sıfır faizli kredi verilecek”, “Mazot 1,5 TL olacak” gibi ekonomi ağırlıklı vaatlerde bulunmuştur (Göksu-Özkoyuncu, 2015: 116).

CHP’nin kampanyasının temelini ekonomi oluşturmuş, ekonomik vaatler üzerinden seçmen ikna edilmek istenmiştir. Oy verme davranışı üzerine yapılan araştırmalar ekonomi konusunun seçmen davranışını doğrudan etkileyen unsurların başında geldiğini göstermektedir. CHP hem seçim bildirgesinde, hem de vaatlerinde ekonomiyi öne çıkartarak seçmeni ikna etme yolunu seçmiştir.

CHP seçim kampanyası kapsamında siyasal reklamlara önemli bir yer ayrılmış, siyasal reklamlar farklı mecralarda belli süreler içerisinde eş zamanlı olarak aynı temalarla yayınlanmıştır. Seçim kampanyası boyunca CHP medya ortamı olarak televizyon, gazete, açık hava ve dijital mecraları kullanmıştır. CHP seçim kampanyasına, 2015 Nisan başında televizyonlarda yayınlanan 16 saniyelik “Milletçe Alkışlıyoruz” teaser filmiyle başlamıştır. Daha sonra “Milletçe Alkışlıyoruz” filminin uzun versiyonu yayınlanmış ve bu filmde neden alkış kullanıldığının gerekçesine de yer verilmiştir. Bir dakika süren filmin sonunda “Gelin Oy Verin, Gitsinler” sloganı yer almaktadır. CHP seçim kampanyası için “Milletçe Alkışlıyoruz” reklam filmlerine ek olarak, “Yaşanacak bir Türkiye” temalı 11 kısa reklam filmi hazırlanmıştır. Bu filmler, televizyonda çeşitli frekanslarda ve çeşitli zamanlarda yayınlanmıştır. CHP, seçim kampanyasında, basın ilanlarına, televizyon ve açık hava reklamlarına göre, daha az önem vermiştir. Basın ilanlarına “Neden mi alkışlıyoruz Ahmet Bey” başlıklı ilanla başlanmış; basın ilanlarında görsel unsurlardan ziyade metinsel içeriğe önem verilmiştir. CHP’nin seçim kampanyasında çok sayıda açık hava reklamı da kullanılmıştır. Tematik olarak “Milletçe Alkışlıyoruz” başlıklı açık hava reklamlarından sonra “Yaşanacak Bir Türkiye” başlıklı siyasal reklamlar billboardlarda yer almıştır (Göksu-Özkoyuncu, 2015: 118).

CHP 7 Haziran 2015 seçimlerine yoğun bir miting maratonu ile hazırlanmış, Kılıçdaroğlu 66 ilde toplam 101 seçim mitingi düzenlemiştir. Mitinglerde, ağırlıklı olarak, seçim bildirgesinde yer alan temel konulara yer verilmiş, CHP’nin iktidar olması durumunda yapacakları anlatılmıştır. Mitinglerde Kılıçdaroğlu’nun konuşmalarının arasında “Milletçe Alkışlıyoruz” reklam filminin davul ritimleri yüksek sesle çalınarak meydanların hareketlendirilmeye çalışılması dikkat çekmiştir.

CHP açtığı “yasanacakbirturkiye.com” web sitesiyle kampanyasının materyallerini dijital ortama taşımış, kullandığı tüm işitsel, yazılı ve görsel malzemelere bu sitede yer vermiştir. Bu site aynı zamanda seçmenle iletişim kurmak için de kullanılmıştır. 7 Haziran seçimlerinde CHP’nin dijital mecraları daha etkin kullandığı, sosyal medyanın diline daha yatkın davrandığı, özellikle genç seçmene ulaşmak için dijital ortamı önemseydiği görülmektedir. 7 Haziran seçimlerinde CHP’nin genç seçmenin % 23.2’sinin oyunu aldığı hatırlandığında sosyal medya kullanımının başarısından söz edilebilir. Eskiden dijital mecralara yoğunlaşmayan CHP’nin 7 Haziran’da bu alanda görünür olması ve önemini anlaması, bundan sonra sosyal medyanın seçim kampanyalarında daha fazla fonksiyon üstleneceği şeklinde değerlendirilebilir.

Cumhuriyet Halk Partisi ekonomi konularında seçmenin hoşuna gidecek vaatlerde bulunsa, birtakım projeler sunsa da çözüm süreci, Suriye’de bizi de yakından etkileyen savaş ortamı, 21. yüzyılda Türkiye’nin nasıl bir stratejik vizyon ortaya koyması gerektiği gibi temel ve önemli konularda ikna edici bir söylem ve eylem planı geliştirmekten uzak bir görünüm arz etmiştir.

1 Kasım Seçimlerinde CHP

7 Haziran seçimlerinde reklamcı Ali Taran’a seçim kampanyasını teslim eden Cumhuriyet Halk Partisi, 1 Kasım seçimlerinde Taran ile çalışmaktan vazgeçmiş, gerekçe olarak ise medyaya maddi konularda anlaşılamadığı iddiası yansımıştır.

CHP 1 Kasım seçimlerine Ohmlette reklam ekibi ile hazırlandı, daha önce de çeşitli platformlarda birlikte çalışılan bu ekibin seçilmesinde hazine yardımı alınamamasının etkili olduğu beyan edildi.

1 Kasım seçimlerinde Cumhuriyet Halk Partisi 109 sayfalık “Önce Türkiye” başlıklı bir seçim bildirgesi açıklamış, bildirmede demokrasiden, özgürlüklere, ekonomiden insan haklarına kadar temel konular ele alınmış, saptamalar yapılmış, çeşitli öneriler getirilmiştir.

CHP 1 Kasım 2015 seçim kampanyasında teşkilatlarından ülkenin içinde bulunduğu durumu dikkate alarak, birlik, beraberlik ve kardeşlik mesajı vermelerini istemiş, seçmene yönelik tüm iletişim çalışmalarının odağına bu perspektifin oturtulmasını talep etmiştir.

CHP 7 Haziran seçimlerinde olduğu gibi büyük ölçekli bir kampanya yapmak yerine 1 Kasım’da çok dar kapsamlı bir seçim kampanyası yapmayı tercih etmiştir. Parti “Önce Türkiye” söylemini kampanyasının odağına oturtmuş; görsel, işitsel, yazılı ve dijital mecralarda bu söylemi tekrarlamış, ülkenin birlik ve beraberliğe duyduğu ihtiyacı vurgulayarak, bu konuda parti olarak üzerlerine düşen görevi yapmaya hazır oldukları mesajını vermiştir.

CHP’nin 1 Kasım seçim kampanyasındaki siyasal reklamları, “Çözüm var; Biz varız, yaparız” konseptiyle seçmene sunulmuştur. Önce ülkenin temel sorunları sıralanmış, bu sorunlarının çözümünün olduğu ifade edilmiş, sonra da CHP’nin varolduğu, sorunları çözeceği iddiasında bulunulmuştur. Sorunların nasıl çözüleceği ise belirtilmemiştir.

7 Haziran’daki vaat bolluğuna bu seçim kampanyasında rastlanmamakta, daha çok “Önce Türkiye” ifadesi öne çıkartılarak ülkenin içinde bulunduğu hassas durum ve toplumun duygu durumundan yararlanılmak istendiği gözlenmektedir.

Siyasal iletişim kampanyalarını yakından izleyen ve bu konuda önemli eserlere imza atan Necati Özkan’ın 1 Kasım kampanyasıyla ilgili olarak yaptığı değerlendirme kayda değerdir: *“CHP 1 Kasım seçimlerine ‘Önce Türkiye’ diyerek girdi. Zaten bir süredir kendisini ‘Türkiye’nin Birleştirici Gücü’ olarak konumlama yoluna girmiş olan parti bu kez ‘Önce Türkiye’ diyerek aslında bir şey dememiş olmayı tercih etmiş oldu. Aslında ‘Önce Türkiye’ CHP için bir fıkirden ziyade slogandı. O kadar ki, kampanyasında kenar süsü gibi işlev gördü...”*

CHP’nin 1 Kasım kampanyasında bir gelecek vizyonu görmek mümkün değildir. Kampanyanın anlattığı esaslı bir ‘hikaye’ de yoktur. Yalnızca terör korkusu ve güvenlik kaygısı öne çıkartılarak, seçmende bu duyguların oluşturduğu birikimden yararlanma amacı vardır. Yine 7 Haziran seçim kampanyasında olduğu gibi ülkenin temel konuları ve sorun alanlarıyla ilgili CHP’nin 1 Kasım seçim kampanyasında ortaya koyamadığı stratejik vizyon eksikliği kendisini hissettirmektedir. “Önce Türkiye” diyen CHP, “Nasıl bir Türkiye” inşa edeceğini seçmene anlatmamış, kampanyasını kuru bir retorik üzerinden yürütmeyi tercih etmiştir.

Oysa iktidara en yakın aday olan anamuhalefet partisinden ülkenin temel meseleleriyle ilgili somut çözüm önerileri ve geleceği inşa edecek önemli projeler beklenmektedir. Sadece seçim döneminde açıklanan acelece hazırlanmış birtakım vaatler ile seçime özel proje sunumları seçmenin ikna olmasına yetmemektedir. CHP’nin seçim dönemleri dışında da iktidar alternatifi sorumluluğu ile çalışması, proje üretmesi, ülkenin geleceğini tasarlaması önemli bir ihtiyaç olarak kendisini hissettirmektedir.

Milliyetçi Hareket Partisi’nin Seçim Kampanyaları

Milliyetçi Hareket Partisi’nin son yıllarda yaptığı seçim kampanyalarına “meydan okuma iletişim tarzı”nın hakim olduğu gözlenmektedir. Bu tarzda muhalefet partileri yalnızca iktidarın yapıp ettiklerine odaklanmakta, iktidarı sert bir şekilde eleştirmekte ama kendilerinin seçmene nasıl bir vizyon sundukları anlaşılamamaktadır. Böylesi bir yaklaşımda seçmen çoğunlukla “korkutularak” ikna edilmek istenmektedir.

7 Haziran Seçimlerinde MHP

MHP 7 Haziran 2015 seçim kampanyasını şu üç söylem üzerine oturtmuştur: “Hatırla”, “Bizimle Yürü Türkiye” ve “Seninle Yürüyorum.”

MHP, “Hatırla” söylemiyle seçmene iktidarın yaptıklarını hatırlatmayı amaçlamış, kendince eksik ve yanlış gördüğü icraatlarını hatırla başlığı altında kamuoyunun gündemine getirerek iktidar partisine oy verilmesini önlemeyi hedeflemiştir.

MHP genel başkanı Devlet Bahçeli’nin resmiyle birlikte kullanılan “Bizimle yürü Türkiye” ifadesi aynı zamanda “ihanete karşı, yolsuzluğa karşı, yoksulluğa karşı, bölünmeye karşı, işsizliğe karşı” ifadeleri ile birlikte kullanılmakta, MHP işaret ettiği olumsuzlukların önlenmesi için kendisini adres göstermektedir.

“Seninle yürüyorum” ifadesi ise toplum kesimlerinden çeşitli kişilerin resimleri ile birlikte kullanılmış, konsept Bahçeli’nin ‘bizimle yürü’ çağrısına olumlu karşılık verilmesi üzerine kurgulanmıştır.

MHP seçim kampanyası döneminde başta siyasal reklamları olmak üzere, mitinglerinde, toplantılarında, televizyon konuşmalarında sürekli mevcut iktidarın icraatlarını eleştirerek, Türkiye’nin sonu belirsiz bir felakete sürüklendiği, ülkenin bölüneceği gibi toplumda korkuya neden olacak söylemleri gündemde tutmuş, seçimin bir varolma ya da yokolma dönüm noktası olduğunu iddia ederek olağandışı bir anlam yüklemiştir. Bu anlamda MHP’nin ve genel başkanı Bahçeli’nin siyasal söylemlerinin son derece sert olması dikkat çekmiştir.

MHP seçim kampanyasında toplumun değişik kesimlerine yönelik çeşitli vaatler açıklamış, çalışma hayatından emeklilere, işçilerden esnafa, tarımdan ekonomiye kadar pekçok alanda iyileştirmeler yapacağı sözünü vermiştir. Bu vaatler içerisinde MHP’nin ülkenin geleceği için tasarladığı, üzerinde çalıştığı, olgunlaştırdığı ve uygulama aşamasına getirdiği herhangi bir somut proje bulunmamaktadır.

MHP’nin 7 Haziran seçimlerinde yürüttüğü kampanyanın merkezinde ekonomik vaatler yer almaktadır. Örneğin, evi olmayan muhtaç ailelere 250 TL kira yardımı yapılması, muhtaç ailelere 700 TL aile desteği verilmesi, yaşlıların aylıklarının artırılması, asgari ücretin 1400 liraya çıkartılması, sosyal yardım alanların bu yardımlarının kesilmeden aynen devam ettirilecek olması, ihtiyaç sahibi ailelere hilalkart verilmesi vb. gibi pekçok alandaki ekonomik vaatler dikkat çekicidir (Yıldırım-Hançer, 2015: 230).

MHP parti politikalarını anlatmak için 44 ilde miting düzenledi, hepsinde de genel başkan Devlet Bahçeli konuştu. Yukarıda da işaret edildiği gibi bu konuşmaların çoğunun içeriğini sert iktidar eleştirisi oluşturdu, milli bütünlük vurgusu yapıldı, ülkenin bölünme tehdidi ile karşı karşıya olduğu iddiası gündeme getirildi. Miting konuşmalarında ayrıca çözüm süreci adı altında ülkenin felakete sürüklendiği ve “çözöldüğü” ifade edildi; tüm bu olumsuzlukların giderilmesi için de adres olarak MHP gösterildi.

MHP’nin “Toplumsal Onarım ve Huzurlu Gelecek – Bizimle Yürü Türkiye” ismini taşıyan seçim bildirgesi 3 Mayıs Türkçülük Günü’nde Ankara’da kamuoyuna açıklandı. Bahçeli’nin burada yaptığı konuşmada verdiği şu mesajlar, bildirgeye yüklenen anlamı ve MHP’nin seçimlere nasıl baktığını anlamak açısından ilginç ipuçları taşımaktadır (Yıldırım-Hançer, 2015: 241):

“Umutların dip yaptığı bir dönemde, hayallerin kurduğu bir süreçte, zulüm ve eziyetlerin zirveye çıktığı bir zamanda, milli varlığımıza yönelik saldırı ve tahammülsüzlüğün yoğunlaştığı bir eşikte, sosyal risklerin, siyasal hezimetlerin, ekonomik afetlerin her insanımızın boğazına çöktüğü ve düğümlendiği bir buhran devrinde, milliyetçi Hareket Partisi cesaretiyle, ilkel tutumuyla, çevik ve çabuk siyasi tavrıyla buradadır. Milliyetçi Hareket Partisi toplumsal onarım iddiasıyla, huzurlu gelecek, milli, ahlaklı ve adaletli yönetim vaadiyle milletimizin huzurundadır. Biz bu aziz vatani ağırlıklarından kurtarmaya talibiz. Biz bu güzel ülkeyi arsızın, kansızın, hırsızın, uğursuzun elinden kurtarmaya yeminliyiz. Biz bu necip milleti sorunlarından arındırmaya, dertlerinden çekip çıkarmaya azimliyiz...”

Seçim bildirgesinde yerel yönetimlerden kırsal kalkınmaya, kamu yönetiminden esnaf ve sanatkarlara kadar pekçok konu yer almakta, bu konulardaki sorunlara yönelik tespitler yapılmakta, MHP’nin sorunlarla ilgili değerlendirmeleri bulunmaktadır.

MHP seçim kampanyası sürecinde bir yandan mitinglerle ve esnaf ziyaretleri ile halkla temas kurmayı öncelerken diğer yandan da kitle iletişim araçlarını kullanarak seçmene mesajlarını iletmeyi amaçlamıştır. Ancak MHP’nin medyayı etkili şekilde kullandığını söylemek zordur; yazılı, görsel-işitsel, açık hava ve dijital ortamlarda MHP’nin kimi reklamları yayınlanmış ama bunlar sıradanlık çizgisini aşmayı başaramamıştır. Kamuoyunun konuştuğu, çarpıcı, etkileyici, sarsıcı bir siyasal reklam uygulamasına rastlamak mümkün değildir. MHP genel başkanı Devlet

Bahçeli'nin mesaj vermek için medyayı kullanma konusunda gösterdiği çekingenlik de kaydedilmesi gereken başka bir konudur. Çok az söyleşi veren, gazetecilerle teması hep mesafeli olan Bahçeli, kitle iletişim araçlarını etkili şekilde kullanma, mesajlarını geniş kitlelere duyurma konusunda geri planda kalmayı tercih etmektedir. Bu tavır da MHP politikalarının geniş kesimlere ulaşmasının önünde engel oluşturmaktadır.

MHP kendi kurduğu online platform olan “alpturk.tv” web adresinden partinin siyasal faaliyetlerini ve kampanya uygulamalarını yayınlamış, bu yolla kamuoyunu bilgilendirme yoluna gitmiştir. Yalnızca böyle bir yöntemin kamuoyunu bilgilendirme ve ikna etme konusunda çok sınırlı bir etkisinin olacağı ise açıktır.

MHP'nin internet ortamında açtığı bir başka site www.bizimleyuruturkiye.com'dur. Burada da seçim materyalleri bulunmakta, seçim bildirgesi başta olmak üzere, siyasal reklamlara ulaşmak mümkün olabilmektedir. MHP sosyal medyayı bu seçim kampanyası döneminde kullanmış, facebook ve twitter hesaplarından kamuoyuna yönelik çeşitli siyasal mesajlar paylaşılmıştır. Genel Başkan Bahçeli kişisel twitter hesabını aktif olarak kullanmakta, önemli bulduğu konulardaki görüşlerini twitter hesabı üzerinden kamuoyu ile paylaşmaktadır.

MHP'nin seçim kampanyasının kendi içinde bir bütünlük arzettiği görülmekte ama bu kampanya tasarımının, verilen mesajların, seçmenin talep, beklenti ve arzuları ile ne kadar uyduğu konusu tartışmaya açıktır. Seçmenin yalnızca belirli kavram ve olgular üzerinden korkutulmaya çalışılması, bir felaket senaryosu hazırlanarak seçmenin ikna edilmek istenmesi üzerinde yeniden düşünülmesi gereken konular olarak öne çıkmaktadır.

1 Kasım Seçimlerinde MHP

Milliyetçi Hareket Partisi, 7 Haziran seçim döneminde izlediği siyasal stratejinin aynısını 1 Kasım seçimlerinde de izlemiş, milli birliğimizin tehlikede olduğu, terörün güvenliğini tehdit ettiği, ülkenin bölünmeye doğru gittiği söylemini kampanyasının odak noktası yapmıştır.

MHP, 7 Haziran seçim kampanyasında kullandığı “Bizimle Yürü Türkiye” sloganını 1 Kasım seçimlerinde değiştirmiş; “Ülkenin geleceğine oy ver” sloganıyla seçmenin karşısına çıkmıştır. MHP bu sloganla 1 Kasım seçimlerinin Türkiye'nin geleceği açısından yol ayrımı olacağına vurgu yapmayı amaçlamış, ülkenin birlik ve bütünlüğü için MHP'nin önemine dikkat çekmeyi hedeflemiştir. 1 Kasım'da verilecek oyun “sadece iktidarı değil, ülkenin geleceğini de belirleyeceği” mesajı seçmene verilmek istenmiştir.

MHP bu seçimde ayrıca “Sen, bilirsin Türkiye” ifadesini de kampanyasının siyasal iletişim materyallerinde kullanmıştır. MHP'nin “Sen, bilirsin Türkiye” ifadesi meramını anlatamadığı gerekçesiyle kamuoyunda çeşitli tartışmalara neden olmuştur. İfadeye yönelik eleştirilerden biri şöyledir: *“Bir şey söylemeden 1 Kasım seçimlerine girme stratejisini en açık ve harbi biçimde uygulayan ise ‘Sen, bilirsin Türkiye’ diyen MHP oldu. Ancak parti, ‘Sen’ ve ‘bilirsin’ arasındaki virgülden de çok şey beklediğini göstermiş oldu açıkçası. MHP'nin parti olarak, Türkiye'ye ‘sen bilirsin’ diyerek ‘posta koymadığını’, aksine Türkiye'nin vicdanına ve kararına güvendiğini belli etmek için kendi kendini bir virgüle muhtaç etmesi siyasal iletişim tarihimizin örnek vakaları arasına girmeyi şimdiden garantiledi...”* (Özkan, 2015).

MHP 1 Kasım seçimlerine özel sanatçı Atilla Yılmaz'a “Devlet Bahçeli Vaktidir” isimli şarkı hazırlattı. Ancak şarkıda bir kez bile MHP'nin isminin geçmemesi eleştiri konusu oldu (Karar, 2015).

MHP 7 Haziran seçimlerinde açıkladığı “Toplumsal Onarım ve Huzurlu Gelecek – Bizimle Yürü Türkiye” isimli seçim bildirgesinin ismini 1 Kasım seçimlerinde “Huzurlu ve Güvenli Gelecek” olarak değiştirdi. Bildirgede MHP'nin Türkiye'nin geleceği olduğu vurgusuna sıklıkla rastlanmaktadır. Ayrıca bildirgenin sunuş yazısında MHP genel başkanı Devlet Bahçeli'nin şu ifadesi dikkat çekmektedir: *“Türkiye'yi yaşadığı sıkıntılardan kurtaracak program ve projelerimizin yanı sıra 46 yıllık tecrübe, yetişmiş kadrolar ve imanımız iddiamızın kefilidir...”*

MHP 1 Kasım seçimlerinde az sayıda basın ilanı vermiş, açık hava mecralarında kısıtlı şekilde yer almış, sosyal medyayı da bir önceki seçime göre çok daha az kullanmıştır. Devlet Bahçeli ise kendi twitter hesabından gündeme dair açıklama yapmayı sürdürmüş, sosyal medyayı mesajlarını kamuoyuna duyurma aracı olarak kullanmıştır.

Her iki seçim kampanyası birlikte yorumlandığında şu tesbiti yapmak mümkündür: MHP'nin toplumsal değişimin kodlarını çözmekte zorlandığı, bu değişim sürecini anlamakta yeterli çabayı göstermediği açıktır. Siyasi partiler, toplumla birlikte gelişen, değişen, yaşayan canlı organizasyonlardır. Toplumsal değişmeye ayak diremek, küresel değişimleri yok saymak bir siyasi parti için seçmenin gerisine düşmek demektir. MHP'nin ayrıca kendini anlatma sorunu olduğu görülmektedir. Kullandığı soğuk savaş dili ve üslubunun artık günümüzde geçerliliğinin olmadığını

görmesi, özellikle gençlere yönelik yeni bir dil geliştirmesi önem taşımaktadır. Ayrıca korkutmak yerine anlatmak, sadece eleştirmek yerine alternatif üretmek, çalışmak, seçmeni daha çok dinlemek de önem arz etmektedir.

Sonuç

2015 yılında yapılan her iki seçimde de CHP ve MHP'nin yeni yüzyılın beraberinde getirdiği yeni iletişim teknik ve yöntemlerini kendi seçim kampanyalarında kullandıkları görülmektedir. Bunun anlamı şudur; Her iki parti de siyasal iletişim yönetimi açısından gelişen teknik ve yöntemleri takip etmekte, kampanyalarında kullanmakta, mesajlarını seçmene en etkili yoldan ulaştırmanın çabası içerisinde olmaktadır.

Elbette yalnızca teknik ve yöntemleri kullanma becerisi, tek başına seçim başarısı olarak ortaya çıkmamaktadır. Mesajların seçmene etkili şekilde aktarılması işin bir boyutu ise, bir başka boyutu o mesajların ikna edicilik niteliği, seçimde nasıl karşılık bulduğu konusudur. Seçmen verilen mesajları okuyor, görüyor, duyuyor ama acaba oyunun rengini değiştirecek ölçüde mesajlar onda bir etki bırakıyor mu, ikna oluyor mu? Her iki parti için bu konunun temel sorunların başında geldiği söylenebilir. Yine her iki parti için söylenebilecek bir başka şey de kendi seçmen tabanları dışında potansiyel başka seçmenlere açılama, onları ikna edebilecek bir vizyonu ortaya koyamama sorunudur.

Sonuçta Cumhuriyet Halk Partisi'nin seçim kampanyaları ile ilgili şu değerlendirme yapılabilir: CHP 7 Haziran'da "Yaşanacak bir Türkiye", 1 Kasım'da ise "Önce Türkiye" mesajı ile seçmenin karşısına çıktı ama iktidara en yakın anamuhalefet partisi olmasına rağmen seçmenden iktidar vizesi alamadı. 7 Haziran kampanyası kamuoyunda epey ses getirmesine, konuşulmasına rağmen seçmeni ikna etmekten uzak kaldı. İktidar alternatifi bir parti olmasına rağmen negatif bir seçim kampanyası yapmayı tercih eden CHP, iktidar eleştirisi üzerinden seçmenin oyunu almaya çalıştı. Vaatleri ekonomi odaklıydı ama bunların yapılabilirliği konusunda seçimde yeterli güveni oluşturamadı. "Merkez Türkiye" diye sunulan ve uluslararası bir nitelik taşıdığı iddia edilen projeyi, ne kendisi kamuoyuna anlatabildi ne de seçmen projenin aslında ne olduğunu anlayabildi. CHP'nin her iki seçimde de görülen eksikliği; seçmenle sürekli bir ilişki kurmadığı, teşkilatlarını motive etmede zayıf kaldığı, seçmenin talep ve beklentilerini karşılayacak bir vizyon ortaya koyamadığı ve Türkiye için nasıl bir gelecek tasarladığını açık seçik anlatmakta güçlük çektiği gerçeği oldu (Özkan, 2016: 28).

Milliyetçi Hareket Partisi'nin her iki seçimde yürüttüğü siyasal kampanyalarla ilgili genel bir değerlendirme için şunlar söylenebilir: MHP'nin 7 Haziran ve 1 Kasım seçim kampanyaları meydan okuma iletişim tarzıyla yapılan, iktidara yönelik sert eleştiriler içeren ve ortaya somut projeler koymayan bir içeriğe sahipti. "Bizimle yürü Türkiye" diyen MHP'nin seçmeni nasıl bir Türkiye'ye doğru yürüttüğü, istikametinin neresi olduğu anlaşılmadı. Sadece iktidarın icraatlarını 'hatırlatan' MHP, seçmene bir "hikaye" sunmadı, geleceği inşa edecek stratejik bir vizyon ortaya koymadı. 7 Haziran sonrasında MHP'nin uzlaşmaz görüntüsü, ön şart koşan, hükümet kurmaktan kaçınan tavrı seçimde tepkiye neden oldu; bu tepki sonucunda MHP 1 Kasım seçimlerinden 40 milletvekilini kaybederek çıktı. MHP 1 Kasım seçim kampanyasında neden uzlaşmadığını, niçin hayır dediğini seçmene anlaşılır bir şekilde anlatamadı. Seçmenin güven ve istikrar talebini okuyamayan MHP, kampanyasında sert söylemini, korkutarak seçmeni ikna etme stratejisini devam ettirince 1 Kasım seçimlerinde ancak dördüncü parti olabildi (Özkan, 2016: 29).

Özetle şu söylenebilir; Her seçim dönemi siyasal partiler ve siyasetçiler için bir laboratuvar niteliğindedir; Burada sürekli bir araştırma, geliştirme, yenilik peşinde koşma, seçmeni doğru anlamaya gayret etme, yanlış yapılanları tespit edip düzeltme, kendisini geliştirme ve gerçeklerden kopmadan geleceğe yönelik vizyon inşa etme işlemleri sürekli devam etmelidir. Siyaset kurumunu "kazanma/kaybetme" ikileminden çıkartmak, yurttışa, ülkeye hizmet etme paradigmasına oturtmak yapılması gereken birincil görevlerin başında gelmelidir. Seçim kampanyaları daha fazla sayıda milletvekili/belediye başkanı elde etmenin ötesine geçmeli; ülkenin barışına, demokrasisine, özgürlüğüne hizmet etme yarışına dönüşmelidir.

Ancak o zaman güçlü bir Türkiye inşa edilebilir..

Yeni İletişim Teknolojilerinin Evrensel Ruhu Whatsapp Ve Aktif Kullanıcıları: Babyboomer Kuşağı Üzerine Bir İnceleme

Doç. Dr. Mine Demirtaş
Beykent Üniversitesi
minedemirtas@beykent.edu.tr

Dr. Oktay Demirtaş
Altınbaş Üniversitesi
oktay.demirtas@altinbas.edu.tr

Özet

Bu çalışmada, bireylerin kendilerini ifade etme biçimlerinin zenginleşmesine olanak sağlayan ve diğer yeni iletişim teknolojileriyle birlikte, insanın temel iletişim etkinliklerinde geleneksel zaman ve uzam algısını değiştirip yeni ve evrensel bir ruhun “Apparatgeist” oluşmasına neden olan mobil telefonlar ve whatsapp uygulaması incelenmiştir. Akıllı telefonların yaygınlaşması mesajlaşmalarda artış sağlamış, bir çok ülkede en çok indirilen iPhone ve Android uygulaması olan WhatsApp, 1945-65 yılları arasında doğan Babyboomer kuşağının ustaca kullandığı bir iletişim mecrası olmuştur. Bu bağlamda, yaşları 50-60 arası olan Babyboomer kuşağı temsilcileri arasında aktif Whatsapp kullanıcısı olan 12 kişiyle odak grup görüşmeleri yapılmış, zaman ve uzam algısını yeniden şekillendiren bu iletişim mecrasında bu kadar aktif olmalarının nedeni incelenmiştir. Çözümlemeler nitel veri analiz türlerinden betimsel analiz yöntemi kullanılarak yapılmıştır.

Anahtar Kelimeler: Yeni İletişim Teknolojileri, Whatsapp, Babyboomer, Apparatgeist

The Universal Spirit Of New Communication Technologies *Whatsapp* And Its Active Users: A Study On Baby Boomers

Abstract

This study includes an analysis of mobile phones and WhatsApp, which have enabled individuals to express themselves in a richer way and, together with other new communication technologies, altered the conventional perception of time and space in man's basic communication activities, thus causing the emergence of a new and universal spirit *Apparatgeist*. The increased use of smartphones has generated more messaging, and WhatsApp — the most downloaded iPhone and Android application in many countries — has become a communication tool that Baby Boomers, people born between 1946 and 1964, skilfully use. In this context, focus group discussions with 12 active WhatsApp users, aged 50-60 years and chosen from among Baby Boomers, have been held, and the reasons why they are so active in this communication channel, which has changed the conventional perception of time and space, are examined. The study employs descriptive analysis, one of the methods used in analysing qualitative data.

Keywords: New communication technologies, WhatsApp, BabyBoomers, Apparatgeist.

Giriş

Bireylerin günlük yaşamlarında giderek daha fazla yer alan mobil telefonlar, kendilerini ifade etme biçimlerinin gelişimine ve zenginleşmesine olanak sağlamaktadır. Bireyler zaman ve uzam algısında değişimler yaşamakta, cep telefonları ile ulaştıkları sanal alemle (evrensel ruh) bütünleşmektedirler. James E. Katz ve Mark Aakhus adlı araştırmacılar bu konuda değişik fikirler öne sürmüş; teknolojinin toplumsal olarak inşa edildiği görüşüne karşı çıkarak, mobil telefonların, bu teknolojiyi kullanan farklı bireyler ve toplumlar arasında, uzamdan bağımsız, ortak bir zaman algısına dayalı, yeni ve evrensel bir ruhun, bir tür Apparatgeist' in gelişmesine yol açtığını ileri sürmüşlerdir. Bu evrensel ruh her kuşaktan bireyleri etkilemekte, özellikle mobil teknolojilerin kullanımında Babyboomer kuşağı bireyleri aktiflikleriyle dikkat çekmektedir. Bu nedenle çalışmada Babyboomer kuşağı aktif Whatsapp kullanıcıları incelenmiştir.

Günümüzde, daha önce benzeri görülmemiş bir dizi medya teknolojisi, bireyselleştirilmiş ilişki ağlarını mümkün kılmaktadır. Bu, bir yandan, mesafelerin iletişimini sağlayan Internet aracılığıyla sınırları ortadan kaldıran iletişim, Facebook, Xing ve Twitter gibi sosyal ağ siteleriyle kullanıcılara translokal (farklı yerleri ve insanları birbirine bağlayan ve etkileyen) iletişim ağlarına entegre olma olanağı sağlanmıştır. Medyada kişilerarası etkileşim ve iki yönlü iletişimin sosyal ilişkilerin eklenmesinde önemli bir rol oynaması cep telefonlarını giderek artan bir şekilde iletişimsel ağlar içinde önemli bir konuma getirmiştir (Berg, 2017, 51).

Günümüzde iletişim ve medya çalışmaları bağlamında çeşitlilik, hız ve bunun sonucunda toplumsal değişim süreçlerinde radikalleşmenin yaşandığı görülmektedir. Medya teknolojilerinde yaşanan dijitalleşme sürecinde özellikle mobil telefonlara odaklanılmıştır. Sonuç olarak, medya, iletişim ve mobilite açısından baktığımızda, durağan medyanın önemi azalmış, hız ve mobilite ön plana geçmiştir (Berg,2017, 17). Mekansal hareketlilik ve dijital iletişim medyası yakından ilişkilidir. Medya giderek daha hareketli hale gelmekle kalmamakta, aynı zamanda insanlar iletişimsel hareketlilik için medyayı giderek daha fazla kullanmaktadır (Wimmer/Hartmann, 2014).

New Jersey Rutgers Üniversitesi'nde bir iletişim profesörü olan James Katz, bir Apparatus'ın (Almanca "makinenin ruhu") olduğunu ileri sürmektedir. İnsanlar,kültürden bağımsız olarak kişiselleştirilmiş iletişim teknolojileriyle etkileşim sağladıklarında, evrensel özellikler taşımaya eğilimli olmaktadır.Uzun vadede ise ulusal farklılıklar ortadan kalkmaktadır (Fryer, 2009). İnternet, mobil iletişim, dijital medya ve çeşitli sosyal yazılım araçlarının yayılımı, yerel ve küresel bağlanan yatay iletişim ağlarının gelişimini sağlamıştır. Sanayi toplumunun iletişim sistemi, kitle iletişim araçlarının etrafında toplanmış ve tek yönlü bir mesajın birinden diğerine kitlesel dağılımı ile karakterize edilmiştir. Ağ topluluğunun iletişim temeli, eşzamanlı ve eşzamansız çok sayıda etkileşimli mesaj alışverişini içeren yatay küresel iletişim ağlarından oluşmaktadır (Castells, 2007, 246). Almanca Apparatus (makinenin ruhu) olarak tanımlanan bu sistem kültürel farklılıkları ortadan kaldırmaktadır. En yaygın teknoloji olaniPhone ve diğer "akıllı" telefonlar tarafından yönlendirilen ve kullanıcıların internete erişimini sağlayan oyunlar, sosyal ağ programları ve diğer pek çok şey de dahil olmak üzere mobil uygulamaları indiren cep telefonu devrimi hızla yayılmaktadır. Mobil operatörler, daha geniş bir uygulama ve hizmet yelpazesi için daha hızlı bağlantısağlayacak ağlar kurmaktadır. Küreselleşme, farklı ulusal ve bölgesel hikayeleri gizlemekte, asimile etmektedir. Kültür, yaşam tarzımızı etkilemekte, yaşam tarzları da iletişim tarzımızı etkilemektedir (Berg, 18).

Genel Olarak Kuşaklar

Modern çağda toplumların nasıl değiştiğini belgelemeyi amaçlayan ampirik çalışmalar yaygın olarak kullanılmaktadır. Örneğin, 1950'lerde Samuel Stouffer, komünistlerin, ateistlerin ve sosyalistlerin hoşgörüsüzlüğünü halkın desteklediğini, daha sonraki nesillerin ise büyüklerinden daha fazla hoşgörülü olduklarını, ancak ait oldukları jenerasyonların özelliklerinden etkilendikleri görüşünü öne sürmüş, bunun ise kısmen konuşma özgürlüğüne ve fikir alışverişine olanak sağlayan yüksek eğitim düzeylerine bağlı olduğunu iddia etmiştir. 1970'lerde, Ronald Inglehart, Batı Avrupa'daki İkinci Dünya Savaşı sonrası kuşakların, savaş öncesi kuşakların ekonomik güvenlik ve politik düzen konusundaki kaygılarının aksine, özgürlüğü ve kendilerini serbestçe ifade etmeyi istediklerini gözlemlemiştir. Ekonomik, teknolojik ve sosyo-politik değişiklikler, son yıllarda ileri sanayi toplumlarının kültürlerini de dönüştürmektedir. Bu iddialı çalışma, dini inançlardaki, iş güdülerindeki, siyasi çatışmaya neden olan konularda, çocukların ve ailelerin sahip olduğu önem ve boşanma, kürtaj ve eşcinselliğe yönelik tutumlarda yaşanan değişiklikleri incelemektedir. Ronald Inglehart'ın daha önceki "The Silent Revolution" (Princeton, 1977) adlı kitabı, sanayi toplumlarında kuşaklararası farklılıkları incelemiş ve bu konuda bir temel oluşturmuştur. Bu değerler değişimi, toplumlarda giderek politik, ekonomik ve toplumsal hayatı dönüştüren çok daha geniş bir kültürel değişim sürecinin bir parçası olmuştur.Inglehart, 1970'den 1988'e kadar toplanan yirmi altı ülkeden devasa bir anket verisi kullanarak, yaşlı nesillerde gençlerin yavaş yavaş yer almasıyla ortaya çıkan kültürel değişimleri analiz etmiştir. Bu değişimlerin geniş kapsamlı siyasi sonuçları vardır. Toplumların ekonomik büyüme oranlarında ve ekonomik kalkınmada değişimlere neden olmaktadır (Inglehart,1990). Maslowian'ın "ihtiyaçlar hiyerarşisi" perspektifinden baktığımız zaman, temel bir ihtiyaçlara odaklanmak zorunda kalan yaşlılara göre, yeni nesillerin daha erken bir zamanda daha ekonomik refaha ve lükse sahip olduğu görülmektedir. Buna "nesiller arası" bir fenomen olarak atıfta bulunulması, tarihsel etkiler belirli zaman diliminde büyüyen çoğu insanın gelişimini şekillendirmekte ve onları birbirinden ayıran ortak bir kültürel kimlik bulunmaktadır. Bununla birlikte, farklı kuşakların fikri, varlığı ve etkileri kolaylıkla belgelenmeyen karmaşık bir kavram olduğu da gözlenmektedir. biçimlendirici deneyimlerin doğası ne olursa olsun, insanlar yine de hayatları boyunca kendi eğilimleri, kimlikleri ve inançlarında değişmeye devam ederler mi? Gençlik döneminde meydana gelen eşsiz tarihsel olaylar hiç şüphesiz güçlüdür. Elbette, bazı dönemler ve toplumsal hareketler (örneğin, Kadın hareketi ya da Sivil Haklar Dönemi) ya da bazı yeni ideolojilerin ortaya çıkması (örneğin, 1930'ların Roosevelt'in Yeni Anlaşması ya da 1970'lerin çevre hareketi) gençlik için farklı deneyimler sunmakta(Alwin/Mccammon, 2003, 25), toplumların ideolojilerini, tutumlarını ve davranış biçimlerini etkilemekte, kültürel değişimlere neden olmaktadır.

İnsanların algıları, beklentileri, öncelikleri, hayata bakış açıları ve nihayetinde de davranışları zaman kavramına bağlı olarak değişmekte, birbirlerine yakın dönemlerde dünyaya gelen insanların benzer özelliklerinin olması ve her bir kuşağın farklı özelliklere sahip olması, araştırmacıların kuşak kavramı ve kuşakların özelliklerine olan ilgisinin yoğunlaşmasına neden olmaktadır (Adıgüzel, 2014, 165). Günümüzde bir arada yaşamak ve çalışmak zorunda olan dört kuşak olduğu gözlenmektedir.

Bireyler arası farklılıklardan dolayı ortaya çıkan kuşak/jenerasyon kavramı; tarih, sosyoloji, psikoloji ve yönetim bilimi gibi sayılabileceğimiz disiplinler açısından önemli araştırma ve çalışma alanlarının ortaya çıkmasına olanak sağlamıştır. Böylelikle dünya genelinde yapılan çalışmalardan ülke ve kültürel farklılıklar bazında kuşak ayrımları tanımlanmış ve kültürel olgulara göre sınıflandırmalar yapılmasına olanak sağlanmıştır. Bu sınıflandırmalar ve tarihsel aralıklar, sosyal olaylar ve kültürel etkilere göre farklılıklar göstermektedir. Bu tanımlamalar genel olarak, Gelenekselciler, Sessiz Kuşak, BabyBoomer Kuşağı, X Kuşağı ve Y Kuşağı ve Z kuşağını içine alarak yapılmıştır. Birbirinden farklı özelliklere sahip olan bu kuşakların birlikte yaşıyor olmaları, sahip oldukları kültürel zenginlikleri ve kolektif bilinç paylaşımı ile birlikte, başta iletişim sorunu olmak üzere pek çok sorunları ve çatışmaları beraberinde getirmektedir (Adıgüzel, 2014, 167). Bu açıklamalardan da yola çıkarak kuşak kavramını, aynı dönemlerde yaşayan, ortak özelliklere sahip bireylerin oluşturduğu gruplar olarak da tanımlanmamız mümkündür.

Christian Licoppe 'e göre yarattığımız bilgi toplumu, akıllı telefonlar gibi yeni teknolojiler sunmakta ve online olarak ilişki yönetimini mümkün kılmaktadır. Akıllı telefonlar, önceki yıllardan farklı olarak, fiziksel olarak ortamda olmayan ya da bir şekilde müsait olmayan tarafla bile iletişim kurmamızı sağlamaktadır. Bulunmadığımız ortamlarda bile bizimle iletişime geçebilecek bir teknolojinin varlığı söz konusudur. Önceleri iletişim içerisinde bulunmak istemediğimiz zamanlarda gelen aramayı cevaplamaz ya da telefonumuzu kapatırdık. İş ile ilgilenmek istemediğimizde maillerimizi kontrol etmezdik. Artık, gelen her elektronik postayı bildiren bir cihazla yaşamakta olup, "görmedim" sözü bir bahane olmamaktadır. Çünkü whatsapp, Messenger gibi bazı uygulamalar mesajı ileten tarafa bizim gördüğümüzün bilgisini vermektedir (<https://www.alperweb.com/apparatgeist/>).

Geleneksel Kuşak üyeleri 1922-1945 yılları arasında doğanlardır. Otoriteye ve kuralara uyma, sadık, disiplinli, mantıklı, detay odaklı olma, çatışmayı sevmeme, teknolojik gelişmeleri araştırma, hiyerarşik organizasyonel yapıları tercih etme gibi özelliklere sahiptirler. Birçok kaynak, BabyBoomers kuşağını 1943-1965 arasında doğmuş insanlar olarak tanımlamaktadır. O dönemde doğan milyonlarca bebekten dolayı Bebek Patlaması olarak adlandırılmaktadırlar (AnickTolbize, 2008). Akşamları ve hafta sonları da dahil olmak üzere ofiste uzun saatler geçirebilirler. Kariyerlerini uzun vadede ve işverenlerine sadakatle inşa ederler. Kaliteli ve iyi iş yapmayı tercih ederler. Çözüm odaklıdırlar. Otoriteye saygı gösterirler. X kuşağı üyeleri 1965-1980 yılları arasında doğanlardır. Nicelikten çok niteliğe önem verirler. Hedefler koyarlar, çok üretkendirler. İş ve özel yaşamlarında esnek çalışma saatleri, iş paylaşımı gibi denge unsuruna önem verirler. Otoriteye karşı rahat hareket etme, aşta bağımsızlık, etnik çeşitlilik onlar için önemlidir. Y Kuşağı üyeleri ise 1981-1994 arasında doğanlardır. Değişim önemlidir. Her zaman çok çeşitli görevler alabilirler. Aktif katılıma önem verirler. Çalışma saatlerinde esneklik, rahat bir çalışma ortamı, takım çalışması, iş başında eğitim, iş ve özel yaşam dengesi (Mitchell) onlar için önemlidir.

Ortalama her yirmi yılda yeni bir kuşak doğmakta ve bu kuşağın da ortak istekleri, ihtiyaçları, güdülleri ve eylemleri oluşmaktadır (Adıgüzel/Batur/Ekşili, 2014, 170). Tarihsel aralıklar, sosyal olaylar, kültürel etkiler ve teknolojiye yaşanan hızlı gelişmeler kuşaklararası farklılıkların ortaya çıkmasında en önemli etkenler olarak görülmektedir.

WJSchroer adlı kuruluşun yaptığı araştırmada kuşaklar 8 dönem olarak ele alınmıştır (Wjschroer, 2018);

Depresyon Kuşağı (1912-21-1930-39): Depresyon dönemi bireyleri muhafazakâr, borca girmekten korkan, finansal açıdan tedbirli hareket eden, iyi bir miras bırakma sorumluluğu olan, vatansever, zevkten önce çalışmaya yönelen ve ahlaki bir yükümlülük duygusu olan bireylerdir.

Savaş Kuşağı (1922-27-1940-45): Bu dönemin insanları zorlukları yenmek için ortak bir amaç etrafında birleşmişlerdir. Ben değil, biz görüşünün hakim olduğu bir dönemdir. Savaşın yarattığı güvensizlik ortamını yaşadılar. Bu güvensizlik onların tüm davranış kalıplarına yansdı. Türkiye açısından bu kuşağın 1923-1929 yılları arasındaki bölümü Cumhuriyet Kuşağı'na karşılık gelmektedir.

Savaş Sonrası (1928-1945): Savaşın sona ermesiyle bu nesil eğitimde ve iş yaşamında önemli fırsatlara sahip oldular. Ekonomik patlama ise Amerika'yı vurdu. Ancak, Soğuk Savaş gerginliklerinde büyüme, nükleer savaş potansiyeli ve daha önce hiç görülmemiş tehditlerle yüksek seviyelere çıktı. "Büyük Buhran" adı da verilen ve tüm dünyayı kasıp kavuran işsizlik sonrası, dünyanın savaşın eşiğine geldiği bir dönemde, iş ve güven kavramlarının hayat mücadelesinde temel rol oynadığı bir dönemde dünyaya gelen nesillerdir. Savaş sonrasında bile gelecek kaygıları olan bir kuşak olarak hayatlarını sürdürmüşlerdir. 1939-1945 yılları arasında doğanlar savaşın yıkıcı atmosferi içinde her şeyden önce hayatta kalmanın önemini öğrenerek büyüdüler. İkinci Dünya savaşı döneminde Türkiye her anlamda sıkıntılı günler geçirdi. 1940-1945 döneminde nüfus artış hızı ciddi biçimde düştü. Savaş yıllarında daha az sayıda bebek doğdu. "Savaş çocukları" diyebileceğimiz bu nesil de, çocukluğunu yokluk ve sıkıntı içinde geçirdi (<http://aydancag.com/kusaklar/>).

Baby Boomers I (Baby Boomers) (1946-54): II. Dünya Savaşı'ndan sonra doğanlardır. Tüm nesillerin en büyük nüfusuna sahiplerdir. Çoğu zaman işlerini hayatlarının merkezine yerleştirdiler. "işkolik" terimi onların döneminde çıktı. Sağlık değerleri, idealizm, yaratıcılık, takım odaklılık, kariyer odaklılık, liderlik pozisyonlarına hızla yükselme, takımda düzenli değişim, ilişkileri ve ağırları korumak, özelliklere sahiptirler. İletişim ortamı olarak telefon ağırlıktadır (Mörsted, 2018). Çalışmamızın ana teması olan günümüz Baby Boomers'ları da bu geleneklerini sürdürerek, en çok indirilen iPhone ve Android uygulaması olan whatsapp'ı yoğun olarak kullanmaktadırlar.

Boomers II. (Jenerasyon Jones) (1955-65): Amerika’da hükümete olan güvenlerinin çoğunu kaybeden Watergate sonrası kuşağıdır. 1979’daki petrol ambargosu da dahil olmak üzere ekonomik mücadeleler ve medyaya olan şüphecilik duygusu ile yaşadılar. Boomer I kuşağı, Boomers II kuşağının yararına olan işlerden ve fırsatlardan daha çok yararlanmıştır. Hem jenerasyon X hem de Bomeers II, Boomers I tarafından kullanılan bu fırsatların gölgesinde kalmıştır (Mörsted).

X Kuşağı (1966-1976): Bazen "kayıp" nesil olarak adlandırılan, ve ebeveyn boşanmalarına maruz kalan “latchkey” çocuklarının (ebeveynleri çalıştığı için okuldan boş bir eve dönen, bakıcıların baktığı çocuklar) yaratıldığı dönemdir. X, jenerasyonu genellikle yüksek düzeyde kuşkuculuk ile karakterize edilir. Birçok jenerasyon X’in çocukluklarında yaşadıkları anne-baba boşanmaları, kendi ailelerini nasıl şekillendireceklerinin en belirleyici deneyimlerden biri olarak görülmektedir. X’ler tartışmasız önceki nesillere göre en iyi eğitilmiş nesildir (Mörsted, 2018). Türkiye açısından ara kuşak anlamına gelen geçiş dönemi çocukları olarak da adlandırılan X Kuşağının geçiş dönemi olarak adlandırılmasının nedeni; sözkonusu yıllarda dünyanın önemli değişim ve dönüşümler yaşamaya başlamasından kaynaklanmaktadır. Sözkonusu dönemde yaşam şartlarında görülen olumlu gelişmeler, bireylerin davranışları üzerinde de etki yaratmış, bireylerin parasal konular dışında, sosyal yaşamla ilgili unsurlara önem vermelerini beraberinde getirmiştir. (www.humanica.com.tr/kusaklari-anlamak-yonetmek). Bağımsızlık, bireycilik, yüksek yaşam kalitesi isteği, zamanı paradan daha değerli kabul etme, çalışma hayatında sonuç odaklı olma, Gücü ve sorumluluğu paylaşma ortak özellikleridir (Mörsted).

Y Kuşağı (1980-1999): Diğer kuşaklardan, yetiştikleri dönemin olumlu şartlar taşıması sebebiyle ayrılan Y Kuşağı, teknolojik imkanlar olarak da gelişme gösteren bir dünyada yetişmişlerdir. Türkiye’de 1980 sonrası olarak ifade edilen Y kuşağı, PC’nin ve GSM teknolojilerinin doğduğu, teknoloji dostu, bireysel, rahat ve küreselleşmeye başlayan dünyanın çocuklarıdır. Yaşam şartlarında meydana gelen değişim ve dönüşümler, Y kuşağının diğer kuşaklardan farklı beklentilere, ümitlere ve tercihlere sahip olmalarını beraberinde getirmiştir (www.humanica.com.tr/kusaklari-anlamak-yonetmek). Kuşaklar arası farklılığın en çok hissedildiği nesil özelliği taşırlar. Çünkü onlar bağımsız olmayı seviyorlar, özgürlüklerine düşkünler ve iş yaşamlarında da farklılar. (http://www.acikbilim.com/2013/09/dosyalar/nesiller-ayriliyor-x-y-ve-z-nesilleri.html). Yeni teknolojilerle büyümeleri, 24 saat çevrimiçi olmaları, öğrenmeye istekli, çalışmaya istekli olmaları, Esnek ve bağımsız çalışmayı sevmeleri, proje odaklı ve takım çalışmalarına yönelik olmaları ve kendini gerçekleştirme isteğinin hakim olması özellikleridir (Mörsted). Ayrıca bağımsızlığı sevmeleri, özgürlüklerine düşkün olmaları, otoriteyi sevmemeleri, kendilerine kurallar koyulmasından hoşlanmamaları, iş yaşamlarında kurallara ve mesai saatlerine göre çalışmayı sevmemeleri ve çok fazla iş değiştirmeleri de kendilerini diğer kuşaklardan farklılaştıran özellikleridir.

Z Kuşağı (1995-2012): Tamamen dijital teknolojiler ile büyümüş olan Z jenerasyonu iş ve özel yaşamında Y kuşağından çok farklıdır. Sabit sınırlar ve net yapılar tekrar aranıyor. İşten sonra dizüstü bilgisayarları evde de yanlarındadır. Kendini gerçekleştirme artık sadece iş yaşamlarında değil, boş zamanlarında ve sosyal ilişkilerin de söz konusudur. Sanal ve gerçek arasında hiçbir ayırım kalmamıştır (Mörsted). Z nesli, 2000 yılı ve sonrası doğanlara denir. En büyüğü 13 yaşındadır. İnternet ve mobil teknolojileri kullanmayı seviyorlar. Günümüzde yaygın olan akıllı telefonlar, ipad’ler ya da tablet bilgisayarlar ile her alanda aktifler. Özellikle internet aracılığıyla sosyalleşmeyi tercih ediyorlar. Diğer nesillerden farklı olarak, internet ve teknoloji ile doğdukları tabir edilir (http://www.acikbilim.com/2013/09/dosyalar/nesiller-ayriliyor-x-y-ve-z-nesilleri.html). Generation Z, aynı zamanda günlük hayatın dijitalleşmesini hayatlarına dahil eden Generation YouTube olarak da bilinir (www.absolventa.de).

Apparatgeist Teorisi

Bu teori, kişinin teknolojiyle ve toplumla olan ilişkisini incelemektedir. Katz ve Aakhus'a göre evrensel özellikleri açısından bireyler altyapıyı standartlaştırmaya ve tutarlı zevklere doğru yönelmeye eğilimlidirler. Kullanıcılar cep telefonlarını büyük ölçüde benzer şekillerde kullanmaktadırlar.

Aparatgeist Teorisine göre, teknoloji kullanımı normları sosyal olarak inşa edilmiş ve bu normlar teknolojinin nasıl kullanılması gerektiğine dair ortak bir anlayış geliştirmiştir.. Bu paylaşılan anlayış, sosyal yapıdan türetilmiştir ve genellikle “sosyal inşacılık” olarak anılmaktadır. Böylece, kullanıcılar, kullanımdan kaynaklanan sonuçların farkında olarak teknolojilerine anlamlar yüklemektedirler (Lever-Mazzuto, 2012, 83). Mobil teknolojilerin kullanımının bir sonucu olan ve evrensel ruh ya da makinenin ruhu denilen bu doğal oluşumun içinde X, Y ve Z kuşağının yanı sıra BabyBoomers kuşağı da aktif olarak yer almaktadır. Özellikle Whatsapp uygulamasına gündelik yaşamlarında var olan arkadaş gruplarını taşıyarak mesaj bombardımanı yapmakta, Katz ve Aakhus tarafından evrensel ruh ya da makinenin ruhu olarak tanımlanan mobil teknolojilerin olanaklarından yararlanmaktadırlar.

Bir Iphone Ve Android Uygulaması Olarak Whatsapp

Akıllı telefonların yaygınlaşması ile mesajlaşma uygulamaları artmış, WhatsApp bir çok ülkede en çok indirilen iPhone ve Android uygulaması olmuştur. İnternet üzerinden karşılıklı mesajlaşma ve dosya gönderebilme programı olan WhatsApp, kullanıcıların GSM operatörlerine ödedikleri kısa mesaj ücretlerini de azaltarak, sınırsız mesajlaşma, resim, video ve ses kaydı gönderme gibi olanaklar yaratmaktadır. Dünyanın internet bağlantısı olan her yerinde WhatsApp yardımı ile mesajlaşma, fotoğraf veya video gönderimi mümkün olmaktadır.

Resim 3: <https://www.hurriyet.com.tr>

Masuda'nın adına “sosyal teknoloji” dediği ve toplumu başkalaştıran bir sistem olarak tanımladığı bu yapı toplumları ve bireyleri bağlı hale getirmiş, dünya küresel bir köye dönüşmüştür. Dünyamızın artık küresel olarak birbirine bağlı hale geldiğini belirten Dijk ise, uydu televizyonlar, mobil telefonlar ve internetin hızla yayılmasıyla gelişmekte olan ülkelerin ağ toplumuna dönüştüğünü belirterek, 21. yüzyılı “Ağlar çağı” olarak tanımlamıştır (Dijk, 2016:13). Ona göre ağlar, toplumun sinir sistemleridir ve bu altyapı hem sosyal hem de özel hayatlarımızda büyük bir etkiye sahiptir. Gündelik yaşamda bireylerin her an içinde var oldukları bu ağlar sistemi Katz ve Aakhus

tarafından Apparategeist olarak adlandırılmıştır. Bireyler bilgilerin, duygu ve düşüncelerin, resimlerin paylaşıldığı bu ağlar sisteminde sadece iş yaşamlarında değil, ağırlıklı olarak sosyal ilişkilerinde de kendini gerçekleştirme güdülerini tatmin etmektedirler.

Bauman'ın akışkan modern dünya olarak tanımladığı bu yeni toplumun, sürekli bir değişim halinde olduğunu ve akışkanlığının buradan geldiğini belirtmektedir. Elektronik dolayımın gittikçe artan bir olgu olduğunu, iş yaşamında, oyunda ve hatta birçok seviyedeki ilişkilerde yeni iletişim platformlarının öneminden bahsetmektedir (Bauman, 2013, 42). Sosyal hayat rutin olarak elektronik ortamda sürmekte ve sosyal yaşam temel olarak bir bilgisayar, İpad veya cep telefonu aracılığıyla yürütülmektedir (Lyon, Bauman, 2013,36). Akışkan toplumun “kişisel sunum kültürü” yeni bir tüketim piyasası oluşturmuştur. Buna göre “tüketmek” damak zevkinden ziyade kişinin kendi sosyal aidiyetine yatırım yapmasıdır. Tüketim toplumunun bir üyesi olmak, ayak uydurmak yetersizlik korkusunun hiç bitmediği çetin bir mücadeledir. Yeni iletişim teknolojilerinden türeyen yeni medya platformları da bu piyasanın sunduğu tüketim mallarıdır. Bireysel olarak yerine getirilen “kendini üretme” işi için gereken “araçlar” şirketler tarafından tedarik edilmekte ve bu araçlar bireylerin önceden olduğu gibi şimdi de özgür olabilmek için öğrenmesi, uyması gereken karşı konulamaz “zorunluluğun” kristalleştirilmiş biçimleridir (Lyon, Bauman, 2013,38-41, Akt: Baran/Kurt/Tekeli, 2017, 5).Tüketimin kişinin sosyal aidiyetine yatırım yapması olarak algılanan günümüz tüketim toplumunda, BabyBoomers kuşağı bireyleri de gündelik yaşamlarında İped ve mobil iletişim teknolojilerinin sağladıkları olanaklardan aktif olarak yararlanmaktadırlar.

Araştırmanın Amacı

Günümüzde Sosyal yaşam elektronik ortamda, siber yaşam olarak süregelmekte, kişilerarası ilişkiler çoğunlukla bilgisayarlar, İpad veya cep telefonları aracılığıyla yürütülmektedir. Araştırmanın amacı, Mobil teknolojilerin kullanımının bir sonucu olan ve evrensel ruh ya da makinenin ruhu “Apparategeist” denilen bu doğal oluşumun içinde en az X, Y ve Z kuşağı temsilcileri kadar BabyBoomers kuşağının da aktif olarak yer almalarının incelenmesidir.

Araştırmanın Yöntemi Ve Sınırlılıkları

Bu çalışmada yöntem olarak, bilgiye tümevarım yöntemini kullanarak ulaşmaya çalışan nitel araştırma yöntemlerinden odak grup görüşmeleri yapılmış, araştırma nitel veri analiz türlerinden betimsel analiz yapılarak sonlandırılmıştır. Kullanılan amaçlı örneklem modelinde araştırmanın konusunu oluşturan kişiler, BabyBoomers kuşağını temsil eden ve aktif olarak whatsapp kullanıcısı olan, 50-60 yaş arası olan 7 bayan ve 5 erkek katılımcı araştırmanın sınırlılıklarını oluşturmaktadır.

Elde Edilen Bulgular

Yapılan odak grup görüşmeleri sonucunda elde edilen bulgular;

Aşağıda elde edilen veriler, odak grup görüşmesi yapılan kişilerin kendi ifadeleri olarak aktarılmıştır. Hiçbir değişiklik yapılmamıştır. Görüşme yapılan 12 katılımcının birbirine benzer cevapları aynı cümleler içindeki ifadelerde yer almış, benzer söylemler ortak noktada birleştirilmiş, dikkati çeken bazı söylemler olduğu gibi aktarılmıştır.

-Whatsapp uygulamasını günde ne kadar süre ile kullanıyorsunuz? Sorusuna verilen yanıtlarda yer alan “her an ve her yerde” ifadesinden, mobil teknolojiler arasında yer alan whatsapp’ın yarattığı evrensel ruhun etkisinde oldukları anlaşılmaktadır.

-Bu uygulamayı sadece resim, bilgi ve haberlerin paylaşımı amacıyla mı kullanıyorsunuz?

- Whatsapp’ta herşeyi paylaşıyoruz. Duygu ve düşüncelerimiz, elde ettiğimiz haber ve bilgiler dahil her şeyi paylaşıyoruz.

-Whatsapp kullanımında bu kadar aktif olmanızın nedenleri nelerdir? Sorusuna verilen cevaplar çok çarpıcıdır; -“Gençlik dönemimizde bu teknolojilerin olmamasının yaratmış olduğu iletişim ve paylaşım duyulan özlem olabilir. Eskiden boş vakitlerimizi geçireceğimiz, arkadaşlarımızla her an iletişime geçeceğimiz olanaklarımız yoktu. Bugün ise cep telefonum yanımda yokken, kendimi sosyal yaşamdan kopuk hissediyorum.”

-Arkadaşlarınızla aynı zaman ve uzamda birlikte olma isteğinizi whatsapp uygulaması sağlıyor mu?

-Bu uygulama her an arkadaş gruplarımızla sanal alemde de olsa birlikte ve iletişim içinde olmamızı sağlıyor.

-Whatsapp, arkadaşlarınızın ne zaman ve nerede neler yaptığını, neler düşündüğünü öğrenmenin bir yolu mudur? Merak duygularınızı bu yolla gideriyor musunuz?

-Merak duygularımızı tatmin ediyor.

- Neler yaptıklarımız arkadaşlarımız tarafından izleniyor.

-Arkadaşlarımızın neler yaptıklarını merak ediyorum ve merak edilmeyi seviyorum.

Kullanıcılar günün her saatinde Whatsapp’ta aktif olduklarını söylemektedirler. Görüşmelerdeki söylemlerden özellikle resim paylaşımlarının, merak duygularını giderme, başkaları tarafından izlenme, ve beğenilme duygularını tatmin ettiği anlaşılmaktadır.

-A adındaki katılımcı;

“Gençlik dönemlerimizde arkadaşlarımızla anlık iletişim kuramazdık. Sabit telefonlar tek iletişim aracımızdı. Şimdi her şey çok kolay. İstedğimiz herhangi bir şeyi gerek resim, gerek haber olsun anında arkadaşlarımızla paylaşabiliyoruz. Çeşitli arkadaş grupları oluşturarak, dilediğimiz gibi iletişim kuruyoruz. Bu sayede sanki gençlik dönemlerimize dönmüş gibi hissediyoruz. Keşke bu teknolojilere çok önceden sahip olsaydık.” söyleminde duygu ve düşüncelerini aktarmıştır.

-D adındaki katılımcı ise;

“yapmış olduğum işleri, gezdiğim yerleri ve düşüncelerimi başkalarıyla paylaşmak hoşuma gider. Keşke gençliğimde bu teknoloji olsaydı.”

söyleminde başkaları tarafından takdir edilme, beğenilme ve izlenme duygularının whatsapp’ta aktif olmasının asıl nedeni olduğunu belirtmiştir.

Sonuç

Mobil telefonlar bireylerin günlük yaşamlarında giderek daha fazla yer almaya başlamıştır. Milenyum çağı kuşakları gibi Babyboomers’lar da kendilerini ifade etme biçimlerinin gelişimine ve zenginleşmesine olanak sağlayan mobil teknolojileri aktif bir şekilde kullanmakta, zaman ve uzam algısında değişimler yaşayıp, cep telefonları ile ulaştıkları ve James E. Katz ve Mark Aahus adlı araştırmacıların “Apparatgeist” evrensel ruh adını verdikleri sanal alemle bütünleşmektedirler. James E. Katz ve Mark Aakhus teknolojinin toplumsal olarak inşa edildiği görüşüne karşı çıkarak, mobil telefonların, bu teknolojiyi kullanan farklı bireyler ve toplumlar arasında, uzamdan bağımsız, ortak bir zaman algısına dayalı, yeni ve evrensel bir ruhun, bir tür Apparatgeist’ in gelişmesine yol açtığını ileri sürmüşlerdir. Bu evrensel ruh her kuşaktan bireyleri etkilemiş, özellikle mobil teknolojilerin kullanımında Babyboomers’lar aktiflikleriyle ön plana çıkmışlardır.

Bu çalışmada Babyboomers kuşağı aktif Whatsapp kullanıcıları incelenerek, gençlik dönemlerinde bu teknolojilerin olmamasının yaratmış olduğu iletişim ve paylaşım isteklerini ancak bu dönemlerinde karşılayabildikleri yapılan görüşmelerde yer alan söylemlerinden anlaşılmıştır. Whatsapp uygulamasının her an arkadaş gruplarıyla sanal alemde de olsa birlikte ve iletişim içinde olmalarını sağladığı, merak duygularını tatmin ettikleri, yaptıklarının arkadaşları tarafından merak ediliyor ve izleniyor olmasının hoşlarına gittiği anlaşılmaktadır. Bu teknolojiler kendilerini gençlik dönemlerine dönmüş hissettirmektedir. “Keşke bu teknolojilere çok önceden sahip olsaydık” söylemi ile de, içinde var oldukları Apparatgeist’a olan özlem ve bağlılıklarını dile getirmişler, cep telefonları yokken, kendilerini sosyal yaşamdan kopuk hissettiklerini belirtmişlerdir. Dolayısıyla haberleri, duygu ve düşüncelerini, resimlerini paylaştıkları bu ağlar sisteminde Baby Boomers’lar gündelik yaşamlarında, sosyal ilişkilerinde kendini gerçekleştirme güdülerini de tatmin etmektedirler.

Yurtdışındaki Türk Diasporasına Yönelik Yürütülen Faaliyetlerin Türkiye'nin Yumuşak Güç Kapasitesine Yaptığı Stratejik Katkıların Değerlendirilmesi

Prof. Dr. Abdullah ÖZKAN
İstanbul Üniversitesi
abdullahozkan@istanbul.edu.tr

Özet

Küreselleşme süreciyle birlikte devletler arasındaki ilişki biçimi uluslar arası arenada toplumlar arası ilişki inşasına evrilmiş, ülkeler sahip oldukları yumuşak güç unsurlarını öne çıkartarak kapasite inşa etmeyi hedeflemeye başlamışlardır. Kültür, eğitim, spor, sanat, bilim gibi yumuşak güç kaynaklarını etkili şekilde kullanmayı başaran ülkeler, cazibe merkezi ve söz sahibi olmaya başlamıştır. Öte yandan ülkelerin yurtdışında (diasporada) yaşayan kendi vatandaşları da önemli bir yumuşak güç kaynağı olarak belirmeye başlamıştır. Türkiye son yıllarda diasporadaki vatandaşlarını adeta yeniden keşfetmiş, onlara yönelik kapsamlı eğitim, kültür ve sosyal çalışmalar başlatmıştır. Başbakanlık makamına bağlı olarak kurulan Yurtdışı Türkler ve Akraba Topluluklar Başkanlığı eliyle yürütülen Türk diasporasına yönelik faaliyetler, hem seslendiği hedef kitlesi, hem geleceğe dair hedefleri açısından oldukça dikkat çekicidir.

Çalışmada Yurtdışı Türkler ve Akraba Topluluklar Başkanlığı eliyle yürütülen Türk diasporasına yönelik faaliyetler detaylı şekilde incelenmiş, Türkiye'nin kamu diplomasisi vizyonu başta olmak üzere yumuşak güç kapasitesinin geliştirilmesine yapılan bu çalışmaların nasıl bir katkısının olduğu analiz edilmiştir.

Anahtar kelimeler: *Yumuşak güç, Türk Diasporası, Yurtdışı Türkler ve Akraba Topluluklar Başkanlığı*

Giriş

Türkiye'nin yurtdışında yaşayan büyük bir diaspora nüfusu bulunmakta olup bu kitle ile yıllardır etkili bir iletişim kurulması ne yazık ki pek mümkün olamamıştır. Bu durumun çeşitli nedenleri olmakla birlikte, diaspora ile kurulamayan bu iletişim köprüsü Türkiye'nin yurtdışında kendisini daha iyi tanıtmayı, anlatmayı ve politikalarına destek verecek bir gücü yanında hissetmesi olgusundan da mahrum kalmasına yolaçmıştır.

Türkiye 2010 yılında yurtdışında yaşayan Türk diasporalarına yönelik kurumsal çalışmalara başlamış ve Yurtdışı Türkler ve Akraba Topluluklar Başkanlığı'nı (YTB) kurmuştur. Kültür, eğitim, hukuk, gençlik ve sivil toplum gibi temel alanlara yoğunlaşan YTB, kamu diplomasisi perspektifinden hareket ederek, Türkiye'nin yumuşak güç potansiyelini harekete geçirmeyi amaçlamıştır. YTB'nin kurulduğu günden bugüne kadar yaptığı faaliyetlere, çalışma alanlarına, yürüttüğü projelere, bunların etkilerine bakıldığında şimdiye kadar ihmal edilen bir alandaki önemli bir potansiyeli açığa çıkardığı görülmektedir. Açığa çıkartılan bu potansiyel yapılan çalışmalarla daha görünür hale gelmekte ve Türkiye'nin yumuşak güç kapasitelerinin kullanılarak neler yapılabileceğinin de işaretlerini vermektedir. Türkiye kültür, eğitim, medya, bilim vb. pekçok alanda önemli yumuşak güç kapasitesine sahip bir ülke olup; doğru planlama, sabırlı/kararlı çalışma ve odaklanma ile bu kapasitenin kalıcı ve başarılı ilişkilerin inşa edilmesinde kullanılabileceğinin en iyi örneğini ise YTB oluşturmaktadır.

Çalışma YTB'nin yurtdışındaki Türk diasporalarına yönelik faaliyetlerine odaklanmakta, bu faaliyetlerin Türkiye'nin yumuşak güç kapasitesi ile ilişkisini incelemektedir. Türk diasporalarına yönelik faaliyetlerin aynı zamanda Türkiye'nin imaj ve algısına yaptığı katkılar da çalışmada analiz edilmektedir.

Kamu Diplomasisi Perspektifi

Kamu diplomasisi kavramı son yıllarda çokça gündeme gelmekte, başarılı uygulama örnekleri görüldükçe bu kavrama olan ilgi de giderek artmaktadır. Etkili iletişimi, kalıcı iknayı, başarılı ilişki inşasını esas alan kamu diplomasisi ülkeler açısından yeni yüzyılın öne çıkan olgularından biri haline gelmektedir.

Kamu diplomasisi, hükümetlerin yabancı kamularla ülkelerinin fikirlerine, ideallerine ve ülke çıkarlarına hizmet edecek şekilde sempati oluşturma amacıyla kurdukları iletişim sürecine vurgu yapmaktadır (Signitzer, 2008, 206). Dolayısıyla kamu diplomasisi her ülkenin kendi çıkarlarını korumak, kendi fikirlerini destekleyecek kişi ve toplumların sayısını artırmak, ideallerine ortak olacak ülkeleri bulma amacına hizmet etmektedir.

Kamu diplomasisi kavramını incelerken ilişki inşa etme gücüne, hükümetlerin iletişim politikası olma boyutuna, kültürel diyalogun kapısını aralama becerisine, ülkelerin imajlarını şekillendirme potansiyeline, algılamaları yönetebilme sanatına ve doğru bilgiyi yayma gücüne de atıf yapmak önem taşımaktadır (Demir, 2012, 12). Çok boyutlu ve kapsamlı bir yapıya sahip olan kamu diplomasisi, etkin kullanıldığında hem ülkelerin imaj ve itibarlarının artmasına, hem stratejik değerlerinin artarak cazibe merkezi haline gelmelerine, hem de politikalarının başka toplumlar/ülkeler tarafından benimsenmesine yardımcı olmaktadır (Özkan, 2017: 5).

21. yüzyılın en stratejik araçlarından biri olarak kabul edilen kamu diplomasisi Nye'a göre (2005) üç farklı boyuttan oluşmaktadır. Birinci boyut "*günlük iletişim ve bilgilendirme*" boyutudur. Doğru bilginin sürekli kılınması, zamanında aktarılması ve sağlıklı bir algı oluşturulması kamu diplomasisi yönetiminin önceliklerinin başında gelmektedir. Kamuoyunun ilgisinin çekilmesi, bütünselliğin ve tutarlılığın sağlanması da önem taşımaktadır. İkinci boyut olan "*stratejik planlama ve ülkenin markalaşması*" uzun vadeli planlama ve stratejiye dayanmaktadır. Kamu diplomasisi, ülkelerin "marka" haline gelmesine de artık çok ciddi katkılar yapmaktadır. Ülke markasını güçlendiren, kamuoyundaki algısını sağlamlaştıran ülkelerin ikna etme kapasitesi daha da artmaktadır. İtibarlı, güvenilir, saygın ülke haline gelmek, verilen mesajların etkisini artıran bir unsur olarak değerlendirilmektedir. "Uzun vadeli ilişkiler kurmak ve geliştirmek" ise kamu diplomasisinin üçüncü boyutunu oluşturmaktadır. Kamu diplomasisi araç ve yöntemlerini kullanarak, hedef ülke ve toplumlarla çeşitli alanlarda kurulan ilişkiler, verilen mesajların kalıcılığını sağlamada önemli bir faktördür. Eğitim, medya, değişim programları, staj imkanları vb. araçlar kalıcı ve uzun vadeli ilişkiler kurabilmek için önemli imkan ve fırsatlar sunmaktadır. Bu ilişkiler toplumların ve ülkelerin birbirini daha yakından tanımalarına yardımcı olmakta, tanıma arttıkça, anlama ve ikna olma olanakları da çoğalmaktadır (Özkan, 2017: 6).

Kamu diplomasisi ilk ortaya çıktığında kaynağı hükümet olan bir iletişim süreci idi. Ancak gelişen iletişim teknolojileriyle birlikte hedef kitlenin daha ulaşılabilir olması, küreselleşmeyle beraber çok uluslu şirketlerin sürdürülebilirliklerinin kamu diplomasisi faaliyetlerine de dolaylı yoldan bağlı olması gibi nedenlerden dolayı kamu diplomasisinde kaynak artık sadece devlet olmaktan çıkmıştır. Kamu diplomasisi sürecinde artık devletin dışında başka kaynaklar da yer almakta, bu kaynaklar bazen devletin çalışmalarına dâhil olmakta bazen de devletten tamamen bağımsız olarak kendi çalışmalarını yürütebilmektedir. Şirketlerin, üniversitelerin, kuruluşların ve de diğer sivil toplum örgütlerinin, resmi dış politika amaçlarını güçlendiren ya da onlarla anlaşmazlığa düşerek kendi kendilerine yumuşak gücü geliştirdikleri doğrudur. Küresel bilgi çağında özel yumuşak güç kaynaklarının önemi artmaktadır. Yumuşak güç ağırları olarak karşımıza aileler, gruplar, şirketler, üniversiteler ve kulüpler ve onların sofistike bilgilendirme kampanyalarındaki etkileri çıkmaktadır (Sancar, 2012, 90).

"Kamu diplomasisi uygulamalarından etkili sonuçlar elde edebilmek için ülkelerin izledikleri politikaların rasyonel, ikna edici, meşru ve savunulabilir olması gereklidir. Evrensel hukuk kurallarını ihlal eden, adaletten uzak, gayrimeşru yöntemlere dayanan bir politikayı savunmak ve uluslar arası kamuoyuna anlatmak mümkün değildir (Kalın,2012,151). Kamu diplomasisi perpektifiyle hareket eden ülkeler önemli kazanımlar elde etmekte, öncelikle insanların o ülke hakkında zihinlerindeki imajlar güncellenmekte, insanların birbirine olan yakınlıkları artmakta, yanlış anlaşılmalara düzeltilmektedir. Böylece olumlu algılar çoğalmakta, insanlar arasında bağlantılar kurulmakta; eğitim, değişim programları, bilimsel işbirlikleri, turizm gibi yollarla insanların birbirini tanıması ve anlamasının yolu açılmaktadır. İnsanlar birbirini ne kadar çok tanırsa ve anlarsa, bunun sonucu olarak da ekonomik, sosyal ve kültürel işbirliklerinin kapısı aralanmakta, kalpler kazanılmakta, kalıcı ve uzun vadeli ilişkiler inşa edilmektedir (Leonard ve Alakeson, 2000,10).

Uluslar arası ilişkiler disiplininin inşacılık kuramı ile kamu diplomasisi olgusu arasındaki ilişkiye de dikkat çekmek yerinde olacaktır. İnşacılık kuramına göre, verili ve kuralları belirli olan bir sosyallik mümkün olmayıp, insanlar ve toplumsal olan arasında karşılıklı bir inşa ilişkisi ve süreci mevcuttur. İnşa süreci sürekli devam etmekte ve farklı dönemlerde farklı öznelere gerçekleşmektedir. Bu kavramsal çerçeve uluslar arası ilişkiler kuramlarına uyarlandığında, uluslar arası ilişkilerin aktörler tarafından inşa edildiği görülmektedir. Bu aktörlerin kapasiteleri yalnızca maddi güç ile ölçülmemekte, aynı zamanda sahip oldukları fikirler, değerler ve kültür onların uluslar arası arenadaki gücünü belirlemektedir (Çemrek, 2016: 38).

Kimlik, algı ve kültür gibi unsurların önemli rol oynadığı inşacılık ile kamu diplomasisi arasında yakın bir ilişki mevcuttur. İnşacılık kuramı, kamu diplomasisinin yürütüleceği araçların nasıl oluştuğuna dair verileri gözler önüne sermekte ve bunları uluslar arası ilişkileri yönlendiren temel bileşenler olarak değerlendirmektedir. Kamu diplomasisi de inşacı yaklaşımın uygulanabilmesi için bir model oluşturmaktadır. İnşacılık, kamu diplomasisi ve yumuşak gücün sunduğu teorik bakış açısının ışığında devletlerin dış politikada hareket edebilme kapasitelerini artırmaktadır (Çemrek, 2016: 39).

Kamu diplomasisi kültür, bilim, eğitim, medya başta olmak üzere bünyesinde pekçok yumuşak güç unsurlarını barındırmakta; ülkeler kamu diplomasisi perspektifiyle hareket ettiklerinde aslında başka toplumlarla inşa ettikleri ilişkilerde karşılıklı anlayışı geliştirme ve pekiştirme amacı taşımaktadır.

Yumuşak Güç Olgusu Ve Araçları

Kamu diplomasisi perspektifiyle hareket eden ülkelerin başka ülkeler/toplumlar ile kalıcı ilişki inşa etmesine yardımcı olacak en önemli unsuru yumuşak güç araçları oluşturmaktadır. Uluslar arası sistemde ülkeler artık sahip oldukları yumuşak güç potansiyeli ile (bilim, medya, sanat, kültür, spor, eğitim vb.) başka ülkeleri etkilemekte, onlar için cazip bir ülke konumuna gelmekte ve bu süreçte kendi politikalarını başka ülkelere kabul ettirmektedir. Bu sürecin temelini iletişim, etkileşim, ikna ve işbirliği oluşturmaktadır (Özkan, 2017: 8).

Joseph S. Nye (2005) yumuşak güç oluşturmak için çekici bir kimlik taşıyan kültürü, siyasi değerleri ve kurumları, ahlaki temellere ve meşruiyete dayalı politikaları gerekli görmekte, ancak bu şekilde bir “cazibe merkezi” oluşturulacağına işaret etmektedir. Nye’in da dikkat çektiği bu süreç tahmin edilebileceği gibi uzun ve zorluklarla dolu bir süreçtir. Çok yoğun çalışmayı, kararlı ve sabırlı olmayı gerektirmekte, ülkenin sahip olduğu tüm yumuşak güç unsurlarını bir arada, birbiriyle uyum içerisinde kullanabilme becerisini zorunlu kılmaktadır (Özkan, 2017: 8). Ülkeler açısından yumuşak güç odaklı bir dış politika yürütmek, sert güç odaklı bir politikayı yürütmekten çok daha yoğun ve karmaşık bir emek gerektirdiği açıktır. Çünkü sert güç askeri unsurların öne çıktığı tek bir merkezden yönetilebilirken, yumuşak güç araçları çok merkezli bir yapıya sahiptir. Sadece devletin kontrolünde olmayan yumuşak güç araçları sivil toplum örgütleri, üniversiteler, düşünce kuruluşları vb. aracılığıyla kullanılabilir (Çemrek, 2016: 37). Bu nedenle çok merkezli ve boyutlu bu yapının çok ciddi koordinasyona ve amaç birliğine ihtiyacı bulunmaktadır.

Kamu diplomasisi, karşılıklı anlayış yoluyla ülkelerin imajını ve saygınlığını artırmayı hedeflemektedir (Simonin, 2008, 24). Günümüzde ülkeler açısından en önemli unsurların başında güven, saygınlık ve itibar gelmektedir. Bu değerlere sahip ülkeler kendi politikalarını başka ülke ve toplumlara rahatlıkla anlatabilmekte, kendini dinletebilmekte, cazibe merkezi haline gelebilmektedir. İletişimde mesajın kendisi kadar, mesajın kaynağı da önem taşımaktadır. Kamu diplomasisinde, kaynak ülkelerin kendisidir. Ülkeler ne kadar güvenilir, itibarlı ve saygın olursa, kamu diplomasisi çerçevesinde verdikleri mesajlara da o oranda güvenilmekte, inanılır bulunmaktadır. Bu nedenle kamu diplomasisi stratejisi geliştirilirken yalnızca mesaja odaklanmak tek başına yeterli değildir. Aynı zamanda mesajı hedef kitleye aktaran kaynak olarak ülkelerin algılarını da düzeltmeleri, inşa etmeleri gerekmektedir. Bunun en etkili yolu da yumuşak güç araçlarını doğru kullanmaktan geçmektedir. Kültürel kapasitesini, bilimsel altyapısını, sportif başarılarını, entelektüel değerlerini etkili şekilde öne çıkartabilen ülkeler, kısa sürede cazibe merkezi haline gelebilmektedir (Özkan, 2017: 9).

Türkiye’nin yumuşak güç kapasitesini etkin şekilde kullanmak amacıyla son yıllarda kurumsal altyapı çalışmalarına önem verdiği, kapasite inşasına yatırım yaptığı görülmektedir. Bu anlamda çalışmanın inceleme konusu olan Yurtdışı Türkler ve Akraba Toplulukları Başkanlığı (YTB) bu altyapı kurma ve kapasite geliştirme çabalarına verilebilecek bir örnek olarak değerlendirilebilir. Türkiye’nin yumuşak gücünü kamu diplomasisi perspektifinden diasporada kullanmayı amaçlayan YTB, şimdiye kadar ihmal edilmiş bir alanda kalıcı ilişkilerin inşa edilmesi amaçlamaktadır.

Diaspora Diplomasisi

Yeni uluslar arası sistemde bir ülkenin başka ülkelerde yaşayan vatandaşlarına yönelik politikaları önem arz etmekte, devletlerin diaspora diplomasisine daha fazla ağırlık verdikleri gözlenmektedir (Ekşi, 2014: 218). Diaspora; doğduğu ya da kuvvetli aile bağlarının bulunduğu ülkenin dışında yaşayan, ancak geldikleri ülke ile güçlü maddi ve manevi bağlar devam ettiren göçmen nüfus olarak tanımlanmaktadır. Başka bir tanıma göre diaspora; doğduğu ülkeden başka ülkelere göç eden veya göç edenlerin soyundan gelen ve geldiği ülke ile ortak ulusal, hemşehrilik veya etnik kimliği paylaşan nüfustur. Diasporayı oluşturan bireylerin, gittikleri ülkelerde dâhil oldukları sosyal, profesyonel ve bilimsel ağlara erişmek ve bu bireylerin o ülkelerde kazandıkları bilgi ve yetkinlikleri ‘uzaktan’ kullanmak mümkün olabilmektedir (Ercan, 2015).

Yurtdışında çeşitli ülkelerde vatandaşları bulunan devletler açısından en önemli unsur bu kişilerle nasıl bir ilişki inşa edeceği, diaspora diplomasisini nasıl yürüteceği konusudur. Bu konuda çeşitli yaklaşımlar mevcut olmakla birlikte, bu çalışma kapsamında Metin Ercan’ın diaspora diplomasisi ile ilgili şu yaklaşımı konunun anlaşılması açısından açıklayıcıdır:

“Diaspora sahibi olan ülkelerin, diasporaları ile bağlarını kuvvetlendirme ve diasporadan azami katkıyı sağlama amaçlı çeşitli politika adımları öneriliyor. Diasporaya ekonomik fırsatlar sunan, bilgi katkılarını ödüllendiren ve bilgi paylaşımını kolaylaştırıp transferini sağlayan projelere parasal ve hukuki dayanak oluşturan politikaların geliştirilmesi bu adımlar arasında yer alıyor. Ayrıca, diasporanın geldikleri ülkelere olan katkıları, bu ülkelerin hukuki mercileri tarafından tanınıyor ve takdir ediliyor. Birçok hükümet; diaspora ile yakın ilişkiler kuruyor, işbirliği politikalarını açık olarak tanıtıyor ve diaspora üyelerine katkılarının önemli olduğunu hissettiriyor. Göçmen topluluklarının, hâlen yaşadıkları ve geldikleri ülkeler arasında köprü vazifesi görmelerini sağlayacak stratejiler geliştiriliyor. Diaspora stratejilerinde başlıca iki tür yaklaşım bulunuyor: Bir taraftan, bireylerin yoğun

katılımını bekleyen, zorlayıcı ‘doğrudan yaklaşım’; diğer taraftan diaspora üyelerinin katkı yapmalarını süreç içinde kendiliğinden teşvik etmeyi amaçlayan ‘dolaylı yaklaşım’. Dolaylı yaklaşım son yıllarda yaygınlık kazanıyor. Dolaylı yaklaşımın başlıca unsurları arasında; diaspora üyelerinin belli bir amaç ve spesifik sorunların çözümü için bir araya getirilmeleri, bireylerin gönüllü olarak, oluşuma katkıda bulunmaya teşvik edilmeleri ve diaspora bireylerinin, esnek ve kendi inisiyatifleri ile çalışan bir organizasyon yapısı içinde, karar mekanizmalarına katılmalarının sağlanması yer alıyor...” (Ercan, 2015).

Türkiye yurtdışındaki Türk diasporasına yönelik olarak dolaylı yaklaşımı benimsemekte, diaspora bireylerinin inisiyatif almasını önemsemekte, halen yaşadıkları ülkeler ile Türkiye arasında köprü görevi görebilecek stratejiler geliştirmeye öncelik vermekte, kapasite inşasını geliştirmeye ve işbirliğini artırmaya yönelik çeşitli projeler yürütmektedir. Tüm bu diaspora politikalarının ana amacı, diaspora bireylerinin bulundukları ülkelerde ekonomik, siyasi, kültürel ve sosyal olarak güçlenmelerini temin etmek, karar alma mekanizmalarında etkin yer almalarını sağlamak, dolayısıyla bu güçlü yapıdan Türkiye’nin kamu diplomasisi politikalarının başarısı için yararlanmaktır.

Yurtdışı Türkler ve Akraba Toplulukları Başkanlığı (YTB) böyle bir vizyonu esas alarak kurulmuş, diaspora diplomasisine işlerlik kazandırılarak yıllardır yararlanılmayan önemli bir gücün harekete geçirilmesi amaçlanmıştır.

Diaspora Diplomasisi Perspektifinden Ytb’nin Faaliyetlerinin İncelenmesi

Bugün dünya genelinde 6 milyondan fazla Türk nüfusunun yaşadığı, bu nüfusun büyük bir kısmının Avrupa Birliği sınırları içindeki ülkelerde ikamet ettiği bilinmektedir. Bu büyük nüfusla irtibat kurulması, onların kendi kimlik ve değerlerini koruyarak yaşadıkları ülkelerde varolmaları, ekonomik, sosyal ve siyasal alanlarda ilerlemelerine katkı sağlanması diaspora diplomasisinin temel perspektifini oluşturmaktadır. Yurtdışı Türkler ve Akraba Toplulukları Başkanlığı böyle bir amaçla 6 Nisan 2010 tarihinde kurulmuştur. Kendisine çalışma alanları olarak; yurtdışı vatandaşlar, soydaş ve akraba topluluklar, uluslararası öğrenciler ve sivil toplum kuruluşlarını seçen YTB, Türkiye açısından da bu tarihten itibaren etkin bir diaspora diplomasisi başlatılmasına vesile olmuştur.

YTB’nin kurumsal yapısına bakıldığında iyi bir örgütlenmeye sahip olduğu görülmektedir. Oluşturulan Yurtdışı Vatandaşlar Danışma Kurulu, 19 ülke ve bölgeyi temsilen 80 üyeden oluşmakta ve ‘Türk Diaspora Meclisi’ gibi çalışmaktadır. (Ekşi, 2014:231). Yurtdışı Vatandaşlar Danışma Kurulu’nun görevleri arasında; “Yurtdışında yaşayan Türk vatandaşlarının sorunlarının tespiti ve yapılacak çalışmaların koordinasyonu ile ilgili olarak tavsiyelerde bulunmak, bulundukları ülkelerin sosyal ve ekonomik yaşamlarına eşit katılımlarını sağlayacak öneriler geliştirmek, Türkiye tarafından karşılanması gereken ihtiyaçlarını belirlemek, bu çerçevede yapılması gerekli kanunî ve idarî düzenlemeleri tespit etmek, yabancı düşmanlığı, ırkçılık ve ayrımcılık gibi akımlara duyarlılıklarını artırarak uluslararası kamuoyunda yapılması gereken etkinlik önerilerini görüşmek” bulunmaktadır. (<https://www.ytb.gov.tr/kurumsal/yurtdisi-vatandaslar-danisma-kurulu-yvdk>)

YTB bünyesinde kurulan yurtdışı vatandaşlar daire başkanlığı, Türk vatandaşlarının yaşadıkları ülkelerdeki varlığını güvence altına alarak onları asimilasyonlara karşı korumayı, bulundukları toplumlarda gelişmelerini sağlamayı amaçlamaktadır. Bu birim vatandaşlık çalışmalarının yanı sıra, eğitim çalışmaları yürütmekte, kültürel ve sosyal programlar düzenlemektedir. Bu kapsamda aktif yurttaşlık ve katılım özendirilmekte, Türk vatandaşlarının yaşadıkları yerlerde faal ve üretken olmaları desteklenmekte, bu çalışmalar sivil toplum örgütleri ile birlikte yürütülmektedir. Ayrıca Türk vatandaşlarının bulundukları ülkelerdeki yasal yükümlülüklerini ve haklarını bilmeleri için hukuki destek çalışmaları yapılmaktadır (Kaya, 2016:135).

YTB’nin eğitim çalışmaları kapsamında yurtdışı vatandaşlar burs programı, yurtdışı genç liderler projesi, çift dillilik, hukuk eğitim programları ve eğitim destekleri alanlarında faaliyetler yürütülmektedir (<https://www.ytb.gov.tr>). “Türkiye Bursları” programına her yıl 100 binin üzerinde başvuru yapılmaktadır. 2017 rakamlarına göre 163 ülkeden 106.550 kişi Türkiye burslarına başvurmuş, 5378 lisans, yüksek lisans ve doktora bursu sağlanmıştır. Ayrıca kamu görevlisi, akademisyen ve mesleki tecrübe artırma amaçlı burslar da çok farklı ülkelerden başvuran kişilere verilmiştir (<https://www.ytb.gov.tr>).

YTB’nin bir diğer çalışma alanı olan soydaş ve akraba topluluklara yönelik faaliyetleri yürütmek amacıyla “kültürel ve sosyal ilişkiler eşgüdüm değerlendirme kurulu” kurulmuş, soydaş ve akraba topluluklarla kültürel, ekonomik, sosyal ilişkilerin geliştirilmesi için stratejilerin belirlenmesi hedeflenmiştir. Soydaş ve akraba topluluklara yönelik faaliyetler YTB bünyesinde kültürel çalışmalar, eğitim ve gençlik, tematik çalışmalar alanlarında yürütülmektedir. YTB’nin internet sitesi incelendiğinde bu alanlarla ilgili yapılmış pekçok faaliyet ve projenin olduğu görülmekte, tüm bu faaliyetlerin soydaş ve akraba topluluklarla kalıcı bir ilişki inşa etme, ortak anlayış geliştirme amacını hedeflediği gözlenmektedir.

YTB sivil toplum örgütleriyle yakın ilişki ve işbirliği içinde bulunmakta, onların yürüttüğü projelere maddi destekler sağlamakta, birlikte proje yürütmekte, sivil toplum kuruluşlarının kapasitelerini geliştirmelerine fırsat tanımaktadır. 21. yüzyılın öne çıkan olgularının başında gelen ve demokratik toplumların vazgeçilmez bir parçası olan sivil toplum eliyle yapılan hertürlü icraat daha ikna edici, kalıcı ve etkileşime açık olmaktadır. Bu anlamda YTB sivil toplum kuruluşları aracılığıyla Türkiye'nin yumuşak gücünü başka ülkelere/toplumlara taşımakta, politikalarına yönelik desteğin artırılmasına katkıda bulunmaktadır.

YTB'nin 2017 faaliyet raporu incelendiğinde değişik alanlarda farklı içerik ve vizyonla gerçekleştirilmiş kapsamlı bir faaliyet dizisi görülmektedir. Yurt içinde ve yurtdışında başta üniversiteler ve kamu kurumları olmak üzere çeşitli özel sektör kuruluşları ile amaca yönelik olarak işbirliği protokolleri imzalandığı, yapılan faaliyetlerin kalıcılığının sağlanmasına yönelik girişimlerde bulunulduğu gözlenmektedir. Ayrıca dünyanın farklı noktalarında 32 Türkiye mezun derneğinin kurulduğu da anlaşılmaktadır. Mezun dernekleri, Türkiye'de bursla okuyup daha sonra ülkelere geri dönen öğrencilerin takibi ve onlarla ilişkilerin devamının sağlanması açısından önem taşımaktadır. Çünkü bu öğrenciler Türkiye'nin kültürünü, dilini ve değerlerini çok yakından tanıyan ve bilen kişiler olarak başka ülke ve toplumlarda fahri büyükelçiler gibi çalışmakta, doğru bilgilendirme sağlamakta, sempati oluşturulmasına yardımcı olmaktadır.

Görüldüğü gibi diaspora diplomasisi perspektifinden YTB, çok boyutlu yapısıyla Türkiye'nin kültürünün, dilinin, değerlerinin başka toplumlara aktarılması, karşılıklı anlayış oluşturulması ve sağlam ilişkilerin inşa edilmesinde önemli bir rol üstlenmektedir. YTB'nin bu faaliyetleri aynı zamanda Türkiye'nin yumuşak gücünün harekete geçirilerek olumlu intiba oluşturulması, algı ve imajının güçlendirilmesi, uzun vadeli işbirliklerinin artırılması açısından da stratejik bir değer taşımaktadır. Toplamda tüm bu katkılar Türkiye'nin ülke marka değerine olumlu yansımakta, markasının güçlenmesine, algısının düzelmesine, cazibesinin artmasına sebep olmaktadır.

Sonuç

21. yüzyıl ülkeler açısından pekçok imkan ve fırsatı beraberinde getirmekle birlikte, keskin rekabet ortamı ve belirsizliklerin artması açısından çeşitli zorlukları da barındırmaktadır. Sınırların kalktığı, dünyanın küçüldüğü, iletişim ve etkileşimin arttığı bir çağda ülkelerin imkan ve potansiyellerinden en üst düzeyde yararlanmaları, başka ülke/toplumlarla kalıcı ilişkiler inşa etmeleri önem kazanmaktadır. Bu noktada kamu diplomasisi politikaları ülkelerin bu amaçlarına ulaşmalarına yardımcı olan en önemli unsurların başında gelmektedir.

Ülkeler kamu diplomasisi politikalarını hayata geçirirken yumuşak güç potansiyellerinden yararlanmakta, kültür, medya, bilim, spor, eğitim gibi yumuşak güç araçlarını başka toplumlarla kalıcı ilişki inşasında etkin olarak kullanmaktadır. Bu yüzyılda yumuşak güç kapasitelerini artıran ve etkili şekilde kullanan ülkelerin cazibe merkezi olduğu, algılarını düzelttiği, olumlu imaj oluşturduğu görülmektedir. Olumlu imaj ve algı, cazibe merkezi olma başarısıyla birleştiğinde bu durum aynı zamanda ülkelerin politik, ekonomik ve kültürel ilişki ve işbirliklerine de yansımakta, başka alanlarda işini epeyce kolaylaştırmaktadır.

Yumuşak güç kullanılan alanlardan biri de diasporalardır. Bir ülkenin başka bir ülkede yaşayan kendi vatandaşlarıyla kurduğu etkili iletişim ve etkileşim diaspora diplomasisi olgusunu gündeme getirmektedir. Diaspora diplomasisi ile diasporada yaşayan vatandaşlar ile geldikleri ülkeler arasında köprü vazifesi görmelerini sağlayacak stratejilerin geliştirilmesi amaçlanmaktadır. Bu konuda dolaylı yaklaşım etkili ve tercih edilen bir yöntem olarak ele alınmaktadır. Diaspora üyeleri belirli amaçlar için bir araya getirilmekte, gönüllülük esas alınmakta, faaliyetlere katkı sunmaları teşvik edilmekte, esnek bir organizasyon yapısı içerisinde karar mekanizmalarına katılmaları sağlanmaktadır.

Türkiye diaspora diplomasisi faaliyetlerinde dolaylı yaklaşımı tercih etmekte, diasporada yaşayan vatandaşların kendi isteği ile katkı sunacağı esnek mekanizmaları kurmayı öncelemektedir. Bu yapılardan biri Yurtdışı Türkler ve Akraba Topluluklar Başkanlığı olup, kurulduğu 2010 yılından itibaren ciddi bir altyapı çalışması yapmış, Türkiye'nin diasporada yaşayan vatandaşları ile başta kültürel ve sosyal olmak üzere çok boyutlu bir ilişki inşası faaliyetine girişmiştir. YTB'nin bu çok boyutlu yapısıyla ilgili faaliyetlerinin içerikleri web sitesinde geniş şekilde anlatılmaktadır. Bu faaliyetlerin tümü ile ilgili genel bir değerlendirme yapıldığında görülen şudur: Türkiye yıllardır ihmal ettiği diaspora alanında ciddi bir saha çalışması başlatmış, bu çalışmanın önce kurumsal altyapısını inşa etmiş, bu kurumsal altyapı değişik alanlardaki faaliyetleri planlamış ve icra etmiştir. Faaliyetlerin çeşitli kurullar ile planlanması, denetlenmesi ve değerlendirilmesi, verim alınması ve önceliklerin belirlenmesi açısından önem taşımaktadır. YTB'nin diasporada yürüttüğü çalışmalar içerisinde eğitim, kültür ve sivil toplum alanındaki çalışmaları öne çıkmakta ve Türkiye'nin yumuşak gücünün daha etkin şekilde kullanılmasına katkıda bulunmaktadır. Ayrıca Türkiye'nin yumuşak güç kapasitesinin diasporalarda başarılı şekilde kullanılması ve marka değerine/algısına katkı yapması aynı zamanda diaspora dışındaki ülke ve toplumlarla kurduğu/kuracağı ilişkilere de olumlu yansıtacağı açıktır. Bu açıdan da Türkiye'nin diasporalarda yürüttüğü kapasite inşasına

yönelik çalışmalar çok daha fazla önemsenmeli, geliştirilmesi ve kalıcı hale getirilmesi için gayret gösterilmeli ve daha katılımcı bir perspektifle hareket edilmelidir.

Teşekkür: Bu çalışma, BYP-2018/28570 nolu proje kapsamında İstanbul Üniversitesi Bilimsel Araştırma Projeleri Birimi tarafından desteklenmiştir.

Eğitim ve Öğretimde Vahyin Temel Gayeleri*

Muhammed Aydın

İslami İlimler Fakültesi, Katar Üniversitesi

Özet

Vahyin ışığında insan, hayatının nasıl olması gerektiğini ve içinde yaşadığı toplumu nasıl şekillendireceğini öğrenmekte ve Kuran-ı Kerim'in kendisine göstermiş olduğu surette bunu yapmaktadır. İnsan aynı zamanda Kuran-ı Kerim'den kendisi Allah'a ibadet etmek ve O'nun rızasını gözetmek olan gerçek mutluluğu da öğrenmektedir. Böylelikle birey yüksek idealler olan yaratılış amacını öğrenmeli, Allah'a kul ve iyi ahlaki değerlere sahip bir insan olmalıdır. Bu suretle insan, gerçek mutluluğu elde etmiş ve içinde yaşadığı toplumun da ideal bir toplum olması için mücadele etmiş olacaktır.

Anahtar Kavramlar: Mutluluk, Vahiy, İdeal, Toplum, Ahlak

Abstract

In the light of the revelation, man learns from Quran what his life should be like and how to shape the society which he lives in. As a result he also learns from Quran to pursue the real happiness which it is to worship to Allah and to seek his sake. Man should know the purpose of his creation, be a servant to Allah and have to be a well moraled human-being to achieve these supreme ideals. In this way, man will have built his own real happiness and struggled to make the society he lives in an ideal society.

Keywords: Happiness, Revelation, İdeal, Society, Moral

Giriş

Her dinin temel bir gayesi olduğu gibi İslam'ın da Kuran-ı Kerim önderliğinde insanoğlunu Allah'ın istediği doğrultuda inşa etme ve onu Allah'ın emirleri ve yasakları doğrultusunda yaşamaya sevk etme gayesi vardır. Allah'ın emir ve yasakları doğrultusunda yaşayan¹ kişi bu sınavın neticesinde sonsuz olan cennete girecek; buna zıt bir hayat sürüp başarısız olan ise cehennemlik olacaktır². İşte bu noktada insanoğlunun önünde bir imtihan olarak duran bu süreçte başarılı olması için önünde bir önder olarak duran Kuran-ı Kerim'in ışığında bir eğitim ve öğretim şarttır. Onun ışığında şekillenen eğitim ve öğretim, kişinin bu hayatta Allah'ın kendisinden istediği bir şekilde yaşamasına imkan tanıyacak ve bu hedefi gerçekleştirmiş olacaktır.

Bu hedefi gerçekleştirmek için kişinin içinde bulunacak olduğu eğitim ve öğretim sürecinde belli başlı esasların insana öğretilmesi zaruret arz etmektedir. Zira Allah'ın, Kuran-ı Kerim vasıtasıyla insanlardan istemiş olduğu³ hususların arka planını görmekten aciz olan kişinin bu hedefi gerçekleştirme doğrultusunda bir yaşam sürmesi pek mümkün gözükmemektedir. İşte bu noktada karşımıza kişinin Kuran-ı Kerim önderliğinde eğitimi ve öğretimi noktasında belirli başlı bir kaç esas çıkmaktadır.

1. İnsanın Yaratılış Gayesini Öğretme

Kuran-ı Kerim'in önderliğinde bir eğitim öğretim sürecinden bahsedecek olduğumuz zaman karşımıza birinci mesele olarak insana yaratılış gayesinin ne olduğunun öğretilmesi çıkmaktadır.⁴ Zira insanı Kuran-ı

* Prof. Dr. Muhammed Aydın, İslami İlimler Fakültesi, Katar Üniversitesi

² Ali İmran 3/12

³ en-Nisa 4/59

⁴ el-Beyyine 98/5

Kerim'in istediği doğrultuda yetiştirmek istiyorsak ilk olarak ona, yaratılış amacının ne olduğunu öğretme zorunluluğu ortaya çıkmaktadır. Nitekim yaratılma sebebinin ne olduğunun farkında olan bir kimse bu sebebin sonucuna uygun bir yaşam sürme eğiliminde olacak ve bunun doğal bir sonucu olarak da Allah'ın emir ve yasaklarına göre bir yaşam sürecektir.

İnsanın yaratılış gayesinin ne olduğunun cevabını ise Kuran-ı Kerim vermekte ve insanlardan bu gaye doğrultusunda bir yaşam sürmelerini istemektedir.⁵ Allah'ın insanları yaratmasındaki maksadın kendisine kulluk etmek olduğu gerçeğinden hareketle kişinin eğitim ve öğretiminin bu ilahi gayeye paralel olması gerçekleşmiş olacaktır. Öyle ki yaratılış gayesi Allah'a kulluk etmek olan insanın bu suretle onu tanıma imkanı elde ettiğini söylediğimiz takdirde⁶ yaratılış gayesinin farkında olan insan, Allah'a kulluk etmek suretiyle O'nu bilecek ve bu bilise uygun bir hayat sürecektir.

Bu noktada dikkate değer bir başka husus ise insanoğlunun dışında yaratılmış olan bütün varlıkların insanın emrine sunulmasıdır.⁷ Öyle ki bütün kainatın hizmetine sunulduğu gerçeğini Kuran-ı Kerim önderliğinde bir eğitim ve öğretim sürecinde öğrenen birey, Allah'ın kendisine vermiş olduğu bu nimetin farkında olmak suretiyle hiçbir yaratılmışı kötü davranışta bulunma cüretini kendisinde bulamayacak ve azgınlardan olmama imkanını elde edecektir. Nitekim yaratılmış her şeyin kendi emrine verilisinin Allah tarafından olduğunun farkında olmayan insanoğlu azgınlıkta sınır tanımamakta ve kendi cinsinden olan insanlar da dahil olmak üzere tüm yaratılmışlara karşı zalimlik yapabilmektedir. Buna benzer sonuçlarla karşılaşmamak için insanın eğitim ve öğretiminde Kuran-ı Kerim merkezli bir sürecin sarsıcı bir etkisinin olduğu muhakkak gözükmemektedir.

Öyle ki insan, Allah'ın kendisini yaratılış gayesine uygun hareket etmeyip üstüne emrine verilmiş nimetleri amacına uygun kullanmayarak yaratılmışların en şerefli olma⁸ imkanını elde edememekte ve yaratılmışların en aşağı olma durumuna düşebilmektedir.⁹

Kuran-ı Kerim merkezli bir eğitim ve öğretim sürecinin insana kattığı gayelerden bir tanesi de hiç şüphesiz yukarıda da bahsettiklerimizin doğrultusunda kendisini, Allah'a kul olma suretiyle diğer aşağılık olan insanlardan ayırma gayesidir. Zira insanın yaratılmışların en şerefli olarak kalabilmesinin şartı onun, Allah'ın emir ve yasakları yani O'na kul olma doğrultusunda bir hayat sürmesiyle mümkün olabilmektedir.¹⁰ Bu suretle insan aklını kullanmak suretiyle kendisini diğer canlılarla arasında bulunan asgari olan ortak özelliklerinin üstüne çıkarabilmekte ve farklı bir konuma gelebilmektedir.

Burada dikkat edilmesi gereken bir diğer husus ise insanın Allah'a karşı kulluk vazifesini ifa edip bu doğrultuda bir hayat sürmesinin önünde engel olarak duran yeterli bir eğitim ve öğretimin verilmemesidir. Allah'a karşı olan kulluk vazifesini yerine getirmek isteyen insanın dikkat etmesi gereken en önemli husus, bu kulluğu doğru bir şekilde yerine getirmesidir.

Allah'a kulluğun doğru bir şekilde gerçekleşebilmesi için Kuran-ı Kerim ve Hz. Muhammed (sav) önderliğinde öğrenilmiş, kalben ve aklen inanılmış ve hayata tatbik edilmiş saf bir iman olgusunun olması zorunluluk arz etmektedir. Zira gerektiği gibi iman etmeyen bir kimsenin Allah'ı hakkıyla bilip O'na karşı hakkıyla kulluk vazifesini ifa etmesi mümkün gözükmemektedir. Bu sebeptendir ki kişinin bu gayesinde başarılı olması için iman esaslarını ve gerekliliklerini doğru bir biçimde öğrenmiş olması icap etmektedir. İman esaslarını doğru bir şekilde öğrenmek için de Kuran-ı Kerim merkezli bir eğitim ve öğretim şart olmaktadır.

2. İman Esaslarını Öğretme

⁸ et-Tin 95/4

⁹ et-Tin 95/5

¹⁰ el-Bakara 2/186

Yukarıda da bahsetmeye çalıştığımız gibi kişinin Allah'a kul olup yaratılma gayesine uygun bir hayat sürmesi için inandığı din olan İslam'ın iman esaslarını bilmelidir. Bu biliş ise Kuran-ı Kerim ve Hz. Muhammed'in (sav) merkezinde olduğu bir eğitim ve öğretim metoduyla mümkündür. Zira Kuran-ı Kerim'in istediği doğrultuda bir yaşam sürmenin yegane şartı pek tabii olarak onun uyulmasını istediği iman esaslarına inanmakla mümkün olmaktadır. Nitekim insan, Allah'ın kendisini yaratma gayesini bilmek ve iman esaslarını da öğrenerek hayatına tatbik etmek suretiyle hayatına anlam katarak en güzel şekilde yaratılan insan konumuna gelmektedir.

Allah'ın kendisine kulluk etsin diye yarattığı insan, yaratılış gayesinin ne olduğunun farkında olmadığı halde O'na iman etmediğinde ahiret hayatına karşılık dünya hayatını seçerek¹¹ en nihayetinde ne dünya ne de ahiret saadetini¹² elde edemeyecektir.

Kişinin Allah'a kul olması ve iman esaslarını bilerek iman etmesi onun hayata dair görüşünde büyük bir öneme sahiptir. Zira Allah'a kul olarak yaratıldığının bilincinde buna uygun bir yaşam süren bir kimse Kuran-ı Kerim endeksli ahlaki değerlere sahip olacaktır. Onun Kuran-ı Kerim merkezli bir eğitim öğretim sürecinde edinecek olduğu bu ahlaki değerler bir takım şartlara göre değişkenlik arz eden değil, aksine dünyanın neresine giderse gitsin her dönem ve mekanla uyum sağlayabilecek mahiyete haiz olacaktır.

Allah'a iman edip kul olma bilincine sahip olan, bununla birlikte Allah'ın elçilerine, kitaplara¹³, meleklerine ve ahiret gününe iman eden¹⁴ ve bunların tümüne uygun bir hayat süren insan, kendisinden istenen hayat tarzını yerine getirmiş olmaktadır. Allah'ın kendisini kulluk etsin diye yarattığının farkında olan insan bu en yüce gayeyi elde etmek suretiyle de mutluluğu elde etme imkanına sahip olmaktadır.¹⁵

İnsan, Allah'a iman etme ve O'na kul olma doğrultusunda bir yaşam sürdüğü takdirde kendi bünyesinde ahlaki değerleri ve erdemleri toplayacak ve en nihayetinde gerçek mutluluğu elde edecektir. Nitekim bu mutluluk en yüce gayeyi elde etmek suretiyle kişinin bu hayattaki hedefini gerçekleştirmesi anlamına gelmektedir.¹⁶ O halde Kuran-ı Kerim'in merkezinde olduğu bir eğitim ve öğretim sürecinde dikkat edilmesi gereken husus kişinin Allah'a kul olma bilincini elde etmesi suretiyle gerçek mutluluğu elde etmesidir.

Allah'a kul olup gerçek mutluluğu elde etme yolunda yaşayan insanın dikkat etmesi gereken bir diğer husus ise Allah'la olan ilişkisinin yanında diğer insanlara karşı olan muamelatını düzeltmesi zorunluluğudur. Zira bu eğitim ve öğretim sürecinin sonucunda elde edilen ahlaki erdem ve değerler, kişinin hem yaratıcısı hem de diğer yaratılanlarla arasındaki ilişkiyi Kuran-ı Kerim'in evrensel değerlerine uygun bir zemine oturtmayı zorunlu kılmaktadır.

Eğitim ve öğretim sürecinde Allah'a iman edip O'na karşı emir ve yasaklara riayet etmek suretiyle kulluk vazifesini yerine getiren kişi, karşımıza yaşadığı topluma, döneme ve tüm canlılara karşı faydalı bir birey olarak çıkmaktadır. Nitekim bu süreç istenildiği gibi sonuç verdiği takdirde Kuran-ı Kerim'in inşa etmiş olduğu evrensel ahlaki değerlere bağlı olan bir toplum da inşa edilmiş olacak ve iyinin hakim olduğu bir ortam oluşacaktır.

3. Ahlaki Değerlere Sahip İnsan Yetiştirme

Eğitim ve öğretim sürecini Kuran-ı Kerim merkezli olarak ele almadığımızda da nihai hedefin ahlaki bireyler yetiştirmek olduğu apaçık ortadadır. Öyle ki bu ahlaki erdemlerin hakim olduğu toplumlar inşa etmek bütün eğitim sistemlerinde kendine yer bulmaktadır. Nitekim Kuran-ı Kerim önderliğinde icra edilen bir eğitim ve öğretim sürecinden elde edilmek istenen sonucun da farklı olması beklenemez. Zira Kuran-ı Kerim, Allah'ın insanları en güzel şekilde yarattığını söylemekte ve onların bu yaratılış üzerine kalmalarını istemektedir. Bu

¹¹ el-Bakara 2/86

¹² Yunus 10/64

¹³ el-Bakara 2/4

¹⁴ el-Bakara 2/177

¹⁵ Farabi, Kitabu't-Tenbih Ala Sebili's-Saade, Tahkik Cafer Ali Yasin, Daru'l-Menahil, Beyrut. (1987). s. 49

¹⁶ İbn Sina, Risale-fis'Saade, s. 2

yaratılış üzerine kalmak da pek tabii olarak ahlaki erdemlere ve değerlere sahip birey olmakla mümkün olmaktadır.

Hiz. Muhammed'in (sav) yüce bir ahlak üzerine gönderilmiş olduğunun ifade edilmesi,¹⁷ bireylerden ahlak sahibi kimseler olmasının istendiğini apaçık ortaya koymaktadır. Zira Allah'a kul olarak yaşamının, O'nu bilmenin ve O'na ve emrettiklerine iman etmenin doğuracak olduğu sonuç budur. Ahlak sahibi olan bireyin ise yukarıda da bahsettiğimiz gibi Allah'ın nimetlerine karşı bilinçli ve kendinden başka diğer insanlara ve yaratılmışlara karşı iyi ve güzel davranışlarda bulunan kimse olması söz konusu olmaktadır.

Kuran-ı Kerim insanoğluna, Hiz. Muhammed (sav) vasıtasıyla indirilmiş son kitap olması sebebiyle ilk olarak bu hayatı ilgilendiren bir kitaptır. Çünkü bu kitap devam eden bir zaman içinde inmiş ve insanlara Allah'ın emir ve yasaklarını bildirme görevini ifa etmiştir ki bu görev dünya durdukça devam edecektir. Bu sebeptendir ki Kuran-ı Kerim insanın hayata dair yaşantısına da karışmış ve onun daimi surette iyilik üzerine olup iyilikte bulunmasını tavsiye etmiştir.¹⁸ olmasını istemiştir. İnsan iyiliği kendisine karşı yapabilmekle birlikte iyilik yapmanın karşılıklı olan bir iş olduğunu göz önüne aldığımız zaman bunun diğer insanlara ve daha genelde de tüm yaratılmışlara karşı olması gerekliliği ortaya çıkmaktadır. Nitekim insan, Allah'ı bilmek, O'na kul olmak ve Kuran-ı Kerim'in tavsiye ettiği ve evrensellik ifade eden ahlaki değerlere sahip olmakla iyi bir birey olabilmekte ve hem kendine hem de yaşadığı topluma yararlı bir birey olma imkanını kendinde bulabilmektedir. Eğitim öğretim sürecinde Kuran-ı Kerim'in evrensellik ifade eden kıstaslarına göre yönlendirilen ve buna paralel bir kişilik kazanan birey yukarıda bahsettiğimiz özellikleri kendinde bulabilecektir. Sonuç olarak insan, cinsinden ayrı inzivaya çekilmiş bir vaziyette tek başına yaşayamamasından dolayı bu ahlaki değerlere sahip olmak zorundadır. Zira diğer insanlarla bir arada uyum içinde yaşayabilmenin yegane şartı herkesin sınırlarını bilmesi haksızlık yapmaması ve hem Allah'a hem de diğer yaratılmışlara karşı isyan noktasında bulunmamasıyla mümkündür.

Allah'ı bilmek ve O'na hakkıyla kul olmak suretiyle insan gerçek mutluluğa ve bununla beraber mutlak iyiliğe ulaşma imkanını elde edecek ve bunun sonucu olarak da kıyamet günü hesap görüldükten sonra cennete girme konusunda herhangi bir sıkıntı yaşamayacaktır.¹⁹ Bu mutlak iyiliğe ulaşmış kimsenin de cennete girmek için yapması gereken de iman ettikten sonra salih ameller işlemesidir ki ahlaki erdemlere sahip bir insandan beklenen de budur.²⁰

Ahlakın, bireyin kendisinde yer etmesi ise onun hem Allah'a iman edip kul olması hem de bunu aklen bilmesi ve farkında olmasıyla mümkün gözükmektedir. Zira akıl ve vahiyle hareket ettiği ölçüde kişinin davranışları ahlaki değerlerle uyumlu olacaktır. Bu noktada ise hayat boyu devam eden eğitim ve öğretimin başarısı için akıl ve vahiy uyumunun zorunluluğu ortaya çıkmaktadır. Burada kasıt vahyin akla uydurulması değil bilakis aklın vahiy merkezli bir eğitimle kendini ilahi emir ve yasaklar çerçevesinde bir hayata adapte etmesidir. Böylelikle kişinin ahlaklı bir birey olması yolunda karşımıza iki unsur çıkmaktadır ki bunlardan ilki vahiy ikincisi ise kendini bu vahiyle şekillendirmiş aklıdır.²¹

Kişinin hareketlerini maddi anlamda şekillendiren her ne kadar bedeni olsa da bedene yapması gerekeni söyleyip onun hareketlerini yönlendiren aklıdır. Bu noktada vahiy bilgisiyle yoğrulmuş bir eğitim ve öğretim sürecinden geçmiş insan tercihte bulunacak ve vahye uygun karar verdiği ölçüde ahlaklı bir birey olmayı başaracaktır. Bu noktada onun davranışlarının ahlaki nitelik kazanması vahiy ve akla uygun karar vermesiyle doğru orantılı olacaktır.²²

¹⁷ el-Kalem 68/4

¹⁸ el-Bakara 2/112, el-Kasas 28/54

¹⁹ en-Nisa 4/13

²⁰ el-Bakara 2/82

²¹ el-Maturidi, Ebu Mansur, Kitabu't-Tevhid, tahk. Bekir Topaloğlu - Muhammed Aruçi, İSAM Yayınları, Ankara. (2005). s. 274

²² Ünverdi, Mustafa, Ahlakın Epistemolojisi, Hitit Üniversitesi Sosyal Bilimler Enstitüsü Dergisi, Yıl 7, Sayı 2, s. 329

En nihayetinde ahlakın gayesi ise kişiyi doğruya sevk etme ve kötü olandan ise uzak tutmaktır.²³ Bunu başardığı ölçüde insan Allah'ın emir ve yasaklarına uygun bir hayat sürme imkanı bulabilmektedir. Bu da kişinin eğitim ve öğretim hayatının aklın da etkin bir şekilde var olduğu vahiy merkezli bir süreç olmasıyla mümkün gözükmektedir.

Kişinin hayatına ahlaki değerleri tatbik etmesi ve buna paralel bir yaşam sürmesi en nihayetinde onun bu vasıflarla ve yaşam tarzıyla beraber yaratılmışların en şerefli olmasına yardımcı olmaktadır. Böylelikle insan kendisi gibi hiçbir akıl ve idrak özelliği olmayan diğer canlılardan ayrılır.

4. Düşüncesinde ve Davranışlarında Özgür İnsan Yetiştirme

Buraya kadar olan süreçte Kuran-ı Kerim'in insana, Allah tarafından yaratıldığını ve O'na kul olması gerektiğini söylemekte ve kurtuluşun sadece bu şekilde olacağını belirtmektedir. Fakat dünya hayatında bir imtihan olmadan kurtuluşa ermek mümkün değildir. Zira insan burada kendi fiillerinin neticesinde bir değerlendirmeye tabi tutulacak ve ona göre değerlendirilecektir. Bu değerlendirmenin kriterleri ise insanın iyi bir birey olup salih ameller işlemesidir.²⁴

Bu değerlendirmenin yapılabilmesi için de kişinin fiillerinde ve aldığı kararlarda özgür bir birey olması gerekmektedir. Zira özgürlüğünden bahsedemediğimiz bir kimsenin hür olmadığı bir alanda sorguya tutulması ne akla ne de ilahi adalete uymamaktadır. O yüzdendir ki Kuran-ı Kerim insanın aldığı kararlarında ve fiillerinde tamamen kendi başına bırakıldığını söylemekte ve insanın bu karar ve fiillerine göre yargılanacağını söylemektedir.²⁵ Allah'ı bilen ve O'na kul olması gerektiğini bilen birey, vahiy ve akıl endeksli ahlaki erdemlere göre şekillendirdiği hür iradesiyle bu imtihanı ya başaracak ya da başarısız olacaktır. Nitekim ahlakın en temel özelliği hür iradeye sahip bireylerin onu iradeleriyle tercih etmeleri ya da etmemeleridir. Böylelikle insan ya iyilik üzerine yaşayan ahlak sahibi bir birey ya da tam tersi ahlaksız kötülük üzerine yaşayan bir kimse olmaktadır. O yüzdendir ki vahiy merkezli eğitim ve öğretim hayatının ana gayesi hür iradeli bireyler yetiştirmek ve onların bir imtihan olan bu dünya hayatında başarılı olmalarını sağlamak olmalıdır.

Hür iradenin zorunluluğu, kişiye Allah'a kul olarak yaratıldığının söylenmesi ve bu doğrultuda bir yaşam sürmesi gerekliliğinin teklif edilmesinde ortaya çıkmaktadır. Zira bu teklifin yerine getirilmesi bireyin hür iradeye sahip olmasıyla mümkündür. Aksi takdirde bir imtihandan söz etmek mümkün olmamakta ve dünya hayatını anlamsız kılmaktadır. Öyle ki hür iradenin olmadığı bir yerde Allah'ın emir ve yasaklarına uygun bir yaşam sürmesi bireyden istenmesi bir anlam ifade etmemektedir. Ahiret günü görülecek hesap, karşılıklar, ödül ve ceza hür iradenin varlığıyla mümkün olmaktadır.

Hür iradenin varlığıyla kişi, kendi isteği doğrultusunda Allah'ın emir ve yasaklarına uygun bir yaşam sürme ya da sürmeme yönünde karar verir. Böylelikle o, hayatına yön verdiği bu kararlarla fazilet sahibi bir kimse olur ya da olamaz. Nitekim bir kimsenin değeri, fazileti ve ahlakı aldığı kararlarla ölçülür. Hal böyleyken hür iradesi olmayan bir insan güzel bir iş yapmış olsa da hiç kimse açısından bir anlam ifade etmeyeceği gibi Allah katında da yaptığı iş her ne kadar nesnel anlamda güzel olsa da bir değer ifade etmeyecektir.

Bireyin vahiy merkezli hayatında Allah'a kul olarak yaşamasının neticesinde gerçek mutluluğa erişmesinin imkanından bahsettiğimiz takdirde bunun tam aksine hür iradesi olmayan ve yapmış olduğu hiçbir fiilin sorumluluğu kendisine yüklenmemiş insanın da gerçek anlamda mutsuzluğundan bahsetmek gerekmektedir. Halbuki bu hayatın amacı, insanın Allah'a kul olmak suretiyle gerçek anlamda mutluluğa erişmesi ve vahyin de bildirdiği gibi ödül anlamında cenneti kazanması bunda başarısız olanların da cezalandırılmasıdır.²⁶

²³ İzutsu Toshihiko, Kur'an'da Allah ve İnsan, Çev.: Süleyman Ateş, Ankara. (1983). s. 62.

²⁴ eş-Şems 91/7-10

²⁵ en-Necm 53/38-41

²⁶ eş-Şehristani, M. Abdülkerim, el-Milel ve'n-Nihal, çev.: Mustafa Öz, Ensar Neşriyat, İstanbul. (2005). s. 58.

Allah'a kul olduğunun bilincinde olan ve bu doğrultuda hür iradesini kullanmak suretiyle emir ve yasaklara uygun bir yaşam süren insan bir bakıma kendi karakterini ve kişiliğini de inşa etmiş olmaktadır. Nitekim insanın en güzel şekilde yaratılmış olmasına uygun bir yaşam sürmesi, karakterinin bu minvalde şekillenip değerli olup yücelmesine de imkan sağlamaktadır. Bu sebeptendir ki vahiy merkezli bir eğitim öğretim sürecinde bireye bahsettiğimiz ahlaki erdemlerin kazandırılması vahyin insana göstermiş olduğu gayeyi gerçekleştirme konusunda yardımcı olacaktır.

Bu eğitim ve öğretim süreciyle beraber yetişen bir toplum en nihayetinde karşımıza, yaptığı fiillerin hesabını verebilen ve sorumluluk sahibi olduğunun farkında olup iyilerden olan bir toplum olarak çıkacaktır. Bu da pek tabii olarak bu hayatta insanoğlunun erdemli bir toplum inşa etmesinin yegane yolu olarak düşünülebilir.

Hür iradeleri doğrultusunda yaşayıp yine hür iradeleri ile Allah'a kul olan ve O'nu hakkıyla bilip emir ve yasaklarına uygun bir hayat süren toplum bunun tam aksine bir yaşam sürüp devamlı surette kötünün hakim olmasını isteyen topluluklar karşısında sağlam bir duruş sergileyebilecek ve hiçbir zaman zayıflığa düşme gafletinde olmayacaklardır. Nitekim Allah'ın kullarından istediği de Allah'a inanmayan topluluklar karşısında hazır ve güçlü olmalarıdır.²⁷ İstenen bu hazır olma durumu ise ancak Allah'ın emir ve yasaklarına uygun bir hayat sürüp kul olma bilincinin farkında olmakla mümkündür. Bunun için de vahiy merkezli bir eğitim ve öğretim süreci mühim bir yer arz etmektedir.

5. Aklını Kullanmayı Öğretme

Kuran-ı Kerim'in devamlı surette insanlara telkinde bulunduğu bir diğer nokta ise aklın kullanılması²⁸ ve bu bağlamda yine devamlı surette tefekkür²⁹ tedebbürde³⁰ bulunmalarıdır.

İnsanoğlu her ne kadar hür iradesiyle beraber emir ve yasaklara uygun bir hayat sürüp ahlaki erdemlere sahip olsa da Kuran-ı Kerim görüldüğü üzere ondan devamlı surette akıl etmesini istemektedir. Böylelikle vahiy insana aklını kullanmayı da öğretmek istemektedir. Sorumluluk sahibi olmanın ve ahlaki erdemlerle donanıp Allah'a kul olmanın bilincine varabilmenin ilk şartı pek tabii olarak akıl sahibi olmaktır. Aksini düşünecek olursak da akıl sahibi olmayan bir insanın hür iradesinden bahsetmek bunun sonucu olarak da işlemiş olduğu fiillerden sorumlu tutulup bunların hesabını vermesinden söz etmek mantığa uymamaktadır. O halde bireyin, vahiy merkezli bir eğitim ve öğretim sürecinden bahsedeceksek Allah'ın istediği doğrultuda aklını kullanmasından bu vesileyle de yaratılış gayesine uygun hareket edebilecek hale getirilmesinden bahsetmek mümkün olmaktadır. Zira insan, aklını Allah'ın istediği doğrultuda kullandığı takdirde hem diğer canlılardan hem de kendi cinsi arasında Allah'ın emir ve yasaklarına uymayarak isyan noktasında olan kimselerden³¹ ayrılmaktadır.

Aklını Allah'ın istediği doğrultuda kullanıp O'na karşı kulluk bilincinde olan ve emir yasaklarına uygun bir yaşam süren kimse bunun sonucu olarak Allah'ın yeryüzündeki halifesi konumuna gelmektedir.³² Bu da vahiy merkezli bir eğitim ve öğretim süreciyle mümkün olmaktadır ki bireyin Allah'ın halifesi olmak suretiyle fazilet sahibi olmasına imkan tanımaktadır. Bu sonuç da insanın en güzel şekilde yaratılmasına uygun bir hayat sürmesi anlamına gelmektedir.

İnsanın aklını kullanmak suretiyle insan olarak kalması neticesinde birey kendine biçilmiş rolü hakkıyla yerine getirebilecek ve Allah'a isyan noktasında olmayıp kulluğunun gerektirdiği bir biçimde hayat sürebilecektir. Birey sadece nefes alıp verme ve yiyip içmeyle hayatta kalması mümkün olmayan bir canlıdır. O, muhakkak ki kendisine verilen akıl cevherini kullanmalı ve bunun gereklerine uygun yaşamalıdır. Bu gerekliliklere uygun yaşamak ise sadece vahyin önderliğinde mümkündür. Nitekim aklını kullanmak suretiyle

²⁷ el-Enfal 8/60

²⁸ Yasin 36/ 62, el-Enbiya 21/10

²⁹ Yunus 10/24

³⁰ Muhammed 47/24

³¹ el-Ahzab 33/36

³² el-Bakara 2/30

insan düşünebilmekte ve Allah'ın Kuran-ı Kerim vasıtasıyla istemiş olduğu düşünme ameliyesini gerçekleştirebilmektedir. Aksi takdirde akıl sahibi olmayan bir varlığın herhangi bir olaydan çıkarımda bulunması ve başka olaylarla arasında bir bağlantı kurması mümkün olmamakta bu sebeple yapmış olduğu bütün fiiller ne yaptığı belli olmayan ve iç güdülerine göre hareket eden hayvanlardan farklılık arz etmemektedir.

Kuran-ı Kerim sadece ahiret hayatına yönelik değil aynı zamanda dünya hayatına dair tavsiyelerde bulunan ve bir sistem inşası hedefi bulunan bir kitaptır. Bu sistem inşası ise Allah'ın insanoğlundan istediği doğrultuda bir hayat sürmelerini hedeflemektedir. Bu söyleme paralel olarak Kuran-ı Kerim aklın kullanılmasını sadece soyut anlamda değil günlük yaşamda muamelat olarak karşımıza çıkan meselelerde de istemektedir. Müdayene ayeti olarak bilinen ayeti³³ incelediğimizde, borcun alıp verilmesi durumunda bunun yazılması ve şahit tutulması istenmektedir. Buna benzer istekler tavsiyeler ise pek tabii olarak akıl sahibi olan kimselerin gerçekleştirip yerine getirebilecek olduğu mevzulardır.

Aklını hem dünyevi hem de uhrevi meselelerde istendiği şekilde kullanma hasletine sahip insanlar da gerçek mutluluğa erişerek hem dünya hem de ahiret saadetini elde etme imkanına sahip olmaktadır. Aklın kullanılmasının istenmesi bu minvalde değerlendirildiğinde bir başka önem arz etmektedir. Öyle ki aklını kullanan insan gerçeklikten kopmamakta ve bu suretle de kimin kendisini kandırmaya çalıştığını neyin doğru neyin yanlış olduğunu bilecek ve hayatta temel gayenin ne olduğunun devamlı surette farkında olacaktır. Aklını doğru kullanan insan da sonuç olarak doğru düşünebilecek, doğru düşünen insan da hür iradesiyle yanlış yapmayıp Allah'ın emir ve yasaklarına uygun bir hayat sürecektir.

Aklını kullanan ve bunun neticesinde doğru bir düşünce sistemiyle iyi bir sistem inşa edip doğruyu hedefleme ve yanlıştan uzak durma gayesi güden bir toplum ideal bir toplum olarak tanımlanabilir. Böyle bir toplum her ne şart altında olsun doğrudan vazgeçmeyecek ve yanlışın peşinden gitmeyecektir. Zira bu toplum yaratılış gayesinin ne olduğunun farkındadır ve korkulacak tek varlığın Allah olduğunun bilincindedir.

İdeal bir toplum inşa edememiş insanoğlu kendi benliğini, kişiliğini, karakterini, hür iradesini dolayısıyla özgürlüğünü kaybetmeye mahkum olacak her ne kadar istese de bu doğrultuda bir yaşamdan kendisini kurtaramayacaktır. Böyle bir yaşamdan kurtulmanın yegane ilacı ise Allah'a kul olmak ve O'nun emir ve yasakları doğrultusunda yaşamaktan geçmektedir. Allah'a kul olma bilinci ise vahiy temelli bir eğitim ve öğretim süreciyle mümkündür ki bunun dışında ideal bir toplum inşa etme isteği ne kadar çabalanırsa çabalansın başarıya ulaşma imkanına sahip gözükmemektedir.

6. Sorumluluk Sahibi İnsan Yetiştirme

Yaratılış gayesini bildikten sonra Allah'a ve emrettiklerine iman eden insan aklını kullanmak ve yine aklını kullanmak suretiyle düşünerek hür iradesi çerçevesinde sorumluluk sahibi olduğunu kabul etmiş olmaktadır. Akıl sahibi olan ve hür iradesiyle yaşayan insan en nihayetinde sorumluluk sahibi de olmaktadır. Nitekim vahiy zemininde verilen eğitim ve öğretim sürecinde nihai hedef olan Allah'ın istediği doğrudan yaşamak için kişide sorumluluk bilinci olmalıdır. Bu yüzdendir ki kişiyi sorumluluk sahibi yapmak bu sürecin es geçilemez bir parçası konumuna gelmektedir. Sorumluluk sahibi insanın ise en büyük özelliği onun tutarlı olmasında yatmaktadır. Zira davranışları ve fiilleri tutarlı olmayan bir insan kendine yüklenen sorumluluklara uygun hareket etmemiş olacak bu da onun yaratılış gayesine ters bir durum teşkil edecektir.³⁴ O halde insan kendine yüklenen sorumluluklara uygun ettiği takdirde bunun karşılığını alacak ve gerçek mutluluğa ulaşacaktır.³⁵ Aksi halde davranışları tutarlı olmayan ve sorumluluklarına uygun hareket etmeyen de gerçek mutluluğa imkanına sahip olamayacaktır.

³³ el-Bakara 2/282

³⁴ el-Fussilet 41/46

³⁵ Meryem 19/76

Sorumluluklarının gerektirdiği gibi bir hayat sürebilmenin şartının fiillerin birbirleriyle uyumlu olması gerektiğini kabul edecek olursak bireyin aynı zamanda sözleriyle fiillerinin de birbiriyle uyumlu olması gerekmektedir. Zira sözleri ve fiilleri birbirini tutmayan insan en nihayetinde hayatın temel gayesi olan Allah'a kul olma noktasında da başarılı olamayacak ve gerçek mutluluğu elde edemeyecektir. O yüzdendir ki ahlak sahibi erdemli bir insan kendinde sorumluluk sahibi olmayı bir haslet haline getirmeli ve bunun sonucu olarak da davranışlarının birbiriyle uyumlu olmasını sağlamalıdır.

Kişinin hem Allah katında hem de kendi cinsi olan diğer insanlar arasında değerli olabilmesi davranışlarının tutarlı olması yani sorumluluk sahibi olmasıyla mümkündür. Bunun aksi bir durumda davranışları ve söylemleri birbiriyle tutarlılık göstermeyen bir kimse ne Allah katında ne diğer insanlar arasında bir değere sahip olamayacaktır. Öyle ki sorumluluk sahibi olmayan bir birey Allah'ın katında kurtulmuşlardan olamayacağı gibi ideal bir toplumun da bir parçası olamamaktadır. Birey, vahiy zeminli bir eğitim ve öğretim sürecinden geçtiği takdirde hem kendi cinsinin inşa etmeye çalıştığı ideal toplumun bir parçası olabilir³⁶ hem de üstün bir varlık olarak Allah'ın vaat ettiği cennete erişebilir.³⁷

Allah'ın insanı kendisine kulluk etsin diye yaratması ve insanın bu doğrultuda yaşadığı oranda kurtuluşa erecek olması her insan için muhtemel bir durumdur. Bu doğrultuda yaşayan kimse kendisi için muhtemel olan bir durumu gerçeğe dönüştürmek suretiyle gerçek mutluluğa erişmiştir. Gerçek mutluluğa erişmiş kimse olan bireyin sorumluluklarından birisi de diğer insanların da kurtuluşuna vesile olmaktır. Her ne kadar yanındakinin kurtuluşuna sebep olma durumu gerçekleşme açısından bir kesinlik arz etmese de birey üzerine düşeni yerine getirmeli ve yanında ki insanın da kurtuluşuna vesile olabilmek için çalışmalıdır ki Hz. Muhammed de (sav) insanları devamlı surette doğru yola çağırmaktadır.³⁸ İnsanoğlunun inşa etmeye çalıştığı ideal bir toplum ancak bu şekilde mümkün gözükmektedir. Zira birbirlerine karşı iyi davranmayan ve Allah'a karşı sorumluluklarının bilincinde olmayan bir toplum istediği ideal toplumu inşa edemez, kurtuluşa eremez ve gerçek mutluluğu da elde edemez. Bütün bu söylenenlerin gerçekleşmesi ise yukarıda da zikrettiğimiz gibi vahiy temelli bir eğitim ve öğretim süreciyle mümkün gözükmektedir. Nitekim her ne kadar diğer insanların hidayetlerine vesile olunması için olmasa da Allah'a kul olmanın bilincinde olan bir kimsenin yaptığı her güzel işin on katı karşılığının kendisine verileceği vaat edilmektedir.³⁹ Hal böyle olunca bu durumdaki birey yaşadığı toplumdaki diğer insanların da hidayetine vesile olma gayreti içinde olacak ve bu doğrultuda çaba gösterecektir. Zira bir kimsenin kurtuluşuna vesile olup onun da bu suretle gerçek mutluluğa ermesi güzel bir duruma sebep olduğu için hasenattan kabul edilir.

Bu noktada bireyin dikkat etmesi gereken husus ise aynı toplumda yaşadığı insanın hidayetine sebep olmak istiyorsa en temelde kendi davranışlarının, fiillerinin, sözlerinin ve hayatının birbiriyle tutarlı olması gerekmekte ve buna paralel olarak sorumluluk sahibi olduğunun farkında olmalıdır. Vahiy temelli bir eğitim ve öğretimin başarısı ise işte tam bu noktada ortaya çıkmakta ve onun başarısı da bireyleri sorumluluk sahibi olarak yetiştirme ve onların da yaşadıkları topluma ve insanlığa faydalı olmalarıyla ölçülür.

7. İnsanı Vasıf Sahibi Olarak Yetiştirme

Aklını kullanmak vasıtasıyla sorumluluk bilincinde olan, vahiyle de yaratılış gayesini bilip Allah'a kul olarak yaşayan insan hem kendine hem yaşadığı topluma hem de çevresinde bulunan bütün yaratılmışlara karşı görevlerini Kuran-ı Kerim temelli bir ahlaki değerler bütünü içinde doğru ve etkili bir biçimde yerine getirebilmek için vasıf sahibi olmalıdır ki vahiy önderliğinde ideal bir toplum düzeni inşa edebilsin.

Bu vasıfları hem ahlaki hem de günlük yaşantıya uygun olarak düşünmek mümkün gözükmektedir. Zira ahlaki anlamda eksikliği olmayan bir kimse mesleki ve günlük yaşantı anlamında hiçbir özelliğe sahip değilse insanlar tarafından dikkate alınmayacak ve dediklerinin bir etkisi pek tabii olamayacaktır. O yüzdendir ki birey

³⁶ et-Tevbe 9/71

³⁷ et-Tevbe 9/72

³⁸ el-Müminun 23/73

³⁹ el-Enam 6/160

yaşadığı toplum şartları içinde kendini geliştirmeli ve diğer insanlara maddi ve manevi fayda sağlayabilecek bir konumda olmalıdır.

İdeal bir toplum inşasında da bu noktadan hareketle kendilerini geliştirmiş ve ahlaki değerler eşliğinde sorumluluğun farkında olan insanlar olmazsa olmaz bir konum teşkil etmektedir.⁴⁰ Zira vahiy eşliğinde devam eden bir eğitim ve öğretim süzgecinden geçmiş böylece kendini geliştirmiş yetkin insanların olmadığı bir toplumun ideal bir düzeye çıkması mümkün gözükmemektedir. Nitekim en baştan yaratılış gayesinin farkında olan bu vasıflı insanların olduğu toplum gerçek anlamda mutluluğu elde etme imkanına sahiptir.

Vasıflı insanların olmadığı bir toplum, ideal bir seviyeye ulaşmak bir yana ayakta bile kalamayacak duruma gelmekte ve gerçek mutluluğu elde edememektedirler.⁴¹ O toplumda işler Allah'ın istediği gibi yerine getirilmez böylece hak, hukuk ve adaletin tesis edilmesi ise imkânız hale gelmektedir. O yüzdendir ki eğitim ve öğretim bir toplumdaki vasıflı insanların artması ve o toplumun ayakta kalabilmesi için çok büyük önem arz etmektedir. Bu yüzdendir ki verilecek eğitim ve öğretim ilahi gaye doğrultusunda olmalı ve yapılmalıdır. İdeal bir toplumun sağlıklı olması ve sekteye uğramadan tüm bireyleriyle karışıklığa gark olmaması için vasıfsız insanlar hiçbir şekilde herhangi bir göreve getirilmemelidir. Zira Allah'a karşı sorumluluklarının bilincinde olmayan ve ahlaki değerleri önemsemeyen bir kimsenin, kendisi dışında kalan insanların iyiliğini düşünerek hareket etmesi akla uygun düşmemektedir.

8. İnsana Yüksek İdealleri Öğretme ve Mutluluğu Elde Etme

Allah'a karşı yaşamındaki gayenin ne olduğunun farkında olan insanoğlu bu gayeleri gerçekleştirdiği takdirde yüksek ideallerin başında gelen mutluluğu elde etmiş olacak ve gerçek kurtuluşa ermiş sayılacaktır.

İnsanın hayattaki en yüksek ideali Allah'a kul olmak ve O'nu bilmektir. Bu ideal doğrultusunda bir yaşamı kendisine şiar edinen birey korkulacak tek varlığın Allah olduğunun bilincinde olarak yaşar⁴² ve hayatını O'nun emir ve yasaklarına göre tanzim eder. Hayatını bu şekilde tanzim eden insan kulluk bilincinde ve sorumluluklarının da farkında olmak suretiyle içinde yaşamış olduğu toplumun da kurtuluşa ermesini ister ve bunun için çaba sarf eder. Bu suretle birey kendisine yeni bir yüksek ideal bulmuştur ki bu da kendisinin de bir parçası olduğu ve içinde Allah'ın emir ve yasaklarına uygun bir yaşamın olduğu ve gerçek mutluluğun hakim olduğu ideal bir toplum inşasıdır.

Sonuç Yerine

Öyleyse baştan itibaren anlatmaya çalıştığımız şekilde vahyin ana esas olduğu bir eğitim ve öğretim hayatının ana gayesi ideal bir birey ortaya koymaktır. Bu ortaya koyuşla da her biri ideal bireylerden oluşan bir toplum inşa etme gayesi karşımıza çıkmaktadır. Allahın emir ve yasaklarına uygun bir hayat sürüp yaratılış gayesinin O'na kul olmak olduğunun farkında olan bu yüzden de vahiy temelli ahlaki değerlere sahip olan erdemli insan gerçek mutluluğa erişecektir. Bu yüksek ideali gerçekleştirmek suretiyle hem dünya hem de ahiret saadetini hedefleyen insanın yetişmesi için Kuran-ı Kerim temelli bir eğitim ve öğretim hayatının zorunluğu ortaya çıkmaktadır.

Bu şekilde bir eğitim ve öğretim sürecinden geçen insan Allah'a kul olma noktasında başarılı olacak aklını kullanarak sorumluluklarının bilincinde olup tutarlı bir insan profili çizecek ve diğer insanların da buna paralel bir gaye ve yüksek idealleri tutturması için mücadele edecektir. Bu mücadelede başarılı olması ise en başta bireyin kendisinin daha sonra da kendisi gibi olan diğer insanların uyumlu bir şekilde vasıflı ve yetkin insanlar olması sonuç olarak gereklilik arz etmektedir. Zira vasıflı ve yetkin insanların egemen olmadığı bir toplumda gerçek mutluluk olan yaratılış gayesine uygun hareket etmek mümkün olmayacak ve en nihayetinde Allah'a isyan noktasında olan bir toplum karşımıza çıkacaktır. Bu tür bir toplum ise yok olmaya ve kaybetmeye mahkum bir toplumdur.

⁴⁰ Farabi, Kitabü's-Siyaseti'l-Medeniyye, Daru Mektebeti'l-Hilal, Beyrut. (1994). s, 89-90.

⁴¹ Farabi, Kitabü Arai Ehli'l-Medineti'l-Fadıla, Neşir: A.Nasri Nadir, Beyrut. (1985). s, 127.

⁴² Nisa 4/1

O yüzdendir ki ideal bir toplum inşa çabası eğitim ve öğretim sisteminin Allah'ın insan için koymuş olduğu gayeleri gerçekleştirmeye çalışması ve vahiy merkezli bir mahiyete sahip olması gerekmektedir. Böyle bir eğitim ve öğretim sonucunda hem dünya hem de ahiret saadetini elde etmiş bir toplum ortaya çıkmış olur.

İdeal bir toplum inşası için de verilecek olan eğitim ve öğretim her ne kadar vahiy merkezli olsa da bu eğitim süreci birey daha çocuk yaşta başlamak ve bireyin kişilik ve karakterini inşa ettiği dönem içindeyken bu yüksek idealleri hedeflemesi öğretilmeli ve bu doğrultuda bir yaşam sürmesi telkin edilmelidir. Bu idealleri gerçekleştirme noktasında başarı oranı daha çocuk yaşta olan bireyin eğitim ve öğretim sürecine etki etmekle doğru orantılıdır. Bu etki ise Allah'ın istediği gibi bir yaşam olacaksa bu da vahiy temelli olmak zorundadır.

Beyond Employability: Embedding Soft Skills In Higher Education

Keow Ngang TANG

Abstract

Today, higher education institutions are being evaluated by the manners in which they react to the social and economic needs of society, that is, how they are expediting social mobility and wider access to higher education, hence this leads to their actions to enhance graduate employability. Therefore, this research was designed to examine the 34 lecturers who joined the Researcher Links Workshop titled as 'Innovate Higher Education to Enhance Graduate Employability' on how they are transferring soft skills and sharing their experiences of teaching. Those workshop participants consisted of 20, 13, and one from Thailand, United Kingdom, and Vietnam respectively were selected according to the criteria given by Newton Fund in collaboration between Thailand Research Fund and British Council. A qualitative interview research method was employed. A semi-structured interviews consisting of key questions was used to define the areas to be explored, but also allowed the interviewees to diverge in order to pursue an idea or response in more detail. The results revealed that many higher education institutions have been facing the challenges head on, rethinking the role of career services, academics, and even support services in boosting employability. In addition, results also indicated that in the United Kingdom higher education system has been emphasized on the vital importance of non-academic skills to employability. Besides, participants have highlighted a list of soft skills that graduates should possess and it seemed that the place where these skills will most often be instructed is in the lecture theatre, the tutorial room or the study group. Those soft skills are depending on how lecturers to ensure that they are embedded these soft skills in their course design and delivery.

Keywords: *Employability; higher education institutions; soft skills*

Introduction

Graduate employability is often operationalized in terms of job offers, employment status and, to a lesser extent, quality of employment (Okay-Somerville & Scholarios, 2017). Therefore, past researchers perceived employability upon graduation constitutes an important indicator of graduate well-being. Rothwell, Herbert, and Rothwell (2008) distinguished internal and external perceptions of employability for graduate entrants to the labor market. The internal perception of employability refers to factors associated with perceptions of knowledge, skills and abilities, and job search. The external perception of employability is associated with factors outwit the individual's control, for example, demand for degree subject, prestige of the university, and the overall state of the graduate labor market.

As a result of the higher education experiences, graduates are expected to possess certain skills and qualities such as team-working and problem-solving, which will make them employable (CBI, 2009). Over the past decade, educational researchers and practitioners have stressed the importance of nurturing a set of non-academic attributes, so called as soft skills that including the abilities to cooperate, communicate, and solve problems in higher education institutions (Chamorro-Premuzic, Artech, Bremner, Greven, & Furnham, 2010). In order to define explicit learning outcomes of higher education programs, including outcomes in terms of certain types of transferable skill, such as communication, team-working or problem-solving.

This process has run in parallel with an increased focus among policy makers, higher education institutions, and students on the employment outcomes of higher education graduates and the extent to which higher education prepares students adequately for employability. As graduates produced by the higher education institutions are eventually expected to serve as human capital for the country, feedback from the industry is of vital importance in determining the necessary attributes that the graduates must possess in order to effectively function in a work environment (Syed Ahmad, 2013). Therefore, the idea of soft skills should be part of the set of learning outcomes so that all students are expected to acquire during their time in higher education is a logical step that should be taken.

The main objective of teaching and learning in higher education obviously outspreads beyond guaranteeing that

graduates are employable. Employability skills are those skills necessary for getting, keeping, and doing well on a job. They are the skills and attributes that enable employees to get along with their colleagues, to make critical decision, solve problems, develop respect, and ultimately become robust representatives for the organization (Yorke, 2006). Yorke further highlighted that the employability of graduates has become an aim that governments around the world have, to varying extents, imposed on national higher education systems. It is the fact that higher education institutions are arenas where students pursue their socialization and acquire and develop a range of knowledge, skills, attitudes, and attributes that affect the way they act in, and engage with, wider society.

According to Kember, Leung, and Rosa (2007), there is growing acceptance for idea that soft skills may help students to accomplish not only academic but also occupational goals after graduating. On this line of reasoning, soft skills have become increasingly critical parts of education to be embedded into teaching and learning process. This is because of employers are desperately seeking employees with a combination of skills that seem fall under this career readiness and employability umbrella. Besides, Chamorro-Premuzic et al. (2010) stated that employer surveys have reflected discontent with the extent to which these skills are foster in higher education. Employers pointed out that there is often a gap between what they require of graduates in assessment tasks and what occurs in the world of work.

Employability issues are at the very core of contemporary higher education both in the United Kingdom and Thailand. In United Kingdom, earlier debates tended to focus on liberal concerns that higher education should seek to enable the individual to better fulfill their role in society but recent discussions have focused more on the notion that all academic courses should include employability enhancing content, and also embedding soft skills (Cranmer, 2006). On the other hand, Thailand has embraced notions of graduates' work readiness as a means of ensuring competitiveness in a global context (UNESCO, 2012). In addition, various measures have been developed in Thailand, such as the Thailand Quality Framework (TQF), in consultation with education and industry specialists.

According to the report of UNESCO (2012), higher education enrolment had increased fivefold from 28.6 million in 1970 to 152.2 million in 2007. This has reflected the priority given to higher education institutions to develop a knowledge-based economy. Unfortunately, employment rates had not kept pace with this trend. The global unemployment rate increased from 5.6 percent in 2007 to 6.2 percent in 2010. It can be seen that there are a highly competitive environment for young people aged from 15 to 24 years old. For example, young unemployment rates have increased from 11.8 percent in 2007, 12.8 percent in 2009, 12.6 percent in 2010, and 12.7 percent in 2010 (UNESCO, 2012). The above statistics are worrying because the youth represent the productive labor force of the countries and majority of them are higher education graduates. If not productively involved for extended periods of time, many governments will have to deal with a host of issues and challenges facing a lost generations.

Although the number of unemployed graduates might be partly caused by imbalances in the economy such as financial crisis and economic downturns in recent years are certainly reasons for the reduction in the number of jobs, but supply-side factors also contributed to the high numbers of unemployed graduates. As a result, higher education institutions need to be clearly understood the kind of skills required for graduates to enter the labor market so that they can foster these skills in their students. Relevance of their study programs plays an important role in assisting their graduates find employment.

Literature Reviews

United Nations Educational, Scientific and Cultural Organization (UNESCO)'s call aims to ensure equitable quality education and lifelong learning for all by 2030 (Pavlova, Lee, Maclean, 2017). Concerns about the relevance of education systems to effectively meeting the economic and social requirements of countries are rising internationally (Organization for Economic Co-operation and Development OECD, 2005). Thailand government adapted educational policies to deal with these concerns include: an assurance concerning curriculum flexibility and quality across the different higher education programs offered; the engagement of different, multiple stakeholders; career guidance, matching programs to adequately meet the needs of both students and the labor market, and attempts to guarantee equity (Thanomwan, Keow Ngang, Prakittiya, & Sermpong, 2017).

Karmel (2017) used OECD country-level data to grasp whether the structure of countries' education systems, illustrated by the level of participation by age at the numerous International Standard Classification of Education (ISCED), affecting systematically the level of unemployment for the cohorts aged 20-24 and 25-29 years old including whole labor market conditions and demographic structures, were accounted for. Karmel found that the

structure of education systems does make a variance although general state of the labor market is critical.

Chamorro-Premuzic et al. (2010) examined the three United Kingdom studies on the relationship between a purpose-built instrument to assess the importance and development of 15 soft skills. Study 1 (N = 444) identified strong latent components underlying these soft skills, such that differences between-skills were over-shadowed by differences between-students. Significance and refining ratings on these skills predicted academic performance and accounted for the influences of personality on academic performance. Study 2 simulated the structure of the soft skills inventory and relationships with academic performance in a larger sample (N = 1309). Examination of mean differences across faculties (humanities, life sciences, hard sciences) revealed higher soft skills ratings in 'softer' courses. Study 3 (N = 87) merged an IQ measure, which was found to be negatively related to significance ratings of soft skills. Their results highlighted the cohesive structure of beliefs regarding various non-academic skills and their significant links to educationally relevant individual differences.

Cranmer (2006) reported on the impact of employability skills teaching and learning on graduate labor market for the Higher Education Funding Council, England. Comprehensive information gathered at university department level was drawn on to evaluate how academics perceived and engaged in the teaching and learning of employability skills. Cranmer argued that despite the best purposes of academics to enhance graduates' employability, the limitations inherent within the program would constantly produce mixed outcomes. In addition, resources would be better utilized to increase employment-based training and experience, and/or employer involvement in courses, which were found to positively affect immediate graduate prospects in the labor market and, therefore, support graduates in the transitional stage into employment.

Conceptualizing Graduate Employability

Employability goes well beyond the basic notion of significant skills, and is demonstrated in the application of a mix of personal qualities and beliefs, understandings, skillful practices, and the ability to replicate productively on experience. Students, therefore, will develop their employability in ways that reflect their particular circumstances with the hope that they will become capable graduates who have confidence in their ability to: (i) take effective and appropriate action; (ii) explain what they are seeking to achieve; (iii) live and work effectively with others, and (iv) continue to learn from their experiences, both as individuals and in association with others, in a diverse and changing society.

Employers are often seeking skills that go beyond qualifications and experience. This means that the specialist, technical skills linked with different roles may be less important than the soft skills that can be transferred between different jobs and different employment sectors. For employers, getting the right people means recognizing people with the right skills and qualities to accomplish the role and contribute to the organization's success. The Association of American Colleges and Universities released a survey which found a gap between how prepared students believe they are for their chosen and how ready employers believe those students to be. Only about a quarter of employers surveyed consider recent graduates are well prepared in critical thinking and analytic reasoning, written and oral communication, complex problem-solving, innovation and creativity, and applying knowledge and skills to real-world settings. By contrast, over 60 per cent of students rate themselves as well prepared in these areas. This finding underscores high education's need to identify new and effective ways to quantify and communicate their students' achievement. Employers told that they need comprehension into soft skills and higher education institutions must understand what employers want from their graduates (Kruger, 2015).

Ministry of Higher Education, Malaysia (2017) found that university graduates are lacking of communication and interpersonal, problem-solving, team-working, and critical and creative thinking skills. In the United Kingdom, government-funded initiatives and programs have emerged from the late 1980s onwards, designed to support the development of soft skills. The report of National Committee of Inquiry into Higher Education 1997 (in Cranmer, 2006) recommended the development of communication, numeracy, information technology, and learning how to learn at a higher level within all subjects. Further government-funded initiatives were made available to support universities in satisfying this concern.

Researcher had conceptualized soft skills that could be embedded into the course content as identified by Holmes (2014). They are communication and interpersonal skills, team-working, critical thinking and problem-solving, and personal development skills. Communication and interpersonal skill refers to job communication which includes being confident about speaking to people either face-to-face or over the phone as well as writing well enough to be understood in emails and memos. Examples of communication and interpersonal skill are writing assignments and reports; blogging or using social media; and making oral presentation. Good communication skill is the ability to communicate both verbally and in writing with a wide

variety of people, maintain good eye contact, write clearly and succinctly, demonstrate a varied vocabulary, and tailor our language to our audience are all essential skills that employers seek out. Good verbal and written communication means we can get our messages across with less unintended of misunderstanding. On the other hand, interpersonal skill is the skill we use to interact with other people. Good interpersonal skill allows us to participate effectively as a member of a team, satisfy customers and clients' expectations, negotiate, make decisions, manage our time efficiently, take responsibility, and work effectively with other employees. Good interpersonal skill allows us to emphasize and build rapport with colleagues and clients, leading to a better working environment which can be less stressful.

Team-working skill means individuals are able to function efficiently and appropriately in groups collaborate on projects and accept constructive criticism when working with others. Team-working skill is important in almost any work setting. Individuals focus on the importance of the team in the workplace. Individual is able to learn about teamwork and the different roles an individual can have within a team. Individuals will examine strengths and weaknesses they might have in inhabiting each of the roles. Individual is able to understand leadership, describing the traits that make a good leader. If an individual works on a number of group projects, he or she needs to be able to get along well with others, sharing the workload with colleagues to complete a goal.

Critical thinking and problem-solving skill means the ability to solve problem and make appropriate decisions. Critical thinking refers to one's ability to understand, analyse, and interpret information, and draw conclusions. Decision-making and problem-solving require gathering reliable information, evaluating the information for a variety of solutions and selecting the most appropriate option based on the criteria and situation. In any job, an individual will have to assess situations and solve problems. They need to be logical and make reasoned judgement. Although the ability to solve problems and make appropriate decisions are critical in any job, people with this skill are able to effectively plan and organize their team and are more likely to get the job done correctly the first time. This skill is beneficial to employers because they can save money and time. Planning and organizing also require the recording of information in a report which can be referred to when planning future projects. In addition, critical thinkers are innovative and inventive, and are more likely to develop innovative ways of doing things that adding value to the work environment, making systems and procedures more efficient. Critical thinkers can offer new perspectives about the job and the company.

Personal development is defined as all about having the right attitude towards work and the organization. The individual who is open to learning and embrace change will be more successful than the individual who is afraid of learning and resistant to changes in the organization. Personal development is concerned with how individuals evolve their working practices and attitudes to work. Self-motivation and confidence are key areas of personal development as is personal appearance and how others perceive us. Self-management skill also known as self-control is the skill we use to manage our personal feelings and how we react to challenges and problems both at work and in our private life. Personal development includes learning to avoid potentially negative emotions such as anger and stress while developing assertiveness and effective negotiation skills.

Methodology Of Research

The researcher employed a qualitative approach to gather information. A total of six focus group interviews were conducted with 34 participants consisting of 20 from Thailand, 13 from United Kingdom and one from Vietnam who participated in a Researcher Links Workshop titled as "Innovate Higher Education to enhance graduate employability" from 31st July to 3rd August 2017 in Asia Hotel Bangkok, Thailand. Each focus group comprised between five to six participants. The participants were selected based on criteria of the workshop set by the Newton Fund in collaboration between Thailand Research Fund and British Council that they have been awarded their doctoral degree not more than 10 years prior to the workshop or to have equivalent experience, with allowances made for career breaks. If a participant does not hold a doctoral degree but has research experience equivalent to a doctoral degree holder and works in a field where a doctoral degree is not a pre-requisite for established research activity, he or she can still be considered eligible. Participants must from non-profit organizations. All the participants were purposively selected according to the above criteria.

A semi-structured interviews protocol consists of several key questions that help to define the areas to be explored, but also allows the researchers the participants to diverge in order to pursue an idea or response in more detail was used in this study. The flexibility of this approach allows for the discovery or elaboration of information that is important to participants but may not have previously been thought of as pertinent by the researcher (Gill, Stewart, Treasure, & Chadwick, 2008). The questions were asked by the researcher herself who sought additional information with follow up question and the sessions were audio-taped for transcription purposes and to ensure an accurate record of what was said in the interviews. The interviews lasted one to two hours. The rationale of using this research design was to discover and pronounce the views and experiences of

higher education practitioners regarding their innovative methods to enhance graduate employability.

A key aim of this study was to understand how participants perceive employability, and for this reason researcher asked each participant to provide a definition. As mentioned, the value of these self-reports is in their usefulness for assessing the level of engagement with and the value of employability skills to academics themselves. A further aim was to understand the emphasis placed on employment-related skills in teaching and learning. For this purpose, participants were asked to indicate the degree of importance given in their teaching, ranged from academic objectives, such as teaching specialist subject knowledge and theoretical understanding, to the development of more explicit employability-enhancing skills. The soft skills were chosen to reflect those typically seen as enhancing graduate employability in higher education, including communication and interpersonal, team-working, critical thinking, problem-solving, and personal development skills. The third aim was to find out the balance between soft skills embedded in courses or stand-alone courses.

Results Of Research

The results of the six cycles of focus group interview are presented in accordance with the three main aims that indicating above. These research aims provided the structure and focus of the interviews. A number of themes are developed and some recurring themes are emerged. The initial result is the participants' understanding and expectations of employability. This is followed by the results of employment-related skills namely communication and interpersonal, team-working, critical thinking and problem-solving, and personal development skills. The final result is the embedding of soft skills in higher education teaching and learning process. The following is the summary of all the themes reflecting the key results of focus group interviews.

The importance of soft skills proficiency for today's employment

Majority of the participants stated that higher education institutions are dedicated to hard skills training rather than soft skills development. This is because most of the university courses are designed to teach students a particular expertise. All of the participants emphasized the importance of soft skills proficiency in order to be employed. This is because employers have a limited worker asset if graduates lack these behaviours. All the 13 United Kingdom participants mentioned that there is a movement in higher education institutions of United Kingdom to develop the whole person development with the completion of both hard and soft skills. Many participants mentioned that university graduates lack of soft skills.

"From the business side, the employer often sees a significant gap between the hard and soft skills that a graduate brings to the workplace." (Focus group interview 2)

"Especially the new graduates, they are lacking the soft skills needed for professional success" (Focus group interview 5)

"Many for-profit high education in Thailand have begun to integrate the soft skills into their curriculum, bringing a greater awareness to this growing of soft skills training need." (Focus group interview 6)

"Last time, we had not focused on teaching soft skills at all in higher education institution but now we have embedded those soft skills in order to make our higher education institutions being competitive." (Focus group 1)

"Many employers said that too many university graduates lack communication and decision-making ability, an understanding of how to think independently but also to work in teams, to solve complex problems and to construct arguments. They lack, we are told, an understanding of leadership, creativity, and emotional intelligence" (Focus group interview 2)

"That's not because I doubt that such a problem exists, but rather that the soft skills so much demand by United Kingdom's employers are precisely at the core of the liberal arts and sciences experience." (Focus group interview 3)

The methods of embedding the soft skills

The diversity of methods has been suggested by the participants related to effectively embedding soft skills into their course design. In general, there are four basic questions that should be answered while lecturers are designing activities for their courses. The four questions are: (i) What is the purpose of this activity? (ii) Why is it important? (iii) What soft skills are developed as a result?, and (iv) How can the student apply what she has learned in the workplace? The employment-related skills such critical thinking and communication skills can be embedded in role playing teaching activities. Team-working skill can be developed in group work teaching activities. Other than soft skills can be taught in weekly teaching courses, companies who involved as parts of the university internship program can integrate these soft skills in those activities within their internship training. Additionally, some of the participants highlighted the importance of coaching and mentoring in order to sustain these soft skills. Graduates have to be lifelong learners who recognize that education is not just a matter of what you know.

"For example, group work assignment helps our students to understand the value of teamwork and time

management” (Focus group interview 1)

“My university mission is to ensure that four years later, our graduates emerge as lifelong learners who recognize that education is not just a matter of what you know but how to ask the right questions, to develop well-supported arguments, and to apply knowledge in new and unfamiliar contexts. Education is not filling of a pail, but the lighting of a fire.” (Focus group interview 2)

“For example, role playing is an important teaching activity that can develop students’ critical thinking and communication skills” (Focus group interview 3)

“A quiet revolution at my institution is the integration of the classroom with world around university campus. For example, we recruit passionate employers to be faculty members and you will find our students are serving millions of internships in companies, non-profits, and non-governmental organizations in Thailand.” (Focus group interview 3)

“Even though sometimes if the soft skills were not effectively taught in the undergraduate education courses, I would like to suggest the companies who involved in internship training, can integrate these soft skills development activities within their training.” (Focus group interview 4)

“Coaching and mentoring can help to introduce and hone the soft skills.” (Focus group interview 5)

“Many young professionals can learn simply by modelling these behaviours.” (Focus group interview 6)

The advisory boards of each faculty in higher education institutions should include practitioners so that they can continually update their curriculum and teaching methods based on feedback from board members. In addition, faculty can build externships into their programs to develop students’ professional experiences, with the goal that students will be employed by the organizations upon graduation. A substantial follow-up such as the faculty can survey the employers regarding their students’ performance after six months of the students’ placement. The feedback about students’ preparation can be incorporated into the related courses. Co-curricular transcripts, badging options, and portfolio are the various methods to encourage students to polish up their soft skills.

“Co-curricular transcripts offer one solution by allowing students to better reflect the soft skills that they may bring to the workplace, establishing expectations for their performance.” (Focus group interview 2)

“Some badging options can be tied to assessment, which allows students to prove their claims of soft skills competency.” (Focus group interview 3).

“And portfolio allows students to share tangible examples of how and when they believe they have distinguished themselves. This will encourage them to develop their soft skills.” (Focus group interview 6)

Embedding of soft skills in higher education teaching and learning

All the participants agreed that soft skills should be embedded in the courses and cannot teach as a stand-alone subject. The importance of soft skills may vary from one sector to the other. Ultimately, every company is driving toward the same goals namely profitability and client satisfaction. However, all the four soft skills are found to be benefited by any individual in any job.

“While it depends on the industry, problem-solving, creativity, critical thinking, and communication are the core soft skills for any business.” (Focus group interview 3)

“A number of higher education institutions are developing curricula to teach the soft skills that employers have identified as so important such as communication and interpersonal skills, critical thinking and problem-solving skills, but soft skills can be taught as a stand-alone subject). (Focus group interview 4)

Discussion

The results of this research have shown that all the 34 Researcher Links Workshop participants emphasized the importance of soft skills development are consistent across a wide range of non-academic attributes to cultivate graduate employability either in Thailand or United Kingdom higher education institutions. From an applied point of view, practitioners should aware of the solid possibility that improvements on any of these soft skills are probably indicative of improvements on any other soft skills. For example, knowing that students think team-working skill is important for outstanding academic achievement may indicate that they also believe critical thinking and problem-solving skills is important for this outcome. Moreover, there are important implications for occupational psychology as the current results have highlighted the importance of equipping students with the relevant soft skills to pursue their work-related career goals. Thus, students seem aware of the need to develop soft skills in order to enhance their work prospects. On this line of reasoning, researcher hopes that the gap between academically fostered and occupationally desired skills such as soft skills is reduced.

Generally, higher education graduates stand for a stronger chance of finding a job they enjoy significantly higher earnings than those with only secondary education graduates (Organization for Economic Cooperation and Development, 2004). Yet, it is a cause for concern that while substantial resources are being committed to the development of soft skills in classroom, there was no confirmation in the study that these efforts had a significant

independent effect on graduate labour market outcomes (Mason, Williams, Cranmer, & Guile, 2003). Furthermore, previous studies showed that a degree of mismatch for some graduates between the soft skills acquired at university and the soft skills they are required to use in employment (Cranmer, 2006). This could be indicative of the limitations of seeking to develop employability outside the higher education institutions.

In addition, results of this study found that employers' involvement in degree course design was found to have positive effects on graduates' outcomes, in their ability to find graduate-level jobs within six months of graduation. However, these influences would most likely diminish rapidly over time as graduates acquire more job and occupationally specific skills and knowledge through work-based training and experience (Cranmer, 2006). As Little (2003: 22) interpreted as suggesting the 'problem' may be more than one of transitions into the labour market rather than longer-term enduring mismatches between labour market supply and demand. In the light of these findings, it would surely make sense for higher education institutions to redirect some of their resources from classroom-based initiatives seeking to develop employability skills to increasing employment-based training and experience, and/or immediate graduate prospects in the labour market and, therefore, support graduates in the transitional stage into employments.

Conclusions And Implications

Higher education is regarded as central to national strategies for securing shares in the global market and higher education institutions as the sources of valuable human capital to support national development is increasing. The fast-tracking change to high-technology industries and an information technology economy entails sustained human resource development and training. Therefore, an appropriate higher education system is critical for preparing a competent workforce. Literature reviews and results of the study indicated that graduates believed their education and skills were sufficient and higher education institutions considered their graduates to be well prepared for the transition to the workplace. Unfortunately, the employers concluded that new graduates lacked vital soft skills for employment, mentioning impractical expectations and demands for higher salaries as examples. Such incongruent perspectives must be addressed for effective solutions to enhance the employability of graduates. It can be concluded that employers are seeking for graduates who are knowledgeable and skilled and at the same time possess desirable attributes.

To name a few aspects mentioned by the participants in this Researcher Links Workshop, it can be concluded that all the lecturers should try out innovative ways of teaching and interaction, including evaluation of learning activities, and allowing students to come up with their own ideas for learning and co-designing lecture with potential employers. One of the outputs is the development of their own course modules, which they can later use again. The incentive of using classroom as learning ground for soft skills has really been effective to benefit students and lecturers (Hagmann & Almekinders, 2003). Besides, some participants tried out coaching and mentoring techniques and with potential employers with great success, and this encouraged them to advance themselves further. This implies lecturers have to try using elements of personal development in the way they interact with their students, to the extent that the students will be asked to present their learning about change in their behaviour to faculty and cross-faculty meetings.

Training and education in participatory approaches to a certain degree, is considered as effective method to generate the required soft skills development. Therefore, there is a need for the incorporation of these four soft skills namely communication and interpersonal, team-working, critical thinking and problem-solving, and personal development skills into the curricula as lecturers in higher education institutions see themselves, as disciplinary experts rather than communicators of soft skills. This is because the skills and expertise of lecturers to develop and implement curricula that interweave soft and hard skills is generally lacking and needs to develop through learning processes or training in which they engage over a time span of at least a year.

Özet

Dijital kültür öncesinde bireylerin düşüncelerini ifade ettikleri kültürel pratikler, televizyon izlemek, geleneksel oyunları oynamak telefonda konuşmak, fotoğraf çekmek ya da mektup yazmakla sınırlı olduğunu söylemek mümkündür. İnternetin gündelik hayata dâhil olmasıyla, eski günlük ritüeller yenileriyle yer değiştirirken şekil de değiştirdikleri söylenebilir. Dijital oyunlar da değişen/dönüşen gündelik yaşam pratikleri içerisinde değerlendirilebileceğimiz kültürel tüketim araçlarının birisidir. Bu çalışmada ele alınan temel kesişim noktası yeni medya, gençlik ve toplumsal yaşam ara kesitindeki önemli öğelerden biri olan dijital oyunlar (*digital games*)’dir. Çalışma ayrıca geleneksel oyundan dijital oyuna bir köprü oluştururken, dijital yerliler (*digital natives*) kavramından hareketle yeni nesil kuşağın dijital oyunla aralarındaki ilişkiye odaklanmıştır. Bununla birlikte dijital oyunlardaki anlatı yapılarının temel özellikleri ve dijital oyunların da bir okuryazarlık (*digital game literacy*) süzgecinden geçmesi gerektiği savunulmaktadır.

Çalışmanın sonucunda oyunların oyunların pedagojik potansiyelini arttırmaya çalışan uluslararası araştırma ve geliştirme girişimleri arttıkça, eğitim araştırmacıları oyunların nasıl işlediğine dair daha fazla temellendirilmiş kavramlar geliştirerek fayda sağlanacağına dair sonuç ve öneriler bulunmaktadır.

Anahtar Kelimeler: Dijital Oyun, Dijital Kültür, Dijital Yerliler, Dijital Oyun Okuryazarlığı, Toplumsal Değişim

Gelenekselden Dijitale “Oyun ve Oynamak”

Oyun (*Play*) ve kurallı oyun (*Games*) kavramlarının da birbirlerinden farklı ele alınması gerekmektedir. Birey küçük yaşlarda daha çok hayal gücüne dayalı, kuralları daha gevşek sınırlarla belirlenmiş ve süresi, kuralları, araçları, teması ve oyuncuları, oyuncuların onayı çerçevesinde değişebilen, daha çok hayal gücüne dayalı, daha az oyuncu becerilerini sınamaya yönelik etkinlikler içeren oyun oynarken, ilerleyen yaşla birlikte kuralları genelde üçüncü şahıslarla belirlenmiş ve süresinin, kurallarının, araçlarının, temasının ve oyuncularının çerçevesi daha sıkı örüntülerle belirlenmiş, bir mücadele içeren ve çoğu zaman oyuncuların performanslarını gösterebilecekleri ya da kendilerini diğer oyuncularla kıyaslayabilecekleri ölçütler içeren, eğlencenin yanında çoğu zaman gerilim ve hırsın eşlik ettiği kurallı oyun oranı artmaktadır (Ural, 2009).

Oyunların anlaşılmasında temel bir meydan okuma, etkileşimli bir ortam olmasıdır. Oyuncuların eylemleri olmadan, üzerinde çalışılacak bir oyun yoktur. Oyunların kültürle ilişkisini inceleyen kültür tarihçisi Huizinga’nın (2010) Homo Ludens (oyuncu insan) kuramına göre ise, insan sadece yaşamaz, yaşama biçimini ve diğer insanlarla kurduğu ilişkileri oyunsallaştırır. Oyun da anlatı gibi insan kültürünün ayrılmaz bir parçasıdır ve drama insan kültürünün oyunsal karakterinin sonuçlarından sadece biridir. Huizinga savaşın oyunsal karakterini de ayrıca incelemiştir. İnsan yaşamının bir parçası olan savaşın; tıpkı felsefe, politika, şiir, hukuk, din gibi diğer ciddi kategorilerde olduğu gibi, oyunsal niteliğine dikkati çeken Huizinga (2010)’ya göre, savaş, üyelerinin birbirlerini karşılıklı olarak eşit veya hiç değilse hak düzeyinde eşit olarak kabul ettikleri bir çevre içinde cereyan ettiği sürece, bir kültür işlevi sayılabilir. Bu anlatımı pekiştirmek adına Huizinga, “oyun ruhu yoksa uygarlık mümkün değildir” der (2010, s. 134). Akbulut (2007: 32) ise oyunun niteliklerini şöyle sıralar:

Özgürlük: Oyun oynamak zorunlu değildir.

Ayrışıklık: Peşin olarak sabitlenmiş ve tanımlanmış, ortam ve zaman sınırları içinde sınırlandırılmıştır.

Belirsizlik: Sonucu önceden belirlenemeyen, elde edilemeyen ve oyuncunun girişimine bırakılmış yeni keşifler için bir ölçüde serbestlik tanıyan bir süreç.

Verimsizlik: Oyuncularla mülk alışverişi dışında ne bir ürün, ne yeni bir çeşit öge oluşturan, oyunun başlangıcında hüküm veren bir durumda sonlanma.

Kurallarla yönetilmek: Olağan kuralları geçici olarak erteleyen kurallarla yönetilmek.

–miş gibi yapmak veya inandırıcı kılmak: Gerçek yaşama karşı olarak özgür bir gerçek; olmayanın ya da ikincil bir gerçekliğin özel bir farkındalığına eşlik eden –miş gibi yapmak.

Genel olarak oyun, anlatısallaştırma kültür, ideoloji ve özellikle ilişkisi bağlamında farklı medya biçimleri içinde okunmaya açık pek çok metin yaratsa da, dijital oyunlar çok farklı anlatı yapılarına sahip olması nedeniyle ideolojik açıdan analiz edilmeleri önemli bu çalışmanın önemini göstermektedir. Temelde oyun

oyunmak, tam anlamıyla anlayamadığımız sonuçlara sahip olan deneyimler, yaratmaktır. Dijital oyunlar, sadece fikirleri değil, tüm dünyaları, oyuncularını onları keşfetmeye davet eden belirli biçimlerde temsil eden karmaşık metinler olarak ortaya çıkmıştır (Gee, 2003, 2004; Juul, 2003). Oyunların bir bütün olarak araştırılma ihtiyacı, bir ortam olarak benzersizlikleri ve aynı zamanda oyunların kendisinden daha fazlasını içeren daha geniş bir medya ekolojisine sahip olmalarıyla bağlantılı olduğunu iddia eden araştırmacılar vardır (Fuller, 2005). Nitekim dijital oyunlarının bu medya ekolojisi, kısmen oyun oynama, yapım ve tasarımı destekleyen “parateksüel” (Consalvo, 2007) endüstrileri tarafından gösterilmiştir. “Paratext”, oyun kültürü içinde bireysel ve grup ayrımı sistemleri oluşturmada oyun sermayesinin merkezinde yer alır.

Dijital oyun teknolojisi ise ekranda görünen görüntüyü kontrol etme ve değiştirebilme olanağını kitlelere vermiştir. 70’li yıllardan başlayarak 80’lerin ilk yıllarına dek altın çağını yaşayan *arcade* oyunlar, *Pac-man* veya tanımlanamayan uzaylı istilacılar gibi temalarla kitleleri eğlendirmeye devam etti. Fakat bu yeni dijital eğlence aracının var olmaya devam edebilmesi için, oyun tasarımcıları televizyon ve sinemanın zaten sahip olduğu bir şeye, öykü’ye ihtiyaç duyduklarını fark ettiler (Brisbois, 2007). 1981 yılında Shigeru Miyamoto tarafından tasarlanan bir karakter olan *Mario* ilk olarak, Nintendo Oyun Şirketi’nin yapımcısı olduğu *Donkey Kong* isimli oyunda oyuncu karşısına çıkmış ve oyuncunun özdeşleşebileceği bir kahraman olarak dijital oyun tarihinin ilk protagonisti olmuştur. Oyunun öyküsü, ana karakter olan *Mario*’nun, *Donkey Kong* isimli dev bir maymundan genç bir kızı kurtarması üzerine kuruludur ve oyuncu ana karakteri, belirli engellerin zıplayarak, koşarak ve kaçarak geçildiği bir dizi platformdan geçirmeye çalışır. *Donkey Kong* da, Pong gibi bir *arcade* oyunudur. Fakat ilk kez bir dijital oyunda belirli mücadeleleri geçmek zorunda olan bir karakterle özdeşleşme aracılığıyla içine girilen bir öykü sunulmuştur. Buradan çıkarılan sonuç önemlidir: Tıpkı sinema gibi, dijital oyun medyası da onu kullanan kişiye öykü ve karakterler aracılığıyla, korku, heyecan, üzüntü veya neşe gibi duyguları geçirme potansiyeline sahiptir (Sayılğan, 2012).

“Dijital Yerliler” Dijital Oyun İçinde Doğanlar

Dijital yerliler, 1980 ve sonrasında doğan nesilden oluşmakta Digital Natives (*dijital yerliler*), Net Generation (internet nesli), The Gamer Generation (*oyun nesli*), Next Generation, N-generation (*yeni nesil*), Cyber Kids (*siber çocuklar*), Homo Zappiens (*zaplayan insan*), Grasshopper Mind (*çekirge zihin*)” (Pedro, 2006’dan aktaran Şahin, 2009: 156) gibi isimlerle de anılmaktadırlar. Dijital yerlilerin sahip oldukları özelliklerinin en başında, internetin keşfiyle gelişen, sosyal ağları (facebook, myspace, flickr, vb.) ve blogları (twitter, blogspot, Wordpress, vb.) etkin kullanabilmek, ulaşılmak istenilen bilgileri hiper metinler ve arama motorları (google, mozilla, vb.) aracılığıyla kolaylıkla edinebilmek gelmektedir. Çalışma örneğinde Sakarya Üniversitesi öğrencilerinin seçilmesindeki amaç, dijital çağda doğmuş bir nesil temsil etmeleridir. Söz konusu örneklem yeni medya ortamlarını aktif bir şekilde kullanan “dijital yerli”lerin tüm özelliklerini bünyesinde barındıran kişilerden oluşmaktadır. Dijital yerliler teknolojiyi öğrenme etkinlikleri ve özellikle sosyal ve iletişim amaçlı kullanmaktadırlar (Lei, 2009’dan akt.: Günüş, 2011: 2)

Dijital yerliler ve dijital göçmenler konusunda çok sayıda araştırma çalışması bulunan Prensky (2001) günümüzün genç kuşağını, yani ağ ortamında büyüyen çocukları ifade etmek üzere kullanılabilecek bir kavram konusunda zorluk yaşadığını belirtmektedir. Ancak daha sonra, bu konuda derinlemesine çalışan bir uzman olarak, en uygun isimlendirmenin, dijital dilin bu kuşak tarafından ana dil (*Native Speaker*) olarak konuşulmasından hareketle “dijital yerli” (*Digital Native*) olmasının uygun olduğunu düşündüğünü belirtmektedir. Prensky’nin yeni teknolojilerle büyüyen bu kuşak için kullandığı “dijital yerli” kavramı günümüzde bu kuşağı nitelendirmek üzere yaygın olarak kabul görmüş bir kavramdır. Dijital yerli öğrenenlerin temel özellikleri aşağıdaki şekilde listelenebilir. Dijital yerliler (Bilgiç ve diğerleri, 2011):

1. Bilgiye hızla erişmek isterler,
2. Metin yerine grafiği tercih ederler,
3. Bir makaleyi baştan sona doğrusal bir biçimde okumak yerine kapsül halinde
5. Rastgele okumayı tercih ederler,
6. Ciddi çalışmalar yerine oyunları tercih ederler,
7. Bilişsel yapıları sıralı değil paraleldir,
8. Aynı anda birçok işi yapmak isterler,
9. Keşfederek öğrenmek isterler.

Oyunların bir bütün olarak araştırılma ihtiyacı, bir ortam olarak benzersizlikleri ve aynı zamanda oyunların kendisinden daha fazlasını içeren daha geniş bir medya ekolojisine sahip olmalarıyla bağlantılı olduğunu iddia eden araştırmacılar vardır (Fuller, 2005). Nitekim dijital oyunlarının bu medya ekolojisi, kısmen oyun oynama, yapım ve tasarımı destekleyen “parateksüel” (Consalvo, 2007) endüstrileri tarafından gösterilmiştir. “Paratext”, oyun kültürü içinde bireysel ve grup ayrımı sistemleri oluşturmada oyun sermayesinin merkezinde yer alır.

Dijital Oyun Okuryazarlığı

Alan yazın incelendiğinde dijital oyunların, oyuncular üzerinde birçok olumlu ve olumsuz etkilerinin olduğu yapılan çalışmalarla ortaya konulmuştur. Özellikle gelişim döneminde bulunan çocukların bilişsel, duyuşsal, sosyal ve fiziksel açıdan bu dönemde daha kolay etkilendiği ve dijital oyunların bu gelişim alanlarını doğrudan etkilediği yapılan araştırmalar sonucunda kanıtlanmıştır. Günümüzde oyuncular giderek artan bir şekilde tüketici olarak sosyalleşmekte, metalaşma ve şeyleşme süreçlerinin objesi haline gelmektedirler. Küreselleşmenin ve neoliberal politikaların çocuk oyuncaklarını metalaştırdığı bir dönemde artık küreselleşme karşıtı bir hareketin başlaması gerekmektedir. Teknolojik gelişmelerle birlikte insan emeğinin üretkenliğinin artması, fazla sayıda çocuğun işgücünden çıkarılmasına ve okul kayıtlarının çoğalmasına yol açmıştır. Bu tür değişimlerin bir sonucu olarak da, çocuğun ailesine olan bağımlılığın artması söz konusu olmuştur (İnal, 2007). Kısaca küreselleşme ve tüketim kültürü, bir yandan Batı menşeli bir çocuk kültürünü yeniden üretirken, öte yandan çocuklara obezite, saldırgan davranışlar korku, asosyalite gibi birçok zarar getirmektedir. Sonuçta, kapalı mekânlara sıkıştırılan (ev, okul gibi) çocuklar, doğadan kopuk, elektriğe dayalı ve yalnızlık kokan bir kültürün nesneleri haline gelmişlerdir (Williams, 2012: 93-104). Küreselleşmenin ve neoliberal politikaların çocuk oyuncakları da dâhil olmak üzere her şeyi metalaştırdığı bir dönemde artık küreselleşme karşıtı bir hareketin başlaması gerekmektedir.

Dijital oyunların oyuncularına ideolojiyi aktardığı ve öğrettiği söylenebilir. Oyun tasarımcıları, kurallar ve resimler gibi kabul edilen varsayımlarla oyun oyuncularına ideolojiyi ustaca öğreten benzetilmiş modeller yaratır (Frasca 2003; Bogost 2006, 2007):

1. Militarizmin oyununu yaratan kurallar
 2. Emperyalizmin oyununu yaratan kurallar
 3. Irkçılık açısından etnik yapı oluşturan imgeler
 4. Cinsiyetçilik açısından cinsiyet oluşturan görüntüler
- Çoğu zaman, oyun oyuncuları video oyunu kurallarını ve görüntülerini eleştirmezler çünkü bu şeyler oyun normları olarak kabul edilir.

Dijital oyunla, militarizm, emperyalizm, cinsiyetçilik ve ırkçılık gibi ideolojileri içerisinde barındırdığını iddia eden bir çok çalışma vardır. Örneğin Hayse (2013: 442) “video oyunları, ilk kez göze daha çok benzeşmektedir” derken ideoloji meselesinin dijital oyunlarda nasıl temsil bulduğu ve ne sıklıkla görünür olduğuna değinmiştir. Prensky (2001), bilgisayar oyunlarının yeni bir öğrenme kültürü oluşturabileceğinden bahsederek bunun da öğrencilerin alışkanlık ve ilgilerini daha iyi karşılayacağına vurgu yapmaktadır. Bilgisayar oyunlarının sahip oldukları potansiyel dikkate alındığından dolayı, günümüz eğitimcileri ya da uzmanları öğrencilerin öğrenme kapasitelerini arttırmak ve onlara daha iyi öğrenme ortamları sunmak amacı ile bilgisayar oyunlarını sınıf ortamlarında kullanılmaktadırlar. Ancak burada bilgisayar oyunlarının eğitim amacı ile kullanılmasındaki tasarım sorunları ön plana çıkmaktadır. Eğitim için kullanılacak bir oyun tasarlanırken eğitim ve eğlence unsurları arasındaki dengenin sağlanması ve öğrencilerin oyun ortamından gerekli eğitim-öğretim içeriğini alabilmesi için tasarım aşamasında dikkate alınması gereken bir çok nokta olabilmektedir. Bilgisayar oyunları sadece öğrencilerin dikkat ve motivasyonunu yükselten birer ders materyali olarak (Kili, 2005) kullanılırken, başlı başına bir oyun da ders destekleyici materyali olarak kullanılmak yerine, dersin ana materyali olarak da kullanılabilir.

Dijital oyunların kullanıcılar üzerindeki en önemli etkisi, psikolojik ve fizyolojik bağımlılık boyutudur. Dijital oyunlar, yüzüze iletişimin yerini almadığı sürece, sosyal hayatı zenginleştirdiğinden söz edilebilir; ancak gerçek dünyadaki sosyal hayatın önüne geçtiğinde, sanal bir sosyal çevre ve sanal birleşim ile sınırlı kalmaktadır. Zaman kısıtlılığından yakınan modern toplumlar açısından dijital oyunlar, bireylerin yeni sosyalleşme ortamları olarak en uygun mekânlar olarak düşünülmektedir. Bu bağlamda araştırma bireylerin dijital oyunlar aracılığıyla sosyalleşmesi; teknoloji ve toplum arasındaki ilişki bağlamında nicel araştırma yöntemi kullanılarak ele almayı amaçlamaktadır. Bununla birlikte teknoloji karşısında edilgenleşen bir insan modelinin ortaya çıkması üzerinde tartışmayı amaçlamaktadır. Oyun insanlara eğitim, fiziksel etkinlik, sağlığın korunması, kendini gerçekleştirme, toplumsal hayata hazırlık, boş zamanları değerlendirme ve eğlence bakımından olanak sağlarken diğer yandan da şiddet yönelmelerine imkân tanımaktadır. Bu sayede de kişiler güçlü ve zayıf yönlerini kavrayarak gerçek kişiliklerini ortaya çıkarırlar.

Sonuç olarak, çocukların ve gençlerin dijital teknolojiyi kaçınılmaz olarak daha yoğun kullanması dijital oyunları da daha fazla oynamaları anlamına gelmektedir. Bu noktada neler yapılabilir diye düşünüldüğünde öncelikle dijital oyun okuryazarlığının temel seviye eğitim sürecinde olması aileler ve çocuklar için eğitim sürecinden geçmesi etkili olacaktır. Ayrıca çevrimiçi oyunların ve oyun sitelerinin yaş gruplarına göre derecelendirilmesi ve sınıflandırılması; şiddet içermeyen, yerli, eğitici, öğretici ve geleneksel oyunların dijital ortamlara taşınması gibi önlemlerin alınması da dijital oyun okuryazarlığı olgusunun içinde değerlendirilmesi gerekir.

Sonuç ve Öneriler

Günümüzde giderek gündelik yaşamın her alanında yaygın kullanım pratikleri bulan, gündelik yaşam pratiklerimizde etkili bir dönüşüm getiren dijital teknolojiler yeni medya araçlarıyla sağlanmaktadır. Yeni iletişim teknolojileri benlik haz ilişkileri içerisinde gelişmekte ve kapitalist sistemin mantığına uygun bir şekilde bu sistemi ekonomik ve ideolojik olarak yeniden üretmek için kullanılmaktadır. Teknolojinin her geçen gün hızla ilerlemesi, şehirleşme ve oyun alanlarının yetersizliği gibi nedenler çocukların oyun oynama ve sosyalleşme alışkanlıklarını

değiştirmiştir. Zamanla geleneksel oyunların yerini bilgisayar ve internet yoluyla oynanan dijital oyunlar almıştır. Şimdilerde gençlerin dijital oyunlara, geleneksel oyunlardan daha fazla rağbet ettiği söylenebilir.

Oyun yoluyla oyunların nasıl oynanacağını öğrenmek daha da önemlidir. Bu yinelemeli oyun döngüleri, eylemlerle ortaya çıkan ve gelecekteki eylemlerde kullanılan kavramlar araçlar, kavramlar üretebilir. Oyunların geleneksel eleştirileri sadece metnin kendisine odaklanmışken, oyunların sadece oyuncu aracılığıyla gerçekleştirilebildiği gerçeği, oyunu ve onun tüketim bağlamlarını kapsayan teorik modelleri gerektirir.

Görsel ve işitsel medya ürünlerinin olası sosyal, kültürel ve psikolojik etkilerini bilimsel olarak araştırma, değerlendirme kabiliyetine sahip, piyasa üzerinde denetim ve yaptırım yetkisi bulunan bir kuruluşun varlığı Türkiye açısından elzemdir. Bu kuruluşun çeşitli disiplinlerden uzmanları istihdam eden, kendine özgü maddi kaynakları bulunan, bağımsız ve görev alanıyla ilgili düzenlemeler yapma yetkisine sahip olmasının uygun olacağı düşünülmektedir. İçinde dijital oyunların da yer aldığı görsel ve işitsel medya ürünlerini değerlendirecek, sınıflandıracak ve bu ürünler hakkında tüketicileri bilgilendirici materyaller üretecek olan bu kuruluşun, kamu yönetimi sistemimizin içerisinde düzenleyici ve denetleyici kurumlar oluşturulmalıdır. Ayrıca dijital oyun ve eğitim kesişiminde yaş ve içerik denetimi video oyunlarının satış denetimi alınan önlemlerin etkinliği çevrimiçi oyunların denetimi gibi konular dikkate alınmalıdır.

Özet

İçinde bulunduğumuz bilişim çağında teknoloji, iletişim ve medyanın şekillendirici gücüyle birlikte çok katmanlı bir kültürel dönüşüm sürecine girilmiştir. Dijital iletişim araçlarının, özellikle de çevrimiçi iletişim araçlarının oluşması kültürdeki kapsamlı değişime işaret etmektedir. Teknolojiyle toplumu özdeşleştiren Castells'e göre ağlar, toplumun sosyal morfolojisini oluşturmakta ve kültürel süreçleri kökten değiştirmektedir. 21. Yüzyılın kültürel oluşumunda öne çıkan en önemli gelişme internetin keşfiyle birlikte, iletişim elektronikleşmiş; toplumlar, ağ toplumuna dönüşmüş; enformasyon dijitalleşmiş ve literatüre dijital kültür olgusu dahil olmuştur. Dijital kültür, modern kapitalist yaşamın yarattığı ihtiyaçlara bir cevap olarak çeşitli alanlara yayılmış olan ve kendini yenileyen bir olgu olarak değerlendirilmektedir. Yeni medya dolayımıyla iletişim ortamları, çevrimdışı (offline) gelişen kültürel, siyasal, ekonomik ya da politik süreçlerden etkilenmekle kalmamakta aynı zamanda bütün bu yapıları da yeniden üretmektedir. Bu bağlamda bu çalışmada dijital medyanın, küreselleşmenin ve sosyal medyanın kültür üzerindeki etkileri ve değişimleri araştırılacaktır. Kültürün dijitalleşmesi, sosyal medyanın kültür üzerine etkileri çalışmanın ana sorunsalını oluşturmaktadır.

Anahtar Kelimeler: *Kültür, Dijitalleşme, Dijital Kültür, Sosyal Medya*

Giriş

İnternet teknolojilerinin gelişmesi ile birlikte ortaya çıkan yeni medya alanlarında bireyler artık dijital/sayısal olarak ifade edilmekte, kültürün de dijitalleşmekte/sayısallaşmakta olduğu dile getirilmektedir. Marx'a (1848) göre, kapitalizmle birlikte her şeyi maddi unsura dönüştüren modernleşme süreci, insanı da maddeleştirmiş, ona sayısal bir değer vermiş ve bunun sonucunda bireyler, maddi olan her şeyin sıvı hale dönüşmesi, yani akışkan bir biçime bürünmesi sebebiyle kendi varlığının dışında ait olduğu alanın biçimine bürünmüştür. Zaman, mekân ve bedensel sınırlılıkları aşarak akışkan hale gelen bireylerde olduğu gibi ilişkiler de akışkanlık kazanmaktadır. Kültürel değişimin postmodern yorumuna göre zaman ve mekân, kültürel üretimin düzenleyici ilkeleri olarak konuşlanmışlardır. Web siteleri üzerinden bireylerin bir profil hesabı aracılığıyla, müzik, video ve resim paylaşımından politikaya varıncaya kadar pek çok alanda birebir ya da grup olarak iletişimde bulunduğu çevrimiçi alanlar, pek çok kültürel etkinliğin gözlemlendiği yeni bir "mekân" olarak değerlendirilebilir. Sanal alan ya da siber uzam adıyla tanınan bu mekân içinde gerçeklik, nesnel tanıma ulaşmadaki yetisini kaybetmesi sebebiyle artık sanal gerçeklik ve sanal kimlikler üretilmektedir.

Bauman, bu kimliklerin belirsiz, kurlsız ve başına buyruk olmasına karşın, imaja dayalı ve onunla merkezleştirilen simgesel varlıklara dönüştüğünü dile getirmektedir. Sosyal medya aracılığıyla aynı zamanda kitlesel iletişimde de bulunabilen bireyler içerik üretebilmelerinden dolayı doğrudan doğruya toplumsal, kültürel ya da siyasal alanlarda anlam üretimine katılabilmektedirler.

Dijitalleşme ile birlikte kültürel hayatta bir akışkanlık söz konusu olmuştur. Bu akışkanlık sayesinde kültürel aidiyetler ulus devletin sınırlarını aşan sosyal hareketler –çevreci, feminist hareketler vs. güçlenmiştir. Bundan başka soy-sop, ırk ve dini inanışlar gibi ayrımlar üzerine bina edilmiş ve ulus devlet potasında eridiğine inanılan çeşitli aidiyetlerin yeniden gündeme gelmesi söz konusu olmuştur.

Çalışmanın amacı, değişen ve gelişen kitle iletişim araçlarının, dijitalleşmenin ve sosyal medyanın kültür üzerine etkileri olarak belirlenmiştir. Bu bağlamda çalışmanın amacının alt başlıkları şu şekilde belirlenebilir;

- Yeni iletişim teknolojilerinin gelişmesinin kültür üzerinde etkileri nelerdir?
- Sosyal medya ve sosyal ağlar kültür değişimine neden olur mu?
- Dijital kültürden bahsedebilir miyiz?
- Artık günümüzde milli bir kültürden bahsedebilir miyiz?

Bu alt başlıklar çerçevesinde çalışmanın çerçevesi oluşturulmuştur. Çalışmada bu sorulara cevap aranmıştır.

Konu ile ilgili yapılmış sınırlı çalışma olması, bu çalışmanın önemini arttırmaktadır. Literatüre konu ile ilgili olarak yeni bir bakış açısı getirmesi bakımından önem taşımaktadır.

Yeni Medyanın Gelişimi ve Küreselleşme

McLuhan'ın "evrensel köy" benzetmesiyle işaret ettiği, birbirinden giderek daha fazla haberdar olan bir dünya düzenine denk düşen küreselleşme, "küresel ölçekte işleyen ve sınırları aşarak toplumları ve kurumları yeni zaman-mekân bileşimlerinde entegre edip bağlayarak, gerçekte ve deneyimde dünyayı birbirine daha bağlı duruma getiren süreçler" şeklinde tanımlanabilir (Larrai, 1995: 207).

20. yüzyılın son çeyreğinden itibaren özellikle kitle iletişim araçlarının devasa nitelikte yaygınlaşmasıyla birlikte uluslararası ilişkiler – bağlantılı olarak kültürler arası ilişkiler- iç içe geçerek yoğunlaşmaktadır. Söz konusu yoğunlaşma, homojenliği ifade ettiği gibi, heterojenliği de içine alan bağlam içinde gelişmektedir. Önceki dönemlerden farklı olarak, sermayenin, yaşam tarzlarının, fikirlerin ve inançların daha hızlı akışkanlık göstermesi bir yana, hiç olmadığı kadar farklılıkların ve ötekinin kendisini temsil etmesi söz konusudur.

Kitle iletişim araçlarının küreselleşme sürecinde merkezi bir konumu vardır. Kitle iletişim araçlarının etkileri hem geniş hem de sınırlıdır. Küreselleşmenin olduğu tüm alanlarda önemli bir rolü olmasından dolayı geniştir, gündelik yaşamın önemli bir parçası olmasına rağmen kültürel deneyimin tek kaynağı olmamasından dolayı da sınırlıdır (Tomlinson, 2004: 37). Her ne kadar kitle iletişim araçları, küreselleşme konusunda biricik güç değilse de küreselleşme sürecinin ortaya çıkmasında ve hız kazanmasında çok etkin bir rol oynamıştır. Sahip olduğu teknolojik nitelikleri nedeniyle ulusal sınırları ortadan kaldırmış, ülkeleri (özellikle de bu teknolojilere sahip olanlar lehine) birbirleri ile daha fazla "etkileşim" içerisine sokmuştur. Sadece teknolojik değil, aynı zamanda sahip olduğu sosyal, kültürel ve ideolojik özellikleri nedeniyle de küreselleşmenin altyapısını oluşturmuştur. Yani sıra kitle iletişim araçları ile kurulan dünya iletişim şebekesi, toplumların her yerini, her alanını kuşatmıştır. İktisadi, siyasal, sosyal ve kültürel alanlarda yirminci yüzyılın sonlarında ortaya çıkan gelişmeler, küreselleşme başlığı altında değerlendirilebilir. Kuşkusuz küreselleşme sürecinin ortaya çıkmasında iktisadi, siyasi, sosyal ve kültürel faktörlerin rolü büyüktür. Yüzyılın sonuna ilişkin küreselleşmeyle ilgili kavramsallaştırma Robertson (1998: 102) tarafından "tikelciliğin evrenselleşmesinin ve evrenselciliğin tikelleşmesinin iç içe geçmesini içeren derin, ikili bir süreç" olarak tanımlanmaktadır. Hall (1998: 94) ise, küreselleşmeyi, "eklemlenmiş tikelliklerden" oluşan bir çerçevede kavrar.

Küreselleşme, başka bir deyişle, dünyanın küçülmesi ve tek bir yer olarak algılanma anlayışının yaygınlaşması olarak tanımlanmaktadır (Aslanoglu 1998: 124-125). Buradaki anlamıyla küreselleşme, dünyanın küresel köy haline gelmesidir (Robertson 1998: 22). Geniş manasıyla, küreselleşme, bugün daha çok Kuzey-Batılı zengin ülkelerin siyasal, toplumsal ve kültürel olarak yoksul ülkeler karşısındaki hegemonyacı üstünlükleri şeklinde kullanılmaktadır. Söz konusu ülkelerin koydukları kurallara uyanların küreselleşme çerçevesi içerisinde değerlendirileceği, uymayanların ise dışlanıp yok sayılacağı mantığı ağırlık kazanmaktadır (Talas 2005: 99-101). Sonuç olarak küreselleşme, pazarın mutlak egemenliği, devletin küçülmesi ve özelleştirmenin tamamlanması, uluslararasılaşmış sermayenin sınırsız hareketi şeklinde tanımlanabilir (Şaylan 1995: 208). Kuzey-Batının değerlerini egemen kılmanın bir diğer adı olarak kafalarda netleşen küreselleşmenin benzer sonuçları zorlayan, ancak sosyokültürel yapı özellikleri bakımından ülkeleri farklı problemlerle karşı karşıya bırakan yönü dikkate alınmalıdır. Şüphesiz küresel dalganın önemli problem alanlarından biri de kültürel sonuçlarıdır.

Yeni Medya ve Dijitalleşmenin Kültür Üzerindeki Etkileri; Milli Kültürden Evrensel Kültüre

Yeni medya, kültürel ürünlerin dijitalleşme sürecini başlatmıştır. Kültür üzerindeki bu önemli değişimin kökleri yeni medya teknolojilerinin öncülü olan 19. yüzyılın sonunda ortaya çıkmış olan tekniklerde bulunmaktadır. Bu teknikler kültürel ürünlerin yeniden üretimini mümkün kılarak, bunların kitleselleşmesine sebep olmuştur.

Bir milletin hayat tarzı olarak tarif edilen kültür ile küreselleşme ve dijitalleşme karşılıklı olarak birbirini etkilemektedir. Hem küreselleşme, büyük dönüşüm ve değişimlerle kültürü etkilemiştir, hem de kültür bizzat dönüşümleri meydana getirmede etkili olabilmiştir. Neticede, küreselleşme olgusuna önderlik eden toplumların kendi hayat tecrübesi ve sahip oldukları bilgileri bir kültür unsurudur.

Yaşam biçimi bakımından, toplumların gittikçe birbirine benzemesi ya da bir başka deyişle, "Amerikanlaşması" şeklinde bir değişim meydana gelmiştir. Dünya ticaret kültür ve sanayisi görünüş, doku ve ses bakımından Amerikan etkisi taşımaktadır. Levis'ler otomobillerden daha çok satış yapmaktadır. Kompakt disklerde Amerikan parçaları görüntülü olarak tüm dünyaya yayılma imkânı bulmaktadır. Yeni nesiller, ailelerinin bütçelerini zorlayarak bu yeni yaşam biçimini tercih etmektedirler. Düşünce şeklinde, münasebetlerde, eğlencede, giyim tarzında, kısaca bir bütün olarak insanların hayata bakış açıları – özellikle genç nesil içerisinde – benzeşme meydana gelmektedir. Ailelerin çocukları için aldıkları ayakkabıdan, gençlerin eğlenirken diskoyu tercih etmelerine, giydikleri kazak, tişört ve blucinlere kadar günlük hayatta baskın bir Amerikan kültürü kendini

göstermektedir. Amerikan video, plak, film, CD ve VCD'lerindeki ürünler-yapımlar, rakipsiz hâkimiyetlerini devam ettirmektedirler. Öyle ki, bu hâkimiyet otoriter yönetimlerin engellemelerini bile aşacak şekilde kabul görmektedir. Bilhassa İranlı gençlerin dipçik yeme uğruna, disko müziği dinlemeleri ve etek ve perdesü altında da olsa, blucin giymeyi tercih etmeleri, engellemeye rağmen, etkilenmenin olduğunun en güzel ispatıdır. Aynı şekilde yeme-içme alışkanlıkları da Amerikan kültürünün simgesi haline gelmiş olan "Coca-Cola", "Pepsi" ve "McDonalds"ların baskın karakterli etkisi altında bulunmaktadır (Talas 2003: 60-69).

Roland Robertson, dünyanın giderek küçülen ve tek dünya olarak tanımlanan hale geldiğini, ulusal olarak kurulmuş toplumlarınsa daha fazla çok kültürlü şekle büründüğünü ifade etmektedir. Ayrıca çok etnikliğin dışsal ve içsel zorlamalarıyla yüz yüze gelen toplumların meydana geldiğinden ve birey ile kolektif ötekilerin özdeşleşme koşullarının her zamankinden daha karmaşık hale geldiği bir dünyadan bahsedebileceğini ileri sürmektedir (Robertson 1998: 99-100).

Ritzer, küreselleşmenin ve dijital dönüşümün kültürel sonuçlarını "McDonaldslaşma" kavramıyla açıklamaktadır. Ritzer bu çalışmasında aslında özellikle Weber'in modern toplumdaki bürokratikleşmenin yükselişi temasından etkilenmiştir. Öyle ki, Ritzer kendi analizlerinde büyük oranda Weber'i çağırıştırılmaktadır. Weber'de bürokratik organizasyon rasyonalitesi çalışmasının merkezindeydi, buna karşılık Ritzer'in çalışmasının merkezinde bugünün yükselen küresel sistemindeki rasyonalite epitomesi mevcuttur. Ritzer McDonaldslaşmayı dünyanın yanı sıra Amerikan toplumundaki çok baskın sektör olarak fastfood restoranlarının kurallarının etkili olduğu süreç olarak tanımlamaktadır. McDonaldslaşmanın toplumsal hayata nüfuz etmesi dört faktörle izah edilmektedir. Bunlar; etkinlik, hesaplanabilirlik, tahmin edilebilirlik ve kontrol edilebilirlikten oluşmaktadır. Birincisi, günlük hayatta istek duyma ve doyuma ulaşma arasındaki zaman aralığının kısaldığını göstermektedir. İkinci ilke ise, paranın zaman ve harcanan emek karşılığı değerinin hesaplanmasını kolaylaştırmaktır. Üçüncü ilkeye göre, sunulan ürünler o kadar standart hale gelmiştir ki, tüketicinin aklına alternatif bir istek gelmemektedir. Dördüncü ve sonuncusu da, Mc Donaldslaşma sürecinde geliştirilen teknolojilerle tüketicinin kontrol edilebilmesidir. Tüketici kontrolü, kuyruğa girmeyi sağlayan rahatsız oturma yerleri ve arabaya yiyecek servisi gibi işlevlerle yapılmaktadır. Tüm bu ilkelerin duyurduğu temel öge zamanın kontrol edilmesi ve yoğun bir standartlaşmadır. Bu standartlaşma sadece hazır yiyecek alanında değil, çocuk bakımı-eğitimi gibi gündelik hayatın diğer alanlarında da etkilidir. "(Ritzer 1993: 7-13).

Yeni medyanın dijitalleşmenin kültürel olarak etkilerine baktığımızda ise, Yeni medyanın temel prensiplerinden kültürel kod çevrimiyle kültürel ürünler yapısal ve işlevsel değişime uğramıştır. Manovich'e göre yeni medyanın kültürel ve bilgisayar olmak üzere iki farklı katmanı bulunmaktadır. Yeni medya bilgisayarda yaratıldığına, dağıtıldığına, saklandığına göre; bilgisayarın mantığı medyanın geleneksel kültürel mantığını da etkilemektedir. Bilgisayarın dünyayı modelleyiş tarzı, verileri temsili, bunlar üzerinde işlem yapabilmemize izin vermesi; kültürel katmanın oluşumunu ve içeriğini etkilemektedir. Kültürel katman da aynı şekilde bilgisayarı etkileyerek yeni bilgisayar kültürünü oluşturmaktadır. Bu yeni kültür insanın dünyayı algılayışıyla bilgisayarın sayısal temsiline bir karışımıdır (Manovich, 2001).

Kültürün bilgisayarlaşması, bilgisayar oyunları, sanal dünyalar, web siteleri gibi yeni kültürel formların ortaya çıkmasına yol açtığı gibi; fotoğraf ve sinema gibi eskileri de dönüştürmekte ve yeniden tanımlamaktadır. Manovich yeni medya ile ilgili herşeyi ve tüm ürünleri yeni medya objeleri olarak isimlendirmektedir. Bu yeni medya objeleri aynı zamanda da kültürel objelerdir ve fiziksel olarak gerçek dünyada var olan nesneleri referans alarak, onları temsil ve inşa ederek oluşturulmaktadır. Yeni medyayla birlikte yeni kültürel formların, ürünlerin ortaya çıkması ve kültürün dönüşüme uğraması siber kültür alanının doğmasına sebep olmuştur (Manovich, 2001). Siberkültür kavramı akademik alanda 1990'ların ortasından beri kullanılmaya başlanmıştır. David Bell, giderek genişleyen bir kavram olarak gördüğü siber kültür çalışmalarını insan ve dijital teknolojilerin nasıl etkileşime girdiğini, birlikte nasıl var olduğunu düşünme yolları olarak görmektedir. Bu anlamda siberkültür bütünlük uygulama ve temsillerin matrisi olan siber alandaki yaşam tarzları ya da siber alanın şekillendirdiği yaşam tarzları olarak görülebilmektedir. Bu bağlamda siberkültür yeni teknolojilerin insan yaşamını ve yaşamındaki temsilleri, imajları, anlamları nasıl değiştirdiği üzerine düşünmeyi içermektedir (Bell, 2007).

Kültürün değişmesi toplumsal değişimi de beraberinde getirmektedir. Yeni medya bu açıdan düşünüldüğünde sadece kültürel ürünlerin dijitalize olmadığı; kişilerarası ilişkilerin de dijitalize olmaya başladığı yorumu yapılabilir. Sosyal medya olgusu bu yorumu örneklendirebilmektedir.

Dijitalleşme ile insanın yabancılaşma başladığı ve daha fazla yalnızlık yaşaması söz konusu olmuştur. Günümüzde insanların başkalarının yaptığı tercihlere tabi olarak, fazla sorumluluk almadan yaşadığı korumalı dünyanın giderek tarihe karıştığı görülmektedir. Ulagay'a göre, önceki dünyanın geçen yeni dünyada, bilgi beceri varlık sebebi olarak insanlığın karşısında durmaktadır. Ona göre, insanlar, kendi ayakları üzerine basmayı öğrendiği ilk

anda da taşıyamayacağı kadar ağır bir yükün altında kalmaktadır. Ulagay'ın tespitlerine göre, daha dar bir sosyal çevrenin (aile, komşu, köylü, mahalleli) kurallarıyla yaşamaya alışmış birinin, birdenbire kendini küresel bir ortamın rekabetçi ve acımasız kanunları içinde bulması çok büyük bir zorluk olacaktır. Onun ifadesine göre, söz konusu ortam, insanı o ana kadar hiç tanık olmadığı ölçüde büyük bir yalnızlığın ve kaybolmuşluğun içine itebilecek niteliktedir. Yine Ulagay'ın bildirdiğine göre, işte bütün bunlar, insanlığın yeni bir dönüm noktasına geldiğini göstermektedir ve bütün bunlar modern toplumun bireyselleşmiş insanının durumunu açıklamaktadır (Ulagay 2001: 35-36).

SONUÇ

Dijitalleşme ve küreselleşme hâkim kültürel kodlar açısından, kültürün üretimi ve tüketiminde, zengin bir taşıyıcılık ve yaygınlaştırma işlevi görmektedir. Kitle iletişim teknolojilerinin köken itibarıyla Anglo-sakson ve Amerikan olmaları, sadece teknolojiye sahipliği değil aynı zamanda kültür akışının yönünü gösterir. Batılı yaşam tarzının, değerlerinin ve tüketim kültürünün toplamını gösteren küresel kültür, medyalar yoluyla –özellikle de televizyon, internet ve reklamcılık- kendisini ve imgelerini dünyanın tüketimine sunar.

Sözgelimi Donald Duck (bizdeki alımlanmasıyla “Vak Vak Amca (!)” çizgi film endüstrisi yoluyla, CocaCola ve McDonald's reklamcılık ve pazarlama dünyasıyla, Levi's reklam ve modayla evrensel tüketim dünyasına sunulmaktadır. Sunulan sadece mal ve hizmet değil, aynı zamanda nesnelerin kültürel anlam ve imgeleridir.

Dijitalleşme sürecinde kültürel boyuttan bakıldığında, ileri iletişim teknolojilerini ellerinde bulunduran Batı kültürleri sahip oldukları bu teknolojik üstünlük sayesinde küresel kültür aktarım sürecinde başat bir rol oynamakta, yerel kültürlerin sahip olduğu öğeleri de bu aktarım sürecine eklemelendirerek kendi kültürlerinin diğer kültürler üzerindeki başatlığını sağlamlaştırmakta ve kendi kültürel arka planlarını taşıyan ürünleri bu kültürlerle hiç de zorlanmadan pazarlayabilmektedirler.

Çalışmayla, medyanın hem küreselleşmeyi yaygınlaştırdığı, hem de yaygınlaşan küreselleşme ile birlikte yayılan küresel kültürün medya yoluyla yerel kültürleri “yerinden ettiği”, kendine eklemlemek suretiyle yerelliği, bağlamından kopararak yeniden ürettiği, yerelliklerin evrenselleşmesi temasının hiç de kolay gerçekleşmediği aksine çağdaş kültürün yerellikleri yeniden üreterek hem ötekileştirdiği, hem de kendine eklemelendirdiği ortaya çıkartılmıştır.

Bütün bu gerçeklerden yola çıkarak, küreselleşmenin kültürel sonuçları ile ilgili olarak şunlar söylenebilir: Küreselleşmenin kültürel sonuçları ile ilgili olarak en fazla öne çıkan husus dünyada Amerikan kültürünün küresel kültür olarak yaygınlık kazanması meselesidir. “Amerikanlaşma”, “McDonaldslaşma” gibi özgün ifadelerle de izah edilen bu konu, hayat tarzı açısından dünyada numune bir kültür olma yolunda çok önemli mesafeler kat eden Amerikan yaşam biçiminin, anti demokratik toplumlar da dâhil olmak üzere, yaygınlaşmasından kaynaklanan bir husustur. Amerikan kolası, hamburgeri, eğlence biçimi, dans şekilleri, film, plak, CD ve VCD gibi somut kültür unsurlarının yoğun bir şekilde küresel ölçekli olarak kabulü böyle bir realitenin varlığını kabul etmenin zorunlu olduğunu ortaya koymaktadır.

Özet

İletişim teknolojilerinin dünden bugüne her geçen gün gelişmesiyle kadınların da hayatlarında değişimlere neden olmuştur. 1990’lı yıllarda kişisel bilgisayarların yaygınlaşması ve internet teknolojisinin günlük hayatta yer almasıyla kadınlarda bu alanda kendilerini ifade etmeye başlamışlardır. Cep telefonu ile birlikte her yerde, her zaman ulaşılabilir olunması, cep telefonlarının bilgisayar alt yapılı akıllı telefonlara dönüşmesi ve telefonda internet kullanımının ucuzlaması ve yaygınlaşması, sosyal medyanın oluşması kadınlarında dünyada siberfeministlerinde öngördüğü üzere özgürce dolaşmasının yolunu aralamıştır. Kadınlar, dijitalleşme hem sanal dünyada hem de onun yansıması ile gerçek dünyada daha aktif yer alması sağlanmıştır. Bu düşünceden yola çıkarak çalışmamızda 1970’li ve 1980’li yıllarda doğan kadınların hayatına da yer alan dijitalleşmeyi ve katkılarını ortaya koymak adına derinlemesine görüşme yöntemi kullanılacaktır. 1970’li ve 1980’li yıllarda doğan kadınların dijitalleşmenin hayatlarına yansımalarının ortaya konulması adına çalışan, en az lisans eğitime sahip toplam altı kadınla derinlemesine görüşme gerçekleştirilecektir. Bu konuda iletişim alanında sınırlı çalışma bulunması nedeniyle bu çalışmanın akademik boşluğun doldurması amaçlanmaktadır.

Anahtar Kelimesi: *Kadın, Dijitalleşme, Değişim, Sosyal Medya, Cep Telefonu*

GİRİŞ

İletişim teknolojilerinde dijitalleşmeyle birlikte toplumun yapısı ve günlük yaşam da değiştirmektedir. Toplumsal cinsiyet açısından bakıldığında iletişim araçlarının dijitalleşmesi kadınları da etkilemekte, günlük hayatlarında değişimlere yol açmaktadır. Geleneksel medya ataerki sistem üzerinden kadın sunumunu yeniden inşa etse de yeni medya ile birlikte bu yapılanma nasıl değişmektedir. Günümüz de ataerki, erkek egemenliğini, erkeğin kadına egemen olduğu güç ilişkilerini anlatmak ve çeşitli yollardan kadını ikincil konuma yerleştiren sistemi nitelemektedir (Bhasi,2003,1). Genel görüşe göre geleneksel medyanın erkek egemen yapıya sahiptir. Bu açıdan yeni iletişim teknolojilerinin yapısı ve etkisi tartışılmaktadır. Dijital açık, kadınlar açısından düşündüğümüz de “Dijital bölünme nedeniyle İnternet teknolojilerinin kimi kadınları güçlendirdiği, kimilerini ise ‘marjinalleştirdiği’ söylenmektedir”(Varol, 2014, 220). Dijitalleşme her kadının hayatına bir şekilde dokunmaktadır. Toplumsal cinsiyet açısından kadınlar, internetle birlikte güçlü bir iletişim alanına kavuşmaktadır. Bilgisayar ve internetin günlük hayata yer almaya başladığı, 1990 yıllardan sonra kadınlar, düşüncelerini geniş kitlelere ulaştırabilecekleri bir teknolojiye sahip olmuşlardır. Yeni iletişim teknolojileriyle birlikte kadınlar, hegemonik örüntüler ve toplumsal cinsiyet ideolojileri yeniden şekillenmekte ve kadınlara daha özgür bir alan sunulmaktadır. Böylece yeni medya kadınlara zamansız ve mekansız iletişim alanı, kendilerini daha doğru ve birlikte ifade etme şansı sunmasının yanı sıra yaşam alanlarını yavaş yavaş sanal dünyaya kayması ile yeni bir var olma alanı oluşturmaktadır. Bu çalışmada Türkiye’de kadınların yeni iletişim teknolojilerinin kısaca dijitalleşmenin kadınların hayatları etkisinin sorgulanması amaçlanmaktadır. Bu kapsamda dijitalleşmenin teknoloji yazını ile hayatlarına sonradan eklenen kadınların bu teknolojiyle tanışması ve kullanımı sorgulanacaktır. Buradan yola çıkarak 1970’li ve 1980’li yıllarda doğan kadınların dijital dünya ile tanışması ve bu dünya ile ilişkisi ortaya konulmaya çalışılacaktır. Bu konuda sınırlı çalışma olması nedeniyle bu çalışmayla akademik boşluğun doldurması ve kadınların dijital dünya ile ilişkilerinin ortaya konulması açısından önem arz etmektedir. Çalışmada yöntem olarak derinlemesine görüşme yöntemi ile 1970’li ve 1980’li yıllar da doğan kadınların dijital dünya bakış açıları ortaya konulmaya çalışılacaktır. Ayrıca bu çalışmanın 1970’li ve 1980’li yıllar da doğan kadınların dijital dünyayı katılım ve kullanımı açısından veri sağlaması amaçlanması nedeniyle iletişim bilimleri alanına önemli katkılar sağlaması açısından önem arz etmektedir.

YENİ İLETİŞİM TEKNOLOJİLERİ VE KADIN

Ataerki bir dünyada yaşadığımız düşünüldüğünde geleneksel kitle iletişim araçlarının kadın ve erkeklerin hayatına etkisi yanı sıra bu alanların yeniden üretim sürecinde kadın ve erkek sunumlarında toplumsal cinsiyet kalıplarında ataerki sistemi yeniden kurmaktadır. “Kitle iletişim araçları, sınıf ve toplumsal cinsiyet ideolojisini güçlendirip

yaymak için üst sınıf ve üst kast erkelerin elindeki çok önemli bir araçtır. Filmler ve televizyondan dergilere, gazetelere ve radyoya her yerde kadının betimlemesi propotiptir ve çarpıtılmıştır” (Bhasi,2003,1). İkinci dalga feminizm¹ öne sürdüğü gibi geleneksel kitle iletişim araçları, kitle kültürünün yansıtıcısı olarak daha çok eril söylemlere hakim olması, elit kültürde kadının dışlanması kaynaklıdır. “Kitle kültürü en nihayetinde kadın olmaktan çok erkektir, çünkü kitle kültürünün üretimi üzerinde gerçek kontrolü daima erkek sağlamaktadır... Dışılığın kitle kültürüne genelleştirici bir biçimde atfedilmesi daima kadınların yüksek kültür ve onun kurumlarından gerçekten dışlanmasına bağlıdır” (Huysen,1995, s.73). Gelişen iletişim teknolojileri sonucu bilgisayar teknolojisinin hayatımıza girmesi ve internetle birlikte küresel köyde dolaşma özgürlüğü, geleneksel medyanın kalıplarını kırmaktadır.

Bilgisayar/İnternet Teknolojisi ve Kadın

Kadınlar hem bilgisayar teknolojilerinin işlevsel olarak kullanılmaya başlaması hem de internet yoluyla yeni bir iletişim sisteminin gelişmesiyle dünden daha çok iletişim teknolojilerinin içinde yer almaya başlamaktadır. 1990 sonrası kişisel bilgisayarın ucuzlamasıyla bilgisayar kullanımı yaygınlaşmıştır.1993’den sonra ise internetin ticarileşmesi sonucu milyonlarca bilgisayar kullanıcısının bağlandığı bir alt yapı oluşmuştur (Geray,2003,132). Öncelikle çalışan kadınların iş alanlarında daha çok kullandığı bilgisayar, zamanla sadece çalışma hayatında değil kişisel bilgisayarlarla kadınlar ev ortamında bu teknolojiye duydukları ihtiyaç çerçevesinde kullanmışlardır. Fakat kadınların, bu dönemde bilgi gereksinimi, teknoloji öğrenme kapasiteleri hakkında önyargılar, bu teknolojiyle yeni tanışmasının dezavantajları ve kullanımının genel anlamda koşullar gereği kısıtlı olması bu teknolojiyi bir anda değil yavaş yavaş edinmeleri ve kullanmalarına yol açmıştır. Dery (1999,120), sosyo-biyolojik kabarma kadınların teknoloji için "genetik" yetersizliği hakkında kendi kendine karar veren dijital seçkinler olduğunu söylemektedir. Kadınların dijital dünyada erkekler kadar yetkin olmadıkları düşüncesi, kadınların bu konuda yetersiz eğitim veya eğitim koşullarına sahip olması, bu konudaki dünyadaki devlet politikalarından kaynaklanmaktadır. Gelişen ağlarla birlikte iletişim hızının artması dünyayı ve günlük hayat etkinliklerini daha fazla bu alanda yer alması kadın dünyasını da değişime sevk etmiştir. Bilgisayar ve internet teknolojisi sonucu, 1990’lı yıllar için telefondan daha hızlı bir iletişim aracı olması ayrıca görüntü, ses ve yazının hızlı bir şekilde gönderilebilmesini sağlamıştır (Şeker,2005,81). Böylece iletişimin hızlanması, ekonomik anlamda ucuzlaması kadınların bu teknolojiyi kullanması için bir teşvik oluşturmıştır. Bilgisayar üzerinden dört tür iletişim şekli; 1.e-mail vb., bir kişiden diğer kişiye eş zamanlı olmayan iletişim 2. Usenet, e-grup gibi çok kişi arasında eş zamanlı olmayan iletişim, 3.Chat vb., bir kişiden diğer kişiye, bir kişiden çok kişiye ya da çok kişi arasında eş zamanlı iletişim,4.web vb., bir kişiden çok sayıda kişiye yada çok kişi arasında eş zamanlı olmayan iletişim(Akt. Atabek,2001,118). Kadınlar internetin getirdiği bu dört iletişim yolunu zamanla fonksiyonel olarak kullanmıştır/kullanmaktadır. Elektronik yayıncılık, e-posta ve İnternet üzerinden haber alan/veren, sohbet grubu içinde yer alan ve forumlara katılan yeni bir kadın profili karşımıza çıkmasıyla kadın geleneksel kitle iletişim kalıplarından da sıyrılmaktadır. 1990’lar da internet kullanıcılarının en çok kullandığı araç e-mail ve ilk olarak kadınların e-mail ile bu alanda yer aldıklarını söylemek doğru olur. Kadınlar yeni kamusal alanda örgütlenmesi veya örgütlerin bu alanda var olması ve sesini duyurması daha kolaylaştırmak ve kadınların özgüvenini yerine getirmektedir. O dönemde kadınlar e-mail grupları oluşturmuşlardır. E-mail grubuna örnek olarak Kadın Kurultayı E-Grubu” verilebilir. Bu e-grup, o dönemde Türkiye Cumhuriyeti Kanunları ve Medeni Kanun tartışmaları sırasında kadın örgütlerinin organize etmesine katkı sağlamıştır. Bu gruba üye olmak için gruptan üyelerinin yeni üyeyi önermesi gerekirken, gruptan kendi isteği dışında çıkarılmamaktadır. E-gruba üye sayısı Mart-Mayıs 2006 döneminde yaklaşık 1100’dur. Grupta katılımcılar genellikle gerçek ad-soyadlarıyla yer almaktadır. Türkiye kadın hareketinin tarihe yazımını içinde bir platform oluşturmuştur (Göker,2007,269). Aslında kadın yazını için önemli bir tarih kaydedici olarak dijital dünya yer almaya başlamaktadır. E-mail yoluyla tek tuşla, binlerce insana ulaşabilen kadınlar, kendilerini daha doğru ve eşit ifade edebilecekleri bir kamusal alana edinmişlerdir. Bu alanda da hegemonik yapı ve toplumsal cinsiyet ideolojisiyle şekillense de kadın için özgürlük alanı sunmaktadır. Aynı zamanda dezavantaj sağladığı yerlerde olmaktadır; e -postanın gelişmesi kadınları bir araya getirirken, güçlenmelerini sağlasa da kadınlar açısından1999’da ABD’de 200’den fazla e-posta gelin ısmarlama ajansı bulunmaktaydı. Ülkelerinden kaçırılan 4-6 bin kadın bu ajanlar ile feminen olarak sunulmaktaydı (Ritzer ,2011,475).

Türkiye İstatistik Kurumu (TÜİK) verilerinde 2004-2018 yılları internet kullanımı tablosuna göz attığımızda her geçen yıl kadınların daha fazla internete daha fazla yer alması bize göstermektedir ki kadınlar bu alanda her geçen gün gelişen teknoloji ile daha fazla dahil olmaktadır. Ayrıca internet siteleri ve bloggerlar, kadınlarla ilgili birçok

¹ Feminizm, “Latince kadın anlamına gelen femine sözcüğünden türetilen feminizm Fransızca’ya 1837’den sonra, (Feme-Kadın sözcüğünden türetilerek) İngilizce’ye ise 1890’larda womanism(kadıncılık) ismini alarak girmiştir”(Sevim,2005,7). Feminizm 20.yüzyıl ilk dönem kadınların seçme ve seçilme hakkını elde etme mücadelesi, ikinci dönem 1960-1980 yasal ve siyasal mücadele dönemi, üçüncü dönem 1990-2008 birey odaklı farklı grupların yaşadığı sorunlara odaklanır, dördüncü dönem ise 2008 sonrası ben kimim sorusunu arayan cinsiyet sosyal bir davranış yansıtır. Uygulamalı cinsiyet ihtiyacı(Pratical Gender Needs -PGN), kadınlar ihtiyacına, işe nasıl ulaştığını sorgular. Burada sosyal medya kadına hem sosyal hem de ekonomik ihtiyacını karşılayabilecek potansiyele sahiptir. Stratejik cinsiyet ihtiyacı (Strategic Gender Needs-PNG), ihtiyaçların arka planı sorgulanır, sosyal medyadan parayı nasıl kazanacak, kazanılan parayı kim harcayacak, ne kadar sürede kazanılacaktır.

konuyu görünür hale getirmekte ve kamuoyu oluşturulmasını sağlamaktadırlar. 1 Ocak 2016 ve 1 Mayıs 2017 tarihleri arasında, www.change.org adresinde, kadınlara yönelik toplam 226 imza kampanyası başlatılmış, bu kampanyalardan 26 tanesi amacına ulaşarak değişim yaratmıştır. Başlatılan kampanya yüzdeleri incelendiğinde en fazla kampanya örgütlenmesi kadınlara yönelik şiddet üzerinedir (Kiraz&Kestel,2017,153). Bloglar kadınlar için yeni bir buluşma ve paylaşım alanı oluşturmuştur. Depeli(2015,271), yaşları 20 ile 40 arasında, 21 kadın bloggerin sayfasını otobiyografik anlatı ve kadın yazınsallığı açısından incelemiştir. Blog yazar kadınlar için blogosfer, hitaplar ve seslenişler, minnet, özlem, sevgi bildirimleriyle dolu, sıcacık bir sosyallik ve paylaşım ortamı gibi olduğu ortaya koymuştur. Gerçek dünyada deşifre olmaktan çok korkan, fakat öte yandan blogger arkadaşlarıyla gerçek ortamlarda buluşup yine blog isimleri üzerinden sosyalleşen genç bloggerlardan Leah, Mia Wallace, Spoti ve Maya için blog mecrası tam bir terapi yeri olarak nitelenmiştir.

Cep Telefonu Kullanımı ve Güvenli Ortam

Doksanlı yıllarda sadece internetin ve bilgisayar alt yapısının kullanılması değil her an her yerde iletişim kurulabilecek telefonların günlük hayata girmesi de kadınların hayatını kolaylaştırmıştır. 1990'lı yılların başından itibaren dijital hücresel telefon sistemi geliştirmiş sesi dijital veri haline dönüştürebilen cep telefonu/Global System for Mobile Communication (GSM) dijital hücreli mobil telefonlar kullanılmaya başlanmıştır (Atabek,2001,68). Telefonun ev veya araç dışında mobil hale gelmesi ile birlikte özellikle toplumda yaygın olan ataerkil görüş kadının korunması düşüncesi çerçevesinde kadına özgürlük sağladığı söylenebilir. Her an istediği yerde birilerine ulaşabilmek hem kadınların hem de çevresinin güven duygusunu inşa etmiştir. Bu kapsamda cep telefonu kadının zamansal ve mekânsal özgürlüğü genişlemiştir. Bu teknoloji kadınların günün farklı saatlerinde ve farklı mekânlarda kadın günlük hayatın içinde daha rahat yer almasına olanak tanımıştır. Akıllı telefonların kullanılmaya başlaması sonucu kadınların her yerde her zaman dünya ile iletişim içinde olmasına yol açmıştır. Cep telefonları ile başlayan özgürleşme, 2000'li yıllarda kadınların akıllı telefonla kullanması, dijital dünyada daha fazla yer almalarını sağlamıştır. Böylece artık kadınlar gerçek dünyadan sanal dünyaya geçmektedir. Geleneksel yapıda deneyimli kadınlardan tavsiye ve yardım almanın yerini yavaş yavaş internet siteleri, bloggerlar, fenomenler ve youtuberlar almaktadır.

Siperfeminizm

Feminizm tarihsel süreci içinde gelişen yeni iletişim teknoloji ile birlikte farklı bir kamusal alan olarak internete yeniden kurulmuştur. "Booth ve Flanagan'a göre, siberfeminizm, belli bir odağı bulunan birleşik bir politik hareket değil, düzenli olmayan, taktik ve çelişkili kuram, tartışma ve uygulamalardan oluşan bir kümedir"(Akt. Varol,225) Dijitalleşen dünyada feminizm internet üzerinden siperfeminizm olarak karşımıza çıkmaktadır. "Genç kadınlar ve dünyadaki diğer üçüncü dalga feministleri, siyasi görüşlerini ifade etmek, sivil eylemlerde bulunmak ve baskılarına karşı harekete geçmek için giderek daha fazla web'e başvurdular" (Matos,2017) sonucu kadın ideolojilerinin anlatacakları ve kabul gördüğü yeni bir kamusal alana kavuşmuştur. "Manifesto for Cyborgs" ve Sadie Plant'ın "Zeros and Ones" adlı çalışmalar siberfeminizmin kurucu metinleri arasında sayılabilir. Ancak, Sandy Stone'un The War of Desire and Technology adlı çalışması da siberfeminizmin çıkışına önemli katkıda bulunmuştur (Galloway, t.y.). Ancak yine de, Haraway ve Plant, siberfeminist düşüncenin "anneleri" olarak kabul edilmektedir(Akt. Varol,2014,222). Siperfeminizm, yeni iletişim teknolojilerini dişil yapısına vurgu yapılarak daha etkin olduğu savunulmaktadır. "Yeni medyanın gelişimiyle birlikte, siberfeministler erilliği teknoloji, kadınsılığı ise doğa ile yan yana koyan kültürel anlayışları yapıbozuma uğratma fırsatını bulmuşlardır. Siberfeminiz, kadınların dışlanması ve baskı görmesini eleştirmek için fırsatlar arayarak yeni medyayı yeniden tanımlama ve aynı zamanda teknolojiye anlam vermemizi sağlayan fantezileri ve kültürel çerçeveleri keşfetme çabasıdır" (Stevenson, 2008,338). Feminizm düşüncesini dijitalleşmesi sonucu kadınların baskı görmesini engellemek adına bir tuşla birçok kişiye haber ulaştırabilen bir yapı kurulmaktadır. siberfeminist hareket özellikle Avrupa odaklı olarak büyümeye ve değişmeye başlamıştır. 1991-1997 yılları arasında yükselen bir düşünce olan siberfeminist kampanyası 1997'de Almanya'da gerçekleştirilen Birinci Uluslararası Siberfeminist Konferans'la birlikte pik yapmaktadır. Siberfeminizm iki farklı dönem ayrılmakta, birinci dalga daha çok cinsiyetsiz kimlikleri yaratmaya çalışırken, ikinci dalga feminizm rahatsızlık duymaya başlayan bir akımdır. "Kira Hall, birinci dalga siberfeminizmi "liberal siberfeminizm", ikinci dalga siberfeminizmi ise "radikal siberfeminizm" olarak adlandırmıştır. Hall'a göre, liberal siberfeminizm bilgisayar teknolojisini kadınların özgürleşmesi için bir araç olarak görmekte, radikal siberfeminizm ise, kendini, erkek tacizine karşı internette kurulan ve yalnızca kadınların girebildiği gruplarda göstermektedir(Akt. Varo,2014,227). Siperfeminizm iki binli yıllarla birlikte popülerliğini kaybetmektedir.

Sosyal Medya ve Kadın

Sosyal medya, alternatif medya veya tekelleşme, küreselleşmeye karşı olan bireylerin kendi haberlerinin üretici olduğu bir kitle iletişim aracı olarak ortaya çıkmıştı(Gündüz ve Pembecioğlu,2013,318). Küresel Dijital Rapor (2018) Ocak Ayı verilerine göre dünyada en çok kullanılan sosyal medya platformu sırasıyla Facebook, Youtube,

Whatsapp, FBMessengery, WeChats, QQ, İstagram,Tumbur, Qzone, Sina Weibo, Twitter olarak sıralanmaktadır. Geleneksel medya kadını betimlemesine karşın yeni medya ile birlikte kadın kendini kurabildiği bir alana sahip olmaktadır. Web 2.0 teknolojisi kullanıcının üretici; yani üretici tüketici, tükettikleri şeyleri aynı zamanda üretmekte olmasıdır (Ritzer,2011,307). Kadın sosyal medya ile birlikte içerik üretici olmaktadır. Kadınlar “üretüketici” olarak karşımıza çıkmaktadır. Bu kadına ekonomik özgürlüğün yolunu açan sınırları da aşmasını sağlamaktadır. Kadınlar sosyal medya aracılığı ile ürettikleri birçok ürünü satmaktadır. Böylece dijital dünya kadınları ekonomik olarak özgürlüğün kapılarını açmıştır. Son yıllarda kadınlar facebook kullanımı giderek artan bir orana sahip olmuştur. Türkiye’ Facebook 43 milyon kişi tarafından kullanılmaktadır.² 18-44 yaş arası kadınlar Facebook platformunu erkelerden daha çok kullanmaktadır.

Tablo1: Dünyada Facebook Kullanımı (Küresel Dijital Rapor,2018)

Kadınlar facebook platformunda gruplar oluşturarak veya bireysel sayfalarında her türlü içerik üretebilmekte, gerçek dünya da ürettikleri birçok ürünü sergileyebilmekte veya satışa sunmaktadır. Korkuteli Kadın El Emeği, İzmir el örgüsü ve kadın dayanışma grubu vb. birçok kadın grubu kadınların ürettikleri ürünlerini Facebook üzerinde reklamını ve satışını yapmaktadır. Siyasal anlamda da kadınlar sosyal medyada aktif konumda hem kendi sayfaları hem de çeşitli siyasi oluşumlar çerçevesinde bunu gerçekleştirmektedirler. Birçok parti, il, ilçe kadın kolları gibi Çivil Ak Parti Kadın Kolları sayfası da Ak Parti Kadın kollarının çalışmalarını, kadınlarla olan çalışmalarına sosyal platforma taşımaktadır.

Tablo 2: Dünyada İstagram Kullanımı (Küresel Dijital Rapor,2018)

Kadınların en çok kullanılan platformlardan birisi “İstagram bir fotoğraf ve video paylaşım platformu olmasının yanı sıra kullanıcıların akıllı telefon uygulaması yoluyla fotoğraflara dijital filtrelerden bir seçim uygulandıktan sonra fotoğrafların paylaşılmasını ya da alınmasına olanak tanıyan bir sosyal ağ sitesidir” (Yeniçıkı, 2016, s.95). İstagram birçok kadın fenomenlerinin aynı zamanda youtuber olması dikkat çekicidir. Özellikle kadınların moda, yemek, çocuk vb. konusunda fenomen olmaktadır. Birçok kadın fenomen olarak, reklam oluşturmakta ve

² <https://wearesocial.com/uk/blog/2018/10/the-state-of-the-internet-in-q4-2018>

yayınlamakta kazanç sağlamaktadır. Bazı kadınlar ise kendi sayfaları üzerinden ürettikleri ürünlerin satışını yapmaktadırlar. Kadınlar bunu yaparken evlerini ofis gibi bir mekan olarak kullanmaktadırlar. Anne fenomenler deneyim ve bilgilerini paylaştıkları sayfaları önemli takipçi sayısına sahip iken Akasya Türkmen gibi fenomenlerin birçoğu youtube kanalı ile instagramı bir arada kullanmaktadır.

Tablo: İstagram Fenomenleri

Akıllı telefonların görüntü oluşturmak açısından kolaylık sağlaması diğer sosyal medyada yer alsa da İstagram birlikte kadınlar, hikaye ve canlı yayınla birlikte reklam üreticisi haline gelmişlerdir. Kadınlar sattıkları ürünlerin veya sayfalarına aldıkları ürünlerinin reklamını üretmektedirler. Bireysel olarak kadınlar ev ortamında hem satış hem de reklam yaparak iş ortamında yer almaları gerçek hayatlarında da birçok avantaj sağlamaktadır. “İstagramda bu kapsamda yemek fenomeni kadınların yayınladıkları reklam türü ve reklam yaptıkları ürünleri mahrem alanları evlerinde gerçekleştirmeleri veya kendi deneyimlerini paylaşmak veya ürün kullanarak sunmaları dikkat çekicidir” (Sabuncu ve Yağlıcı, 2018,168). İstagramda tanıdıkları ürünlerinin satışını Watsappla gerçekleştirmektedir. Kadınlar her türlü platformu iş açısından değerlendirmektedir. Sosyal medya ve sosyal ağlar kadınlara iş ortamında büyük bir alan yaramıştır.

Dijital Aktivizm ve Kadın

Dijital aktivizmin gerçekleşebilmesi için teknolojik altyapı, bağımsız internet, yaygın olarak bilgisayar veya alt yapıya araç sahip olmak gereklidir. Yeni iletişim imkanlarına dayalı dijital aktivist hareketler net bir organizasyon yapısı ve lider olmadan da hayatta kalabilir, Öne çıkan hesaplar, yönlendirme yapan bloglar, özenilen hacker grupları liderlik misyonunu üstlenebilir ya da paylaşılabilir” (Turhan, 2017,27). “Dijital aktivizm doğrudan internet ile sınırlı faaliyetler (internet üzerinden başlatılmış bir faaliyete destek verme) ve herhangi bir faaliyet için internet üzerinden örgütlenme biçiminde ikiye ayrılabilir. Örneğin bireyler gerçekleştirecekleri bir protesto yürüyüşünü Facebook ve Twitter gibi sosyal paylaşım siteleri üzerinden örgütleyebilmektedir”(Kiraz&Kestel,2017,153). Yeni medya ile birlikte dünyada önemli hareketleri başlatan dijital aktivizmler olarak karşımıza çıkmaktadır. Ayrıca İran’da 2009 yılındaki Cumhurbaşkanı seçimleri sırasında siber aktivizm anlatırken, 20 Haziran’da Youtube’da, *Neda Sultan* isimli aktivistin polis tarafından vurularak öldürüldüğü video görüntüleri yayınlanmıştır (Aktar,2016,23-32). Kadınlar slavitizm, hashtag aktivizmi, hacktivizm, Citizen Journalism olarak karşımıza çıkmaktadır. Slaktivizm (kltivizm), insanlar dijital platformlarda bir şey yapmış olmak için pasif eylemlerde bulunmalarıdır. Bu facebook platformu üzerinden kadınların sıklıkla kullandığı oldukça yaygın kullanılmaktadır. Slaktivizm, kadınların meme kanseri için pembe kurdele profillerinde kullanmaları, paylaşmaları örnek olarak verilebilir. Türkiye’de kadın cinayetleri sonrası taraf olma aktivizm görmekteyiz. Taciz, tecavüz veya kadın cinayetlerinde iyi hal indirimi uygulanmaması için gerçekleştirilen eylemler, kampanyalar ve paylaşımlar örnek verilebilir. Hashtag aktivizmi (Taraf olma) sosyal sistem içinde kurumların ya da kişilerin kararlarını etkilemek için bireysel ya da grup olarak yapılan aktivitedir. Hacktivizm, hack yöntemiyle bir yolsuzluk ortaya çıkarılır ve bu insanları uyarmak amacıyla yayınlanıp sosyal tepki yaratılır (Turhan,31). Yurttaş veya Vatandaş Gazeteciliği (Citizen Journalism), geniş bir çerçevede haber toplama, üretme ve dolayına sokmada gazetecilikle profesyonel olarak uğraşmayan vatandaşların mevcut teknolojik imkânlar dâhilinde yer aldığı yeni bir gazetecilik (Devran ve Özcan, 2017,153). Sosyal medya ile birlikte kadınlar hem kendi ülkelerinde hem de dünyada birçok olayda önemli rol edinmektedirler. “Yurttaş gazeteciliği kavramını teorize eden ve yaygınlaştıran isimlerden Mark Glaser kavramın arka planında yurttaşların modern teknoloji araçlarını kullanarak tek başlarına ya da birlikte haber üretebilmelerinin olduğunu belirtmiştir”(Akt. Saka,2012,41). Arap Baharı’nda kadınlar yurttaş gazeteciliğini başarıyla gerçekleştirmişlerdir. Aralık 2010’da Tunus’ta başlayan, Mısır, Libya, Suriye, Bahreyn, Yemen gibi ülkelere yayılan ayaklanmalarda kadınlar ön saflarda yer almışlardır. Mısır’da, aktivist Asmaa Mahruz 25 Ocak 2011 Ulusal Polis Günü yayınladığı video ile rejimini protesto etmek için Mısırlıları çağrı yapması ile Mısır Devrimi’ni başlatmıştır³

Gerçek Hayat Acıları Sosyal Medyada Pansuman Ediliyor

³ <https://www.youtube.com/watch?v=6-4JRwXzyle>

Kadınlar artık yaşadıkları olumsuz durumları internet üzerinde yaratılan belirli sayfalar ve kampanyalar çerçevesinde paylaşabilmektedir, böylece kadının sesi yükselmektedir. Özgecan cinayeti sonrası sosyal medyada kadınlar, #sendeanlat etiketi altında 640 bine yakın olay paylaşım gerçekleştirmişlerdir. Böylece kadınlar gerçek hayatta paylaşamadıkları taciz olayını sosyal medya aracılığıyla paylaştılar. Kadınlar gerçek hayatta rahatsız oldukları durumları sosyal medya üzerinden kampanyalarla görünür hale getirmektedir. Bunlardan biriside “#bacaklarımıtopla” kampanyası, kadınların toplu taşıma araçlarında dar alana sıkıştırılmalarına tepki göstermek ve sosyal medyayı farkındalık yaratmak amacıyla kullanmışlardır⁴

Dijital Hikaye Anlatımı Atölyesi, Kasım 2009’da gerçekleştirilen ilk kolaylaştırıcı eğitim atölye çalışması ile başladı. Üniversite ve sivil toplum örgütleriyle de ortak çalışmalar yürütülmektedir. Atölyede kolaylaştırıcı eğitimi almış akademisyen ekip üyeleri, çalışma alanlarına göre çeşitli projeler geliştirmektedir⁵ Dijital hikayelerde bir başlık olan “etek boyu” etek konusunda kadınların maruz kaldığı sözel, fiziksel ve psikolojik tacizler anlatılmaktadır.⁶

YÖNTEM

Problem Cümlesi: Dijitalleşen dünyada ve kadın ilişkisi çerçevesinde 1970 ve 1980’li yıllarda doğan kadınların dijitalleşen dünya yer almaları ve kullanımları nasıl gerçekleşmiştir/gerçekleşmektedir?

Alt Problemler:

- Bilgisayar teknolojisi ve internetle birlikte kadınlar yeni bir kamusal alana kavuşmuş mudur?
- Cep telefonu teknolojisi kadınlara özgürlük ve güven duygusu getirmiş midir?
- Sosyal medya kadınların hayatında ne tür avantajlar sağlamıştır?

Araştırma Modeli:

Bu çalışma kapsamında öncelikle araştırma sorusu oluşturulmuştur. Bu çalışma dijitalleşen dünyada ve kadın ilişkisi çerçevesinde 1970 ve 1980’li yıllarda doğan kadınların dijitalleşen dünya yer almaları ve kullanımları nasıl gerçekleşmiştir/gerçekleşmektedir sorusuna cevap aramaktadır. Bu çerçevede nitel araştırma yöntemlerinden yarı yapılandırılmış görüşme yöntemi kullanılmıştır. Bu görüşme yöntemi toplumsal konularda sıklıkla kullanılmaktadır. “Tekniğin çıkış noktası, “ ne düşündüğünü öğrenmek onlara sor” ilkesidir. Ayrıca dilin kullanımı toplumsal bir eylemdir. Görüşmelerdeki cümlelerin tamamı yanlış veya doğru olarak değerlendirilemez. Onların her biri bir toplumsal etkinlik, bir öznenin/eyleyicisinin(aktörün) eylemi olarak değerlendirilebilir” (Geray, 2006, s.164). Görüşme türleri katılımcı sayısına göre belirlenir. Burada bireysel görüşme gerçekleştirilecektir. Karasar (2005), katılan sayısına göre görüşmeler grup ve bireysel görüşme olarak ikiye ayrıldığını, Bireysel görüşmelerde görüşmeci ile kaynak dışında kimse bulunmamaktadır. Görüşülmek istenen kişiye göre üç gruba ayrılır görüşmeler; önder (lider), uzman ve halkla yapılan görüşmeler vardır. Halkla ilgili görüşme yapıldığında belli konularda genel bilgi, tutum, davranışların öğrenmedir. Görüşmeler, uygulanan kuralların katılığına göre yapılmış (formel), yarı yapılmış (yarı formel) ve yapılmamış (informel, serbest) olmak üzere üç grupta gerçekleştirilmektedir. Yapılanmamış görüşme görüşmeciye hareket alanı sağlar, sorunun kökenine inmeyi sağlayabilir. Bu yöntemde sorulacak sorular ana hatlarıyla belirlenir (166-167). Bu çalışmada yapılan görüşmelerde yarı yapılandırılmış görüşme bireysel olarak, halktan kişilerle gerçekleştirilecektir. “Bu türden görüşmeler daha önceden belirlenmiş, soru biçimi, düzeni ve sıklığı önceden düzenlenmiş soruların yer aldığı görüşmelerdir. Bu görüşme tarzında görüşülenlerin karşı karşıya kaldığı sorulardan elde edilecek verilerdeki değişkenliği en aza indirmek hedeflenmektedir” (Kümbetoğlu, 2005, s. 76). Bu çalışmada yarı yapılandırılmış görüşme yüz yüze gerçekleştirilecektir. Görüşme yapmadan önce her görüşmeci için görüşme kılavuzu hazırlanmıştır. “Geray (2006, s.170), kılavuzda görüşme için bir başlık, görüşmecinin izleyeceği talimatlar, sorulacak birkaç temel soru, temel sorulara yanıt verdiğinde açmak amacıyla sorulacak ek sorular ve görüşmeyle ilgili yorum ve notların yer alması gerektiğini belirtmektedir. Ayrıca sorular titizlikle hazırlanmalıdır ve bilgi edinilmek adına çerçeve oluşturulmalıdır. Soru sorma konusunda Karasar (2005), ilk soruların ilginç ve cevaplanması kolay ve kaynağı cevap vermeye güdüleyen bir yapıda olması gerektiğini, genelden öze doğru sırlanması, son soru kaynakta başarı duygusu uyandırması gerektiğine dikkat çekmektedir. Görüşmeciden kaynaklı sınırlılıklar vardır, konuşmacı zeki duyarlılığı yüksek bireyler olmalı, koşullanmamış, ayrımcı olmayan, konusunda uzman kişiler olmalıdır (169-174). Kümbetoğlu (2005), sorular hazırlanırken dikkat edilmesi gereken noktaları belirtmiştir;

1. Öncelikle görüşülene bir anlam ifade edecek sorular hazırlanmalıdır,
2. Görüşülecek kişilerin deneyimlerin, koşulları ve faaliyetlerine uygun soruların hazırlanması,

⁴ <https://www.youtube.com/watch?v=NwSwYqTr0mU>

⁵ http://www.iletisim.hacettepe.edu.tr/pdata/index.php?page_id=286

⁶ <http://www.digitalstoryhub.org/Etek-Boyu>

3. Görüşülecek kişilerin ihtiyaç ve haklarına duyarlı soruların seçilmesi,
4. Görüşülenlerle bir etkileşim ortamı yaratacak ve bu ortamın doğal akışı içinde gelişmesine imkan yaratacak soruların hazırlanması
5. Araştırma sorunsalına odaklanmış soruların hazırlanması ilke olarak uygundur.(s.86)

Bu çalışmada bu kurallara uygun toplam altı soru hazırlanmıştır. Yarı yapılandırılmış görüşme çerçevesinde gerekli görülen noktalarda ilave sorular sorulmuştur. Sorular demografik özellikler, kadınların dijital dünyada yer alma durumlarını ortaya koymak adına 1990 ve 2000 yıllarında bu teknolojinin içine doğan kadınlar değil bu teknolojinin öncesi ve sonrasını değerlendirebilecek 1970’li ve 1980’li yıllarda doğan kadınlarla görüşme gerçekleştirilmiştir. Teknoloji bilgisi sahip olma adına en az üniversite mezunu ve çalışan kadınlar evren olarak belirlenmiştir. Böylece dijitalleşmenin kadınların hem iş hem de özel yaşamlarında açısından değerlendirmeleri sağlanmıştır.

Evren:

Türkiye’de yaşayan 1970’li ve 1980’li yıllarda doğan, en az lisans mezunu ve çalışan kadınlar evreni oluşturmuştur.

Örnekleme:

1970’li yıllarda doğan üç ve 1980’li yıllarda doğan üç kadın olmak üzere toplam altı, en az lisans mezunu ve çalışan kadın örneklem olarak seçilmiştir.

Veri Toplama Analizi:

Çalışma kapsamında altı kadınla yarı yapılandırılmış görüşme yüz yüze gerçekleştirilmiştir. Yüz yüze gerçekleştirilen bu mülakatlarda elde edilen veriler tarafsız bir şekilde çalışmada yer alacaktır. Görüşmeler 1-11 Ocak 2018 tarihleri arasında gerçekleştirilmiştir.

Varsayımlar:

- Yeni medya kadınlar ataerkil düşünce kalıplarını yıkarak daha geniş bir söz söyleme alanına sahip olmuşlardır.
- Kadınlar cep telefonu teknolojisi ile gerçek hayatta daha rahat ulaşılabilir olmaları onların güven duygusunu geliştirmiştir.
- Sosyal medya ile birlikte gerçek hayatta veya sanal hayatta ürettiklerini kadınlar özgürce sergileyebilmeleri ve pazarlayabilmeleri sonucu kadınların çalışma hayatına katılmasında ve ekonomik özgürlüğünün gelişmesini sağlamıştır.
- Kadınların hayatında bloglar, fenomenler, youtuberlar gerçek hayattaki deneyimli insanların yerini almışlardır.
-

Sınırlılıklar:

Bu çalışmada görüşmecilerin en az lisans mezunu olması, çalışan olması, 1970’li ve 1980’li yıllarda doğan kadınlar oluşması sınırlılıkları belirlenmiştir.

Bulgular

Bulguların raporlanması aşamasında katılımcılar; kişilerin zarar görmemesi adına ve verdikleri cevapların anonimliğinin sağlanması adına görüşmecilerin doğum tarihleri ve isimlerinin baş harfleri ile bir rumuz oluşturularak düşünceleri çalışmaya aktarılacaktır. Soru formunda ilk iki soru demografik bilgileri elde etmek adına yer almaktadır. Diğer sorular ise görüşmecinin hayatındaki dijitalleşme tarihi ve katılımı üzerine yoğunlaşmıştır.

Bu çalışmada görüşme yapılan kadınların ilk bilgisayar deneyimleri hakkındaki düşünceleri genellikle iş hayatına adım atmalarıyla paralel olarak görülmektedir. 1974G, çalışma hayatına başladığım yıl kendine ait kişisel bilgisayar kullandığını belirterek, daha önceki dönemde bilgisayar merkezli işlerini babası tarafından yapılması dikkat çekicidir. 1977 K, ise ilk bilgisayar teknoloji deneyiminin 1999 yılında komşularının bilgisayarını kullanarak, lisans tezini yazmakla başladığını belirtmiştir. Bilgisayar “çok pahalıydı” demesi aslında kadınların maddi anlamda kişisel bilgisayar ulaşmasının önündeki engellerden birinin oluşturduğu görülmektedir. 1977A, ilk bilgisayar teknolojisi deneyimini hemşire olarak çalıştığı hastanedeki bilgisayarla olduğunu belirtmiştir, “2003’de Word dosyası kullanıyordum” demektedir. 1980Ş, ilk kişisel bilgisayara “2002 yılında babamın aldığı bilgisayarla sahip oldum” demektedir. 1981A, ilk bilgisayar teknolojisi deneyimin 1999 yılında okul bilgisayarını kullanarak gerçekleştiğini belirtirken “araştırma, ödev sebebiyle tanıştım” ve kişisel bilgisayarını “2003 yılında ailem aldı” demektedir. 1981C, “Üniversite birinci sınıfta ilk kez üniversite laboratuvarında bilgisayar kullandım” demektedir. Kişisel bilgisayar edindiği 2000 yılında bilgisayar konusunda eğitim aldığını belirtmektedir.

Cep telefonlarının hayatlarına girme hikayesi ise hepsinin farklı, 1980Ş, “gazete kuponu biriktirerek Nokia 5110 telefonu” ‘nun ilk telefonu olduğunu belirtmiştir. Cep telefonun hatlı olduğunu belirtmekte ve cep telefonundan mesaj ve çağrı atmayı daha çok kullandığının daha çokta çağrı bıraktığını, sayısına göre çağrı bırakmanın

nasılsın, seni hatırlıyorum gibi anlamlara geldiğini söylemektedir. Cep telefonu “güven sağladı, her an ulaşılabilir olmak, evet dışarı daha rahat çıkabiliyorsun, iyi hissettiriyor” demektir. 1981C, cep telefonu ulaşılabilir olmak “öğrenciydim ailem açısından iyiydi ama benim için iyi değildi” demektir. 1977A, cep telefonu “aradıklarında ulaşıyorlardı anne ve babam, o dönem çok yoğun çalışıyordum” demektir. 1974G ise ilk telefonum “29 yaşında, Motorola, Persil’in hediyesi” olduğunu “öğretmen hattı aldık bedavaya konuşuyorduk” demektir. Cep telefonu “daha güvende hissetmemi sağladı, herhangi bir problem anında” demektir. İlk telefonunu 1999 yılında aldığını belirten 1977K ise telefonunun hatlı olduğunu belirterek “çok pahalıydı ayda 45tl gibi bir fatura ödüyordum. O zaman çok etkilemiyordu, maaşım yetiyordu. Evlendikten sonra kontrorlüye geçtim. Ailemle iletişim kurmak daha rahatlaştı, dışarı rahat çıkıyordum, o dönem Hürriyette oturuyordum, gece ikide gelip terminalden eve dönmek o dönem koşullarında zordu, herhangi bir durum olsa ev arkadaşımı arayabilirdim” demektir.

Görüşmecilerin sosyal medya platformlarında hesap açmaları ve tercihleri birbirine bazı noktalarda benzerlik göstermektedir. 1974G, ilk sosyal medya hesabını Facebook platformunda açtığını belirterek, “Mehmet açtı, o söyledi, arkadaşlarını bulabiliyorsun dedi”. Twitter hesabı olmayan 1974G “Twitter hoş eğlenceli kızımдан gördüm çok kısa ve vurucu ifade istiyor. Instagram hesabında var. Paylaşım yapmıyorum, kızımı görmek için, instagramın yokken kızımın takipçileri bende daha fazla haber alıyordum, kızımın bütün paylaşıtlıklarına bakıyorum. Whatsapp’ı 5-6 aydır kullanıyorum, hayatımın bir parçası oldu. Kızımın Whatsapp’tan konuşuyorum” demektir. Ayrıca öğrencileriyle grup kurarak buradan iletişim kurduğunu belirtmektedir.

1977K ise Facebook katılması “hatırladığım kadarıyla 2008’de baktım herkes açtı, becerebilir miyim diye düşündüm, açtım. Facebook’um hep açık olur, her an ulaşılabilirim. Öncelikle iletişim kurmak için kullanıyorum, uzun süredir görüşmediklerimle online iletişime geçiyorum, boş vakitlerimde de eğlence olsun. Instagram’da varım, bir yıl önce açtım, ama hiç alımadım, facebook bana yetiyor. Youtube da çocukların izlediklerini kontrol etmek için kullanıyorum” demektir. 1981C, sosyal medyada 2016’ya kadar hesabının olmadığını, yurtdışına giderken arkadaşlarının fotoğraf paylaşmasını ısrarla istemeleri sonucu Whatsapp üzerinden zor olacağından, Instagram sayfası açtığını, burada da arkadaşları dışında sadece astroloji fenomenlerini takip ettiğini, Youtube da kanal takip etmediğini, sadece kızımın ilgisini çeken yayınlara baktığını söylemektedir. 1977A, “2009’da Facebook’a üye oldum, önce çevredekiler kullanıyordu bana ne faydası var diyordum ama bir araya gelince Facebook üzerinden sohbetlerden, paylaşımlardan bahsedip gülüyorlardı. Muhabbetin, sohbetin dışında kalıyordum. Kalmak istemediğim için açtım. Eşimi de buradan takip ediyordum eşim paylaşımlarımdan rahatsız oldu Facebook’u kapattı. Bende Facebook’ta tek başıma hissettim kendimi eşim olmadığı için. Bir dönem çok rahatsız oluyordum istemediğim ortamda çıplak geziyor gibi hissediyordum kendimi, bir cümle yazsa biri bana mı söylüyor diyordum, bende paylaşım yapıyordum insanların psikolojilerini bozuyordum” demektir. Twitter kullanmıyorum o alanı bilmiyorum diyen 1977A, “twitter’ı özgür bulmuyorum, söyleyemiyorum özgürce, sahte buluyorum. Instagramda sanatsal içeriğin yoğun olduğunu belirten 1977A, magazin dünyasını da buradan takip ettiğini “Gülben gazetesi felan, tanıdıklarımı takip etmiyorum, toplumda ne oluyor haberdar olmak için takip ediyorum” demektir. 1997A, “telefon elimdeyken her şeyi biliyorum gibi hissediyorum, bazen de internete güvenilir kaynaklar onaylanmalı diye düşünüyorum, hakemli dergiler gibi, her şey yalan gibi geliyor” demesi önemlidir. Youtube kanallarını ise 1977A, yemek, makayaj yapmak gibi bilgiler için kullandığını söylemektedir. 1981A, Facebook’a 2005’de erkek kuzenimin tavsiyesiyle katıldım. Twitter’a ise 2016 üye olduğunu belirterek “duyuru anlamında devlet kurumları, halkla ilişkilerle ilgili takip ediyorum, daha bilgiye dayalı bir yer” demektir. Youtube’u çocuklar izlerken güvenlikleri için baktığını belirterek “youtube’den yemek yaptım tutmadı” demektir. 1981A, Instagram’da “ekonomik gelir sağlıyor kadınlar, alışveriş yapıyorum, patik aldım el örgüsü, çocuk kıyafeti aldım, Instagram’dan kadın gruplarını da takip ediyorum” demekte ve 2014’den beri Whatsapp kullandığını, kişisel ilişkiler için ve kadın arkadaşlarıyla gruptan yazışmak için kullandığını belirtmektedir. 1980Ş, 2009’da Facebook’a üye olduğunu şiir, şarkı vb. paylaşımlar yaptığını, uzun zamandır görüşmediği arkadaşlarıyla iletişim kurduğunu söylemektedir. Twitter’a ise 2011 katıldığını belirten 1980Ş, “çok hızlı akışı var, olaylara anında erişim, dolaşım var. Haber sitelerini ve esprili bulduğum hesapları takip ediyorum” demektir. Instagrama 2014’de fotoğrafı çok sevdiği kullandığını söyleyen 1980Ş, “kadın fenomenler için alternatif bir satış yolu, ekonomik yapıya eklemlemede ekonomik kazançta” demektir. Whatsapp’ı aktif kullanan 1980Ş, burada Kadın çalışmaları, Altın kızlar gibi kadın gruplarına katıldığını söylemekte “kadın olarak konuşarak ifade edemediğim şeyleri yazarak ifade ediyorum” demektir. 1974G, görüşmede özellikle bilgisayar teknolojisi konusunda eski eşinin internet üzerinden kendisini aldattığını belirtmesi önemli bir detaydı.

SONUÇ

Kadın ve dijitalleşme konusunda kadınların 2000’li yıllarla birlikte daha aktif hale gelmesi, hem akıllı telefonların hem de sosyal medyanın oluşmasının sonucu olarak görülebilir. 1970 ve 80’li yıllarda doğan görüşmecilerin düşüncelerinden yola çıkarak cep telefonlarının onlara güven ve özgürlük sağladığını onaylamışlardır. 1970 ve 80’li yıllarda doğan kadınlara baktığımızda Facebook’ta dün veya bugün aktif oldukları görülmekteyken, Twitter’ı ise çok tercih edilmediği görülmektedir. 1974G, Twitter’ı sınırlı kelime sayısı olması nedeniyle, 1977A sahte bir ortam olarak görmesi nedeniyle tercih etmezken sadece 1980Ş Twitter’ı hızlı haber almak adına önemli bulmaktadır. Görüşmeye katılan kadınların hepsi en az bir sosyal medya hesabına sahip olduğu görülmektedir.

Katılımcıları tamamının Whatsapp'ı diğer platformlardan farklı görmekte kolay ve kişisel iletişim açısından telefona benzetmekteyken aynı zamanda burada grup iletişiminde de kullandıklarını söylemişlerdir. Görüşme yapılan kadınların dijital teknolojiyi kullanırken kendilerini bu konuda yetersiz ve eksik bulmadığı sadece 1977K'nın Facebook'a üye olurken bu alanda olma konusunda teknik anlamda tedirginliği olduğu görülse bunun kısa sürede yendiği görülmektedir. Kadınlar her geçen gün gelişen ve değişen dijital dünyada farklı platformlarda ihtiyaçlarına göre yer aldığı yapılan araştırmada ortaya konulmuştur. Görüşme yaptığımız kadınları fenomen değillerdir ve sosyal platform üzerinden ekonomik gelir elde etmemektedirler. Fakat kadınların bu alanlardan satış yapmasını ekonomiye katılmaları olarak görmektedirler. Katılımcıların tamamı da internet üzerinden tacize uğramadığını belirterek bu alanı güvenli olarak gördükleri anlaşılmıştır. Sosyal medyanın kadınların hayatının önemli bir parçası olduğunu 1977A'nın eşinin olmadığı bir platformda kendini yalnız hissetmesi, 1977K'nın ise Facebook'un açık olması ortaya koymaktadır. Kadın artık dijital dünya ile bütünleşmiştir. Katılımcıların tamamı internetin iş ve genel anlamda hayatlarını kolaylaştırdığını belirtmiş, katılımcılar kadın olarak avantajları konusu da bir ayrıma varamamaları yeni medyanın kadın ve erkek eşitliğini sunduğunun göstergesidir Bu da geleneksel medyanın ataerkilliğinin yeni medyada üzerinden kırıldığı görülmektedir.

ABSTRACT

Constructive cultural that behavior reflects the ideas, beliefs, values, and practices of people who represent collaboration to achieve creative goals. If a small school is built, it will affect the quality of the small school education more effectively and can develop students' potential to be accepted by parents and community. The purposes of this research were to studies the components of constructive cultural of small schools in Northeastern Thailand. Data was collected by 2methods were using: 1) analysis the constructive cultural 101documentary sources; and 2) field studies in the 3 school models that Northeastern Thailand's small school the best practice. The research found that : constructive cultural of small school consisting of 5main components which are 1) Innovation creation behavior consisting of 4 indicators are: 1.1)Personal Creativity 1.2) Personal Innovation 1.3) Aggressive behavior 1.4) Opportunity exploration behavior 2)Shared value consisting of 3 indicators are: 2.1) Shared vision setting 2.2) Positive value 2.3) Co-practice 3) Creative Communication of 3indicators are: 3.1) Deep listening 3.2) Reflecting 3.3) Advocacy 4) Open atmosphere consisting of 3indicators are: 4.1) Positive Satisfaction 4.2) Freedom in Creativity 4.3) help and support 5)team work consisting of 3indicators are: 5.1) Collaboration 5.2) Skills and Creation 5.3) mutual goal

Key words: constructive cultural, small school, northeastern Thailand

Introduction

After decades of the emergence of the 21st century, the world has been shrunk together via support of telecommunication technology. In this fast-changing world, working cultures in offices must be retuned according to the changing communicative culture of the world. The dormant shared orientations of the office that do not benefit the effectiveness of the work should be shredded, while a new culture that works under the changing conditions should be cultivated. The latter, which can be characterized by the attempt to; create work commitment among the workers, allow freedom of thought, and collective achievement, is an ideal working culture that should be established (Natida Choojalearnpipat, 2012). Organizational working culture is a crucial factor in the achievement of the office. A successful workplace should encourage teamwork, staff satisfaction, and good career atmosphere. In general, a successful office pays close attention to the 4 dimensions of targeted working behaviors including; outcome base working, self- reliability, individualization, and interactive value (Ganiga Pholungka, 2014). The development of these four working behaviors should be exercised to guarantee the organizational achievement. Organizational culture is necessary for school administration since it yields participation and intimate relationships among the school's staff while good school cultures are a base for the school transition to higher educational standards (Thippapron Mahapolpiasan, 2010). The school administrators must find measures to make the schools survive in the changing world. The schools should be propelled with good governance which encourages the creation of good working culture, values, and norms. Organization cultures are interrelated with the teachers' desirable behaviors such as teacher's harmony, school work commitment, and loyalty. The good organizational culture is a key factor for the school survival since it is associated with the creation of teachers' work satisfaction, teacher and school developments, and it helps reduce the teacher's relocation and resigning rates. Under the good organizational culture, the teachers are collaborative in moving the school toward its optimal goals (Cook & Lafferty, 1989). Steer (1979) found that creative organizational cultures were helping obtain the desirable working atmosphere which enhances high office achievement. Jiraphan Dangdech (2012) conducted a research into the organizational cultures that affected the state enterprise transformation in Thailand. Research into working cultures of different Thai government offices was reviewed and it was found that the organizational culture in the Thai offices was about the

system and the people. It was suggested in this research that the constructive culture should be used to solve the problem of the organizational culture in Thai offices. Mettha Chaitirakoon (2008) suggested that the creative organizational culture could yield higher achievement for the office while creating enthusiasm and creativity among the workers. The problems of the organizational cultures of the small schools in Thailand were found similar to the problems observed in a study by Patterson et. al on the extent that the organizational cultures should be conducted in order to increase the schools' achievements, empower decisive power, increase interpersonal reliability, and generate recognition and trust among the school members. One of the reasons for the organizational culture development among the small schools is to alter the teachers' working cultures. The school teachers lose hope in their careers since they have been asked to do a lot of work in addition to their regular teaching. The additional tasks take most of the teachers' time from the classroom, they are overwhelmed with the tasks and finally lose their inspiration to work for the schools. This research supports the idea that the development of the creative organizational culture in the small schools can help create good teachers who can make the schools establish their names and become well accepted by the community.

Research Objective

This research is aimed to investigate the components of creative organizational cultures in the small schools in the northeastern region of Thailand.

Literature Review

Constructive Culture

Constructive culture has been defined by a number of scholars. Cooke and Lefferty (1989) said constructive culture is an appropriate balance between people and work, which is a condition that promotes ultimate interpersonal relationships among the workers. Under creative culture setting, the individual achievement is associated with the organization's goals while participation from all people is emphasized and the collective achievement is well driven. ChakriyaTamakhan, MootithaPhonpaipan, and Udomrat Sa-gnuansiritham (2013) said an organization with the constructive organizational culture has a good overall working condition, under which its people share the same working objectives and values. People in this type of organization reflect how they have exercised the values of their work. The individual's satisfaction at work and good interpersonal relationships are emphasized. Worarat Thepmatee (2015) said the constructive culture is reflected in an office that; respects the staff satisfaction, encourages good interpersonal relationships and harmony, and provides advocates for individual's work succeed. Ganiga Pholungka (2014) said the constructive culture is a work condition that is supportive of the workers' harmony, achievements, and satisfaction. The creative culture postulates four dimensions of development including, outcome-based working, self-reliability, individualization, and interactive value. Mookda Kam-amna (2014) explained that the constructive culture involves making the people be aware of the organization and work values. The members were encouraged to work together to achieve the goals of an organization. Natida Choochalearnpitak (2012) said that the organizations with constructive cultures encourage their people to take a part in problem-solving and contributing to the group success via the collective work process. Pornrat Ratanasiriwong (2008) said the constructive culture encourages people to be aligned with the outcome-based performance via collaborating enthusiastically with peers. Under the constructive culture, people take the challenges of their work as the pathway to professional growth. Wijarn Panich (2007) said that the constructive culture emphasizes on the working value which promotes interpersonal collaboration that is a key to organization's success.

It can be concluded that the constructive culture represents behavioral patterns of people at schools which reflect thought, beliefs, and values that people hold on to at their work. The constructive culture helps increase work performance of the staff and it is a standard that has been passed down from generation to generation.

The Importance of constructive culture

Many academicians have shared their ideas about the creation of constructive culture. Fernando Triad de Bas & Philip Kotler (2011) said the constructive culture is generated when there is support from high rank administrators. It can also be fueled by the suggestion of the lower rank operators. However, the definite decision on constructing the constructive culture is based solely on the administrators. Tony Schwartz (2010) said that the creation of the constructive culture takes place under 6 scenarios. 1) Personnel's need awareness, 2) Systematic teaching of thinking development, 3) Openness to creative opinions, 4) Proper task allocation and the matching of a task to individual's interest, 5) Allotting of time for creative thinking, 6) Supportive working environment. Amabile (1996) said that there are five factors for the creation of the constructive culture including; 1) The support from all level officers ranging from administrators to lower rank operators, 2) Freedom at work, 3) Sufficiency of

materials and information, 4) Positive and Negative pressures, and 5) Free from creativity's obstacles. Robert Cooke (2015) advocated that the creation of the constructive culture is simple as long as all operators are allowed to do things that they like. The foundations for the creation of the constructive culture are; 1) Achievement, 2) Excellence, 3) Self-actualizing, 4) Affiliation, and 5) Trust. In conclusion, the creation of the constructive culture is based on a creative working system, outcome-based work, personnel satisfaction at work, teamwork, enthusiasm, relationships with coworkers and valuing the challenges at work.

The analysis of the constructive cultures in the small schools in the northeastern region of Thailand is based on the review of related literature: Cook and Lafferty Cook and Lafferty (1989), Amabile (1996), John Winsor (2006), Eric Bryn (2009), Tony Schwartz (2010), Jonathan Feinstein (2011), Marquardt (1996), Cameran and Quinn (1999), WijarnPanitch (2011), Pornrat Ratanasiriwong (2008), Danai Tianpoot (2009), Sombat Kusuwalee (2009), Chakriya Tamakhan (2013), Mookda Kham-Umna (2014), Ganika Pholangka (2014), Roongrawan Sakoonmalaithong (2014), and Worarat Thepmatee (2015).

Research Methodology

This research is framed around the qualitative research discipline which is divided into two working phases; 1) Reviewing of 108 studies on the constructive culture to obtain data about the components of the constructive culture. The types of components were placed under the categories based on their meaning and concept similarities. 2) Doing data collecting with 3 of the small schools that gained public recognition as the schools of excellence. These schools were selected via the purposive random method. The data collecting process involves; fieldwork data collection, decoding practical codes to trace the key factors for the schools' success, which involved interviewing the school stakeholders, making conclusions about the school practices at all areas under focus. The percentile and frequency were used for the conclusion of the data about the constructive culture obtained from the three schools as presented in Figure 1.

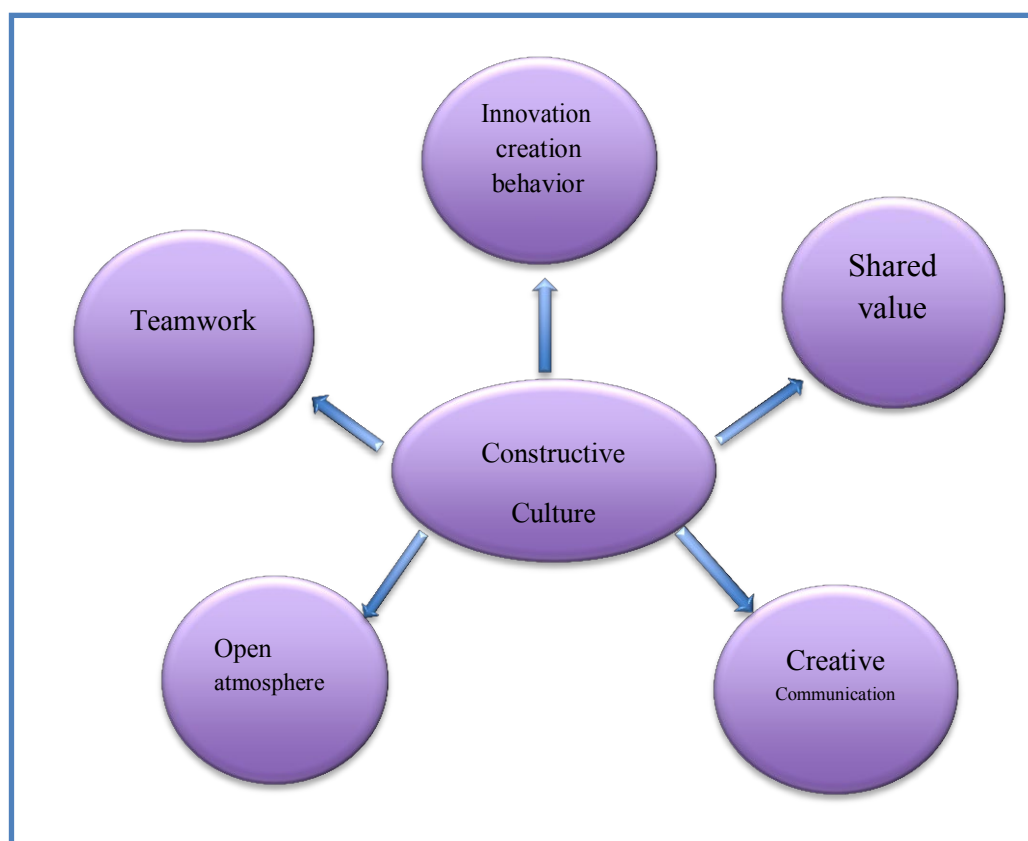

Table 1 Indicator of the Innovative Schools

Component	Practical Definition	Indicators
1. Innovation Creating Behaviors	The individual's attempt to invent something new, and introducing the new idea to the teaching practices, and the new objective-based teaching methodology.	1. Changing of the working process. 2. Innovation in teaching and school creative projects. 3. Finding ways to a higher chance of success. 4. Creation of a leadership
2. Shared Values	Actions/practices that reflect the organization's shared values that all members based their performance on.	1. Taking part in the vision establishment 2. Taking part in the issuing of the regulation
3. Creative communication	Relaxing communication, openness to other people's opinion, inspiring and respectful conversations	1. Listen to other people's opinion mindfully 2. Contemplating the received piece of information 3. Generating new knowledge 4. Transmitting of an idea via speaking informatively
4. Open atmosphere	Collaborative working atmosphere, proud of one's own job, administrators are open to different opinions and allow freedom at work, work flexibility, supportive working atmosphere	1. Working with happiness 2. Being able to work and choose working methods freely 3. Interests and skills based on job allocation
5. Teamwork	Team working behaviors, bringing out an individual's specialty for the success of the school's tasks	1. Taking part in tasks 2. Being a part of the success of work

Results and discussion

Five components of the constructive culture were observed in this research.

1. Innovation Creating Behaviors: This behavior is reflected by the teachers and the school personnel struggling to create something new or to introduce something new to the teaching and working. This idea is supported by De Jong (2007) Parker, Williams, & Turner (2006) on the extent that staff with innovative work behaviors tend to; try something new, think of a new working strategy, and be decisive in introducing new methods to good production and services. The staff with innovative work behaviors also focuses on the objectives and success of the work. Siwanan Siwapitak (2011) said the workers with innovative work behaviors are those who purposively aim to introduce new ideas and methods deemed beneficial for the development of their product to the performing of their tasks. Siwanan also proposed four components of innovation creating behavior, which includes; 1) Staff's creativity, 2) Staff's possession of innovation, 3) Progressive working behavior, and 4) Quest for opportunity.

2. Shared Value: Shared value means behaviors showing attempt to set a shared value which is a norm that describes desirable practices preferable by all the people in the office. Peter Senge (1990) said the creation of a vision is proposing a set of goals that all members of the office agree to achieve in the future. Wijarn Panitch (2007) said a shared vision is about being harmonic, which helps create incredible strength that psychologically propel all of the organization members to contribute to the organization's success. There are three components

of the shared vision including; 1) The allocating of shared vision, 2) Positive Value, 3) Path of collaboration.

3. **Creative Communication:** This is a dialogue that is based on the friendly and respectful atmosphere in which the conversation is completed via a deep listening and inspiring an idea for work. Katherine Tyler Scott (2010) supported that creative communication is based on the equality of idea, which means that all the proposed ideas are listened to with respect. Creative communication is driven unprecedentedly by the dominant idea of the administrators. It has three components including; 1) Deep listening, 2) Deliberating of received idea, and 3) Presenting of idea.

4. **Open Atmosphere:** Open atmosphere means working conditions that; are supportive of a free opinion, encourage teamwork, work satisfaction and pride. The regulations are made flexible under an open atmosphere. A similar idea is observed in Frederickson (1982) on the extent that under an open atmosphere, the staff should have intimate relationships and positive thoughts toward their coworkers and their missions. The staffs are happy and creative at work, which leads to higher organizational achievements. Konwiga Promjuang (1998) said in an autonomous climate, the staffs have freedom at work, in which the workers are happy to create good relationships with their colleagues rather than the achievement of their tasks. The open atmosphere, however, is better in the way that the administrators are more supportive at work. They also set a good role model for their lower rank workers. The open atmosphere has three components;

1) Creating satisfaction, 2) Freedom to create work, 3) Providing helps and support.

5. **Teamwork:** It is a working principle that brings out an individual's ability for the completion of school's work under team working. Levi (2007) supported that team is an arena for an individual to exercise his or her ability under interpersonal relationships with other members of the school to achieve the set goals. Malcolm (1982) said teamwork is a collaboration of all members of the office or social group in achieving the goals that the group has set. Teamwork is driven by both the individual desire to collaborate or by the instruction posted upon the individuals by their supervisors. Team behaviors can lead to the creation of new thoughts and practical clues for the ongoing problems. The quality and the proficiency of the team's members are two important factors that affect the quality of the teamwork. Teamwork has three components; 1) Collaboration, 2) Integrated skills and Creating of products, and 3) Shared objectives.

Conclusion

It can be concluded that there are five components of the constructive culture observed in the small schools in the northeastern part of Thailand including; 1) Innovation Creating Behaviors, 2) Shared Values, 3) Creative Communication, 4) Open Atmosphere, and 5) Teamwork. The constructive culture reflects the teachers' behavioral patterns in relation to their thoughts, belief, and school practical norms. The teachers in the schools with the constructive cultures apply their creativities in succeeding the school's missions. The constructive culture is a key factor to success that helps schools to create its credit and accountability for the school's development.

Abstract

Nowadays, social networks are an important part of daily life due to the variety of uses and facilities they offer us. Mobile applications and websites offer their user's different ways of interacting, communicating and grouping according to interests, ideologies, tastes, among other things.

But social networks today have also created support networks against gender abuse and violence, creating movements and groups in which thousands of people around the world can tell their stories and feel supported and listened to or simply, listen and search in one way or another, make visible the different forms of gender violence. This has been the case of #metoo, a hashtag that was generated in social networks after the denunciations of several Hollywood actresses against the producer Harvey Weinstein for sexual harassment and that sparked a chain reaction throughout the world, on the one hand, with stories of people counting some type of gender violence that has suffered and, on the other, people who have offered to listen and become a support network.

Beyond the relationship of these movements with feminism, this work will try to observe the scope of social networks to make gender violence visible, create support networks and mobilize thousands of people around the world.

Keywords : *Social media - #MeToo - #MiraComoNosPonemos – Gender violence.*

Introduction

In a hyperconnected world, like the one we live in, there is nothing that goes unnoticed and even hundreds of situations become viral and go around the world in a few hours. Thousands of videos, challenges, and games are produced and travel through all corners of the earth with a single click, as well as information, news and topics of local, regional or national interest and become topics of global interest thanks to networks.

In the second half of 2017, several accusations against producer Harvey Weinstein for harassment and sexual abuse of several Hollywood actresses generated outrage around the world and also set off the alarms, putting the issue of gender violence on the table. In this way, the hashtag #metoo appeared on social networks, motivating thousands of people around the world to tell stories and even make complaints about cases of abuse and violence.

With the hashtag #metoo, a movement of the same name was made visible, which was founded in 2006. This movement, according to its website, was created with the purpose of “help survivors of sexual violence, particularly black women and girls, and other young women of color from low wealth communities, find pathways to healing.”²

After the big media boom that was #metoo in 2017, various movements have been generated in the world in order to expose situations of gender violence and create social impact. This is how other hashtags like #BalanceTonPorc, #NiUnaMenos, #YoReconozco and, currently #MiráComoNosPonemos have appeared on different social networks with the same purpose.

In this way and with this example, it is possible to see that some of these initiatives have been promoted by movements or groups that already have years of work but that, through social networks, create awareness and call for collective indignation and cooperation against cases of gender violence. In the same way, with these initiatives, movements and organizations set

² “Me too movement” website. History & visión. Taken from <https://metoomvmt.org/about/#history>.

off alarms and open discussions about everyday situations that can be considered as gender violence. But how have they been generated, how have they grown and what impact have these movements had on the world? In order to resolve these questions, this work will initially review what is considered gender violence. Next, it will analyze the largest movements that have been organized through hashtags against gender violence, the most important complaints and how these hashtags have become support networks for those who report violence. It is necessary to understand that most of these initiatives are linked to feminist movements, which is why, for the purposes of this work, gender violence will be understood mainly as violence against women. Although in some countries of Latin America it is recognized that some men are also victims of violence, these complaints are not common and, to try to analyze how the different movements act against these complaints, it would be important to consider other types of factors and development for the analysis.

Gender Violence

The concept of gender violence has been understood as an ambiguous concept of which there are many understandings. In the various legislations, a connection has been given to the gender violence. However, the UN in resolution 48/104 of 20 December 1993 explains that:

Article 2

Violence against women shall be understood to encompass, but not be limited to, the following:

- (a) Physical, sexual and psychological violence occurring in the family, including battering, sexual abuse of female children in the household, dowry-related violence, marital rape, female genital mutilation and other traditional practices harmful to women, non-spousal violence and violence related to exploitation;*
 - (b) Physical, sexual and psychological violence occurring within the general community, including rape, sexual abuse, sexual harassment and intimidation at work, in educational institutions and elsewhere, trafficking in women and forced prostitution;*
 - (c) Physical, sexual and psychological violence perpetrated or condoned by the State, wherever it occurs.*
- (1993)³

This document, as a document of international standards, has become a guide for what different countries have conceptualized in their legislation as violence against women, allowing a concept of violence to be acquired beyond the family and domestic and also opening a debate and discussion around everyday situations at work, school, and even the streets, which can be considered as gender violence.

However, the visibility of the rights and guarantees that must exist to protect women against gender violence has not been sufficient to establish policies or real rules that allow equal rights and freedoms between men and women in the world. It is important to note that since 1920, different movements have been generated in order to give women a position equal to that of men, and there is still a long way to go.

In 1995, ECLAC published a document in which it states that gender-based violence should be considered a violation of human rights, while, in a certain way, equality of rights and freedoms has been achieved. Gender puts women in a position of inferiority to men, in which they can not make decisions or feel free to develop as a subject or exercise their citizenship by living in a context of subordination. In this way, the text states that:

It has begun to recognize that gender violence constitutes a violation of the right to identity, since it reinforces and reproduces the subordination of women to men, as well as the distortion of the human being; of the right to affect, because violence is the antithesis of any manifestation of that nature; of the right to peace and enriching personal relationships, since it is a negative form of conflict resolution; of the right to protection, because it creates a situation of helplessness, which does not come only from the husband and the family but also from the State, which denies protection to women, and from society that makes the problem invisible; of the right to personal development, since the victims suffer a psychological paralysis that

³ Resolution 48/104 of 20 December 1993 issued by the General Assembly of the United Nations under the title of *Declaration on the Elimination of Violence against Women*. This statement makes it possible to understand the concept of violence against women not as something exclusive to the private and family sphere (which is understood as domestic violence), but also as a concept extended to the public and social sphere. In the same way,

this document is translated as a guide document of international standards, turning it into a central document to understand what violence against women is. The complete document can be read on the website <https://www.ohchr.org/EN/ProfessionalInterest/Pages/ViolenceAgainstWomen.aspx>.

prevents them from developing their creative potential; of the right to social and political participation, due to the fact that it limits the performance of extra-domestic activities (with the exception of the minimums related to traditional roles), such as participation in organizations, groups or meetings; of the right to freedom of expression, and of the right to optimal physical and mental health. (Rico, 1995)

Gender violence can be reflected in different forms of violence that can range from physical, psychological and sexual violence, to economic or social violence, all of which constitute ways to limit, subordinate and enrage women.

According to the report *Hechos y cifras: Acabar con la violencia contra mujeres y niñas*

(Facts and figures: End violence against women and girls⁹, of the UN Women: (UN Women)

- *Approximately 35 percent of women around the world have suffered physical and/or sexual violence (does not include harassment)*
- *The total number of femicides in Latin America and the Caribbean rose in 2017 to 2,554*
- *There are approximately 650 million women and girls who married before they turned 18.*
- *One in ten women in the European Union declares to have suffered cyberbullying since the age of 15 years.*
- *According to a study in Australia, two out of every five women of 15 or more years of age who have participated in the labor market during the last five years have been victims of sexual harassment in the workplace.*⁴

Hashtags and tenders.

As already discussed in the previous chapter, there are a whole series of situations that are considered gender violence. However, it is important to understand that, even though over time, efforts have been made to eradicate these forms of violence and raise awareness about them, it is not until some years ago that the issue of gender violence became in a central issue in the citizens' agenda.

And this is where we can understand social networks as a factor that generates awareness about this issue. Feminist movements that for years had worked to identify forms of violence against women and raise awareness about them, found social networks important allies to get the message to hundreds of women who, without really understanding it, suffered some form of violence and already had normalized.

1. #MeToo movement.

The #MeToo movement was born in 2006 to help women victims of violence against women in the United States. However, thanks to the wave of complaints of harassment and abuse that several Hollywood actresses made since the end of 2017, the movement, through the hashtag #MeToo, became a global phenomenon. Initially, there was exclusive talk about sexual violence, however, over time, the discussion opened up to other forms of gender violence.

Some Hollywood actresses, like the actress Alyssa Milano⁵, popularized the hashtag and opened the conversation for hundreds of women around the world to make visible the experiences of violence they had experienced at some point in their lives. This hashtag ignited the alarms in the whole world, in the first place, for being a denunciation in a sphere as public as it is Hollywood and, in second place, by popularizing a theme that, for years, had generated in the victim's feelings of shame and guilt.

The tweet published by Alyssa Milano quickly began to receive hundreds of responses with comments such as “I thought it was my fault”, “I never told anyone”, “I talk about it but

⁴ These are some of the figures indicated in the document. To see the figures and the complete facts, you can go to the link: <http://www.unwomen.org/es/what-we-do/ending-violence-against-women/facts-and-figures>

⁵ On October 15-2017, the actress Alyssa Milano shared on her personal Twitter account an image that said: “Me too. Suggested by a friend: “If all the women who have been sexually harassed or assaulted wrote ‘Me

too' as a status, we might give people a sense of the magnitude of the problem." She accompany this image with a comment saying "If you've been sexually harassed or assaulted write 'me too' as a reply to this tweet." https://twitter.com/Alyssa_Milano/status/919659438700670976?ref_src=twsrc%5Etfw.

they said I deserved it", "*People called me liar*"⁶ realizing how normalized and incorrectly understood was the violence of gender in our society and our daily life.

This hashtag had such a global impact, that versions were even created in some languages like *#YoTambién* in Latin America and *#BenDe* in Turkey to expose their own cases of gender violence.

2. *#NiUnaMenos movement*

The *#NiUnaMenos* (*Not one less*) movement was born in Argentina as a slogan against "femicides", murders of women because of their gender, which in Argentina began to gain relevance in 2015. Several mobilizations were held in the country to put on the national agenda the issue of femicide and to demand justice in Argentina for women and girls who had been victims of femicide.

This movement began to cross borders, becoming a general movement in Latin America, which not only seeks to raise its voice against the femicides of which thousands of Latin American women and girls are victims each year and to make visible the problems and shortcomings of justice in these countries to deal in a timely manner with complaints of various forms of violence against women before committing femicides, but also seeks to raise awareness in the region about institutional failures to guarantee the rights and protection of women and girls.

The central clamor of this movement is clear: do not kill us. This is the way in which the movement has expressed its purpose and has spread throughout the region. Throughout Latin America, this movement has been driven by writers, journalists, actresses, musicians, presenters and is especially effective in national areas with the news of murders of girls and women. Although the topics of the internal agenda of the movement have expanded⁷, the clamor continues to be for the visibility and awareness of femicides in the region as one of the causes of death in girls and women.

3. *#BalanceTonPorc*

In October of 2017 and following the *#MeToo* movement, the French journalist Sandra Muller urged her followers to report cases of aggression and gender violence in workplaces with the hashtag *#BalanceTonPorc*, indicating the name of the abuser and the details.⁸

With this hashtag, many women reported cases of abuse they had lived in their workplaces, which showed that hierarchical positions and power, in many cases, ended in comments or violent acts against women. (AFP, 2017)

⁶ These are general ideas about the hundreds of response messages to the Alyssa Milano tweet.

⁷ Currently the *Ni Una Menos* movement was organized around the legalization of abortion in Argentina, setting its voice in favor of the slogan "sexual education to decide, contraceptives not to abort, legal abortion to not die".

⁸ "*#BalanceTonPorc !!! toi aussi raconte en donnant le nom et les détails un harcèlement sexuel que tu as connu dans ton boulot. Je vous attends*" https://twitter.com/LettreAudio/status/918810180879515653?ref_src=twsrc%5Etfw%7Ctwcamp%5Etweteembed%7Ctwterm%5E918810180879515653&ref_url=https%3A%2F%2Fwww.elmundo.es%2Fsociedad%2F2017%2F10%2F15%2F59e39b60ca4741df438b45e8.html

4. #MiráComoNosPonemos.

The hashtag #MiráCómoNosPonemos (Look how we get) was born in Argentina as a support of the Actrices Argentinas collective to the denounce of the actress Thelma Fardín against the actor Juan Darthes for sexual abuse. It has been the last movement promoted in social networks and has generated hundreds of women in Latin America to show solidarity, become aware of the forms of violence and even encourage them to denounce judicially.

Through a press conference on December 11, 2018, Thelma Fardín, along with actresses belonging to the collective, publicly released the complaint with a video in which she recounted how the violation occurred, generating a whole discussion in the country and, in general in Latin America, about the abuses and the sexual harassment in labor fields and how, the violence of gender acts affecting the life and the labor development of the women.⁹

This denunciation generated a whole movement and a wave of indignation, not only because of the judicial denunciation and public denunciation interposed by the actress, but by the constant abuses and violations that are being lived in Argentina and Latin America and that have become visible thanks to this type of movement and dozens of collectives that have exposed the cases.¹⁰

Conclusions and final considerations

Despite all the advances in equal rights and freedoms of women that have taken place for approximately 100 years, gender violence is something that is still latent in our societies due to the naturalization and normalization of attitudes and behaviors that affect the physical and psychological integrity of women in daily life.

Although hundreds of movements and organizations around the world have been fighting against gender violence and gender inequalities for decades, social networks have allowed not only a visibility but also an awareness of the different forms of gender violence, causing that attitudes and daily habits that affect women are broken and deconstructions of behaviors and imaginaries are created around the way of seeing and relating, not only between men and women but also between women and women.

Most of the movements promoted or made visible by the exposed hashtags have something in common: they are used and promoted by public figures, which allows an even broader scope to recognize gender violence as a social problem and to raise awareness of the behaviors and hostile environments for women.

Various criticisms have been made to the movements exposed in this work. Most of these critics consider that these movements are exaggerated and that they are, in one way or another, demonizing any type of demonstration of men towards women. With regard to this, it is considered necessary to clarify that, in this work, although it has been sought to present gender violence as a social problem of global relevance at present and that mainly affects women, it is not unknown that there is also violence of gender against men and that there is a part of the male population that has been a victim of it. However, as mentioned at the beginning of this article, gender violence was taken as violence against women.

Social networks have become support networks in cases of gender violence. Spaces where the discussion is open to make complaints, warnings, mobilizations in favor of women's rights, motivate the victims to speak and offer them not only to be heard but also support in various ways. However, new questions remain at the end of this work: 1. What are the governments and the justice of the different countries doing to confront gender violence? 2. How inefficient must justice and society be for social networks to become support networks among victims of gender violence?

⁹ Full video of the Actrices Argentinas press conference on the case of Thelma Fardín on GQuitoNoticias youtube channel. <https://www.youtube.com/watch?v=moQjH5BUICo> (GQuitoNoticias Youtube Channel., 2018)

¹⁰ Ibid. In the video of the Argentine Actrices press conference reference is made to the shortcomings of the Argentine justice system in the cases of femicide and gender violence, exposing the case of Lucía Pérez, in which the victim's femicides were left on freedom. According to the actresses, justice and the state "*hinder, dismiss, delay, stigmatize the victims, or fail aberrantly in favor of the perpetrators, as in the case of Lucía Pérez*"

Abstract

The media plays an essential role in changing the perception in the society by reinterpreting and shaping the phenomena. With the increasing interest in sports, the importance of sports media has also increased. Although historically the sport has been seen as a masculine field, the success of women athletes has made them visible. In parallel, the number of women in sports media has also increased. However, when we look at the news in the media, women's sports identity is overshadowed by gender stereotypes. In this manner, the media have been marginalizing the female athletes by framing their attractiveness, sex appeal or private lives' rather than accomplishments they have. The female athletes are placed in the "other" position. The aim of this study is to examine the perception of sports media, in terms of gender stereotypes. The study focuses on the image of women in sports and the reflection on the media. Women athletes whose achievements stay in the background of their femininity are pressured in the psychological and sociological sense. It is suggested that sports media should behave more egalitarian and fair attitude.

Key Words: sports media, gender stereotype, female athlete, masculinity, femininity

1. Introduction

On the one hand, while studies continuing for the woman to be more active in sport and social life, on the other hand, the woman is taken to the second place in the media and used as sexual object or entertainment material.

Over the centuries, the media first entered our lives as a newspaper, then radio, television and finally the internet. But the only thing that does not change that is the power of the media and its use in the design of society. Bernstein (2002) asks in his research; "Why should the media be discussed in relation to women and sport?" The fact that, the mass media, which are part of our lives, continue to disseminate both their own codes and codes of modern thought or culture, and in this sense, the mass media direct the society (Türkdoğan, 2015). The role of media, especially the portrayal of men and women with regard to how the sport is presented as a socially constructed reality in the ongoing construction of gender can not underestimate (Koivula, 1999).

The general finding of studies and related research is that the news media consistently contributes to the reproduction of traditional expectations of men and women and to the construction of a social stratification which enhances and naturalizes gender differences (Büyükbaykal, 2011; Koivula, 1999; Popa & Gavrilu, 2015; Türkdoğan, 2015; Ünsal & Ramazanoğlu, 2013). This social stratification is reflected in the attitude of the media. The approval of female, in other word, acceptance of the success in sports comes from the social system itself. We see that the media is on the side of the social system rather than the success of the woman in sports. While the sexist language is legitimized over the female body in the media, women could only take part in the gender roles in the media. While the fields such as economy, sports, politics and finance are mostly shown as men's expertise, women can be the subject of news, especially when it comes to shopping, health, magazine, home and dining.

Nowadays, women's participation in sports is not at a level comparable to men, but developments cannot be underestimated. In recent years, women have truly advanced in organized, competitive sport (Bernstein, 2002). Although social perceptions of women's participation in sports do not completely disappear, observed that they have started to change. While women were only seen in the sports fields that were under the control of the male, they became competing with men. It is now possible to see women in many sports branches that we are not used to see before, or where only men compete (Bernstein, 2002; Noordegraaf & Çoknaz, 2014; Shaller, 2013; Yüksel, 2014).

While sports news, which already include a small number of women, should emphasize the relevant performance, rather than women's sporting aspects, gender roles are more prominent (Arslan & Koca, 2015; Türkdoğan, 2015). But what is important is not the numerical increase of women's sports news in the media, but the content of presentation forms (Özsoy, 2008; Tiryaki, 2014). For example, Öktem conducted a survey in the newspapers about Süreyya Ayhan, a Turkish national athlete. As a result of the research, it was found that the Turkish press highlighted the emphasis on femininity before identity. It has been observed that the success of the woman in sport is defined as an unusual or a random situation and thus the woman is put into a secondary position in sports (Arslan & Koca, 2006; Özsoy, 2008). As Bernstein (2002) explained: "Visibility is certainly important but a closer look is required at the type of coverage of women's sports and female athletes get from the media" (p. 420).

“To deepen our understanding of the cultural values embedded in sports and to explore current values and power structures regarding men and women, it is necessary to investigate the potential effect that mass media may have in influencing beliefs about gender-appropriate sports behaviour” (Koivula, 1999, p. 589). There are many different studies about the presentation of women athletes in the media (Akkaya & Kaplan, 2015; Arslan & Koca, 2006; Bakan, 2013; Bernstein, 2002; Cooky, Wachs, Messner, & Dworkin, 2010; Fink, 2015; Knight & Giuliano, 2001; Koca, 2011; Koivula, 1999; Noordegraaf & Çoknaz, 2014; Özsoy, 2008; Shaller, 2013; Suiçmez, 2018; Tiryaki, 2014; Tuggle, 1997). In the majority of these studies, it was revealed that female athletes were less represented in the media than male athletes and that the representations had gender content.

Limiting women's coverage in social and cultural interpretations of gender role has revealed the necessity to analyze. Female athletes are often framed by the media in terms of their private life, sexual appeal etc. rather than their accomplishments. Based on the *Frame Theory* proposed by Goffman, a literature review was conducted on the status of women athletes in the media. The basis of framing theory is that the media focuses specific attention on particular events and then places them within a meaning (Goffman, 1974). In this study, the gender roles of female athletes in the media, the way of representation of them by the media, the process of influence not only female athletes also society discussed in terms of gender.

2. Gender Stereotypes and Sports Media

Media; has a strong power to change economic, political and social dynamics. Therefore, this study examines the representation of the media, which is an important tool for the determination and internalization of gender roles, on women athletes.

Gender is a major social and intellectual category that along with the social class, race, age, ethnicity and others, must be incorporated into all theoretically based social analysis of sport (Koca & Bulgu, 2005). To study sport in media would increase our understanding of the cultural values embedded in sport, as well as the social structures and values based on and linked to gender and perceived gender differences (Koivula, 1999). The media has the potential to produce, change and re-establish these roles as well as reflect the gender roles in society.

The world we are creating from representations is divided in gender, race, ethnic, class, age, disability, sex or origin area, where advantages, disadvantages, exclusions are mostly linked with these categories (Popa & Gavrilu, 2015). The only concept that divides people into two categories is the gender, that is, women or men. Social gender and sex are often confused. Sex is a term used to reveal the biological differences of women and men. In other words, this term basically refers to the differentiation of female and male according to chromosomes as XX in females, XY in males.

Social gender is a concept that includes many different approaches (Yüksel, 2014). Gender identity is not only biological. There are socially constructed identities and this has revealed the concept of gender. Gender is a notion about how society perceives us as men and women, how they think and expect to behave. Gender refers to social and cultural social roles and responsibilities of women and men. The meaning of gender equality is the lack of discrimination in the separation of opportunities or resources due to gender (Arslan & Koca, 2006; Özsoy, 2008).

According to findings of the research, there are significant gender role differences between men and women as expected. Men had more masculine characteristics than women did, whereas women had more feminine characteristics than men did (Koca, Aşçı, & Kirazcı, 2005). The concept of gender is used by feminists to emphasize inequalities and discrimination between women and men. Gender roles should be interrogated for both sexes but gender studies centre are mostly women because gender stereotypes and sexist behaviours based on these prejudices such as bodily weakness, bodily appearance are mostly carried out through the female body (Akkaya & Kaplan, 2015; Yüksel, 2014).

By imposing a female model that conforms to the expectations of the society, a perception is created that the female body is beautiful or delicate. On the one hand, the woman struggles against the social values created by the patriarchal tradition and the psychological pressures it creates, while on the other hand, it strives to comply with the dimensions of the ideal body imposed by the consumer culture. In accordance with gender stereotypes that portray women as the weaker sex physically, mentally and emotionally, the sport domain has been thought for centuries an exclusively masculine affair, not suited to the delicacy of a woman (Gentile, Boca, & Giammusso, 2018). Gentile and friends' meta-analysis reveals that gender stereotype influences the sport activities of women and that this is particularly true for sports typically thought suited to men (2018). Again, the position of women in the social structure is determined in terms of social, economic and political aspects (Büyükbaykal, 2011). This special struggle has continued throughout history (Özsoy, 2008; Suiçmez, 2018).

Discourse which constrains women from sports and physical activities or restrains them to certain limits is based on the biological difference between the power of men and the weakness of women (Akkaya & Kaplan, 2015). Women are often framed in terms of their social position, for example, as girlfriends, wives, or mothers (Bakan, 2013; Koivula, 1999).

2.1. Hegemonic Masculinity in Sports Media

Mankind tries to understand the other entities he sees around by marginalizing. A belief, denomination, gender or thought outside us can easily be the *other*. In addition to religious and ethnic marginalization within social life, sexist othering is also frequently seen. The media are also accepted the ideal beauty of women by the supporting this othering with the giving the place on screens, newspapers, magazines. In this manner, the female body transforms into entertainment then present to the audience (Suiçmez, 2018). Marginalizing women in sport is the fact that certain sports branches are closed to women and excluded. This type of marginalization is based on the desire of the man to see the woman below him and establish a domination over him in societies dominated by patriarchal culture (Arslan & Koca, 2006; Koca & Bulgu, 2005). Sport continues to be viewed through the prism of male domination that traditionally requires masculine gender role characteristics (Bernstein, 2002; Gentile et al., 2018; Hall, 1988; Koca, 2011; Shaller, 2013; Sherry, Osborne, & Nicholson, 2016; Yüksel, 2014). Superior sporting performance is considered equivalent to masculinity (Arslan & Koca, 2006). In particular, competition sports give very strong messages about masculinity and femininity.

Many studies in the fields of sociology, psychology and sports emphasize the importance of the equal participation of men and women in sports-related publications (Özsoy, 2008). As a good example of this situation may be shown the article of Bahar Toker who is licensed basketball player. In the article, she shared her player experiences and said that;

"I would like to discuss the results of sports sexism more than the 'women do not understand football' or 'men do not water ballet' over my own experiences. While the men played basketball on the street, I would say that 'I don't play like a girl' to be accepted into their games (Toker, 2010)."

Taking into account the bodies of women, they are seen as weak beings that cannot handle heavy sporting activities (Akkaya & Kaplan, 2015). It has been accepted by many studies that the definitions of the position of women in sports are not on an equal basis in terms of two sexes and are discussed in terms of success, power and gender perception on the discriminatory and sexist basis towards women (Bakan, 2013; Gregg & Gregg, 2017; Hall, 1988; Koca & Bulgu, 2005; Özdemir, 2018; Yüksel, 2014). According to Özdemir's research, the idea that sports are a male-owned field is widely accepted even by sports teacher candidates both female and male (Özdemir, 2018). It would not be wrong to say that this approach is reflected in sports media and is also valid in institutions.

Another area that is dominated by men, such as sports, is the media. In the 1980s and especially in the 1990s was revealed that the media mainly included male athletes (Bernstein, 2002). Surely, sports participation among female athletes is currently greater than all time, and they achieve remarkable athletic performances. Nevertheless, female athletes and women's sport still receive starkly disparate behaviour by the sport media commercial complex compared to male athletes and men's sport (Fink, 2015; Shaller, 2013). Media often allude or explicitly refer to a female athlete's attractiveness, sensuality, femininity, and weakness. All of them effectively transmit to the audience that her stereotypical gender role is more marked than her athletic role. Women most often refer to as ladies, young ladies, or girls, whereas men more commonly refer to as men or guys. Male athletes are portrayed as powerful, independent, dominating and precious (Bakan, 2013; Knight & Giuliano, 2001; Koivula, 1999). Several researchers (Arslan & Koca, 2006; Bakan, 2013; Cooky, Messner, & Hextrum, 2013; Knight & Giuliano, 2001; Noordegraaf & Çoknaz, 2014; Tuggle, 1997) found that most studies of dominant sports media, discussions about gender that compare the amount and type of coverage given to male and female sports. In short, sport is one of the basic areas in the social construction of masculinity. Looking at the history of sports, the male-dominated structure, which can be easily seen, is now being reproduced through the media (Akkaya & Kaplan, 2015). According to Özsoy research findings, it was seen that the rate of following the sports pages of the newspapers among men was 61 percentage and it was 18 percentage among women (2008).

Media and sports, which are two areas that need and complement each other, have been dominated by men more than in many areas of life. Due to the fact that most of the news about sports is made up of men, duties such as reporters, writers and editors in sports media are mostly carried out by men (Akkaya & Kaplan, 2015; Arslan & Koca, 2006; Koca & Bulgu, 2005; Özsoy, 2008)

The reason why the news of women athletes is less in the media may be that the most followed sport is male football (Bakan, 2013). The fact that football, with its masculine structure, is the most popular sports branch, therefore, sports journalism and television, makes news about women less popular (Akkaya & Kaplan, 2015; Özsoy, 2008). Media, therefore, frame female sports as less deserving of coverage than men's sport (Tuggle, 1997). Özsoy revealed that the number of news about male athletes who do sports out of football is less than the news involving male athletes in general (2008). The results of this study clarify the existence of male hegemony due to the fact that the sport with the most interest is football.

This long-term differentiation between men and women has affected not only the participation in sports but also the conversation about sports, which is seen as a male-specific activity (Yüksel, 2014). Women are given the place with the purpose of passive and image which can only be considered as a mannequin in sports media where men are largely dominated (Akkaya & Kaplan, 2015). As a one of important example may be given the sports program is called as *"İddialı Yorum."* Program published in the *Show TV* channel in the year 2006. While

the three male football commentators discussed the games to be played in that week, the female server in the program only watches the comments and could speak when given the right. In the program mostly followed by men, the server was physically placed in a place where the camera could get the best view (Akkaya & Kaplan, 2015). Nowadays, it is possible to say that women become a visual object on television (Büyükbaykal, 2011).

Even in a country where there are significant gains in equality between men and women, it may not be possible to see the same equality in an institution where men are more such as media (Arslan & Koca, 2006; Yüksel, 2014). In this context, the secondary position of the woman in the media will continue to be discussed on the basis of inequality (Türkdoğan, 2015). Mass media has become one of the most powerful institutional forces in society (Bakan, 2013). Not only in Turkey, almost every country in the world, the negative representation of women in the media, humiliation, subordination is seen as a problem area (Arslan & Koca, 2006; Özsoy, 2008). Here we see that the attitude of the media is not based on the success of women in sports but on the social system (Arslan & Koca, 2006).

2.2. Women in Sports Too

In the western world of the 19th century, women said that *I am in too* and they began to reap the fruits of their struggles in the twentieth century. As a natural extension of this process, women participated in sports too (Noordegraaf & Çoknaz, 2014). For the last 30 years there has been a rapid increase in the participation levels of women in sports, with factors such as the creation of new opportunities and regulations in recent years all over the world (Shaller, 2013). While the male-dominated structure in the sport was felt more aggressively in the past century, there is an increase even in women's interest in watching sports (Özsoy, 2008).

There has been a significant increase in women's participation in sport since 2002. In addition, there has been an increase in the level of women's participation even in the types of sport that have been traditionally limited to men such as wrestling, weight-lifting, kick-boxing, bodybuilding in many countries around the world (Bakan, 2013; Koca et al., 2005; Arslan & Koca, 2007, p. 317). Although the number of women taking part in traditionally male sports has been growing, gender stereotype continues in media.

Over recent years women have absolutely advanced in organized, competitive sport (Bernstein, 2002). Women athletes, from wushu to windsurfing, from judo to table tennis in many branches with the pioneers and the achievements they began to take their deserved place. For example; female athletes who participated in the 2012 Olympics took part in the media because of pioneered many firsts such as the number of female athletes being more than the number of male athletes and being the pioneer in the Islamic world in terms of Turkish sports history (Noordegraaf & Çoknaz, 2014). The 2012 London Olympic Games were heralded as the year of the woman as every delegation sent a female athlete to contest in the games, and nearly 45% of all athletes were women (Fink, 2015; Noordegraaf & Çoknaz, 2014). According to Yüksel research (2014), although women's participation in sports is lower than men, it was concluded that women engaged in sports do more regularly than men. Woman athletes are not the woman that behind a successful man anymore; they became the symbol of the success. It should be noted that this growing interest in the press will encourage women athletes (Arslan & Koca, 2006; Noordegraaf & Çoknaz, 2014).

In an era in which men's professional sport is becoming portrayed by multimillion-dollar contracts, player's union lockouts, illegal steroid use, and an individualistic mentality, disgruntled sports fans are increasingly turning to women's professional sport for entertainment (Knight & Giuliano, 2001).

This has not been successfully portrayed in journalism. Because women have sprung into the mainstream sports world at a high rate in the last decade, one would assume they would receive an increased amount of media coverage. The media chooses to depict female athletes in a differing manner than their male counterparts; therefore women suffer the consequences of being forced into socially acceptable traditions (Shaller, 2013, p. 50).

Despite the fact that recent researches prove a shift toward the more respectful representation of women's sports in some media outlets, this is typically found in smaller media markets or in corner markets where the focus centres on women's sports (Cooky et al., 2013). In several studies, it has been underlined that the cause behind the submission of female athletes in the media is the ideology of gender dominant in the society.

3. Representation of Female Athletes: Sex Appeal Image

This world is equally saturated by media, information and communication technologies (Popa & Gavrilu, 2015). In the media, especially in daily newspapers, the involvement of sports is increasing and many newspapers have started to publish sports supplement, along with sports pages (Arslan & Koca, 2006).

As Bernstein said that although women have achieved some ground as far as media visibility is concerned, especially in major sporting events, it is far too early for a victory lap (2002). The media could not be expected to remain indifferent to the sport, which is an important element of life, however, the problem of the lack of news about women's sports in the media compared to men's sports is similar in all around the world (Özsoy, 2008). But what is important is not the numerical increase of women's sports news, but the content and quality of presentation forms (Arslan & Koca, 2006; Bernstein, 2002; Büyükbaykal, 2011; Knight & Giuliano, 2001). As in all sectors, women should be strengthened in the field of media too.

For example, Talk radio host, Don Imus in their examination of the mainstream print news media frames of the 2006–2007 Rutgers University Women's Basketball Team, reference to the team as “nappy-headed ho’s” (Cooky et al., 2013; Daniels, 2009).

Arslan and Koca research in which examined sports media visuals, revealed that instead of the performance poses of the female athletes, the photographs containing the meaning of sexuality were published in the media (2006).

For another instance, Yüksel Aytuğ, a Turkish journalist, is one of the most important examples to understand the point of some media perception. Aytuğ said in his article which is called *Womanhood is Dying at Olympics*;

“Big shoulders, tiny hips, and flat breasts like wood... If they weren't wearing swimsuits in different shapes, I'd think they were all men. Breasts; the symbol of womanhood, maternity, fertility. (...) as if it was pruned. (...) Should not be satisfied with the women athletes' results of the stopwatch. When sorting, plus and minus points should be added according to the ratio of physical appearance of athletes to women similarities (Yüksel Aytuğ, 2012).”

Today, most of the women are still considered as the topics of the news about sexuality, indecency, unfaithfulness, jealousy etc (Büyükbaykal, 2011). Female athletes have often been defined in terms of their physical attributes in the print and television media, which is argued to sexually objectify women, devalue their performance and reassert traditional notions of femininity (Sherry et al., 2016). The presentation of women athletes in the media is an important issue for feminist research in relation to the process of reproduction of gender ideology in the sports institution (Arslan & Koca, 2006; Bernstein, 2002; Popa & Gavrilu, 2015; Yüksel, 2014).

For example, in 2012 London Olympics, where most women's athletes participated, some media tools, preferred to report on the list of *The Twenty Sexiest Women of The London 2012 Olympics* instead of mentioning the achievements of athletes (‘Photos: The 20 sexiest women of the London 2012 Olympics’, 2012).

Although female athletes are becoming more accepted in the media, there is still a stigma encircling female athletes such as a sex appeal image. Written and visual mass media are increasingly highlighting sexuality on female athletes. In the mass media, seeing the body as an object and presenting it will lead to a burdensome cost such as the use of the body as an object (Taşkaya, 2009). Moreover, this situation is not only seen in sports media, but also in advertisements. For instance, Lanis and Covell research indicate that males who see print media advertisements in which women are presented as sex objects are more likely to evidence increased sex role stereotypic (1995). The constant direction of the media to the desire, legitimizes the transformation of the body into the object of consumption (Taşkaya, 2009).

3.1. Does Look Matter?

The best answer to this question is the two well-known tennis players: Serena Williams and Maria Sharapova. The general idea is that someone who is better than someone else should have a more in endorsement money. There was the disparity in endorsement pay between Serena Williams (\$13 million) and Maria Sharapova (\$23 million) in 2015. At this point, we should bring into this question;

Why does Maria Sharapova earn much more while Serena Williams more successful? Or else, does look matter?

With 23 Grand Slam titles, Serena Williams continues to be the most successful tennis player of all time, but the whole world focuses on; Serena Williams' body. Being in the spotlight as a superstar tennis player has made Serena Williams a target for attacks over her body, her gender, and the colour of her skin, in a nutshell, her appearances. There are sexism and racism on the basis of comments for Williams. Thus, it is possible to say that the appearance of the female athletes overshadows their many accomplishments in the media (Knight & Giuliano, 2001).

In the consumption society created by the capitalist system, the female body is rediscovered in the context of pleasure and sexuality (Suiçmez, 2018). It seems that this has nothing to do with being more successful, but it has to do with selling more products and more advertising. However, capitalism does not take into account such things like equality. Williams told the *New York Times Magazine* (Rankine, 2015);

“If they want to market someone who is white and blond, that's their choice.”

As a result of the sports club's efforts to increase revenues, the popularity of sports organizations and the interest of the media as well as sports organizations, the marketing-oriented structuring has started in the sports sector. Although sport is a new field within the marketing field, sports have been either marketed or used as a marketing tool for centuries (Ekmekçi & Ekmekçi, 2009).

Without the beauties or sexual aspects, the female athletes who think that they cannot attract attention by the media, unfortunately, front different ways. For example; Lori Susan "Lolo" Jones - an American hurdler and bobsledder who specializes in the 60 meter and 100 meter hurdles - in 2009, Jones posed nude for *ESPN the Magazine*. Lolo Jones criticized by the “Today” in “The New York Times” for marketing her sex appeal (Longman, 2012).

"Judging from this year's performances, Lolo Jones (...) no possibility of winning gold. Still, Jones has received far greater publicity than any other American track and field athlete competing in the London Games. This was based not on achievement but on her exotic beauty and on a sad and cynical marketing campaign. (...) So she has played into the persistent, demeaning notion that women are worthy as athletes only if they have sex appeal. And, too often, the news media have played right along with her."

Women's attractiveness can make the most ordinary product or news interesting, so the use of women in mass media is rapidly increasing. Nowadays it has become very natural to meet a beautiful woman in commercials, newspapers, television and magazines. In this way, women become material for the media (Büyükbaykal, 2011).

3.2. The role of media

Today's society now exists as a demonstration society. As a result of this situation, the media is the most important or even the only important dynamic of this visuality world to direct the masses (Türkdoğan, 2015; Ünsal & Ramazanoğlu, 2013). "Instead, media production entails a complex process of negotiation, processing, and reconstruction. It, not only offers us something to see, but also shapes the way in which we see by creating shared perceptual modes" (Koivula, 1999, p. 589).

Production of media is not based solely on facts instead requires a complex process of negotiation, processing, and reconstruction. This is may be the most important role of the media. The media has a significant impact on the spread of sports branches with the words and visuals that it uses. Especially in recent years, the increasing number of media coverage of women athletes' success has encouraged families and young people (Arslan & Koca, 2006; Noordegraaf & Çoknaz, 2014). Turkish volleyball player, setter, Arzu Göllü said in an interview (Albay, 2008); "The recent achievements of the national team and their reflections on the media make families more positive in encouraging their daughters to sports.

It is not only what the media says, but also what it does not say (Özsoy, 2008). According to Bakan's research findings, female athletes gender roles such as "mother", "grandmother" and "wife" were emphasized in one-third of the news in which their names were mentioned (2013). Also, Türkdoğan research revealed that the dominant sexist language used by the media during the reproduction of the patriarchal system was carried out through a divinity in motherhood (2015).

At this point, the media has something more important than the male dominant sports new; women are the objects in visual and written media which emphasize sexuality. The media displays a continuous thin female body in this manner forces the society to enter into standard patterns. The media gives women a specific concept of thin body sizes by manipulating them visually (Suiçmez, 2018). With the desire of reaching the body sizes determined by the media, women apply various sports activities and nutrition programs organized by dieticians (Suiçmez, 2018).

This situation affects the athletes as well as the society. For example Suiçmez study is particularly concerned with the ways in which the idealization of beautiful female bodies in the media has led to the public disregard for non-standard female body sizes (2018). When media coverage is afforded to women's sports, it tends to involve humorous stories of nonserious women's sports, such as the nude calendar, and the sexual objectification of women athletes, such as commentary on tennis player Anna Kournikova's physical attractiveness (Daniels, 2009).

Although researchers suggest that the media should be cognizant of the harmful and erroneous impressions that can result from portraying athletes in terms of their personal attributes rather than their athletic accomplishments, the media continuing its behaviour in this direction (Knight & Giuliano, 2001; Lanis & Covell, 1995). The fact that the media is behaving to the athletes in this way may create serious effects on their success.

The weightlifter Holley Mangold has been criticized for her physique. Ms. Jones had the most direct emotional response, said to the media;

"I just thought that was crazy because I worked six days a week for 4 years for a 12-second race and the fact that they just tore me apart is heartbreaking (Carter, 2012)."

Serena Williams explained what it means to be a female athlete. In a recent interview, she talked to *Motto* -an offshoot of *Time Magazine*- about the many body-shaming comments she's faced throughout her career (Segarra, 2017);

"It is not always easy to be on the stage playing a tournament and have someone making a comment about your body, that it's too strong."

The gymnast Gabby Douglas was scrutinized over her uniform choice and the way she kept her hair, in a few words over her appearance. Ms Douglas, who failed to medal in any individual events, and said she had been reading about herself online and had not slept well (Carter, 2012). It is quite difficult to say that the media had not any effect on her psychology in this defeat. Thus people under stereotype threat might underperform because their attention is focused on actions that are usually unconscious.

4. Conclusion

Even though it cannot be compared with the level of male sports it is obvious that there are significant improvements in female sports. We see women athletes in many branches even that require men power or masculinity which we are not accustomed to seeing. Although gender equality in sports has come a long way, it still has not come far enough. At this point, the media reinforces this gender inequality in the sports with the attitudes it exhibits. The media is framing the female athletes with their appearance, private life etc. except their sports achievements in this manner, somehow marginalizing them.

Although the news about female athletes is rapidly increasing, non-objective representation is continuous to marginalizing them in the sports media. Instead of the strong and successful female athletes, beautiful and sexy female athletes attract more attention in the sports media. In this direction women athletes who are not more successful but more beautiful and attractive becoming more marketable. This situation pushes the female athletes to use femininity to attract attention by sports media.

Female athletes who are mostly presented in sports media with their physical attractiveness or private lives may face strong psychological and sociological consequences when the achievements that they endeavour throughout their lives overshadowed by. This may affect even the athletes' career. Demonstration of the fact that sports can be done successfully by both sexes and besides this, construction of the sports media, in which sportsmen's identities are at the forefront rather than gender roles may increase the motivation of female athletes. Female athletes who would love to be presented no longer with their beauties, sex appeals or with their muscular bodies, overweight should be represented with their achievements in the media. Not the more beautiful one but the more successful one should earn more. We should become a pioneer to demonstrate gender equality in sports media. Time to *fair play* for sports media.

Abstract

The use of social media continues to grow and especially widespread among young adults. It is unexpected then that, despite this active and ongoing connectivity among individuals, young adults may be lonelier than other age groups, and maybe the current generation is the loneliest ever. It is to consider that the age people born into, plays an important role in their relation with technological new founds. People, born in a time where technology plays a crucial role in daily life, are getting used to the social life, which seems unthinkable without technology. People, born in a time frame where technology had not such a playful role in daily life, are more sensitive onseeing the differences in social and overall daily life, thus, making the integration with the technology really difficult for them, consequently.

It seems that, only image-based social media platforms (e.g. Instagram) have the potential to decrease loneliness because of the improved intimacy they offer. In the contrary, platforms that are overwhelmingly text-based (e.g. Twitter) offer little of giving away an individual's intimacy due to their format. Therefore, text based social media platforms should have no effects on decreasing loneliness.

Based on the Uses and Gratifications framework (U&G), we aim to identify and describe if there is any effective difference between text-based and image-based social media platforms, as far as the mental health (i.e. happiness and loneliness) is concerned.

Keywords: Social Media, Loneliness, Happiness, Instagram, Twitter, Intimacy, Social Presence

Introduction

Human species have the opportunity of connection among themselves like never before, thanks to the communication channels that today's technology provides them. Social media can be roughly defined as platforms that individuals build networks and communities on in the cyberspace where they have the ability to create and share content with their social networks (i.e., friends, followers, etc.). This form of media revolutionized the way individuals communicate and interact with each other. And young adults are the ones using this new phenomenon enthusiastically.

The Pew Research Center (2017) found in a recent study that, younger Americans (especially those ages 18 to 24) stand out for embracing a variety of platforms and using them frequently. According to The Pew Research Center (2017), some 78% of 18- to 24-year-olds use Snapchat, and a sizeable majority of these users (71%) visit the platform multiple times per day. Similarly, 71% of Americans in this age group now use Instagram and close to half (45%) are Twitter users (Smith & Anderson, 2018). According to Thayer & Ray (2006), young people are more harmonious with the current technology, therefore the age of the users is determining the quality and frequency of social media usage. Monica & Jingjing (2018) found that, the popularity of picture based social media platforms such as YouTube, Instagram and Snapchat are increasing rapidly under teens, ages 13-17, whereas the use of text-involved social media platforms is not anymore dominant, as it was the case a few years ago. This might be an indication of a shift on technology landscape in next generations, where it will have possibly some effects on people's emotional and social anticipations.

The availability of technology is higher in developed countries (e.g. USA, UK etc.), where individuals have easier access to internet. Thus, this intensifies the interconnectivity of individuals through social media and therefore the emotional well-being of these people can be regarded as

likely to increase. However, the loneliness problem of these societies is continuing firmly whereas the use of social media is at its highest, compared to undeveloped countries.

According to a survey, conducted nation-wide in the United Kingdom, by the Mental Health Foundation, 48% of adult research participants believe that people in the UK are getting lonelier as time proceeds, 45% are reporting being lonely at least some times, and the rate of people feeling depressed due to being alone is reported as 42% (Griffin, 2010). According to Griffin (2010), 24% of people worry about feeling lonely, from which the critical part of it is that, this worrying is commonly felt by people aged 18-34 compared to people aged over 55.

In some ways similar to this research, Nicolaisen & Thorsen (2014) conducted a nation-wide survey in Norway, analyzing different factors related to loneliness among different age group 18-81. They found that, 21% of research participants experience loneliness often or at least some times. From which the oldest group aged 65-81 is the one feeling most lonely, followed by the youngest group aged 18-29 (Nicolaisen & Thorsen, 2014). The factors associated with loneliness vary in different age groups obviously, but the interest attracting point in this research is that the youngest group is pointing significantly differently compared to other age groups close to it. Olds & Schwartz (2011) argue that, in the twenty-first century, Americans are using technology to stay connected, more than any other society in history, whereas studies are showing that Americans “feel increasingly alone” (p.1). The consequences of this trend in the direction of loneliness is to be considered. Where social isolation, therefore loneliness has significant effects on physical body health and even life expectancy.

A research, conducted by Brigham Young University researchers, found that loneliness increases the odds of mortality by 26%, in the case of social insulation it is 29% and 32% for living alone (Holt-Lunstad, Smith, Baker, Harris, & Stephenson, 2015). According to Holt-Lunstad et al.

(2015), loneliness and social insulation is comparable with other health issues like obesity and substance abuse which are risk factors for premature mortality.

Every time period in human history contain different variables that can affect the psychology of people. Modern social science researchers have a serious function in identifying the causes and cures of loneliness, considering today's factors. This research aims to play a part in this matter by focusing on certain types of social media, particularly image-based social media, to find an answer to the possibility, that these types of social media may affect the mental health of people.

The term “loneliness” might seem easy to define, because everybody experienced it in some ways or another. But, like many seemingly simple things, the term “loneliness” is not easy to define. Eisenman (1983) argues that there are different perspectives about this term, where it can be considered partly as subjective. For instance, according to Eisenman (1983), a person might feel lonely even surrounded by friends and in contrast, on certain situations, one might be objectively lonely, but cannot experience the feeling of any loneliness. Perlman & Peplau (1981) define loneliness as “unpleasant and distressing inconsistency between someone's desired and achieved level of social relationships” (p. 31).

It is yet to be determined whether this newly in people's lives entered communication technologies can deflect the issue of loneliness. It is also significantly important to capture how people build their social relations via the newfound ways of socialization opportunities enabled by the internet, in a way that makes them feel less lonely and therefore psychologically healthy.

According to Hughes, Waite, & Cacioppo (2004), social relations are vital among humans to have the fulfillment of emotions, behavioral attitude and cognitive functionality. That is however, rather than for purposely preventing negative outcomes of the individual's psychology (e.g. loneliness, grief), a person's social relations contain some potential to provide positive outcomes (e.g. satisfaction, happiness). But Allen, Ryan, Gray, McInerney, & Waters (2014) argue that, still, the role of social media's motion in this sense is undiscovered.

Advancements and innovations in communication technology enabled people from any socio-economic status, to benefit from these opportunities. Additionally, the innovations in bandwidth technology and the reachability to mobile cell phones, started from SMS (short message service) texting and came to a point, where people can record and send high definition videos, pictures or even stream live events with affordable financial offsets (Pittman & Reich, 2016). Superficially, it appears that widespread different ways of communication through various social media platforms should allow people to feel more connected to each other. The rate of newcomer social media platforms and the adoption, popularity and (sometimes) obsolescence of these platforms makes it difficult to find out which kinds of them has which effects on loneliness and overall human psychology. The style of each social media platform (image or text-based) might create a clue about its effects on loneliness. It is to consider also that, the age people born into, plays an important role in the relation with technological new founds. People, born in a time where technology plays a crucial role in daily life, have the tendency of getting used to the unusualness's (e.g. unusual social interactions) that newfound technology creates. People, born in a prior time frame then those, are more sensitive on seeing the differences in social and overall daily life, thus, making the integration with the new

technology really difficult, consequently. The discussion about this issue expands into more broader disciplines going far into sociology, psychology and social- psychology.

Nasaescu, Marin-López, Llorent, Ortega-Ruiz, & Zych (2018) argue that, newfound technology brings different issues with itself, where it has effects on social and emotional states in younger generations. According to Siciliano et al. (2015), new generations are most affected and unprepared by these issues the newfound technology brings with itself, also the intensive internet use leads to concerns about problematic internet use. According to Altın & Kivrak (2018), in age groups which have linkage to an education institute (e.g. university), there are also aspects which can't be overlooked, in terms of the social media use and its effects on human mental well-being. The reachability to social media, made an enormous shock to people's sense of social relations and has paved the way of diversifying the perception of each individual, even in a nuclear family. The widespread use and availability of electronics, enabled people to spend time on the internet, more than in their real lives and thus, making it easy for them to review and change their perceptions about the world. The communication through mobile cell phones, and other digital media brought up the issue of "technoference", a word that is used for describing the interference, disruption and intrusions in social relations, as a result of using new ways of communication channels provided by technology (McDaniel & Coyne, 2016). According to McDaniel & Coyne (2016), this term refers to the phenomena that, the option of using communication channels via electronic media, caused challenges in family life and overall relation between parents and their children, which opened the way for new challenges in nurture of children, adolescents and teens.

Therefore, it is important to notice the variables in social life interactions and relationships, which occurs with the influence of newfound ways of communication channels provided by electronic devices and internet.

Goal of the Study

To consider the role of social media in everyday life, and the potential negative outcomes of loneliness (i.e. mental health), the objective our research is to identify the correlation between the use of certain social media platforms and their effects on people's mental well-beings. We focus particularly on the relationship between loneliness and both of text-based and image based social media platforms.

As subject to text-based social media platform, our main focal point will be Twitter, since it is the most popular platform of its kind. In the case of image-based social media platform, we will center Instagram and Snapchat on our focus. Which are also two popular platforms of their kinds. The far-reaching social media platform, which integrates components of both image-based and text-based social media, namely Facebook, is included as the fourth social media platform in this research. In correlation to the possible uses and satisfactions provided by these four social media platforms of approach, we review the literature of communication.

Social media is usually being used as a tool for compensating the needs of social interaction, that users don't or can't have the opportunity of experiencing in their physical lives. The virtual social presence of these interactions differ relevant to which platform is used. The image-based social media platforms (e.g. Instagram and Snapchat), should theoretically offer the maximum level of artificial social presence. Conclusively, leading to our research's hypothesis that these sorts of social media platforms will be most efficacious at counteracting loneliness.

Text-based social media platforms, primarily Twitter in the case of our research, appear to provide a lower level of virtual social presence. As well as mixed social media platforms, which include the aspects of both image-based and text-based properties (e.g. Facebook), seem also to offer a poor-quality degree of virtual social presence.

Importance of the Study

Understanding the dynamics of human behavior and psychology has been a noteworthy part of research areas in human healthcare. According to Conner & Norman (2017), researchers with considerable amount of researches have proven that, a healthy lifestyle behavior is effective on sustaining health and hindering diseases, whereas risky lifestyle behaviors (e.g. sleep disorder, unhealthy diet, physical inactivity) are accountable for the probability of diseases and untimely mortality. Helbostad et al. (2017) concluded that, investigating and observing human behaviors can play a role on sustaining an active and healthy aging of humans, which is a complicated process that is dependent on social, psychological and physical changes. According to Helbostad et al. (2017) the newfound advancements in technology have enabled the identification of human behavior, inconspicuously.

Since smartphones are playing a crucial role in people's daily lives, this opened the way for smartphones to become a tool for detecting and tracing human behavior. In the US, 75% of people own a smartphone (Smith, 2014). And in the UK, about 50% used internet, which is estimated to rise up to 90% by 2020 (Green & Rossall, 2013). Additionally, according to Statista (2018), worldwide use of smartphones has reached to 2.1 billion people in 2016, and this number is projected to rise up to 2.5 billion by 2020.

As an example of how smartphones became a tool for detecting and tracing human behavior, one can focus on

smartphones hardware's which include sensors such as gyroscope and accelerometer, which can track users' body movements, position and orientation. Additionally, software, that can detect user interaction with the device, such as keyboard and screen lock/unlock applications are also to be taken into account. These aspects of newly advanced technological devices have therefore the potential of gathering all sorts of data about individuals, which in the end can lead to the fact that, these devices will be playing a crucial role at analyzing and interpreting different variables, that affect human psychology.

Considering above mentioned statistics, the widespread use of smartphones has the potential to pave the way of widening the use of social media platforms. Eventually, this prevalence of mobile smartphones will lead social live to a position, where these social media platforms will be the overwhelmingly the source of influence in human behavior.

Kagan, Bornstein, & Lerner, (2017) describe human behavior as "the potential and expressed capacity for physical, mental and social activity during the phases of human life" (p.1). Through technological devices gathered data about a user's behavioral lifestyle, contain information about the person's daily activities, psychological abilities, and social interactions, which can be useful for identifying and having a presentiment about emotional, physical and social behavior. Consequently, providing a trace about emotional, physical and social health of individuals, as well as social groups.

To deliver an example, physical behavior of an individual is related to physical health problems (e.g. heart failure and obesity). Emotional behavior interrelates with mental health problems (e.g. depression, anger, suicidal feelings and sleep problems). Social behavior interrelates with user's social interaction problems (e.g. loneliness). So, the gathered data about people's behavioral lifestyle through widely used smartphones, consequently through social media usage, can shed light on a broad variety of aspects about human behavior (physical, emotional and cognitive etc.).

From this standpoint, the importance of this research is related to these aforementioned visions. We herewith focus on different varieties of social media platforms (i.e. picture-based and text-based platforms) and their potential effects on loneliness and happiness. From this point of view, we have a well-balanced approach to analyze and interpret the behaviors and emotions of certain social groups and to provide potential assist for future research directions.

Theoretical Background

As an approach to a study related to media, The Uses and Gratifications (U&G) framework (Katz, Blumler, & Gurevitch, 1973; Rubin & Haridakis, 2001; Sundar & Limperos, 2013) is a fine- established pathfinder for our research. This approach of idea is moving along the way, that consumers of media have the awareness of choosing the types of media, which are capable to effectively fulfill their particular needs and satisfactions.

Main aspects of newfound technologies, for instance the freedom of choosing which media a consumer wants to use and the option of active interaction between individuals, are considerable reasons for users to be attracted to these technology-based new media, which was not the case by the traditional media of 20th century (Ruggiero, 2000). According to Pittman & Reich (2016), present U&G research has shed light on the question, why individuals are in favor of using certain technologies, and yet, researches which focus particularly on social media are limited.

In regard to this context, Katz et al. (1973) acknowledged that behavior of media consumption is generally canalized by gratification needs. The existing literature of U&G about social media may shed light on understanding possible relations between social media usage and its effects on loneliness and happiness.

Methodology

We use the descriptive method in this research, with the aim of collecting information without altering any variables in the research process. Moreover, we aim to obtain information, concerning the current state of text and image-based social media and if there is any correlation with the aspects of mental health (i.e. loneliness, happiness) of the users.

According to Ethridge (2004), "descriptive studies may be characterized as simply the attempt to determine, describe or identify what is" (p. 24). Also, Fox & Bayat (2008) acknowledge that descriptive research is "aimed at casting light on current issues or problems through a process of data collection that enables them to describe the situation more completely than was possible without employing this method" (p. 45).

The main characteristic of a descriptive study is that it describes different aspects of certain phenomena. In other words, descriptive studies are used to describe the behavior of a sample population. Main purpose of a descriptive research can be interpreted as describing, explaining and validating the findings of the research.

Social Media Platforms

The most popular social media platform worldwide, in 2004 founded Facebook lets its users share text, photos and videos with each other. According to Facebook, as of 2nd quarter of 2018, it has 2,23 billion monthly active users and 1,4 daily active users. Nadkarni & Hofmann (2012) reported that motivating factors of Facebook users are primarily the need of belonging and the need of self-presentation. Also, compared to direct messaging, which is often used for preserving relationships among individuals, Facebook is more oriented in the direction of getting updates about one's entire social network and having fun (Quan-Haase & Young, 2010). According to Skues, Williams, & Wise (2012), lonely people have more the tendency of using Facebook as compensation for their poor social relationships in physical live. Additionally, Malik, Dhir, & Nieminen (2016) acknowledged that Facebook users are sharing photos on the platform, because this satisfies their needs of attachment, seeking attention, sharing of information and for the purpose of social influence, which are leading reasons among many other reasons. However, according to Pittman & Reich (2016), it is unclear what kind of effects photos and videos have in gratifying needs of people socially and emotionally, and if fulfilling these needs might decrease the feeling of loneliness.

Among other popular social media platforms, Twitter, founded shortly after Facebook, lets users post text messages with a limitation of 280 characters per post (also known as *tweet*), this social media platform also supports image and video posting, but is mainly designed for mediating short messages. Concerning the statistics of popularity, Twitter's numbers have a quite considerable gap in comparison to Facebook. According to Twitter, the platform accommodated an impressive 326 million active user per month, in the 3rd quarter of 2018. In connection to U&G approach in the case of Twitter, Chen (2011) concluded that, the more a person uses Twitter, the more this usage gratifies a need for connection.

Another popular social media platform Instagram, was founded in 2010 and features aspects of design properties of Twitter. It is just more focused on image and video sharing, rather than primarily text postings, which is the very opposite way of Twitter.

Snapchat was released in 2011, functions more like an anonymous and temporary version of Instagram. On this platform, users have the ability of posting videos or images, limited to 3-10 second views per post. Users therefore have the limited time of 3 to 10 seconds per click, to have a look at a posting. These postings than, are deleted automatically after 24 hours.

With their differences in design, all of above-mentioned social media platforms do commonly serve the same purpose, namely the need of interaction and communication between individuals. The question is, which effects do these platforms have, regarding the loneliness status of individuals and their satisfaction with live? Afterall, the U&G of each platform concerns to meet the needs for social interaction to an extent. But the approach of each platform to fulfill these needs, differ from each other, in terms of interaction format. It appears to be that, the social media platform which contains the highest degree of characteristics of daily-life communication, would be most efficient in decreasing loneliness. Because that particular platform would be effectively imitating physical-life social interactions.

This degree of characteristics of daily-life communication is entitled in communication literature as "social presence" (Gunawardena, 1995; Short, Williams, & Christie, 1976) and requires simultaneously both immediacy and intimacy whilst the communication occurs. In this context, social presence is at its highest level, when the interaction on social media happens both immediately and in intimacy, simultaneously. Therefore, in examining which social media platforms might be affecting loneliness and satisfaction with life, it might be useful to consider the platforms, which provide both immediacy and intimacy to their users.

Hypotheses and Research Questions

Visual images are concrete and are most likely to invoke the emotions in the receiver, that the sender of that particular image has intended. In the sense of social presence, images seem to deliver intimacy and immediacy simultaneously, which are both important parts of social presence, as explained above. On the other hand, text messages or posts, seem to deliver only one side of the aspects of social presence, which is only the immediacy side. In conclusion, image-based communication seems to be more likely to satisfy people's emotions, as this kind of communication provides relatively closer to reality, and interpersonal communication experience. In contrast, text-based communication seems to be less satisfying in comparison to real live social presence aspect, which in the end, could affect the users emotional and psychological well-being negatively.

Hypotheses

- **Hypothesis 1 (H1):** Social Media affects one's mental health, feelings.
- **Hypothesis 2 (H2):** There is a difference in effectiveness between image- and text-based social media, when the effectiveness on mental health/feelings are concerned.

Research Questions

- **Question 1 (Q1):** Does social media use predict mental health (i.e. Happiness, Loneliness, Satisfaction with Life)?
- **Question 2 (Q2):** Does image- and text-based social media differ from each other, as far as their effects on mental health are concerned?
-

Literature Review

The aim of our research is to examine the effects of social media platforms, on happiness and loneliness. In more detail, we examine if there is any correlation between the different formats of social media platforms and their effects on happiness and loneliness. Furthermore, there is a strong relation between human psychology, which clearly affects the communication between individuals, and social changes that occurred with advancements in technology. So, the communication behaviors and mental health of individuals are overwhelmingly determined by variables in social life, which in today's case, is very relevant to technological advancements and communication technologies being accessible to everyone. We aim to review the literature in this context.

In the research "*Loneliness, social networks, and health: A cross-sectional study in three countries*", Rico-Uribe et al. (2016) investigated the association of a person's social network and subjective feeling of loneliness with health. The scientific community spent considerable time to document the association between health and social relationships. At first, this association was approached by the earlier literature with simple concepts, such as "feeling lonely, living in a single household, having few social contacts or a small social network, or not having people to trust" (Rico-Uribe et al., 2016, p. 2). But recent studies produced considerable advancements by including different dynamics and dimensions of social relationships and moved beyond simple indicators by analyzing the case of loneliness and health.

This particular study was conducted in three European countries (Finland, Poland and Spain) with different health-characteristics, socio-economic quality and welfare system. The study also analyzes if there is any differentiation between these three countries, which have distinct properties. It is documented by international studies that, the health status of populations differ across countries, when the welfare systems of these countries are each different. According to Rico

Uribe et al. (2016), also earlier studies which were conducted in countries with different welfare- systems, acknowledged differences in loneliness and social network grades, because of the different socio-economic and welfare systems of those countries.

The relationship between health and loneliness was very similarly strong in these three countries, although these countries have very different social and economic properties. The results of the study show that, people in Finland scored somewhat lower scores in loneliness than the people in Poland and Spain. A result, which is in the line with different studies, suggesting that people in northern European countries have the tendency of feeling less lonely, in comparison to people in central and south Europe.

In the study "*Mobile voice communication and loneliness: Cell phone use and the social skills deficit hypothesis*" Jin & Park (2013) investigated the relation between mobile voice communication and loneliness. Nowadays, social media has become a place for people to build and maintain social relationships. The mobility of smartphones enabled people to communicate with each other, anywhere and anytime. This particular research in that context, is focusing on instant voice communication.

The study was based on the social skills deficit hypothesis, which states that poor social skills are strongly correlated with "incompetence in communication", "difficulties in building intimate relationships" and "satisfying relationships", which are also strongly associated with loneliness. Mobile voice communication tends to occur between people which have close relationships and it also helps increasing the intimacy of social relationships. Other studies examine the case generally in the context of face-to-face communication. Because face-to-face and mobile communication occurs in similar contexts, how people communicate in person should be similar to how they communicate through cell phones. This may be a distinct feature of cell phones as compared to other social media. Therefore, this particular study differently, focuses on mobile voice communication. The aim of this particular study was to find out briefly, if the social skills deficit hypothesis for loneliness is true in the case of mobile voice communication.

Poor social skills were in relation with less face-to-face communication and also less mobile voice communication, which had linkage to a greater degree of loneliness. In that case, the survey results of the research came to conclude that, poor social skills were related to less involvement in face-to-face communication and therefore causing a greater degree of loneliness. However, the increase in mobile voice communication was associated with a greater degree of feeling in loneliness. But, another regression analysis in this particular research came to conclude, that there is a positive relationship between loneliness and mobile voice communication, for person's who have a greater circle of friends, then those with less friends.

In the study *"Instagram Use, Loneliness, and Social Comparison Orientation: Interact and Browse on Social Media, But Don't Compare"* Yang (2016) investigated the relation between Instagram activities of the user and loneliness. Since social networking sites (SNSs) like Instagram open the way of social comparison between users, it is important to consider the level of user's orientation to social comparison.

In this context, this particular study considers the social comparison orientation (SCO) of users. SCO refers to, when individuals lack objective criteria to determine their abilities and opinions, so they compare themselves with others as a natural process of self-evaluation. To make their self-evaluation accurate, individuals tend to choose those who they perceive to be similar to themselves as the targets for comparisons. People vary in their tendencies of making comparisons with others, for example there are people who have more tendency to SCO, which have certain personality traits and there are also people with less tendency to SCO, which also shows their particular personality traits. This study was focused on determining the association between loneliness and specific SNS use, primarily Instagram.

Results showed that, interactions on Instagram and simply browsing on the platform were related to decrease in loneliness, whereas broadcasting on the platform was found to be associated with increase in loneliness. In the case of SCO, interactions on the platform were in relation with lower loneliness, only by users with low SCO. The conclusion of this particular research is, in order to prevent negative effects of SNSs on mental health, it is crucial that users consider their approach of using those platforms, in accordance with their personality traits.

In the study *"Activity in social media and intimacy in social relationships"* Sutcliffe, Binder, & Dunbar (2018) examined the association between online and offline socializing, and groups of social ties were. This association was examined by using the as Social Brain Hypothesis (SBH).

SBH suggest that people may naturally form only a small number of very close friendships. And that people have only a small amount of really intimate friends in their lives. SBH also suggests that, the number of friends one has, doesn't necessarily indicate that all of them have the same degree of intimacy and closeness to that person. This research aims to investigate the effect of social activity and social media use on the size of SBH-like social network layers, social satisfaction and loneliness. This study was conducted at the University of Manchester and the participants were divided in three groups which had different social network layers. In more detail, the groups were categorized into groups, in the order of their intimacy level. The first group with the most intimacy was consisted of ~5 persons, the lesser intimate group was consisted of ~15 persons and the least intimate group was consisted of ~150 people.

Analyses of this particular research showed that, the group with the most intimacy (~5) was more closely connected with offline social activities, and social media influenced their relationships not considerably. Social media use influenced the groups, which had less intimacy (~15) and also the group which was a pure network with no any intimacy (~150). In conclusion, this research showed that, spending time on offline social activities affected the feel of social satisfaction by the group, which had the highest degree of intimacy, and spending time on social media was also associated positively, but it was related to offline relationship intensity. Whereas spending time online has affected the two groups with lesser intimacy positively, in the sense of social satisfaction.

The study *"The Benefits of Social Technology Use Among Older Adults Are Mediated by Reduced Loneliness"* Chopik (2016) investigates the use of technology for social reasons and its association with psychological and physical health. And focuses particularly on older adults as focus group. Chopik (2016) examines also specifically the benefits of technology use in older adults. The use of technology was measured by technology-based behaviors as using a smartphone, SNSs online video/phone calls, using e-mail and chatting/instant messaging. Attitude of the focus group towards the benefits and usability of technology was also measured. According to Chopik (2016), "a growing number of studies have revealed some mental health benefits that come along with using technology and the Internet more often" (p. 551). Also Chopik (2016) argues that researches about technology, conducted previously, are focusing more "digital divide", a term referred to the unevenness in using technology between younger and older generations.

In the case of this particular research, the focus group in general had positive attitudes towards technology. Chopik (2016) notes that, older people think positively about socializing through technology, as it makes it easier for them to reach people, stay in connection with people they like and to meet new people. The increase in the use of

technology for social purposes was linked to better self-rated health, higher subjective well-being, reduced chronic illnesses and reduced depressive symptoms. In addition, the association between the use of technology for social purposes and physical and psychological health provided a decrease in loneliness.

As conclusion about this particular research, the use of technology for social purposes encouraged older people to build close relationships. And close relationships were found to play an important role in physical health and psychological well-being. Chopik (2016) also notes that, reports show that, technology is being used by older people to prevent the feeling of loneliness. Ultimately, technology was found to have the potential of maintaining successful relationships.

In the research *"Will Online Chat Help Alleviate Mood Loneliness?"* Hu (2009) investigates the association between internet use for social purposes and loneliness. According to Hu (2009), there are reports about the influence of internet use and its relation with psychological well-being, which conclude that there is a positive correlation. In other words, "some studies showed that more Internet use led to less social involvement and more depression and loneliness" (Hu, 2009, p.219). But Hu (2009) notes also, that there are studies which concluded the opposite, namely, studies which showed that internet users had wider online communities, therefore wider social networks than internet non-users.

According to Hu (2009), researchers who concluded that internet use leads to more deficits in psychological well-being tie this phenomena to "time displacement effect", a term that refers to inefficient use of time, and a lack of balance between online and offline relationships. Additionally, these researchers acknowledge that "online relationships are weak and therefore easy to break because of the infrequent and irregular contact and narrow focus" (Hu, 2009, p.219). Another group of researchers defend their standpoint by focusing on the advantages of online communication, and say that internet expands one's reachability to the whole world and the physical distance is not a big problem where it can enable to bring like-minded people together.

This particular survey covered a loneliness test and an experiment considering five conditions which might influence the feeling of loneliness of the research participants. These five conditions consist of face-to-face chatting, instant message chatting, watching a video, writing assignments, and "do nothing". As result of this particular research, participants reported an increase in the feeling of loneliness after an online chat. The degree of feeling lonely after an online chat was higher, than a face-to-face conversation.

The research *"News Dissemination Gratifies Needs for Social Media Users"* by Teresa & Chad (2016), examines if individuals interpreting and consuming attitudes about news articles are influenced, when they receive these news articles from their social media friends. In other words, it is being investigated, when a social media user posts a news article with his own interpretation, and if this subjective interpretation receives a positive feedback from his online social circle, in terms of the tendency to agreement on that particular view.

Teresa & Chad (2016) note that, after the emergency of social media platforms, in particular Facebook, the way people use media has changed. Previously, consumers of media used to learn new information through "connecting", but with the change in the media arena, people started to learn new information through "interaction", which occurred with the rise of social media platforms. Teresa & Chad (2016) also note that, this opened the way for people to exchange ideas with their online social circles, which in the end can lead to the fact that people are more into knowing about different ideas, rather than having only fixed opinions about certain topics. This shows that, social media platforms have in some degree a positive effect on critical thinking and preventing cognitive dissonance.

From participants gathered data showed that the most striking motivation of SNSs use was "reading posts", "keeping in touch" and "browsing". In other words, users use the SNSs, gratify their needs mostly with these activities. These top three gratifications, are in relation with the fact that "individuals on social media look for specific posts, photos, videos, etc. to become informed on what's popular with their friends within their social circles" (Teresa & Chad, 2016, p.123). In this context, a user who posts about news articles on social media, will give an interpretive perspective on the news, which in the end will be absorbed by that person's online friends. Results of this particular research showed that, news articles posted by online friends, indeed affects users' knowledge about news events and it also affects how the users consume social media.

In the study *"Social media and political discussion: when online presence silences offline conversation"* Hampton, Shin, & Lu (2017) examined the association between the use of social media, the strength of attitude and perceived opinion in relation with social ties. The study also examines the willingness of discussion about a political issue in online and offline contexts.

Some social media platforms are designed more to provide an anonymous social interaction, whereas other social media platforms from design, allow users to be closely connected to the relationships and activities of everyday life. Because social media becomes increasingly interconnected with offline occurrences, and these occurrences landing in social media wherein it circulates for a sometime, the influence of social media is likely to affect daily conversations about political issues, in terms of online and offline conversations (e.g. home, workplace, social

gatherings with friends, community meetings, and on social network sites). Hampton, Shin, & Lu (2017) note that, there are very few researches, which focus on the effects of social media in daily conversations.

The results of the study show that, the use of social media has less reflection in many offline cases. Because in most cases, users have perceived opinion agreement with their social ties, therefore this reduces the tendency of having a discussion about any political issue in daily conversations. Hampton, Shin, & Lu (2017) also note that, in some cases a spiral of silence can occur, “where willingness to discuss political issues is indirectly hindered as a result of higher levels of perceived disagreement with social ties” (p.1091). So, as a part of spiral silence, even users who use social media platforms actively as a way of sharing their opinions in political issues, tend not to speak about politics in their daily conversations, as they are already aware of their disagreement with their social circles. But as an exception, those with strong position to a political issue are immune to this standpoint.

In the research “*Social Networking Sites, Depression, and Anxiety: A Systematic Review*”, Seabrook, Kern, & Rickard (2016) identify and summarize researches, which are conducted between years 2005 and 2016. This particular study reviews researches, which are in the context of SNSs, and associated with anxiety and depression. The study also reviews the researches, which are analyzing the evaluation of mental illnesses.

This research goes along the idea that, SNSs have become to play an important role in modern culture. So, it aims to identify and summarize other researches, which are examining anxiety and depression in the context of SNSs. According to Seabrook, Kern, & Rickard (2016), there are different views about the association between SNSs and anxiety and depression, where some researchers think that the use of SNS can protect from mental illnesses, as they provide people to build social relations and maintain connections. And on the other hand, some researchers have the opinion that, SNSs can affect mental health negatively, because it can lead people to have miscommunication and mismanaged expectations, also maladaptive dispositions which can lead individuals to feel a greater degree of isolation. Seabrook, Kern, & Rickard (2016) also note that, SNSs can have positive effects on mental health, as well as at the same time can affect people negatively, as it would be the case in the real social environment.

The results of the study show that, social support, social connectedness and positive interactions on the SNSs were commonly in association with lower degrees of anxiety and depression. Overall, the use of SNS was in relation with life satisfaction, increase in self-respect and decrease in loneliness. As conclusion of this particular study, the findings revealed many mixed associations between anxiety, depression and the use of SNS. The use of SNS strongly correlates with mental illness and well-being. Though, the quality of social factors on the SNS environment generally determine the effects on mental health, either negatively or positively. As it would be likely the same case in the physical social environment.

In the research “*Comparing Facebook users and Facebook non-users: Relationship between personality traits and mental health variables - An exploratory study*” Brailovskaia & Margraf (2016) examine the relationship between personality characteristics and mental health variables. And in this context, compare Facebook users with Facebook non-users.

According to Brailovskaia & Margraf (2016), certain personality traits have indeed a strong association with online social behavior, where extraverted individuals spend the most time on SNSs and have considerably long online-friend lists. On the contrary, introverted individuals are spending less time on SNSs and have fewer interactions. Brailovskaia & Margraf (2016) also note that, studies, which examined the relationship between internet use and mental health variables found, that there is a positive correlation between internet use and mental disorders. Brailovskaia & Margraf (2016) acknowledge that, studies, comparing users and non-users of a particular SNS and the effects of these SNS on individual’s personality traits are not common. In this context, this particular research is aimed at to filling this gap in the literature by focusing on the most popular social media platform and compares the personality traits of the platform’s users and non-users. Therefore, Facebook being the most popular social media platform, makes the results of this research valuably considerable.

Results of the study show that, Facebook users had considerably higher scores on narcissism, extraversion and self-regard compared to Facebook non-users. Additionally, Facebook users showed higher results in social support, life satisfaction and subjective-rated happiness in comparison to Facebook non-users. Whereas, Facebook non-users showed significantly higher values of depression symptoms and conscientiousness compared to Facebook users. As conclusion regarding this particular research, the results indicate that, in comparison of the two groups, Facebook users contain personality traits, which can be protective for mental health.

Conclusion

We mentioned various aspects about social media platforms and different views about how social media is effective in different ways, when it comes to influencing social relations and social perceptions in general.

As social networking sites are relatively new in our era, there are many studies conducted in this area. However, there still is a deeper investigation required, for which some time is needed for that to be reached (Pantic, 2014).

According to Pantic (2014), social media indeed has a strong correlation with the mental health of the users. In other words, the use of social media has a correlation with the mental health of the user and also the contrary is the case, where mental health of the user characterizes the way social media is being approached. Which leads to our research question Q1 that is concerned with this case and supports our hypothesis H1, consequently.

The effects of image-based social media sites are considerably different from text-based platforms. Pittman & Reich (2016) found that, the more someone uses image-based social media platforms, the likelihood of subjective feeling in satisfaction with life and happiness increases, whereas loneliness decreases. Pittman & Reich (2016) also note that, text-based social media platforms don't seem to affect loneliness and happiness in a positive manner, and if any, increased use of text-based media may intensify loneliness.

Discussion

Visual images are concrete and are most likely to invoke the emotions in the receiver, that the sender of that particular image has intended. Goh, Ang, Chua, & Lee (2009) acknowledged that, people tend to communicate mostly with photos rather than other media possibilities, i.e. videos or audio, because it requires lesser sending time and provides the intended message accurately. In the sense of social presence, images seem to deliver intimacy and also at the same time, doing this in an immediate manner, which are both important parts of social presence, as explained above.

On the other hand, text messages or posts, seem to deliver only one side of the aspects of social presence, which is only the immediacy side. Therefore, text-based communication may not be as powerful as image-based communication, since it doesn't provide the same degree of intimacy.

In conclusion, image-based communication seems to be more likely to satisfy people's emotions, as this kind of communication provides relatively closer to reality, and interpersonal communication experience. In contrast, text-based communication seems to be less satisfying in comparison to real live social presence phenomena, which means a lack in affecting emotional and consequently mental well-being.

Abstract

There is a rapid increase in informatics and communication technologies whole the world. Parallel to this growth, diversification and innovation of smart phones are quite active. Particularly teenagers are very active in social media through these smart phones. Then it is surprising that, in spite of this enhanced interconnectivity, young adults may be lonelier than other age groups, and that the current generation may be the loneliest ever. The usage of smart phones among adolescents might be considered by some people as an increase communication network while others might think that they reduce communication and make them more isolated. The study was carried out to perceive the effects of using smart phones on the feeling of loneliness based on the literature review. The reason why this study was conducted especially with freshman students is that it's the important age range that plays a major role in the formation of the characters of the youth, which is the transition period from childhood to adulthood.

Keywords: sense of loneliness, smart phone addiction, teenage, social media effects, freshman

1. Introduction

The concept of communication technologies is often used as a concept that covers all technologies in the field of communication. New communication technologies, also known as information technologies, are the result of developments in three key areas such as computers, telecommunications and microelectronics (Tekin, 2012, p. 4).

In fact, the first users were so impressed by the easy access to the information that they visited the Internet for 4-5 hours and began to enjoy the information needed or not. Davis, Smith, Rodrigue and Pulvers (1999) called as a *"masturbation with the information"* (as cited in Doğan, Işıklar, & Eroğlu, 2010, p. 107).

Along with the rapidly developing technology, important design changes have been made in the dimensions of the products, especially when we consider the change of devices such as the first computer or the first telephone, we understand the importance of the studies in this field. In recent years, with the rapid developments in technology, the demand for smart phones and tablets, which can fit even in our pockets, is growing rather than huge computers. As a result, we can say that the interest in desktops and laptops in the world is now decreasing and mobile technologies, especially smart phone ownership, are increasing (Güler, Şahinkayasi, & Şahinkayasi, 2017, p.188 - 189).

Worldwide and in Turkey, mobile phone number of the show much greater increases than estimated users, and indispensable to become a part of daily life, this technology also requires closely monitored and questioned the changes in cultural life. This situation may cause individuals to feel they cannot be mobile phones (Tekin, 2012, p.2). This dependence is considered to be more especially among young generation (Öztunç, 2013).

There are philosophers who claim that technology has both good outcomes and bad outcomes. Surely, the importance of technology cannot be underestimated and its effects on human life cannot be ignored. Today's people are fully involved in the process of technological change and development. Smart phones offer a whole world that can fit into our pockets. Internet has brought innovations which able to fit all segments of society.

Global System for Mobile Communications (GSM) sector is developing very fast in the Turkey as in all over the world. In addition to verbal communication, telephones are now used for many different purposes, such as through chat rooms, message boards, multiuser domains (MUDs). People may meet with someone else who has similar interests and these online relationships may develop into real-world relationships surfing the internet, exchanging e-mails (Tekin, 2012, p. 1; Shaw & Gant, 2002, p. 158).

The hardware and software of smart phones are dramatically improving and various applications are being developed and these available to suit our lifestyle. It is natural for smart phones to become increasingly popular due to new features added to smart phones and easy portability. With smart phones, besides the features of normal phones; there are also many applications such as image and sound recording, transmission of data, internet access, e-mail, transmission of instant messages, display of digital content, mobile applications, social media tools, games

etc. As a result, many people in this modern society are extremely willing to acquire a smart phone (Çakır&Oğuz, 2017; Kwon et al., 2013, p. 1 - 2)). Due to very rich programs they contain, are thought to isolate people since they personalize them, and worst of all, render them addicted. New Generation mobile phones open the windows of a new dimension to users(Tekin, 2012, p. 6).

According to the We Are Social report (2016), individuals with smartphones make up 56% of Turkey's population, and the number of active mobile social network users has reached 36 million people, in other words, 45% of the population, in Turkey. Furthermore, the number of people using social media activity on their mobile devices has increased by 13% percent over the last one year in Turkey. Therefore, it might seem fair to say that people are now migrating to mobile devices for socialization, entertainment, and other needs (Gezgin, Hamutoglu, Sezen-Gultekin, & Ayas, 2018, p. 359).

Devices, smart phones and the internet, in particular, are being extensively used all over the world. These tools of communication take all the people, whether young or old, under their control and are also being used to satisfy a number of needs in addition to communication. These tools offering many activities such as watching television, playing games, instant messaging etc., render them addicted. (Öztunç, 2013, p. 456-457).

The combination of faster mobile connections and improved access to smartphones has delivered another of the key findings of 2017's report. More than half of all web pages are now served to mobile phones (We Are Social, 2017).

The use of mobile phones is becoming increasingly common among adolescents. This increased use of mobile phones affects the social communication of young people, and these devices are not only for communication but also as a status symbol and identity element (Tekin, 2012). Shaw and Grant research (2002) shows that there is no certain internet user. Although internet use is linked generally with younger generations, a 1998 study found that only 6% of users were under 21, while in 2000, 4 million senior citizens were reportedly online.

Especially in school-age adolescents, excessive use of internet and computer has a negative effect on both academic and personal development of adolescents. Problematic internet use can make the person addictive. Research on adolescents has shown that problematic internet use affects adolescents intensively (Doğan et al., 2010, p. 108).

On the other hand, some of the disadvantages of overuse cell phone usage include hindering classroom performance, distraction and an annoyance to fellow classmates and instructors, because of the lack of attention, increasing dropout rates, and fewer graduates for students, the anxiety students experience because of their constant need to have their phone on them at all times. Therefore, it can be claimed that multiple psychological effects emerge from smart phone ownership and usage. For instance, Bian and Leung (2014) observed that the higher one scores in loneliness, the higher the possibility one would be addicted to smart phones (as cited in Gezgin et al., 2018, p. 359). While the concept of Internet addiction was at the forefront, the concept of smart phone addiction has now been replaced by this concept(Kwon et al., 2013).

Technology adoption has been the subject of various theories(Gezgin et al., 2018; Güler et al., 2017; Kwon et al., 2013; Liu, Desai, Krishnan-Sarin, Cavallo, & Potenza, 2011; Lopez-Fernandez, Honrubia-Serrano, Freixa-Blanxart, & Gibson, 2014; Mert & Özdemir, 2018; Moody, 2001; Öztunç, 2013; Siomos, Dafouli, Braimiotis, Mouzas, & Angelopoulos, 2008).

According to Shaw and Gant research (2002), loneliness, depression, and daily stress were positively linked to greater Internet usage when researchers controlled for possible mediating variables. The researchers used path analyses to analyze each of these findings and determined that the Internet caused the observed effects (p. 158)

Today, the phenomenon of socialization has gone beyond the definition of the individual with the physical conditions, the people and places around it. With the development of technology, this concept has found itself in different fields. The use of social media has become known as a new form of socialization when it becomes an object in the construction of social reality (Yüzüncüyıl, Buluş, & İşman, 2016, p. 611-612).

Considering the increasing role of smartphone use play in everyday life and the potential dangers of loneliness, the aim of the present research is to determine the relationship between use smartphones and feeling lonely. Unfortunately, in the world, while carried out research on the internet and the use of negative effects, studies conducted in Turkey are quite limited. Therefore, the purpose of this study is to reveal the problematic internet usage levels of adolescents and smart phone addiction.

2. Communication Technologies and Social Change

Worldwide and in Turkey, the number of mobile phone users showing much greater increases than estimated and become an indispensable part of daily life. This technology requires the questioning of changes in cultural life (Tekin, 2012).

More than half the world now uses a smart phone, almost two-thirds of the world's population now has a mobile phone and more than half of the world's web traffic now comes from mobile phones (We Are Social, 2017). With the rapidly developing innovations in the field of technology and especially after the 21st century, we

feel strongly the effect of the internet everywhere in our lives. As well as all over the world, we see the effects of the wide internet in terms of Turkey besides. According to TUIK (Turkish Statistical Institute [TUIK], 2018); Internet usage of individuals was 72.9% in 2018. In April 2018, 82.5% of households had a broadband Internet connection. In terms of broadband connection types, while 44.5% of households used a fixed broadband connection (ADSL, cable, optic fibre, etc.), 79.4% of households used the mobile broadband connection to access the Internet. 78.3% of households had a broadband Internet connection in the previous year in Turkey.

New communication tools attract people, from any age and statute and one of them is smart phones (Doğan et al., 2010). Mobile phone usage is becoming more and more common in adolescents (Tekin, 2012). As the access to these technologies increases, times spent and interaction with these technologies will increase even at very young ages (Güler et al., 2017). Upon review of the above information, problematic mobile phone usage may adversely effects adolescents whom may easily be influenced by the characteristics of the period they are in and constitute an important risk group (Çakır & Oğuz, 2017; Öztunç, 2013).

As Moody said; "The internet is so new that little is known about those who use it a great deal, or whether it can effect behaviour or reflect personality traits" (2001, p. 393). However, our knowledge is limited if the innovations impress masses or impulse them.

However, the direction of this relationship is uncertain. Two contrast theses have been submitted to describe the association between loneliness and Internet use: extreme Internet use causes loneliness vs. lonely individuals are more likely to use the Internet extremely (Mert & Özdemir, 2018; Moody, 2001). As in every addiction, smart phone addiction is common also in individuals alone. To prevent this, individuals should first be made aware of the ways of coping with the feeling of loneliness (Mert & Özdemir, 2018).

The subject of loneliness which is at the forefront of these effects forms the foundation of this research. In fact, although the means of communication emerged to increase communication among people, in this study, it was pointed out that the sense of loneliness created by smart phones which is one of these communication tools. One of the issues identified as a major problem is the spread of the view that children and young people move away from society and become lonely due to such environments.

3. Problematic Smart Phone Usage and Social Changes on Adolescents'

As digital technologies continue to make communication channels and platforms more accessible and effortless, human beings are more related to each other than ever before (Pittman & Reich, 2016, p. 155). The standout finding of the 2017 year report is that more than half of the world's population now uses the internet. It's not only the internet that's growing rapidly but also more than half the world now uses a smart phone. In addition 2017 statistics, almost two-thirds of the world's population has a mobile phone and more than half of all mobile connections around the world are broadband (We Are Social, 2017).

New communication tools attract people, from any age, statute and one of them is smart phones. Now people have begun to spend most of their time with new communication technologies in order to obtain information or to spend their leisure time. Our daily habits at home, work or our relationships with the environment are determined according to the time that we spare for these technologies in our daily lives (Tekin, 2012, p. 4).

The development of technology has established significant distinguish in people lives, particularly over the past few years. It has not only changed the daily routine but has also changed the cultures of societies. (Morahan-Martin & Schumacher, 2003). More specifically, in tandem with an expansion in the prevalence of mobile phone use, certain side effects related to extend usage of mobile phones have come into the picture (Gezgin, Hamutoglu, Sezen-Gultekin, & Ayas, 2018, p. 358). According to TUIK; computer and Internet usage of individuals aged 16-74 were 59.6% and 72.9% respectively in 2018. These proportions were 56.6% and 66.8% respectively in 2017. Almost three-quarters of the world's population use a mobile phone and the overall trend is clear: mobile phones are now an indispensable part of everyday life for most people around the globe (We Are Social, 2017).

Although smart mobile phones are widely used in daily life and work well, they bring with them a number of problems. Particularly young people are becoming addicted to the smart phones. They have a huge impact on the birth of technology-filled world.

Especially teenagers, who use their phone for social networking sites and messaging, want to keep their phones hands on or beside them even when they are not using them. Unfortunately most young people cannot limit and control the use of phones. When they are in the cinema, with their family or friends, they even use the phone in the toilet or in the bathroom and when they don't use it, they feel uncomfortable, missing, and uneasy (Doğan et al., 2010; Kwon et al., 2013).

The consequences of smart phone addiction may be as bad as the consequences of substance abuse. Because first, you will get away from your family, friends, social and cultural activities, and then you will experience behaviours such as depression, loneliness, hypersensitivity, low self-esteem, guilt and despair due to the failure of your interpersonal or self-relationship with yourself. Mert and Özdemir (2018) emphasized, there are numerous studies confirming that loneliness is more intense at young ages. It was proved in the results of research that adolescence is the period when loneliness was more intense than other age groups (p. 103). Also Erikson said

that it is the period of psychosocial development in which adolescents form identity and are the most vulnerable to environmental impacts while they form this identity (as cited in Doğan et al., 2010).

We can say that the young people who use excessive mobile phones are risky for addiction. Loss of control over the use of technology and unpredictable use of technology can lead to serious physical and psychological damage. In general, excessive and unconscious consumption causes a negative change in our country as in the whole world (Tekin, 2012).

Day by day, new technologies are developed and made available to the public to address the needs of society and people. Technological improvements will continue to progress at any moment. With the new technological developments they have developed, companies are approaching their customers more closely. They understand the demands of customers in changing conditions more clearly and adapt to developments in this framework.

Each firm has different technological products to test for future generations, and this cycle is rapidly continuing dramatically. Innovation is a process that begins with encountering new ideas and technologies both individually and in social terms and results in adopting or rejecting these ideas and technologies. The concept of innovation spread aims to model the spread of new ideas and technologies within a culture (Chang, 2010).

The first studies on this subject have started in the field of communication with the thesis that a social system is spread over certain channels among its members and then different disciplines have been involved with the interest in economics and management. The first model of the diffusion of innovations is developed by Rogers. He defined the model as “the process by which an innovation is communicated through certain channels over time among the members of a social system” (Rogers, 2010).

An innovation must be self-sustained on a large scale. There is a critical point for the size of the mass reached and it can be said that after reaching this point, the innovation has reached a sustainable level.

In recent years, where research on the internet and social media addiction has increased, human beings have been confronted with serious problems (Chang, 2010). This dependency ratio has increased rapidly, especially by providing internet access easily via mobile phones. From a psychological point of view, this addiction can cause many problems, ranging from behavioural disorder to loss of relationships. Again, Internet addiction causes people to be isolated from society, weaknesses of relationships, decrease in trust and asocialism (Öztunç, 2013; Tekin, 2012). As a result of the fact that the existing relations start to gain a virtual dimension, the existing relations are being e-social and they are dragged into a process of communication that is not natural. In addition, the most serious side effects of Internet addiction that cause behavioural disorder include anxiety, anxiety, depression and stress (Shaw & Gant, 2002). People who isolate themselves in the mobile world are trying to design their behaviour and lives according to social networks. After a while, people living in the real world with the difficulty of separating the real world, if not treated can lead to severe psychological trauma may result.

4. Does Smart Phone Really Felt Lonelier?

With the rapidly developing technology, the purpose of using modern technology and its tools are changing. On the one hand, the use of this changing technology meets our needs, on the other hand, bring up some problems.

In Öztunç (2013) research aimed to determine the feelings of the loneliness of adolescents. In Öztunç study, a notable distinction was observed among the feeling of shyness and internet use (2013). It has seen that pupils, who do not use the internet very often in their regular lives, feel much shyer than students who use it. It can be translated that using the internet decreases the feeling of shyness. There were not found significant differences between the feeling of loneliness and internet use variable. In addition, there were not found meaningful discrepancies between the place of residence, students' grade level and problematic mobile phone use and internet use variables.

Morgan and Cotten's research was an internet survey of college beginners at Mid-Atlantic Mid-Sized University was conducted during the spring of 2002 (2003). They were tried to determine the effect of Internet activities on social aspects and well-being. Unfortunately, a few studies consider that these internet activities may be related to depression. Conclusions show that increased e-mail and instant messaging hours are linked to reduced depressive symptoms. On the contrary an increased internet hour is associated with increased depressive signs. Morgan and Cotten hypothesized that higher levels of internet usage should be associated with lower levels of depressive symptoms, while higher levels of non-communication Internet usage should be associated with increased depressive symptoms (2003). Also, these findings recommend those male students communications, even if by e-mail, is important for reducing depression levels. These conclusions recommend that using the Internet for communication purposes has useful consequences on well-being among college beginners, while non-communication internet usage may be connected with adverse effects on well-being.

Since more people are connected to the internet, researchers have increased the work on the effects of the internet. One of these researches, Morgan and Cotten's study is an important study in terms of comparing the results of this research and considering each aspect with the result that smart mobile phone use increases both social interaction and decreases the sense of loneliness, decreases social insolvency and increases loneliness (2003).

In Doğan, Işıklar, & Eroğlu research, (2010) conducted to observe adolescents' problematic internet usage according to variables, such as gender, internet access situations, interests, their comments about going to an

internet café. According to the results of Doğan and his friends study, it has been revealed that boys and girls use the internet for different reasons(2010). While the girls mostly connected to the internet with the aim of creating e-mail and social relations; men use the internet for playing games, virtual sex, reading news, chatting, meeting new people, accessing illegal materials, music and downloading programs. Girls are supported by the results that are more effected by the negative results of the internet than men. Also, considering the culture of the location, it can be thought that girls see the internet as the only environment in which they will feel free and easily communicate with people and express themselves. Based on these results, it can be said that girls are more risky in terms of problematic internet usage behaviour than males.

Ownership of Japanese mobile phones called *Keitai* has increased quickly day by day among young people. Kamibeppu and Sugiura's research determined *Keitai* usage of younger high school students and consider the effect of using it on their psychology, particularly on their social interaction as friendship (2005). Findings from research conducted that students used *Keitai* much more often for e-mail than as a telephone. Most of them transferred e-mails between classmates. Students ascertained that their own *Keitai* was useful for their friendship and well-being. Students considered that they could not live without their own *Keitai*. The surveyed students positively estimated the effects of using *Keitai* on relations with friends. The students who have a large number of friends are used e-mail more often than those who did not. As a result, usage of *Keitai* mail effectively broadens their inter-personal relations.

Kamibeppu and Sugiura's research will be an important source of literature for this research in addressing both the advantages and disadvantages of using the mobile phone psychologically. This will help to draw the borders more clearly.

In Siomos, Dafouli, Braimiotis, Mouzas and Angelopoulos research(2008), proposed to detect the diffusiveness of Internet addiction among Greek adolescent students, between 12 to 18 ages. Considering the evaluation of the contemporary condition, Siomos and friends detected at-risk Internet use, establishing it as the fulfilment of three to four of eight criteria. These results concern when considering the rapid growth of the Internet in Greece (2008).

While many researchers focus on the harmless and negative effects of the Internet, Shaw and Gant aim to reveal the useful and positive effects of internet use (2002). Shaw and Gant's research confirms that the negative effects of the Internet have been exaggerated. According to their findings, sense of depression among the participants could have decreased for reasons independent to the research(2002). As hypothesized, the data point out that chatting on the Internet had useful effects on students. It seems unlikely that college students' depression would reduce as they became more confused in the semester. As a result, internet use was found to reduce loneliness and depression significantly. Somewhat, it is more credible that the reduction in depression was linked to the study.

In Moody's research (2001), the association between Robert Weiss's bimodal theory of loneliness and Internet use was examined. Low levels of social and emotional loneliness were both associated with high degrees of face-to-face networks of friends and high levels of Internet use were associated with low levels of social loneliness and high levels of emotional loneliness. This might include keeping in contact with distant relatives and friends, although this connection, high Internet usage also links with high emotional loneliness. As hypothesized in related research, individuals who consume more time online are more likely to have higher degrees sense of loneliness (Moody, 2001). This proposes that the influence of the Internet on emotional wellbeing might be more complicated. As a conclusion, the Internet can reduce social well-being, even though it is frequently used as a communication tool. Therefore it is inevitable that the research of Moody was in the literature of this research (2001).

The usage of the smart phone can be described as an internet addiction. Accordingly, in Çakır and Oğuz's study (2017) it was proposed to show the relationship between high school students' loneliness levels and their smart phone addiction. According to the results of the research, high school students use the smart phone intensively (Çakır & Oğuz, 2017). More than half of the students were male. Nonetheless, female students participating in the research were more likely to have a smart phone dependency than male students. It can be said that female students use the smart phone more, provide more socialization in this way, so they experience more physical symptoms. It can be said that 15 years old students who were in transition to adolescence lived the most. There is a positive and significant relationship between students' smart phone addiction and loneliness levels.

In Gezgin, Hamutoglu, Sezen-Gultekin and Ayas research(2018) aims to examine the association between nomophobia and loneliness. Besides them, analyse the impacts of smart phone and mobile internet usage among adolescents. As a result of research, there is as a notable positive relationship between nomophobia and loneliness in adolescents (Gezgin et al., 2018). Adolescents' nomophobic behaviours levels were at a medium level. The findings show that; when participants lose access to their smart phones, have a sense of loneliness. They could feel anxiety because of failure to interact with others. Base on the results of research, it is reasonable to say that adolescents who suffer from loneliness might have difficulties when they are isolated from their smart phones.

The mobile phone, which is one of the communication tools, has experienced an increase in usage rate every year since it entered our lives. The reason for this increase is the renewal of the usage characteristics of

mobile phones with the development of technology and the addition of different functions. The main feature of communication, rather than the purpose of high-level access and information processing has had the opportunity. While the studies focused on creating the feeling of loneliness by the use of intensive mobile phones, Mert and Özdemir pointed out a completely different question in their study (2018). This time, the effect of research loneliness on the use of mobile phones has been discussed. The findings support the effects of loneliness on smart phone addiction (Mert & Özdemir, 2018). It has been found that smart phone addiction has no relation with age, learning and teaching status. The state of loneliness is not proportional to the ages, meaning that people experience less loneliness when they get older.

With the rapidly developing technology, the innovations in the communication tools and the attractive functions they offer us increase the usage time of people. This leads to addiction on devices. As with any addiction, smart phone addiction is common in individuals who are alone. As a way to cope with the sense of loneliness to prevent this, individuals tend to use intensive mobile phones. In the study of Mert and Özdemir, the connection of mobile phone and loneliness with a completely different perception would be a very important literature in terms of the research (2018).

ÖZET

Tüketim toplumu kavramı günümüz insanının içinde bulunduğu toplumsal yapıyı tanımlamak için kullanılan en genel kavramlar arasındadır. Tüketim toplumunda üretimin devam etmesi tüketimin artışıyla ilişkilidir. Nesne tüketimleriyle bireylerin toplum içindeki statüleri belirlenmektedir. Bireylerin imajları da tükettikleri nesnelerle belirlenmektedir. Teknoloji sürekli değişmekte ve her şey tüketilmektedir. Teknolojik gelişmelerin sonucu olarak kredi kartları, online alışveriş siteleri, cep telefonları ve bloglar tüketimi hem kolaylaştırmakta ve hem de toplumsal paradigmalardaki değişimler olarak karşımıza çıkmaktadır. Bu çalışmada, tüketimin ve tüketimde kullanılan araçların geçmişten bugüne değişen anlamı ve bu değişimi körükleyen iletişim paradigmaları tartışılmaktadır.

Anahtar Kelimeler: Tüketim kültürü, kitle kültürü, toplumsal değişim

Giriş

Kişisel hedeflerimizin birçoğuna ulaşmak için birbirimize bağımlı olduğumuz bir toplum içerisinde yaşıyoruz. Bunlar toplumdaki yerimizle doğrudan ilgili olan tüm hedefleri içerir ve sadece sosyal bir bağlamda anlamlıdır. 20. Yüzyılın sonlarına doğru kapitalizmin etkisiyle toplumsal yapıları anlamlandırma konusunda tüketim konusunu ele alan kavram ve yaklaşımlar öne çıkmıştır. Bu durum farklı alanlarda çalışma yapan araştırmacıların ilgisini tüketim kültürüne çekmiştir.

Avrupa’da teknolojik anlamda yaşanan ilerlemeler ve bunun bir sonucu olarak görülen ekonomik büyüme, toplumları, adına modernleşme denilen kurumsal ve kültürel bir değişim sürecine zorlamıştır. Bu gelişmeler dünyada hissedilen yeni bir yaşam tarzı ve sosyal örgütlenme biçimini ortaya çıkarmıştır. “Modern” olmak kavramı, eskisi olmayan ve yeni yöntemlerle değerlendirilen bir toplumda yaşamayı ifade etmektedir. Toplumun yapısını ve gelişim sürecini daha iyi anlayabilmek için kimileri endüstrileşme, rasyonelleşme ve kentleşme sürecini incelemiştir. Tüketim toplumunda ise teknolojinin değişmesiyle birlikte tüketimi kolaylaştıran araçlar olarak karşımıza kredi kartları, online alışveriş siteleri ve bloglar çıkmaktadır.

Kitle iletişim araçları ve reklamlar tüketicilerin daha da fazla tüketmelerine ortam hazırlamıştır. Tüketiciler daha da çok tüketsinler diye işletmelerin uyguladıkları pazarlama stratejileri onları etkilemiş ve tüketim bir yaşam biçimi haline gelmiştir. Yeni medyanın ortaya çıkmasıyla pazarlama iletişimi alanındaki değişiklikler, daha verimli ve uygun maliyetli iletişim ihtiyacını artırır hale gelmiştir.

Tüketiciler bir ürünün değişik işlev ve özelliklerine sahip ürünlerle karşılaşmaktadırlar. Tüketiciler gereksinimlerini karşılamak üzere kendilerine en fazla yararı sunan markayı tercih etmektedirler. Bu durumda firmalar markalarını sürekli takip eden bir tüketici kitlesi yaratabilmek için, tüketicilerin beklentilerini en iyi şekilde karşılayabilmeleri beklenir. Şirketler hizmetlerini verimli bir şekilde sürdürmek ve küresel rekabet piyasasında ayakta kalabilmek için bütünlük pazarlama iletişimini kullanırlar.

1. Tüketim Kavramı

Baudrillard’ın tüketim toplumu çalışmasında da ele aldığı üzere üretimde yaşanan bollukla birlikte tüketimde artış görülmüş ve çevremizdeki ürünlerin, nesnelerin ve hizmetlerin artış göstermesiyle bireylerin yaşam tarzlarında değişiklikler olmuş ve üretim ve paralelinde tüketimde bolluk yaşanmıştır. Alışverişler de ihtiyacın ötesine geçerek gündelik motivasyon unsuru olarak haline gelmiştir (Baudrillard, 2010, s. 17).

Türk dil kurumu tanımına göre “bir şeyleri kullanıp bitirmek ve yok etmek” anlamına gelen tüketim sadece nesnelerin değil aynı zamanda kimliğin ve iletişim de bir sürecidir. Tüketim, ihtiyaçlarımızı karşılamak için satın aldığımız ve kullandığımız bir ürünü kullanma süreci olarak ifade edilmektedir (Odabaşı, 2006, s. 16).

Sadece üretim şekli değil bununla birlikte kültürel bir yaşama biçimi olan kapitalist ekonomi tüketimi bir yaşam biçimi haline dönüştürmüştür.

Önemli bir farklılaşma gösteren tüketim kavramı 18. Yüzyılın son çeyreğinden beri modern toplumların ilgisini çekmiştir (Bocock, 1997, s. 13). Bu farklılaşmanın en önemli etkenlerinden biri üretimin makineleşmeye dönüşmesi ve çoğalmasdır. Farklılaşma gösteren tüketim kavramı modern toplumların kendilerini ifade etmeleri için kullanılan önemli kavramlardan biri olmuştur. On sekizinci yüzyılın son çeyreğinde makineleşme ile hissedilen sanayideki ilerlemeler yirminci yüzyılın ikinci yarısına geldiğinde ise farklılaşma çok daha farklı bir anlam taşıyor hale gelmiştir (Orçan, 2008).

Hayatımızın her alanına giren tüketim kavramı temelde insanların karar verme süreçlerinin bir sonucudur. Sadece ürünleri tüketmek olmayan tüketim kavramı aynı zamanda toplumsal alanı da etkilemektedir. İnsanlığın var olduğu zamandan beri tüketim kavramı farklı bilim dallarının dikkatini çekmiştir. Üretimin daha önceki yapısından dolayı tüketicinin önüne geçerken günümüzde üretim ve tüketim ilişkisi çok iç içe geçmiş durumdadır (Featherstone, 2013).

Tüketim *“insan ihtiyaçlarının ötesinde kolektif yaşamı, sermaye hareketlerini ve imajlar dizgesini dönüştürmek, tarihin belli bir kesitinde dünya genelinde değerler atfedebilmek ve bilişsel anlamlar kazanmak için kullanılan bilinç yönetimi biçimi”* olarak eleştirel ekonomi politik yaklaşımlar tarafından anlamlandırılmaktadır (Tellan, 2009, s. 86).

Temel ihtiyaçlardan farklı olarak bireyin kontrolü dışında gerçekleşen gerçek olmayan ihtiyaçlar oluşturulmaktadır. Bize reklamlar aracılığıyla dayatılan tüketim algısı serbest zamanlarımızı geçirdiğimiz vakitlerde toplumdan etkilenerek zorla veya farkında olmadan yaptığımız şeyler gerçek olmayan ihtiyaçlar tanımı olarak ifade edilebilir. Neyin gerçek neyin gerçek olmayan ihtiyaçlar olduğuna insanların karar verebileceklerinin fakat bunun tüketim ve ideolojik zorlamalardan dolayı neredeyse imkânsız hale geldiğini ortaya koymaktadır (Tankut Tuğcu, 2003). Tüketim kavramı günümüzde tüketilenin sadece ürünler ve hizmetler olmadığı aynı zamanda bireylerin düşünceler aracılığıyla kendi kimliklerini simgesel olarak oluşturmalarında bir süreç olarak görülmektedir.

Baudrillard tüketimi temel ürünlerin ve hizmetlerin tüketilmesi olarak değil aynı zamanda gösterge ve sembollerin tüketilmesi olarak ifade eder. Tüketim günümüzde sadece temel gereksinimlerin giderilmesi değil aynı zamanda kültür alanından kaynaklanan kurallar ve istemsiz zorlamaların bir sonucu olarak ortaya çıkan davranışlardır. Tüketim insanların kendilerini diğer insanlardan farklı göstermek adına yani yer almak istedikleri sosyal sınıflarda kendilerini kanıtlamak üzere de ortaya çıkmaktadır. Böylelikle, ekonomik ve bunun yanı sıra kültürel ve sosyal bir kavram olarak beliren tüketim farklı disiplinler tarafından da çalışılmaktadır (Orçan, 2008, s. 22).

Tüketicinin yalnızca ekonomi alanından değil aynı zamanda kültür alanından da olduğu ifade edilmesine rağmen kültür alanındaki çalışmalara on dokuzuncu yüzyıl öncesinde çok rastlanmamaktadır. Bunun sebebini de on yedinci yüzyılın sonunda öne çıkan üretim ve tüketim ilişkisi olarak ifade etmek mümkündür. Sanayileşme, farklılaşan yeni üretim kolları ve farklılaşan endüstri devrimi de bunun sebepleri arasındadır (Kıray, 2005, s. 14). Modern tüketim kavramının gelişmesini tetikleyen birçok neden bulunmaktadır. Tüketim kavramını incelerken, başta ekonomik olmak üzere sosyal ve kültürel gelişmeleri değerlendirmek gerekir. Üretim ve tüketim ilişkisi tüketime yeni anlamlar kazandırmıştır. Seri üretime geçilmesi tüketicinin gelişmesini sağlayan en temel faktörlerden biridir. Kitle iletişim araçlarının yaygınlaşması ile (gazete ve reklam) modern reklamcılık hayat bulmuş ve modern tüketim on dokuzuncu yüzyılın dünyasında kendine yeni bir anlam daha yüklemiştir. Kitle iletişim araçları modern tüketim için bir araç haline gelmiştir. (Orçan, 2008, s. 20).

1.1. Tüketim Toplumu

Tüketim konusunda araştırma yapanlar tüketim toplumunun ortaya çıkışı ile farklı düşüncelere sahipler. Çalışmalar temelde kitle iletişim araçlarının ortaya çıkmasıyla ürün imajlarının kültürel değişime uğradığını ortaya koymaktadırlar. On dokuzuncu yüzyıla gelindiğinde ise tüketicinin üretim – tüketim ilişkisinin yanı sıra üretim – tüketim – ticari ilişki olarak ifade edilmektedir. Endüstri devrimi, insanların tüketim tercihlerini belirgin şekilde farklılaştırırken, varlıklı insanların (burjuvazi) kullandıkları veya tercih ettikleri ürünler işçilerin kullandıkları ürün ve hizmetlerden farklılaşmış ve her iki kesim arasında da önemli bir fark olduğunu ortaya çıkarmaktadır (Tellan, 2009, s. 90).

Tüketim toplumunun gelişme sürecine bakıldığında üretimin bireylerin üretiminden seri üretim haline dönüşmesiyle önemli bir ivme kazanır. Seri üretimde tüketim olursa üretim hayat bulabilecektir. On sekizinci yüzyılın sonunda işçiler ürettikleri ürünleri tüketmiyorlar sadece kazandıklarının çoğunu temel ihtiyaçlarını karşılamak üzere kullanıyorlardı (Karl, 2000, s. 125). Kapitalizm’deki gelişmeler yirminci yüzyılın başında ve sonunda tüketime farklı şekilde yansımıştır. Bunun sebebi de ücret artışlarının tüketime yansmasıdır (Wagner, 1996, s. 30).

On sekizinci yüzyılda kendini hissettiren ekonomik refah modern tüketicinin ve böylelikle tüketim toplumunun temelidir. Tüketim – üretim kavramları birbirleriyle anlam kazanmış ve paralel gelişme göstermişlerdir. Endüstrinin gelişmesiyle birlikte evde üretilen ürünler ev dışından alınmaya başlanmıştır. Böylelikle insanlar ihtiyaçlarını karşılamak için satın alma yani tüketme yoluna gitmişlerdir. Yalnızca temel ihtiyaçlar değil bunun yanı sıra gerekli olmayan lüks tüketim devreye girmiştir. Gösteriş tüketicimini ifade eden ürünleri olarak farklılaşmak istemişlerdir (Zorlu, 2006, s. 78).

Bauman'ın (1997, s. 215) ifade ettiği gibi üretim, bireyleri tüketim toplumuna dönüşmeleri için özendirir veya bireyleri farkına varmadan ikna eder. Bu sebepten ötürü herkes bu düzenin içinde kendine yer bulabilir ve kendilerine yer bulmaları için mümkün hale getirilirler.

Bauman (1997) tüketim toplumunu bireylerin toplumda yer edinmek için kimlik ve simgelerle kendilerini ifade ettikleri kültürel bir sistem olarak ele alır. Bu sistemde devamlılığı sağlayan araçları reklam ve kitle iletişim araçları olarak ifade eder.

Tüketim toplumu kavramı ile vurgulanmak istenen nokta tüketim toplumunun tüm bireylerinin tüketime odaklanmış olmaları ve temel ya da lüks olmak üzere insanların tüketime karşı istekli olmalarıdır (Tomlinson, 1999, s. 183).

Bireylerin tüketim davranışları üretim potansiyellerinden daha çok öne çıkmaktadır. Bu durumda bireyleri tüketmeye yönlendiren araçların başında halkla ilişkiler ve reklamlar gelmektedir (Bauman, 1997, s. 214).

1.2. Tüketim Kültürü

Kültür, belli bir grubun bireyleri tarafından paylaşılan davranış sonuçları ile öğrenilen davranışların tamamıdır. Kültürü aynı zamanda inanç sistemi, yasalar, ahlaki kural ve sanata dair varlıklar olarak da ifade etmek mümkündür (Yanıklar, 2006, s. 13).

İnsanoğlu kültürü doğuştan kazanmaz fakat doğduktan sonra önce ailesi sonra çevresinden kültürü öğrenir. Kültür unsurları tarihsel gelişme sürecinde yaratılan her türlü değerlerle inanç sistemi, ahlaki kurallar ve sanatsal faaliyetleri kullanma ve bir sonraki kuşaklara iletme yoluyla aktarılmaktadır. İnsanlar tarafından oluşturulan kültür zaman içinde değişime uğrar (Odabaşı, 2006).

Tüketim kültürünün hem Batılı toplumlarda hem de tüketimin tam anlamıyla gelişmediği toplumlarda kendini hissettirdiği görülür (Yanıklar, 2006). Tüketim kültürü kapitalist düzene uyum sağlar ve her türlü toplumda bireylerin tüketme isteği içinde olmasını sağlar. Bu tüketme isteği, gerekli olan ihtiyaçların temin edilmesinden sonra, satın alma işlemi kendisini sürekli olarak gösterir.

Amerika Birleşik Devletleri'nin yeni beğenilerin ve eğilimlerin kitle iletişim araçları reklam, sinema, moda, yüksek tirajı olan basımla birlikte tüketim kültürünün ilk gerçek gelişimi meydana gelmiştir. Bireyleri ürünlerin temel ihtiyaçlarını karşılamak üzere değil de faydacı olmayan bir tutumla sergilemeye ve özellikle sadece kişiye özgü olma çabası içinde ürünleri özenli bir şekilde seçmeye ve özellikle göstermeye teşvik eder (Featherstone, 2013, s. 201).

Bireyin sahip olduğu kültürü, tüketici davranışlarında da kendini hissettirmektedir. Çevresinden öğrendiği ve edindiği davranışlar bireyin günlük yaşamını etkiler. Günlük yaşamında satın alma davranışları da tüketim davranışını belirler. Çevresindekilerin kabul ettikleri değerleri, tüketim motivasyonları bazı unsurları ve ürünleri değerli yaparken, bazılarını değersiz kılar (Çelik, 2009, s. 77-78).

Tüketim toplumlarında üretim ve tüketim ilişkisi dengeli gitmektedir. Ekonominin şekillenme biçimi de toplumların ihtiyaçlarına göre olmaktadır. Toplumların ihtiyaçlarını göz önüne alarak ihtiyaçları karşılayacak mal ve hizmetler üretilmektedir. Birey satın aldığı ürünle bir kimlik kazanmaya, birey olduğunu tüketimle hissedebileceğini düşündürten kavram tüketim kültürüdür. Tüketim toplumunun temelinde mutlu olmak ifadesi tüketiciye tüketirsen mutlu olursun sloganı ile gönderilmektedir (Dağtaş & Dağtaş, 2009, s. 80).

Tüketimin hızının takip edilemediği küreselleşen dünyada iletişim mecralarında da değişimler yaşanmış ve tüketicilerin yeni medya ortamlarında ne kadar zaman geçirdikleri önemli duruma gelmiştir.

Postmodernizmi tüketim kültürünün büyümesi ve malların üretilmesi ve dağıtılması ile paralel bir gelişme olarak görmek mümkündür. Tüketim kültüründe bulunan hayatın estetikleşmesi olarak ifade edilen postmodernizm estetik hayatın iyi hayat olduğunu belirtir. Postmodernizm gerçek benlik diye bir şeyin olmadığını ve hayatın yeni tecrübeler ve değerler arayışında olduğunu savunur (Featherstone, 2013, s. 218). Tüketim kültürünün kapitalizm kültürü olduğu yönündeki görüşler birçok çalışmada ön kabul olarak yerini almaktadır (Dağtaş & Dağtaş, 2009, s. 68). Baudrillard'a (2010) göre tüketim semboller ve göstergeler tüketimine dönüşmüştür. Bunun sebebi de modern toplumun tüketimci bir kültürle beslenmesidir.

1.3. Tüketim Kültürünün Toplumsal Değişim Paradigmaları

İnsanları temel ihtiyaçlarını sağlarken, bulundukları çevreden, ekonomik unsurlar ile bireyin bulunduğu çevresindeki adetlerinden, aile büyüklerinden ve değerlerinden etkilenmektedir (Kıray, 2005, s. 13). Tüketim kültüründe hizmet ve ürünler bir ihtiyacı gidermenin yanı sıra bireyin bulunduğu toplumda kendisini ifade ettiği sosyal bir içerik olarak ortaya çıkmaktadır (Gültekin, 2007, s. 91). Tüketim sosyal açıdan ele alındığında bireyler arası ilişkileri düzenleyen, özellikle statü ve itibar göstergesi olarak değerlendirilmektedir (Kıray B. M., 1999, s. 77).

Tüketim insanlığın ilk zamanlarından bu yana var olmuş ve değişimlerle yeni bir boyut kazanmıştır. Önceki dönemdeki insanların ihtiyaçları ölçüsünde gerçekleştirdikleri tüketim günümüzde ise daha çok satın almak ve bunun neticesinde toplumda yer edinebilme olarak karşımıza çıkmaktadır. Tüketim kavramının kapsamının değişikliğe uğramasıyla birlikte tüketimde kullanılan araçlar da değişikliğe uğramıştır. Yüz yüze yapılan

alışverişler yerini internet üzerinden- bloglardan bilgiler alarak, kredi kartlarını ve sosyal medya araçlarını da etkin bir şekilde kullanarak- alışverişler yapılmaktadır.

Tüketimle toplumsal değişimi özetleyen görüşe göre (Eğilmez, 2005) insanın yalnızca tüketici olduğu ve de tüketici ve üretici olduğu dönem olmak üzere iki dönem bulunmaktadır. Üretici ve tüketici olduğu dönemi de kendi içinde üçe ayırabilmek mümkündür: Tüketiciliğin ağır bastığı tarımsal devrim sonrası, üreticiliğin baskın olduğu sanayi devrimi sonrası, tüketiciliğin baskın olduğu bilgi teknolojisi dönemidir.

Baudrillard'a göre (Baudrillard, 2010, s. 70) avcı toplumların amacı eşyalara sahip olmak değildi. Üretmeye yönelik olarak araç ya da çalışma disiplini bulunmamaktaydı. Avcılıktan elde edilen her şey diğer bireylerle paylaşılmaktaydı. Bireyler gelecek kaygısı olmadan büyük bir savurganlıkla tüketmekteydiler (Baudrillard, 2010, s. 71).

Dünyada pek çok ülkede tarıma dayalı olan ekonomi 19. Yüzyılın ikinci yarısına kadar devam etmiştir. Halkın büyük bir bölümü kırsal bölgelerde hayatını devam ettirirken, tarımın hâkim olduğu ekonomilerde evin yakınlarında üretilen ürünler tüketilmekteydi. Ürünler değiş tokuş şeklindedir ve pazarda satışı genellikle kısıtlıdır (Yavuz, 2013, s. 220). Tarım toplumundan sanayi üretimine geçiş dünyadaki önemli gelişme ve değişimlerden biridir (Giddens, 1998, s. 36).

Aydınlanma döneminde global ilişkiler ve akıl ve mantık ilkelerine uygun olarak tutarlı düşünme sistemi yayılırken, bireyler akıl ve mantık çerçevesinde bir tutarlılık ve süreklilik ortaya çıkararak değişiklikler oluşturmuşlardır. Kavramlar geçmiş ve gelecek arasında bir köprü oluşturmak gayretiyle yeniden tanımlanmaya başlamıştır. Bilimsel bilginin endüstride hayat bulmasıyla birlikte sanayileşme süreci önce ekonomisi gelişmiş toplumlara sonra da tüm dünya devletlerine etki etmiştir (Sağlam, 2016, s. 189). Tarımdan sanayiye geçiş süresinde sanayinin üretimi gerçekleştirmek için kurduğu fabrikalarının niceliklerinin artmasıyla üretimin gelişmesine katkı sağlanmıştır. Endüstri alanındaki gelişmeler ekonomik unsurlar başta olmak üzere sosyal ve kültürel yapıyı değişikliğe uğratmıştır (Yavuz, 2013, s. 220).

Endüstri devrimiyle birlikte bireyler para kazanmaya başlamışlardır. Sanayi kuruluşlarında ücret kazanan bireylerin sayısında artış olmuştur. Geliştirilen sosyal politikaların gelişmesiyle beraber çalışma ve ücret düzenlemeleri gerçekleştirilmiştir. Tüketim konusunda ise tarım toplumundan farklılaşmalar meydana gelmeye başlamış ve insanlar kendileri üretmek yerine sanayileşmenin etkisiyle satın almaya yönelmişlerdir (Yavuz, 2013, s. 221).

Savaş sonrası dönem bebek patlaması kuşağı olarak adlandırılmakta, bu dönemde doğum oranları artmış ve ciddi teknolojik ve ekonomik gelişmeler hayat bulmuştur. Savaşın zorlu etkisinden çıkmak isteyen insanlar ise mutlu olmak için tüketmeye hazır dırlar (Fromm, 1985, s. 454). Geleneksel medya araçlarının gelişme gösterdiği dönemde televizyon'un etkisinde kalan ilk kuşaktır (Benlisoy, 2008, s. 31).

İletişim teknolojileri alanındaki gelişmeler büyük bir hızla yaşanmakta ayrıca bu gelişmeler yerel ve küresel olmak üzere bireylerin düzenini etkileyebilmektedir. Bu gelişmenin nedeni internet teknolojileri olarak gösterilebilir. Yeni medya alanındaki en önemli gelişmeler internet ile hayat bulmuştur. Günümüzde internet sadece yeni medyayı değil aynı zamanda geleneksel medyayı da etkilemektedir (Kırık, 2017).

İnterneti kullanan kuşaklar internetin sunduğu sanal dünyanın sembolleri üzerinden ilişkilerini oluşturmaktadırlar. Üretime dayalı dünya algısının kırılması hususunu gün yüzüne getiren internet dünyası y kuşağı tüketim dünyası ile tanışan ilk kuşak olmuştur.

2000 sonrasında henüz çocukluklarını yaşayanlar ise, ekonomik, sosyal, kültürel ve teknolojik alanda yaşanan değişimler sonucunda, tüketim kararlarında çok farklı davranışlarda bulunmaktadır. Diğer tüm kuşakların tecrübe ettikleri pazarlama ve tüketim alışkanlıklarında büyük ölçüde farklılık gösterecekleri ve gelecek kuşakların alışkanlıklarını da etkileyecekleri tahmin edilmektedir. 2000 sonrası doğanlar iletişim teknolojileri sayesinde teknolojiye bağımlı, aceleci, internet kullanma konusuna oldukça iyi, önceki nesillere göre daha yaratıcı, değişime çok hızlı ayak uydurabilen, her şeyi en hızlı şekilde olsun isteyen ve bu çizgi doğrultusunda da anlık tüketim davranışında bulunmaktadır.

Bireyler tüketim davranışında bulunurlarken istedikleri kaynaktan istedikleri kadar tüketerek yaşam ve hayat durumlarını ortaya koyarlar. Yeni ürünlerin tasarlanması ve yeni endüstri alanlarının oluşması toplumun satın alabilme gücüyle de orantılıdır. Özellikle 1990'larda tüketimin küreselleşmesiyle tüketim yeni bir boyut daha kazanmıştır.

Neo-liberal uygulamalar, devamlı olarak tüketim konusu üzerine çalışmalar yapmaktadır.

Yenilikçi tüketim uygulamalarının esnekliği durumu, zaman mekân ilişkilerinin dönüşümüne yönelik görüşleri temellendirmiştir.

Üretim bandının uygulamaya konduğu Fordizm ve post-Fordizm uygulamaları tüketim kültürünü etkilemiştir. Ürün çeşitliliğinin artmasıyla tüketicinin tercih edeceği ürün ve marka da çeşitlilik yaşamıştır. Post-modern dönemde ürünün tüketiciye sağlayacağı temel özelliklerin yanı sıra tüketiciye sağlayacağı imaj ve statü önemlidir. Tüketim ürünlerindeki bolluğun ilk olarak giyim eşyalarında, paketli ürünlerde ve hazır giyim eşyalarında görülmüştür. Bireyleri tüketmeye zorlayan nedenlerin arasında güzel şekilde paketlenen ürünler, renkli kıyafetler ve ürünlerin ışıltılı yerlerde sunulması sıralanabilir (Baudrillard, 2010, s. 12).

Son zamanlarda tüketim sürekli bir yenilik halinde kendini yenileyerek yeni şekliyle tüketicilerle buluşmaktadır. Tüketici sürekli yenilenen bu sistemin içerisinde geleneksel ve yeni medya araçları (reklam, sosyal medya gibi) tarafından tüketmeye özendirilmektedir.

Burke'e (2008:37) göre bir kuşaktan diğer bir kuşağa aktarılan şeyler aktarım sırasında değişikliğe uğramaktadır. Her bireyin dünyada iz bırakma iddiasıyla eylemde bulunması değişimi hızlandırmaktadır. Belge'ye (2012) göre değişim elimizde olmadan olmakla birlikte geçmiş ve geleceği birbirine bağlayan bir takım değerlere dayanmaktadır.

1946 – 1964 Bebek patlaması dönemi ve 1965 - 1980 arası X kuşağının tüketim alışkanlıklarında tek yönlü pazarlama ilişkisi ortaya çıkmaktadır. X kuşağı tüketicileri pazarlamaya yeni bir boyut kazandırmışlardır fakat piyasanın hâkimi pazarlamacılar olmuştur. 1985 – 1995 arası Y kuşağının tüketime dâhil olmasıyla X kuşağından farklı olarak piyasanın hâkimiyeti tüketicilere geçmiştir. Y kuşağı bireyleri post modernist uygulamaların düşünme ve yegâne doğrunun hakimiyetine karşı çıkmasına bağlı olarak, benzeşmeyen yönlerin ifade edilmesinden ve bununla ilişkili sonu olmayan tüketim zihniyetinin globalleşmesinden yararlanarak; benzersiz, kişisel ve kendine has tüketimi benimsemişlerdir.

Y kuşağının internet teknolojilerini çok iyi kullanması sebebiyle her türlü bilgiyi ve mobil uygulamaları takip etmeleri işletme sahiplerinin de dikkatini çekmektedir. Tüketicilerin mobil iletişim araçlarındaki uygulamalarından gelişmeleri takip etmeleri bilinçli tüketici kitlesinin olduğunu göstermektedir. Şeffaf olmayan işletme yapıları sosyal medya ortamlarında hızlı bir şekilde yayınlanmaktadır (Yüzbaşıoğlu, 2012). Bu sebepten işletmeler özellikle sosyal medya ortamlarından tüketiciyle iletişime geçerken dikkatli olmalıdırlar.

İnternet aracılığıyla ortaya çıkan yeni mecralar tüketici davranışlarını takip etme anlamında pazarlamacılar için önemli bir duruma gelmiştir. Geleneksel medya ortamları henüz etkisini kaybetmemiş olsa da yeni medya ortamları tüketim davranışlarında önem arz etmektedir. Tüketicilerin yenilikleri takip etme isteği hususundaki tüketim çabası dikkatlerden kaçmamaktadır.

Sonuç ve Öneriler

Kapitalizm ve tüketim döngüsünü ele aldığımızda hiç şüphesiz medyanın kapitalizm ve tüketim kültürü üzerindeki yansımaları görmezden gelinemez. Topluma ayak uydurma ve modern olma isteğinin sonucu olarak bireyler kapitalist ve post-modern dünyada tüketmektedirler. Bireyler tüketmeyi kanıksamış durumda ve bireyleri tüketmeye yönelten sistem etraflarını sarmış haldedir. Aşırı tüketmek üzere bireyler sanki görevlendirilmiş gibi çalışmaktadırlar. Fiske'nin popüler haz kavramına dikkat çektiği gibi, bireyler medya tarafından popüler olarak gösterilene uyum sağlayarak kendilerini mutlu hissetmekte ve tüketimi haz aldıkları bir araç olarak görmektedirler. Tüketim sadece üst sınıfın bir pratiği olarak değil orta ve alt sınıfın da kendi imkânları ölçüsünde pratiği olmaktadır. Tüketim kültürünün ortaya çıkışının sırasıyla en önemli nedeni sanayileşme, modernleşme ve sosyal ilişkiler boyutu olarak ifade edilebilir. Sanayileşme döneminde bireyin emeği konusunda etkili olan sistem tüketim çağında bireyin tüm tüketim alanını kapsamaktadır. Artan medya araçları ve reklamlar aracılığı ile gelişmiş ülke olmanın yegâne koşulunun tüketmek olduğu fikri geniş ölçüde kabul edilen bir kanı haline getirilmiştir.

Z kuşağı ile diğer kuşaklar arasındaki tüketim alışkanlıklarındaki farklılığın en önemli sebebi de internet teknolojisinin getirdiği yenilikler olarak karşımıza çıkmaktadır. Sosyal uygulamalar, kültürel değerler ve kredi kartları modern olmanın pratikleri olarak görülmektedir. Kuşaklar arasındaki farklılıklardan dolayı geleneksel medya araçlarından yeni medya teknolojilerine geçiş hem tüketiciler hem işletmeler tarafından bir zorunluluk olarak hissedilmektedir. Bireyler dâhil oldukları kuşağın niteliklerine uygun tüketim davranışı göstermektedirler. İşletmeler ise yeni medya teknolojilerinin sunduğu imkânlardan faydalanarak bireylerin yaşam standartlarına uygun tüketim hizmeti sunmaktadırlar. Online iletişim ortamları bireylere tüketimi kolaylaştıran yeni bir güç olarak hizmet vermektedir.
